

15 Islington St,  
NEV, Dunedin.  
25 February, 2021

The Secretary,  
Second Generation District Plan,  
Dunedin City Council.

Dear Secretary,

Could you please photograph  
the enclosed submission and present  
it unedited by the spell check since  
technospeak is sometimes confuted  
by my diction and grammatical  
variations. Thank you.

Yours sincerely,

Luanille Taneatua

The Secretary,  
Second Generation District Plan,  
4- Dunedin City Council,  
to The Octagon.

To whom it May concern,

Healthy growth is organic, the  
rules adjust according to the need,  
when you live long you know  
10% of expectations achieve  
the imagined result, and I'm  
disappointed the electronic map  
fails to accord the differential in  
the human mind between main  
roads and side roads, and  
blocked parts of the picture  
when there was plenty of room  
for information at the sides,

Small areas picked on and the area where development was most requested, ignored.

More respect needs paid to geographic stability because the happiest people live in familiar places, and limitations on growth in favour of maintenance.

while the developers turn their attention back God, away from Northend, where the R3 still allows 90% of ground to be covered with visual atrocities and clinical settings, where the brains of the country are squished into squares, the cohorts neatly divided to keep them ignorant, other well developed arboreal areas with previously stable populations seem set for the chop, while valley residents sorrow at the prospect of losing their lovely view

of the countryside opposite, the steep, <sup>(ZGP)</sup>  
unstable countryside opposite the main  
housing area, tacked on to Pine Hill while  
a large paddock to the north on the  
housing side waits for a starter's whistle.

The fabric of the city seems under attack,  
and the refurbishment of motels for  
assisted housing needs consideration so  
the low rent people can stabilise.

I'm not enamoured of the projected  
artificial population increase by rich  
immigrants masquerades and world culture  
has brought ignored and vicious evils  
to the bohemian and other classes  
unmentioned in the artificial intelligences  
categories, along with their skills.

Planners need to pull away from their  
cell phones and computers and take

in more information from nature.

the cracks in the drains provide electrical conduits; the bus stop window has been broken at 142 North Road for over a year, the Chorus wiring is a messy circus, visually and in its workings, and the predictions unsound.

I'm concerned about the lack of considerations for harmony with other buildings, FI-4 policy 2.2.4.5

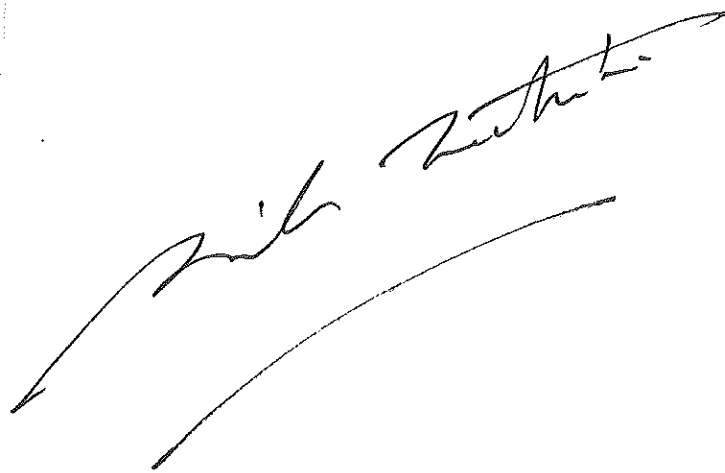

where connections to public infrastructure are allowed and its closer alignment with FI-5 in the Spatial Plan,

rule 9.3.3 and SNZ/PAS:4509:2008

because if it is for surveillance I can only write when my chimney went on fire they arrived when I had put it out, and failed to damp down the ceiling,

a job I did myself while a Real Estate agent eagerly whizzed back and forth, so if this rule has anything to do with efficiency it doesn't work and needs to be expunged. My assessment is it may be used for purposes other than fire prevention.

Yours sincerely,  
Lucille Taneatua

Dear Secretary,

Could you please photograph the enclosed submission and present it unedited by the spell check since technospeak is sometimes confused by my direction and grammatical variations

Thank you.

To whom it may concern,

Healthy growth is organic, the rule adjusts according to the need, when you live long you know 10% of expectations achieve the imagined result, and I'm disappointed the electronic map fails to accord the differential in the human mind between main roads and side roads, and blocked parts of the picture when there was plenty of room for information at the sides, small areas picked on and the area where development was most requested, ignored.

More respect needs paid to geographic stability because the happiest people live in familiar places, ad limitations on growth in favour of maintenance. While the developers turn their attention thank god, away from Northend, where the 12 3 still allows 90% of the ground to be covered with visual atrocities and clinical settings, were the brains of the country are squished into squares, the cohorts neatly divided to keep them ignorant, other well developed arboreal areas with previously stable populations seem set for the chop, while valley residents sorrow at the prospect of losing their lovely view of the countryside opposite, the steep, unstable countryside opposite the main housing area, tacked onto Pine Hill while a large Paddock to the north on the housing side waits for a starters whistle.

The fabric of the city seems under attack, and refurbishment of motels for assisted housing needs consideration so the low rent people can stabilise. I'm not enamoured by rich immigrants' masquerades and world culture has brought ignored and vicious evils to the bohemian and other classes unmentioned in the artificial intelligence's categories, along with their skills. Planners need to pull away from their cell phones and computers and take in more information from nature.

The cracks in the drains provide electrical conduits; the bus stop window has been broken at 142 North Road for over a year, the chorus wiring is a messy circus, visually and in its workings, and the predictions unsound. I'm concerned about the lack of considerations for harmony with other buildings, F1-4 policy 2.2.4.5 where connections to infrastructure are allowed and its closer alignment with F1-5 in the Spatial plan, rule 9.3.3 and SNZ/PAS:4509:2008 because if it is for surveillance I can only write when my chimney went on fire they arrived when I had putt it out, and failed to damp down

the ceiling, a job I did myself while a Real Estate agent eagerly whizzed back and forth, so if this rule has anything to do with efficiency it does not work and needs to be expunged. My assessment is it may be used for purposes other than fire prevention.

Yours sincerely,

Lucille Taneatuatua
