

# South Dunedin Future

## UPDATE

### Coming Soon: The Science of South Dunedin

Our first brochure about South Dunedin Future was well received, and we have almost finished the next in the series. Called 'The Science of South Dunedin', it's an easy-to-read explainer for the environment in South D, water problems and other hazards facing the area.

We've been working with scientists and Otago Museum's science communicators to make it all accurate and clear. It will explain how the climate is changing and what that means for South Dunedin's coast, groundwater and flood risks, now and in the future.

Here's a taste of what to look out for in your letterbox in the next few weeks.

When it arrives, we hope you will grab a cuppa, settle back in your favourite chair and have a read. If we are all on the same page on the hazards it will be easier to work out how to respond.

We will be organising chances to learn more, meet the scientists who have created the information and share what it all means for you in the next few months.

### Let's make a plan, in many languages

People have been asking for our flyers to be in a range of languages spoken in the South Dunedin community so the messages get out far and wide. So we have been busy making new versions of our first brochure 'Let's make a plan'.

We now have versions in Te Reo Māori, NZ Sign Language, Easy Read format, Samoan, Tongan and Arabic.

Here is a QR code you can snap on your phone to go straight to them.

### Email newsletter helps stay in the loop

We have recruited a range of consultants to help with technical investigations, and the pace is picking up. We have launched a regular email newsletter to keep you up with the latest. Go to our website and look for the "Stay in the loop" page.

### Don't be shy!

We are keen to have your feedback and questions.
