This proposal needs community approval, a final business case, resource consent and funding to go to development. We envisage requiring capital *at the earliest* in late 2012. If a large majority of residents were able to support this project at \$6000 per household, the business would be less likely to need external support. When **you** can be confident that this is a viable project with a secure legal frame-work, how much would you be willing to invest?

Please rank your preference for an ownership and business structure, with 1 being highest and 3 being lowest (you do not necessarily need to give more than one response). All models assume that a 'community dividend' will be part of the rules. This information will help us in the next stage of our work.
