

Addendum

Dunedin City Water Conservation and Management Plan – Stage 1

Pages 14 and 15 of the Dunedin City Water Conservation and Management Plan – Stage 1 is modified as follows:

- (i) the domestic consumption figure should be shown as 7,600,000 m³/year (not 7,700,000)
- (ii) the amount of water used per person per day should be shown as 207 litres per person per day

Add foot notes to Page 14 as follows:

- (iii) ⁷ Note that a population figure of 100,290 people has been used (1996 Census figures estimate), (metropolitan Dunedin and Mosgiel only). Hence the 120,300 outlined in the report is not the figure used within the source data for the graphs.
- (iv) ⁸ The information/graph for all those places except Dunedin was sourced from a Water Care report.

Explanation

The discrepancies are due to two aspects:

- the population figures used are different; and
- there are two typo's.
