9.	Number, location and design of ancillary signs	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.3</li> <li>ii. Ancillary signs convey information about the name, location and nature of the business to passing pedestrians and vehicles while not being oversized or too numerous for that purpose (Policy 18.2.3.7).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. An attractive streetscape is maintained.</li> <li>iv. The visual cohesion of the street is not reduced by the increase in size or number of signs.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>v. For signs that do not comply with Rule 18.6.13.1.e (the restriction on signs for restaurants ancillary to trade related retail or food and beverage retail), Council will also consider the effects in terms of Policy 18.2.1.17 and Policy 18.2.1.18.</li> </ul>
		b. Effects on the safety and efficiency of the transport network	See Rule 6.10
10.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
		b. Effects on the safety of parking and loading areas	
11.	Setback from coast and water bodies	a. Effects on biodiversity values and natural character of riparian margins and the coast	See Rule 10.5
		b. Effects on public access	
		c. Risk from natural hazards	See Rule 11.4
12.	Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6

### 18.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
13.	Harbourside Edge Zone Standards (18.6.17.1) - height	<p>a. Effects on views across Otago Harbour</p> <p>b. Effects on amenity and character of zone</p>	<p><i>Relevant objectives and policies:</i></p> <p>i. Objectives 2.4.1, 18.2.3, Policy 2.4.1.4.</p> <p>ii. Buildings and structures:</p> <ol style="list-style-type: none"> <li>1. reflects the general heights of the block; and</li> <li>2. minimises, as far as practicable, adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the upper harbour toward Otago Peninsula, including through the use of quality and contextually appropriate design (Policy 18.2.3.11).</li> </ol> <p>iii. Buildings and additions and alterations to buildings provide a high level of amenity by being of a design that is coherent, appropriate to the setting and history of the area, and providing a positive relationship to both the street and the harbour (Policy 18.2.3.4.c).</p>
14.	Harbourside Edge Zone Standards (18.6.17.2) - access	a. Effects on amenity and character of zone	<p><i>Relevant objectives and policies:</i></p> <p>i. Objectives 2.4.1, 18.2.3</p> <p>ii. Development in the Harbourside Edge Zone is designed and located to provide a high level of amenity by:</p> <ol style="list-style-type: none"> <li>1. requiring public pedestrian access to and along the coast that is attractive, safe, durable, and readily accessible to the public (Policy 18.2.3.5.a); and</li> <li>2. maintaining viewshafts from Roberts Street and Kitchener Street to and across the Steamer Basin (Policy 18.2.3.5.d).</li> </ol>
15.	Harbourside Edge Zone Standards (18.6.17.4) - walkway design	a. Effects on amenity and character of zone	<p><i>Relevant objectives and policies:</i></p> <p>i. Objectives 2.4.1, 18.2.3</p> <p>ii. Development in the Harbourside Edge Zone is designed and located to provide a high level of amenity by requiring public pedestrian access to and along the coast that is attractive, safe, durable, and readily accessible to the public (Policy 18.2.3.5.a).</p>
X.	Setback from designated rail corridor	a. Effects on the safety and efficiency of the transport network	See Rule 6.10.6.

### 18.9.5 Assessment of subdivision performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Access	a. Effects on accessibility	See Rule 6.10
2.	Esplanade reserves and strips	a. Effects on biodiversity values and natural character of riparian margins and the coast	See Rule 10.5
		b. Effects on public access	
3.	Firefighting	a. Effects on health and safety	See Rule 9.5
4.	Service connections	a. Effects on efficiency and affordability of infrastructure	See Rule 9.5

### 18.9.5 Assessment of subdivision performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
5. Shape		<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Subdivisions are designed to ensure any future land use or development of the resultant site is able to meet the performance standards in the zone, or where in a <b>structure plan mapped area</b>, reflects the requirements of the <b>structure plan mapped area</b> performance standards, unless: <ul style="list-style-type: none"> <li>i. a resource consent is approved for a development that does not meet the performance standard and the subdivision is intended for and capable of providing for that approved development; or</li> <li>ii. the resultant site is required for: <ul style="list-style-type: none"> <li>1. a Scheduled ASBV;</li> <li>2. a QEII covenant;</li> <li>3. a reserve;</li> <li>4. an access;</li> <li>5. a utility; or</li> <li>6. a road (Policy 2.4.1.8).</li> </ul> </li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. Non-compliance with the performance standard for shape will be assessed based on which performance standard(s) the shape of the resultant site does not provide for compliance with. See matters of discretion and assessment rules in relation to performance standard contraventions for: <ul style="list-style-type: none"> <li>i. NA;</li> <li>ii. boundary setbacks;</li> <li>iii. setback from scheduled tree; and</li> <li>iv. setbacks from water bodies.</li> <li>v. NA.</li> </ul> </li> <li>d. For contravention of the building platform slope part of the shape performance standard (Rule 18.7.5.2), see the matters of discretion and assessment rules in relation to earthworks - large scale (Rule 8A.7.2.1).</li> </ul> <p><i>Conditions that may be imposed:</i></p> <ul style="list-style-type: none"> <li>e. Restrictions or conditions, including by way of consent notice, on land use or development activities allowed on the site.</li> <li>f. A building platform may be required to be registered against the title by way of consent notice.</li> </ul>

**18.9.6 Assessment of restricted discretionary performance standard contraventions in a pedestrian street frontage mapped area, overlay zone, mapped area, heritage precinct, or affecting a scheduled item**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. Affecting a <b>scheduled heritage building or scheduled heritage structure</b> : <ul style="list-style-type: none"> <li>Materials and design</li> </ul>	a. Effects on heritage values	See Rule 13.5
2. In a <b>hazard overlay zone or swale mapped area</b> : <ul style="list-style-type: none"> <li>Hazard exclusion areas (Rule 11.3.1.1) – <b>Swale mapped area</b> (Rural Centre Zone only)</li> <li>Maximum area of vegetation clearance in the hazard overlay zones (Hazard 1 or 2 (land instability) overlay zones)</li> <li>Relocatable buildings (Hazard 3 (coastal) Overlay Zone)</li> <li>Hazardous substances quantity limits and storage requirements</li> </ul>	a. Risk from natural hazards	See Rule 11.4
3. In a <b>heritage precinct</b> : <ul style="list-style-type: none"> <li>Boundary setbacks</li> <li>Building colour</li> <li>Fence height and design</li> <li>Materials and design</li> <li>Height</li> <li>Number, location and design of ancillary signs</li> </ul>	a. Effects on heritage streetscape character	See Rule 13.5
4. Along or adjacent to a <b>pedestrian street frontage mapped area</b> : <ul style="list-style-type: none"> <li>Location of industrial activities</li> </ul>	a. Effects on streetscape amenity	<i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>Objective 18.2.3</li> <li>Industrial activities avoid or, if avoidance is not practicable, adequately mitigate any adverse effects on streetscape amenity by locating any part of the industrial operation that involves machinery or metal work within a part of a building that does not include any doors or windows that open to a <b>primary pedestrian street frontage mapped area or secondary pedestrian street frontage mapped area</b> (Policy 18.2.3.10).</li> </ol>

**18.9.6 Assessment of restricted discretionary performance standard contraventions in a pedestrian street frontage mapped area, overlay zone, mapped area, heritage precinct, or affecting a scheduled item**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>5. Along or adjacent to a <b>primary pedestrian street frontage mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Location of activities within <b>pedestrian street frontage mapped areas</b></li> <li>• Height</li> <li>• Minimum glazing and building modulation</li> <li>• Minimum ground floor to ceiling height</li> <li>• Pedestrian entrances</li> <li>• Setback from road boundaries</li> <li>• Verandahs</li> </ul>	<p>a. Effects on streetscape amenity</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>i. Objective 18.2.3</li> <li>ii. Buildings along a <b>primary pedestrian street frontage mapped area</b> are located, designed and operated to provide a high level of pedestrian amenity by:             <ol style="list-style-type: none"> <li>1. providing a continual frontage of buildings along the street, apart from pedestrian alleyways;</li> <li>2. providing a clear and direct visual connection between the street and the building interior;</li> <li>3. providing a direct physical connection to the building interior through clearly identified pedestrian entrances on the highest order pedestrian street frontage;</li> <li>4. providing shelter for pedestrians on footpaths, in the form of a verandah;</li> <li>5. being of a height that maintains existing sunlight access to footpaths and public open spaces;</li> <li>6. providing an architecturally interesting façade and human scale design, through building modulation and consistent alignment of windows;</li> <li>7. being designed to have commercial activities at the ground floor, with an adequate ground floor to ceiling height to accommodate these activities; and</li> <li>8. providing customer-facing activities on the ground floor (Policy 18.2.3.2).</li> </ol> </li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>iii. The length of the total building frontage that will not meet this standard is short and the context of the building means any effects on streetscape amenity will be no more than minor.</li> <li>iv. It is proposed to only lease the space for a limited period of time, and the consent will be time-limited.</li> <li>v. In neighbourhood centres the setback area between the road boundary and the building is used for outdoor seating for a restaurant.</li> </ol> <p><i>Conditions that may be imposed include:</i></p> <ol style="list-style-type: none"> <li>vi. Time limit on consent.</li> <li>vii. A condition that prevents the setback area from being used for car parking or outdoor storage.</li> </ol>

**18.9.6 Assessment of restricted discretionary performance standard contraventions in a pedestrian street frontage mapped area, overlay zone, mapped area, heritage precinct, or affecting a scheduled item**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>6. Along or adjacent to a <b>secondary pedestrian street frontage mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Location of activities within <b>pedestrian street frontage mapped areas</b></li> <li>• Pedestrian entrances</li> <li>• Minimum glazing and building modulation</li> <li>• Setback from road boundaries</li> <li>• Verandahs</li> </ul>	<p>a. Effects on streetscape amenity</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>i. Objective 18.2.3.</li> <li>ii. Buildings provide a good level of pedestrian amenity by:               <ol style="list-style-type: none"> <li>1. providing a regular frontage of buildings along the street, with limited interruptions for vehicle accesses;</li> <li>2. providing a clear and direct visual connection between the street and the building interior;</li> <li>3. providing an architecturally interesting façade and human scale design, through building modulation and consistent alignment of windows; and</li> <li>4. providing shelter for pedestrians at pedestrian entrances (Policy 18.2.3.3).</li> </ol> </li> </ol> <p><i>General assessment guidance:</i></p> <p>X. For applications that propose an alternative site layout for safety reasons, a CPTED analysis should be provided by a suitably qualified expert to support that assessment.</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>iii. The design and size of the verandah still allows for the shelter of pedestrians from the weather.</li> <li>iv. The activities proposed at ground floor have a customer-facing function.</li> <li>v. The length of the total building frontage that will not meet this standard is short and the context of the building means any effects on streetscape amenity will be no more than minor.</li> <li>vi. It is proposed to only lease the space for a limited period of time, and the consent will be time-limited.</li> </ol> <p>Y. For retail activities, a CPTED analysis demonstrates that due to hours of car park use a different site layout is necessary for safety reasons and the layout and site landscaping will still achieve a high standard of amenity and safety for pedestrians and people accessing activities by bicycle.</p> <p>Z. For food and beverage retail where store layout is constrained due to site size, shape or existing site or building layout, glazing along pedestrian frontages must be reduced for operational reasons, site constraints and layout efficiencies.</p> <p><i>Conditions that may be imposed include:</i></p> <ol style="list-style-type: none"> <li>vii. Time limit on consent.</li> </ol>

**18.9.6 Assessment of restricted discretionary performance standard contraventions in a pedestrian street frontage mapped area, overlay zone, mapped area, heritage precinct, or affecting a scheduled item**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>7. On a <b>primary or secondary pedestrian street frontage mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Location (network utility activities) (Rule 5.5.2.1)</li> <li>• Maximum volume in <b>pedestrian street frontage mapped areas</b>, heritage precincts and scheduled heritage sites (network utility activities) (Rule 5.5.4)</li> </ul>	<p>a. Effects on pedestrian amenity</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>Objectives 18.2.3 and 5.2.1</li> <li>Network utility structures - small scale are of a design, location and scale that maintains a high level of pedestrian amenity in <b>pedestrian street frontage mapped areas</b> (Policy 18.2.3.12).</li> </ol>
<p>8. In a <b>wāhi tūpuna mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Setback from coast and water bodies</li> <li>• Esplanade reserves and strips</li> </ul>	<p>a. Effects on cultural values of Manawhenua</p>	<p>See Rule 14.3</p>
<p>X. In the <b>Campus mapped area</b> north of Albany Street:</p> <ul style="list-style-type: none"> <li>• Maximum and minimum height (Rule 18.6.5.2.a.viii.X)</li> </ul>	<p>a. **18.9.6 Assessment of restricted discretionary performance standard contraventions in a pedestrian street frontage mapped area, overlay zone, mapped area, heritage precinct, or affecting a scheduled item**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>Y. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (buildings, structures, city-wide activities)</li> </ul>	<p>a. Effects on health and safety</p> <p>b. Effects on efficient and effective operation of network utilities</p>	<p>See Rule 5.7.</p>

## **Rule 18.10 Assessment of Restricted Discretionary Activities**

### **Rule 18.10.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 18.10.2 - 18.10.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 18.10.2 - 18.10.5 apply as follows:
  - a. Rule 18.10.2 applies to restricted discretionary land use activities;
  - b. Rule 18.10.3 applies to assessment of restricted discretionary development activities;
  - c. Rule 18.10.4 applies to restricted discretionary subdivision activities; and
  - d. Rule 18.10.5 applies to restricted discretionary activities in an overlay zone, mapped area, heritage precinct or affecting a scheduled item.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 18.9; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 18.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 18.12; and

- iii. the assessment guidance in this section will also be considered.

### 18.10.2 Assessment of restricted discretionary land use activities

Activity		Matters of discretion	Guidance on the assessment of resource consents
1.	All high trip generators, which include any activities that generate 250 or more vehicle movements a day	<p>a. Effects on the safety and efficiency of the transport network</p> <p>b. Effects on accessibility</p>	See Rule 6.11
2.	<ul style="list-style-type: none"> <li>Restaurants drive-through (CEC - North, CEC - South, TR, SDLF)</li> <li>Service stations (CEC - North, CEC - South, TR, SDLF, Centres, PPH)</li> </ul>	a. Effects on residential amenity	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 18.2.2.</p> <p>ii. Significant adverse effects on the amenity of existing residential activities are avoided or mitigated as far as practicable (Policy 18.2.2.4).</p>
		b. Effects on the safety and efficiency of the transport network	See Rule 6.11.
X.	<ul style="list-style-type: none"> <li>Bulky goods retail (SDLF)</li> <li>General retail 750m<sup>2</sup> or greater in gross floor area (SDLF)</li> </ul>	a. Effects on accessibility	See Rule 6.11.
		b. Effects on the safety and efficiency of the transport network	
Y.	General retail 750m <sup>2</sup> or greater in gross floor area (SDLF)	a. Effects on the vibrancy and viability of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <p>1. Objective 18.2.1.</p> <p>2. Large format retail in the SDLF Zone has no more than minor adverse effects on the vibrancy and viability of the CBD and centres (Policy 18.2.1.X).</p>

### 18.10.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
3. Early childhood education (CBD, centres, WP, PPH outside a <b>hazard facility mapped area</b> , SSYP, HE)	a. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.2</li> <li>ii. Early childhood education and residential activities in the CBD, centres and CBD edge mixed use zones are located where they will not constrain (have reverse sensitivity effects on) activities which are provided for in the commercial and mixed use zone (Policy 18.2.2.8).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Performance standards for development activities are met.</li> <li>iv. Outdoor play areas of early childhood centres are protected from external noise through acoustic fencing or other building design measures that reduce the noise received in play areas.</li> </ul>
	b. Effects on the safety and efficiency of the transport network	See Rule 6.11

### 18.10.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>4.</p> <ul style="list-style-type: none"> <li>Conference, meeting and function ancillary to visitor accommodation (PPH, SSYP)</li> <li>Entertainment and exhibition ancillary to visitor accommodation (PPH, SSYP)</li> </ul>	<p>a. Effects on the vibrancy, and economic and social success of the CBD and centres</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.2</li> <li>ii. The activities are secondary to the visitor accommodation activity (Policy 18.2.2.2.a).</li> </ul>
	<p>b. Effects on residential amenity</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.2</li> <li>ii. Any adverse effects on the amenity of surrounding residential activities, from noise, anti-social behaviour, or other effects will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 18.2.2.2.b).</li> </ul> <p><i>Potential circumstances that may support a consent application</i></p> <ul style="list-style-type: none"> <li>iii. Performance standards for development activities are met.</li> <li>iv. The scale and nature of the activity including the number of people involved in the activity, hours of operation means that effects will be avoided or, if avoidance is not possible, adequately mitigated.</li> </ul>
	<p>c. Reverse sensitivity effects</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.2</li> <li>ii. The potential for reverse sensitivity will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 18.2.2.2.c).</li> </ul>
	<p>d. Effects on the safety and efficiency of the transport network</p>	<p>See Rule 6.11</p>
<p>5.</p> <ul style="list-style-type: none"> <li>Visitor accommodation (NEC and NECC)</li> <li>Community and leisure - large scale (NEC and NECC)</li> </ul>	<p>a. Effects on residential amenity</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.2</li> <li>ii. Any adverse effects on the amenity of surrounding residential activities are avoided or, if avoidance is not practicable, adequately mitigated (Policy 18.2.2.7).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Communal outdoor living / gathering areas are located or screened from surrounding properties.</li> <li>iv. Performance standards for development activities are met.</li> </ul>
<p>6. Hospital (CEC - North)</p>	<p>a. Effects on accessibility</p>	<p>See Rule 6.11</p>
	<p>b. Effects on the safety and efficiency of the transport network</p>	

### 18.10.2 Assessment of restricted discretionary land use activities

Activity		Matters of discretion	Guidance on the assessment of resource consents
Z.	Food and beverage retail 500m <sup>2</sup> or less in gross floor area (HE)	a. Effects on safety and efficiency of the transport network	See Rule 6.11.
		b. Effects on accessibility	See Rule 6.11.

### 18.10.3 Assessment of restricted discretionary development activities

Activity		Matters of discretion	Guidance on the assessment of resource consents
----------	--	-----------------------	---

<p>1. New buildings and additions and alterations to buildings in the Harbourside Edge Zone, that are visible from an adjoining public place or the harbour</p>	<p>a. Effects on streetscape amenity</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.3</li> <li>ii. New buildings and additions and alterations to buildings in the Harbourside Edge Zone are designed and located to provide a high level of amenity by: <ul style="list-style-type: none"> <li>1. being built to the street frontage along the entire length of Birch Street, and for no less than 60% of the street frontage on Kitchener Street, except for: <ul style="list-style-type: none"> <li>1. any setbacks required to allow pedestrian entrances; and</li> <li>2. the provision of amenity space for customers or residents at the front of buildings.</li> </ul> </li> <li>2. including appropriate building modulation, window alignment, use of glazing, floor height, colour, architectural detail to provide visual interest and a human-scale design;</li> <li>3. being of a design that is coherent, appropriate to the setting and history of the area, and provides a positive relationship to both the street and the harbour; and</li> <li>4. having active edges with strong visual and physical connections from the street to the inside of buildings (Policy 18.2.3.4).</li> </ul> </li> <li>iii. Development is designed and located to provide a high level of amenity by: <ul style="list-style-type: none"> <li>1. ensuring the design and location of on-site car parking does not compromise streetscape or harbour amenity (Policy 18.2.3.5.b); and</li> <li>2. ensuring development activities incorporate the principles of CPTED (Policy 18.2.3.5.c)</li> </ul> </li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iv. Council may place condition on aspects of building design including: <ul style="list-style-type: none"> <li>1. entry and exit points for pedestrians;</li> <li>2. building materials;</li> <li>3. architectural detail;</li> <li>4. building modulation;</li> <li>5. colour; and</li> <li>6. window type and placement.</li> </ul> </li> </ul>
---	--	--

### 18.10.3 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
2. New buildings and structures, and additions and alterations as part of the Dunedin Hospital redevelopment	a. Effects on streetscape and pedestrian amenity	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 18.2.3</p> <p>ii. Development maintains or enhances streetscape amenity by ensuring:</p> <ol style="list-style-type: none"> <li>1. an attractive street interface is maintained through landscaping where buildings are not built to the street frontage;</li> <li>2. large parking areas which are visible from the street are visually broken up with internal landscaping, which also provides for rainwater absorption;</li> <li>3. service areas and outdoor storage areas associated with industrial or other activities are not visible from ground level of a public place; and</li> <li>4. an architecturally interesting façade through building modulation and use of glazing (Policy 18.2.3.1)</li> </ol> <p>iii. Buildings and additions and alterations maintain or enhance streetscape amenity by ensuring the use of verandahs where appropriate (Policy 18.2.3.13.a)</p>
3. High trip generators: • New or additions to parking areas that result in 50 or more new parking spaces	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
	b. Effects on accessibility	

### 18.10.4 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. Subdivision activities	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
	b. Risk from natural hazards	See Rule 11.5

**18.10.5 Assessment of restricted discretionary activities in an overlay zone, mapped area, heritage precinct or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In a <b>heritage precinct</b> : <ul style="list-style-type: none"> <li>All RD activities due to being in a heritage precinct</li> </ul>	a. Effects on heritage streetscape character	See Rule 13.6
2. Activities affecting a <b>scheduled heritage building or scheduled heritage structure</b> : <ul style="list-style-type: none"> <li>Additions and alterations that affect a protected part of a scheduled heritage building or scheduled heritage structure</li> <li>Removal for relocation</li> <li>All subdivision activities on sites containing a scheduled heritage building or scheduled heritage structure</li> </ul>	a. Effects on heritage values	See Rule 13.6
3. In all hazard overlay zones, <b>swale mapped areas and dune system mapped areas</b> : <ul style="list-style-type: none"> <li>Subdivision activities</li> </ul>	a. Risk from natural hazards	See Rule 11.5
4. In the <b>Hazard 2 (flood) Overlay Zone</b> (see Rule 18.3.8): <ul style="list-style-type: none"> <li>New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area</li> </ul>	a. Risk from natural hazards	See Rule 11.5.
5. In the <b>Hazard 2 (flood) Overlay Zone</b> : <ul style="list-style-type: none"> <li>Natural hazards sensitive activities</li> <li>Natural hazards potentially sensitive activities</li> </ul>	a. Risk from natural hazards	See Rule 11.5
6. In the <b>National Grid Subdivision Corridor mapped area</b> : <ul style="list-style-type: none"> <li>All subdivision activities</li> </ul>	a. Risks to the safety of people and property	See Rule 5.8.
	b. Reverse sensitivity effects	
	c. Effects on efficient and effective operation of the National Grid and access to it	
Z. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> : <ul style="list-style-type: none"> <li>All subdivision activities</li> </ul>	a. Effects on health and safety	See Rule 5.8.
	b. Reverse sensitivity effects	
	c. Effects on efficient and effective operation of network utilities	

**18.10.5 Assessment of restricted discretionary activities in an overlay zone, mapped area, heritage precinct or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>7. Activities affecting a <b>scheduled heritage site</b>:</p> <ul style="list-style-type: none"> <li>• New buildings and structures on a scheduled heritage site, where visible from an adjoining public place or a publicly accessible place within the site</li> <li>• Parking, loading and access on a scheduled heritage site, where visible from an adjoining public place or a public place within the site</li> <li>• All subdivision activities</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.6</p>
<p>X. In the <b>Campus mapped area</b> north of Albany Street:</p> <ul style="list-style-type: none"> <li>• All subdivision activities</li> </ul>	<p>a. Effects on the efficient and effective operation of Campus</p>	<p>See Rule 34.10.5.1.</p>
	<p>b. Effects on the efficiency and affordability of infrastructure</p>	<p>See Rule 9.6.</p>
<p>Y. In the <b>Campus mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Conference, meeting and function</li> <li>• Entertainment and exhibition</li> <li>• Restaurants</li> <li>• Visitor accommodation</li> <li>• Community and leisure - large scale</li> <li>• All activities in the residential activities category</li> <li>• Campus</li> </ul>	<p>a. Reverse sensitivity effects</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.2.</li> <li>ii. The potential for reverse sensitivity will be avoided or, if avoidance is not practicable, adequately mitigated. (Policy 18.2.2.X).</li> </ul>
	<p>b. Effects on the safety and efficiency of the transport network</p>	<p>See Rule 6.11.</p>
	<p>c. Effects on accessibility</p>	<p>See Rule 6.11.</p>

## **Rule 18.11 Assessment of Discretionary Activities**

### **Rule 18.11.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. With respect to section 104(2) of the RMA, Council will not consider retail as a permitted activity in scheduled heritage buildings as part of the permitted baseline in considering the effects of discretionary activities in the Warehouse Precinct Zone.
3. Rules 18.11.2 - 18.11.4 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
4. Rules 18.11.2 - 18.11.4 apply as follows:
  - a. Rule 18.11.2 applies to all land use discretionary activities;
  - b. Rule 18.11.3 applies to discretionary land use activities; and
  - c. Rule 18.11.4 applies to discretionary performance standard contraventions.
5. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 18.11.2 Assessment of all discretionary activities

Activity	Guidance on the assessment of resource consents
<p>1. All discretionary land use activities listed below</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. The activity does not detract from, or preferably contributes to, the strategic directions objectives, including, but not limited to, those related to:               <ul style="list-style-type: none"> <li>i. Objective 2.3.2, policies 2.3.2.1 - 2.3.2.4</li> <li>ii. Objective 2.4.3, policies 2.4.3.1 - 2.4.3.4</li> </ul> </li> <li>b. Objective 14.2.1</li> <li>c. Objective 18.2.3</li> <li>d. Avoid land use activities (including stand-alone car parking) that require buildings or site design that is incompatible with:               <ul style="list-style-type: none"> <li>i. the high level of pedestrian streetscape amenity expected for the location in a <b>primary pedestrian street frontage mapped area</b> and <b>secondary pedestrian street frontage mapped area</b>; and</li> <li>ii. the higher level of urban neighbourhood amenity anticipated in the HE, SSYP and WP zones (18.2.3.9).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application:</i></p> <ul style="list-style-type: none"> <li>e. For discretionary land use activities, whether any associated buildings or structures meet relevant development performance standards, or otherwise achieve the relevant policies for development (see rules 18.9 and 18.12.5 for performance standard contraventions).</li> <li>f. All relevant land use performance standards are met, including noise and light spill standards.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>g. In assessing the significance of effects, consideration will be given to:               <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>h. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3 and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> </ul>

### 18.11.3 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
1. Ancillary licensed premises (NEC/NECC)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 18.2.1</li> <li>b. Adverse effects on the amenity of adjacent residential activities and the surrounding neighbourhood will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 18.2.2.9).</li> </ul> <p><i>Potential circumstances that may support a consent application:</i></p> <ul style="list-style-type: none"> <li>c. The scale and nature of the activity, including hours of operation, and whether the activity has an on and/or off license, is appropriate for a neighbourhood centre and will reduce the potential for any adverse effects.</li> </ul>
2. Restaurants (PPH, SSYP, CEC, TR, SDLF)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 18.2.1</li> <li>b. The activity is not of a scale or nature that is more appropriate to locate in the CBD, centres, WP or HE because:               <ul style="list-style-type: none"> <li>i. it is unlikely to contribute to the vibrancy and vitality of those zones; and</li> <li>ii. it has specific operational requirements that do not fit with those locations (Policy 18.2.1.17).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>c. The restaurant is a take-away only restaurant that requires easily accessible short term parking.</li> </ul>
3. <ul style="list-style-type: none"> <li>• Food and beverage retail (WP and PPH)</li> <li>• Food and beverage retail more than 500m<sup>2</sup> in gross floor area but no more than 750m<sup>2</sup> in gross floor area (HE)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 18.2.1.</li> <li>b. Food and beverage retail in the WP, HE and PPH zones is of a size, and designed in a manner, to cater to people living or working locally or using the area for recreational purposes (Policy 18.2.1.12).</li> </ul>
4. Restaurant - drive through (PPH and Centres)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 18.2.2</li> <li>b. Objective 18.2.3</li> <li>c. Significant adverse effects on the amenity of existing residential activities will be avoided or mitigated as far as practicable (Policy 18.2.2.4).</li> <li>d. The drive-through component of restaurant - drive through will not be visible or accessed from a <b>primary pedestrian street frontage mapped area</b> (Policy 18.2.1.14.b).</li> </ul>
5. Development associated with discretionary land use activities	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 18.2.3</li> <li>b. Policies 18.2.3.1 - 18.2.3.7</li> </ul>

### 18.11.3 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
6. Visitor accommodation (CEC - South)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 18.2.2</li> <li>b. The potential for reverse sensitivity will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 18.2.2.10)</li> </ul>
7. <ul style="list-style-type: none"> <li>• Early childhood education (CEC - North)</li> <li>• Residential activities (CEC - North)</li> </ul>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objective 18.2.2</li> <li>b. Early childhood education and residential activities are located where their establishment will not constrain (have reverse sensitivity effects on) activities that are provided for in the commercial and mixed use zone (Policy 18.2.2.8).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>c. Outdoor play areas of early childhood centres are protected from external noise through acoustic fencing or other building design measures that reduce the noise received in play areas.</li> </ul>

### 18.11.4 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. Acoustic insulation	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ul>
2. <ul style="list-style-type: none"> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ul>
4. Restaurants ancillary to trade related retail or food and beverage retail activity 1500m <sup>2</sup> or more in gross floor area <ul style="list-style-type: none"> <li>• Location of ancillary restaurants</li> <li>• Maximum gross floor area of restaurants</li> </ul>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objective 18.2.1</li> <li>b. Restaurants service people engaged in the primary activity and are unlikely to attract significant patronage outside this purpose (Policy 18.2.1.18).</li> <li>c. The activity is not of a scale or nature that is more appropriate to locate in the CBD, centres, WP or HE because: <ul style="list-style-type: none"> <li>i. it is unlikely to contribute to the vibrancy and vitality of those zones; and</li> <li>ii. it has specific operational requirements that do not fit with those locations (Policy 18.2.1.17).</li> </ul> </li> </ul>

## Rule 18.12 Assessment of Non-complying Activities

### Rule 18.12.1 Introduction

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. With respect to section 104(2), Council will not consider retail as a permitted activity in scheduled heritage buildings as part of the permitted baseline in considering the effects of non-complying activities in the Warehouse Precinct Zone.
3. Rules 18.12.2 - 18.12.5 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
4. Rules 18.12.2 - 18.12.5 apply as follows:
  - a. Rule 18.12.2 applies to all non-complying activities;
  - b. Rule 18.12.3 applies to non-complying land use activities;
  - c. Rule 18.12.4 applies to non-complying development activities; and
  - d. Rule 18.12.5 applies to non-complying performance standard contraventions.
5. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 18.12.2 Assessment of all non-complying activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying activities, including but not limited to the activities listed below</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. The activity does not detract from, or preferably contributes to, the strategic directions objectives, including, but not limited to, those related to: <ul style="list-style-type: none"> <li>i. Objective 2.3.2, policies 2.3.2.1 - 2.3.2.4</li> <li>ii. Objective 2.4.3, policies 2.4.3.1 - 2.4.3.4</li> </ul> </li> <li>b. The activity supports the purpose of the zone as outlined in Objective 2.3.2 and Objective 18.2.1.</li> <li>c. The proposed activities will achieve objectives 18.2.1, 18.2.2. and 18.2.3.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>d. In assessing the significance of effects, consideration will be given to: <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities.</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> <li>e. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>f. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>g. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>h. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>

### 18.12.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
1. Commercial advertising	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 2.4.1</p> <p>b. Policy 2.4.1.6.c</p>
2. Crematoriums	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 18.2.2, Policy 18.2.2.5</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>b. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</p>
3. Office and retail outside of CBD and centres, where non-complying	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 2.3.2</p> <p>b. Objective 18.2.1, Policy 18.2.1.3</p>
4. Industry in SSYP	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 18.2.1, Policy 18.2.1.13</p>
5. Service stations, restaurant drive-through, yard-based retail in CBD, WP, SSYP and HE zones.	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 18.2.1, Policy 18.2.1.14</p> <p>b. Objective 18.2.2, Policy 18.2.2.4</p> <p>c. Objective 18.2.3, Policy 18.2.3.9</p>
6. Conference, meeting and function, entertainment and exhibition (PPH, SSYP, CEC, TR, SDLF)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 18.2.1, Policy 18.2.1.16</p>
7. <ul style="list-style-type: none"> <li>• Early childhood education and residential activities (CEC - South, SDLF and TR)</li> <li>• Visitor accommodation (TR, SDLF)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 18.2.2, Policy 18.2.2.6</p>
8. <ul style="list-style-type: none"> <li>• Cemeteries</li> <li>• Landfills</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</p>
9. Yard-based retail (CBD, SSYP, HE, WP)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 18.2.1, Policy 18.2.1.3</p>
10. In a <b>hazard facility mapped area</b> , bulk fuel storage facilities sensitive activities	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and Policy 9.2.2.15 and the risks to people from an emergency event occurring at a hazard facility.</p>

### 18.12.4 Assessment of non-complying development activities

Activity	Guidance on the assessment of resource consents
1. Demolition of a protected part of a scheduled heritage building or scheduled heritage structure	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1 and effects on heritage values.
X. In the <b>Campus mapped area</b> north of Albany Street: • Maximum and minimum height (Rule 18.6.5.2.a.viii.X)	<i>Relevant objectives and policies (priority considerations):</i> a. Objective 18.2.2, Policy 18.2.3.X.  <i>Related strategic directions:</i> b. Objective 2.3.1, Policy 2.3.1.6. c. Objective 2.4.1, Policy 2.4.1.5.

### 18.12.5 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>Light spill - where the limit is exceeded by greater than 25%</li> <li>Noise - where the limit is exceeded by 5bD LAeq (15 min) or more</li> <li>Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2, and effects related to public health and safety.
2. <ul style="list-style-type: none"> <li>Setback from National Grid (buildings, structures, city-wide activities, and National Grid sensitive activities) (Rule 5.6.1.1)</li> <li>Setback from National Grid (subdivision activities) (Rule 18.7.X)</li> </ul>	<i>Relevant guidance from other sections:</i> a. See Section 5.10 for guidance on the assessment of resource consents in relation to Objective 5.2.X and effects related to the operation, maintenance, upgrading and development of the National Grid.
3. Location and screening of car parking	<i>Relevant objectives and policies (priority considerations):</i> a. Objective 18.2.3 b. Policies 18.2.3.8 and 18.2.3.9  <i>Relevant guidance from other sections (priority considerations):</i> c. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.3 and effects on heritage streetscape character.
4. Harbourside Edge Zone Standards (Rule 18.6.17.3) - walkway location	<i>Relevant objectives and policies (priority considerations):</i> a. Objective 18.2.3 b. Policy 18.2.3.5.a
5. Location of restaurant drive-through and service stations (Rule 18.5.4.3)	<i>Relevant objectives and policies (priority considerations):</i> a. Objective 18.2.1 b. Policy 18.2.1.14

### 18.12.5 Assessment of non-complying performance standard contraventions

Performance standard		Guidance on the assessment of resource consents
6.	<p>Along a <b>primary pedestrian street frontage mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Access to loading areas (Rule 6.6.2.5.b)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Rule 6.13 for guidance on the assessment of resource consents in relation to Objective 6.2.4 and effects on the safety and efficient operation of the transport network.</p>
7.	<p>Maximum gross floor area of office activity in the Harbourside Edge Zone</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 2.3.2</p> <p>b. Objective 18.2.1, policies 18.2.1.2, 18.2.1.3</p>
9.	<p>Parking, loading and access standards (Rule 18.6.14.2) - new vehicle accesses on a <b>primary pedestrian street frontage mapped area</b></p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 18.2.3</p> <p>b. Policies 18.2.3.2</p>
10.	<p>In a <b>dune system mapped area</b> or <b>swale mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Hazard exclusion areas (except Rural Centre Zone in a <b>swale mapped area</b>)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risk from natural hazards.</p>

## 19. Industrial Zones

### 19.1 Introduction

Industrial activities make an important contribution to the economic well-being of Dunedin. In order to be able to operate effectively, industrial activities have particular requirements including adequate land and access to raw materials and markets. However, these activities can create off-site effects such as noise, smell, and heavy traffic movements that need to be managed under the RMA.

Industrial zoned land is spread throughout the City, including in the following areas:

- Ravensbourne Road;
- State Highway 88;
- Dunedin Wharf (inner city Port);
- Strathallan Street, Portobello Road, Portsmouth Drive;
- Hillside Road;
- Kaikorai Valley Road and Donald Street;
- Burnside Corner;
- Fairfield;
- Abbotsford; and
- Mosgiel.

The inner city Port area, like Port Chalmers, is recognised as an important city gateway. As a key transportation route, the inner city Port is important for both economic and social prosperity. The inner city Port area has been included in the Industrial Port Zone. The intent of the Industrial Port Zone is to specifically recognise and provide for the needs of the inner city Port and its associated activities.

The key resource management issues that are being experienced or are anticipated in industrial zones are:

- Reverse sensitivity due to off-site effects such as noise, odour (managed by Otago Regional Council), heavy traffic movements, and the interaction between industrial activities and adjacent activities also needs to be managed under the RMA. Often the extent of these effects is such that physical separation is required between industrial activities and more sensitive activities.
- Threats to the availability and affordability of industrial land from the encroachment of non industrial activities (particularly retail and residential activities) into industrial zoned land. An example of this is the development of the former industrial zoned land adjoining Andersons Bay Road into large format retail, car yards and other commercial activities. The use of industrial zoned land for retail and residential activities reduces the availability, and increases the value, of industrial zoned land and consequently reduces the potential for industrial activities to be able to successfully operate in these locations. Such encroachment also exacerbates potential reverse sensitivity issues. For this reason, one of the primary focusses of the Industrial Zone is the protection of industrial zoned land for industrial activities.

In response to these issues, the Plan provisions propose to protect the existing clusters of industrial zoning, including areas near the centre city in order to take advantage of economies of scale and connectivity, while identifying new industrial land in strategic locations.

The Plan provides for all industrial activities to occur in the Industrial Zone and Industrial Port Zone, including industry, industrial ancillary tourism, rural contractor and transport depots and rural industry. A range of activities that are unlikely to create reverse sensitivity issues or compete with industrial activities for land are also provided for in the

Industrial Zone. These activities include port, yard based retail, retail ancillary to industry (with maximum gross floor area requirement), and stand-alone car parking activities. Industry is also broadly defined and includes service activity (repairs and maintenance), transport depots, and laboratories.

Lastly, land that is currently zoned rural but is suitable for future industrial development has been identified and a rule included that will trigger a change from rural to industrial applied to this land.

## 19.2 Objectives and Policies

<b>Objective 19.2.1</b>	
The industrial zones enable and protect industrial and port activities by:	
a. only providing for a very limited range of specified non-industrial or non-port activities; and	
b. ensuring the potential for reverse sensitivity is insignificant.	
Policy 19.2.1.1	Provide for industrial and port activities, and retail ancillary to industry in the industrial zones.
Policy 19.2.1.2	Enable farming and grazing in the <b>Dukes Road North mapped area</b> .
Policy 19.2.1.3	Avoid the establishment of non-industrial or non-port activities, other than those expressly provided for in the industrial zones, unless they would have significant positive effects on the successful operation of surrounding industrial or port activities.
Policy 19.2.1.4	Provide for yard based retail, service stations and emergency services to locate in the industrial zones in recognition that: <ul style="list-style-type: none"> <li>a. these activities often require a built form that cannot meet the requirements within the CBD and centres; and</li> <li>b. they are unlikely to be incompatible with industrial or port activities due to reverse sensitivity; and</li> <li>c. they are unlikely to be significant competing uses of land in an Industrial and Industrial Port zoned area.</li> </ul>
Policy 19.2.1.5	Only allow retail ancillary to industry where it is of a size that: <ul style="list-style-type: none"> <li>a. is clearly subordinate to and part of the operation of the primary industry activity; and</li> <li>b. does not conflict with objectives 2.3.1, 2.3.2 and 2.4.3; and</li> <li>c. does not create adverse effects on other industrial activities, for example from traffic, parking or reverse sensitivity.</li> </ul>
Policy 19.2.1.6	Only allow restaurants and ancillary licensed premises which are designed and operated to service the workers engaged in or associated with industrial or port activities in the area, and are unlikely to attract significant patronage outside of this purpose.
Policy 19.2.1.7	Only allow community and leisure, and sport and recreation, to locate in the industrial zones where these activities have specific operational requirements that mean it is not practical to locate in a recreation, residential or commercial and mixed use zone.
Policy 19.2.1.8	Provide for crematoriums to locate in the industrial zones due to the high degree of cultural and social sensitivity to their operation, and the lack of residential activity in these zones.
Policy 19.2.1.9	Avoid retail activity (excluding retail ancillary to industry and yard based retail activities) due to its high potential to be a significant competing use of land primarily zoned for industrial or port uses, unless it would have significant positive effects on the successful operation of surrounding industrial or port activities.
Policy 19.2.1.10	Only allow industrial ancillary tourism and activities other than industrial activities in the industrial zones where the potential for reverse sensitivity is insignificant.

### Objective 19.2.2

Activities are designed and operated so that:

- a. a reasonable level of amenity is maintained within the industrial zones;
- b. adverse effects on the amenity of adjoining residential, school or recreation zones are minimised as far as practicable; and
- c. a high standard of amenity along identified **amenity route mapped areas** is maintained.

Policy 19.2.2.1	Require buildings to be set back an adequate distance from boundaries which adjoin residential, school or recreation zoned sites to maintain adequate sunlight access to these sites.
Policy 19.2.2.2	Require development along an <b>amenity route mapped area</b> to provide a high level of streetscape amenity by: <ol style="list-style-type: none"> <li>a. providing landscaping of a height and density adequate to maintain or enhance the amenity of the route and to mitigate the visual impact of industrial activities and development; and</li> <li>b. setting back buildings an adequate distance to allow this landscaping.</li> </ol>
Policy 19.2.2.3	Require fencing along boundaries that adjoin residential or school zoned sites to be of an adequate height and design to provide screening and security.
Policy 19.2.2.4	Require materials stored outside, including those which may become airborne due to wind, to be stored in a way that prevents materials escaping and contaminating any off-site area.
Policy 19.2.2.5	Require buildings and structures to be of a height that: <ol style="list-style-type: none"> <li>a. avoids or minimises, as far as practicable, significant adverse effects on views from the central city and Dunedin's inner hill suburbs across the upper harbour toward the Otago Peninsula; and</li> <li>b. avoids or, if avoidance is not practicable, ensures adverse effects from shading and wind tunnelling effects on school, residential, and recreation zoned sites are no more than minor.</li> </ol>
Policy 19.2.2.6	Only allow buildings and structures to exceed the maximum height limit where: <ol style="list-style-type: none"> <li>a. the height is essential to the operation of the industry activity; and</li> <li>b. the visual effects of the height limit exceedance have been minimised as far as practicable.</li> </ol>
Policy 19.2.2.7	Require ancillary signs to be of an appropriate size and number to convey information about the name, location and nature of the business to passing vehicles or pedestrians, and not oversized or too numerous for that purpose.
Policy 19.2.2.8	Only allow crematoriums where they are located to avoid or minimise, as far as practicable, significant adverse effects on the amenity of surrounding residential, school and recreation zoned sites.

## Rules

### Rule 19.3 Activity Status

#### 19.3.1 Rule Location

The activity status tables in rules 19.3.3 to 19.3.6 specify the activity status of land use activities, development activities, and subdivision activities in the industrial zones and relevant overlay zones, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 19.3.2 Activity Status Introduction

1. The tables in rules 19.3.3 to 19.3.5 show the activity status of activities in the industrial zones and the overlay zones indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Additional activity status rules in hazard overlay zones*

7. For the purpose of the hazards provisions, activities are categorised as natural hazards sensitive activities, natural hazards potentially sensitive activities or natural hazards least sensitive activities. The activities that are in each hazards sensitivity category are included in the definitions section and in Section 11.1.
8. In the Hazard 2 (flood) Overlay Zone, the activity statuses in Rule 19.3.6 apply to the following activities:
  - a. natural hazards sensitive activities;
  - b. natural hazards potentially sensitive activities; and
  - c. new buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area.
9. Where the activity status in Rule 19.3.6 differs from that in rules 19.3.3 - 19.3.5, the most restrictive activity status always applies.

10. In addition to the rules in Rule 19.3.6, performance standards for development activities within hazard overlay zones are included in rules 19.3.3 - 19.3.5.
11. Activities in a hazard overlay zone must comply with all of the rules in 19.3.3 - 19.3.6.

### *Performance Standards*

12. Performance standards are listed in the far right column of the activity status tables.
13. Performance standards apply to permitted, controlled, and restricted discretionary activities.
14. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
15. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

### **Legend**

<b>Acronym</b>	<b>Meaning</b>
N/A	Not Applicable
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
Ind	Industrial Zone
IndPort	Industrial Port Zone
Haz1	Hazard 1 Overlay Zones
Haz2	Hazard 2 Overlay Zones
Haz3	Hazard 3 Overlay Zones

### 19.3.3 Land Use Activity Status Table

1.	Performance standards that apply to all land use activities			<ul style="list-style-type: none"> <li>a. Acoustic insulation</li> <li>b. NA</li> <li>c. Light spill</li> <li>d. Noise</li> <li>e. Setback from National Grid (National Grid sensitive activities only)</li> </ul>
Industrial activities		Activity status		Performance standards
		a. Ind	b. IndPort	
2.	Industrial ancillary tourism	RD	RD	<ul style="list-style-type: none"> <li>i. Minimum mobility car parking</li> <li>ii. Minimum vehicle loading</li> </ul>
3.	All other activities in the Industrial activities category	P	P	<ul style="list-style-type: none"> <li>i. Minimum mobility car parking</li> <li>ii. Minimum vehicle loading</li> </ul>
Major facility activities		a. Ind	b. IndPort	Performance standards
4.	Crematoriums outside a <b>hazard facility mapped area</b>	RD	RD	i. Minimum mobility car parking
X.	Crematoriums within a <b>hazard facility mapped area</b>	NC	NC	
5.	Emergency services outside a <b>hazard facility mapped area</b>	P	P	i. Minimum mobility car parking
Y.	Emergency services within a <b>hazard facility mapped area</b>	NC	NC	
6.	Port	P	P	
7.	All other activities in the major facility activities category	NC	NC	
Commercial activities		a. Ind	b. IndPort	Performance standards
8.	Ancillary licensed premises	RD	RD	
9.	Yard based retail	P	P	i. Minimum mobility car parking
10.	Retail ancillary to industry	P	P	<ul style="list-style-type: none"> <li>i. Maximum gross floor area</li> <li>ii. Minimum mobility car parking</li> </ul>
11.	Service stations other than self-service fuel stations	RD	RD	<ul style="list-style-type: none"> <li>i. Service station standards</li> <li>ii. Minimum mobility car parking</li> </ul>
12.	Self-service fuel stations	P	P	<ul style="list-style-type: none"> <li>i. Service station standards</li> <li>ii. Minimum mobility car parking</li> </ul>

13.	Restaurants	P	P	i. Hours of operation ii. Maximum gross floor area iii. Minimum mobility car parking
14.	Stand-alone car parking	P	P	
15.	Commercial advertising	NC	NC	
16.	All other activities in the commercial activities category	NC	NC	
Community activities		a. Ind	b. IndPort	Performance standards
17.	Community and leisure	NC	NC	
18.	Sport and recreation	RD	RD	
19.	Conservation	P	P	
20.	Early childhood education	NC	NC	
Rural activities		a. Ind	b. IndPort	Performance standards
21.	Farming in <b>Dukes Road North mapped area</b>	P	N/A	
22.	Farming in all other areas	NC	NC	
23.	Grazing in <b>Dukes Road North mapped area</b>	P	N/A	
24.	All other activities in the rural activities category	NC	NC	
Residential activities		a. Ind	b. IndPort	Performance standards
25.	All activities in the residential activities category	NC	NC	

#### **Note 19.3.3X- Other requirements outside of the District Plan**

- Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

#### **19.3.4 Development Activity Status Table**

1.	Performance standards that apply to all development activities	a. Boundary treatments b. Setback from scheduled tree c. Natural Hazards Performance Standards
----	--	--

2.	Performance standards that apply to all buildings and structures activities			<ul style="list-style-type: none"> <li>a. Boundary setbacks</li> <li>b. Maximum height</li> <li>c. Height in relation to boundary</li> <li>d. Number, location and design of ancillary signs</li> <li>e. Setback from coast and water bodies</li> <li>f. Setback from National Grid <ul style="list-style-type: none"> <li>Y. Setback from Critical Electricity Distribution Infrastructure</li> <li>X. Setback from designated rail corridor</li> </ul> </li> </ul>
Buildings and structures activities (excluding activities affecting a protected part of a scheduled heritage building or scheduled heritage structure. See rows 4 - 11)		Activity status		Performance standards
		a. Ind	b. IndPort	
3.	Buildings and structures activities	P	P	
Buildings and structures activities that affect a protected part of a scheduled heritage building or scheduled heritage structure		a. Ind	b. IndPort	Performance standards
4.	Repairs and maintenance	P	P	
5.	Restoration of a building or structure that has a Heritage New Zealand Category 1 listing as detailed in Appendix A1.1	C	C	
6.	Restoration of all other scheduled heritage buildings and structures	P	P	
7.	Earthquake strengthening where external features only are protected	C	C	i. Materials and design
8.	Signs attached to buildings or structures	P	P	
9.	All other additions and alterations	RD	RD	
10.	Demolition	NC	NC	
11.	Removal for relocation	RD	RD	
Development activities on a scheduled heritage site, where visible from an adjoining public place or a public place within the heritage site		a. Ind	b. IndPort	Performance standards
12.	New structures no more than 2.5m high or 2m <sup>2</sup> footprint	P	P	
13.	All other new structures	RD	RD	
14.	New buildings	RD	RD	
15.	Parking, loading and access	RD	RD	i. Parking, loading and access standards

Site development activities in all areas (except as covered by rows 12 - 15 above)		a. Ind	b. IndPort	Performance standards
16.	Parking, loading and access	P	P	i. Parking, loading and access standards
17.	New or additions to parking areas that result in 50 or more new parking spaces.	RD	RD	i. Parking, loading and access standards
18.	Outdoor storage	P	P	i. Maximum height ii. Location of outdoor storage
19.	Storage and use of hazardous substances	P	P	i. Hazardous substances quantity limits and storage requirements ii. Setback from coast and water bodies
20.	Vegetation clearance	P	P	i. Vegetation clearance standards
21.	All other site development activities	P	P	

### Note 19.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

### 19.3.5 Subdivision Activity Status Table

Subdivision activities		Activity status		Performance standards
		a. Ind	b. IndPort	
1.	Subdivision activities	RD	RD	i. Access ii. Esplanade reserves and strips iii. Firefighting iv. Service connections v. Shape X. Setback from National Grid (subdivision activities)

### Note 19.3.5A - Other RMA considerations

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

### Note 19.3.5X - Other relevant District Plan provisions

1. Additional matters of discretion apply to the subdivision of land within a **Critical Electricity Distribution Infrastructure Corridor mapped area**. These are set out in Rule 19.10.6.
2. Additional matters of discretion apply to the subdivision of land within a **National Grid Subdivision Corridor mapped area**. These are set out in Rule 19.10.6.

### 19.3.6 Activity Status in the Hazard 2 (flood) Overlay Zone

Activity	Activity status
Land Use Activities	
1. Natural hazards sensitive activities	RD
2. Natural hazards potentially sensitive activities	RD

Activity	Activity status
Development Activities	
3. New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m <sup>2</sup> of new ground floor area	RD

### **Note 19.3.6A - Other RMA considerations**

X Section 10 of the RMA (existing use rights) provides for land to be used in a manner that contravenes a rule in a district plan if the use was lawfully established before the rule became operative or the proposed plan was notified, and the effects of the use are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified.

2. Accordingly, activities that are shown to have effects that are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified will not usually trigger the provisions for natural hazards sensitive activities and natural hazards potentially sensitive activities in Rule 19.3.6. However, Council will consider specific circumstances associated with the development and how this affects the character, intensity and scale of effects from the land use activity.

### **Note 19.3.6B - Other requirements outside the District Plan**

1. Clause E1 – Surface water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework (including earthworks) in relation to managing surface water and effects on other property.
2. Buildings and structures that will divert water may require resource consent under the Otago Regional Plan: Water.
3. If buildings and structures affect the flow of water, this effect is also subject to the common law principle of natural servitude.

## Rule 19.4 Notification

1. Applications for resource consent for the following activities will be considered without the need to obtain a written approval of affected persons and will not be notified in accordance with section 95A or section 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:
  1. earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is not listed by Heritage New Zealand.
2. With respect to resource consent applications, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided for the following:
  1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand;
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is listed by Heritage New Zealand; and
  3. contravention of the archaeological sites performance standard (Rule 13.3.3).
3. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided:
  1. crematoriums;
  2. all restricted discretionary activities that list 'effects on cultural values of Manawhenua' as a matter for discretion; and
  3. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat in Appendix A4.
4. With respect to sections 95D(b) and 95E(2)(a), Council will not use the performance standard for maximum height as a permitted baseline in considering the effects of any development activity associated with a discretionary or non-complying activity in the industrial zones.
5. With respect to resource consent applications for activities in **swale mapped areas**, the Otago Regional Council will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided.
6. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## Rule 19.5 Land Use Performance Standards

### 19.5.1 Acoustic Insulation

1. Noise sensitive activities in the following areas must comply with Rule 9.3.1:
  - a. port noise control mapped area;
  - b. within 40m of a state highway;
  - c. within 40m of the Taieri Aerodrome Zone; and
  - d. within 70m of a railway line.

### 19.5.3 Hours of Operation

1. Restaurants must not be open before 6am or after 6pm.
2. Activities that contravene this performance standard are restricted discretionary activities.

### 19.5.4 Light Spill

Land use activities must comply with Rule 9.3.5.

### 19.5.5 Maximum Gross Floor Area

1. The gross floor area used for retail ancillary to industry activity must not exceed 10% of the gross floor area of the premises.
2. The maximum gross floor area for restaurants is 50m<sup>2</sup>.
3. Any retail ancillary to industry activity that contravenes the performance standard for maximum gross floor area is a non-complying activity.
4. Any restaurants that contravene the performance standard for maximum gross floor area are a restricted discretionary activity.

### 19.5.6 Minimum Mobility Car Parking

1. NA.

Activity	Minimum car parking rate
a-h. <i>Removed to comply with the National Policy Statement on Urban Development 2020 requirement to remove minimum car parking requirements. Rule numbering to be corrected at a later date.</i>	

2. Land use activities must provide on-site mobility parking spaces as follows:

Total number of parking spaces provided	Minimum number of these that must be mobility parking spaces
i. 1 - 20	1 parking space
ii. 21 - 50	2 parking spaces
iii. For every additional 50 parking spaces	1 additional parking space

3. Required parking spaces must be designed and constructed to comply with Rule 6.6.1.1.e.iii.

4. NA.
5. Parking spaces may be shared between land use activities (i.e. the same parking spaces may be used to fulfil the minimum mobility parking requirement for more than one land use activity), as long as the hours of operation of the land use activities do not overlap.
6. NA.
7. NA.
8. Activities that contravene this performance standard are restricted discretionary activities.

**Note 19.5.6A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

**19.5.7 Minimum Vehicle Loading**

1. Land use activities must provide on-site vehicle loading and manoeuvring as follows:

Activity		Minimum vehicle loading
a.	Industry	1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10).
b.	Industrial ancillary tourism	1 loading space to accommodate a coach on any site greater than 400m <sup>2</sup> which has a vehicle crossing onto a rural highway or urban connector (See Appendix 6B, Figure 6B.12).

2. Required vehicle loading must be designed and constructed to comply with Rule 6.6.2.
3. Activities that contravene this performance standard are restricted discretionary activities.

**19.5.8 Noise**

Land use activities must comply with Rule 9.3.6.

**19.5.9 Service Station Standards**

Service stations must comply with Rule 6.7.1.

**19.5.10 Setback from National Grid**

National Grid sensitive activities must comply with Rule 5.6.1.1.

## Rule 19.6 Development Performance Standards

### 19.6.1 Boundary Treatments and Other Landscaping

1. New buildings, additions and alterations that increase the gross floor area of a building, demolition or removal for relocation of buildings and new or additions to parking areas must provide a landscaping area with a minimum width of 3m along the full length of any road frontage that is identified as an **amenity route mapped area** (except for where existing or permitted vehicle access is provided), except that this standard does not apply where:
  - a. The building subject to demolition or removal for relocation is not visible from the street frontage.
2. Landscaping areas must:
  - a. be planted with a mix of trees and shrubs and/or ground cover plants that achieves a total coverage of the ground area in planting (when mature), except for 10% of the area, which may be used for pedestrian paths;
  - b. have an average of one tree for every 5m of frontage;
  - c. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - d. be designed to allow surface water run-off from surrounding areas to enter;
  - e. be protected by a physical barrier that prevents cars damaging plants;
  - f. for required trees, use trees that are at least 1.5m high at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting;
  - g. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and
  - h. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.
3. Any road boundary fences provided must be placed on the property side of any required road frontage landscaping required by this rule.
4. Fencing must be provided along any boundaries which adjoin a residential or school zoned property. Fencing must:
  - a. be constructed from solid timber paling;
  - b. have vertical palings which are butted together;
  - c. only have palings visible from the residential zone (have posts and rails on the Industrial Zone side); and
  - d. be a minimum of 1.8m high.
5. Activities that contravene this performance standard are restricted discretionary activities.

#### Note 19.6.1A - Other requirements outside of the District Plan

1. The Dunedin City Council Commercial Use of Footpaths Policy applies to all objects placed on the footpath or suspended over it up to a height of 2.6m. Contact customer services on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.

### 19.6.2 Natural Hazards Performance Standards

#### 19.6.2.1 Hazard exclusion areas

New buildings and structures, and additions and alterations located in a **swale mapped area** must comply with Rule 11.3.1.1.

19.6.2.2 Maximum area of vegetation clearance in the hazard overlay zones

Vegetation clearance in the Hazard 2 (land instability) Overlay Zone must comply with Rule 11.3.2.

### 19.6.2.3 Relocatable buildings

New buildings containing residential activity on the ground floor in the Hazard 3 (coastal) Overlay Zone must comply with Rule 11.3.3.

### 19.6.3 Hazardous Substances Quantity Limits and Storage Requirements

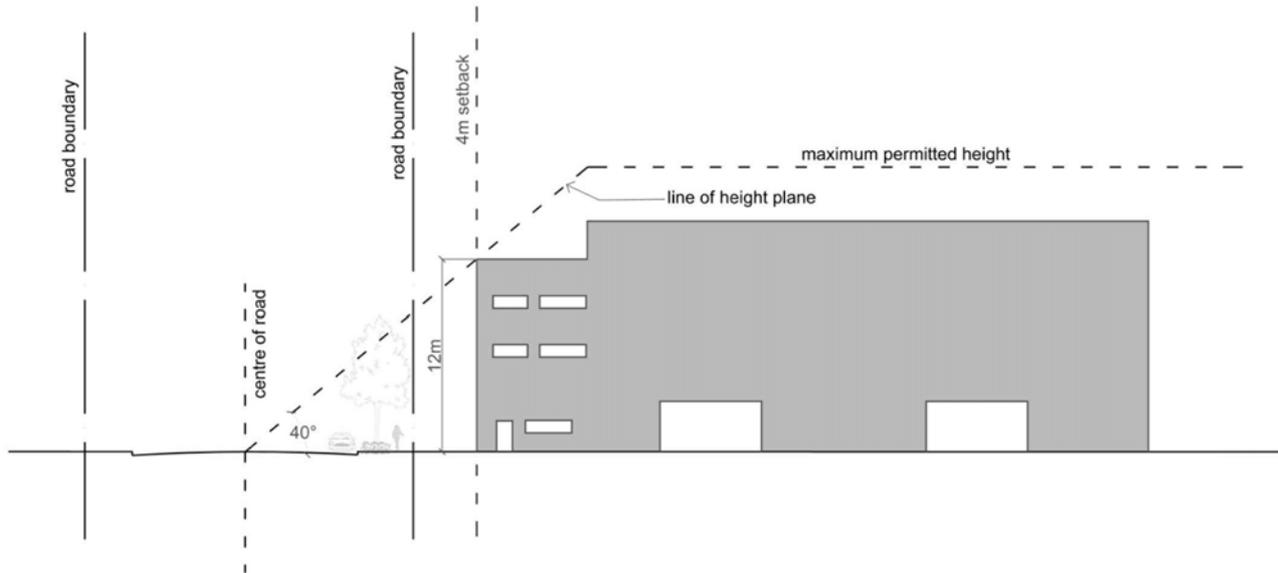

The storage and use of hazardous substances must comply with Rule 9.3.4.

### 19.6.4 Height

#### 19.6.4.1 Height in relation to boundary

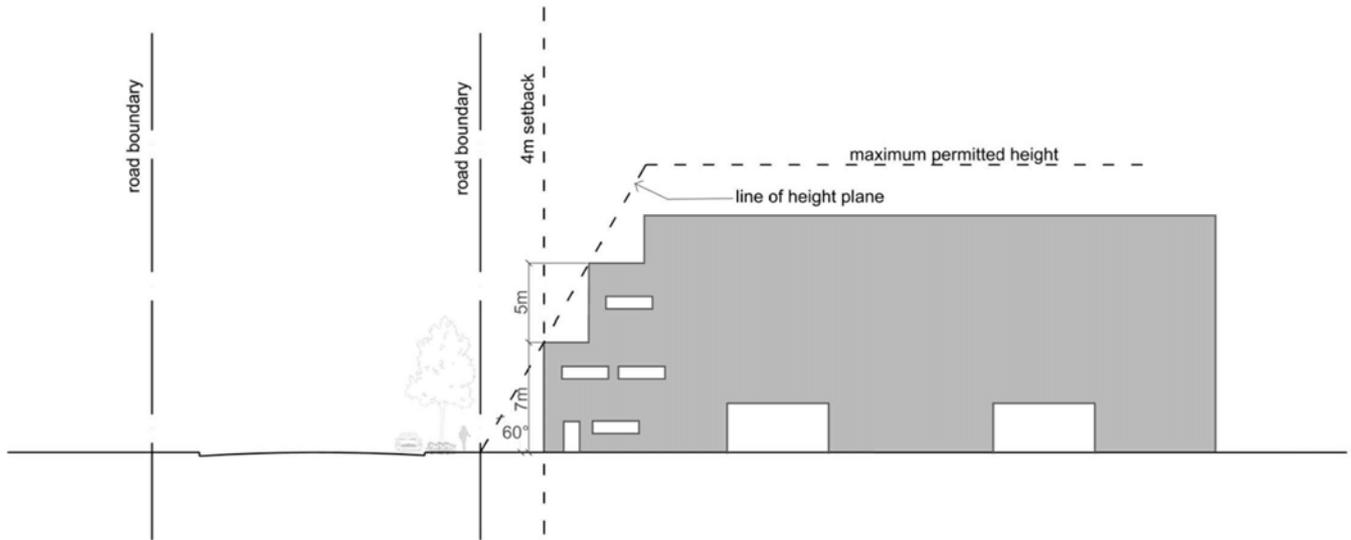

- a. New buildings and additions and alterations to buildings on sites that adjoin a residential zone along their side or rear boundary must comply with the height in relation to boundary performance standard of that residential zone, along the adjoining boundary (see Rule 15.6.6.1);
- b. New buildings and additions and alterations to buildings on sites that adjoin the Recreation Zone along their side or rear boundary must comply with the height in relation to boundary performance standard of the Recreation Zone, along the adjoining boundary (see Rule 20.6.4.1);
- c. New buildings and additions and alterations to buildings along the **amenity route mapped area** on Burns Street must not protrude through a plane rising at an angle of 40 degrees measured from ground level at the centreline of the road (see Figure 19.6.4.1A).
- d. New buildings and additions and alterations to buildings along the **amenity route mapped area** in all other locations must not protrude through a plane rising at an angle of 60 degrees measured from ground level along the road boundary (see Figure 19.6.4.1B).
- e. Rooftop structures are exempt from the performance standard for height in relation to boundary.
- f. Activities that contravene this performance standard are restricted discretionary activities.

Figure 19.6.4.1A: Height in relation to boundary

Example 1. 40 degree height plane measured from the road centre.

Figure 19.6.4.1B: Height in relation to boundary

Example 2. 60 degree height plane measured from the property road boundary.

#### 19.6.4.2 Maximum height

- a. The maximum height of new buildings and structures, additions and alterations, and outdoor storage, including the temporary storage of shipping containers must not exceed the following above ground level:

Height area		Maximum height
i.	Industrial Port Zone	25m
ii.	<b>Ravensbourne height mapped area</b> (see Figure 19.6.4.2A)	20m
iii.	<b>Cerebos Greggs height mapped area</b> (see Figure 19.6.4.2B)	33m
iv.	<b>Parry Street East height mapped area</b> (see Figure 19.6.4.2A)	25m
v.	All other areas in the Industrial Zone	18m

- vi. Except, rooftop structures and freestanding chimneys as part of industry activity are exempt from the performance standard for height provided they do not exceed the maximum height limit for all other building and structures by 5m.
- vii. New buildings and structures, and additions and alterations must not protrude through the height restriction for the Taieri Aerodrome approach and take-off fans shown on the **Taieri Aerodrome flight fan mapped area**.
- b. Activities that contravene this performance standard are restricted discretionary activities.

Figure 19.6.4.2A: Parry Street East and Ravensbourne height mapped area

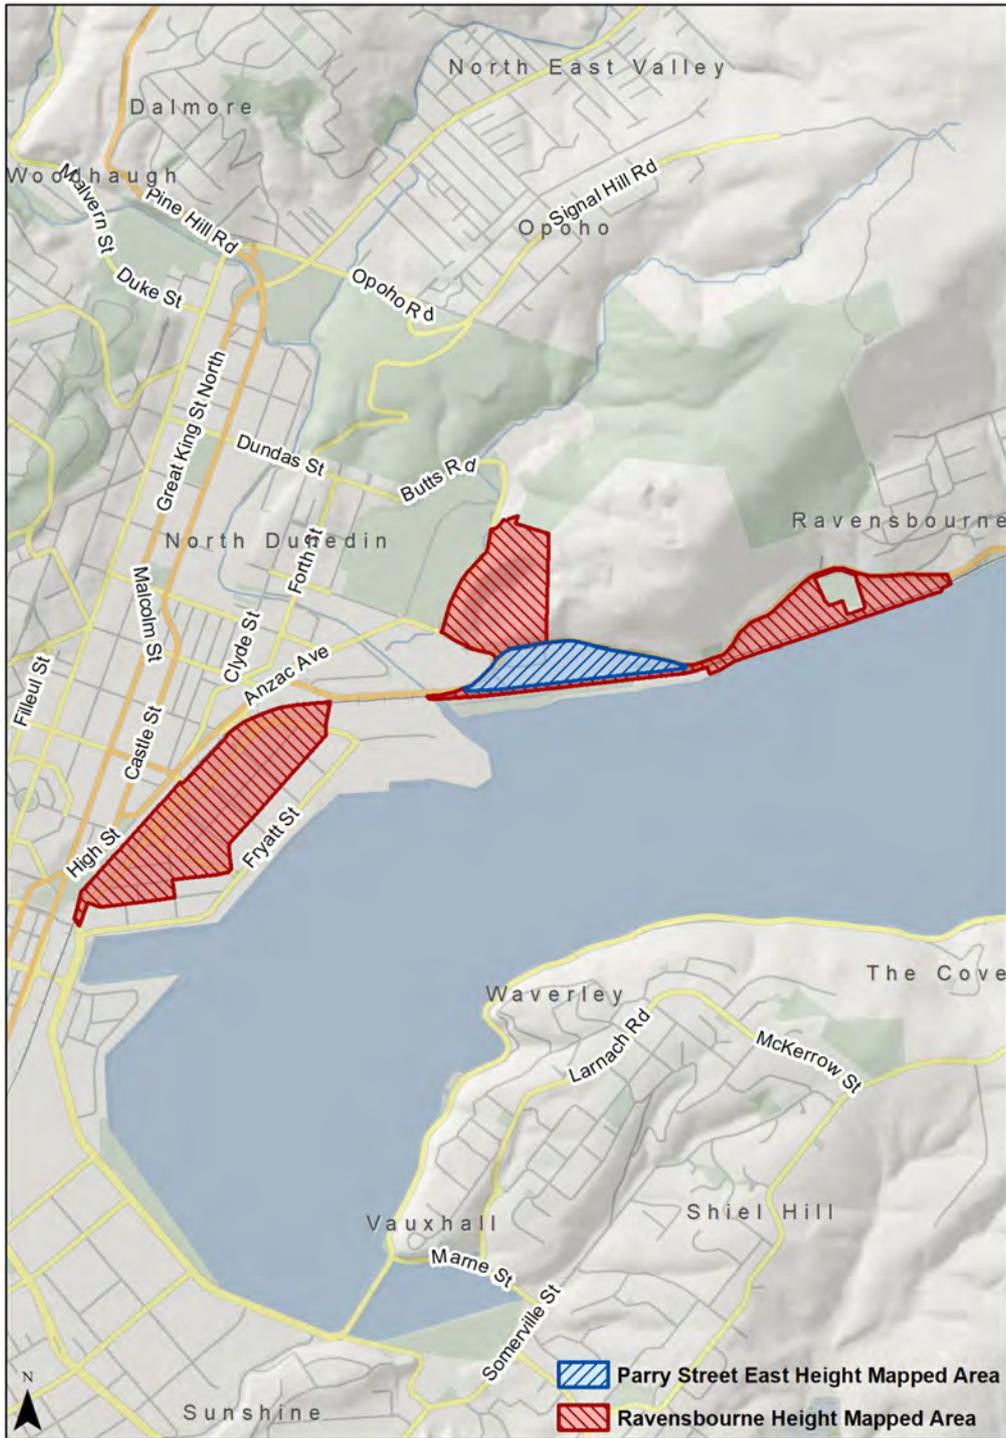

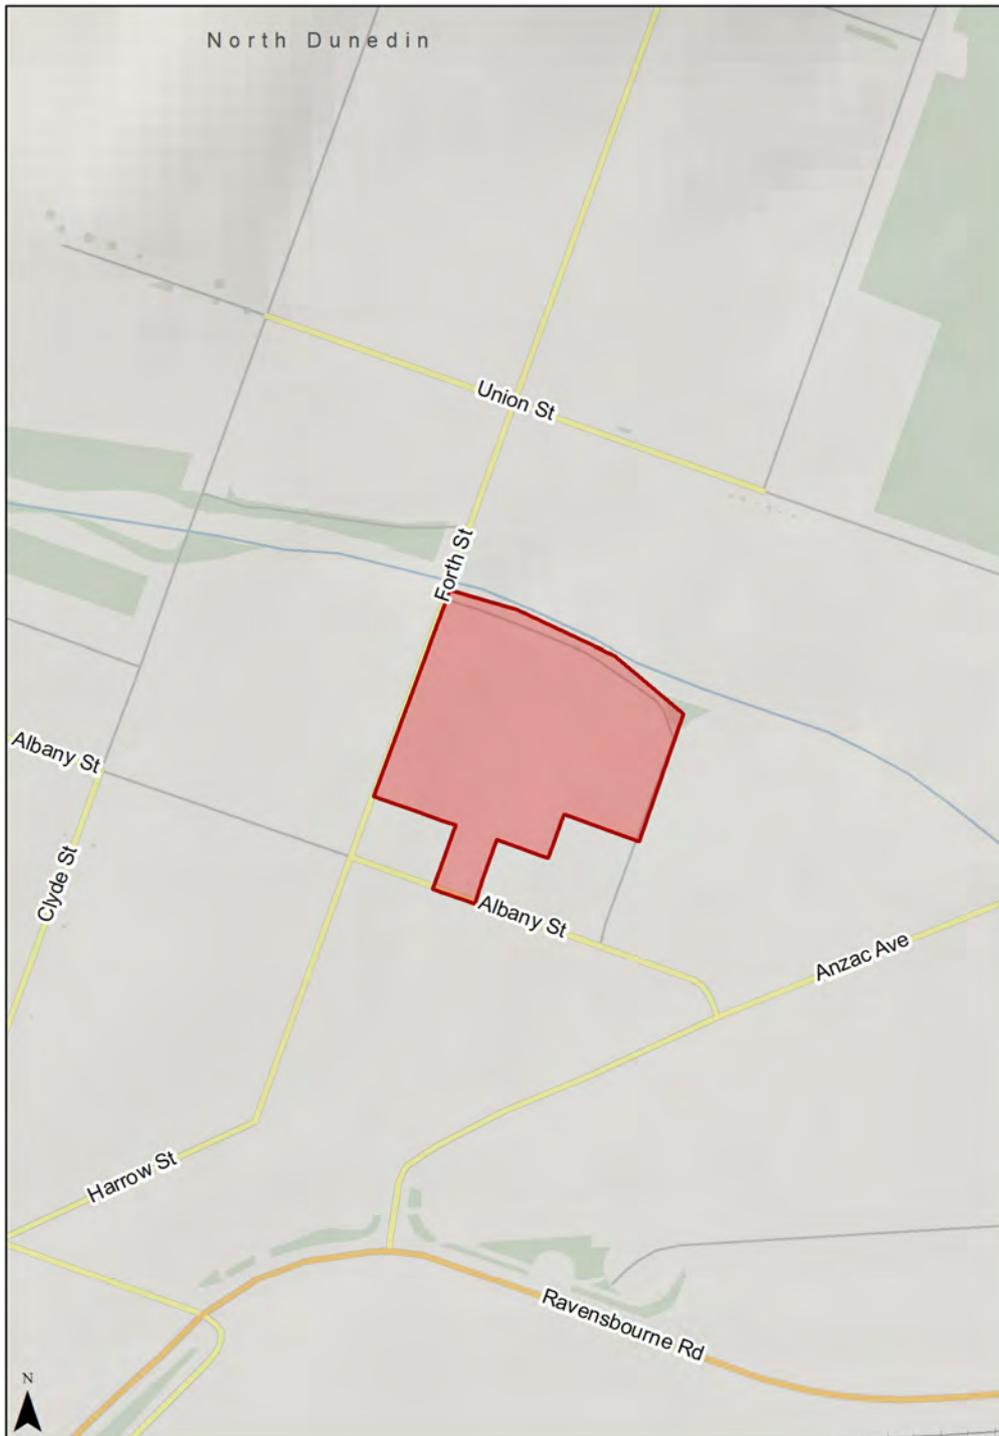

Figure 19.6.4.2B: Cerebos Gregg's height mapped area

### 19.6.5 Materials and Design

Earthquake strengthening must comply with Rule 13.3.2.

### 19.6.6 Number, Location and Design of Ancillary Signs

#### 19.6.6.1 General

- a. Signs visible from a public place must meet all of the following performance standards, except that regulatory signs, directional signs and warning signs that do not exceed 0.25m<sup>2</sup> are exempt from these standards.
- b. Signs must also comply with:

- i. Rule 6.7.2 where located on or above the footpath; and
  - ii. Rule 6.7.3 where visible from a road.
- c. Signs higher than 4m above ground level must only display the business name.
- d. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### 19.6.6.2 Signs attached to buildings

- a. The height, above ground level, at the highest point of any sign attached to a building is 8m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs attached flat against a building:
  - i. must not cumulatively exceed 15% of the total wall area (excluding windows) that face the street frontage, or 8m<sup>2</sup>, whichever is lesser; and
  - ii. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.
- e. If attached on the underside of a verandah or protruding from a building façade, signs must:
  - i. where attached to the façade of a building, not protrude more than 1.5m from the façade;
  - ii. have a maximum area per display face of 2m<sup>2</sup>;
  - iii. have a maximum of 2 display faces;
  - iv. not exceed 1 sign per 15m of street frontage, for a site with a single premise, or 1 per 7.5m, for a site with multiple premises; and
  - v. not exceed a total of 3 signs per building.

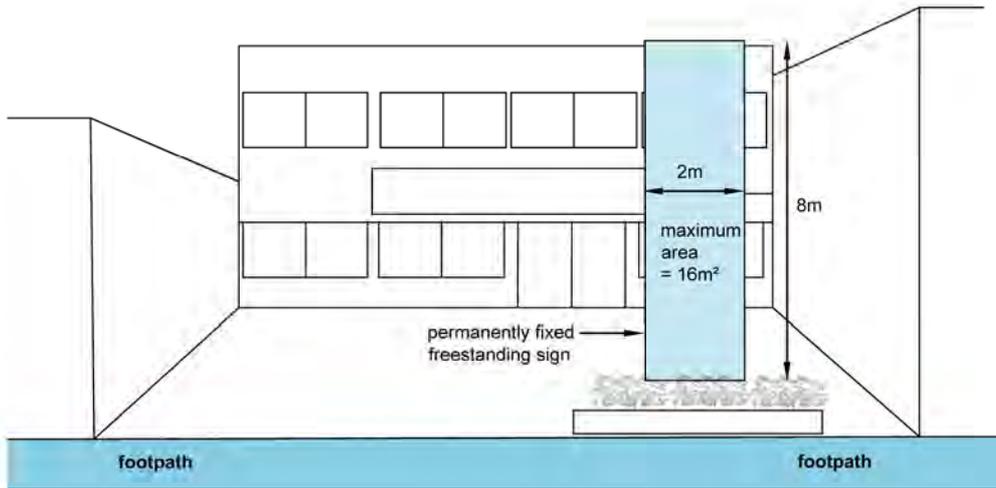

### 19.6.6.3 Freestanding signs

- a. The maximum number of freestanding signs is:
  - i. 2 per site or 1 per 50m of street frontage, whichever is the lesser, for permanently fixed freestanding signs; and
  - ii. 1 per 15m of street frontage for portable freestanding signs.
- b. The maximum dimensions of freestanding signs are:
  - i. maximum height of 8m for permanently fixed freestanding signs;
  - ii. maximum height of 4m for portable freestanding signs;
  - iii. maximum area of 16m<sup>2</sup> per display face for permanently fixed freestanding signs;
  - iv. maximum area of 8m<sup>2</sup> per display face for portable freestanding signs;
  - v. maximum width of 2m; and
  - vi. maximum depth of 400mm.
- c. Portable freestanding signs must not be located on the road reserve.
- d. Freestanding signs must:
  - i. not obstruct driveways, parking or loading areas; and
  - ii. be positioned entirely within site boundaries, except:
    1. a flag sign may project a maximum of 1.5m over a footpath if the flag sign is located at least 2.5m, at its lowest point, above the footpath.

#### **Note 19.6.6A - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial use of Footpaths Policy
  - c. Dunedin City Council Roadway Bylaw
  - d. Dunedin City Council Traffic and Parking Bylaw

Figure 19.6.6.3A: Signs in industrial zones

### 19.6.7 Parking, Loading and Access Standards

Parking, loading and access must comply with Rule 6.6.

### 19.6.8 Location of Outdoor Storage

1. Materials stored outside must be stored in a way that prevents them contaminating any off-site area.
2. Outdoor storage must not encroach into required parking, loading or landscaping areas.
3. Activities that contravene this performance standard are restricted discretionary activities.

### 19.6.9 Setbacks

#### 19.6.9.1 Boundary setbacks

- a. New buildings and structures, and additions and alterations must have a minimum setback as follows:

Location		Setback distance
i.	From a site boundary that adjoins a residential, school or recreation zone	5m
ii.	From a boundary along the Burns Street <b>amenity route mapped area</b>	3m
iii.	From a boundary along all other <b>amenity route mapped areas</b>	4m

- iv. Except, fences and ancillary signs are exempt from this standard.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 19.6.9.2 Setback from scheduled tree

New buildings and structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2.

#### 19.6.9.3 Setback from National Grid

New buildings and structures, and additions and alterations must comply with Rule 5.6.1.1.

#### 19.6.9.4 Setback from coast and water bodies

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

#### 19.6.9.X Setback from designated rail corridor

New buildings, new structures and additions and alterations must comply with Rule 6.7.4.

#### 19.6.9.Y Setback from Critical Electricity Distribution Infrastructure

New buildings, new structures and additions and alterations must comply with Rule 5.6.X.1.

### 19.6.10 Vegetation Clearance Standards

#### 19.6.10.1 Maximum area of vegetation clearance (UBMA)

Vegetation clearance in an **urban biodiversity mapped area** (UBMA) must comply with Rule 10.3.2.4.

#### 19.6.10.2 Maximum area of vegetation clearance in a hazard overlay zone

Vegetation clearance in the Hazard 2 (land instability) Overlay Zones must comply with Rule 11.3.2.

## **Rule 19.7 Subdivision Performance Standards**

### **19.7.1 Access**

Subdivision activities must comply with Rule 6.8.1.

### **19.7.2 Esplanade Reserves and Strips**

Subdivision activities must comply with Rule 10.3.1.

### **19.7.3 Firefighting**

Subdivision activities must comply with Rule 9.3.3.

### **19.7.4 Service Connections**

Subdivision activities must comply with Rule 9.3.7.

### **19.7.5 Shape**

1. Each resultant site must be of a size that is large enough to ensure the following performance standards can be met:
  - a. NA;
  - b. setbacks from boundaries, water bodies, scheduled trees; and
  - c. esplanade reserves or strips.
2. Building platforms must have a slope of 12° (1:4.7 or 21%) or less and must:
  - a. not contain scheduled heritage buildings or scheduled heritage structures; or
  - b. not contain right-of-way easements.
  - c. NA.
3. For unreticulated areas, resultant sites must provide for a wastewater disposal area to be located at least 50m from any water body and mean high water springs.
4. Sites created and used solely for the following purposes are exempt from the shape standard:
  - a. Scheduled ASBV or QEII covenant;
  - b. reserve;
  - c. access;
  - d. network utility; or
  - e. road.
5. Subdivision activities that do not meet this standard are restricted discretionary activities.

## 19.7.X Setback from National Grid (Subdivision Activities)

Subdivision activities must comply with Rule 5.6.1.X.

## Rule 19.8 Assessment of Controlled Activities

### Rule 19.8.1 Introduction

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 19.8.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 19.9; and
    - iv. the matters of control become matters of discretion and will be assessed as indicated in this section.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 19.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 19.12; and
    - iii. the assessment guidance in this section will also be considered.

### 19.8.2 Assessment of controlled development activities

Activity	Matters of control	Guidance on the assessment of resource consents
1. Affecting a scheduled heritage building or a scheduled heritage structure: <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected.</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)</li> </ul>	a. Effects on heritage values	See Rule 13.4

## **Rule 19.9 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 19.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 19.9.2 - 19.9.6:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 19.9.2 - 19.9.6 apply as follows:
  - a. Rule 19.9.2 applies to all performance standard contraventions;
  - b. Rule 19.9.3 applies to land use performance standards;
  - c. Rule 19.9.4 applies to development performance standards;
  - d. Rule 19.9.5 applies to subdivision performance standard contraventions; and
  - e. Rule 19.9.6 applies to performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item.

### 19.9.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1. All performance standard contraventions</p>	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. Compliance with the performance standard would be impracticable or create health and safety issues.</li> <li>c. The need to meet other performance standards, or other site specific factors including topography, make meeting the standard impracticable.</li> <li>d. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>e. Non-compliance with the development performance standard would improve the design of the development in a way that would result in positive effects and better achieve identified objectives and policies of the Plan.</li> <li>f. The contravention is necessary for the industry activity to operate or would have significant positive effects on its operation.</li> </ul> <p><i>General assessment criteria:</i></p> <ul style="list-style-type: none"> <li>g. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> </ul>

### 19.9.3 Assessment of land use performance standards

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. <ul style="list-style-type: none"> <li>Hours of operation</li> <li>Maximum gross floor area (restaurants)</li> </ul>	a. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 19.2.1</li> <li>ii. The restaurant is designed and operated to service workers engaged in or associated with industrial activities in the area, and is unlikely to attract significant patronage outside of this purpose (Policy 19.2.1.6).</li> </ul>
3. <ul style="list-style-type: none"> <li>Minimum vehicle loading</li> <li>Service station standards</li> </ul>	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
4. Minimum mobility car parking	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
	b. Effects on accessibility	

#### 19.9.4 Assessment of development performance standards

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Boundary setbacks (boundaries adjoining residential, school or recreation zoned sites)	a. Effects on the character and amenity of sensitive surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 19.2.2</li> <li>ii. Buildings are set back an adequate distance from boundaries which adjoin residential, school or recreation zoned sites to maintain adequate sunlight access to these sites (Policy 19.2.2.1).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The topography of the area means adequate sunlight access will be maintained to the adjacent sites.</li> <li>iv. The affected part of the adjacent site is not utilised by, and will not be used in the future for, a sensitive use.</li> </ul>
2.	Boundary treatments (fencing)	a. Effects on the character and amenity of sensitive surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 19.2.2</li> <li>ii. Fencing along boundaries that adjoin residential sites in the residential zones or sites in the Schools Zone is of an adequate height and design so that it provides screening and security (Policy 19.2.2.3).</li> </ul>
3.	Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5

#### 19.9.4 Assessment of development performance standards

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
4. Height	a. Effects on views across Otago Harbour	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 2.4.1, Policy 2.4.1.4</li> <li>ii. Objective 19.2.2</li> <li>iii. Buildings and structures are of a height that avoids or minimises, as far as practicable, significant adverse effects on views from the central city and Dunedin's inner hill suburbs, across the upper harbour toward the Otago Peninsula (Policy 19.2.2.5.a).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Adverse effects are adequately mitigated by: <ul style="list-style-type: none"> <li>1. natural landforms and features (e.g. cliffs, tall trees on adjacent reserves) that provide a backdrop to the building;</li> <li>2. the topography of the site;</li> <li>3. building design; or</li> <li>4. other neighbouring buildings.</li> </ul> </li> </ul>
	b. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 19.2.2</li> <li>ii. Buildings and structures are of a height that avoids or, if avoidance is not practicable, ensures adverse effects from shading and wind tunnelling effects on school, residential, and recreation zoned sites are no more than minor (Policy 19.2.2.5.b).</li> </ul>
	c. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 19.2.2</li> <li>ii. The height is essential to the operation of the industry activity; and the visual effects of the height limit exceedance have been minimised as far as practicable. (Policy 19.2.2.6).</li> </ul>
	d. Effects on health and safety	See Rule 9.5

#### 19.9.4 Assessment of development performance standards

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
5. Number, location and design of ancillary signs	a. Effects on character and streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 19.2.2</li> <li>ii. Signs are of an appropriate size and number to convey information about the name, location and nature of the business to passing vehicles or pedestrians, and are not oversized or too numerous for that purpose (Policy 19.2.2.7).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Signs will not be visible from outside the zone.</li> </ul>
	b. Effects on the safety and efficiency of the transport network	See Rule 6.10
6. Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
7. Location of outdoor storage	a. Effects on amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 19.2.2</li> <li>ii. Materials stored outside, including those which may become airborne due to wind, are stored in way that prevents materials escaping and contaminating any off-site area (Policy 19.2.2.4).</li> </ul>
8. Setback from coast and water bodies	a. Effects on biodiversity values and natural character of the coast and riparian margins	See Rule 10.5
	b. Effects on public access	See Rule 10.5
	c. Risk from natural hazards	See Rule 11.4
9. Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6
X. Setback from designated rail corridor	a. Effects on the safety and efficiency of the transport network	See Rule 6.10.6

#### 19.9.5 Assessment of subdivision performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
----------------------	-----------------------	---

1.	Access	a. Effects on accessibility	See Rule 6.10
2.	Esplanade reserves and strips	a. Effects on biodiversity values and natural character of the coast and riparian margins	See Rule 10.5
		b. Effects on public access	
3.	Firefighting	a. Effects on health and safety	See Rule 9.5
4.	Service connections	a. Effects on efficiency and affordability of infrastructure	See Rule 9.5

### 19.9.5 Assessment of subdivision performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
5. Shape		<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Subdivisions are designed to ensure any future land use or development is able to meet the performance standards in the zone, or where in a <b>structure plan mapped area</b>, reflects the requirements of the <b>structure plan mapped area</b> performance standards, unless: <ul style="list-style-type: none"> <li>i. a resource consent is approved for a development that does not meet the performance standard and the subdivision is intended for and capable of providing for that approved development; or</li> <li>ii. the resultant site is required for: <ul style="list-style-type: none"> <li>1. Scheduled ASBV; QEII covenant; or</li> <li>2. reserve; or</li> <li>3. access; or</li> <li>4. utility; or</li> <li>5. road (Policy 2.4.1.8).</li> </ul> </li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. Non-compliance with the performance standard for shape will be assessed based on which performance standard(s) the shape of the resultant site does not provide for compliance with. See matters of discretion and assessment rules in relation to performance standard contraventions for: <ul style="list-style-type: none"> <li>i. boundary setbacks;</li> <li>ii. setbacks from water bodies; and</li> <li>iii. setback from scheduled trees.</li> <li>iv. NA.</li> </ul> </li> <li>d. For contravention of the building platform slope part of the shape performance standard (Rule 19.7.5.2), see the matters of discretion and assessment rules in relation to earthworks - large scale (Rule 8A.7.2.1).</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>e. Restrictions or conditions, including by way of consent notice, on land use or development activities allowed on the site.</li> <li>f. A building platform may be required to be registered against the title by way of consent notice.</li> </ul>

### 19.9.6 Assessment of performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>1. In an <b>amenity route mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Boundary setbacks</li> <li>• Boundary treatments - landscaping</li> </ul>	<p>a. Effects on streetscape amenity</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>Objective 19.2.2</li> <li>Development along an <b>amenity route mapped area</b> provides a high level of streetscape amenity by: <ol style="list-style-type: none"> <li>providing landscaping of a height and density adequate to maintain or enhance the amenity of the route and to mitigate the visual impact of industrial activities and development; and</li> <li>setting back buildings an adequate distance to allow this landscaping (Policy 19.2.2.2).</li> </ol> </li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>There are positive effects on streetscape amenity from better building or site design outcomes achieved through not meeting the performance standard. These include the use of building treatments such as murals, green walls, or activation treatments.</li> <li>The alternative boundary treatment proposed is necessary to address traffic safety issues that could arise if the standard was complied with; and is necessary to achieve Objective 6.2.3. <ol style="list-style-type: none"> <li>The alternative boundary treatment is necessary to allow for the redevelopment of, or additions and alterations to, existing buildings.</li> </ol> </li> </ol>
<p>2. In a <b>hazard overlay zone</b>:</p> <ul style="list-style-type: none"> <li>• Maximum area of vegetation clearance in the hazard overlay zones (Hazard 1 or 2 (land instability) overlay zones)</li> <li>• Relocatable buildings (Hazard 3 (coastal) Overlay Zone)</li> <li>• Hazardous substances quantity limits and storage requirements</li> </ul>	<p>a. Risk from natural hazards</p>	<p>See Rule 11.4</p>

**19.9.6 Assessment of performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
3. Affecting a <b>scheduled heritage building or scheduled heritage structure</b> : <ul style="list-style-type: none"> <li>• Materials and design</li> </ul>	a. Effects on heritage values	See Rule 13.5
4. In the <b>Taieri Aerodrome flight fan mapped area</b> : <ul style="list-style-type: none"> <li>• Maximum height (Rule 19.6.4.2.a.vii)</li> </ul>	a. Effects on health and safety	See Rule 9.5
5. In a <b>wāhi tūpuna mapped area</b> : <ul style="list-style-type: none"> <li>• Setback from coast and water bodies</li> <li>• Esplanade reserves and strips</li> </ul>	a. Effects on cultural values of Manawhenua	See Rule 14.3
6. In an <b>urban biodiversity mapped area</b> : <ul style="list-style-type: none"> <li>• Vegetation clearance standards: Maximum area of vegetation clearance (UBMA)</li> </ul>	a. Effects on biodiversity values	See Rule 10.5

**19.9.6 Assessment of performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>X. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (buildings, structures, city-wide activities)</li> </ul>	<p>a. Effects on health and safety</p> <p>b. Effects on efficient and effective operation of network utilities</p>	<p>See Rule 5.7.</p>

## **Rule 19.10 Assessment of Restricted Discretionary Activities**

### **Rule 19.10.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 19.10.2 - 19.10.6:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 19.10.2 - 19.10.6 apply as follows:
  - a. Rule 19.10.2 applies to all restricted discretionary activities;
  - b. Rule 19.10.3 applies to restricted discretionary land use activities;
  - c. Rule 19.10.4 applies to restricted discretionary development activities;
  - d. Rule 19.10.5 applies to restricted discretionary subdivision activities; and
  - e. Rule 19.10.6 applies to restricted discretionary activities in an overlay zone, mapped area, or affecting a scheduled item.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 19.9; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 19.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and

- ii. the performance standard contravention will be assessed as indicated in Section 19.12; and
- iii. the assessment guidance in this section will also be considered.

### 19.10.2 Assessment of all restricted discretionary activities

Activity	Guidance on the assessment of resource consents
<p>1. All restricted discretionary activities listed below</p>	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. For restricted discretionary land use activities, whether any associated buildings or structures meet relevant development performance standards.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>b. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.</li> </ul>

### 19.10.3 Assessment of restricted discretionary land use activities

Activity		Matters of discretion	Guidance on the assessment of resource consents
1.	All high trip generators, which include any activities that generate 250 or more vehicle movements a day.	a. Effects on accessibility	See Rule 6.11
		b. Effects on the safety and efficiency of the transport network	
2.	Service stations (except self-service fuel stations)	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
3.	Crematoriums outside a <b>hazard facility mapped area</b>	a. Effects on cultural values of Manawhenua	See Rule 14.4
		b. Reverse sensitivity effects	<i>Relevant objectives and policies:</i> i. Objective 19.2.1 ii. The potential for reverse sensitivity is insignificant (Policy 19.2.1.10).
		c. Effects on amenity of surrounding sites	<i>Relevant objectives and policies:</i> i. Objective 19.2.2 ii. Crematoriums are located to avoid or minimise, as far as practicable, significant adverse effects on the amenity of surrounding residential, school and recreation zoned sites (Policy 19.2.2.8).

### 19.10.3 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
4. <ul style="list-style-type: none"> <li>• Sport and recreation</li> <li>• Industrial ancillary tourism</li> </ul>	a. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 19.2.1</li> <li>ii. The potential for reverse sensitivity is insignificant (Policy 19.2.1.10).</li> <li>iii. Sport and recreation activities have specific operational requirements when located in the industrial zones that mean it is not practical to locate in a recreation, residential or commercial and mixed use zone (Policy 19.2.1.7).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. The scale of the activity is such that it will not result in a more than minor long term loss of land for industrial or port activities within a particular area, either on its own, or cumulatively with other non-industrial or port activities in that area.</li> <li>v. The number of people involved in the activity, hours of operation, and noise is such that the activity will not have significant adverse effects on the amenity of surrounding residential, school and recreation zones.</li> </ul>
5. Ancillary licensed premises	a. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 19.2.1</li> <li>ii. Ancillary licensed premises are designed and operated to service the workers engaged in or associated with industrial or port activities in the area, and are unlikely to attract significant patronage outside of this purpose (Policy 19.2.1.6).</li> <li>iii. The potential for reverse sensitivity is insignificant (Policy 19.2.1.10)</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. The number of people involved in the activity, hours of operation and noise is such that the activity will not have significant adverse effects on the amenity of surrounding residential, school and recreation zones.</li> </ul>

**19.10.4 Assessment of restricted discretionary development activities**

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. High trip generators: <ul style="list-style-type: none"> <li>• New or additions to parking areas that result in 50 or more new parking spaces</li> </ul>	a. Effects on the safety and efficiency of the transport network b. Effects on accessibility	See Rule 6.11

### 19.10.5 Assessment of restricted discretionary subdivision activities

Subdivision activities	Matters of discretion	Guidance on the assessment of resource consents
1. Subdivision activities	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
	b. NA	NA
	c. Effects on efficiency and affordability of infrastructure	See Rule 9.6
	d. Risk from natural hazards	See Rule 11.5

### 19.10.6 Assessment of restricted discretionary activities in an overlay zone, mapped area, or affecting a scheduled heritage item

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In <b>all hazard overlay zones, swale mapped areas and dune system mapped areas</b> : <ul style="list-style-type: none"> <li>Subdivision activities</li> </ul>	a. Risk from natural hazards	See Rule 11.5
2. In the <b>Hazard 2 (flood) Overlay Zone</b> (see Rule 19.3.6): <ul style="list-style-type: none"> <li>New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area</li> </ul>	a. Risk from natural hazards	See Rule 11.5
3. Activities affecting a scheduled heritage building or scheduled heritage structure: <ul style="list-style-type: none"> <li>Additions and alterations that affect a protected part of a scheduled heritage building or scheduled heritage structure</li> <li>Removal for relocation</li> <li>All subdivision activities on sites containing a scheduled heritage building or scheduled heritage structure</li> </ul>	a. Effects on heritage values	See Rule 13.6
4. Activities affecting a scheduled heritage site: <ul style="list-style-type: none"> <li>New buildings and structures on a scheduled heritage site, where visible from an adjoining public place or a publicly accessible place within the site</li> <li>Parking, loading and access on a scheduled heritage site, where visible from an adjoining public place or a public place within the site</li> <li>All subdivision activities</li> </ul>	a. Effects on heritage values	See Rule 13.6

**19.10.6 Assessment of restricted discretionary activities in an overlay zone, mapped area, or affecting a scheduled heritage item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
5. In the <b>Hazard 2 (flood) Overlay Zone</b> : <ul style="list-style-type: none"> <li>Natural hazards sensitive activities</li> <li>Natural hazards potentially sensitive activities</li> </ul>	a. Risk from natural hazards	See Rule 11.5
6. In the <b>National Grid Subdivision Corridor mapped area</b> : <ul style="list-style-type: none"> <li>All subdivision activities</li> </ul>	a. Risk to the safety of people and property b. Reverse sensitivity effects c. Effects on efficient and effective operation of the National Grid and access to it	See Rule 5.8.
Y. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> : <ul style="list-style-type: none"> <li>All subdivision activities</li> </ul>	a. Effects on health and safety b. Reverse sensitivity effects c. Effects on efficient and effective operation of network utilities	See Rule 5.8.
X. In a <b>Harbourside Edge Transition Overlay Zone (HETZ)</b> (prior to release): <ul style="list-style-type: none"> <li>Subdivision activities</li> </ul>	a. Effects on future urban development	See Rule 12.X

## **Rule 19.11 Assessment of Discretionary Activities**

### **Rule 19.11.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. With respect to section 104(2) of the RMA, Council will not consider the performance standard for maximum height in the industrial zones as part of the permitted baseline in considering the effects of discretionary activities.
3. Rules 19.11.2 - 19.11.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
4. Rules 19.11.2 and 19.11.3 apply as follows:
  - a. Rule 19.11.2 applies to all discretionary activities; and
  - b. Rule 19.11.3 applies to discretionary performance standard contraventions.
5. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

**19.11.2 Assessment of all discretionary activities**

Activity	Guidance on the assessment of resource consents
1. All discretionary activities	<p><i>General assessment guidance:</i></p> <p>a. In assessing the significance of effects, consideration will be given to:</p> <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul>

**19.11.3 Assessment of discretionary performance standard contraventions**

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Acoustic insulation</li> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and the effects on public health and safety.</p>

## **Rule 19.12 Assessment of Non-complying Activities**

### **Rule 19.12.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. With respect to section 104(2) of the RMA, Council will not consider the maximum height performance standard in the industrial zones as part of the permitted baseline in considering the effects of non-complying activities.
3. Rules 19.12.2 - 19.12.4 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
4. Rules 19.12.2 - 19.12.5 apply as follows:
  - a. Rule 19.12.2 applies to non-complying land use activities;
  - b. Rule 19.12.3 applies to non-complying development activities; and
  - c. Rule 19.12.4 applies to non-complying performance standard contraventions.
5. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 19.12.2 Assessment of non-complying land use activities

Activity	Assessment Matters
<p>1. All non-complying land use activities, including but not limited to the activities listed below</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. The activity does not detract from, or preferably contributes to, the strategic directions objectives, including, but not limited to, those related to Objective 2.3.1.</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2.</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4.</li> <li>d. The activity supports the purpose of the zone as outlined in (objectives 2.3.1 and 19.2.1)</li> <li>e. The activity would have significant positive effects on the successful operation of surrounding industrial or port activities (Policy 19.2.1.3).</li> <li>f. The potential for reverse sensitivity is insignificant (Policy 19.2.1.10)</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>g. In assessing the significance of effects, consideration will be given to: <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities.</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> <li>h. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>i. A requirement for noise sensitive activity establishing in an industrial zone to comply, at a minimum with the acoustic insulation requirements in Rule 9.3.1</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>j. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>k. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>l. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>
<p>2. Commercial advertising</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Policy 2.4.1.6.c</li> </ul>

### 19.12.2 Assessment of non-complying land use activities

Activity	Assessment Matters
3. Community and leisure	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. The activity has specific operational requirements that mean it is not practical to locate in a recreation, residential or commercial and mixed use zone (Policy 19.2.1.7)</p> <p>b. The potential for reverse sensitivity is insignificant (Policy 19.2.1.10)</p>
4. <ul style="list-style-type: none"> <li>• Cemeteries</li> <li>• Landfills</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</p>
5. Retail (excluding retail ancillary to industry and yard based retail)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Retail activity (excluding retail ancillary to industry and yard based retail activities), is avoided, due to its high potential to be a significant competing use of land primarily zoned for industrial or port uses, unless it has significant positive effects on the successful operation of surrounding industrial or port activities (Policy 19.2.1.9).</p>
6. In the <b>hazard 1 (flood) overlay zones</b> (see Rule 19.3.6): <ul style="list-style-type: none"> <li>• Natural hazards potentially sensitive activities</li> <li>• Natural hazards sensitive activities</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and the effects related to the risk from natural hazards.</p>
7. In a <b>hazard facility mapped area</b> , bulk fuel storage facilities sensitive activities	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and Policy 9.2.2.15 and the risks to people from an emergency event occurring at a hazard facility.</p>

### 19.12.3 Assessment of non-complying development activities

Activity	Guidance on the assessment of resource consents
1. Demolition of a protected part of a scheduled heritage building or scheduled heritage structure	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1 and effects on heritage values.</p>

### 19.12.4 Assessment of non-complying performance standard contraventions

Performance standard	Assessment matters
<p>1.</p> <ul style="list-style-type: none"> <li>Light spill - where the limit is exceeded by greater than 25%</li> <li>Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and the effects related to public health and safety.</p>
<p>2.</p> <ul style="list-style-type: none"> <li>Setback from National Grid (buildings, structures, city-wide activities, and National Grid sensitive activities) (Rule 5.6.1.1)</li> <li>Setback from National Grid (subdivision activities) (Rule 19.7.X)</li> </ul>	<p><i>Relevant guidance from other sections:</i></p> <p>a. See Section 5.10 for guidance on the assessment of resource consents in relation to Objective 5.2.X and effects related to the operation, maintenance, upgrading and development of the National Grid.</p>
3. Hazard exclusion areas	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risk from natural hazards.</p>
4. Maximum gross floor area (retail ancillary to industry)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objectives 2.3.1 and 19.2.1</p> <p>b. Retail ancillary to industry is of a size that is clearly subordinate to and part of the operation of the primary industry activity; and does not conflict with objectives 2.3.1, 2.3.2 and 2.4.3; and does not create adverse effects on other industrial activities, for example from traffic, parking or reverse sensitivity (Policy 19.2.1.5).</p>

## 20. Recreation Zone

### 20.1 Introduction

Public reserve and recreational areas are interspersed among other environments within the city. The protection and provision of these areas and facilities is important for the health and well-being of the community and to contribute to amenity values.

- Activities and developments in recreation areas can have adverse effects on the surrounding environment. For example, large scale buildings and structures, parking and traffic effects, and nuisance-related effects such as noise or glare from lighting can impact on the amenity of surrounding residential properties.
- Many recreation areas provide important green space for the city. Limiting the types and scale of activities and development that occurs on them is necessary to ensure that they are available for a range of uses (including casual public use), and that green space is not consumed by inappropriate activities or development.
- Commercial food, beverage, and retail activities provided in association with recreation facilities could threaten the vitality of centres if provided in a way or at a scale that would compete with activities in the centres. Such activities occurring outside of a commercial centre also have the potential to impact on neighbours.

The areas covered by the zone are primarily sports fields, large urban bush reserves, and coastal reserves.

Other recreation areas not incorporated in this zone are:

- a. Small pocket parks, such as neighbourhood playgrounds, and small reserve areas in a commercial centre or the inner city, which retain the zoning of the surrounding environment.
- b. Moana Pool is managed through the Moana Pool Zone .
- c. Open space and recreation areas in the rural environment, which are generally zoned the same as the surrounding environment (i.e. rural zones). These areas are primarily used for conservation, protection of biodiversity and landscapes, and to provide for walking and biking tracks.

## 20.2 Objectives and Policies

<b>Objective 20.2.1</b>	
The Recreation Zone provides opportunities for a wide range of recreational, sporting, community, and cultural activities.	
Policy 20.2.1.1	Enable sport and recreation, community and leisure, and restaurant and retail ancillary to sport and recreation.
Policy 20.2.1.2	Enable rural activities in the form of grazing and forestry.
Policy 20.2.1.3	Provide for a wide range of community activities, cemeteries, and campgrounds, where these activities are designed and operated to meet Objective 20.2.2 and its policies.
Policy 20.2.1.4	Avoid industrial, residential, commercial, rural, and major facility activities, unless otherwise provided for in the Recreation Zone.

<b>Objective 20.2.2</b>	
Land use, development and subdivision activities: support the efficient and effective operation of the recreation area; maintain a high standard of on-site amenity for users of the recreation area; and maintain or enhance neighbourhood amenity and the amenity of any surrounding residential properties.	
Policy 20.2.2.1	Require development to maintain or enhance on-site amenity for recreation area users, neighbourhood amenity, and the amenity of any surrounding residential properties by ensuring: <ul style="list-style-type: none"> <li>a. there are adequate areas free from buildings or hard surfacing;</li> <li>b. the height, boundary setbacks, height in relation to boundary, and scale of buildings and structures is appropriate to the recreation area and in keeping with the scale of buildings in surrounding residential environments;</li> <li>c. service areas for campgrounds or restaurants ancillary to sport and recreation, are not visible from ground level from outside the site;</li> <li>d. communal outdoor gathering areas are designed and located to avoid overlooking and disturbing surrounding residential properties;</li> <li>e. parking areas are designed or located to minimise, as far as practicable, light spill from vehicles using the parking area on surrounding residential properties; and</li> <li>f. outdoor storage is managed in a way that does not result in unreasonable visual amenity effects or nuisance effects.</li> </ul>
Policy 20.2.2.2	Require boundary fences to be of a height and design that contributes positively to streetscape amenity and character of the neighbourhood and recreation area.
Policy 20.2.2.3	Require ancillary signs to be located and designed to maintain on-site amenity, and surrounding streetscape and residential amenity by: <ul style="list-style-type: none"> <li>a. being of an appropriate size, design, and number to convey information about the name and nature of the club, organisation, or reserve, and not oversized or too numerous than what is necessary for that purpose; and</li> <li>b. limiting commercial sponsorship signs ancillary to sport and recreation to be temporary or enclosed within the site.</li> </ul>
Policy 20.2.2.4	Require forestry and shelterbelts and small woodlots to be set back an adequate distance to avoid significant effects from shading on residential buildings on adjacent properties.

### Objective 20.2.2

Land use, development and subdivision activities: support the efficient and effective operation of the recreation area; maintain a high standard of on-site amenity for users of the recreation area; and maintain or enhance neighbourhood amenity and the amenity of any surrounding residential properties.

Policy 20.2.2.5	Require retail and restaurants ancillary to sport and recreation, and ancillary licensed premises, to operate in a way (including hours of operation) that avoids or, if avoidance is not practicable, adequately mitigates, noise or other adverse effects on the amenity of surrounding residential properties.
Policy 20.2.2.6	Only allow sport and recreation that involves motor vehicles, where there will be no, or only minimal, adverse effects on: <ul style="list-style-type: none"> <li>a. any surrounding residential properties; and</li> <li>b. other recreation area users.</li> </ul>
Policy 20.2.2.7	Only allow campgrounds where any adverse effects, including from noise, dust or loss of privacy, on surrounding residential properties and other recreation area users, will be avoided or, if avoidance is not practicable, are adequately mitigated.
Policy 20.2.2.8	Only allow cemeteries, where they are designed and located: <ul style="list-style-type: none"> <li>a. to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the amenity of surrounding residential properties; and</li> <li>b. to minimise, as far as practicable the potential for reverse sensitivity.</li> </ul>
Policy 20.2.2.9	Only allow mining where: <ul style="list-style-type: none"> <li>a. there is a reasonable certainty that land will be restored or rehabilitated to a standard that will minimise, as far as practicable, the long term visual effects; and</li> <li>b. any adverse effects, including from noise or dust, on surrounding residential properties or other recreation area users will be avoided or, if avoidance is not practicable, adequately mitigated.</li> </ul>
Policy 20.2.2.10	Only allow new buildings or additions and alterations to buildings that will result in gross floor area greater than 350m <sup>2</sup> and / or have any wall longer than 20m, where any adverse effects on on-site amenity, surrounding properties, and neighbourhood amenity, will be avoided or, if avoidance is not practicable, adequately mitigated.
Policy 20.2.2.11	Only allow subdivision activities where the subdivision does not adversely affect the efficient and effective operation of the recreation area.
Policy 20.2.2.12	Only allow early childhood education or conference, meeting and function where they are designed, located, and operated to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on: <ul style="list-style-type: none"> <li>a. the amenity of surrounding residential properties; and</li> <li>b. other recreation area users.</li> </ul>
Policy 20.2.2.13	Only allow stand-alone car parking where it is the secondary use of a car parking area required for an activity provided for in the recreation area, at times when that parking is not needed for that activity or otherwise needed to facilitate public use of the recreation area.

## Rules

### Rule 20.3 Activity Status

#### 20.3.1 Rule Location

The activity status tables in rules 20.3.3 to 20.3.6 specify the activity status of land use activities, development activities, and subdivision activities in the Recreation Zone and relevant overlay zones, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 20.3.2 Activity Status Introduction

1. The activity status tables in rules 20.3.3 - 20.3.5 show the activity status of activities in the Recreation Zone and the overlay zones indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Additional activity status rules in hazard overlay zones*

7. For the purpose of the hazards provisions, activities are categorised as natural hazards sensitive activities, natural hazards potentially sensitive activities or natural hazards least sensitive activities. The activities that are in each hazards sensitivity category are included in the definitions section and in Section 11.1.
8. In the Hazard 1 (flood) Overlay Zone or Hazard 2 (flood) Overlay Zone, the activity statuses in Rule 20.3.6 apply to the following activities:
  - a. natural hazards sensitive activities;
  - b. natural hazards potentially sensitive activities; and
  - c. new buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area.
9. Where the activity status in Rule 20.3.6 differs from that in rules 20.3.3 - 20.3.5, the most restrictive activity

status always applies.

10. In addition to the rules in Rule 20.3.6, performance standards for development activities within hazard overlay zones are included in rules 20.3.3 - 20.3.5.
11. Activities in a hazard overlay zone must comply with all of the rules in 20.3.3 - 20.3.5.

#### *Performance Standards*

12. Performance standards are listed in the far right column of the activity status tables.
13. Performance standards apply to permitted, controlled, and restricted discretionary activities.
14. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
15. If a controlled or restricted discretionary activity does not meet one or more performance standards, then the activity status is restricted discretionary, unless otherwise indicated in the performance standard.

### **Legend**

<b>Acronym</b>	<b>Meaning</b>
+	Additional provisions apply (assessment criteria for activities in the overlay need to be viewed)
N/A	Not Applicable
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
Rec	Recreation Zone
NCC	Natural Coastal Character Overlay Zone
ASBV	Areas of Significant Biodiversity Value
UBMA	Urban Biodiversity Mapped Area
SHS	Scheduled Heritage Site
Haz1	Hazard 1 Overlay Zones
Haz2	Hazard 2 Overlay Zones
Haz3	Hazard 3 Overlay Zones

### 20.3.3 Land Use Activity Status Table

1.	Performance standards that apply to all land use activities				<ul style="list-style-type: none"> <li>a. Acoustic insulation (noise sensitive activities only)</li> <li>b. NA</li> <li>c. Light spill</li> <li>d. Noise</li> <li>e. Setback from National Grid (National Grid sensitive activities only)</li> </ul>
Community activities		Activity status			Performance standards
		a. Rec	b. NCC	c. ASBV	
X.	Community and leisure within a <b>hazard facility mapped area</b>	NC	N/A	N/A	
2.	Community and leisure - small scale outside a <b>hazard facility mapped area</b>	P	P	P	i. Minimum mobility car parking
3.	Community and leisure - large scale outside a <b>hazard facility mapped area</b>	RD	RD	RD	i. Minimum mobility car parking
4.	Conservation	P	P	P	
Y.	Early childhood education within a <b>hazard facility mapped area</b>	NC	N/A	N/A	
5.	Early childhood education - small scale outside a <b>hazard facility mapped area</b>	RD	RD	RD	
6.	Early childhood education - large scale outside a <b>hazard facility mapped area</b>	D	D	D	
7.	Sport and recreation that involves motor vehicles	D	D	D+	
8.	All other sport and recreation	P	P	D	<ul style="list-style-type: none"> <li>i. Hours of operation</li> <li>ii. Minimum mobility car parking</li> </ul>
Commercial activities		a. Rec	b. NCC	c. ASBV	Performance standards
9.	Ancillary licensed premises	RD	RD	RD	i. Hours of operation
10.	Conference, meeting and function	D	D	D	
11.	Campgrounds outside a <b>hazard facility mapped area</b>	RD	RD	NC	i. Minimum mobility car parking

Z.	Campgrounds within a <b>hazard facility mapped area</b>	NC	N/A	N/A	
12.	Restaurants ancillary to sport and recreation	P	P	D	i. Hours of operation
13.	Retail activity ancillary to sport and recreation	P	P	D	i. Hours of operation
14.	Stand-alone car parking	RD	RD	NC	
15.	All other activities in the commercial activities category	NC	NC	NC+	
Rural activities		a. Rec	b. NCC	c. ASBV	Performance standards
16.	Forestry	P	RD	NC	i. Forestry and shelterbelts and small woodlots setbacks ii. Tree species
17.	Grazing	P	P	NC	
18.	Mining	D	D+	NC	
19.	Scheduled mining activity	P	P	N/A	i. Scheduled mining activity

Industrial activities		a. Rec	b. NCC	c. ASBV	Performance standards
21.	All activities in the industrial activities category	NC	NC	NC+	
Residential activities		a. Rec	b. NCC	c. ASBV	Performance standards
22.	All activities in the residential activities category	NC	NC	NC+	
Major facility activities		a. Rec	b. NCC	c. ASBV	Performance standards
23.	Cemeteries outside a <b>hazard facility mapped area</b>	RD	RD	NC	
AA.	Cemeteries within a <b>hazard facility mapped area</b>	NC	N/A	N/A	
24.	All other activities in the major facility activities category	NC	NC	NC+	

### Note 20.3.3A – Other requirements outside of the District Plan

1. Activities that involve the sale, consumption, or provision of alcohol, may require a licence. Contact the DCC's Alcohol

Licensing Department on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.

2. Permission from the Dunedin City Council (DCC) must be obtained for activities or development on recreation areas in addition to any permission or consent granted under the District Plan. Additional controls may apply under the Reserves Act 1977 or any management plan made under the Reserves Act. Please contact the Parks and Recreation Department on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) to ensure all appropriate permissions are received.
3. Plantation forestry and associated activities are addressed by the NESPF rather than Rule 20.3.3.16 for the Rural Residential 1 Zone at 50 Three Mile Hill Road, although the NESPF does not apply to any vegetation clearance prior to afforestation and the rules in Section 10 Natural Environment apply.

#### **Note 20.3.3X- Other requirements outside of the District Plan**

1. Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

### 20.3.4 Development Activity Status Table

1.	Performance standards that apply to all development activities				<ul style="list-style-type: none"> <li>a. Natural Hazards Performance Standards</li> <li>b. Setback from scheduled tree</li> </ul>
2.	Performance standards that apply to all buildings and structures activities				<ul style="list-style-type: none"> <li>a. Boundary setbacks</li> <li>b. Height in relation to boundary</li> <li>c. Maximum height</li> <li>d. Number, location and design of ancillary signs</li> <li>e. Setback from coast and water bodies</li> <li>f. Setback from National Grid</li> <li>Y. Setback from Critical Electricity Distribution Infrastructure</li> <li>X. Setback from designated rail corridor</li> </ul>
Buildings and structures activities (excluding activities affecting a protected part of a scheduled heritage building or a scheduled heritage structure. See rows 8 - 15)		Activity status			Performance standards
		a. Rec	b. NCC	c. ASBV	
5.	New buildings or additions and alterations (excluding fences)	P	P	P	i. Area, number and location of buildings
6.	Fences	P	P	P	i. Fence height and design
7.	All other buildings and structures activities	P	P	P	
Buildings and structures activities that affect a protected part of a scheduled heritage building or scheduled heritage structure		a. Rec	b. NCC	c. ASBV	Performance standards
8.	Repairs and maintenance	P	P	P	
9.	Restoration of a building or structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)	C	C	C	
10.	Restoration of all other scheduled heritage buildings and structures	P	P	P	

11.	Earthquake strengthening where external features only are protected	C	C	C	i. Materials and design
12.	Signs attached to buildings or structures	P	P	P	
13.	All other additions and alterations	RD	RD	RD	
14.	Demolition	NC	NC	NC	
15.	Removal for relocation	RD	RD	RD	
Development activities on a scheduled heritage site, where visible from an adjoining public place or a public place within the heritage site		a. Rec	b. NCC	c. ASBV	Performance standards
16.	New structures that are no more than 2.5m high or that have no more than a 2m <sup>2</sup> footprint	P	P	P	
17.	All other new structures	RD	RD	RD	
18.	New buildings	RD	RD	RD	
19.	Parking, loading and access	RD	RD	RD	i. Parking, loading and access standards ii. Location and screening of car parking
Site development activities in all areas (except as covered by rows 16 - 19 above)		a. Rec	b. NCC	c. ASBV	Performance standards
20.	Outdoor storage	P	P	P	i. Location and screening of outdoor storage
21.	Indigenous vegetation clearance - small scale	P	P	P	i. Vegetation clearance standards
22.	Indigenous vegetation clearance - large scale	N/A	RD+	NC	i. Vegetation clearance standards
23.	All other vegetation clearance	P	P	P	i. Vegetation clearance standards
24.	Parking, loading and access	P	P	P	i. Parking, loading and access standards ii. Location and screening of car parking

25.	New or additions to parking areas that result in 50 or more new parking spaces.	RD	RD	RD	<ul style="list-style-type: none"> <li>i. Parking, loading and access standards</li> <li>ii. Location and screening of car parking</li> </ul>
26.	Storage and use of hazardous substances	P	P	P	<ul style="list-style-type: none"> <li>i. Hazardous substances quantity limits and storage requirements</li> <li>ii. Setback from coast and water bodies</li> </ul>
27.	Shelterbelts and small woodlots	P	P	RD	<ul style="list-style-type: none"> <li>i. Tree species</li> <li>ii. Forestry and shelterbelts and small woodlots setbacks</li> </ul>
28.	All other site development activities	P	P	RD	

#### Note 20.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.
5. Freedom camping is managed by Council's Camping Control Bylaw 2015. Bylaws are available at [www.dunedin.govt.nz](http://www.dunedin.govt.nz).
6. Dunedin City Council Bylaws may apply to some activities in the Recreation Zone. Please refer to the bylaws for more detail. Bylaws are available at [www.dunedin.govt.nz](http://www.dunedin.govt.nz).

#### 20.3.5 Subdivision Activity Status Table

Subdivision activities	Activity status			Performance standards
	a. Rec	b. NCC	c. ASBV	

1.	General subdivision	RD	RD+	RD+	<ul style="list-style-type: none"> <li>i. Access</li> <li>ii. Esplanade reserves and strips</li> <li>iii. Firefighting</li> <li>iv. Service connections</li> <li>v. Shape <ul style="list-style-type: none"> <li>X. Setback from National Grid (subdivision activities)</li> </ul> </li> </ul>
2.	Cross lease, company lease and unit title subdivision	NC	NC	NC	

**Note 20.3.5A - Other RMA considerations**

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

**Note 20.3.5X - Other relevant District Plan provisions**

1. Additional matters of discretion apply to the subdivision of land within a **Critical Electricity Distribution Infrastructure Corridor mapped area**. These are set out in Rule 20.10.5.
2. Additional matters of discretion apply to the subdivision of land within a **National Grid Subdivision Corridor mapped area**. These are set out in Rule 20.10.5.

### 20.3.6 Activity Status in Hazard 1 (Flood) Overlay Zone and Hazard 2 (Flood) Overlay Zone

Activity	Activity status	
	a. Haz1 (flood)	b. Haz2 (flood)
Land Use Activities		
1. Natural hazards sensitive activities	NC	RD
2. Natural hazards potentially sensitive activities	NC	RD
Development Activities		
3. New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m <sup>2</sup> of new ground floor area	RD	RD

#### Note 20.3.6A - Other RMA considerations

X Section 10 of the RMA (existing use rights) provides for land to be used in a manner that contravenes a rule in a district plan if the use was lawfully established before the rule became operative or the proposed plan was notified, and the effects of the use are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified.

2. Accordingly, activities that are shown to have effects that are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified will not usually trigger the provisions for natural hazards sensitive activities and natural hazards potentially sensitive activities in Rule 20.3.6. However, Council will consider specific circumstances associated with the development and how this affects the character, intensity and scale of effects from the land use activity.

#### Note 20.3.6B - Other requirements outside the District Plan

1. Clause E1 – Surface water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework (including earthworks) in relation to managing surface water and effects on other property.
2. Buildings and structures that will divert water may require resource consent under the Otago Regional Plan: Water.
3. If buildings and structures affect the flow of water, this effect is also subject to the common law principle of natural servitude.

## **Rule 20.4 Notification**

1. Applications for resource consent for the following activities will be considered without the need to obtain a written approval of affected persons and will not be notified in accordance with section 95A or section 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:
  1. earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is not listed by Heritage New Zealand.
2. With respect to resource consent applications, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided for the following:
  1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand;
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is listed by Heritage New Zealand; and
  3. contravention of the archaeological sites performance standard (Rule 13.3.3).
3. Applications for resource consent for the following activities will be publicly notified in accordance with section 95A of the RMA, unless Council considers special circumstances exist in relation to the application:
  1. all commercial activities (including commercial advertising); and
  2. all industrial activities.
4. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided:
  1. cemeteries;
  2. all restricted discretionary activities that list effect on cultural values of Manawhenua as a matter for discretion; and
  3. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat in Appendix A4.
5. With respect to resource consent applications for the following activities, the Department of Conservation will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:
  1. indigenous vegetation clearance - large scale in a scheduled Area of Significant Biodiversity Value; or
  2. indigenous vegetation clearance - large scale or any discretionary or non-complying activity in a Natural Coastal Character Overlay Zone.
6. With respect to resource consent applications for the following activities, the Otago Regional Council will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:
  1. activities in the Hazard 1 (flood) or Hazard 1A (flood) overlay zones; and
  2. activities in **swale mapped areas**.
7. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## Rule 20.5 Land Use Performance Standards

### 20.5.1 Acoustic Insulation

1. Noise sensitive activities in the following areas must comply with Rule 9.3.1:
  - a. port noise control mapped area;
  - b. within 40m of a state highway;
  - c. within 20m of an industrial zone; and
  - d. within 70m of a railway line.

### 20.5.3 Hours of Operation

1. Sport and recreation, restaurants ancillary to sport and recreation, retail ancillary to sport and recreation, and ancillary licensed premises must operate within the following hours:

Days of week		Hours of operation
a.	Sunday - Thursday	7.00am - 10.30pm
b.	Friday - Saturday	7.00am - 12.00am (midnight)

2. Sportsfield lighting on sites adjacent to a residential zone must not operate within the hours of 10.00pm - 7.00am.
3. Activities that contravene this performance standard are restricted discretionary activities.

#### Note 20.5.3A - Other requirements outside of the District Plan

1. Activities that involve the sale or provision of alcohol, or contain a social area that could be used for this purpose, may require a licence. Contact the DCC's Alcohol Licensing Department on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.
2. Land owner consent from the DCC's Parks, Recreation and Aquatic Group Department is required for activities or development on recreation areas in addition to any permission or consent granted under the District Plan. Additional controls may apply under the Reserves Act 1977 or any Management Plan for the Area. Please contact customer services on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.

### 20.5.4 Light Spill

Land use activities must comply with Rule 9.3.5.

### 20.5.5 Minimum Mobility Car Parking

1. NA

Activity	Minimum car parking rate
a- c. <i>Removed to comply with the National Policy Statement on Urban Development 2020 requirement to remove minimum car parking requirements. Rule numbering to be corrected at a later date.</i>	

d. Land use activities must provide on-site mobility parking spaces as follows:

Total number of parking spaces provided	Minimum number of these that must be mobility parking spaces
i. 1 - 20	1 parking space
ii. 21 - 50	2 parking spaces
iii. For every additional 50 parking spaces	1 additional parking space

e. NA.

f. Parking spaces may be shared between land use activities (i.e. the same parking spaces may be used to fulfil the minimum mobility car parking requirement for more than one land use activity), as long as the hours of operation of the land use activities do not overlap.

g. NA.

2. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 20.5.5A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### 20.5.6 Noise

Land use activities must comply with Rule 9.3.6.

### 20.5.7 Setback from National Grid

National Grid sensitive activities must comply with Rule 5.6.1.

### 20.5.8 Tree Species

Forestry and shelterbelts and small woodlots must comply with Rule 10.3.4.

## **20.5.10 Scheduled Mining Activity**

### 20.5.10.1

Waldronville Gun Club Sand Pit must meet the performance standards listed below.

### 20.5.10.2

If Waldronville Gun Club Sand Pit contravenes any of these standards it will be considered expansion of scheduled mining activity and will be subject to the rules that apply to that activity in Rule 20.3.

### 20.5.10.3 Operating limits

- a. Waldronville Gun Club Sand Pit:
  - i. may only operate: Monday to Saturday 6.00am to 10.00pm;
  - ii. must not use blasting;
  - iii. must not undertake aggregate processing.

### 20.5.10.4 Noise

- a. Waldronville Gun Club Sand Pit must comply with Rule 9.3.6, subject to the following:
  - i. An adjustment of minus 5 dBA for noise emissions having special audible characteristics.
  - ii. Noise level readings for the purpose of determining compliance with the noise conditions must be provided by the quarry operator for two hours, at times representative of the operation and at which maximum noise levels can be assessed. For continuous operations, readings must take place at 12 monthly intervals. For intermittent operations, readings must be provided at the time of every subsequent operation of the site.

### 20.5.10.5 Landscaping and rehabilitation

- a. Waldronville Gun Club Sand Pit must undertake a programme of landscaping to encourage the revegetation of areas that are no longer being mined. The landscaping programme must ensure that:
  - i. all planting is in accordance with a landscape plan prepared by a qualified landscape architect;
  - ii. all vegetation established as part of this programme is maintained in a healthy state at all times;
  - iii. the site is rehabilitated to an appearance and character similar to that of the surrounding environment.
- b. Prior to removing sand from undisturbed areas, the DCC will be contacted to allow the removal of any pingao growing in the area.

## **Rule 20.6 Development Performance Standards**

### **20.6.1 Fence Height and Design**

#### 20.6.1.1 Maximum Height

- a. The maximum height of fences along boundaries (including within the boundary setbacks required by Rule 20.6.10) is 2m.
- b. For the purposes of calculating maximum height, where a fence is erected atop a retaining wall, the height will be calculated as the combined height measured from ground level to the top of the fence.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### 20.6.1.2 Visual Permeability

- a. Fences along road boundaries (or within the boundary setbacks required by Rule 20.6.10), or along a side or rear boundary with a residential zone, must be constructed to a length and/or height that maintains visual permeability for 50% of the length of the boundary measured at a height of 1.4m above ground level (see Figure 15.6.2.2A).
- b. The following fences are exempt from this requirement:
  - i. fences along the road boundary of a state highway;
  - ii. fences required to meet Rule 20.6.6 (Location and Screening of Outdoor Storage); and
  - iii. fences required to meet Rule 20.6.5 (Location and Screening of Car Parking).
- c. Fences that contravene this performance standard are restricted discretionary activities.

## **20.6.2 Natural Hazards Performance Standards**

### 20.6.2.1 Hazard exclusion areas

- a. New buildings and structures, and additions and alterations located in a **swale mapped area** must comply with Rule 11.3.1.1.
- b. New buildings and structures, and additions and alterations located in a **dune system mapped area** must comply with Rule 11.3.1.2.

### 20.6.2.2 Maximum area of vegetation clearance in the hazard overlay zones

Vegetation clearance in the Hazard 1 (land instability) Overlay Zone, Hazard 2 (land instability) Overlay Zone, or in a **dune system mapped area**, must comply with Rule 11.3.2.

### 20.6.2.3 Outdoor storage

Outdoor storage in the Hazard 1 (flood) Overlay Zone must comply with Rule 11.3.4.

## **20.6.3 Hazardous Substances Quantity Limits and Storage Requirements**

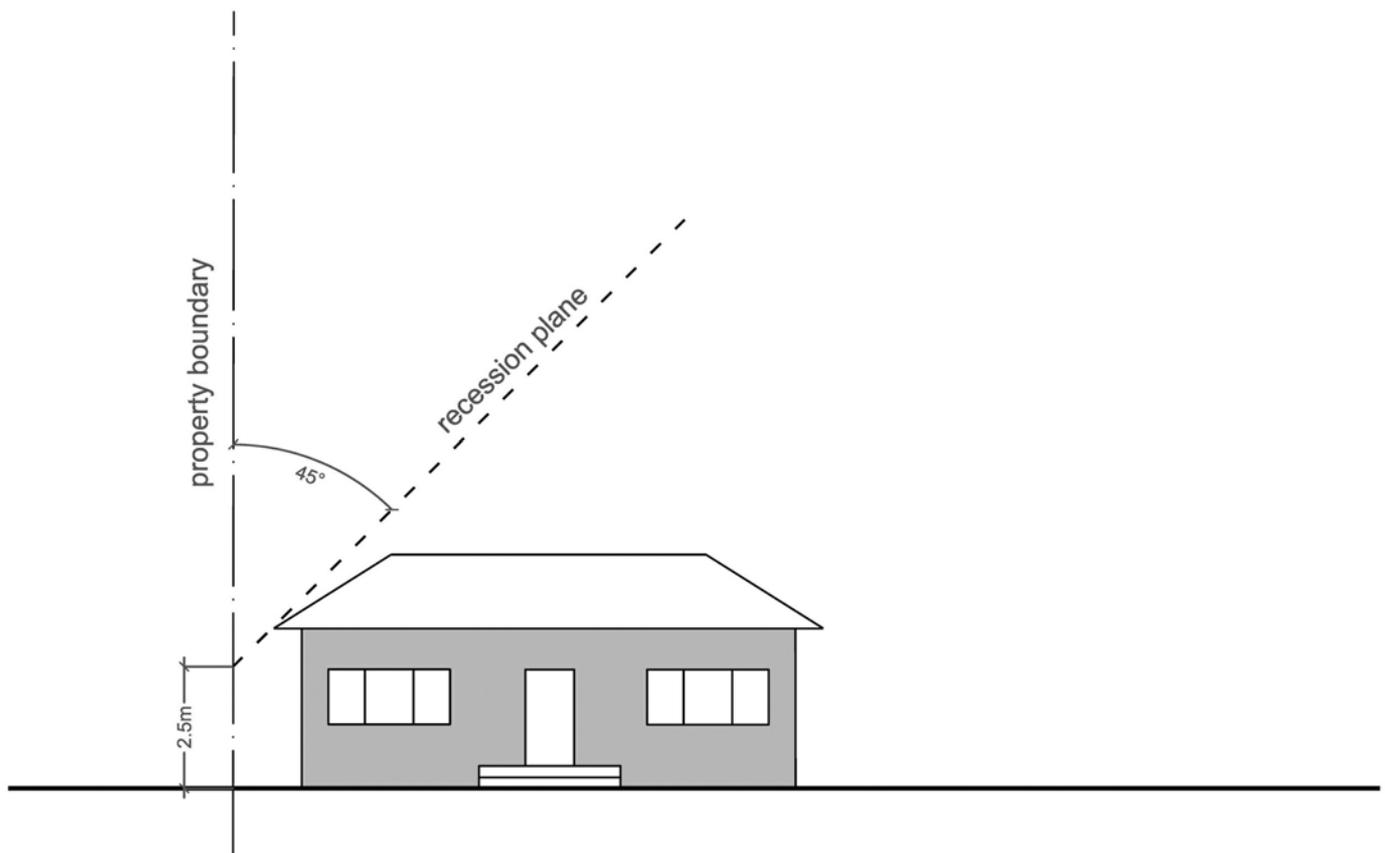

The storage and use of hazardous substances must comply with Rule 9.3.4.

## 20.6.4 Height

### 20.6.4.1 Height in relation to boundary

- a. New buildings and additions and alterations to buildings must not protrude through a plane (see Figure 20.6.4.1A) rising at an angle of 45 degrees measured from a point 2.5m above ground level at the boundary of the Recreation Zone.
- b. Except sports field fences which are 100% permeable and required to be tall for the purposes of public safety (e.g. wire netting fences around softball fields), sports field lighting, and goal posts.
- c. Rooftop structures are exempt from the performance standard for height in relation to boundary
- d. Activities that contravene this performance standard are restricted discretionary activities.

Figure 20.6.4.1A: Height in relation to boundary

### 20.6.4.2 Maximum Height

- a. The maximum height for new buildings and structures, and additions and alterations, must not exceed the following above ground level:

Activity	1. Recreation Zone	2. Natural Coastal Character Overlay Zone (NCC)
i. Goal posts and sports field lighting	22m	22m
ii. All other buildings and structures	9m	5m

- b. Rooftop structures are exempt from the performance standard for height provided they do not exceed the maximum height limit for all other buildings and structures by more than one third of that limit.
- c. Activities that contravene this performance standard are restricted discretionary activities.

### **20.6.5 Location and Screening of Car Parking**

1. Parking areas adjacent to boundaries of sites that are in a residential zone must, on that boundary, have a solid fence or dense landscaping at least 1.4m high that is capable of blocking light from headlights of motor vehicles.
2. Activities that contravene this performance standard are restricted discretionary activities.

### **20.6.6 Location and Screening of Outdoor Storage**

1. Service areas must be located or screened so that they are not visible at ground level from adjacent residential zoned sites or roads.
2. Outdoor storage, including service areas, must not encroach into required parking, loading and access areas.
3. Outdoor storage must be managed in a way that does not result in unreasonable visual amenity effects or nuisance effects.
4. Materials stored outside must be stored in a way that prevents them contaminating any off-site area.
5. Activities that contravene this performance standard are restricted discretionary activities.

### **20.6.7 Materials and Design**

Earthquake strengthening must comply with Rule 13.3.2.

### **20.6.X Area, Number and Location of Buildings**

#### **20.6.X.1 Area, number and location of buildings - NCC and ASBV's**

- a. In the Natural Coastal Character (NCC) overlay zones and scheduled Areas of Significant Biodiversity Value (ASBVs), all new buildings and additions and alterations must comply with Rule 10.3.5.

#### **20.6.X.2 Area and length of buildings**

- a. New buildings must not exceed 350m<sup>2</sup> footprint, and additions and alterations must not result in a building that is greater than 350m<sup>2</sup> footprint.
- b. New buildings must not have any wall longer than 20m, and additions and alterations must not result in any wall longer than 20m.
- c. Activities that contravene this performance standard are restricted discretionary activities.

### **20.6.8 Number, Location and Design of Ancillary Signs**

#### **20.6.8.1 General**

- a. Signs visible from a public place must meet all of the following performance standards, except that regulatory signs, directional signs and warning signs that do not exceed 0.25m<sup>2</sup> are exempt from these standards.
- b. Signs must also comply with:
  - i. Rule 6.7.2 where located on or above the footpath; and
  - ii. Rule 6.7.3 where visible from a road.
- c. Signs must not be illuminated or digital.
- d. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### **20.6.8.2 Performance standards that apply to all ancillary signs, except commercial sponsorship signs**

- a. Ancillary signs must only display the name, and logo of the relevant land use activity or organisation (e.g. DCC), locational, directional or informative information relevant to the area, or rules of the area or use of the

area.

- b. Ancillary signs that promote or advertise retail, restaurants, or conference, meeting and function ancillary to sport and recreation must not be visible from a public place outside the recreation area.

#### 20.6.8.3 Signs attached to buildings

- a. Any signs displaying the club(s) name on clubrooms must not exceed a maximum total area of 5m<sup>2</sup> per building face.
- b. The maximum number of permanent commercial sponsorship signs is one sign for the naming rights sponsor of the sport and recreation activity (club), with a maximum area of 3m<sup>2</sup>, except: for clubs that operate in an enclosed area that is only open to members, apart from during events, there is no maximum number of commercial sponsorship signs, provided those signs are not visible from outside of the enclosed area.
- c. Other signs must not exceed a total maximum area of 1m<sup>2</sup> per building face.
- d. Signs must remain entirely within the visual profile of the building or structure.
- e. Signs must not project higher than the lowest point of the roof, except as mounted flat against a parapet or gable end.

#### 20.6.8.4 Freestanding signs

- a. Freestanding signs
  - i. must not exceed a maximum total area of all display faces of 3m<sup>2</sup>; and each display face must not exceed 1.5m<sup>2</sup> in area;
  - ii. must not exceed a maximum height above ground level of 4m; and
  - iii. must not obstruct parking, loading and access areas; and
  - iv. must be positioned entirely within the site boundaries.

#### 20.6.8.5 Portable freestanding signs

- a. Commercial sponsorship signs erected for matches, competitions, or events must not be displayed for more than one day before the competition/event, and must be removed within one day of completion of the competition/event.
- b. Any other portable signs must not exceed one sign per activity, and 0.9m in height and 0.6m in width.
- c. Signs must be positioned within site boundaries.

#### **Note 20.6.8A - Other requirements outside of the District Plan**

- 1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy.
  - c. Dunedin City Council Roadway Bylaw.
  - d. Dunedin City Council Traffic and Parking Bylaw.

#### **20.6.9 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

#### **20.6.10 Setbacks**

##### 20.6.10.1 Boundary setbacks

- a. New buildings and structures, and additions and alterations, must be set back from boundaries as follows:

- i. 4.5m from the road boundary; and
  - ii. 2m from side and rear boundaries;
  - iii. except for the site at 50 Three Mile Hill Road, where they must be set back: 12m from the road boundary; and 6m from side and rear boundaries.
  - iv. Jetties, boat ramps, wharves, fences, and ancillary signs are exempt from this standard.
- b. Communal outdoor gathering areas, including decks at or above ground level, must be setback 10m from a residential zone.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### 20.6.10.2 Forestry and shelterbelts and small woodlots setbacks

- a. Trees associated with forestry activity:
- i. must not be planted within 30m of the boundary of any residential zone or rural residential zone;
  - ii. must not be planted within 40m of a residential building where the building exists at the time of planting;
  - iii. must not shade a motorway or a strategic road, arterial road, or collector road between 10.00am and 2.00pm on the shortest day of the year;
  - iv. must not be planted within 10m of the boundary of the designated rail corridor; and
  - X. must not be planted within the **Critical Electricity Distribution Infrastructure Corridor mapped area**.
- b. Trees associated with shelterbelts and small woodlots:
- i. must be set back, or managed so that they maintain, a minimum distance of their own height from any residential building on an adjacent site, where the building exists at the time of planting;
  - ii. must not shade a motorway, strategic road, arterial road, or collector road between 10.00am and 2.00pm on the shortest day of the year; and
  - iii. must not be planted within 10m of the boundary of the designated rail corridor.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### 20.6.10.3 Setback from coast and water bodies

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

#### 20.6.10.4 Setback from National Grid

New buildings and structures, and additions and alterations must comply with Rule 5.6.1.

#### 20.6.12.5 Setback from scheduled tree

New buildings and structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2.

#### 20.6.10.X Setback from designated rail corridor

New buildings, new structures and additions and alterations must comply with Rule 6.7.4.

#### 20.6.10.Y Setback from Critical Electricity Distribution Infrastructure

New buildings, new structures and additions and alterations must comply with Rule 5.6.X.1.

**Note 20.6.10.YA - General advice**

1. The **Critical Electricity Distribution Infrastructure Corridor mapped area** is measured either side of the centreline of above ground Critical Electricity Distribution Infrastructure (except in the case of designated zone substations where the measurement is taken from the designation boundary), as follows:
  - a. 5m from the centreline of a 11kV line;
  - b. 8.5m from the centreline of a 33kV line;
  - c. 8.5m from designated zone substations; and
  - d. 9.5m from the centreline of a 66kV or a 110kV line.
2. Work near Aurora Energy's overhead lines and power poles requires Close Approach consent. For more information contact Aurora Energy.
3. Vegetation to be planted near Critical Electricity Distribution Infrastructure should be selected and/or managed to ensure that it will not result in that vegetation breaching the Electricity (Hazards from Trees) Regulations 2003.

### **20.6.11 Vegetation Clearance Standards**

#### 20.6.11.1 Indigenous vegetation clearance - small scale thresholds

Indigenous vegetation clearance - small scale must comply with Rule 10.3.2.1.

#### 20.6.11.2 Maximum area of vegetation clearance (UBMA)

Vegetation clearance in an **urban biodiversity mapped area** must comply with Rule 10.3.2.4.

#### 20.6.11.3 Protected areas (vegetation clearance)

Vegetation clearance and indigenous vegetation clearance must comply with Rule 10.3.2.2.

#### 20.6.11.4 Protected species (indigenous vegetation clearance)

Indigenous vegetation clearance must comply with Rule 10.3.2.3.

#### 20.6.11.5 Maximum area of vegetation clearance in the hazard overlay zones

Vegetation clearance in the Hazard 1 (land instability) Overlay Zone, Hazard 2 (land instability) Overlay Zone, or in a **dune system mapped area**, must comply with Rule 11.3.2.

## **Rule 20.7 Subdivision Performance Standards**

### **20.7.1 Access**

General subdivision must comply with Rule 6.8.1.

### **20.7.2 Esplanade Reserves and Strips**

General subdivision must comply with Rule 10.3.1.

### **20.7.3 Firefighting**

General subdivision must comply with Rule 9.3.3.

### **20.7.4 Service Connections**

General subdivision must comply with Rule 9.3.7.

### **20.7.5 Shape**

1. Each resultant site must be of a size and shape that is large enough to allow for:
  - a. setbacks from boundaries, water bodies, scheduled trees; and
  - b. esplanade reserve or strip areas.
2. NA.
3. Resultant sites created and used solely for the following purposes are exempt from the shape standard:
  - a. Scheduled ASBV or QEII covenant;
  - b. reserve;
  - c. access;
  - d. network utilities activities; or
  - e. road.
4. Activities that contravene this performance standard are restricted discretionary activities.

## **20.7.X Setback from National Grid (Subdivision Activities)**

Subdivision activities must comply with Rule 5.6.1.X.

## **Rule 20.8 Assessment of Controlled Activities**

### **Rule 20.8.1 Introduction**

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 20.8.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 20.9; and
    - iv. the matters of control become matters of discretion and will be assessed as indicated in this section.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 20.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 20.12; and
    - iii. the assessment guidance in this section will also be considered.

### 20.8.2 Assessment of controlled activities

Activity	Matters of control	Guidance on the assessment of resource consents
<p>1. Affecting a scheduled heritage building or a scheduled heritage structure:</p> <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected.</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.4</p>

## Rule 20.9 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### Rule 20.9.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 20.9.2 - 20.9.6:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 20.9.2 - 20.9.6 apply as follows:
  - a. Rule 20.9.2 applies to all performance standard contraventions;
  - b. Rule 20.9.3 applies to land use performance standard contraventions;
  - c. Rule 20.9.4 applies to development performance standard contraventions;
  - d. Rule 20.9.5 applies to subdivision performance standard contraventions; and
  - e. Rule 20.9.6 applies to performance standard contraventions in an overlay zone, mapped area, or affecting a scheduled item.

### 20.9.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards, or other site specific factors including topography, make meeting the standard impracticable.</li> <li>c. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>e. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> </ol>

### 20.9.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Hours of operation	a. Effects on amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Retail and restaurant activities ancillary to sport and recreation operate in a way that avoids or, if avoidance is not practicable, adequately mitigates adverse effects on surrounding properties (Policy 20.2.2.5).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing effects on amenity, Council will consider the location of the building on the site in relation to adjacent residential buildings, and the location of the site and access in the context of the wider environment, considering effects of vehicle movements, vehicle headlights and noise.</li> </ul>
3. Minimum mobility car parking	a. Effects on the safety and efficiency of the transport network b. Effects on accessibility	See Rule 6.10
4. Tree species	a. Effects on biodiversity values b. Effects on natural character of the coast c. Effects on landscape values	See Rule 10.5

### 20.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Boundary setbacks	a. Effects on on-site amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Development maintains or enhances on-site amenity for recreation area users (Policy 20.2.2.1.b).</li> </ul>
		b. Effects on amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Development maintains or enhances neighbourhood amenity, and the amenity of any surrounding residential properties (Policy 20.2.2.1.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Access to sunlight to the outdoor living space(s) and windows of bedrooms and living areas of adjacent residential buildings is maintained or any reduction is minor.</li> </ul>
2.	Fence height and design	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Boundary fences are of a height and design that contributes positively to the amenity and character of the neighbourhood and recreation area (Policy 20.2.2.2).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The increased height or reduced visual permeability is necessary to meet protection requirements, to provide security, minimise noise effects from a busy road or activity, or for public well-being.</li> <li>iv. Existing vegetation or proposed landscaping will screen fences from public places.</li> <li>v. For side and rear boundaries, the fence is on a boundary that is not generally accessible or visible from open areas of the recreation area, e.g. on a boundary in a dense bush area.</li> </ul>
		b. Effects on health and safety	See Rule 9.5

### 20.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
3.	Forestry and shelterbelts and small woodlots setbacks	a. Effects on amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Forestry and shelterbelts and small woodlots are set back an adequate distance to avoid significant effects from shading on residential buildings on adjacent properties (Policy 20.2.2.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The area to be planted is to the south of any adjacent residential or rural residential zone.</li> <li>iv. Slope or orientation or other topographical aspects of the sites involved mean that there will be no shading of a residential building on an adjoining site.</li> </ul>
		b. Effects on health and safety	See Rule 9.5
		c. Effects on the safety and efficiency of the transport network	See Rule 6.10
4.	Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
5.	Height in relation to boundary	a. Effects on amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Development maintains or enhances neighbourhood amenity, and the amenity of any surrounding residential properties (Policy 20.2.2.1.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Access to sunlight to the outdoor living space(s) and windows of bedrooms and living areas of adjacent residential buildings is maintained or any reduction is minor.</li> </ul>

### 20.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
6.	Maximum height	a. Effects on on-site amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Development maintains or enhances on-site amenity for recreation area users (Policy 20.2.2.1.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Better use of public space and retention of open space within the site can be achieved.</li> <li>iv. Greater height is required to meet specialised recreational needs.</li> </ul>
		b. Effects on amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Development maintains or enhances neighbourhood amenity, and the amenity of any surrounding residential properties and is in keeping with the scale of buildings in the surrounding residential environment (Policy 20.2.2.1.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Access to sunlight to the outdoor living space(s) and windows of bedrooms and living areas of adjacent residential buildings is maintained or any reduction is minor.</li> <li>iv. Landscaping or fences screen or soften the visual effects of buildings.</li> <li>v. Natural landforms or topography (e.g. cliffs or tall trees) provide a backdrop to the building.</li> </ul>
7.	Location and screening of car parking	a. Effects on amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Parking areas are designed or located to minimise, as far as practicable, light spill from vehicles using the parking area on surrounding residential properties (Policy 20.2.2.1.e).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Landscaping to minimise adverse visual and nuisance effects from lighting, vehicle headlights, or car parking areas on surrounding properties.</li> </ul>

#### 20.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
8.	Location and screening of outdoor storage	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Service areas for campgrounds or restaurants ancillary to sport and recreation are not visible from ground level from outside the site (Policy 20.2.2.1.c).</li> <li>iii. Outdoor storage is managed in a way that does not result in unreasonable visual amenity effects or nuisance effects (Policy 20.2.2.1.f).</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iv. Landscaping</li> </ul>

### 20.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
Y.	Area and length of buildings	a. Effects on on-site amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. New buildings or additions and alterations to buildings avoid adverse effects on on-site amenity, or if avoidance is not practicable, effects are adequately mitigated (Policy 20.2.2.10).</li> <li>iii. Development maintains or enhances on-site amenity for recreation area users, neighbourhood amenity and the amenity of any surrounding residential properties by ensuring the scale of buildings and structures is appropriate to the recreation area and in keeping with the scale of buildings in surrounding residential environments (Policy 20.2.2.1.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. The visual effect of the building length is screened and softened by landscaping, fencing, or other screening.</li> <li>v. The building is set back from boundaries an adequate distance to avoid shading or visual effects on adjacent residential properties or public places.</li> <li>vi. Topography of the site mitigates the effects of the building scale on adjacent residential properties or public places.</li> <li>vii. The building will not result in removal of important trees or other vegetation.</li> <li>viii. The building will not visually dominate the site or result in unacceptable loss of open space available for users of the recreation area.</li> <li>ix. The building enhances opportunities for use of the recreation area for its purpose.</li> <li>x. The building is attractive and has appropriate building modulation such as through:               <ul style="list-style-type: none"> <li>1. varying building elevations;</li> <li>2. setting parts of the building back;</li> <li>3. using different textures;</li> <li>4. architectural features; or</li> <li>5. other forms of building modulation.</li> </ul> </li> </ul>
		b. Effects on amenity of surrounding sites	
		c. Effects on neighbourhood amenity	

### 20.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
9.	Number, location and design of ancillary signs	a. Effects on on-site amenity	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 20.2.2</p> <p>ii. Ancillary signs are located and designed to maintain on-site amenity and surrounding streetscape and residential amenity, by being of an appropriate size, design, and number to convey information about the name and nature of the club, organisation, or reserve, and not oversized or too numerous than what is necessary for that purpose (Policy 20.2.2.3.a).</p> <p>iii. Commercial sponsorship signs ancillary to sport and recreation are temporary in nature or are enclosed within a site to maintain on-site amenity and surrounding streetscape and residential amenity (Policy 20.2.2.3.b).</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>iv. The number and location of signs will not result in more than minor cumulative visual effects.</p>
		b. Effects on surrounding streetscape and residential amenity	
		c. Effects on the safety and efficiency of the transport network	
10.	Parking loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
11.	Setback from coast and water bodies	a. Effects on biodiversity values and natural character values of riparian margins and the coast	See Rule 10.5
		b. Effects on public access	See Rule 10.5
		c. Risk from natural hazards	See Rule 11.4
12.	Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6
13.	Vegetation clearance standards: <ul style="list-style-type: none"> <li>Protected areas (vegetation clearance)</li> </ul>	a. Effects on biodiversity values and natural character values of riparian margins and the coast	See Rule 10.5

#### 20.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
14.	Vegetation clearance standards: <ul style="list-style-type: none"> <li>Protected species (indigenous vegetation clearance)</li> </ul>	a. Effects on biodiversity values	See Rule 10.5
X.	Setback from designated rail corridor	a. Effects on the safety and efficiency of the transport network	See Rule 6.10.6

### 20.9.5 Assessment of subdivision performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Access	a. Effects on accessibility	See Rule 6.10
		b. Effects on the safety and efficiency of the transport network	
2.	Esplanade reserves and strips	a. Effects on biodiversity values and natural character values of riparian margins and coast	See Rule 10.5
		b. Effects on public access	
3.	Firefighting	a. Effects on health and safety	See Rule 9.5
4.	Service connections	a. Effects on efficiency and affordability of infrastructure	See Rule 9.5

### 20.9.5 Assessment of subdivision performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
5. Shape		<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.4.1</li> <li>b. Subdivisions are designed to ensure any future land use or development is able to meet the performance standards in the zone, or where in a <b>structure plan mapped area</b>, reflects the requirements of the <b>structure plan mapped area</b> performance standards, unless: <ul style="list-style-type: none"> <li>i. a resource consent is approved for a development that does not meet the performance standard and the subdivision is intended for and capable of providing for that approved development; or</li> <li>ii. the resultant site is required for: <ul style="list-style-type: none"> <li>1. Scheduled ASBV or QEII covenant;</li> <li>2. reserve;</li> <li>3. access;</li> <li>4. network utility activities; or</li> <li>5. road (Policy 2.4.1.8).</li> </ul> </li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. Non-compliance with the performance standard for shape will be assessed based on which performance standard(s) the shape of the resultant site does not provide for compliance with. See matters of discretion and assessment rules in relation to performance standard contraventions for: <ul style="list-style-type: none"> <li>i. boundary setbacks;</li> <li>ii. setbacks from coast and water bodies; and</li> <li>iii. setback from scheduled tree.</li> <li>iv. NA.</li> </ul> </li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>d. Restrictions or conditions, including by way of consent notice, on land use or development activities allowed on the site.</li> <li>e. A building platform may be required to be registered against the title by way of consent notice.</li> </ul>

**20.9.6 Assessment of performance standard contraventions in an overlay zone, mapped area, or affecting a scheduled item**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>1. In a <b>hazard overlay zone</b></p> <ul style="list-style-type: none"> <li>• Maximum area of vegetation clearance in the hazard overlay zones (Hazard 1 or 2 (land instability) overlay zones and in a <b>dune system mapped area</b>)</li> <li>• Outdoor Storage (Hazard 1 (flood) Overlay Zone)</li> <li>• Hazardous substances quantity limits and storage requirements</li> </ul>	<p>a. Risk from natural hazards</p>	<p>See Rule 11.4</p>
<p>2. In the <b>NCC Overlay Zone:</b></p> <ul style="list-style-type: none"> <li>• Maximum height</li> <li>• Reflectivity</li> <li>• Area, number and location of buildings and structures</li> </ul>	<p>a. Effects on natural character of the coast</p>	<p>See Rule 10.5</p>
<p>X. In an <b>ASBV:</b></p> <ul style="list-style-type: none"> <li>• Area of buildings and structures</li> </ul>	<p>a. Effects on biodiversity values</p>	<p>See Rule 10.5.</p>
<p>3. On a <b>scheduled heritage building</b> or <b>scheduled heritage structure:</b></p> <ul style="list-style-type: none"> <li>• Materials and design</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.5</p>
<p>4. In an <b>urban biodiversity mapped area:</b></p> <ul style="list-style-type: none"> <li>• Vegetation clearance standards: Maximum area of vegetation clearance (UBMA)</li> </ul>	<p>a. Effects on biodiversity values</p>	<p>See Rule 10.5</p>
<p>5. In a <b>wāhi tūpuna mapped area:</b></p> <ul style="list-style-type: none"> <li>• Setback from coast and water bodies</li> <li>• Esplanade reserves and strips</li> <li>• Vegetation clearance standards: Maximum area of vegetation clearance (UBMA)</li> <li>• Protected areas</li> <li>• Protected species</li> </ul>	<p>a. Effects on cultural values of Manawhenua</p>	<p>See Rule 14.3</p>
<p>Y. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area:</b></p> <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (forestry setbacks)</li> </ul>	<p>a. Effects on the safety and efficiency of network utilities</p>	<p>See Rule 5.7.</p>

**20.9.6 Assessment of performance standard contraventions in an overlay zone, mapped area, or affecting a scheduled item**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>Z. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area:</b></p> <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (buildings, structures and city-wide activities)</li> </ul>	<p>a. Effects on health and safety</p> <p>b. Effects on efficient and effective operation of network utilities</p>	<p>See Rule 5.7.</p>

## **Rule 20.10 Assessment of Restricted Discretionary Activities**

### **Rule 20.10.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 20.10.2 - 20.10.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 20.10.2 - 20.10.5 apply as follows:
  - a. Rule 20.20.2 applies to restricted discretionary land use activities;
  - b. Rule 20.10.3 applies to restricted discretionary development activities;
  - c. Rule 20.20.4 applies to restricted discretionary subdivision activities; and
  - d. Rule 20.20.5 applies to restricted discretionary activities in an overlay zone, mapped area, or affecting a scheduled item.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 20.9; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 20.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 20.12; and

- iii. the assessment guidance in this section will also be considered.

### 20.10.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All restricted discretionary land use activities, including but not limited to the activities below	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
2. All high trip generators, which include: <ul style="list-style-type: none"> <li>any activities that generate 250 or more vehicle movements a day</li> </ul>	a. Effects on accessibility b. Effects on the safety and efficiency of the transport network	See Rule 6.11
3. Campgrounds outside a <b>hazard facility mapped area</b>	a. Effects on amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Campgrounds are designed so any adverse effects, including from noise or dust, or loss of privacy, on surrounding residential properties and other recreation area users, will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 20.2.2.7).</li> <li>iii. Campgrounds are designed so service areas are not visible from ground level from outside the site (Policy 20.2.2.1.c).</li> <li>iv. Outdoor storage is managed in a way that does not result in unreasonable visual amenity effects or create nuisance effects (Policy 20.2.2.1.f).</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>v. Limits on the scale of the activity.</li> <li>vi. Location of dump stations (for disposal of waste from motor homes) away from boundaries with residential properties.</li> <li>vii. Restrictions on location and hours of operation of generators to minimise any effects from noise on neighbours.</li> <li>viii. Road upgrades necessary to handle the amount and type of vehicles anticipated.</li> <li>ix. Location, screening, or acoustic fencing of communal outdoor gathering areas.</li> </ul>

**20.10.2 Assessment of restricted discretionary land use activities**

Activity	Matters of discretion	Guidance on the assessment of resource consents
4. Cemeteries outside a <b>hazard facility mapped area</b>	a. Effects on cultural values of Manawhenua	See Rule 14.4
	b. Effects on amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Cemeteries are designed and located to:               <ul style="list-style-type: none"> <li>1. avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties; and</li> <li>2. minimise, as far as practicable, the potential for reverse sensitivity (Policy 20.2.2.8).</li> </ul> </li> </ul> <p><i>General assessment guidance/Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the effects on amenity, Council will consider whether graves will be located a suitable distance away from boundaries and whether any screening or landscaping proposed will be adequate. These aspects may be included as conditions of consent.</li> </ul>

**20.10.2 Assessment of restricted discretionary land use activities**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>5. Early childhood education - small scale outside a <b>hazard facility mapped area</b></p>	<p>a. Effects on amenity of surrounding sites</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Early childhood education facilities are designed, located, and operated to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the amenity of surrounding residential properties (Policy 20.2.2.12.a).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the effects on amenity, Council will consider whether buildings and outdoor areas are designed and located to reduce noise emissions.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iv. Delivery time restrictions.</li> <li>v. Landscaping to minimise amenity effects of lighting, or parking areas on surrounding properties. Mitigation measures to minimise noise such as insulation, acoustic fencing, low noise surfaces for play areas, or other such treatments.</li> <li>vi. A noise management plan may be required.</li> </ul>
	<p>b. Effects on on-site amenity</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Early childhood education facilities are designed, located, and operated to avoid or, if avoidance is not practicable, adequately mitigate adverse effects for other recreation area users (Policy 20.2.2.12.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Any loss of open space that would otherwise be available to the public, is minimal.</li> <li>iv. The activity will support a recreation activity on the site.</li> </ul> <p><i>General assessment guidance include:</i></p> <ul style="list-style-type: none"> <li>v. In assessing the effects on amenity, Council will consider whether: <ul style="list-style-type: none"> <li>1. noise emissions reduction measures should be required</li> <li>2. the scale of the activity is suitable for the site.</li> </ul> </li> </ul>

**20.10.2 Assessment of restricted discretionary land use activities**

Activity	Matters of discretion	Guidance on the assessment of resource consents
6. Stand-alone car parking	a. Effects on on-site amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Stand-alone car parking is only allowed where it is the secondary use of a parking area required for an activity provided for in the recreation area, when not required for the primary purpose of the area, and where that parking is not needed to facilitate public use of the recreation area (Policy 20.2.2.13).</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iii. Limits on the number of parking spaces that can be used for stand-alone parking to ensure car parks are still available for public use.</li> <li>iv. Limits on the hours parking spaces can be used for stand-alone car parking to ensure conflicts with the primary use of the site do not occur.</li> </ul>
7. Ancillary licensed premises	a. Effects on amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 20.2.2</li> <li>ii. Ancillary licensed premises operate in a way that avoids or, if avoidance is not practicable, adequately mitigates, noise or other adverse effects on the amenity of surrounding residential properties (Policy 20.2.2.5).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The intensity and scale of the activity will not result in increased vehicle or pedestrian movement at unreasonable hours or undesirable activities that would create a disturbance for surrounding residential properties; and</li> <li>iv. effects of the activity will be contained within the recreation area.</li> </ul>

#### 20.10.4 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. General subdivision	a. Effects on the efficient and effective operation of the recreation area	<i>Relevant objectives and policies:</i> i. Objective 20.2.2. ii. The subdivision does not adversely affect the efficient and effective operation of the recreation area (Policy 20.2.2.11).
	b. Effects on the safety and efficiency of the transport network	See Rule 6.11.
	c. NA	NA
	d. Effects on biodiversity values and natural character of riparian margins and the coast	See Rule 10.6.
	e. Effects on public access	
	f. Risk from natural hazards	See Rule 11.5.

#### 20.10.5 Assessment of restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In <b>all hazard overlay zones, swale mapped areas and dune system mapped areas:</b> • General subdivision	a. Risk from natural hazards	See Rule 11.5
2. In a <b>Hazard 1 (flood) or Hazard 2 (flood) Overlay Zone</b> (see Rule 20.3.6): • New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m <sup>2</sup> of new ground floor area	a. Risk from natural hazards	See Rule 11.5
3. In the <b>NCC Overlay Zone:</b> • Forestry • Indigenous vegetation clearance - large scale • General subdivision	a. Effects on natural character of the coast	See Rule 10.6

**20.10.5 Assessment of restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>4. On an <b>ASBV</b>:</p> <ul style="list-style-type: none"> <li>• General subdivision</li> <li>• Shelterbelts and small woodlots</li> <li>• Site development activities (except for outdoor storage, parking, loading and access, vegetation clearance, storage and use of hazardous substances)</li> </ul>	<p>a. Effects on biodiversity values</p>	<p>See Rule 10.6</p>
<p>5. Activities affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b>:</p> <ul style="list-style-type: none"> <li>• Additions and alterations that affect a protected part of a scheduled heritage building or scheduled heritage structure</li> <li>• Removal for relocation</li> <li>• All subdivision activities on sites containing a scheduled heritage building or scheduled heritage structure</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.6</p>
<p>6. Activities affecting a scheduled heritage site:</p> <ul style="list-style-type: none"> <li>• New buildings and structures on a scheduled heritage site, where visible from an adjoining public place or a publicly accessible place within the site</li> <li>• Parking, loading and access on a scheduled heritage site, where visible from an adjoining public place or a public place within the site</li> <li>• All subdivision activities</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.6</p>
<p>7. In a <b>wāhi tūpuna mapped area</b> where activity is identified as a threat, including:</p> <ul style="list-style-type: none"> <li>• All RD forestry</li> <li>• All RD buildings and structures, additions and alterations up to 60m<sup>2</sup></li> <li>• Indigenous vegetation clearance - large scale</li> <li>• General subdivision activities</li> </ul>	<p>a. Effects on cultural values of Manawhenua</p>	<p>See Rule 14.4</p>
<p>8. In the <b>Hazard 2 (flood) Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Natural hazards sensitive activities</li> <li>• Natural hazards potentially sensitive activities</li> </ul>	<p>a. Risk from natural hazards</p>	<p>See Rule 11.5</p>

**20.10.5 Assessment of restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
9. In the <b>National Grid Subdivision Corridor mapped area</b> : <ul style="list-style-type: none"> <li>• All subdivision activities</li> </ul>	a. Risks to the safety of people and property b. Reverse sensitivity effects c. Effects on efficient and effective operation of the National Grid and access to it	See Rule 5.8.
X. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> : <ul style="list-style-type: none"> <li>• All subdivision activities</li> </ul>	a. Effects on health and safety b. Reverse sensitivity effects c. Effects on efficient and effective operation of network utilities	See Rule 5.8.

## **Rule 20.11 Assessment of Discretionary Activities**

### **Rule 20.11.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 20.11.2 - 20.11.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 20.11.2 - 20.11.3 apply as follows:
  - a. Rule 20.11.2 applies to discretionary land use activities; and
  - b. Rule 20.11.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 20.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
<p>1. All discretionary land use activities listed below</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objectives 20.2.1 and 20.2.2</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>b. For discretionary land use activities, whether any associated development activities meet relevant performance standards, or are otherwise consistent with relevant objectives and policies for development (see Rule 20.9 for performance standard contraventions).</p> <p>c. For discretionary land use activities, whether relevant land use performance standards are met, including noise and light spill standards.</p> <p><i>General assessment guidance:</i></p> <p>d. In assessing the significance of effects, consideration will be given to:</p> <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the grant of resource consent.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>e. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety</p> <p>f. For activities that may have effects on biodiversity values, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1.</p> <p>g. For activities adjacent to water bodies and the coast, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.2.</p> <p>h. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua</p>

### 20.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
<p>2. Early childhood education - large scale outside a <b>hazard facility mapped area</b></p>	<p><i>Relevant objectives and policies (priority considerations)</i></p> <p>a. Objective 20.2.2</p> <p>b. Early childhood education facilities are designed, located, and operated to avoid or, if avoidance is not practicable, adequately mitigates adverse effects on the amenity of surrounding residential properties or other recreation area users (Policy 20.2.2.12).</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>c. The activity will not result in a loss of open space that would otherwise be available to the public.</p> <p>d. The activity is provided to support a recreation activity on the site.</p> <p><i>General assessment guidance:</i></p> <p>e. In assessing the effects on amenity Council will consider whether buildings and outdoor areas are designed and located to reduce noise emissions.</p> <p>f. The scale of the activity is suitable for the site.</p> <p><i>Conditions that may be imposed include:</i></p> <p>g. Delivery time restrictions.</p> <p>h. Landscaping to minimise amenity effects of lighting, vehicle headlights or parking areas on surrounding properties.</p> <p>i. Mitigation measures to minimise noise such as insulation, acoustic fencing, low noise surfaces for play areas, or other such treatments.</p> <p>j. A noise management plan.</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>k. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3 and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</p>

### 20.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
3. Mining	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 20.2.2</li> <li>b. Mining is only allowed where there is reasonable certainty that land will be restored or rehabilitated to a standard that will minimise, as far as practicable, the long term visual effects (Policy 20.2.2.9.a).</li> <li>c. Any adverse effects on the amenity of the site for recreation users or on surrounding residential properties from noise or dust can be avoided or, if avoidance is not practicable, adequately mitigated (Policy 20.2.2.9.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>d. The site will be restored or rehabilitated to the satisfaction of the landowner.</li> <li>e. The site will be restored or rehabilitated to its original or better condition at the completion of the activity or, for mining sand from dunes or beaches, there will be no significant effect on the look of the area.</li> <li>f. The activity will not result in the creation of significant dust and noise.</li> <li>g. The stability of the area, or surrounding areas will not be undermined or affected.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>h. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3 and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> <li>j. See Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and effects on biodiversity values.</li> <li>k. Where in the <b>NCC Overlay Zone</b>, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.3 and effects related to the natural character of the coast.</li> <li>l. Where in a <b>wāhi tūpuna mapped area</b>, see Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</li> </ul>

### 20.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
<p>4. Sport and recreation that involves motor vehicles</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 20.2.2</li> <li>b. Sport and recreation that involves motor vehicles has no, or only minimal, adverse effects on:               <ul style="list-style-type: none"> <li>i. surrounding residential properties; and</li> <li>ii. other recreation area users (Policy 20.2.2.6).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. There is sensitivity to the ecological values, scale, character, and use of the recreation area.</li> <li>d. Existing trees and desirable vegetation is retained.</li> <li>e. Activities support the continued operation of railway activities at 3 John Wilson Drive, Ocean Beach</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>f. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3 and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>g. Where in an <b>ASBV</b> - See Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and effects related to biodiversity values.</li> </ul>

### 20.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
<p>5. Conference, meeting and function</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 20.2.1 and 20.2.2</li> <li>b. Conference, meeting and function is designed, located and operated to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on surrounding residential properties amenity. (Policy 20.2.2.12.a)</li> <li>c. Conference, meeting and function is designed, located, and operated to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on other reserve area users. (Policy 20.2.2.12.b)</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>d. The activity will not result in a loss of open space that would otherwise be available to the public.</li> <li>e. The activity is provided to support a recreation activity on the site.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>f. In assessing the effects on amenity Council will consider whether buildings and outdoor areas are designed and located to reduce noise emissions.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>g. Restrictions on the hours, days or frequency of operation, or maximum number of participants for events.</li> <li>h. Delivery time restrictions.</li> <li>i. Landscaping to minimise amenity effects of lighting, vehicle headlights or parking areas on surrounding properties.</li> <li>j. Mitigation measures to minimise noise such as insulation, acoustic fencing, or other such treatments.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>k. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3 and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> </ul>
<p>6. In an <b>ASBV</b>:</p> <ul style="list-style-type: none"> <li>• Sport and recreation (excluding sport and recreation that involves motor vehicles)</li> <li>• Restaurants and retail ancillary to sport and recreation.</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and effects related to biodiversity values.</li> </ul>

### 20.11.3 Assessment of discretionary performance standard contraventions

Activity	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Acoustic insulation</li> <li>• Noise - where the limit is exceeded by less than 5bD LAeq (15 min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>
X. In the <b>NCC Overlay Zone</b> : <ul style="list-style-type: none"> <li>• Area of buildings and structures (Rule 10.3.5.X.b.ii)</li> </ul>	See Rule 10.7.

## **Rule 20.12 Assessment of Non-complying Activities**

### **Rule 20.12.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 20.12.2 - 20.12.6 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 20.12.2 - 20.12.5 apply as follows:
  - a. Rule 20.12.2 applies to all non-complying activities;
  - b. Rule 20.12.3 applies to non-complying land use activities;
  - c. Rule 20.12.4 applies to non-complying development activities;
  - d. Rule 20.12.5 applies to non-complying subdivision activities; and
  - e. Rule 20.12.6 applies to non-complying performance standard contraventions.
  - f. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 20.12.2 Assessment of all non-complying activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying activities including but not limited to the activities listed below.</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. The activity does not detract from, or preferably contributes to, the strategic direction objectives, including, but not limited to, those related to: <ul style="list-style-type: none"> <li>i. Objective 2.3.3 and 2.4.1</li> </ul> </li> <li>b. The activity supports the purpose of the zone as outlined in Objective 20.2.1.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. In assessing the significance of effects, consideration will be given to: <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities;</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the grant of resource consent;</li> <li>iii. any effects otherwise managed through performance standards and consistent with all relevant objectives and policies for the zone.</li> </ul> </li> <li>d. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>e. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>f. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety</li> <li>g. For activities that may have effects on biodiversity values, see Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1.</li> <li>h. For activities adjacent to water bodies and the coast, see Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.2.</li> <li>i. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua</li> </ul>

### 20.12.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
1. Commercial advertising	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Policy 2.4.1.6.c</li> </ul>
2. <ul style="list-style-type: none"> <li>• Commercial activities (except commercial advertising, campgrounds)</li> <li>• Industrial activities</li> <li>• Major facility activities (except cemeteries)</li> <li>• Rural activities (except grazing, forestry, mining, and scheduled mining activity)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.3.2 and Policy 2.3.2.2</li> <li>b. Objective 2.4.3 and Policy 2.4.3.4</li> <li>c. Objective 20.2.1</li> <li>d. Policy 20.2.1.4</li> </ul>
3. Residential	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 20.2.1</li> <li>b. Policy 20.2.1.4</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>c. An on-site residence is essential for management of the recreation area and approval has been granted under the Reserves Act 1977; and</li> <li>d. The location, design, and scale of the residence is appropriate to minimise effects on the recreation area, recreation users, surrounding sites, and neighbourhood amenity.</li> </ul>
4. In the <b>Hazard 1 (flood) Overlay Zone</b> (see Rule 20.3.6): <ul style="list-style-type: none"> <li>• Natural hazards potentially sensitive activities</li> <li>• Natural hazards sensitive activities</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and the effects related to the risk from natural hazards.</li> </ul>
5. In an <b>ASBV</b> : <ul style="list-style-type: none"> <li>• Commercial activities (except ancillary licensed premises, conference, meeting and function, restaurants or retail activities ancillary to sport and recreation)</li> <li>• Rural activities</li> <li>• Industrial activities</li> <li>• Residential activities</li> <li>• Major Facility activities</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and the effects related to biodiversity values.</li> </ul>

### 20.12.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
6. In a <b>hazard facility mapped area</b> , bulk fuel storage facilities sensitive activities	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and Policy 9.2.2.15 and the risks to people from an emergency event occurring at a hazard facility.</p>

### 20.12.4 Assessment of non-complying development activities

Activity	Guidance on the assessment of resource consents
1. Demolition of a protected part of a scheduled heritage building or scheduled heritage structure	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1 and the effects on heritage values.</p>
2. In an <b>ASBV</b> : <ul style="list-style-type: none"> <li>• Indigenous vegetation clearance - large scale</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and the effects related to biodiversity values.</p>

### 20.12.5 Assessment of non-complying subdivision activities

Activity	Guidance on the assessment of resource consents
1. Cross lease, company lease and unit title subdivision	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 20.2.2</p> <p>b. Policy 20.2.2.11</p>

### 20.12.6 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>
2. <ul style="list-style-type: none"> <li>• Setback from National Grid (buildings, structures, city-wide activities, and National Grid sensitive activities (Rule 5.6.1.1)</li> <li>• Setback from National Grid (subdivision activities) (Rule 20.7.X)</li> </ul>	<p><i>Relevant guidance from other sections:</i></p> <p>a. See Section 5.10 for guidance on the assessment of resource consents in relation to Objective 5.2.X and effects related to the operation, maintenance, upgrading and development of the National Grid.</p>
3. Hazard overlay zones development standards: <ul style="list-style-type: none"> <li>• Hazard exclusion areas</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and the effects related to the risk from natural hazards.</p>
5. In an <b>ASBV</b> : <ul style="list-style-type: none"> <li>• Tree species</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and the effects related to biodiversity values.</p>
6. In the NCC Overlay Zone: <ul style="list-style-type: none"> <li>• Tree species</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.3 and the effects related to natural character of the coast.</p>

## E. Major Facility Zones

### Introduction

The major facilities are key facilities throughout the city which contribute to the economic, social and cultural well-being of the community. The facilities identified in the District Plan enable people in Dunedin to access essential services such as education, health care, transport, and recreation. Including these facilities in separate zones, with provisions tailored specifically to them, ensures that their contributions to economic and social prosperity can be maintained and encouraged. Providing for major facilities also ensures greater certainty for the community regarding the activities, and the effects, which can be expected to occur.

Several major facilities (Campus, Dunedin Botanic Garden, Airport, Hospital, Invermay/Hercus, major recreation facilities (Moana Pool and Stadium), Port, Schools, and Taieri Aerodrome) have a unique activity that provides for all the primary activities of the major facility. These activities are included in the Major Facility Activities Category of the Nested Table. However, some major facilities rely on standard activities that are provided for in a range of zones (for example the Otago Museum's primary activities are provided for through enabling training and education, campus-affiliated office, conference, meeting and function, entertainment and exhibition). In addition, some of the facilities in the Major Facility Activities Category do not have a special major facility zone (for example the New Zealand Marine Studies Centre). In addition to the major facilities, the Major Facility Activities Category also contains important community facilities that occur in a range of locations, for example cemeteries and emergency services.

The focus for the major facility zones is on providing for the operation of the major facility. Permitted activities within each zone include:

- activities that support the operation of the major facility, including ancillary activities; and
- related activities that may make use of the facilities' buildings or grounds, and are unlikely to have any effects on neighbouring communities.

Activities that are not part of, or ancillary to, the major facility or are incompatible with the major facility or the surrounding zone, require consent.

Major facilities operate in a different manner to activities in the surrounding zones and will have effects that differ from those that typically occur in the surrounding area. It is therefore appropriate to manage them in a different way to allow them to operate effectively. While some adverse effects are to be expected, the provisions require the operation and development of the facility in a manner that does not result in unacceptable effects on the amenity of neighbours and the local community.

To further encourage efficient operation, most major facilities have been assigned a 'default zone'. The provisions allow land that is surplus to the requirements of the major facility to be used in a manner consistent with the default zone. The default zone is usually the surrounding zone, but may also be a zone that is considered a 'best fit' for the likely future use of the facility buildings. These provisions allow a facility to dispose of surplus land without the need for a resource consent or plan change.

## **21. Ashburn Clinic**

### **21.1 Introduction**

The Ashburn Clinic is located at 496 Taieri Road, Halfway Bush, Dunedin. The hospital occupies an area of approximately eight hectares and is owned and operated by the Ashburn Hall Charitable Trust. Ashburn Clinic provides in-patient and out-patient mental health care.

The Ashburn Clinic was originally established in Dunedin in 1882, then known as Ashburn Hall, and provided an alternative to public asylums of that time. The clinic is a private trust which provides a range of essential mental health services to the region. With this in mind, the Ashburn Clinic Zone has been designed to enable the services which are offered by Ashburn Clinic to be provided for, while providing greater certainty to the community regarding what land use activities can be expected to occur on the Ashburn Clinic site.

The site itself is surrounded by the Rural Residential 1 Zone, which is characterised by relatively low density residential development, and is also in close proximity to the General Residential 1 Zone and the Recreation Zone. There is a high level of residential amenity in the area, and the site and wider area has a high level of established vegetation. While the buildings on the Ashburn Clinic site are generally larger than would otherwise be expected in the surrounding residential environments, these are contained within a largesite which is extensively bordered by trees and vegetation.

The Ashburn Clinic Zone recognises the existing and foreseeable future use of Ashburn Clinic site and, at the same time, appropriately manages any adverse effects of development on the surrounding Rural Residential 1 Zone.

## 21.2 Objectives and Policies

<b>Objective 21.2.1</b>	
Ashburn Clinic is able to operate efficiently and effectively as a hospital and medical training and research facility.	
Policy 21.2.1.1	Enable hospital activity in the Ashburn Clinic Zone.
Policy 21.2.1.2	Enable land that is surplus to the needs of Ashburn Clinic to transition to the Rural Residential 1 Zone, so that future development that is not related to hospital activity will be managed in accordance with the objectives and policies of that zone.
Policy 21.2.1.3	Provide for activities that are ancillary to hospital activity where they are designed and operated in line with Objective 21.2.2 and its policies.
Policy 21.2.1.4	Only allow activities that are not ancillary to hospital activity where all of the following apply: <ul style="list-style-type: none"> <li>a. the activities are related to or support Ashburn Clinic, or have other operational requirements that mean they need to locate in the zone;</li> <li>b. they will support the efficient and effective operation of Ashburn Clinic;</li> <li>c. they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>d. they are designed and operated in line with Objective 21.2.2 and its policies.</li> </ul>
Policy 21.2.1.5	Only allow general subdivision in the Ashburn Clinic Zone where: <ul style="list-style-type: none"> <li>a. it is in accordance with the provisions of the Rural Residential Zone 1; and</li> <li>b. it does not adversely affect the efficient and effective operation of Ashburn Clinic.</li> </ul>

<b>Objective 21.2.2</b>	
Land use activities and development necessary for Ashburn Clinic to meet the reasonably foreseeable health needs of the community are enabled, while ensuring development: <ul style="list-style-type: none"> <li>a. achieves a reasonable standard of on-site amenity for patients, staff and visitors; and</li> <li>b. maintains or enhances the residential amenity of surrounding sites.</li> </ul>	
Policy 21.2.2.1	Require development to provide a reasonable standard of on-site amenity by retaining open spaces uncluttered by buildings.
Policy 21.2.2.2	Require buildings and structures to be of a height and setback from boundaries that ensures there are no more than minor effects on the sunlight access and privacy of current and potential future residential buildings and their outdoor living spaces.
Policy 21.2.2.3	Require development to maintain or enhance the visual amenity of the surrounding Rural Residential 1 Zone by ensuring all the following are met: <ul style="list-style-type: none"> <li>a. buildings and structures are of a height and setback that reduces their visual impact and preserves open space values; and</li> <li>b. service areas are not visible from ground level outside the site.</li> </ul>
Policy 21.2.2.4	Require landscaping of the boundary of parking areas, where adjacent to the road frontage, to screen or soften these areas and ensure a high standard of visual amenity when viewed from the road.

### Objective 21.2.2

Land use activities and development necessary for Ashburn Clinic to meet the reasonably foreseeable health needs of the community are enabled, while ensuring development:

- a. achieves a reasonable standard of on-site amenity for patients, staff and visitors; and
- b. maintains or enhances the residential amenity of surrounding sites.

Policy 21.2.2.5	Require ancillary signs visible from outside the zone to be located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose.
Policy 21.2.2.6	Require ancillary commercial activities to be designed, located and operated to primarily serve staff, patients and visitors of Ashburn Clinic.
Policy 21.2.2.7	Require shelterbelts and small woodlots to be set back an adequate distance to avoid or minimise, as far as practicable, significant effects from shading on residential dwellings on surrounding properties.

## Rules

### Rule 21.3 Activity Status

#### 21.3.1 Rule location

The activity status tables in rules 21.3.3 to 21.3.5 specify the activity status of land use activities, development activities, and subdivision activities in the Ashburn Clinic Zone, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 21.3.2 Activity status introduction

1. The activity status tables in rules 21.3.3 - 21.3.5 show the activity status of activities in the Ashburn Clinic Zone and the mapped area indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying..

#### *Performance Standards*

7. Performance standards are listed in the far right column of the activity status tables.
8. Performance standards apply to permitted, controlled, and restricted discretionary activities.
9. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
10. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

## Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity

### 21.3.3 Activity status table - land use activities

1.	Performance standards that apply to all land use activities		a. NA b. Light spill c. Noise
Major facility activities		Activity status	Performance standards
2.	Hospital	P	a. Minimum mobility car parking
3.	All other activities in the major facility activities category	NC	
Community activities		Activity status	Performance standards
4.	Community and leisure - small scale	P	
5.	Conservation	P	
6.	All other activities in the community activities category	D	
Commercial activities		Activity status	Performance standards
7.	Commercial activities ancillary to hospital activity	P	a. Location
8.	Registered health practitioners	P	
9.	All other activities in the commercial activities category	NC	
Residential activities		Activity status	Performance standards
10.	Rest homes	P	
11.	All other activities in the residential activities category	D	
Industrial activities		Activity status	Performance standards
12.	All activities in the industrial activities category	NC	
Rural activities		Activity status	Performance standards
13.	Grazing	P	
14.	Farming	D	

15.	Forestry	D	
16.	All other activities in the rural activities category	NC	

### Note 21.3.3X- Other requirements outside of the District Plan

1. Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

### Note 21.3.3A – Other requirements outside of the District Plan

Plantation forestry and associated activities in the Ashburn Clinic Zone are addressed by the NESPF rather than Rule 21.3.3.15. The NESPF does not apply to vegetation clearance prior to afforestation and the rules in Section 10 Natural Environment apply.

### 21.3.4 Activity status table - development activities

1.	Performance standards that apply to all development activities		a. Setback from scheduled tree
Buildings and structures activities		Activity status	Performance standards
2.	All buildings and structures activities	P	<ol style="list-style-type: none"> <li>a. Boundary setbacks</li> <li>b. Maximum height</li> <li>c. Number, location and design of ancillary signs</li> <li>d. Setback from coast and water bodies</li> </ol>
Site development activities		Activity status	Performance standards
3.	Service areas	P	a. Location and screening of service areas
4.	Parking, loading and access	P	<ol style="list-style-type: none"> <li>a. Parking, loading and access standards</li> <li>b. Boundary treatments and other landscaping</li> </ol>
5.	New, or additions to, parking areas that result in 50 or more new parking spaces.	RD	<ol style="list-style-type: none"> <li>a. Boundary treatments and other landscaping</li> <li>b. Parking, loading and access standards</li> </ol>
6.	Storage and use of hazardous substances	P	<ol style="list-style-type: none"> <li>a. Hazardous Substances quantity limits and storage requirements</li> <li>b. Setback from coast and water bodies</li> </ol>
7.	Shelterbelts and small woodlots	P	<ol style="list-style-type: none"> <li>a. Forestry and shelterbelts and small woodlots setbacks</li> <li>b. Tree species</li> </ol>

8.	Vegetation clearance	P	a. Protected areas
9.	All other site development activities	P	

### 21.3.5 Activity status table - subdivision activities

Subdivision activities		Activity status	Performance standards
1.	General subdivision	RD	a. Subdivision performance standards
2.	Cross lease, company lease and unit title subdivision	NC	

#### Note 21.3.5A - Other RMA considerations

- Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

### 21.3.6 Transition to Rural Residential 1 Zone

On receipt of written notice from both the landowner and operator of Ashburn Clinic (if different) to Dunedin City Council in relation to all or part of the land within the Ashburn Clinic Zone, the provisions of the Ashburn Clinic Zone will no longer apply to that parcel of land and the provisions of the Rural Residential 1 Zone will apply in full.

### **Note 21.3.4A - General advice**

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

### **Rule 21.4 Notification**

1. Activities are subject to the normal tests for notification in accordance with sections 95A - 95G of the RMA.

## **Rule 21.5 Land Use Performance Standards**

### **21.5.2 Light Spill**

Land use activities must comply with Rule 9.3.5.

### **21.5.3 Location**

1. For commercial activities ancillary to hospital activity, customer access must only be available from inside hospital buildings.
2. Activities that contravene this performance standard are restricted discretionary activities.

### **21.5.4 Minimum Mobility Car Parking**

1. Hospital activity must provide a minimum of two mobility parking spaces.
2. NA.
3. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 21.5.4A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### **21.5.5 Noise**

Land use activities must comply with Rule 9.3.6.

## **Rule 21.6 Development Performance Standards**

### **21.6.1 Boundary Treatments and Other Landscaping**

1. Where a parking area is built within 5m of a street frontage, a landscaping area with a minimum 1.5m width must be provided along the full length of the road frontage (except for where vehicle access is provided).
2. Landscaping areas must:
  - a. be planted with a mix of trees and shrubs and/or ground cover plants that achieves a total coverage of the ground area in planting (when mature), except for 10% of the area, which may be used for pedestrian paths;
  - b. have an average of one tree for every 5m of frontage;
  - c. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - d. be designed to allow surface water run-off from surrounding areas to enter;
  - e. be protected by a physical barrier that prevents cars from damaging plants;
  - f. for required trees, use trees that are at least 1.5m high at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting;
  - g. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and
  - h. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.
3. Any road boundary fences provided must be placed on the property side of any road frontage landscaping required by this rule.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **21.6.2 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **21.6.3 Location and Screening of Service Areas**

1. Service areas must be located or screened so that they are not visible at ground level from adjacent residential activities, residential zoned properties, or public places.
2. Service areas must not encroach into required parking, loading, or manoeuvring areas.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **21.6.4 Maximum Height**

1. The maximum height of new buildings and structures, and additions and alterations, must not exceed 12m above ground level.
2. Rooftop structures are exempt from the performance standard for height provided they do not exceed the maximum height limit for all other buildings and structures by more than one third of that limit.
3. Activities that contravene this performance standard are restricted discretionary activities.

## **21.6.5 Number, Location and Design of Ancillary Signs**

### 21.6.5.1 General

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are not visible from outside the Ashburn Clinic Zone;
  - ii. regulatory signs, warning signs, or directional signs; and
  - iii. building names (excluding sponsorship names).
- b. Signs related to ancillary retail and ancillary restaurants must not be visible outside the Ashburn Clinic Zone.
- c. Signs must comply with Rule 6.7.3 where visible from a road.
- d. Signs must not be illuminated or digital.
- e. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

### 21.6.5.2 Freestanding signs

- a. The maximum number of permanently fixed freestanding signs is one per 50m of frontage.
- b. The maximum number of portable freestanding signs is one per 50m of frontage.
- c. The maximum dimensions of freestanding signs are:
  - i. maximum height of 4m;
  - ii. maximum area of 8m<sup>2</sup>;
  - iii. maximum width of 2m; and
  - iv. maximum depth of 400mm
- d. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.

### 21.6.5.3 Signs attached to buildings

- a. The height, above ground level, at the highest point of any sign, attached to a building is 4m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs attached to a building must:
  - i. not exceed one sign per 30m of road frontage;
  - ii. have a maximum area per display face of 2m<sup>2</sup>;
  - iii. have a maximum of two display faces per sign;
  - iv. where attached to the façade of a building, must not project more than 1m from the façade to which it is attached; and
  - v. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.

### **Note 21.6.5A - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency, *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*
  - b. Dunedin City Council Public Commercial Use of Footpaths Policy.
  - c. Dunedin City Council Roadway Bylaw.
  - d. Dunedin City Council Traffic and Parking Bylaw.

### **21.6.6 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

### **21.6.7 Protected Areas (vegetation clearance)**

Vegetation clearance must comply with Rule 10.3.2.2

### **21.6.8 Setbacks**

#### **21.6.8.1 Boundary setbacks**

- a. New buildings and structures, and additions and alterations must have a minimum setback from boundaries of 10m; except:
  - i. buildings or structures less than 10m<sup>2</sup> and less than 2m high may be located within the boundary setbacks where the total length of the buildings facing a boundary and within the setback does not exceed 7m in length and there are no windows or openings along the wall facing the boundary; and
  - ii. fences and ancillary signs are exempt from the performance standard.
- b. Public entrances to buildings must be located at least 10m from a boundary with any rural residential zone.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### **21.6.8.2 Setback from coast and water bodies**

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

#### **21.6.8.3 Setback from scheduled tree**

New buildings, structures, additions and alterations, and any site development activities, if they involve ground excavation or the installation of impermeable surfaces on the ground, must comply with Rule 7.5.2.

#### **21.6.8.4 Forestry and shelterbelts and small woodlots setbacks**

Shelterbelts and small woodlots must comply with Rule 17.6.9.2.

### **21.6.9 Tree Species**

Shelterbelts and small woodlots must comply with Rule 10.3.4.

## **Rule 21.7 Subdivision Performance Standards**

General subdivision must comply with the performance standards for the Rural Residential 1 Zone within Rule 17.7.

## **Rule 21.8 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 21.8.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 21.8.2 - 21.8.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 21.8.2 - 21.8.5 apply as follows:
  - a. Rule 21.8.2 applies to all performance standard contraventions;
  - b. Rule 21.8.3 applies to land use performance standard contraventions;
  - c. Rule 21.8.4 applies to development performance standard contraventions; and
  - d. Rule 21.8.5 applies to subdivision performance standard contraventions.

### **21.8.2 Assessment of all performance standard contraventions**

Performance standard	Guidance on the assessment of resource consents
----------------------	---

<p>1. All performance standard contraventions</p>	<p><i>Relevant objectives and policies:</i></p> <p>a. Objective 21.2.1</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>b. The degree of non-compliance with the performance standard is minor.</p> <p>c. The need to meet other performance standards or site specific factors makes meeting the standard impracticable.</p> <p>d. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</p> <p>e. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</p> <p><i>General assessment guidance:</i></p> <p>f. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</p> <p>g. In balancing consideration of the objectives and policies related to the maintenance of heritage values and those related to general amenity, greater weight will usually be placed on heritage policies.</p>
---	---

**21.8.3 Assessment of land use performance standard contraventions**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>2. Location (ancillary commercial activities)</p>	<p>a. Effects on rural residential character and visual amenity</p> <p>b. Effects on the vibrancy, and economic and social success of the CBD and centres</p>	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 21.2.2</p> <p>ii. Ancillary commercial activities are designed, located and operated to primarily serve staff, patients and visitors of Ashburn Clinic (Policy 21.2.2.6).</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>iii. The ancillary activity is unlikely to attract external customers and become a stand-alone activity.</p>
<p>3. Minimum mobility car parking</p>	<p>a. Effects on the safety and efficiency of the transport network</p> <p>b. Effects on accessibility</p>	<p>See Rule 6.10</p>

**21.8.4 Assessment of development performance standard contraventions**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
----------------------	-----------------------	---

1.	Boundary treatments and other landscaping	a. Effects on rural residential character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 21.2.2</li> <li>ii. The boundary of parking areas, where adjacent to the road frontage is landscaped to screen or soften these areas and ensure a high standard of visual amenity when viewed from the road (Policy 21.2.2.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The parking areas are small and/or surrounded by mature vegetation such that the effects on visual amenity are minor.</li> <li>iv. Alternative landscaping or screening is effective in visually softening large areas of hard surfaces, when viewed from the road.</li> </ul>
2.	<ul style="list-style-type: none"> <li>• Boundary setbacks</li> <li>• Maximum height</li> </ul>	a. Effects on the amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 21.2.2</li> <li>ii. Buildings and structures are of a height and setback from boundaries that ensures there are no more than minor effects on the sunlight access and privacy of current and potential future residential buildings and their outdoor living spaces (Policy 21.2.2.2).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. There is consistency with the setbacks of surrounding properties.</li> </ul> <p><i>In assessing the application Council will consider:</i></p> <ul style="list-style-type: none"> <li>iv. Existing sunlight access to neighbouring properties</li> <li>v. Cumulative effects from incremental development.</li> </ul>
		b. Effects on rural residential character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 21.2.2</li> <li>ii. Buildings and structures are of a height and setback that reduces their visual effect and preserves open space values (Policy 21.2.2.3.a).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. There is consistency with the setbacks of surrounding properties.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iv. Landscaping requirements to screen or soften the effect of buildings or fences.</li> </ul>

### 21.8.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
3. Forestry and shelterbelts and small woodlots setbacks	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 21.2.2</li> <li>ii. Shelterbelts and small woodlots are set back an adequate distance to avoid or minimise, as far as practicable, significant effects from shading on residential dwellings on surrounding properties (Policy 21.2.2.7).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The area to be planted is to the south of any adjoining residential zone or residential buildings on an adjoining site.</li> <li>iv. Slope or orientation or other topographical aspects of the sites involved mean that there will be no shading of residential buildings on an adjoining site.</li> </ul>
	b. Effects on health and safety	See Rule 9.5
	c. Effects on the safety and efficiency of the transport network	See Rule 6.10
4. Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
5. Location and screening of service areas	a. Effects on rural residential character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 21.2.2</li> <li>ii. The visual amenity of the surrounding Rural Residential 1 Zone is maintained or enhanced by ensuring service areas are not visible from ground level outside the site (Policy 21.2.2.3.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Screening would unduly restrict the usability of the service area.</li> <li>iv. The site layout prevents the service area from being visible from any public place without additional screening being required.</li> </ul>

#### 21.8.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
6.	Number, location and design of ancillary signs	a. Effects on rural residential character and visual amenity	<i>Relevant objectives and policies:</i> i. Objective 21.2.2 ii. Ancillary signs visible outside the zone are located and designed to maintain or enhance streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose (Policy 21.2.2.5).
		b. Effects on the safety and efficiency of the transport network	See Rule 6.10
7.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
8.	Protected areas (vegetation clearance)	a. Effects on biodiversity values and the natural character of riparian margins and the coast	See Rule 10.5
9.	Setback from coast and water bodies	a. Effects on biodiversity values and natural character of riparian margins and the coast	See Rule 10.5
		b. Effects on public access	
		c. Risk from natural hazards	See Rule 11.4
10.	Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6
11.	Tree species	a. Effects on biodiversity values	See Rule 10.5

#### 21.8.5 Assessment of subdivision performance standard contraventions

Performance standard		Guidance on the assessment of resource consents
1.	Subdivision performance standards	See Rule 17.9

## **Rule 21.9 Assessment of Restricted Discretionary Activities**

### **Rule 21.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 21.9.2 - 21.9.3:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 21.9.2 - 21.9.3 apply as follows:
  - a. Rule 21.9.2 applies to restricted discretionary development activities; and
  - b. Rule 21.9.3 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 21.8; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 21.10; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 21.11; and
    - iii. the assessment guidance in this section will also be considered.

### 21.9.2 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. High trip generators: <ul style="list-style-type: none"> <li>• New, or additions to, parking areas that result in 50 or more new parking spaces</li> </ul>	a. Effects on the safety and efficiency of the transport network b. Effects on accessibility	See Rule 6.11

### 21.9.3 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. General subdivision	a. Effect on the efficient and effective operation of Ashburn Clinic  See Rule 17.10.	<i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>Objectives 21.2.1, 2.3.1.</li> <li>General subdivision does not adversely affect the efficient and effective operation of Ashburn Clinic (Policy 21.2.1.5.b).</li> </ol>

## **Rule 21.10 Assessment of Discretionary Activities**

### **Rule 21.10.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 21.10.2 - 21.10.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 21.10.2 - 21.10.3 apply as follows:
  - a. Rule 21.10.2 applies to all discretionary activities;
  - b. Rule 21.10.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 21.10.2 Assessment of all discretionary activities

Activity	Guidance on the assessment of resource consents
<p>1. All discretionary land use activities listed below:</p> <ul style="list-style-type: none"> <li>• all activities in the community activities category except community and leisure - small scale and conservation</li> <li>• all activities in the residential activities category except rest homes</li> <li>• farming</li> <li>• forestry</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 2.3.1</li> <li>b. Objective 21.2.1</li> <li>c. The activity does not detract from, or preferably contributes to, the strategic directions objectives.</li> <li>d. Activities that are not ancillary to hospital activity:               <ol style="list-style-type: none"> <li>i. are related to or support the Ashburn Clinic, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Ashburn Clinic;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 21.2.2 and its policies (Policy 21.2.1.4).</li> </ol> </li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>e. The activity is in accordance with relevant objectives, policies and performance standards of the rural residential zone.</li> <li>f. For discretionary land use activities, whether any associated development activities meet relevant development performance standards, or are otherwise consistent with relevant objectives and policies for development.</li> <li>g. All relevant land use performance standards are met, including noise and light spill standards.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>h. In assessing the significance of effects, consideration will be given to:               <ol style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ol> </li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>i. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>j. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>k. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ol>

**21.10.3 Assessment of discretionary performance standard contraventions**

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Rule 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>

## **Rule 21.11 Assessment of Non-complying Activities**

### **Rule 21.11.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 21.11.2 - 21.11.4 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 21.11.2 - 21.11.4 apply as follows:
  - a. Rule 21.11.2 applies to all non-complying activities;
  - b. Rule 21.11.3 applies to non-complying land use activities; and
  - c. Rule 21.11.4 applies to all non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 21.11.2 Assessment of all non-complying activities

Activity	Guidance of the assessment of resource consents
<p>1. All non-complying land use activities</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.3.1</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 21.2.1</li> <li>e. Activities that are not ancillary to hospital activity:               <ul style="list-style-type: none"> <li>i. are related to or support Ashburn Clinic, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Ashburn Clinic;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 21.2.2 and its policies (Policy 21.2.1.4).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>f. In assessing the significance of effects consideration will be given to:               <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities;</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent; and</li> <li>iii. any effects otherwise managed through performance standards and consistent with all relevant objectives and policies for the zone.</li> </ul> </li> <li>g. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>h. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety</li> <li>j. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua</li> </ul>

### 21.11.3 Assessment of non-complying land use activities

Activity	Guidance of the assessment of resource consents
----------	---

1.	Commercial advertising	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 2.4.1</p> <p>b. Policy 2.4.1.6.c</p>
----	------------------------	--

**21.11.4 Assessment of all non-complying performance standard contraventions**

Performance standard	Guidance on the assessment of resource consents
<p>1.</p> <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>

## **22. Dunedin Botanic Garden**

### **22.1 Introduction**

The Dunedin Botanic Garden is located in North Dunedin, on an extensively landscaped site of approximately 30 hectares. The Garden is owned and operated by the Dunedin City Council.

The Garden was New Zealand's first botanic garden, opening in 1863, and has since developed to provide a wide range of recreational opportunities and significant amenity, horticultural and conservation plant collections. The Garden has an information centre, café and aviary, and provides volunteer activities, education programmes and regular entertainment events in the lower garden band rotunda.

The Garden is managed as one of Dunedin's reserves, under a broad reserve management plan administered by the Dunedin City Council. Future development at the Dunedin Botanic Garden is guided by its Strategic Development Plan which was launched in 2006 and sets the framework for managing the garden for a 30-40 year period. The Development Plan includes proposals to relocate buildings, enhance existing projects and develop a suite of new projects. Development within the next 10 years may include a visitor information and education facility in the upper garden, additions to the Lister Garden, a model vegetable/fruit garden, extensions to the water garden and a children's adventure playground. Ongoing development involves renewal and redevelopment of plantings within the garden. The lower garden contains three scheduled heritage buildings and structures: the Wolf Harris fountain, the Bandstand soundshell and the Winter Garden.

The Garden is surrounded by several zones, which provide for a range of different land use activities. To the east of the Garden is Recreation Zone which includes sports grounds and the Northern Cemetery. To the north, south and west are residential zones with varying densities of residential development. At the north-western edge of the Garden is a further recreation sports field, the 'Gardens Ground', and also the North East Valley suburban centre, which includes a mix of commercial and community activities.

The Dunedin Botanic Garden Zone has been designed to enable the activities necessary for the continued functioning of the Garden, while providing certainty to the community regarding what land use activities can be expected to occur on the Dunedin Botanic Garden site. The types and mix of activities appropriate within the zone, and the potential future uses of the site, have been important factors in determining the extent of, and rules for, the Dunedin Botanic Garden Zone. The zone recognises the existing and foreseeable future uses of the Garden site and, at the same time, appropriately manages potential adverse effects while ensuring compatibility with the wide variety of surrounding environments.

## 22.2 Objectives and Policies

<b>Objective 22.2.1</b>	
The Dunedin Botanic Garden is able to operate efficiently and effectively.	
Policy 22.2.1.1	Enable Dunedin Botanic Garden activity.
Policy 22.2.1.2	Provide for activities that are ancillary to Dunedin Botanic Garden activity where they are designed and operated in line with Objective 22.2.2 and its policies.
Policy 22.2.1.3	Only allow activities that are not ancillary to Dunedin Botanic Garden activity where: <ol style="list-style-type: none"> <li>they are related to or support the Dunedin Botanic Garden, or have other operational requirements that mean they need to locate in the zone;</li> <li>they will support the efficient and effective operation of the Dunedin Botanic Garden;</li> <li>they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>they are designed and operated in line with Objective 22.2.2 and its policies.</li> </ol>
Policy 22.2.1.4	Only allow subdivision activities where they do not adversely affect the efficient and effective operation of Dunedin Botanic Garden.

<b>Objective 22.2.2</b>	
Land use activities and development necessary for the continued operation of the Dunedin Botanic Garden are enabled, while ensuring development and land use activities: <ol style="list-style-type: none"> <li>achieve a good standard of on-site amenity for staff and visitors; and</li> <li>maintain or enhance the amenity of the surrounding residential areas.</li> </ol>	
Policy 22.2.2.1	Require buildings and structures to be of a height and setback from boundaries that ensures: <ol style="list-style-type: none"> <li>there are no more than minor effects on the sunlight access and privacy of current and potential future residential buildings and their outdoor living spaces; and</li> <li>any adverse effects on neighbourhood amenity are avoided or, if avoidance is not practicable, are no more than minor.</li> </ol>
Policy 22.2.2.2	Require development to maintain or enhance on-site and neighbourhood amenity by ensuring service areas are not visible from ground level within or outside the site.
Policy 22.2.2.3	Require landscaping of the boundary of parking areas, where adjacent to a road frontage, to screen or soften these areas and ensure a high standard of visual amenity when viewed from the road.
Policy 22.2.2.4	Require fences on road boundaries to be of a height and design that contributes positively to neighbourhood amenity.
Policy 22.2.2.5	Require ancillary signs visible from outside the zone to be located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose.
Policy 22.2.2.6	Require ancillary restaurants and retail activities to be designed, located and operated to primarily serve visitors to the Dunedin Botanic Garden.

## Rules

### Rule 22.3 Activity Status

#### 22.3.1 Rule location

The activity status tables in rules 22.3.3 to 22.3.5 specify the activity status of land use activities, development activities, and subdivision activities in the Dunedin Botanic Garden Zone and relevant overlay zones, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 22.3.2 Activity status introduction

1. The activity status tables in rules 22.3.3 - 22.3.5 show the activity status of activities in the Dunedin Botanic Garden Zone and the overlay zones indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Additional activity status rules in hazard overlay zones*

7. For the purpose of the hazards provisions, activities are categorised as natural hazards sensitive activities, natural hazards potentially sensitive activities or natural hazards least sensitive activities. The activities that are in each hazards sensitivity category are included in the definitions section and in Section 11.1.
8. In the Hazard 2 (flood) Overlay Zone, the activity statuses in Rule 22.3.6 apply to the following activities:
  - a. natural hazards sensitive activities;
  - b. natural hazards potentially sensitive activities; and
  - c. new buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area.
9. Where the activity status in Rule 22.3.6 differs from that in rules 22.3.3 - 22.3.5, the most restrictive activity

status always applies.

10. In addition to the rules in Rule 22.3.6, performance standards for development activities within hazard overlay zones are included in rules 22.3.3 - 22.3.5.
11. Activities in a hazard overlay zone must comply with all of the rules in 22.3.3 - 22.3.6.

### *Performance Standards*

12. Performance standards are listed in the far right column of the activity status tables.
13. Performance standards apply to permitted, controlled, and restricted discretionary activities.
14. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
15. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

### Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
Haz2	Hazard 2 Overlay Zones
Haz3	Hazard 3 Overlay Zones

### **22.3.3 Activity status table - land use activities**

1.	Performance standards that apply to all land use activities		a. NA b. Light spill c. Noise
Major facility activities		Activity status	Performance standards
2.	Dunedin Botanic Garden	P	a. Minimum mobility car parking
3.	All other activities in the major facility activities category	NC	
Community activities		Activity status	Performance standards
4.	Community and leisure	P	
5.	Conservation	P	
6.	Sport and recreation not involving a motor vehicle	P	
7.	All other activities in the community activities category	D	

Commercial activities		Activity status	Performance standards
8.	Commercial activities that are ancillary to Dunedin Botanic Garden	P	a. Location
9.	All other activities in the commercial activities category	NC	
Residential activities		Activity status	Performance standards
10.	All activities in the residential activities category	D	
Industrial activities		Activity status	Performance standards
11.	All activities in the industrial activities category	NC	
Rural activities		Activity status	Performance standards
12.	All activities in the rural activities category	NC	

#### Note 22.3.3X- Other requirements outside of the District Plan

- Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

#### 22.3.4 Activity status tables - development activities

1.	Performance standards that apply to all buildings and structures activities		a. Boundary setbacks b. Height in relation to boundary c. Maximum height d. Number, location and design of ancillary signs e. Setback from coast and water bodies
Building and structures activities (excluding activities affecting a protected part of a scheduled heritage building or scheduled heritage structure. See rows 4 - 11)		Activity status	Performance standards
2.	Fences	P	a. Fence height and design
3.	All other buildings and structures activities	P	
Building and structures activities that affect a protected part of a scheduled heritage building or scheduled heritage structure		Activity status	Performance standards
4.	Repairs and maintenance	P	
5.	Restoration of a building or structure that has a Heritage New Zealand Category 1 listing as detailed in Appendix A1.1	C	

6.	Restoration of all other scheduled heritage buildings and scheduled heritage structures	P	
7.	Earthquake strengthening where external features only are protected	C	a. Materials and design
8.	Signs attached to buildings or structures	P	
9.	All other additions and alterations	RD	
10.	Demolition	NC	
11.	Removal for relocation	RD	
Site development activities		Activity status	Performance standards
12.	Service areas	P	a. Location and screening of service area
13.	Parking, loading and access	P	a. Boundary treatments and other landscaping b. Parking, loading and access standards
14.	New, or additions to, parking areas that result in 50 or more new parking spaces.	RD	a. Boundary treatments and other landscaping b. Parking, loading and access standards
15.	Storage and use of hazardous substances	P	a. Hazardous substances quantity limits and storage requirements b. Setback from coast and water bodies
16.	Vegetation clearance	P	a. Maximum area of vegetation clearance (UBMA)
17.	All other site development activities	P	

### Note 22.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

### 22.3.5 Activity status - subdivision activities

Subdivision activities		Activity Status	Performance standards
1.	General subdivision	RD	a. Subdivision performance standards
2.	Cross lease, company lease and unit title subdivision	NC	

**Note 22.3.5A - Other RMA considerations**

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

**22.3.6 Activity status in the Hazard 2 (flood) Overlay Zone**

Activity	Activity status
Land Use Activities	
1. Natural hazards sensitive activities	RD
2. Natural hazards potentially sensitive activities	RD
Development Activities	
3. New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m <sup>2</sup> of new ground floor area	RD

**Note 22.3.6A - Other RMA considerations**

X Section 10 of the RMA (existing use rights) provides for land to be used in a manner that contravenes a rule in a district plan if the use was lawfully established before the rule became operative or the proposed plan was notified, and the effects of the use are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified.

2. Accordingly, activities that are shown to have effects that are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified will not usually trigger the provisions for natural hazards sensitive activities and natural hazards potentially sensitive activities in Rule 22.3.6. However, Council will consider specific circumstances associated with the development and how this affects the character, intensity and scale of effects from the land use activity.

### **Note 22.3.6B - Other requirements outside the District Plan**

1. Clause E1 – Surface water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework (including earthworks) in relation to managing surface water and effects on other property.
2. Buildings and structures that will divert water may require resource consent under the Otago Regional Plan: Water.
3. If buildings and structures affect the flow of water, this effect is also subject to the common law principle of natural servitude.

### **Rule 22.4 Notification**

1. Applications for resource consent for the following activities will be considered without the need to obtain a written approval of affected persons and will not be notified in accordance with section 95A or section 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:
  1. earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand; and
  2. contravention of the materials and design performance standard Rule 13.3.2 where the building or structure is not listed by Heritage New Zealand.
2. With respect to resource consent applications, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided for the following:
  1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand; and
  2. contravention of the materials and design performance standard Rule 13.3.2 where the building or structure is not listed by Heritage New Zealand.
3. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 22.5 Land Use Performance Standards**

### **22.5.2 Light Spill**

Land use activities must comply with Rule 9.3.5.

### **22.5.3 Location**

1. Ancillary retail and restaurants must not be located adjacent to a road frontage.
2. Activities that contravene this performance standard are restricted discretionary activities.

### **22.5.4 Minimum Mobility Car Parking**

1. Dunedin Botanic Garden activity must provide a minimum of three mobility parking spaces.
2. NA.
3. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 22.5.4A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### **22.5.5 Noise**

Land use activities must comply with Rule 9.3.6.

## **Rule 22.6 Development Performance Standards**

### **22.6.1 Boundary Treatments and Other Landscaping**

1. Where a parking area is built within 5m of a road frontage, a landscaping area with a minimum 1.5m width must be provided along the full length of the road frontage (except for where vehicle access is provided).
2. Landscaping areas must:
  - a. be planted with a mix of trees and shrubs and/or ground cover plants that achieves a total coverage of the ground area in planting (when mature), except for 10% of the area, which may be used for pedestrian paths;
  - b. have an average of one tree for every 5m of frontage;
  - c. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - d. be designed to allow surface water run-off from surrounding areas to enter;
  - e. be protected by a physical barrier that prevents cars from damaging plants;
  - f. for required trees, use trees that are at least 1.5m high at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting;
  - g. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and
  - h. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.
3. Any road boundary fences provided must be placed on the property side of any road frontage landscaping required by this rule.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **22.6.2 Fence Height and Design**

#### **22.6.2.1 Maximum Height**

- a. The maximum height of fences along boundaries (including within the boundary setbacks required by Rule 22.6.9) is 2m.
- b. For the purposes of calculating maximum height, where a fence is erected atop a retaining wall, the height will be calculated as the combined height measured from ground level to the top of the fence.
- c. Fences that contravene this performance standard are restricted discretionary activities.

#### **22.6.2.2 Visual Permeability**

- a. Fences along road boundaries (or within the boundary setbacks required by Rule 22.6.9), or along a side or rear boundary with a residential zone, must be constructed to a length and/or height that maintains visual permeability for 50% of the length of the boundary measured at a height of 1.4m above ground level (see Figure 15.6.2.2A).
- b. Fences along the road boundary of a state highway are exempt from this requirement.
- c. Fences that contravene this performance standard are restricted discretionary activities.

### **22.6.3 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

## **22.6.4 Height**

### 22.6.4.1 Height in relation to boundary

New buildings and additions and alterations to buildings adjoining a residential zone must comply with the height in relation to boundary performance standard of that residential zone along the adjoining boundary (see Rule 15.6.6.1).

### 22.6.4.2 Maximum height

- a. The maximum height of new buildings and structures, and additions and alterations, must not exceed 12m above ground level.
- b. Rooftop structures are exempt from the performance standard for height provided they do not exceed the maximum height limit by more than 4m.
- c. Activities that contravene this performance standard are restricted discretionary activities.

## **22.6.5 Location and Screening of Service Areas**

1. Service areas must be located or screened so that they are not visible at ground level from adjacent residential activities, residential zoned properties, or public places.
2. Service areas must not encroach into required parking, loading or manoeuvring areas.
3. Activities that contravene this performance standard are restricted discretionary activities.

## **22.6.6 Materials and Design**

Earthquake strengthening must comply with Rule 13.3.2.

## **22.6.7 Number, Location and Design of Ancillary Signs**

### 22.6.7.1 General

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are not visible from outside the Dunedin Botanic Garden Zone;
  - ii. regulatory signs, warning signs, or directional signs; and
  - iii. building names (excluding commercial sponsorship names).
- b. Signs related to ancillary retail and ancillary restaurants must not be visible outside the Dunedin Botanic Garden Zone.
- c. Signs must comply with Rule 6.7.3 where visible from a road.
- d. Signs must not be illuminated or digital.
- e. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

### 22.6.7.2 Signs attached to buildings

- a. The height above ground level at the highest point of any sign attached to a building is 4m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs attached to a building must:
  - i. not exceed one sign per 30m of building façade;
  - ii. have a maximum area per display face of 2m<sup>2</sup>;
  - iii. have a maximum of two display faces per sign;

- iv. where attached to the façade of a building, must not project more than 1m from the façade to which it is attached; and
- v. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.

#### 22.6.7.3 Freestanding signs

- a. The maximum number of freestanding signs is one per entrance to the Dunedin Botanic Garden plus one per 100m of road frontage.
- b. The maximum dimensions of freestanding signs are:
  - i. maximum height of 3m;
  - ii. maximum area of 2m<sup>2</sup>;
  - iii. maximum width of 2m; and
  - iv. maximum depth of 400mm.
- c. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.

#### **Note 22.6.7B - Other requirements outside of the District Plan**

- 1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy.
  - c. Dunedin City Council Roadway Bylaw.
  - d. Dunedin City Council Traffic and Parking Bylaw.

#### **22.6.8 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

#### **22.6.9 Setbacks**

##### 22.6.9.1 Boundary setbacks

- a. New buildings and structures, and additions and alterations, must be set back from boundaries as follows:

<b>Building</b>		<b>Setback from road boundary or other zone boundary</b>
i.	New buildings and structures, and additions and alterations not exceeding 9m in height or 250m <sup>2</sup> gross floor area	4.5m
ii.	All other new buildings and structures, and additions and alterations	10m

- iii. Except fences and ancillary signs are exempt from the performance standard.
- b. New buildings and structures, and additions and alterations must be designed to have all public entrances located at least 10 metres from a boundary with a residential zone.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### 22.6.9.2 Setback from coast and water bodies

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

#### **22.6.10 Maximum Area of Vegetation Clearance (UBMA)**

Vegetation clearance in an **urban biodiversity mapped area** (UBMA) must comply with Rule 10.3.2.4.

### **Rule 22.7 Subdivision Performance Standards**

General subdivision must comply with Rule 20.7.

## Rule 22.8 Assessment of Controlled Activities

### Rule 22.8.1 Introduction

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 22.8.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 22.9; and
    - iv. the matters of control become matters of discretion and will be assessed as indicated in this section.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 22.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 22.12; and
    - iii. the assessment guidance in this section will also be considered.

### 22.8.2 Assessment of controlled activities

Activity	Matters of control	Guidance on the assessment of resource consents
1. Affecting a scheduled heritage building or a scheduled heritage structure: <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected.</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)</li> </ul>	a. Effects on heritage values	See Rule 13.4

## **Rule 22.9 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 22.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 22.9.2 - 22.9.6:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 22.9.2 - 22.9.6 apply as follows:
  - a. Rule 22.9.2 applies to all performance standard contraventions;
  - b. Rule 22.9.3 applies to land use performance standard contraventions;
  - c. Rule 22.9.4 applies to development performance standard contraventions;
  - d. Rule 22.9.5 applies to subdivision performance standard contraventions; and
  - e. Rule 22.9.6 applies to performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item.

### 22.9.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards, or site specific factors including topography, make meeting the standard impracticable.</li> <li>c. The nature of activities on surrounding sites, topography of the site and/or surrounding sites, or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>e. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> <li>f. In balancing consideration of the objectives and policies related to the maintenance of heritage values and those related to general amenity, greater weight will usually be placed on heritage policies.</li> </ul>

### 22.9.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Location	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 22.2.2</li> <li>ii. Ancillary restaurants and retail are designed, located and operated to primarily serve visitors to the Dunedin Botanic Garden (Policy 22.2.2.6).</li> </ul>
3. Minimum mobility car parking	<ul style="list-style-type: none"> <li>a. Effects on the safety and efficiency of the transport network</li> <li>b. Effects on accessibility</li> </ul>	See Rule 6.10

#### 22.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>Boundary setbacks</li> <li>Height in relation to boundary</li> <li>Maximum height</li> </ul>	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 22.2.2</li> <li>ii. Buildings and structures are of a height and setback from boundaries that ensures: <ul style="list-style-type: none"> <li>1. there are no more than minor effects on the sunlight access and privacy of current and potential future residential buildings and their outdoor living spaces (Policy 22.2.2.1.a); and</li> <li>2. any adverse effects on neighbourhood amenity are avoided or, if avoidance is not practicable, are no more than minor (Policy 22.2.2.1.b).</li> </ul> </li> </ul>
2. Boundary treatments and other landscaping	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 22.2.2</li> <li>ii. Landscaping of the boundary of parking areas adjacent to a road frontage screens or softens these areas and ensures a high standard of visual amenity when viewed from the road (Policy 22.2.2.3).</li> </ul>
3. Fence height and design	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 22.2.2</li> <li>ii. Fences on road boundaries are of a height and design that contributes positively to neighbourhood amenity (Policy 22.2.2.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The increased height or reduced visual permeability is necessary to meet protection requirements, to provide security, minimise noise effects from a busy road or activity, or for public well-being.</li> <li>iv. An attractive interface with the streetscape is achieved.</li> <li>v. The fence will be screened by landscaping.</li> </ul>
	b. Effects on health and safety	See Rule 9.5
4. Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5

#### 22.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
5.	Location and screening of service areas	a. Effects on on-site amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 22.2.2</li> <li>ii. Development maintains or enhances on-site and neighbourhood amenity by ensuring service areas are not visible from ground level within or outside the site (Policy 22.2.2.2).</li> </ul>
		b. Effects on neighbourhood amenity	
6.	Number, location and design of ancillary signs	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 22.2.2</li> <li>ii. Ancillary signs visible from outside the zone are located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose (Policy 22.2.2.5).</li> </ul>
		b. Effects on the safety and efficiency of the transport network	
7.	Setback from coast and water bodies	a. Effects on biodiversity values and natural character of the coast and riparian margins	See Rule 10.5
		b. Effects on public access	
		c. Risk from natural hazards	See Rule 11.4
8.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10

### 22.9.5 Assessment of subdivision performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. Subdivision performance standards	See Rule 20.9

### 22.9.6 Assessment of performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. In a hazard overlay zone: <ul style="list-style-type: none"> <li>Hazardous substances quantity limits and storage requirements</li> </ul>	a. Risk from natural hazards	See Rule 11.4
2. Affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> <ul style="list-style-type: none"> <li>Materials and design</li> </ul>	a. Effects on heritage values	See Rule 13.5
3. In an <b>urban biodiversity mapped area</b> : <ul style="list-style-type: none"> <li>Maximum area of vegetation clearance (UBMA)</li> </ul>	a. Effects on biodiversity values	See Rule 10.5

## **Rule 22.10 Assessment of Restricted Discretionary Activities**

### **Rule 22.10.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 22.10.2 and 22.10.3:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 22.10.2 and 22.10.3 apply as follows:
  - a. Rule 22.10.2 applies to restricted discretionary development activities; and
  - b. Rule 22.10.3 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 22.9; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 22.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 22.12; and
    - iii. the assessment guidance in this section will also be considered.

### 22.10.2 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. Activities affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> : <ul style="list-style-type: none"> <li>• Additions and alterations that affect a protected part of a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b></li> <li>• Removal for relocation</li> </ul>	a. Effects on heritage values	See Rule 13.6
2. In the <b>Hazard 2 (flood) Overlay Zone</b> (see Rule 22.3.6): <ul style="list-style-type: none"> <li>• New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area</li> </ul>	a. Risk from natural hazards	See Rule 11.5
3. High trip generators: <ul style="list-style-type: none"> <li>• New, or additions to, parking areas that result in 50 or more new parking spaces</li> </ul>	a. Effects on the safety and efficiency of the transport network  b. Effects on accessibility	See Rule 6.11
4. In the <b>Hazard 2 (flood) Overlay Zone</b> : <ul style="list-style-type: none"> <li>• Natural hazards sensitive activities</li> <li>• Natural hazards potentially sensitive activities</li> </ul>	a. Risk from natural hazards	See Rule 11.5

### 22.10.3 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. General subdivision	<p>a. Effects on the efficient and effective operation of Dunedin Botanic Garden</p> <p>See Rule 20.10</p>	<p><i>Relevant objective and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 22.2.1</li> <li>ii. Subdivision activities do not adversely affect the efficient and effective operation of Dunedin Botanic Garden (Policy 22.2.1.4).</li> </ul>

## **Rule 22.11 Assessment of Discretionary Activities**

### **Rule 22.11.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 22.11.2 - 22.11.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 22.11.2 - 22.11.3 apply as follows:
  - a. Rule 22.11.2 applies to all discretionary activities; and
  - b. Rule 22.11.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 22.11.2 Assessment of all discretionary activities

Activity	Guidance on the assessment of resource consents
<p>1. All discretionary land use activities listed below:</p> <ul style="list-style-type: none"> <li>• all residential activities</li> <li>• all activities in the community activities category except community and leisure, sport and recreation not involving a motor vehicle and conservation</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objectives 2.3.1, 2.3.3</li> <li>b. Objective 22.2.1</li> <li>c. The activity does not detract from, or preferably contributes to, the strategic directions objectives.</li> <li>d. Activities that are ancillary to Dunedin Botanic Garden activity are designed and operated in line with Objective 22.2.2 and its policies (Policy 22.2.1.2).</li> <li>e. Activities that are not ancillary to Dunedin Botanic Garden activity:               <ol style="list-style-type: none"> <li>i. are related to or support the Dunedin Botanic Garden, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Dunedin Botanic Garden;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 22.2.2 and its policies (Policy 22.2.1.3).</li> </ol> </li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>f. For discretionary land use activities, whether any associated development activities meet relevant development performance standards, or are otherwise consistent with relevant objectives and policies for development.</li> <li>g. All relevant land use performance standards are met, including noise and light spill standards.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>h. In assessing the significance of effects, consideration will be given to:               <ol style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ol> </li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>i. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>j. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>k. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ol>

### 22.11.3 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.

## **Rule 22.12 Assessment of Non-complying Activities**

### **Rule 22.12.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 22.12.2 - 22.12.4 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 22.12.2 - 22.12.4 apply as follows:
  - a. Rule 22.12.2 applies to non-complying land use activities;
  - b. Rule 22.12.3 applies to non-complying development activities; and
  - c. Rule 22.12.4 applies to non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 22.12.2 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying land use activities</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.3.1, 2.3.3</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 22.2.1</li> <li>e. Activities that are not ancillary to Dunedin Botanic Garden activity:               <ul style="list-style-type: none"> <li>i. are related to or support Dunedin Botanic Garden, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Dunedin Botanic Garden;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 22.2.2 and its policies (Policy 22.2.1.3).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>f. In assessing the significance of effects consideration will be given to:               <ul style="list-style-type: none"> <li>i. short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> <li>g. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>h. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety</li> <li>j. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua</li> </ul>
<p>2. Commercial advertising</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Policy 2.4.1.6.c</li> </ul>

### 22.12.3 Assessment of non-complying development activities

Activity	Guidance on the assessment of resource consents
1. Demolition that affects a protected part of a scheduled heritage building or scheduled heritage structure	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1 and effects on heritage values.</p>

### 22.12.4 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>

## **23. Dunedin Hospital**

### **23.1 Introduction**

Dunedin Hospital is the primary medical facility for the Otago and Southland regions, and is situated on Great King Street in Dunedin's central city. The hospital spans two blocks, covering an area of approximately 3 hectares. The hospital is operated by the Southern District Health Board.

The hospital has been at its present site since 1865 and provides 388 beds across a number of wards. It includes a helipad which enables emergency medical services to be provided across the region. The hospital employs over 3,000 staff, providing medical services across all specialties and a broad array of sub-specialties. The hospital also serves as a teaching hospital, with strong links to both the University of Otago and Otago Polytechnic. Ancillary activities associated within the hospital include cafés, a gift shop and a childcare facility.

Significant re-development of the hospital site is anticipated within the next ten years, allowing facilities to be upgraded. This may involve the construction of new buildings and re-development of existing ones.

The site is surrounded by a number of zones, providing for a wide range of different land use activities. To the north and east is the Campus Zone, which provides for activities essential to the functioning of the University of Otago and Otago Polytechnic. To the west is the General Residential 2 Zone. To the west and the south are commercial and mixed use zones, which provide for a range of commercial activities.

The Dunedin Hospital and its associated activities have the potential to generate effects, particularly on the amenity of the central city. The zone recognises the existing and foreseeable future uses of the Dunedin Hospital site, provides certainty to the community regarding what land use activities can be expected to occur, while appropriately managing potential adverse effects and ensuring compatibility with the surrounding environments.

## 23.2 Objectives and Policies

<b>Objective 23.2.1</b>	
Dunedin Hospital is able to operate efficiently as a medical training and research facility.	
Policy 23.2.1.1	Enable hospital and community activities in the Dunedin Hospital Zone.
Policy 23.2.1.2	Provide for activities ancillary to hospital activity where they are designed and operated in line with Objective 23.2.2 and its policies.
Policy 23.2.1.3	Only allow activities that are not ancillary to hospital activity where all the following apply: <ol style="list-style-type: none"> <li>the activities are related to or support Dunedin Hospital, or have other operational requirements that mean they need to locate in the zone;</li> <li>they will support the efficient and effective operation of Dunedin Hospital;</li> <li>they are not more appropriately located in another zone in line with Objective 23.2.2 and its policies; and</li> <li>they are designed and operated in line with Objective 23.2.2 and its policies.</li> </ol>
Policy 23.2.1.4	Enable land that is surplus to the needs of Dunedin Hospital to transition to the Campus Zone, so that future development that is not related to hospital activity will be managed in accordance with the objectives and policies of that zone.
Policy 23.2.1.5	Only allow subdivision activities where: <ol style="list-style-type: none"> <li>they are in accordance with the provisions of the Campus Zone; and</li> <li>the subdivision does not adversely affect the efficient and effective operation of Dunedin Hospital.</li> </ol>

<b>Objective 23.2.2</b>	
Land use activities and development necessary for Dunedin Hospital to meet the reasonably foreseeable health needs of the community is enabled, while ensuring development achieves: <ol style="list-style-type: none"> <li>a reasonable standard of on-site amenity for patients, staff and visitors; and</li> <li>a reasonable level of streetscape amenity.</li> </ol>	
Policy 23.2.2.1	Require development to maintain or enhance streetscape amenity by ensuring: <ol style="list-style-type: none"> <li>an attractive street interface is maintained through landscaping where buildings are not built to the street frontage;</li> <li>an architecturally interesting façade through building modulation and use of glazing; and</li> <li>service areas to be located or screened so they are not visible from ground level of a public place.</li> </ol>
Policy 23.2.2.2	Only allow buildings above 20m in height where: <ol style="list-style-type: none"> <li>effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, are minimised as far as practicable through the use of quality and contextually appropriate architectural design; and</li> <li>they are designed to minimise as far as practicable adverse effects of shading and wind on pedestrian amenity.</li> </ol>

**Objective 23.2.2**

Land use activities and development necessary for Dunedin Hospital to meet the reasonably foreseeable health needs of the community is enabled, while ensuring development achieves:

- a. a reasonable standard of on-site amenity for patients, staff and visitors; and
- b. a reasonable level of streetscape amenity.

Policy 23.2.2.3	Only allow buildings over 48m in height where: <ul style="list-style-type: none"> <li>a. the height is essential to the operation of hospital activities; and</li> <li>b. the height exceedance is minimal.</li> </ul>
Policy 23.2.2.4	Only allow early childhood education - large scale where it will not constrain (have reverse sensitivity effects on) other neighbouring activities.
Policy 23.2.2.5	Require buildings to provide a good level of pedestrian amenity by providing shelter over pedestrian entrances.
Policy 23.2.2.6	Require ancillary signs visible from outside the zone to be located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose.

## Rules

### Rule 23.3 Activity Status

#### 23.3.1 Rule location

The activity status tables in rules 23.3.3 to 23.3.5 specify the activity status of land use activities, development activities, and subdivision activities in the Dunedin Hospital Zone, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 23.3.2 Activity status introduction

1. The activity status tables in rules 23.3.3 - 23.3.5 show the activity status of activities in the Dunedin Hospital Zone, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Performance Standards*

7. Performance standards are listed in the far right column of the activity status tables.
8. Performance standards apply to permitted, controlled, and restricted discretionary activities.
9. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
10. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

## Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity

### 23.3.3 Activity status table - land use activities

1.	Performance standards that apply to all land use activities		a. Acoustic insulation (noise sensitive activities) b. NA c. Light spill d. Noise
Major facility activities		Activity status	Performance standards
2.	Hospital	P	a. Minimum mobility car parking
3.	All other activities in the major facility activities category	NC	
Community activities		Activity status	Performance standards
4.	Early childhood education - small scale	P	a. NA
5.	Early childhood education - large scale	RD	
6.	Conservation	P	
7.	All other activities in the community activities category	D	
Commercial activities		Activity status	Performance standards
8.	Commercial activities ancillary to hospital	P	
9.	Registered health practitioners	P	
10.	Training and education	P	
11.	Campus-affiliated office	P	
12.	All other activities in the commercial activities category	NC	
Residential activities		Activity status	Performance standards
13.	All activities in the residential activities category	NC	
Industrial activities		Activity status	Performance standards
14.	All activities in the industrial activities category	NC	

Rural activities	Activity status	Performance standards
15. All activities in the rural activities category	NC	

**Note 23.3.3X- Other requirements outside of the District Plan**

1. Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

**23.3.4 Activity status table - development activities**

1.	Performance standards that apply to all development activities		a. Setback from scheduled tree
2.	Performance standards that apply to all buildings and structures activities		a. Number, location and design of ancillary signs b. Maximum height
Buildings and structures activities		Activity status	Performance standards
3.	All new buildings and additions and alterations to buildings	P	a. Boundary treatments and other landscaping b. Minimum glazing and building modulation c. Verandahs
4.	All other buildings and structures activities	P	
Site development activities		Activity status	Performance standards
5.	Service areas	P	a. Location and screening of service areas
6.	Parking, loading and access	P	a. Boundary treatments and other landscaping b. Parking, loading and access standards
7.	New, or additions to, parking areas that result in 50 or more new parking spaces.	RD	a. Boundary treatments and other landscaping b. Parking, loading and access standards
8.	Storage and use of hazardous substances	P	a. Hazardous substances quantity limits and storage requirements
9.	All other site development activities	P	a. Boundary treatments and other landscaping

### Note 23.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

### 23.3.5 Activity status table - subdivision activities

Subdivision activities		Activity status	Performance standards
1.	Subdivision activities	RD	a. Subdivision performance standards

### Note 23.3.5A - Other RMA considerations

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

### 23.3.6 Transition to Campus Zone

On receipt of written notice from both the owner and operator (if different) of Dunedin Hospital to Dunedin City Council in relation to all or part of the land within the Dunedin Hospital Zone, the provisions of the Dunedin Hospital Zone will no longer apply to that parcel of land and the provisions of the Campus Zone will apply in full.

### Rule 23.4 Notification

1. Activities are subject to the normal tests for notification in accordance with sections 95A - 95G of the RMA.

## **Rule 23.5 Land Use Performance Standards**

### **23.5.1 Acoustic Insulation**

In-patient areas must comply with Rule 9.3.1.

### **23.5.3 Light Spill**

Land use activities must comply with Rule 9.3.5.

### **23.5.4 Minimum Mobility Car Parking**

1. Hospital activity must provide a minimum of six mobility parking spaces. These must be provided within 250m of the Dunedin Hospital Zone.
2. NA.
3. NA.
4. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 23.5.4A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### **23.5.5 Noise**

Land use activities must comply with Rule 9.3.6.

## **Rule 23.6 Development Performance Standards**

### **23.6.1 Boundary Treatments and Other Landscaping**

1. Where a building is not built within 5m of a road frontage, a landscaping area with a minimum width of 1.5m must be provided along the full length of the road frontage (except for where vehicle access is provided).
2. Landscaping areas must:
  - a. be planted with a mix of trees and shrubs and/or ground cover plants that achieves a total coverage of the ground area in planting (when mature), except for 10% of the area, which may be used for pedestrian paths;
  - b. have an average of one tree for every 5m of frontage;
  - c. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - d. be designed to allow surface water run-off from surrounding areas to enter;
  - e. be protected by a physical barrier that prevents cars from damaging plants;
  - f. for required trees, use trees that are at least 1.5m high at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting;
  - g. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and
  - h. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.
3. Any road boundary fences provided must be placed on the property side of any road frontage landscaping required by this rule.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **23.6.2 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **23.6.3 Location and Screening of Service Areas**

1. Service areas must be located or screened so that they are not visible at ground level from adjacent: residential activities, residential zoned properties, or public places.
2. Service areas must not encroach into required parking, loading or manoeuvring areas.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **23.6.4 Maximum Height**

1. The maximum height of new buildings and structures, and additions and alterations, must not exceed 20m above ground level.
2. Rooftop structures are exempt from the performance standard for maximum height, provided they do not exceed the maximum height limit by more than 5m.
3. Activities that contravene the performance standard for maximum height but are no greater than 48m in height are a restricted discretionary activity.
4. Activities that contravene the performance standard for maximum height and are over 48m in height are a discretionary activity.

### **23.6.5 Minimum Glazing and Building Modulation**

1. New buildings and additions and alterations to buildings must be designed to provide the following minimum building modulation and minimum glazing requirements for any parts of buildings which face (are parallel to) and are visible from the road frontage is as follows:
  - a. minimum distance between building modulation elements 20m; or
  - b. minimum glazing of 20%.
2. The required glazing will be calculated as a percentage of the total wall area (from floor to ceiling) that faces the road frontage and that includes clear glass. In the case of curved walls, the wall area will be calculated as the part of the wall which is 45° either side of a point directly facing (parallel to) the road frontage (see Figure 18.6.11A)
3. Except that the minimum glazing standard in Rule 23.6.5.1 does not apply to scheduled heritage buildings.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **23.6.6 Number, Location and Design of Ancillary Signs**

1. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - a. signs that are not visible from outside the Dunedin Hospital Zone;
  - b. regulatory signs, warning signs, or directional signs; and
  - c. building names (excluding sponsorship names).
2. Signs located on or above the footpath must comply with Rule 6.7.2.
3. Signs must comply with Rule 6.7.3 where visible from a road.
4. Signs related to ancillary retail and ancillary restaurants must not be visible outside the Dunedin Hospital Zone.
5. Signs higher than 4m above ground level must only display the business name or major facility name.
6. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### **23.6.6.7 Signs attached to buildings**

- a. The height, above ground level, at the highest point of any sign, attached to a building is 8m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs attached flat against a building must:
  - i. not cumulatively exceed 15% of the total wall area (excluding windows) that face the road frontage, or 8m<sup>2</sup>, whichever is lesser; and
  - ii. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.
- e. If attached on the underside of a verandah or protruding from a building façade, must:
  - i. where attached to the façade of a building, have a maximum area per display face of 2m<sup>2</sup>;
  - ii. where attached to the façade of a building, must not project more than 1.5m from the façade to which it is attached;
  - iii. have a maximum of 2 display faces per sign; and

- iv. not exceed 1 sign per 15m of road frontage.

#### 23.6.6.8 Freestanding signs

- a. The maximum number of permanently fixed freestanding signs is 1 per 50m of road frontage.
- b. The maximum number of portable freestanding signs within the zone is 2.
- c. The maximum dimensions of freestanding signs are:
  - i. maximum height of 6m for permanently fixed freestanding signs;
  - ii. maximum height of 4m for portable freestanding signs;
  - iii. maximum area of 12m<sup>2</sup> per display face for permanently fixed freestanding signs;
  - iv. maximum area of 8m<sup>2</sup> per display face for portable freestanding signs;
  - v. maximum width of 2m; and
  - vi. maximum depth of 400mm.
- d. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.

#### **Note 23.6.6A - Other requirements outside of the District Plan**

- 1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy.
  - c. Dunedin City Council Roadway Bylaw.
  - d. Dunedin City Council Traffic and Parking Bylaw.

#### **23.6.7 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

#### **23.6.8 Setback from Scheduled Tree**

New buildings and structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2.

#### **23.6.9 Verandahs**

- 1. New buildings or additions and alterations to the façade of buildings must have a verandah that covers the full width of the main pedestrian entrance.
- 2. Activities that contravene this performance standard are restricted discretionary activities.

#### **Rule 23.7 Subdivision Performance Standards**

Subdivision activities must comply with Rule 34.7.

## Rule 23.8 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### Rule 23.8.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 23.8.2 - 23.8.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 23.8.2 - 23.8.5 apply as follows:
  - a. Rule 23.8.2 applies to all performance standard contraventions;
  - b. Rule 23.8.3 applies to land use performance standard contraventions;
  - c. Rule 23.8.4 applies to development performance standard contraventions; and
  - d. Rule 23.8.5 applies to subdivision performance standard contraventions.

### 23.8.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>a. Objective 23.2.1</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>b. The degree of non-compliance with the performance standard is minor</li> <li>c. The need to meet other performance standards, or site specific factors, make meeting the standard impracticable.</li> <li>d. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>e. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>f. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> </ol>

### 23.8.3 Assessment of land use performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
2.	Minimum mobility car parking	a. Effects on the safety and efficiency of the transport network b. Effects on accessibility	See Rule 6.10

### 23.8.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Boundary treatments and other landscaping	a. Effects on streetscape amenity	<i>Relevant objectives and policies:</i> i. Objective 23.2.2 ii. Development maintains or enhances streetscape amenity by ensuring an attractive street interface through landscaping where buildings are not built to the street frontage (Policy 23.2.2.1.a).
2.	Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
3.	Location and screening of service areas	a. Effects on streetscape amenity	<i>Relevant objectives and policies:</i> i. Objective 23.2.2 ii. Development maintains or enhances streetscape amenity by ensuring service areas are located or screened so they are not visible from ground level of a public place (Policy 23.2.2.1.c).  <i>Potential circumstances that may support a consent application include:</i> iii. Screening would unduly restrict the usability of the site.
4.	Maximum height (buildings no greater than 48m in height)	a. Effects on streetscape amenity	<i>Relevant objectives and policies:</i> i. Objective 23.2.2 ii. Buildings greater than 20m in height minimise as far as practicable adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, through the use of quality and contextually appropriate architectural design (Policy 23.2.2.2.a).
		b. Effects on pedestrian amenity	<i>Relevant objectives and policies:</i> i. Objective 23.2.2 ii. Buildings are designed to minimise as far as practicable adverse effects of shading and wind on pedestrian amenity (Policy 23.2.2.2.b).

#### 23.8.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
5.	Minimum glazing and building modulation	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 23.2.2</li> <li>ii. Development maintains or enhances streetscape amenity by ensuring an architecturally interesting façade through building modulation and use of glazing (Policy 23.2.2.1.b).</li> </ul>
6.	Number, location and design of ancillary signs	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 23.2.2</li> <li>ii. Ancillary signs visible from outside the zone are located and designed to maintain streetscape amenity, by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose (Policy 23.2.2.6).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. An attractive streetscape is maintained.</li> </ul>
		b. Effects on the safety and efficiency of the transport network	See Rule 6.10
7.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
8.	Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6
9.	Verandahs	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 23.2.2</li> <li>ii. Buildings provide a good level of pedestrian amenity by providing shelter over pedestrian entrances (Policy 23.2.2.5).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The design and location of the building, and/or design of the verandah, allows for appropriate shelter of pedestrians from the weather.</li> </ul>

#### 23.8.5 Assessment of subdivision performance standard contraventions

Performance standard		Guidance on the assessment of resource consents
1.	Subdivision performance standards	See Rule 34.9

## **Rule 23.9 Assessment of Restricted Discretionary Activities**

### **Rule 23.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 23.9.2 - 23.9.4:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 23.9.2 - 23.9.4 apply as follows:
  - a. Rule 23.9.2 applies to restricted discretionary land use activities;
  - b. Rule 23.9.3 applies to restricted discretionary development activities; and
  - c. Rule 23.9.4 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 23.8; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 23.10; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 23.11; and
    - iii. the assessment guidance in this section will also be considered.

### 23.9.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All high trip generators, which include: <ul style="list-style-type: none"> <li>any activities that generate 250 or more vehicle movements a day</li> </ul>	a. Effects on accessibility	See Rule 6.11
	b. Effects on the safety and efficiency of the transport network	
2. Early childhood education - large scale	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
	b. Reverse sensitivity effects	<i>Relevant objectives and policies:</i> i. Reverse sensitivity will be avoided as far as practicable (Policy 23.2.2.4).

### 23.9.3 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. High trip generators: <ul style="list-style-type: none"> <li>New, or additions to, parking areas that result in 50 or more new parking spaces</li> </ul>	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
	b. Effects on accessibility	

### 23.9.4 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. Subdivision activities	a. Effects on the efficient and effective operation of Dunedin Hospital	<i>Relevant objectives and policies:</i> i. Objective 2.3.1 ii. Objective 23.2.1 iii. Subdivision activities do not adversely affect the efficient and effective operation of Dunedin Hospital (Policy 23.2.1.5.b).
	See Rule 34.10	

## **Rule 23.10 Assessment of Discretionary Activities**

### **Rule 23.10.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 23.10.2 and 23.10.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 23.10.2 and 23.10.3 apply as follows:
  - a. Rule 23.10.2 applies to all discretionary activities; and
  - b. Rule 23.10.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

**23.10.2 Assessment of all discretionary activities**

Activity	Guidance on the assessment of resource consents
<p>1. All discretionary land use activities listed below:</p> <ul style="list-style-type: none"> <li>• all activities in the community activities category except early childhood education and conservation</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.3.1</li> <li>b. Objective 23.2.1</li> <li>c. Activities that are ancillary to hospital activity are designed and operated in line with Objective 23.2.2 and its policies (Policy 23.2.1.2).</li> <li>d. Activities that are not ancillary to hospital activity:               <ul style="list-style-type: none"> <li>i. are related to or support the Dunedin Hospital, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Dunedin Hospital;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 23.2.2 and its policies (Policy 23.2.1.3).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>e. For discretionary land use activities, whether any associated development activities meet relevant development performance standards, or are otherwise consistent with relevant objectives and policies for development.</li> <li>f. All relevant land use performance standards are met, including noise and light spill standards.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>g. In assessing the significance of effects, consideration will be given to:               <ul style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>h. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>j. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>

### 23.10.3 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Acoustic insulation</li> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>
2. Maximum height (buildings over 48m in height)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 23.2.2</p> <p>b. Buildings over 48m in height are only allowed where:</p> <ul style="list-style-type: none"> <li>i. the height is essential to the operation of hospital activities; and</li> <li>ii. the height exceedance is minimal (Policy 23.2.2.3).</li> </ul> <p>c. Buildings minimise, as far as practicable, adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, through the use of quality and contextually appropriate architectural design (Policy 23.2.2.2.a).</p> <p>d. Buildings are designed to minimise as far as practicable adverse effects of shading and wind on pedestrian amenity (Policy 23.2.2.2.b).</p>

## **Rule 23.11 Assessment of Non-complying Activities**

### **Rule 23.11.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 23.11.2 - 23.11.3 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 23.11.2 and 23.11.3 apply as follows:
  - a. Rule 23.11.2 applies to non-complying land use activities; and
  - b. Rule 23.11.3 applies to non-complying performance standard contraventions
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 23.11.2 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying land use activities including but not limited to the activities listed below:</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.3.1</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 23.2.1</li> <li>e. Activities not ancillary to hospital activity: <ul style="list-style-type: none"> <li>i. are related to or support Dunedin Hospital, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Dunedin Hospital;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 23.2.2 and its policies (Policy 23.2.1.3).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>f. In assessing the significance of effects consideration will be given to: <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities;</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent; and</li> <li>iii. any effects otherwise managed through performance standards and consistent with all relevant objectives and policies for the zone.</li> </ul> </li> <li>g. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>h. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>j. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>
<p>2. Commercial advertising</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Policy 2.4.1.6.c</li> </ul>

### 23.11.3 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ul>

## **24. Dunedin International Airport**

### **24.1 Introduction**

Dunedin International Airport is situated at Momona. It occupies an area of approximately 300 hectares and is owned and operated by Dunedin International Airport Limited (DIAL). The airport is surrounded by rural zoned land.

Dunedin International Airport is an integral part of the local and regional transport network, providing a link to national and international destinations for passengers, goods and freight. There has been steady growth in passenger numbers and freight volumes, both domestic and international, and a continuation of this growth is expected. The airport is a physical resource that provides for the economic and social well-being of the Dunedin area and beyond.

The operation of the airport is undertaken in accordance with two designations (D273 - Aerodrome and Runway Extension, and D274 - Flight Path Protection), which extend across the majority of the Dunedin International Airport Zone and beyond. The designations focus upon ensuring the safe and efficient operation of the airport activity, while securing a future runway extension and providing a limited range of associated activities.

The zone includes the airport and immediately adjacent rural land, together with the site occupied by Momona Garage. Momona village is zoned residential. The Dunedin International Airport Zone recognises the function of the Dunedin International Airport within the transport network, sustainable management of the resource and the need to manage effects of activities located at the airport. The zone enables an integrated approach to the management of the airport resource.

The intention is that development within the Dunedin International Airport Zone is clearly associated with the operation and functions of the airport. This will ensure land within the zone is retained for its primary operational functions. The provisions allow for the continued use and development of Dunedin International Airport and provide certainty for airport operators and the community, while managing effects on neighbouring land uses.

## 24.2 Objectives and Policies

<b>Objective 24.2.1</b>	
Dunedin International Airport is able to operate efficiently and effectively.	
Policy 24.2.1.1	Enable airport activity at Dunedin International Airport.
Policy 24.2.1.2	Provide for commercial activities ancillary to airport, office, service stations, and visitor accommodation where they are designed and operated in line with Objective 24.2.2 and its policies.
Policy 24.2.1.3	Only allow activities that are not ancillary to airport activity where: <ol style="list-style-type: none"> <li>they are related to or support Dunedin International Airport, or have other operational requirements that mean they need to locate in the zone;</li> <li>they will support the efficient and effective operation of Dunedin International Airport;</li> <li>they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>they are designed and operated in line with Objective 24.2.2 and its policies.</li> </ol>
Policy 24.2.1.4	Only allow subdivision where the subdivision does not adversely affect the efficient and effective operation of Dunedin International Airport.

<b>Objective 24.2.2</b>	
Land use activities and development necessary to meet the reasonably foreseeable needs of Dunedin International Airport is enabled, while ensuring it: <ol style="list-style-type: none"> <li>achieves a high standard of on-site amenity for airport users; and</li> <li>minimises adverse effects on rural amenity as far as practicable.</li> </ol>	
Policy 24.2.2.1	Require buildings and structures to be of a height and setback that reduces their visual impact on the rural environment.
Policy 24.2.2.2	Require landscaping of new buildings, parking areas and outdoor storage areas, to ensure a high standard of visual amenity is maintained adjacent to public roads and the rural zones.
Policy 24.2.2.3	Require development to maintain on-site and rural amenity by ensuring service areas are not visible from publicly accessible areas within or outside the zone.
Policy 24.2.2.4	Require ancillary signs to be located and designed to maintain visual amenity for airport users, including by being of an appropriate size and number to convey information about the name, location and nature of the activities on-site, and not being too numerous or oversized for that purpose.
Policy 24.2.2.5	Require commercial activities ancillary to airport to be designed, located and operated to primarily serve staff and visitors to the Dunedin International Airport.
Policy 24.2.2.6	Require tourism advertising signage and other commercial advertising in permitted locations to be of a size and number that: <ol style="list-style-type: none"> <li>will not detract from the amenity of the airport as an international gateway; and</li> <li>ensures any adverse effects on the rural amenity outside the Dunedin International Airport Zone are no more than minor.</li> </ol>

**Objective 24.2.2**

Land use activities and development necessary to meet the reasonably foreseeable needs of Dunedin International Airport is enabled, while ensuring it:

- a. achieves a high standard of on-site amenity for airport users; and
- b. minimises adverse effects on rural amenity as far as practicable.

Policy 24.2.2.X	<p>Avoid commercial advertising outside permitted locations unless:</p> <ul style="list-style-type: none"> <li>a. considering the potential for cumulative adverse effects from future signage, it will not detract from the amenity of the airport as an international gateway; and</li> <li>b. it will have no more than minor adverse effects on rural amenity outside the Dunedin International Airport Zone.</li> </ul>
-----------------	--

## Rules

### Rule 24.3 Activity Status

#### 24.3.1 Rule location

The activity status tables in rules 24.3.3 to 24.3.6 specify the activity status of land use activities, development activities, and subdivision activities in the Dunedin International Airport Zone and relevant overlay zones, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 24.3.2 Activity status introduction

1. The activity status tables in rules 24.3.3 - 24.3.5 show the activity status of activities in the Dunedin International Airport Zone and the overlay zones indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Additional activity status rules in hazard overlay zones*

7. For the purpose of the hazards provisions, activities are categorised as natural hazards sensitive activities, natural hazards potentially sensitive activities or natural hazards least sensitive activities. The activities that are in each hazards sensitivity category are included in the definitions section and in Section 11.1.
8. In the hazard 2 overlay zones, the activity statuses in Rule 24.3.6 apply to the following activities:
  - i. natural hazards sensitive activities and natural hazards potentially sensitive activities; and
  - ii. new buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area.
9. Where the activity status in Rule 24.3.6 differs from that in rules 24.3.3 - 24.3.5, the most restrictive activity status always applies.

10. In addition to the rules in Rule 24.3.6, performance standards for development activities within hazard overlay zones are included in rules 24.3.3 - 24.3.5.
11. Activities in a hazard overlay zone must comply with all of the rules in 24.3.3 - 24.3.5.

*Performance Standards*

12. Performance standards are listed in the far right column of the activity status tables.
13. Performance standards apply to permitted, controlled, and restricted discretionary activities.
14. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
15. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

**Legend**

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
Pr	Prohibited
DIA	Dunedin International Airport Zone
ANIC	<b>Airport Noise Inner Control Mapped Area</b>
Haz2	Hazard 2 Overlay Zones

**24.3.3 Activity status table - land use activities**

1.	Performance standards that apply to all land use activities			a. Acoustic insulation (noise sensitive activities) b. NA c. Light spill d. Noise X. Setback from Critical Electricity Distribution Infrastructure
Major facility activities		Activity status		Performance standards
		a. DIA	b. ANIC	
2.	Airport	P	P	i. Minimum mobility car parking
3.	Emergency services	P	P	
4.	All other activities in the major facility activities category	NC	NC	

Commercial activities		a. DIA	b. ANIC	Performance standards
5.	Commercial activities ancillary to airport activity	P	P	i. Location
6.	Conference, meeting and function ancillary to visitor accommodation	P	P	
7.	Office	D	D	
8.	Service stations	RD	RD	i. Service station performance standards
9.	Visitor accommodation	P	P	i. NA ii. Minimum vehicle loading
10.	Tourism advertising	P	P	i. Number and location of tourism signs
X.	Other commercial advertising	P	P	i. Number and location of other commercial advertising signs
11.	All other activities in the commercial activities category	NC	NC	
Residential activities		a. DIA	b. ANIC	Performance standards
12.	Standard residential	NC	Pr	
13.	Working from home	P	Pr	
14.	Supported living facilities	NC	Pr	
Community activities		a. DIA	b. ANIC	Performance standards
15.	Conservation	P	P	
16.	All other activities in the community activities category	NC	NC	
Rural activities		a. DIA	b. ANIC	Performance standards
17.	Farming	P	P	
18.	Grazing	P	P	
19.	All other activities in the rural activities category	NC	NC	
Industrial activities		a. DIA	b. ANIC	Performance standards
20.	All activities in the industrial activities category	D	D	

### Note 24.3.3X- Other requirements outside of the District Plan

- Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

#### 24.3.4 Activity status table - development activities

Building and structures activities		Activity status	Performance standards
1.	All buildings and structures activities	P	a. Boundary setbacks b. Maximum height c. Number, location and design of ancillary signs
Site development activities		Activity status	Performance standards
2.	Outdoor storage	P	a. Boundary treatments and other landscaping
3.	Service areas	P	a. Location and screening of service areas
4.	Parking, loading and access	P	a. Boundary treatments and other landscaping b. Parking, loading and access standards
5.	Storage and use of hazardous substances	P	a. Hazardous substances quantity limits and storage requirements
6.	All other site development activities	P	

#### Note 24.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.

#### 24.3.5 Activity status table - subdivision activities

Subdivision activities		Activity status	Performance standards
1.	Subdivision activities	D	

#### Note 24.3.5A - Other RMA considerations

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

### 24.3.6 Activity status in Hazard 2 (flood) Overlay Zones

Activity	Activity Status
Land Use Activities	
1. Natural hazards sensitive activities and natural hazards potentially sensitive activities	RD
Development Activities	
2. New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m <sup>2</sup> of new ground floor area	RD

#### Note 24.3.6A - Other RMA considerations

X Section 10 of the RMA (existing use rights) provides for land to be used in a manner that contravenes a rule in a district plan if the use was lawfully established before the rule became operative or the proposed plan was notified, and the effects of the use are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified.

- Accordingly, activities that are shown to have effects that are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified will not usually trigger the provisions for natural hazards sensitive activities and natural hazards potentially sensitive activities in Rule 24.3.6. However, Council will consider specific circumstances associated with the development and how this affects the character, intensity and scale of effects from the land use activity.

#### Note 24.3.6B - Other requirements outside the District Plan

- Clause E1 – Surface water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework (including earthworks) in relation to managing surface water and effects on other property.
- Buildings and structures that will divert water may require resource consent under the Otago Regional Plan: Water.
- If buildings and structures affect the flow of water, this effect is also subject to the common law principle of natural servitude.

#### Note 24.3A - General advice

- Dunedin International Airport Limited holds two designations, D273 (airport activities, operation and runway extension) and D274 (take-off and approach fan).
- Airways Corporation of New Zealand Limited hold a number of designations for airport-related structures (D388 - D409).
- Details of the designations can be found in Appendix A1.4.

### Rule 24.4 Notification

- With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided:
  - all restricted discretionary activities that list 'effect on cultural values of Manawhenua' as a matter for discretion.
- All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## Rule 24.5 Land Use Performance Standards

### 24.5.1 Acoustic Insulation

Noise sensitive activities in the **airport noise outer control mapped area** and the **airport noise inner control mapped area** must comply with Rule 9.3.1.

### 24.5.3 Light Spill

1. On-site lighting (other than runway, navigational and other operational lighting) within the Dunedin International Airport Zone must be positioned, directed and maintained so that light spill outside of the zone does not exceed 16 Lux when measured:
  - a. 10 metres outside the zone boundary;
  - b. in both the horizontal and vertical planes; and
  - c. with the runway, navigation and associated operational lighting turned off.

2. Rule 24.5.3.1 does not apply where the adjoining zone is a residential zone.

3. Light spill measured at any point of the vertical plane that marks the boundary of any site within a residential zone, or, in any other zone, the notional boundary of any residential building, must not exceed the following limits:

Time	Limit
a. 7.00am - 10.00pm	10 Lux
b. 10.00pm - 7.00am	3 Lux

- c. except, this standard does not apply to headlights of motor vehicles, operating on roads or driveways/vehicle tracks or from street lighting, but it does apply to parking/loading areas with over 5 vehicles.
  - d. any outdoor lighting must ensure that direct or indirect illumination does not exceed 3 lux at the windows of residential buildings within residential zones and the notional boundary of residential buildings in any other zone.
  - e. Light spill must not be emitted in the angles above the horizontal.
  - f. All outdoor lighting, except street lighting, must be shielded from or directed away from adjacent roads and site boundaries.
4. Activities that contravene the performance standard for light spill are non-complying activities.

### 24.5.4 Location

1. For office activity and commercial activities ancillary to airport activity (except vehicle rental facilities), customer access must only be available from inside terminal buildings.
2. Activities that contravene this performance standard are restricted discretionary activities.

### 24.5.5 Minimum Mobility Car Parking

1. Airport activity must provide a minimum of 20 mobility parking spaces.
2. NA.
3. Visitor accommodation must provide mobility parking spaces as follows:

Total number of parking spaces provided	Minimum number of these that must be mobility parking spaces
---	--

i.	1 - 20	1 parking space
ii.	21 - 50	2 parking spaces
iii.	For every additional 50 parking spaces	1 additional parking space

4. NA.
5. NA.
6. Activities that contravene this performance standard are restricted discretionary activities.

**Note 24.5.5A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

**24.5.6 Minimum Vehicle Loading**

1. Visitor accommodation units with greater than 50 individual rooms must provide one loading space to accommodate a coach with minimum dimensions (See Appendix 6B, Figure 6B.12).
2. Required vehicle loading must be designed and constructed to comply with Rule 6.6.2.

**24.5.7 Noise**

Land use activities must comply with Rule 9.3.6.

**24.5.8 Service Station Standards**

Service stations must comply with Rule 6.7.1.

**24.5.9 Number and Location of Tourism Signs**

1. Tourism advertising located outside terminal buildings must not:
  - a. exceed a total maximum signage area of 200m<sup>2</sup>;
  - b. be visible from a public place outside the Dunedin International Airport Zone;
  - c. exceed 8m in height (as measured from finished ground level);
  - d. exceed 400mm in depth;
  - e. have any display face that exceeds 18m<sup>2</sup>; or
  - f. obstruct parking, loading or access areas.
2. Activities that contravene this performance standard are restricted discretionary activities.

### 24.5.10 Number and Location of Other Commercial Advertising Signs

1. All commercial advertising (other than tourism advertising) must:
  - a. be located in the permitted locations specified in Table 24.5.10A; and
  - b. not exceed the maximum number of signs or the maximum dimensions of signs for that location in Table 24.5.10A.

**Table 24.5.10A**

Permitted locations		Maximum number of signs	Maximum dimensions of signs
Main airport area (Figure 24.5.10A)			
2.	Area A	a. One double-sided freestanding sign	i. Maximum height of 8m ii. Maximum depth of 400mm iii. Maximum area of 18m <sup>2</sup> per display face
3.	Area B	a. One single-sided freestanding sign	i. Maximum height of 8m ii. Maximum depth of 400mm iii. Maximum area of 18m <sup>2</sup> per display face
Airport parking areas (car parks)			
4.	Airport parking areas for use by the travelling public (car parks)	a. No maximum number of signs	i. Maximum height of 8m ii. Maximum depth of 400mm iii. Maximum area of 18m <sup>2</sup> per display face iv. Any signs in parking areas (car parks) in Area C of Figure 24.5.10A must be oriented: <ol style="list-style-type: none"> <li>1. to be viewed primarily by users of the car park; and</li> <li>2. such that the display faces are not visible from Airport Road</li> </ol>
Momona garage site (Figure 24.5.10B)			
5.	Area A	a. No maximum number of signs	i. Maximum area of 50% of the surface area of the building facade
		b. Signs must be attached to only one building facade of any building	
6.	Area B	a. One double-sided freestanding sign	i. Maximum area of 5.25m <sup>2</sup> per display face ii. Maximum height of 1.1m

7. For the purposes of this rule maximum height is height as measured from finished ground level.
8. Commercial advertising (other than tourism advertising) that contravenes the permitted locations in Table 24.5.10A is a non-complying activity.

9. Commercial advertising (other than tourism advertising) that contravenes the maximum number of signs or maximum dimensions of signs in Table 24.5.10A is a restricted discretionary activity.
10. Commercial advertising if illuminated or digital must also comply with Rule 6.7.3.3, including by not being flashing.

Figure 24.5.10A: Main airport area signage

Figure 24.5.10B: Momona garage site signage

## Rule 24.6 Development Performance Standards

### 24.6.1 Boundary Setbacks

1. New buildings and structures, and additions and alterations, must be set back 20m from any boundary with a rural zone or any road.
2. Except fences, ancillary signs and all buildings and structures in section 73 IV Maungatua Survey District (CT 15D/487) are exempt from the performance standard.
3. Activities that contravene this performance standard are restricted discretionary activities.

#### 24.6.1.X Setback from Critical Electricity Distribution Infrastructure

New buildings, new structures and additions and alterations must comply with Rule 5.6.X.1.

### 24.6.2 Boundary Treatments and Other Landscaping

1. For all parking areas, new buildings and outdoor storage areas within 5m of Miller Road, Otokia Road, Centre Road or a rural zone, a landscaping area with a minimum width of 1.5m must be provided along the full length of the road frontage (except for where vehicle access is provided).
2. Landscaping areas must:
  - a. be planted with a mix of trees and shrubs and/or ground cover plants that achieves a total coverage of the ground area in planting (when mature), except for 10% of the area, which may be used for pedestrian paths;
  - b. have an average of one tree for every 5m of frontage;
  - c. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - d. be designed to allow surface water run-off from surrounding areas to enter;
  - e. be protected by a physical barrier that prevents cars from damaging plants;
  - f. for required trees, use trees that are at least 1.5m high at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting;

- g. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and
  - h. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.
3. Any road boundary fences provided must be placed on the property side of any road frontage landscaping required by this rule.
  4. Activities that contravene this performance standard are restricted discretionary activities.

### **24.6.3 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **24.6.4 Location and Screening of Service Areas**

1. Service areas must be located or screened so that they are not visible at ground level from adjacent: residential activities, residential zoned properties, or publicly accessible places within or outside the zone.
2. Service areas must not encroach into required parking, loading or manoeuvring areas.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **24.6.5 Maximum Height**

1. The maximum height of new buildings and structures, and additions and alterations, must not exceed 20m above ground level.
2. Rooftop structures are exempt from the performance standard for height provided they do not exceed the maximum height limit for all other buildings and structures by more than 5m.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **24.6.6 Number, Location and Design of Ancillary Signs**

#### **24.6.6.1 General**

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are not visible from any public place outside the Dunedin International Airport Zone;
  - ii. regulatory signs, warning signs, or directional signs; and
  - iii. building names (excluding sponsorship names).
- b. Signs located on or above the footpath must comply with Rule 6.7.2.
- c. Signs must comply with Rule 6.7.3 where visible from a road.
- d. Signs related to commercial activities, except service station activity, must not be visible from a public place outside the Dunedin International Airport Zone.
- e. Signs higher than 4m above ground level must only display the business name or major facility name.
- f. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### **24.6.6.2 Signs attached to buildings**

- a. The height, above ground level, at the highest point of any sign, attached to a building is 8m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or

gable end.

- d. Signs attached flat against a building must:
- i. not cumulatively exceed 15% of the total wall area (excluding windows) that face the road frontage, or 8m<sup>2</sup>, whichever is lesser; and
  - ii. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.
- e. If attached on the underside of a verandah or protruding from a building façade, signs must:
- i. where attached to the façade of a building, not protrude more than 1.5m from the façade;
  - ii. have a maximum area per display face of 2m<sup>2</sup>;
  - iii. have a maximum of 2 display faces per sign;
  - iv. not exceed 1 sign per 15m of road frontage; and
  - v. not exceed 3 signs per building, for buildings with a single premise.

#### 24.6.6.3 Freestanding signs

- a. The maximum number of freestanding signs is:
- i. 1 per 50m of road frontage (including private airport roads) for permanently fixed freestanding signs; and
  - ii. 1 per 15m of road frontage (including private airport roads) for portable freestanding signs.
- b. Freestanding signs must not exceed:
- i. 8m in height for permanently fixed freestanding signs;
  - ii. 4m in height for portable freestanding signs;
  - iii. an area of 16m<sup>2</sup> per display face for permanently fixed freestanding signs;
  - iv. an area of 8m<sup>2</sup> per display face for portable freestanding signs;
  - v. a width of 2m; and
  - vi. a depth of 400mm.
- c. Freestanding signs must:
- i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.

#### **Note 24.6.6A - Other relevant District Plan provisions**

1. Commercial advertising is a non-complying land use activity in all zones except tourism advertising in the Dunedin International Airport Zone.
2. See Section 3 Public Amenities for the rules related to public noticeboards
3. See Section 4 Temporary Activities for the rules related to temporary signs.

#### **Note 24.6.6B - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy
  - c. Dunedin City Council Roadway Bylaw

d. Dunedin City Council Traffic and Parking Bylaw

#### **24.6.7 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

## Rule 24.7 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### Rule 24.7.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 24.7.2 - 24.7.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 24.7.2 - 24.7.4 apply as follows:
  - a. Rule 24.7.2 applies to all performance standard contraventions;
  - b. Rule 24.7.3 applies to land use performance standard contraventions; and
  - c. Rule 24.7.4 applies to development performance standard contraventions.

24.7.2 Assessment of all performance standard contraventions	
Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards or topography, or other site specific factors, make meeting the standard impracticable.</li> <li>c. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>e. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> </ol>

### 24.7.3 Assessment of land use performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Location (commercial activities ancillary to airport)	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<i>Relevant objectives and policies:</i> i. Objective 24.2.2 ii. Commercial activities ancillary to airport are designed, located and operated to primarily service staff and visitors to the Dunedin International Airport (Policy 24.2.2.5).
2.	Minimum mobility car parking	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
		b. Effects on accessibility	
3.	Minimum vehicle loading	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
4.	Number and location of tourism signs	a. Effects on rural amenity and amenity at Dunedin International Airport	<i>Relevant objectives and policies:</i> i. Objective 24.2.1 ii. Tourism advertising signage in permitted locations is of a size and number that: 1. will not detract from the amenity of the airport as an international gateway, and 2. ensures any adverse effects on the rural amenity outside the Dunedin International Airport Zone are no more than minor (Policy 24.2.2.6).
5.	Service station standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10.
X.	Number and location of other commercial advertising signs (maximum number of signs or maximum dimensions of signs)	a. Effects on amenity of the airport	<i>Relevant objectives and policies:</i> i. Objective 24.2.2. ii. Other commercial advertising in permitted locations is of a size and number that will not detract from the amenity of the airport as an international gateway (Policy 24.2.2.6.a).
		b. Effects on rural amenity	<i>Relevant objectives and policies:</i> i. Objective 24.2.2. ii. Other commercial advertising in permitted locations is of a size and number that ensures any adverse effects on the rural amenity outside the Dunedin International Airport Zone are no more than minor (Policy 24.2.2.6.b).

### 24.7.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Boundary setbacks	a. Effects on rural amenity	<i>Relevant objectives and policies:</i> i. Objective 24.2.2 ii. Buildings and structures are of a setback that reduces their visual impact on the rural environment (Policy 24.2.2.1).
2.	Boundary treatments and other landscaping	a. Effects on on-site amenity	<i>Relevant objectives and policies:</i> i. Objective 24.2.2 ii. Landscaping of new buildings, parking areas, and outdoor storage areas ensures a high standard of visual amenity is maintained adjacent to public roads and the rural zones (Policy 24.2.2.2).
		b. Effects on rural amenity	
3.	Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
4.	Location and screening of service areas	a. Effects on on-site amenity	<i>Relevant objectives and policies:</i> i. Objective 24.2.2 ii. Development maintains on-site and rural amenity by ensuring service areas are not visible from publicly accessible areas within or outside the zone (Policy 24.2.2.3).
		b. Effects on rural amenity	
5.	Maximum height	a. Effects on rural amenity	<i>Relevant objectives and policies:</i> i. Objective 24.2.2 ii. Buildings and structures are of a height that reduces their visual impact on the rural environment (Policy 24.2.2.1).
		b. Effects on cultural values of Manawhenua	See Rule 14.3
6.	Number, location and design of ancillary signs	a. Effects on rural amenity	<i>Relevant objectives and policies:</i> i. Objective 24.2.2 ii. Ancillary signs are located and designed to maintain visual amenity for airport users, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site, and not being oversized or too numerous for that purpose (Policy 24.2.2.4).
		b. Effects on the safety and efficiency of the transport network	See Rule 6.10
7.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10

**24.7.5 Assessment of performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. In a hazard overlay zone: <ul style="list-style-type: none"> <li>Hazardous substances quantity limits and storage requirements</li> </ul>	a. Risk from natural hazards	See Rule 11.4
X. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area:</b> <ul style="list-style-type: none"> <li>Setback from Critical Electricity Distribution Infrastructure (buildings, structures and city-wide activities)</li> </ul>	a. Effects on health and safety  b. Effects on efficient and effective operation of network utilities	See Rule 5.7.

## **Rule 24.8 Assessment of Restricted Discretionary Activities**

### **Rule 24.8.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 24.8.2 - 24.8.3:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 24.8.2 - 24.8.3 apply as follows:
  - a. Rule 29.8.2 applies to restricted discretionary land use activities; and
  - b. Rule 24.8.3 applies to restricted discretionary development activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 24.7; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 24.9; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 24.10; and
    - iii. the assessment guidance in this section will also be considered.

### 24.8.2 Assessment of restricted discretionary land use activities

24.8.2 Assessment of restricted discretionary land use activities		
Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All high trip generators: <ul style="list-style-type: none"> <li>any activities that generate 250 or more vehicle movements a day</li> </ul>	a. Effects on accessibility	See Rule 6.11
	b. Effects on the safety and efficiency of the transport network	
2. Service stations	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
	b. Effects on accessibility	

### 24.8.3 Assessment of restricted discretionary development activities

24.8.3 Assessment of restricted discretionary development activities		
Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In the <b>hazard 2 (flood) overlay zones</b> (see Rule 24.3.6): <ul style="list-style-type: none"> <li>New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area</li> <li>Natural hazards sensitive activities</li> <li>Natural hazards potentially sensitive activities</li> </ul>	a. Risk from natural hazards	See Rule 11.5

## **Rule 24.9 Assessment of Discretionary Activities**

### **Rule 24.9.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 24.9.2 - 24.9.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 24.9.2 - 24.9.3 apply as follows:
  - a. Rule 24.9.2 applies to all discretionary activities; and
  - b. Rule 24.9.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 24.9.2 Assessment of all discretionary activities

Activity

Guidance on the assessment of resource consents

### 24.9.2 Assessment of all discretionary activities

Activity	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Office</li> <li>• All activities in the industrial activities category</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.3.1</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 24.2.1</li> <li>e. Commercial activities ancillary to airport, office, service stations, and visitor accommodation are designed and operated in line with Objective 24.2.2 and its policies (Policy 24.2.1.2).</li> <li>f. Activities that are not ancillary to airport:               <ul style="list-style-type: none"> <li>i. are related to or support the Dunedin International Airport, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Dunedin International Airport;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 24.2.2 and its policies (Policy 24.2.1.3).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>g. For discretionary land use activities, whether any associated development activities meet relevant development performance standards, or are otherwise consistent with relevant objectives and policies for development.</li> <li>h. All relevant land use performance standards are met, including noise and light spill standards.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>i. In assessing the significance of effects, consideration will be given to:               <ul style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>j. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>k. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>l. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>

### 24.9.2 Assessment of all discretionary activities

Activity	Guidance on the assessment of resource consents
2. Subdivision activities	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 24.2.1.</li> <li>b. Subdivision activities do not adversely affect the efficient and effective operation of Dunedin International Airport (Policy 24.2.1.4)</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>c. See Section 11.6. for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risk from natural hazards.</li> </ul>

### 24.9.3 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Acoustic insulation</li> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ul>

## **Rule 24.10 Assessment of Non-complying Activities**

### **Rule 24.10.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 24.10.2 - 24.10.3 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 24.10.2 - 24.10.3 apply as follows:
  - a. Rule 24.10.2 applies to non-complying land use activities; and
  - b. Rule 24.10.3 applies to non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

Activity	Guidance on the assessment of resource consents
----------	---

### 24.10.2 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
1. All non-complying land use activities	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.3.1 and Policy 2.3.1.1</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 24.2.1 and Policy 24.2.1.3</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>e. In assessing the significance of effects consideration will be given to:               <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> <li>f. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>g. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>h. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>i. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>

### 24.10.3 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Light spill</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ul>

### 24.10.3 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>X. Number and location of other commercial advertising signs (permitted locations of commercial advertising signage)</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1.</li> <li>b. Policy 2.4.1.6.c.</li> <li>c. Objective 24.2.2.</li> <li>d. Avoid commercial advertising outside permitted locations unless:               <ul style="list-style-type: none"> <li>i. considering the potential for cumulative adverse effects from future signage, it will not detract from the amenity of the airport as an international gateway; and</li> <li>ii. it will have no more than minor adverse effects on rural amenity outside the Dunedin International Airport Zone (Policy 24.2.2.X).</li> </ul> </li> </ul>

**{Note - appeal relates to the hazardous substances performance standard only}**

## **25. Edgar Centre**

### **25.1 Introduction**

The Edgar Centre is located at 116 Portsmouth Drive, Andersons Bay, and occupies a site of approximately three hectares in area. The site fronts onto the harbour, and is surrounded on the other three sides by industrially zoned land, which provides predominantly for industrial and large scale yard based retail activities.

The Edgar Centre is a large indoor venue and includes a number of arenas and meeting spaces that are used for social and competitive sport, functions, meetings, expos and concerts from local, national and international artists. A large car parking area services the Centre.

The key resource management issues are that land use activities on the Edgar Centre site have the potential to generate effects, particularly traffic, which may adversely affect the operation of surrounding industrial land uses or the safe and efficient operation of the transport network. Portsmouth Drive is classed as an 'industrial amenity route' and is managed to ensure the maintenance of views across the harbour and ensure a higher level of amenity for pedestrians and cyclists using it. The Edgar Centre Zone recognises the existing and foreseeable future uses of the site, providing certainty to the community and appropriately managing any adverse effects on the surrounding industrial zone and transport network.

## 25.2 Objectives and Policies

<b>Objective 25.2.1</b>	
The Edgar Centre is able to operate efficiently and effectively.	
Policy 25.2.1.1	Enable major recreation facility activity in the Edgar Centre Zone.
Policy 25.2.1.2	Provide for activities ancillary to a major recreation facility where they are designed and operated in line with Objective 25.2.2 and its policies.
Policy 25.2.1.3	Only allow activities that are not ancillary to a major recreation facility where: <ul style="list-style-type: none"> <li>a. they are related to or support the Edgar Centre, or have other operational requirements that mean they need to locate in the zone;</li> <li>b. they will support the efficient and effective operation of the Edgar Centre;</li> <li>c. they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>d. they are designed and operated in line with Objective 25.2.2 and its policies.</li> </ul>
Policy 25.2.1.4	Enable land that is surplus to the needs of the Edgar Centre to transition to the Industrial Zone, so that future development that is not related to major recreation facility activity will be managed in accordance with the objectives and policies of that zone.
Policy 25.2.1.5	Only allow subdivision activities where: <ul style="list-style-type: none"> <li>a. they are in accordance with the provisions of the Industrial Zone; and</li> <li>b. the subdivision does not adversely affect the efficient and effective operation of the Edgar Centre.</li> </ul>

### Objective 25.2.2

Land use activities and development necessary for the Edgar Centre to meet the reasonably foreseeable needs of the community are enabled, while ensuring they:

1. achieve a reasonable standard of on-site amenity for facility users; and
2. maintain or enhance the amenity of surrounding areas as far as practicable.

Policy 25.2.2.1	Require buildings and structures to be of a height that: <ol style="list-style-type: none"> <li>a. is similar to the existing height of buildings of the surrounding Industrial Zone; and</li> <li>b. avoids or minimises, as far as practicable, significant adverse effects on views from Dunedin's inner hill suburbs across the upper harbour toward the Otago Peninsula.</li> </ol>
Policy 25.2.2.2	Only allow buildings and structures to exceed the maximum height limit where: <ol style="list-style-type: none"> <li>a. the height is essential to the operation of the Edgar Centre; and</li> <li>b. all practicable measures have been taken to avoid or minimise the visual effects of the height limit exceedance.</li> </ol>
Policy 25.2.2.3	Require development along Portsmouth Drive ( <b>amenity route mapped area</b> ) to provide a high level of streetscape amenity by: <ol style="list-style-type: none"> <li>a. providing landscaping of a height and density adequate to maintain or enhance the amenity of the route; and</li> <li>b. setting back buildings an adequate distance to allow this landscaping.</li> </ol>
Policy 25.2.2.4	Require ancillary signs visible from outside the zone to be located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose.
Policy 25.2.2.5	Require ancillary commercial activities to be designed, located and operated to primarily serve staff and visitors to the Edgar Centre.

## Rules

### Rule 25.3 Activity Status

#### 25.3.1 Rule location

The activity status tables in rules 25.3.3 to 25.3.5 specify the activity status of land use activities, development activities, and subdivision activities in the Edgar Centre Zone, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 25.3.2 Activity status introduction

1. The activity status tables in rules 25.3.3 - 25.3.5 show the activity status of activities in the Edgar Centre Zone provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Performance Standards*

7. Performance standards are listed in the far right column of the activity status tables.
8. Performance standards apply to permitted, controlled, and restricted discretionary activities.
9. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
10. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

## Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity

### 25.3.3 Activity status table - land use activities

1.	Performance standards that apply to all land use activities		a. NA b. Light spill c. Noise
Major facility activities		Activity status	Performance standards
2.	Major recreation facility	P	a. Minimum mobility car parking
3.	All other activities in the major facility activities category	NC	
Community activities		Activity status	Performance standards
4.	Early childhood education ancillary to major recreation facility	D	
5.	Early childhood education not ancillary to major recreation facility	NC	
6.	All other activities in the community activities category	P	
Commercial activities		Activity status	Performance standard
7.	Commercial activities ancillary to major recreation facility	P	a. Location
8.	All other activities in the commercial activities category	NC	
Residential activities		Activity status	Performance standards
9.	All activities in the residential activities category	NC	
Industrial activities		Activity status	Performance standards
10.	All activities in the industrial activities category	D	
Rural activities		Activity status	Performance standards
11.	All activities in the rural activities category	NC	

**Note 25.3.3X- Other requirements outside of the District Plan**

1. Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

### 25.3.4 Activity status table - development activities

1.	Performance standards that apply to all development activities		a. Boundary treatments and other landscaping
Buildings and structures activities		Activity status	Performance standards
2.	All buildings and structures activities	P	<ol style="list-style-type: none"> <li>a. Maximum height</li> <li>b. Number, location and design of ancillary signs</li> <li>c. Boundary setbacks</li> </ol>
Site development activities		Activity status	Performance standards
3.	Parking, loading and access	P	a. Parking, loading and access standards
4.	New, or additions to, parking areas that result in 50 or more new parking spaces	RD	a. Parking, loading and access standards
5.	Storage and use of hazardous substances	P	a. Hazardous substances quantity limits and storage requirements
6.	All other site development activities	P	

#### Note 25.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

### 25.3.5 Activity status table - subdivision activities

Subdivision activities		Activity status	Performance standards
1.	Subdivision activities	RD	a. Subdivision performance standards

#### Note 25.3.5A - Other RMA considerations

- Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

### 25.3.6 Transition to the Industrial Zone

On receipt of written notice from both the owner and operator (if different) of the Edgar Centre to Dunedin City Council confirming that all or part of the land within the Edgar Centre Zone is surplus to requirements, the provisions of the Edgar Centre Zone will no longer apply to that parcel of land and the provisions of the Industrial Zone will apply in full.

## **Rule 25.4 Notification**

1. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided:
  1. all discretionary activities that list 'effect on cultural values of Manawhenua' as a matter for discretion; and
  2. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat in Appendix A4.
2. All other activities are subject to the normal tests for notification in accordance with sections 95A - 95G of the RMA.

## **Rule 25.5 Land Use Performance Standards**

### **25.5.2 Light Spill**

Land use activities must comply with Rule 9.3.5.

### **25.5.3 Location**

1. For ancillary commercial activities, customer access must only be available from inside the Edgar Centre buildings.
2. Activities that contravene this performance standard are restricted discretionary activities.

### **25.5.4 Minimum Mobility Car Parking**

1. Major recreation facility activity must provide a minimum of nine mobility parking spaces. These must be provided either within or on land close to the Edgar Centre Zone.
2. NA.
3. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 25.5.4A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### **25.5.5 Noise**

Land use activities must comply with Rule 9.3.6.

## **Rule 25.6 Development Performance Standards**

### **25.6.1 Boundary Setbacks**

1. New buildings and structures, and additions and alterations must have a minimum set back from Portsmouth Drive (**amenity route mapped area**) of 10.5m.
2. Except fences and ancillary signs are exempt from this standard.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **25.6.2 Boundary Treatments and Other Landscaping**

1. Along the Portsmouth Drive frontage, a landscaping area with a minimum width of 1.5m must be provided along the full length of the road frontage (except for where vehicle access is provided).
2. Landscaping areas must:
  - a. be planted with a mix of trees and shrubs and/or ground cover plants that achieves a total coverage of the ground area in planting (when mature), except for 10% of the area, which may be used for pedestrian paths;
  - b. have an average of one tree for every 5m of frontage;
  - c. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - d. be designed to allow surface water run-off from surrounding areas to enter;
  - e. be protected by a physical barrier that prevents cars from damaging plants;
  - f. for required trees, use trees that are at least 1.5m high at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting;
  - g. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and
  - h. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.
3. Any road boundary fences provided must be placed on the property side of any road frontage landscaping required by this rule.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **25.6.3 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **25.6.4 Maximum Height**

1. The maximum height of new buildings and structures, and additions and alterations, must not exceed 18m above ground level.
2. Rooftop structures are exempt from the performance standard for maximum height, provided they do not exceed the maximum height limit for all other buildings and structures by more than 5m.
3. Activities that contravene this performance standard are restricted discretionary activities.

## 25.6.5 Number, Location and Design of Ancillary Signs

### 25.6.5.1 General

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are not visible from outside the Edgar Centre Zone;
  - ii. regulatory signs, warning signs, or directional signs; and
  - iii. building names (excluding sponsorship names).
- b. Signs related to activities ancillary to a major recreation facility must not be visible outside the Edgar Centre Zone.
- c. Signs located on or above the footpath must comply with Rule 6.7.2.
- d. Signs must comply with Rule 6.7.3 where visible from a road.
- e. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

### 25.6.5.2 Signs attached to buildings

- a. The height above ground level of the highest point of any sign must not exceed 8m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs must not exceed the following number and cumulative maximum area:

Location	Number of signs	Cumulative maximum area
Façade facing Portsmouth Drive	5	75m <sup>2</sup>
Façade facing Midland Street	3	56m <sup>2</sup>
Façade facing Teviot Street	2	26.5m <sup>2</sup>

- e. Signs attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.
- f. Signs attached on the underside of a verandah or protruding from a building façade must:
  - i. where attached to the façade of a building, have a maximum area per display face of 2m<sup>2</sup>;
  - ii. where attached to the façade of a building, must not project more than 1.5m from the façade to which it is attached;
  - iii. have a maximum of two display faces per sign; and
  - iv. not exceed one sign per 15m of building façade.

#### 25.6.5.3 Freestanding signs

- a. The maximum number of freestanding signs within the zone is two.
- b. The maximum dimensions of freestanding signs are:
  - i. maximum height of 4m;
  - ii. maximum area of 8m<sup>2</sup> per display face;
  - iii. maximum width of 2m; and
  - iv. maximum depth of 400mm.
- c. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.

#### **Note 25.6.5A - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy.
  - c. Dunedin City Council Roadway Bylaw.
  - d. Dunedin City Council Traffic and Parking Bylaw.

#### **25.6.6 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

#### **25.6.7 Setback from Coast and Water Bodies**

New buildings and structures, and additions and alterations must comply with Rule 10.3.3.

#### **Rule 25.7 Subdivision Performance Standards**

Subdivision activities must comply with Rule 19.7.

## Rule 25.8 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### Rule 25.8.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 25.8.2 - 25.8.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 25.8.2 - 25.8.5 apply as follows:
  - a. Rule 25.8.2 applies to all performance standard contraventions;
  - b. Rule 25.8.3 applies to land use performance standard contraventions;
  - c. Rule 25.8.4 applies to development performance standard contraventions; and
  - d. Rule 25.8.5 applies to subdivision performance standard contraventions.

25.8.2 Assessment of all performance standard contraventions	
Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards or site specific factors make meeting the standard impracticable.</li> <li>c. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>e. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> </ol>

### 25.8.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Location	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<i>Relevant objectives and policies:</i> i. Objective 25.2.2 ii. Ancillary commercial activities are designed, located and operated to primarily serve staff and visitors to the Edgar Centre (Policy 25.2.2.5).
3. Minimum mobility car parking	a. Effects on accessibility b. Effects on the safety and efficiency of the transport network	See Rule 6.10

### 25.8.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance in the assessment of resource consents
1. Boundary setbacks	a. Effect on streetscape amenity	<i>Relevant objectives and policies:</i> i. Objective 25.2.2 ii. Development along Portsmouth Drive ( <b>amenity route mapped area</b> ) provides a high level of streetscape amenity by setting back buildings an adequate distance to allow landscaping (Policy 25.2.2.3.b).
2. Boundary treatments and other landscaping	a. Effects on streetscape amenity	<i>Relevant objectives and policies:</i> i. Objective 25.2.2 ii. Development along Portsmouth Drive ( <b>amenity route mapped area</b> ) provides a high level of streetscape amenity by providing landscaping of a height and density adequate to maintain or enhance the amenity of Portsmouth Drive (Policy 25.2.2.3.a).  <i>Potential circumstances that may support a consent application include:</i> iii. The site is laid out in an alternative manner to achieve better outcomes for streetscape amenity.
3. Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5

#### 25.8.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance in the assessment of resource consents
4. Maximum height	a. Effects on heightscape of the industrial zones	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 25.2.2</li> <li>ii. Buildings and structures are a similar height to existing buildings within the surrounding Industrial Zone (Policy 25.2.2.1.a).</li> <li>iii. Buildings and structures only exceed the maximum height limit where:               <ul style="list-style-type: none"> <li>1. the height is essential to the operation of the Edgar Centre; and</li> <li>2. all practicable measures have been taken to avoid or minimise the visual effects of the height limit exceedance (Policy 25.2.2.2).</li> </ul> </li> </ul>
	b. Effects on important view shafts	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 25.2.2</li> <li>ii. Buildings and structures are a height that avoids or minimises, as far as practicable, significant adverse effects on views from Dunedin's inner hill suburbs across the upper harbour toward the Otago Peninsula (Policy 25.2.2.1.b).</li> </ul>
5. Number, location and design of ancillary signs	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 25.2.2</li> <li>ii. Ancillary signs visible from outside the zone are located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose (Policy 25.2.2.4).</li> </ul>
	b. Effects on the safety and efficiency of the transport network	See Rule 6.10
6. Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
7. Setback from coast and water bodies	a. In a <b>wāhi tupuna mapped area</b> , effects on cultural values of Manawhenua	See Rule 14.3

**25.8.5 Assessment of subdivision performance standard contraventions**

Performance standard	Guidance on the assessment of resource consents
1. Subdivision performance standards	See Rule 19.9

## **Rule 25.9 Assessment of Restricted Discretionary Activities**

### **Rule 25.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 25.9.2 - 25.9.3 list:
  - a. the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 25.9.2 - 25.9.3 apply as follows:
  - a. Rule 25.9.2 applies to restricted discretionary development activities; and
  - b. Rule 25.9.3 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 25.8; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 25.10; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 25.11; and
    - iii. the assessment guidance in this section will also be considered.

### 25.9.2 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. High trip generators: <ul style="list-style-type: none"> <li>New, or additions to, parking areas that result in 50 or more new parking spaces</li> </ul>	a. Effects on the safety and efficiency of the transport network b. Effects on accessibility	See Rule 6.11

### 25.9.3 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All subdivision activities	a. Effects on the efficient and effective operation of the Edgar Centre  See Rule 19.10	<i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>Objectives 25.2.1, 6.2.3</li> <li>Subdivision activities do not adversely affect the efficient and effective operation of the Edgar Centre (Policy 25.2.1.5.b).</li> </ol>

## **Rule 25.10 Assessment of Discretionary Activities**

### **Rule 25.10.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 25.10.2 - 25.10.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rule 25.10.2 - 25.10.3 apply as follows:
  - a. Rule 25.10.2 applies to all discretionary activities; and
  - b. Rule 25.10.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 25.10.2 Assessment of all discretionary activities

Activity	Guidance on the assessment of resource consents
<p>1. All discretionary land use activities listed below:</p> <ul style="list-style-type: none"> <li>• early childhood education ancillary to major recreation facility</li> <li>• all activities in the industrial activities category</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.3.1, 2.3.3</li> <li>b. Objective 25.2.1</li> <li>c. Activities that are ancillary to a major recreation facility are designed and operated in line with Objective 25.2.2 and its policies (Policy 25.2.1.2).</li> <li>d. Activities that are not ancillary to a major recreation facility: <ul style="list-style-type: none"> <li>i. are related to or support the Edgar Centre, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Edgar Centre;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 25.2.2 and its policies (Policy 25.2.1.3).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>e. For discretionary land use activities, whether any associated development activities meet relevant development performance standards, or are otherwise consistent with relevant objectives and policies for development.</li> <li>f. All relevant land use performance standards are met, including noise and light spill standards.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>g. In assessing the significance of effects, consideration will be given to: <ul style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>h. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>j. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>

**25.10.3 Assessment of discretionary performance standard contraventions**

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>

## **Rule 25.11 Assessment of Non-complying Activities**

### **Rule 25.11.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 25.11.2 and 25.11.3 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 25.11.2 and 25.11.3 apply as follows:
  - a. Rule 25.11.2 applies to non-complying activities; and
  - b. Rule 25.11.3 applies to non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 25.11.2 Assessment of non-complying activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying activities</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.3.3 and Policy 2.3.3.2</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 25.2.1</li> <li>e. Activities not ancillary to a major recreation facility: <ul style="list-style-type: none"> <li>i. are related to or support Edgar Centre, or have other operation requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Edgar Centre;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 25.2.2 and its policies (Policy 25.2.1.3).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>f. In assessing the significance of effects consideration will be given to: <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> <li>g. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>h. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>j. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>
<p>2. Commercial advertising</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Policy 2.4.1.6.c</li> </ul>

**25.11.3 Assessment of non-complying performance standard contraventions**

Performance standard	Guidance on the assessment of resource consents
<p>1.</p> <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>

## **26. Invermay and Hercus**

### **26.1 Introduction**

Invermay Research Centre (Invermay) is owned by AgResearch Limited and is located near the eastern outskirts of Mosgiel. The main Invermay site is accessed from Puddle Alley and consists of a 23 hectare research hub. There is an adjacent research farm (approximately 495 hectares) and a second research farm (approximately 50 hectares) a short distance to the north of the main Invermay site, straddling Silverstream Valley Road . These farms are zoned rural, but additional research related activities are provided for within these areas.

The Invermay site is tenanted by a range of commercial organisations, which also have a rural research focus. They include an agricultural training provider, veterinary diagnostic services, food origin testing, food safety testing and veterinary services. The site is also used for veterinary nurse training by Otago Polytechnic. The site therefore acts as a hub for organisations with a similar rural focus.

The Hercus Taieri Resource Unit (Hercus), at 270 Factory Road, is a biomedical research and support facility. The site contains a scheduled heritage building 'Taieri House', which provides staff accommodation, and several outbuildings.

The Invermay and Hercus research and education facilities are of sufficient scale and importance to the rural economy to warrant special consideration in the District Plan as a major facility, to provide for their continued use, intensification and expansion. The buildings and types of activities undertaken at Invermay and Hercus are different in scale to those generally undertaken in the rural zones. There is opportunity to establish other research and education-related organisations and facilities on the site, which in turn will have economic benefits to Dunedin and surrounding areas. Accordingly, the Invermay and Hercus Zone provisions have been designed to facilitate ongoing research and education, and ancillary activities that complement this function.

## 26.2 Objectives and Policies

<b>Objective 26.2.1</b>	
Invermay and Hercus research facilities are able to operate and develop efficiently and effectively.	
Policy 26.2.1.1	Enable Invermay/Hercus activity.
Policy 26.2.1.2	Provide for retail and conference, meeting and function activity that is ancillary to Invermay/Hercus activity or rural activities where they are designed and operated in line with Objective 26.2.2 and its policies.
Policy 26.2.1.3	Only allow activities that are not ancillary to Invermay/Hercus activity where: <ul style="list-style-type: none"> <li>a. they are related to or necessary to support the Invermay Research Centre and Hercus Taieri Resource Unit, or have other operational requirements that mean they need to locate in the zone;</li> <li>b. they will support the efficient and effective operation of Invermay Research Centre and Hercus Taieri Resource Unit;</li> <li>c. they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>d. they are designed and operated in line with Objective 26.2.2 and its policies.</li> </ul>
Policy 26.2.1.4	Enable land that is surplus to the needs of the Invermay Research Centre and Hercus Taieri Resource Unit to transition to the default zone listed in Appendix A9, so that future development that is not related to Invermay/Hercus activity will be managed in accordance with the objectives and policies of that zone.
Policy 26.2.1.5	Only allow subdivision activities where: <ul style="list-style-type: none"> <li>a. they are in accordance with the provisions of the default zone listed in Appendix A9; and</li> <li>b. the subdivision does not adversely affect the efficient and effective operation of the Invermay Research Centre and Hercus Taieri Resource Unit.</li> </ul>

<b>Objective 26.2.2</b>	
Land use activities and development necessary for the continued operation of the Invermay Research Centre and Hercus Taieri Resource Unit is enabled, while ensuring development maintains the amenity of adjacent rural areas as far as practicable.	
Policy 26.2.2.1	Require buildings that house animals to be set back from site boundaries so that any adverse effects on sensitive activities on adjoining sites, such as residential activities are avoided or, if avoidance is not practicable, are no more than minor.
Policy 26.2.2.2	Require buildings and structures to be of a height and setback from boundaries to minimise adverse effects on rural amenity.
Policy 26.2.2.3	Require landscaping of parking areas to ensure a high standard of visual amenity is maintained from adjoining public roads.
Policy 26.2.2.4	Require ancillary signs visible from outside the zone to be located and designed to maintain rural amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose.

## Rules

## **Rule 26.3 Activity Status**

### **26.3.1 Rule location**

The activity status tables in rules 26.3.3 to 26.3.5 specify the activity status of land use activities, development activities, and subdivision activities in the Invermay and Hercus Zone, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

### **26.3.2 Activity status introduction**

1. The activity status tables in rules 26.3.3 - 26.3.5 show the activity status of activities in the Invermay and Hercus Zone, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Performance Standards*

7. Performance standards are listed in the far right column of the activity status tables.
8. Performance standards apply to permitted, controlled, and restricted discretionary activities.
9. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
10. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

## Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
Haz3	Hazard 3 Overlay Zones

### 26.3.3 Activity status table - land use activities

1.	Performance standards that apply to all land use activities		a. NA b. Light spill c. Noise
Major facility activities		Activity status	Performance standards
2.	Invermay/Hercus activity	P	
3.	All other activities in the major facility activities category	NC	
Community activities		Activity status	Performance standards
4.	Community and leisure	P	
5.	Conservation	P	
6.	All other activities in the community activities category	D	
Commercial activities		Activity status	Performance standards
7.	Retail ancillary to Invermay/Hercus activity	P	
8.	Conference, meeting and function ancillary to Invermay/Hercus activity	P	
9.	Veterinary services	P	
10.	Training and education	P	
11.	All other office activity	D	
12.	All other activities in the commercial activities category	NC	
Residential activities		Activity status	Performance standards
13.	All activities in the residential activities category	NC	
Industrial activities		Activity status	Performance standards
14.	All activities in the industrial activities category	D	

Rural activities		Activity status	Performance standards
15.	Farming	P	
16.	Grazing	P	
17.	Forestry	P	a. Forestry and shelterbelts and small woodlots setbacks
18.	Landfills	NC	
19.	All other activities in the rural activities category	D	

**Note 26.3.3A – Other requirements outside of the District Plan**

Plantation forestry and associated activities in the Invermay and Hercus Zone are addressed by the NESPF rather than Rule 26.3.3.17. The NESPF does not apply to vegetation clearance prior to afforestation and the rules in Section 10 Natural Environment apply.

**Note 26.3.3X- Other requirements outside of the District Plan**

- Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

**26.3.4 Activity status table - development activities**

1.	Performance standards that apply to all development activities		a. Setback from scheduled tree
2.	Performance standards that apply to all buildings and structures activities		a. Boundary setbacks b. Maximum height c. Number, location and design of ancillary signs d. Setback from coast and water bodies
Building and structures activities (excluding activities affecting a protected part of a scheduled heritage building or scheduled heritage structure. See rows 4 - 11)		Activity status	Performance standards
3.	All buildings and structures activities	P	
Building and structures activities that affect a protected part of a scheduled heritage building or scheduled heritage structure		Activity status	Performance standards
4.	Repairs and maintenance	P	
5.	Restoration of a building or structure that has a Heritage New Zealand Category 1 listing as detailed in Appendix A1.1	C	

6.	Restoration of all other scheduled heritage buildings and structures	P	
7.	Earthquake strengthening where external features only are protected	C	a. Materials and design
8.	Signs attached to buildings or structures	P	
9.	All other additions and alterations	RD	
10.	Demolition	NC	
11.	Removal for relocation	RD	
Site development activities		Activity status	Performance standards
12.	Parking, loading and access	P	a. Boundary treatments and other landscaping b. Parking, loading and access standards
13.	New, or additions to, parking areas that result in 50 or more new parking spaces.	RD	a. Boundary treatments and other landscaping b. Parking, loading and access standards
14.	Storage and use of hazardous substances	P	a. Hazardous substances quantity limits and storage requirements b. Setback from coast and water bodies
15.	Outdoor storage	P	
16.	All other site development activities	P	

### 26.3.5 Activity status table - subdivision activities

Subdivision activities		Activity status	Performance standards
1.	Subdivision activities	RD	a. Subdivision performance standards

<sup>1</sup>See Appendix A9 for a list of default zones

#### Note 26.3.5A - Other RMA considerations

- Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

### 26.3.6 Transition to default zone

On receipt of written notice from both the owner and operator (if different) of the Invermay Research Centre to Dunedin City Council confirming that all or part of the land contained within land parcel Lot 4 DP 23060 is no longer required for Invermay Research Centre requirements, the provisions of the Invermay and Hercus Zone will no longer apply to that piece of land and the provisions of the Industrial Zone will apply in full.

On receipt of written notice from both the owner and operator (if different) of the Hercus Taieri Resource Unit, to Dunedin City Council confirming that land parcel Lot 1 DP 6164 is no longer required for Hercus Taieri Resource Unit requirements, the provisions of the Invermay and Hercus Zone will no longer apply to that parcel of land and the provisions of the Taieri Plain Rural Zone will apply in full.

#### **Note 26.3.4A - General advice**

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

## **Rule 26.4 Notification**

1. Applications for resource consent for the following activities will be considered without the need to obtain a written approval of affected persons and will not be notified in accordance with section 95A or section 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:
  1. earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is not listed by Heritage New Zealand.
2. With respect to resource consent applications, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided for the following:
  1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is not listed by Heritage New Zealand.
3. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided:
  1. all restricted discretionary activities that list 'effect on cultural values of Manawhenua' as a matter for discretion; and
  2. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat in Appendix A4.
4. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 26.5 Land Use Performance Standards**

### **26.5.2 Light Spill**

Land use activities must comply with Rule 9.3.5.

### **26.5.3 Noise**

Land use activities must comply with Rule 9.3.6.

## **Rule 26.6 Development Performance Standards**

### **26.6.1 Boundary Treatments and Other Landscaping**

1. Where a parking area is built within 5m of a road frontage, a landscaping area with a minimum 1.5m width must be provided along the full length of the road frontage (except for where vehicle access is provided).
2. Landscaping areas must:
  - a. be planted with a mix of trees and shrubs and/or ground cover plants that achieves a total coverage of the ground area in planting (when mature), except for 10% of the area, which may be used for pedestrian paths;
  - b. have an average of one tree for every 5m of frontage;
  - c. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - d. be designed to allow surface water run-off from surrounding areas to enter;
  - e. be protected by a physical barrier that prevents cars from damaging plants;
  - f. for required trees, use trees that are at least 1.5m high at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting;
  - g. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and
  - h. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.
3. Any road boundary fences provided must be placed on the property side of any road frontage landscaping required by this rule.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **26.6.2 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **26.6.3 Materials and Design**

Earthquake strengthening must comply with Rule 13.3.2.

### **26.6.4 Maximum Height**

1. The maximum height of new buildings and structures, and additions and alterations, must not exceed 20m above ground level.
2. Rooftop structures are exempt from the performance standard for height provided they do not exceed the maximum height limit for all other buildings and structures by more 5m.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **26.6.5 Number, Location and Design of Ancillary Signs**

#### **26.6.5.1 General**

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are not visible from outside the Invermay and Hercus Zone;
  - ii. regulatory signs, warning signs (informing of hazards or of other features requiring a safe response), or directional signs; and
  - iii. building names (excluding sponsorship names).

- b. Signs must comply with Rule 6.7.3 where visible from a road.
- c. Signs must not be illuminated or digital.
- d. Signs related to ancillary retail and ancillary conference, meeting and function activity, and other commercial activities provided for, must not be visible outside the Invermay and Hercus Zone.
- e. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### 26.6.5.2 Signs attached to buildings

- a. The height, above ground level, at the highest point of any sign, attached to a building is 4m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs attached to a building must:
  - i. not exceed one sign per 30m of road frontage;
  - ii. have a maximum area per display face of 2m<sup>2</sup>;
  - iii. have a maximum of two display faces per sign;
  - iv. where attached to the façade of a building, must not project more than 1m from the façade to which it is attached; and
  - v. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.

#### 26.6.5.3 Freestanding signs

- a. The maximum number of permanently fixed freestanding signs is one per 50m of frontage.
- b. The maximum number of portable freestanding signs is one per 50m of frontage.
- c. The maximum dimensions of freestanding signs are:
  - i. maximum height of 4m;
  - ii. maximum area of 8m<sup>2</sup>;
  - iii. maximum width of 2m; and
  - iv. maximum depth of 400mm.
- d. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.

**Note 26.6.5A - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy
  - c. Dunedin City Council Roadway Bylaw
  - d. Dunedin City Council Traffic and Parking Bylaw

**26.6.6 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

**26.6.7 Setbacks**

26.6.7.1 Boundary setbacks

- a. New buildings and structures, and additions and alterations, must be set back from boundaries as follows:

Activity	i. Setback from road zone	ii. Setback from other zone boundaries
i. Residential buildings	20m	40m
ii. Buildings not housing animals	20m	6m
iii. Buildings housing animals	20m	12m

- iv. Except fences and ancillary signs are exempt from the performance standard.
- b. Activities that contravene this performance standard are restricted discretionary activities.

26.6.7.2 Setback from scheduled tree

New buildings and structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2.

26.6.7.3 Setback from coast and water bodies

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

26.6.7.4 Forestry and shelterbelts and small woodlots setbacks

Forestry and shelterbelts and small woodlots must comply with Rule 16.6.10.2.

## **Rule 26.7 Subdivision Performance Standards**

1. For subdivision of land contained within land parcel Lot 4 DP 23060 (Invermay Research Centre), subdivision activities must comply with Rule 19.7.
2. For subdivision of land contained within land parcel Lot 1 DP 6164 (Hercus Taieri Resource Centre), subdivision activities must comply with performance standards for the Taieri Plain Rural Zone within Rule 16.7.

## **Rule 26.8 Assessment of Controlled Activities**

### **Rule 26.8.1 Introduction**

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 26.8.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**;
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard;
    - iii. the performance standard contravention will be assessed as indicated in Section 26.9; and
    - iv. the matters of control become matters of discretion and will be assessed as indicated in this section.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**;
    - ii. the performance standard contravention will be assessed as indicated in Section 26.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**;
    - ii. the performance standard contravention will be assessed as indicated in Section 26.12; and
    - iii. the assessment guidance in this section will also be considered.

### 26.8.2 Assessment of all controlled activities

Development activity	Matters of control	Guidance on the assessment of the resource consents
<p>1. Affecting a scheduled heritage building or a scheduled heritage structure:</p> <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected.</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1).</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.4</p>

## **Rule 26.9 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 26.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 26.9.2 - 26.9.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 26.9.2 - 26.9.5 apply as follows:
  - a. Rule 26.9.2 applies to all performance standard contraventions;
  - b. Rule 26.9.3 applies to land use performance standard contraventions;
  - c. Rule 26.9.4 applies to development performance standard contraventions; and
  - d. Rule 26.9.5 applies to subdivision performance standard contraventions.

### 26.9.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1. All performance standard contraventions</p>	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor</li> <li>b. The need to meet other performance standards or topography, or other site specific factors, make meeting the standard impracticable.</li> <li>c. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>e. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> <li>f. In balancing consideration of the objectives and policies related to the maintenance of heritage values or heritage precinct streetscape character and those related to general amenity, greater weight will usually be placed on heritage policies.</li> </ul>

### 26.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>Boundary setbacks</li> <li>Maximum height</li> </ul>	a. Effects on rural character	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 26.2.2</li> <li>ii. Buildings and structures are of a height and setback from boundaries that minimises adverse effects on rural amenity (Policy 26.2.2.2).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Where there are already existing buildings on the site in breach of the same setback, a breach of the boundary setback standard may be considered acceptable where this would promote rural character and the maintenance of open space through the clustering of buildings on the site.</li> </ul>
	b. Effects on surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 26.2.2</li> <li>ii. Buildings that house animals are set back from site boundaries so that any adverse effects on sensitive activities on adjoining sites, such as residential activities, are avoided or, if avoidance is not practicable, are no more than minor (Policy 26.2.2.1).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Where a building used to house animals contravenes the boundary setback standard, the type and/or number of animals or the frequency of housing them means that there will be no more adverse effects from noise, odour or dust on sensitive activities on adjoining sites.</li> </ul>
2. Boundary treatments and other landscaping	a. Effects on rural character	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 26.2.2</li> <li>ii. Parking areas are landscaped to ensure a high standard of visual amenity is maintained from adjoining public roads (Policy 26.2.2.3).</li> </ul>
3. Forestry and shelterbelts and small woodlots setbacks	a. Effects on amenity of surrounding properties	See Rule 16.9
	b. Effects on health and safety	See Rule 9.5
	c. Effects on the safety and efficiency of the transport network	See Rule 6.10

#### 26.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
4. Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
5. Affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> <ul style="list-style-type: none"> <li>Materials and design</li> </ul>	a. Effects on heritage values	See Rule 13.5
6. Number, location and design of ancillary signs	a. Effects on rural character	<i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>Objective 26.2.2</li> <li>Ancillary signs visible from outside the zone are located and designed to maintain rural amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose (Policy 26.2.2.4).</li> </ol>
	b. Effects on the safety and efficiency of the transport network	See Rule 6.10
7. Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
8. Setback from coast and water bodies	a. Effects on biodiversity values and natural character of riparian margins and the coast	See Rule 10.5
	b. Effects on public access	
	c. In a <b>wāhi tupuna mapped area</b> , effects on cultural values of Manawhenua	See Rule 14.3
	d. Risk from natural hazards	See Rule 11.4

**26.9.4 Assessment of development performance standard contraventions**

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
9.	Setback from scheduled tree	a. Effect on long term health of tree	See Rule 7.6

**26.9.5 Assessment of subdivision performance standard contraventions**

Performance standard		Guidance on the assessment of resource consents
1.	Subdivision performance standards	a. For subdivision of land contained within land parcel Lot 4 DP 23060, see Rule 19.9. b. For subdivision of land contained within land parcel Lot 1 DP 6164, see Rule 16.9.

## **Rule 26.10 Assessment of Restricted Discretionary Activities**

### **Rule 26.10.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 26.10.2 - 26.10.3:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 26.10.2 - 26.10.3 apply as follows:
  - a. Rule 26.10.2 applies to restricted discretionary activities; and
  - b. Rule 26.10.3 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 26.9; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 26.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 26.12; and
    - iii. the assessment guidance in this section will also be considered.

### 26.10.2 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. High trip generators: <ul style="list-style-type: none"> <li>New, or additions to, parking areas that result in 50 or more new parking spaces</li> </ul>	<p>a. Effects on the safety and efficiency of the transport network</p> <p>b. Effects on accessibility</p>	See Rule 6.11
2. Activities affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> : <ul style="list-style-type: none"> <li>Additions and alterations and removal for relocation that affects a protected part of a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b></li> <li>Removal for relocation</li> </ul>	a. Effects on heritage values	See Rule 13.6

### 26.10.3 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment resource consents
1. All subdivision activities	a. Effects on the efficient and effective operation of Invermay Research Centre and Hercus Taieri Resource Unit	<p><i>Relevant objectives and policies:</i></p> <p>i. Objectives 26.2.1, 2.3.1</p> <p>ii. Subdivision does not adversely affect the efficient and effective operation of the Invermay Research Centre and Hercus Taieri Resource Unit (Policy 26.2.1.5.b).</p>
		For subdivision of land contained within land parcel Lot 4 DP 23060 (Invermay Research Centre), see Rule 19.10.
		For subdivision of land contained within land parcel Lot 1 DP 6164 (Hercus Taieri Resource Centre), see Rule 16.10.

## **Rule 26.11 Assessment of Discretionary Activities**

### **Rule 26.11.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 26.11.2 - 26.11.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 26.11.2 - 26.11.3 apply as follows:
  - a. Rule 26.11.2 applies to all discretionary activities; and
  - b. Rule 26.11.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 26.11.2 Assessment of all discretionary land use activities

Activity	Guidance on the assessment of resource consents
<p>1. All discretionary land use activities listed below:</p> <ul style="list-style-type: none"> <li>• all other activities in the community activities category and rural activities category</li> <li>• all other office activity</li> <li>• all activities in the industrial activities category</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 2.3.1</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 26.2.1</li> <li>e. Activities that are not ancillary to Invermay/Hercus activity:               <ol style="list-style-type: none"> <li>i. are related to or necessary to support the Invermay Research Centre and Hercus Taieri Resource Unit, or have other operation requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Invermay Research Centre and Hercus Taieri Resource Unit;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 26.2.2 and its policies (Policy 26.2.1.3).</li> </ol> </li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>f. For discretionary land use activities, whether any associated development activities meet relevant development performance standards, or are otherwise consistent with relevant objectives and policies for development (see Rule 26.9 for performance standard contraventions).</li> <li>g. All relevant land use performance standards are met, including noise and light spill standards.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>h. In assessing the significance of effects, consideration will be given to:               <ol style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ol> </li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>i. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>j. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>k. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ol>

**26.11.3 Assessment of discretionary performance standard contraventions**

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>

## **Rule 26.12 Assessment of Non-complying Activities**

### **Rule 26.12.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 26.12.2 - 26.12.5 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 26.12.2 - 26.12.5 apply as follows:
  - a. Rule 26.12.2 applies to all non-complying activities;
  - b. Rule 26.12.3 applies to non-complying land use activities;
  - c. Rule 26.12.4 applies to non-complying development activities;
  - d. Rule 26.12.5 applies to non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 26.12.2 Assessment of all non-complying activities

Activity	Guidance on the assessment of resource consents
1. All non-complying activities	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.3.1</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 26.2.1</li> <li>e. Activities that are not ancillary to Invermay/Hercus activity: <ul style="list-style-type: none"> <li>i. are related to or necessary to support Invermay Research Centre and Hercus Taieri Resource Unit, or have other operation requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Invermay Research Centre and Hercus Taieri Resource Unit;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. they are designed and operated in line with Objective 26.2.2 and its policies (Policy 26.2.1.3).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>f. In assessing the significance of effects consideration will be given to: <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> <li>g. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>h. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>j. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>

### 26.12.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
1. Commercial advertising	<i>Relevant objectives and policies (priority considerations):</i> a. Objective 2.4.1 b. Policy 2.4.1.6.c

### 26.12.4 Assessment of non-complying development activities

Activity	Guidance on the assessment of resource consents
1. Demolition of a protected part of a scheduled heritage building or scheduled heritage structures	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1 and effects on heritage values.

### 26.12.5 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>Light spill - where the limit is exceeded by greater than 25%</li> <li>Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety. <b>{Note - appeal relates to the hazardous substances performance standard only}</b>

## 27. Mercy Hospital

### 27.1 Introduction

The Mercy Hospital site is approximately 4ha in area and is located at 72 Newington Avenue, Maori Hill, Dunedin. The hospital was originally established in 1936 and relocated to the current Maori Hill site in 1969. Mercy Hospital provides a unique service to the South Canterbury, Otago and Southland regions, providing a comprehensive range of specialist assessment, diagnostic and treatment services. The Mercy Hospital Zone has been designed to enable the services offered by Mercy Hospital to be provided for, and to provide greater certainty to the community regarding what land use activities can be expected to occur on the Mercy Hospital site.

The site is surrounded by the General Residential 1 Zone, with predominantly residential use interspersed with commercial activities such as private dentists and medical specialists. There is a high level of residential amenity, with extensive established vegetation in the neighbouring area.

Residents are exposed to very low levels of non-residential noise. While the buildings on the Mercy Hospital site are generally large in scale, they are contained within an extensive site with well established stands of trees and open space. The values of the vegetated area on the eastern part of the site is recognised via its inclusion within the **urban biodiversity mapped area** (UBMA). Marinoto House, which forms part of Mercy Hospital, is listed in the Heritage New Zealand List and Appendix A1.1 - Schedule of Protected Heritage Items and Sites of this Plan.

Mercy Hospital and its associated activities have the potential to generate effects, including traffic, noise, landscape and visual effects, which may impact on surrounding land uses. The Mercy Hospital Development Plan (Appendix 27A) identifies development anticipated over the next 10 years. Other development is provided for, subject to meeting standards relating to height and setback. The type and mix of activities appropriate within the zone, and the ability of the site to absorb change, have been important factors in determining how the Mercy Hospital site will develop over time. The Mercy Hospital Zone recognises the existing and foreseeable future use of the Mercy Hospital site and, at the same time appropriately manages any adverse effects on the surrounding residential zone.

## 27.2 Objectives and Policies

<b>Objective 27.2.1</b>	
Mercy Hospital is able to operate efficiently and effectively as a hospital.	
Policy 27.2.1.1	Enable hospital activity in the Mercy Hospital Zone.
Policy 27.2.1.2	Provide for activities that are ancillary to hospital activity where they are designed and operated in line with Objective 27.2.2 and its policies.
Policy 27.2.1.3	Only allow activities that are not ancillary to hospital activity where all of the following apply: <ul style="list-style-type: none"> <li>a. the activities are related to or support Mercy Hospital, or have other operational requirements that mean they need to locate in the zone;</li> <li>b. they will support the efficient and effective operation of Mercy Hospital;</li> <li>c. they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>d. they are designed and operated in line with Objective 27.2.2 and its policies.</li> </ul>
Policy 27.2.1.4	Enable land that is surplus to the needs of Mercy Hospital to transition to the General Residential 1 Zone (for land outside the <b>urban biodiversity mapped area</b> ) or the Recreation Zone (for land within the <b>urban biodiversity mapped area</b> ), so that future development that is not related to hospital activity will be managed in accordance with the objectives and policies of that zone.
Policy 27.2.1.5	Only allow subdivision activities where: <ul style="list-style-type: none"> <li>a. they are in accordance with the provisions of the General Residential 1 Zone; and</li> <li>b. the subdivision does not adversely affect the efficient and effective operation of Mercy Hospital.</li> </ul>

### Objective 27.2.2

Land use activities and development necessary for Mercy Hospital to meet the reasonably foreseeable health needs of the community is enabled, while ensuring development:

- a. achieves a good standard of on-site amenity for patients, staff and visitors; and
- b. maintains or enhances the amenity of surrounding residential sites and areas, as far as practicable.

Policy 27.2.2.1	Only allow buildings and structures that are either: <ul style="list-style-type: none"> <li>a. in accordance with the Mercy Hospital Development Plan; or</li> <li>b. of a height, setback from boundaries, purpose and size that ensures: <ul style="list-style-type: none"> <li>i. there are no more than minor effects on the sunlight access and privacy of current and potential future residential buildings and their outdoor living spaces; and</li> <li>ii. any adverse effects on neighbourhood amenity are avoided or, if avoidance is not practicable, are no more than minor.</li> </ul> </li> </ul>
Policy 27.2.2.2	Require development to maintain or enhance neighbourhood amenity by ensuring service areas are not visible from ground level outside the site.
Policy 27.2.2.3	Require landscaping of the boundary of parking areas where adjacent to a road frontage to screen or soften these areas and ensure a high standard of visual amenity where viewed from the road.
Policy 27.2.2.4	Require fences on road boundaries to be of a height and design that contributes positively to neighbourhood amenity.
Policy 27.2.2.5	Require ancillary signs visible from outside the zone to be located and designed to maintain streetscape amenity.
Policy 27.2.2.6	Require ancillary commercial activities to be designed, located and operated to primarily serve staff, patients and visitors to Mercy Hospital.
Policy 27.2.2.7	Require the maintenance of the Amenity Planting Area as shown on the Mercy Hospital Development Plan, unless any changes to this area will have no more than minor effects on the visual amenity from surrounding residential sites and areas.

## Rules

### Rule 27.3 Activity Status

#### 27.3.1 Rule location

The activity status tables in rules 27.3.3 to 27.3.5 specify the activity status of land use activities, development activities and subdivision activities in the Mercy Hospital Zone, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 27.3.2 Activity status introduction

1. The activity status tables in rules 27.3.3 - 27.3.5 show the activity status of activities in the Mercy Hospital Zone provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Performance Standards*

7. Performance standards are listed in the far right column of the activity status tables.
8. Performance standards apply to permitted, controlled, and restricted discretionary activities.
9. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
10. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

## Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity

### 27.3.3 Activity status table - land use activities

1.	Performance standards that apply to all land use activities		a. NA b. Light spill c. Noise
Major facility activities		Activity status	Performance standards
2.	Hospital	P	a. Minimum mobility car parking
3.	All other activities in the major facility activities category	NC	
Community activities		Activity status	Performance standards
4.	Community and leisure - small scale	P	
5.	Community and leisure - large scale	D	
6.	Conservation	P	
7.	All other activities in the community activities category	D	
Commercial activities		Activity status	Performance standards
8.	Commercial activities ancillary to hospital activity	P	a. Location
9.	Registered health practitioners	P	
10.	All other activities in the commercial activities category	NC	
Residential activities		Activity status	Performance standards
11.	All activities in the residential activities category	D	
Industrial activities		Activity status	Performance standards
12.	All activities in the industrial activities category	NC	
Rural activities		Activity status	Performance standards
13.	All activities in the rural activities category	NC	

**Note 27.3.3X- Other requirements outside of the District Plan**

1. Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

**27.3.4 Activity status table - development activities**

1.	Performance standards that apply to all development activities		<ol style="list-style-type: none"> <li>a. Setback from scheduled tree</li> <li>b. Amenity planting area</li> </ol>
Building and structures activities (excluding activities affecting a protected part of a scheduled heritage building or scheduled heritage structure. See rows 5 - 11)		Activity status	Performance standards
2.	Fences	P	<ol style="list-style-type: none"> <li>a. Fence height and design</li> </ol>
3.	All building and structures activities in accordance with the Mercy Hospital Development Plan (Appendix 27A)	P	<ol style="list-style-type: none"> <li>a. Number, location and design of ancillary signs</li> </ol>
4.	All other building and structures activities not in accordance with the Mercy Hospital Development Plan (Appendix 27A)	P	<ol style="list-style-type: none"> <li>a. Small scale buildings and structures</li> <li>b. Number, location and design of ancillary signs</li> </ol>
Building and structures activities that affect a protected part of a scheduled heritage building <b>or</b> scheduled heritage structure		Activity status	Performance standards
5.	Repairs and maintenance	P	
6.	Restoration of all scheduled heritage buildings and structures	C	
7.	Earthquake strengthening where external features only are protected	C	
8.	Signs attached to buildings or structures	P	
9.	All other additions and alterations	RD	
10.	Demolition	NC	
11.	Removal for relocation	RD	
Site development activities		Activity status	Performance standards
12.	Service areas	P	<ol style="list-style-type: none"> <li>a. Location and screening of service areas</li> </ol>
13.	Parking, loading and access	P	<ol style="list-style-type: none"> <li>a. Parking, loading and access standards</li> <li>b. Screening of parking areas</li> </ol>

14.	New or additions to parking areas that result in 50 or more new parking spaces.	RD	a. Screening of parking areas b. Parking, loading and access standards
15.	Storage and use of hazardous substances	P	a. Hazardous substances quantity limits and storage requirements
16.	Vegetation clearance	P	a. Maximum area of vegetation clearance (UBMA)
17.	All other site development activities	P	

#### Note 27.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.

#### 27.3.5 Activity status table - subdivision activities

Subdivision activities		Activity status	Performance standards
1.	Subdivision activities	RD	a. Subdivision performance standards

#### Note 27.3.5A - Other RMA considerations

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

#### 27.3.6 Transition to General Residential 1 Zone or Recreation Zone

On receipt of written notice from both the owner and operator (if different) of Mercy Hospital to Dunedin City Council in relation to all or part of the land within the Mercy Hospital Zone, the provisions of the Mercy Hospital Zone will no longer apply to that parcel of land and the provisions of the General Residential 1 Zone (for land outside the **urban biodiversity mapped area**) or Recreation Zone (for land within the **urban biodiversity mapped area**), will apply in full.

## **Rule 27.4 Notification**

1. Applications for resource consent for the following activities will be considered without the need to obtain a written approval of affected persons and will not be notified in accordance with section 95A or 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:
  1. earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand.
2. With respect to resource consent applications for the following activities, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:
  1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is listed by Heritage New Zealand.
3. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## Rule 27.5 Land Use Performance Standards

### 27.5.2 Light Spill

Land use activities must comply with Rule 9.3.5.

### 27.5.3 Location

1. For ancillary commercial activities, customer access must only be available from within the facility.
2. Activities that contravene this performance standard are restricted discretionary activities.

### 27.5.4 Minimum Mobility Car Parking

1. NA.
2. NA.
3. NA.
4. Hospital activities must provide mobility parking spaces as follows:

Total number of parking spaces provided		Minimum number of these that must be mobility parking spaces
a.	1 - 20	1 parking space
b.	21 - 50	2 parking spaces
c.	For every additional 50 parking spaces	1 additional parking space

5. NA.
6. NA.
7. Activities that contravene this performance standard are restricted discretionary activities.

#### Note 27.5.4A - Other relevant District Plan provisions

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### 27.5.5 Noise

Land use activities must comply with Rule 9.3.6.

## Rule 27.6 Development Performance Standards

### 27.6.1 Screening of parking areas

1. Where any part of a parking area is built within 5m of a road frontage, a landscaping area with a minimum 1.5m width must be provided between that part of the parking area and the road frontage (except for where vehicle access is provided).
2. Landscaping areas required by 27.6.1.1 must:
  - a. have an average of one tree for every 5m of frontage;
  - b. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - c. be designed to allow surface water run-off from surrounding areas to enter;
  - d. be protected by a physical barrier that prevents cars from damaging plants;
  - e. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and

- f. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.

3. Activities that contravene this performance standard are restricted discretionary activities.

### **27.6.2 Fence Height and Design**

#### **27.6.2.1 Maximum Height**

- a. The maximum height of fences along boundaries is 2m.
- b. For the purposes of calculating maximum height, where a fence is erected atop a retaining wall, the height will be calculated as the combined height measured from ground level to the top of the fence.
- c. Fences that contravene this performance standard are restricted discretionary activities.

#### **27.6.2.2 Visual Permeability**

- a. Fences along road boundaries must be constructed to a length and/or height that maintains visual permeability for 50% of the length of the boundary measured at a height of 1.4m above ground level (see Figure 15.6.2.2A).
- b. Fences along the road boundary of a state highway are exempt from this requirement.
- c. Fences that contravene this performance standard are restricted discretionary activities.

### **27.6.3 Small scale buildings and structures**

1. New buildings and structures, and additions and alterations that are not in accordance with the Mercy Hospital Development Plan must:
  - a. not exceed 40m<sup>2</sup> footprint;
  - b. not exceed 5m in height;
  - c. not be used for clinical services;
  - d. be set back from zone boundaries a minimum of 4.5m, except for fences and ancillary signs;
  - e. have any public entrances to buildings located at least 10m from a boundary adjoining a residential zone; and
  - f. not protrude through a plane rising at an angle of 45 degrees measured from a starting point of 2.5m vertically above ground level at the zone boundary (see Figure 15.6.6.1C), except:
    - i. a gable end or dormer may project beyond the plane where it is:
      1. no greater than 1m in height measured parallel to the nearest adjacent boundary; and
      2. no greater than 1m in depth measured horizontally at 90 degrees to the nearest adjacent boundary.
2. Activities that contravene this performance standard are restricted discretionary activities, except contravention of rules 27.6.3.1.a and c are restricted discretionary activities.

### **27.6.4 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **27.6.5 Location and Screening of Service Areas**

1. Service areas must be located or screened so that they are not visible at ground level from adjacent: residential activities, residential zoned properties, or public places.
2. Service areas must not encroach into required parking, loading or manoeuvring areas.

3. Activities that contravene this performance standard are restricted discretionary activities.

### **27.6.6 Materials and Design**

Earthquake strengthening must comply with Rule 13.3.2.

### **27.6.7 Maximum Area of Vegetation Clearance (UBMA)**

Vegetation clearance in an **urban biodiversity mapped area** (UBMA) must comply with Rule 10.3.2.4.

### **27.6.8 Number, Location and Design of Ancillary Signs**

#### 27.6.8.1 General

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are not visible from outside the Mercy Hospital Zone;
  - ii. regulatory signs, warning signs, or directional signs; and
  - iii. 'building names' (excluding sponsorship names).
- b. Signs related to ancillary retail and ancillary restaurants must be designed so as to not be visible outside the Mercy Hospital Zone.
- c. Signs must comply with Rule 6.7.3 where visible from a road.
- d. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### 27.6.8.2 Freestanding signs

- a. The maximum number of freestanding signs is one per accessway to a maximum of four signs.
- b. The maximum dimensions of freestanding signs are:
  - i. maximum height of 4m;
  - ii. maximum area of 4m<sup>2</sup>;
  - iii. maximum width of 4m; and
  - iv. maximum depth of 400mm.
- c. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within site boundaries.

#### 27.6.8.3 Signs attached to buildings

- a. The height above ground level at the highest point of any sign attached to a building is 4m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs attached to a building must:
  - i. not exceed one sign per 30m of road frontage;
  - ii. have a maximum area per display face of 2m<sup>2</sup>;
  - iii. have a maximum of two display faces per sign;
  - iv. where attached to the façade of a building, must not project more than 1m from the façade to which it is attached; and
  - v. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah

fascia, whichever is greater.

#### **Note 27.6.8A - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy.
  - c. Dunedin City Council Roadway Bylaw.
  - d. Dunedin City Council Traffic and Parking Bylaw.

#### **27.6.9 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

#### **27.6.10 Setback from scheduled tree**

New buildings and structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2.

#### **27.6.11 Amenity planting area**

1. The Amenity Planting Area shown on the Mercy Hospital Development Plan must be maintained to provide visual screening from the neighbouring residential zone, including by replanting, if required, to maintain a similar level of screening (as was present on 26.9.15) and limiting vegetation clearance to:
  - a. the pruning of any tree for the maintenance of its health;
  - b. the clearance of any defined pest species, dead vegetation, vegetation that is in terminal decline or vegetation with extreme failure;
  - c. the clearance of vegetation for the construction, maintenance or alteration of fences, gates, drainage, utilities or access; and
  - d. the clearance of vegetation for the safety of persons or property.
2. Activities that contravene Rule 27.6.11 are a discretionary activity.

## **Rule 27.7 Subdivision Performance Standards**

1. For the subdivision of land outside of the **urban biodiversity mapped area**, subdivision activities must comply with performance standards for the General Residential 1 Zone in Rule 15.7.
2. For the subdivision of land within the **urban biodiversity mapped area**, subdivision activities must comply with performance standards for the Recreation Zone in Rule 20.7.

## **Rule 27.8 Assessment of Controlled Activities**

### **Rule 27.8.1 Introduction**

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 27.8.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 27.9; and
    - iv. the matters of control become matters of discretion and will be assessed as indicated in this section.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 27.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 27.12; and
    - iii. the assessment guidance in this section will also be considered.

### 27.8.2 Assessment of all controlled activities

Development activity	Matters of control	Guidance on the assessment of the resource consents
1. Affecting a scheduled heritage building or a scheduled heritage structure: <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected.</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)</li> </ul>	a. Effects on heritage values	See Rule 13.4

## Rule 27.9 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### Rule 27.9.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 27.9.2 - 27.9.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 27.9.2 - 27.9.5 apply as follows:
  - a. Rule 27.9.2 applies to all performance standard contraventions;
  - b. Rule 27.9.3 applies to land use performance standard contraventions;
  - c. Rule 27.9.4 applies to development performance standard contraventions; and
  - d. Rule 27.9.5 applies to subdivision performance standard contraventions.

27.9.2 Assessment of all performance standard contraventions	
Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards or site specific factors, make meeting the standard impracticable.</li> <li>c. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>e. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> <li>f. In balancing consideration of the objectives and policies related to the maintenance of heritage values and those related to general amenity, greater weight will usually be placed on heritage policies.</li> </ol>

### 27.9.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Location (ancillary commercial activities)	<p>a. Effects on the vibrancy, and economic and social success of the CBD and centres</p> <p>b. Effects on neighbourhood amenity</p>	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 27.2.2</p> <p>ii. Ancillary commercial activities are designed, located and operated to primarily serve staff, patients and visitors to Mercy Hospital (Policy 27.2.2.6).</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>iii. The location of customer access is unlikely to attract external customers and become a stand-alone activity.</p>
3. Minimum mobility car parking	<p>a. Effects on the safety and efficiency of the transport network</p> <p>b. Effects on accessibility</p>	See Rule 6.10

### 27.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. Small scale buildings and structures: <ul style="list-style-type: none"> <li>• Boundary setbacks (Rules 27.6.3.1.d and e)</li> <li>• Height in relation to boundary (Rule 27.6.3.1.f)</li> <li>• Maximum height (Rule 27.6.3.1.b)</li> </ul>	<p>a. Effects on the amenity of surrounding sites</p> <p>b. Effects on neighbourhood amenity</p>	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 27.2.2</p> <p>ii. Buildings and structures are of a height, setback from boundaries, purpose and size that ensures there are no more than minor effects on the sunlight access and privacy of current and potential future residential buildings and their outdoor living spaces (Policy 27.2.2.1.b.i).</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>iii. Residential buildings on neighbouring sites receive adequate natural light and privacy.</p> <p><i>In assessing the application Council will consider:</i></p> <p>iv. Existing sunlight access to neighbouring properties.</p> <p>v. Cumulative effects from incremental development.</p> <p><i>Relevant objectives and policies:</i></p> <p>i. Objective 27.2.2</p> <p>ii. Buildings and structures are of a height, and setback from boundaries, purpose and size that ensures any adverse effects on neighbouring amenity are avoided or, if avoidance is not practicable, are no more than minor (Policy 27.2.2.1.b.ii).</p>

### 27.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
2.	Screening of parking areas	a. Effects on neighbourhood residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 27.2.2</li> <li>ii. Landscaping of the boundary of parking areas adjacent to a road frontage screens or softens these areas and ensure a high standard of visual amenity where viewed from the road (Policy 27.2.2.3).</li> </ul>
3.	Fence height and design	a. Effects on health and safety	See Rule 9.5
		b. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 27.2.2</li> <li>ii. Fences on road boundaries are of a height and design that contributes positively to the neighbourhood amenity (Policy 27.2.2.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The increased height or reduced visual permeability is necessary to meet protection requirements, to provide security, minimise noise effects from a busy road or activity, or for public well-being.</li> <li>iv. An attractive interface with the street is achieved.</li> <li>v. The fence will be screened by landscaping.</li> </ul>
4.	Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
5.	Location and screening of service areas	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 27.2.2</li> <li>ii. Development maintains or enhances neighbourhood amenity by ensuring service areas are not visible from ground level outside the site (Policy 27.2.2.2).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Screening would unduly restrict the usability of the service area.</li> <li>iv. The site layout prevents the service area from being visible from any public place without additional screening being required.</li> </ul>

#### 27.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
6.	Affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> <ul style="list-style-type: none"> <li>Materials and design</li> </ul>	a. Effects on heritage values	See Rule 13.5
7.	Number, location and design of ancillary signs	a. Effects on neighbourhood amenity	<i>Relevant objectives and policies:</i> i. Objective 27.2.2 ii. Ancillary signs visible from outside the zone are located and designed to maintain streetscape amenity (Policy 27.2.2.5).
		b. Effects on the safety and efficiency of the transport network	See Rule 6.10
8.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
9.	Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6
10.	In an <b>urban biodiversity mapped area:</b> <ul style="list-style-type: none"> <li>Maximum area of vegetation clearance (UBMA)</li> </ul>	a. Effects on biodiversity values	See Rule 10.5

#### 27.9.5 Assessment of subdivision performance standard contraventions

Performance standard		Guidance on the assessment of resource consents
1.	Subdivision performance standards	See Rule 15.10

## **Rule 27.10 Assessment of Restricted Discretionary Activities**

### **Rule 27.10.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 27.10.2 - 27.10.3:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 27.10.2 - 27.10.3 apply as follows:
  - a. Rule 27.10.2 applies to restricted discretionary activities; and
  - b. Rule 27.10.3 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 27.9; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 27.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 27.12; and
    - iii. the assessment guidance in this section will also be considered.

### 27.10.2 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. Activities affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> : <ul style="list-style-type: none"> <li>Additions and alterations that affects a protected part of a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b></li> <li>Removal for relocation</li> </ul>	a. Effects on heritage values	See Rule 13.6
2. High trip generators: <ul style="list-style-type: none"> <li>New or additions to parking areas that result in 50 or more new parking spaces</li> </ul>	a. Effects on the safety and efficiency of the transport network b. Effects on accessibility	See Rule 6.11

### 27.10.3 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All subdivision activities	a. Effects on the efficient and effective operation of Mercy Hospital	<i>Relevant objectives and policies:</i> <ul style="list-style-type: none"> <li>Objective 2.3.1</li> <li>Objective 27.2.1</li> <li>Subdivision activities do not adversely affect the efficient and effective operation of Mercy Hospital (Policy 27.2.1.5.b).</li> </ul>
	See Rule 15.11	

## **Rule 27.11 Assessment of Discretionary Activities**

### **Rule 27.11.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 27.11.2 - 27.11.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 27.11.2 - 27.11.3 apply as follows:
  - a. Rule 27.11.2 applies to discretionary activities; and
  - b. Rule 27.11.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 27.11.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
<p>1. All discretionary land use activities listed below:</p> <ul style="list-style-type: none"> <li>• all activities in the community activities category except conservation and community and leisure - small scale</li> <li>• all activities in the residential activities category</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 2.3.1</li> <li>b. Objective 27.2.1</li> <li>c. Activities that are ancillary to hospital activity are designed and operated in line with Objective 27.2.2 and its policies (Policy 27.2.1.2).</li> <li>d. Activities that are not ancillary to hospital activity:               <ol style="list-style-type: none"> <li>i. are related to or support Mercy Hospital, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Mercy Hospital;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 27.2.2 and its policies (Policy 27.2.1.3).</li> </ol> </li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>e. For discretionary land use activities, whether any associated development activities meet relevant development performance standards, or are otherwise consistent with relevant objectives and policies for development.</li> <li>f. All relevant land use performance standards are met, including noise and light spill standards.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>g. In assessing the significance of effects, consideration will be given to:               <ol style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ol> </li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>h. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>j. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ol>

### 27.11.3 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1. Small scale buildings and structures:</p> <ul style="list-style-type: none"> <li>• Footprint greater than 40m<sup>2</sup> (Rule 27.6.3.1.a)</li> <li>• Used for clinical services (Rule 27.6.3.1.c)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 27.2.2</li> <li>b. Buildings and structures are of a height, set back from buildings, purpose and size that ensures:               <ol style="list-style-type: none"> <li>i. there are no more than minor effects on the sunlight access and privacy of current and potential future residential buildings and their outdoor living spaces; and</li> <li>ii. any adverse effects on neighbourhood amenity are avoided or, if avoidance is not practicable, are no more than minor (Policy 27.2.2.1).</li> </ol> </li> <li>c. NA</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>d. In considering the effects on the amenity of surrounding properties, Council will consider the following effects:               <ol style="list-style-type: none"> <li>i. the visual effects of buildings and car parks;</li> <li>ii. loss of existing vegetation;</li> <li>iii. any proposed lighting and signage; and</li> <li>iv. any cumulative effects.</li> </ol> </li> </ol>
<p>2. Amenity planting area</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 27.2.2</li> <li>b. Maintain the amenity planting area on the Mercy Hospital Development Plan, unless any changes to the amenity planting area have no more than minor effects on the visual amenity from surrounding residential sites and areas (Policy 27.2.2.7).</li> </ol>
<p>3. Noise - where the limit is exceeded by less than 5dB LAeq (15min)</p>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ol>

## **Rule 27.12 Assessment of Non-complying Activities**

### **Rule 27.12.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 27.12.2 - 27.12.4 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 27.12.2 - 27.12.4 apply as follows:
  - a. Rule 27.12.2 applies to assessment of non-complying land use activities.
  - b. Rule 27.12.3 applies to assessment of non-complying development activities.
  - c. Rule 27.12.4 applies to assessment of non-complying subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

## 27.12.2 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying land use activities</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.3.1</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 27.2.1</li> <li>e. Activities that are not ancillary to hospital activity: <ul style="list-style-type: none"> <li>i. are related to, or support, Mercy Hospital, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Mercy Hospital;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. they are designed and operated in line with Objective 27.2.2 and its policies (Policy 27.2.1.3).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>f. In assessing the significance of effects consideration will be given to: <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> <li>g. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>h. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>j. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>
<p>2. Commercial advertising</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Policy 2.4.1.6.c</li> </ul>

### 27.12.3 Assessment of non-complying development activities

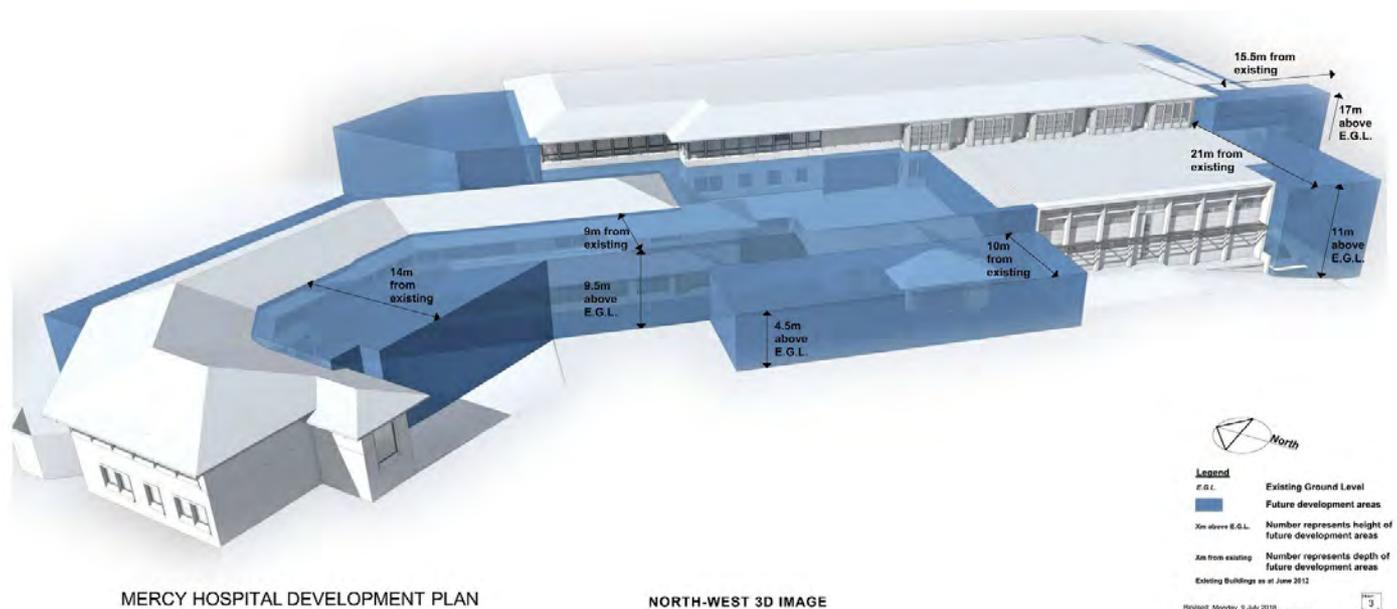

Activity	Guidance on the assessment of resource consents
1. Demolition of a protected part of a scheduled heritage building or scheduled heritage structures	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1 and effects related to heritage values.</p>

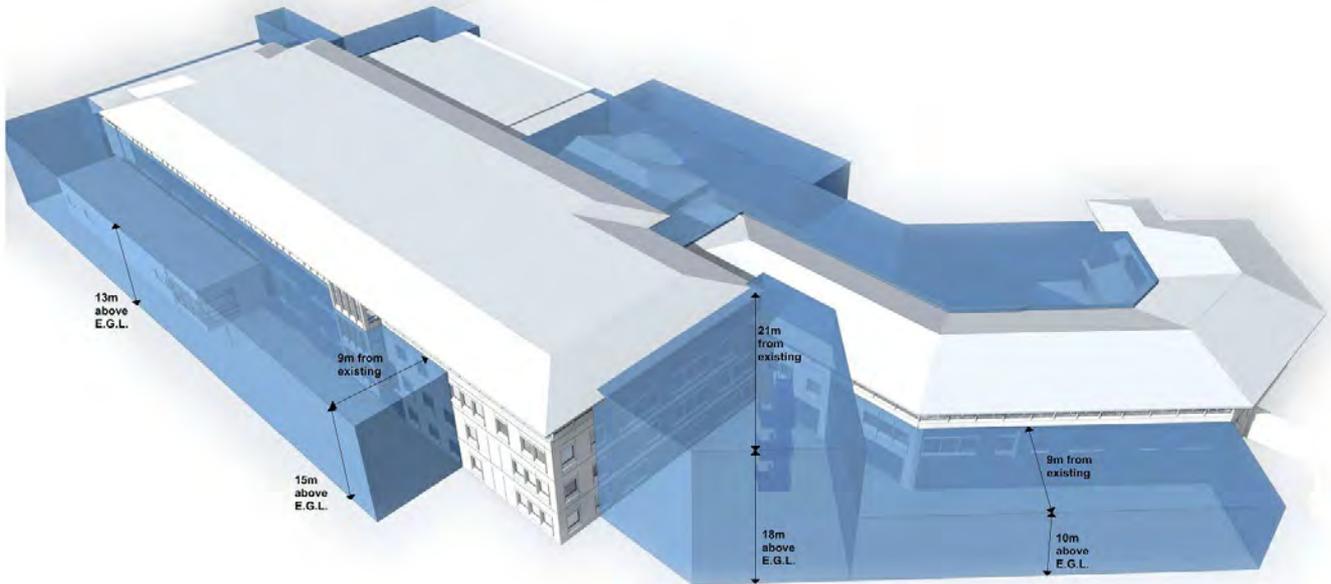

### 27.12.4 Assessment of non-complying subdivision activities

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p> <p><b>{Note - appeal relates to the hazardous substances performance standard only}</b></p>

## **28. Moana Pool**

### **28.1 Introduction**

Moana Pool sits within the Town Belt, just below Dunedin's hill suburbs, at 60 Littlebourne Road. The pool is owned and operated by the Dunedin City Council and has occupied the site since 1964. It provides a range of recreation facilities, including an Olympic sized pool, a leisure pool, learner's pool, dive/lap pool, water slides, a gymnasium and various function and meeting rooms. There are massage and physiotherapy facilities on-site, as well as an early childhood centre. Expansion of the facility may occur within the next 10 years.

The site is bordered by land zoned recreation and residential. While the facility itself is considerably larger than surrounding properties, it backs onto a steep bush clad area and is an accepted part of the local environment. There is a high level of amenity in the area given its location within the Town Belt, and parts of the site are densely vegetated.

The zone recognises the existing uses of the Moana Pool site and provides certainty to the community regarding what land use activities can be expected to occur on the site, while appropriately managing any adverse effects that may occur, including effects on the Town Belt, residential zones and transport network.

## 28.2 Objectives and Policies

<b>Objective 28.2.1</b>	
Moana Pool is able to operate efficiently and effectively	
Policy 28.2.1.1	Enable major recreation facility activity in the Moana Pool Zone.
Policy 28.2.1.2	Provide for activities that are ancillary to major recreation facility activity where they are designed and operated in line with Objective 28.2.2 and its policies.
Policy 28.2.1.3	Only allow activities that are not ancillary to major recreation facility activity where all of the following apply: <ul style="list-style-type: none"> <li>a. the activities are related to or support Moana Pool, or have other operational requirements that mean they need to locate in the zone;</li> <li>b. they will support the efficient and effective operation of Moana Pool;</li> <li>c. they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>d. they are designed and operated in line with Objective 28.2.2 and its policies.</li> </ul>
Policy 28.2.1.4	Enable land that is surplus to the needs of Moana Pool to transition to the Recreation Zone, so that future development will be managed in accordance with the objectives and policies of that zone.
Policy 28.2.1.5	Only allow subdivision activities where: <ul style="list-style-type: none"> <li>a. they are in accordance with the provisions of the Recreation Zone; and</li> <li>b. the subdivision does not adversely affect the efficient and effective operation of Moana Pool.</li> </ul>

### Objective 28.2.2

Land use activities and development necessary for Moana Pool to meet the reasonably foreseeable needs of the community is enabled, while ensuring development:

- a. achieves a good standard of on-site amenity for staff and visitors; and
- b. maintains or enhances the residential amenity of surrounding sites as far as practicable.

Policy 28.2.2.1	Require buildings and structures to be of a height and setback from boundaries that ensures there are no more than minor effects on the sunlight access of current and future residential buildings and their outdoor living spaces.
Policy 28.2.2.2	Require development to maintain or enhance neighbourhood amenity by ensuring service areas are not visible from ground level outside the site.
Policy 28.2.2.3	Require landscaping that provides a reasonable level of streetscape amenity along the boundary of parking areas.
Policy 28.2.2.4	Require fences on road boundaries to be of a height and design that contributes positively to neighbourhood amenity.
Policy 28.2.2.5	Require ancillary signs visible from outside the zone to be located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose.
Policy 28.2.2.6	Require ancillary commercial activities to be designed, located and operated to primarily serve staff and visitors of Moana Pool.
Policy 28.2.2.7	Only allow early childhood education - large scale where it is designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties.

## Rules

### Rule 28.3 Activity Status

#### 28.3.1 Rule location

The activity status tables in rules 28.3.3 to 28.3.5 specify the activity status of land use activities, development activities, and subdivision activities in the Moana Pool Zone, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 28.3.2 Activity status introduction

1. The activity status tables in rules 28.3.3 - 28.3.5 show the activity status of activities in the Moana Pool Zone, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Performance Standards*

7. Performance standards are listed in the far right column of the activity status tables.
8. Performance standards apply to permitted, controlled, and restricted discretionary activities.
9. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
10. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

## Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity

### 28.3.3 Activity status table - land use activities

1.	Performance standards that apply to all land use activities		a. NA b. Light spill c. Noise
Major facility activities		Activity status	Performance standards
2.	Major recreation facility	P	a. Minimum mobility car parking
3.	All other activities in the major facility activities category	NC	
Community activities		Activity status	Performance standards
4.	Early childhood education - small scale	P	
5.	Early childhood education - large scale	RD	
6.	All other activities in the community activities category	P	
Commercial activities		Activity status	Performance standards
7.	Activities ancillary to major recreation facility	P	a. Location
8.	All other activities in the commercial activities category	NC	
Residential activities		Activity status	Performance standards
9.	All activities in the residential activities category	NC	
Industrial activities		Activity status	Performance standards
10.	All activities in the industrial activities category	NC	
Rural activities		Activity status	Performance standards
11.	All activities in the rural activities category	NC	

#### Note 28.3.3X- Other requirements outside of the District Plan

- Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television

reception.

### 28.3.4 Activity status table - development activities

1.	Performance standards that apply to all development activities		a. Maximum building site coverage and impermeable surfaces
Buildings and structures activities		Activity status	Performance standards
2.	Fences	P	a. Fence height and design
3.	All other buildings and structures activities	P	a. Boundary setbacks b. Height in relation to boundary c. Maximum height d. Number, location and design of ancillary signs
Site development activities		Activity status	Performance standards
4.	Service areas	P	a. Location and screening of service areas
5.	Parking, loading and access	P	a. Parking, loading and access standards b. Boundary treatments and other landscaping
6.	New, or additions to, parking areas that result in 50 or more new parking spaces.	RD	a. Boundary treatments and other landscaping b. Parking, loading and access standards
7.	Storage and use of hazardous substances	P	a. Hazardous substances quantity limits and storage requirements
8.	Vegetation clearance	P	a. Maximum area of vegetation clearance (UBMA)
9.	All other site development activities	P	

### Note 28.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.

### 28.3.5 Activity status table - subdivision activities

Subdivision activities		Activity status	Performance standards
1.	Subdivision activities	RD	a. Subdivision performance standards

### Note 28.3.5A - Other RMA considerations

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

### 28.3.6 Transition to Recreation Zone

On receipt of written notice from both the landowner and operator of Moana Pool (if different) to Dunedin City Council confirming that all or part of the land within the Moana Pool Zone is surplus to requirements, the provisions of the Moana Pool Zone will no longer apply to that parcel of land and the provisions of the Recreation Zone will apply in full.

## **Rule 28.4 Notification**

1. Activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 28.5 Land Use Performance Standards**

### **28.5.2 Light Spill**

Land use activities must comply with Rule 9.3.5.

### **28.5.3 Location**

1. For ancillary commercial activities, customer access must only be available from inside the Moana Pool buildings.
2. Activities that contravene this performance standard are restricted discretionary activities.

### **28.5.4 Minimum Mobility Car Parking**

1. Major recreation facility activity must provide a minimum of four mobility parking spaces.
2. NA.
3. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 28.5.4A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### **28.5.5 Noise**

Land use activities must comply with Rule 9.3.6.

## Rule 28.6 Development Performance Standards

### 28.6.1 Boundary Setbacks

1. New buildings and structures, and additions and alterations, must be set back from boundaries as follows:

Building		Setback from road boundary or site boundary where site directly adjoins another zone
a.	Buildings not exceeding 12m in height or 250m <sup>2</sup> gross floor area	4.5m
b.	Other buildings	10m

- c. Fences and ancillary signs are exempt from the performance standard.
  - d. Public entrances to buildings must be located at least 10m from a boundary with the residential zone.
2. Activities that contravene this performance standard are restricted discretionary activities.

### 28.6.2 Boundary Treatments and Other Landscaping

1. Where a parking area is built within 5m of a road frontage, a landscaping area with a minimum 1.5m width must be provided along the full length of the road frontage (except for where vehicle access is provided).
2. Landscaping areas must:
  - a. be planted with a mix of trees and shrubs and/or ground cover plants that achieves a total coverage of the ground area in planting (when mature), except for 10% of the area, which may be used for pedestrian paths;
  - b. have an average of one tree for every 5m of frontage;
  - c. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - d. be designed to allow surface water run-off from surrounding areas to enter;
  - e. be protected by a physical barrier that prevents cars from damaging plants;
  - f. for required trees, use trees that are at least 1.5m high at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting;
  - g. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and
  - h. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.
3. Any road boundary fences provided must be placed on the property side of any road frontage landscaping required by this rule.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **28.6.3 Fence Height and Design**

#### 28.6.3.1 Maximum Height

- a. The maximum height of fences along boundaries (including within the boundary setbacks required by Rule 28.6.1) is 2m.
- b. For the purposes of calculating maximum height, where a fence is erected atop a retaining wall, the height will be calculated as the combined height measured from ground level to the top of the fence.
- c. Fences that contravene this performance standard are restricted discretionary activities.

#### 28.6.3.2 Visual Permeability

- a. Fences along road boundaries (or within the boundary setbacks required by Rule 28.6.1) must be constructed to a length and/or height that maintains visual permeability for 50% of the length of the boundary measured at a height of 1.4m above ground level (see Figure 15.6.2.2A).
- b. Fences along the road boundary of a state highway are exempt from this requirement.
- c. Fences that contravene this performance standard are restricted discretionary activities.

### **28.6.4 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **28.6.5 Height**

#### 28.6.5.1 Height in Relation to Boundary

- a. New buildings and additions and alterations to buildings on sites adjoining a residential zone must comply with the height in relation to boundary performance standard of that residential zone, along the adjoining boundary (see Rule 15.6.6.1).

#### 28.6.5.2 Maximum height

- a. The maximum height of new buildings and structures, and additions and alterations, must not exceed the following heights above ground level:
  - i. Western side Queens Drive/Littlebourne Road: 18m;
  - ii. Eastern side Queens Drive/Littlebourne Road: 12m;
  - iii. Rooftop structures are exempt from the performance standard for maximum height, provided they do not exceed the maximum height limit by more than one third of that limit or 5m, whichever is the lesser.
- b. Activities that contravene this performance standard are restricted discretionary activities.

### **28.6.6 Location and Screening of Service Areas**

1. Service areas must be located or screened so that they are not visible at ground level from adjacent: residential activities, residential zoned properties, or public places.
2. Service areas must not encroach into required parking, loading or manoeuvring areas.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **28.6.7 Maximum Building Site Coverage and Impermeable Surfaces**

1. The maximum building site coverage of buildings (% of site) is 40%; and
2. The maximum total impermeable surface site coverage (buildings and impermeable surfaces % of site) is 70%.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **28.6.8 Number, Location and Design of Ancillary Signs**

#### 28.6.8.1 General

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are not visible from outside the Moana Pool Zone;
  - ii. regulatory signs, warning signs, or directional signs; and
  - iii. building names (excluding commercial sponsorship names).
- b. Signs related to ancillary retail and ancillary restaurants must not be visible outside the Moana Pool Zone.
- c. Signs located on or above the footpath must comply with Rule 6.7.2.
- d. Signs must comply with Rule 6.7.3 where visible from a road.
- e. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### 28.6.8.2 Signs attached to buildings

- a. The height, above ground level, at the highest point of any sign, attached to a building is 4m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs attached to a building must:
  - i. not exceed one sign per 15m of road frontage;
  - ii. have a maximum area per display face of 2m<sup>2</sup>;
  - iii. have a maximum of two display faces per sign;
  - iv. where attached to the façade of a building, must not project more than 1m from the façade to which it is attached; and
  - v. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.

#### 28.6.8.3 Freestanding signs

- a. The maximum number of freestanding signs is two per 50m of frontage.
- b. The maximum dimensions of freestanding signs are:
  - i. maximum height of 3m;

- ii. maximum area of 4m<sup>2</sup>;
  - iii. maximum width of 2m; and
  - iv. maximum depth of 400mm.
- c. Freestanding signs must:
- i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.
- d. Freestanding signs must not exceed:
- i. maximum height of 900mm above ground level; and
  - ii. a maximum width of 600mm.

**Note 28.6.8B - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy.
  - c. Dunedin City Council Roadway Bylaw.
  - d. Dunedin City Council Traffic and Parking Bylaw.

**28.6.9 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

**28.6.10 Maximum Area of Vegetation Clearance (UBMA)**

Vegetation clearance in an **urban biodiversity mapped area** (UBMA) must comply with Rule 10.3.2.4.

## **Rule 28.7 Subdivision Performance Standards**

Subdivision activities must comply with Rule 20.7.

## **Rule 28.8 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 28.8.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 28.8.2 - 28.8.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 28.8.2 - 28.8.5 apply as follows:
  - a. Rule 28.8.2 applies to all performance standard contraventions;
  - b. Rule 28.8.3 applies to land use performance standard contraventions;
  - c. Rule 28.8.4 applies to development performance standard contraventions; and
  - d. Rule 28.8.5 applies to subdivision performance standard contraventions.

### 28.8.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of the resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards, or site specific factors, make meeting the standard impracticable.</li> <li>c. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>e. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> </ul>

### 28.8.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Location	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 28.2.2</li> <li>ii. Ancillary commercial activities are designed, located and operated to primarily serve staff and visitors of Moana Pool (Policy 28.2.2.6).</li> </ul>
3. Minimum mobility car parking	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
	b. Effects on accessibility	See Rule 6.10

#### 28.8.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>Boundary setbacks</li> <li>Height in relation to boundary</li> <li>Maximum height</li> </ul>	a. Effects on surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 28.2.2</li> <li>ii. Building and structures are of a height and set back from boundaries to ensure that there are no more than minor effects on sunlight access of current and future residential buildings and their outdoor living spaces (Policy 28.2.2.1).</li> </ul>
2. Boundary treatments and other landscaping	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 28.2.2</li> <li>ii. Landscaping provides a reasonable level of streetscape amenity along the boundary of parking areas (Policy 28.2.2.3).</li> </ul>
3. Fence height and design	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 28.2.2</li> <li>ii. Fences on road boundaries are of a height and design that contribute positively to neighbourhood amenity (Policy 28.2.2.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The increased height or reduced visual permeability is necessary to meet protection requirements, to provide security, minimise noise effects from a busy road or activity, or for public well-being.</li> <li>iv. An attractive interface with the street is achieved.</li> <li>v. The fence will be screened by landscaping.</li> </ul>
	b. Effects on health and safety	See Rule 9.5
4. Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
5. Location and screening of service areas	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 28.2.2</li> <li>ii. Development maintains or enhances neighbourhood amenity by ensuring service areas are not visible from ground level outside the site (Policy 28.2.2.2).</li> </ul>
6. Maximum building site coverage and impermeable surfaces	a. Effects on efficiency and affordability of infrastructure	See Rule 9.5

#### 28.8.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
7.	Number, location and design of ancillary signs	a. Effects on neighbourhood amenity	<i>Relevant objectives and policies:</i> i. Objective 28.2.2 ii. Ancillary signs visible from outside the zone are located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose (Policy 28.2.2.5).
		b. Effects on the safety and efficiency of the transport network	See Rule 6.10
8.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
9.	In an <b>urban biodiversity mapped area:</b> • Maximum area of vegetation clearance (UBMA)	a. Effects on biodiversity values	See Rule 10.5

#### 28.8.5 Assessment of subdivision performance standard contraventions

Performance standard		Guidance on the assessment of resource consents
1.	Subdivision performance standards	See Rule 20.9

## **Rule 28.9 Assessment of Restricted Discretionary Activities**

### **Rule 28.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 28.9.2 - 28.9.4:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 28.9.2 - 28.9.4 apply as follows:
  - a. Rule 28.9.2 applies to restricted discretionary land use activities;
  - b. Rule 28.9.3 applies to restricted discretionary development activities; and
  - c. Rule 28.9.4 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 28.8; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 28.10; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 28.11; and
    - iii. the assessment guidance in this section will also be considered.

### 28.9.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All high trip generators, which include: <ul style="list-style-type: none"> <li>any activities that generate 250 or more vehicle movements a day</li> </ul>	a. Effects on accessibility	See Rule 6.11
	b. Effects on the safety and efficiency of the transport network	
2. Early childhood education - large scale	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
	b. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 28.2.2</li> <li>ii. Early childhood education - large scale is designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 28.2.2.7).</li> </ul>

### 28.9.3 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. High trip generators: <ul style="list-style-type: none"> <li>New, or additions to, parking areas that result in 50 or more new parking spaces</li> </ul>	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
	b. Effects on accessibility	

### 28.9.4 Assessment of restricted subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All subdivision activities	a. Effects on efficient and effective operation of Moana Pool	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 28.2.1, 2.3.1</li> <li>ii. Subdivision does not adversely affect the efficient and effective operation of Moana Pool (Policy 28.2.1.5.b).</li> </ul>
	See Rule 20.10	

## Rule 28.10 Assessment of Discretionary Activities

### Rule 28.10.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 28.10.2 provides guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 28.10.2 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ol>

## **Rule 28.11 Assessment of Non-complying Activities**

### **Rule 28.11.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 28.11.2 - 28.11.3 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 28.11.2 - 28.11.3 apply as follows:
  - a. Rule 28.11.2 applies to non-complying land use activities; and
  - b. Rule 28.11.3 applies to non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 28.11.2 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying land use activities</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.3.1, 2.3.3</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 28.2.1</li> <li>e. Activities that are not ancillary to a major recreation facility: <ul style="list-style-type: none"> <li>i. are related to or support Moana Pool, or have other operation requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Moana Pool;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 28.2.2 and its policies. (Policy 28.2.1.3)</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>f. In assessing the significance of effects consideration will be given to: <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> <li>g. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>h. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>j. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>
<p>2. Commercial advertising</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Policy 2.4.1.6.c</li> </ul>

### 28.11.3 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1.</p> <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p> <p><b>{Note - appeal relates to the hazardous substances performance standard only}</b></p>

## **29. Otago Museum**

### **29.1 Introduction**

Otago Museum first opened to the public in 1868 in the Exchange area south of the Octagon, and mainly displayed a collection of rocks and minerals as its foundation objects. The collection began to grow, and a larger, purpose-built site was needed. The site at the existing address – 419 Great King Street – was selected, with the foundation laid in December 1874. In August of 1877 the new building, designed by architect David Ross, was opened. The Otago Museum H D Skinner Annex (situated on the corner of the Museum Reserve) was opened in July 1879 and operated as the Dunedin North Post Office until the 1960s. It is now part of the Museum.

The management of the Museum was handed wholly to the University through the Otago Museum Act 1877 and was to remain vested in the University for almost 80 years, becoming a teaching museum and housing various University departments. Otago Museum is now managed by a Trust Board, established under the Otago Museum Trust Board Act 1996. The appointing bodies are the Dunedin City Council; the combined District Councils of Central Otago, Clutha and Waitaki; the University of Otago; the Association of Friends of the Otago Museum; the Otago Institute; and Manawhenua (the local Māori community).

The Museum comprises seven galleries, containing exhibits on Tākata Whenua, southern land and people, Otago natural and maritime history and cultures of the Pacific and wider world. The Animal Attic features nearly 3,000 historical specimens, and also within the Museum is the Tūhura Tropical Forest which contains live butterflies and the interactive Tūhura Otago Community Trust Science Centre .

The site was zoned industrial in The Dunedin City District Plan (2006). Therefore, the key issue was that the zoning was neither efficient nor effective in terms of providing for the facility, enabling it to be further developed or redeveloped in the future, or in terms of managing its effects.

In response to this issue, this Plan applies an 'Otago Museum Zone' to the site. The Otago Museum Zone is tailored to provide for the continued efficient and effective operation of the Museum, while ensuring a reasonable level of amenity for surrounding streets and the Otago Museum Reserve. Entertainment and exhibition, conference, meeting and function, training and education and a range of community activities are provided for in the zone, and the Great King Street façade of the Museum and Dunedin North Post Office (former) are listed as scheduled heritage buildings.

The zone recognises the existing and foreseeable future uses of the Museum and provides certainty to the community regarding what land use activities can be expected to occur, while managing potential effects and ensuring compatibility with surrounding environments. The Otago Museum Zone is surrounded by Campus and Suburban Centre zones.

## 29.2 Objectives and Policies

<b>Objective 29.2.1</b>	
Otago Museum is able to operate efficiently and effectively.	
Policy 29.2.1.1	Enable entertainment and exhibition activities in the Otago Museum Zone.
Policy 29.2.1.2	Provide for conference, meeting and function, training and education and community activities where they are designed and operated in line with Objective 29.2.2 and its policies.
Policy 29.2.1.3	Only allow activities which are not provided for, where the following apply: <ul style="list-style-type: none"> <li>a. the activities are related to or necessary to support the Otago Museum, or have other operational requirements which mean they need to locate within the zone;</li> <li>b. they will support the efficient and effective operation of Otago Museum;</li> <li>c. they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>d. they are designed and operated in line with Objective 29.2.2 and its policies.</li> </ul>
Policy 29.2.1.4	Enable land that is surplus to the needs of the Otago Museum to transition to the Campus Zone, so that future development that is not related to the Otago Museum will be managed in accordance with the objectives and policies of this zone.
Policy 29.2.1.5	Only allow subdivision activities where: <ul style="list-style-type: none"> <li>a. they are in accordance with the provisions of the Campus Zone; and</li> <li>b. the subdivision does not adversely affect the efficient and effective operation of Otago Museum.</li> </ul>

### Objective 29.2.2

Land use activities and development necessary for the continued operation of Otago Museum is enabled, while ensuring it achieves a reasonable level of amenity for surrounding streets and the Otago Museum Reserve.

Policy 29.2.2.1	Require buildings and structures to be of a height that: <ul style="list-style-type: none"> <li>a. maintains adequate sunlight access to the adjoining Otago Museum Reserve; and</li> <li>b. avoids significant adverse wind effects.</li> </ul>
Policy 29.2.2.2	Require outdoor storage areas to be located or screened so they are not visible from ground level of a public place.
Policy 29.2.2.3	Require ancillary signs visible from outside the zone to be located and designed to maintain the amenity of surrounding streets and the Otago Museum Reserve, including by being of an appropriate size and number to convey information to passing pedestrians and motorists, and not being too oversized or numerous for that purpose.
Policy 29.2.2.4	Require landscaping that provides a reasonable level of streetscape amenity along the boundary of parking areas.
Policy 29.2.2.5	Only allow buildings between 25m - 40m in height where adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, are minimised as far as practicable through the use of quality and contextually appropriate architectural design.
Policy 29.2.2.6	Only allow buildings over 40m in height where: <ul style="list-style-type: none"> <li>a. the height is essential to the operation of Otago Museum; and</li> <li>b. the height exceedance is minimal.</li> </ul>

## Rules

### Rule 29.3 Activity Status

#### 29.3.1 Rule location

The activity status tables in rules 29.3.3 to 29.3.5 specify the activity status of land use activities, development activities, and subdivision activities in the Otago Museum Zone, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 29.3.2 Activity status introduction

1. The activity status tables in rules 29.3.3 - 29.3.5 show the activity status of activities in the Otago Museum Zone, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Performance Standards*

7. Performance standards are listed in the far right column of the activity status tables.
8. Performance standards apply to permitted, controlled, and restricted discretionary activities.
9. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
10. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

## Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity

### 29.3.3 Activity status table - land use activities

1.	Performance standards that apply to all land use activities		<ul style="list-style-type: none"> <li>a. NA</li> <li>b. Light spill</li> <li>c. Noise</li> <li>d. Minimum mobility car parking</li> </ul>
Commercial activities		Activity status	Performance standards
2.	Entertainment and exhibition	P	
3.	Commercial advertising	NC	
4.	Conference, meeting and function	P	
5.	Training and education	P	
6.	Campus-affiliated office	P	
7.	All other activities in the commercial activities category	D	
Community activities		Activity status	Performance standards
8.	Community and leisure - small scale	P	
9.	Community and leisure - large scale	RD	
10.	Early childhood education - small scale	P	
11.	Early childhood education - large scale	RD	
12.	All other activities in the community activities category	P	
Major facility activities		Activity status	Performance standards
13.	All activities in the major facility activities category	NC	
Residential activities		Activity status	Performance standards
14.	All activities in the residential activities category	NC	
Industrial activities		Activity status	Performance standards
15.	All activities in the industrial activities category	NC	

Rural activities	Activity status	Performance standards
16. All activities in the rural activities category	NC	

### Note 29.3.3X- Other requirements outside of the District Plan

- Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

### 29.3.4 Activity status table - development activities

1.	Performance standards that apply to all development activities		a. Setback from scheduled tree b. Boundary treatments
2.	Performance standards that apply to all buildings and structures activities		a. Number, location and design of ancillary signs b. Maximum height
Buildings and structures activities (excluding activities affecting a protected part of a scheduled heritage building or scheduled heritage structure. See rows 4 - 11)		Activity status	Performance standards
3.	Buildings and structures activities	P	
Buildings and structures activities that affect a protected part of a scheduled heritage building or scheduled heritage structure		Activity status	Performance standards
4.	Repairs and maintenance	P	
5.	Restoration of a building or structure that has a Heritage New Zealand Category 1 listing as detailed in Appendix A1.1	C	
6.	Restoration of all other scheduled heritage buildings and structures	P	
7.	Earthquake strengthening where external features only are protected	C	a. Materials and design
8.	Signs attached to buildings or structures	P	
9.	All other additions and alterations	RD	
10.	Demolition	NC	
11.	Removal for relocation	RD	
Site development activities		Activity status	Performance standards
12.	Outdoor storage	P	a. Location and screening of outdoor storage
13.	Parking, loading and access	P	a. Parking, loading and access standards

14.	Storage and use of hazardous substances	P	a. Hazardous substances quantity limits and storage requirements
15.	All other site development activities	P	

**Note 29.3.4A - General advice**

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

**29.3.5 Activity status table - subdivision activities**

Subdivision activities		Activity status	Performance standards
1.	Subdivision activities	RD	a. Subdivision performance standards

**Note 29.3.5A - Other RMA considerations**

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

**29.3.6 Transition to Campus Zone**

On receipt of written notice from the landowner(s) of the Otago Museum Zone confirming that all or part of the land within the zone is surplus to requirements, the provisions of the Otago Museum Zone will no longer apply to that parcel of land and the provisions of the Campus Zone will apply in full.

## **Rule 29.4 Notification**

1. Applications for resource consent for the following activities will be considered without the need to obtain a written approval of affected persons and will not be notified in accordance with section 95A or 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:
  1. earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is not listed by Heritage New Zealand.
2. With respect to resource consent applications for the following activities, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:
  1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is listed by Heritage New Zealand.
3. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 29.5 Land Use Performance Standards**

### **29.5.2 Light Spill**

Land use activities must comply with Rule 9.3.5.

### **29.5.3 Minimum Mobility Car Parking**

1. Otago Museum must provide a minimum of one mobility parking space.
2. NA.
3. Parking spaces may be shared between land use activities (i.e. the same parking spaces may be used to fulfil the minimum mobility car parking requirement for more than one land use activity), as long as the hours of operation of the land use activities do not overlap.
4. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 29.5.3A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### **29.5.4 Noise**

Land use activities must comply with Rule 9.3.6.

## **Rule 29.6 Development Performance Standards**

### **29.6.1 Boundary Treatments and Other Landscaping**

1. Where a building is not built to the street frontage, a landscaping area with a minimum width of 1.5m, must be provided along the full length of any road frontage (except for where vehicle access is provided).
2. Landscaping areas must:
  - a. be planted with a mix of trees and shrubs and/or ground cover plants that achieves a total coverage of the ground area in planting (when mature), except for 10% of the area, which may be used for pedestrian paths;
  - b. have an average of one tree for every 5m of frontage;
  - c. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - d. be designed to allow surface water run-off from surrounding areas to enter;
  - e. be protected by a physical barrier that prevents cars from damaging plants;
  - f. for required trees, use trees that are at least 1.5m high at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting;
  - g. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and
  - h. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.
3. Any road boundary fences provided must be placed on the property side of any required road frontage landscaping required by this rule.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **29.6.2 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **29.6.3 Location and Screening of Outdoor Storage**

1. Service areas must be located or screened so that they are not visible at ground level from adjacent residential activities, residential zoned properties, or public places.
2. Outdoor storage, including service areas, must not encroach into required parking, loading or landscaping areas.
3. Materials stored outside must be stored in a way that prevents them contaminating any off-site area.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **29.6.4 Materials and Design**

Earthquake strengthening must comply with Rule 13.3.2.

### **29.6.5 Maximum Height**

1. The maximum height for new buildings and structures, and additions and alterations, must not exceed 25m above ground level.
2. Rooftop structures are exempt from the performance standard for maximum height, provided they do not exceed the maximum height limit by more than 5m.
3. Activities that contravene the performance standard for maximum height but are no greater than 40m in height are a restricted discretionary activity.
4. Activities that are over 40m in height are a discretionary activity.

### **29.6.6 Number, Location and Design of Ancillary Signs**

#### 29.6.6.1 General

- a. Signs visible from outside the Otago Museum Zone must comply with the following standards, except:
  - i. regulatory signs, warning signs, or directional signs.
- b. Signs located on or above the footpath must comply with Rule 6.7.2.
- c. Signs must comply with Rule 6.7.3 where visible from a road.
- d. Signs must not be illuminated or digital.
- e. Signs higher than 4m above ground level must only display the business name or major facility name.
- f. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### 29.6.6.2 Signs attached to buildings

- a. The height, above ground level, at the highest point of any sign, attached to a building is 8m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs attached flat against a building must:
  - i. not cumulatively exceed 15% of the total wall area (excluding windows) that face the road frontage, or 8m<sup>2</sup>, whichever is lesser; and
  - ii. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.
- e. if attached on the underside of a verandah or protruding from a building façade, must:
  - i. have a maximum area per display face of 2m<sup>2</sup>;
  - ii. where attached to the façade of a building, must not project more than 1.5m from the façade to which it is attached;
  - iii. have a maximum of two display faces per sign; and
  - iv. not exceed one sign per 15m of street frontage.

#### 29.6.6.3 Freestanding signs

- a. The maximum number of permanently fixed freestanding signs is two per site or 1 per 50m of street frontage, whichever is the lesser.
- b. The maximum number of portable freestanding signs is two per site or one per 50m of street frontage, whichever is the lesser.
- c. The maximum dimensions of freestanding signs are:
  - i. maximum height of 6m for permanently fixed freestanding signs;
  - ii. maximum height of 4m for portable freestanding signs;
  - iii. maximum area of 12m<sup>2</sup> per display face for permanently fixed freestanding signs;
  - iv. maximum area of 8m<sup>2</sup> per display face for portable freestanding signs;
  - v. maximum width of 2m; and
  - vi. maximum depth of 400mm.
- d. Portable freestanding signs must only be located in the Otago Museum Reserve and must not be located on the road reserve.
- e. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.

#### **Note 29.6.8B - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*
  - b. Dunedin City Council Commercial Use of Footpaths Policy.
  - c. Dunedin City Council Roadway Bylaw.
  - d. Dunedin City Council Traffic and Parking Bylaw.

#### **29.6.7 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

#### **29.6.8 Setback from Scheduled Tree**

New buildings and structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2.

## **Rule 29.7 Subdivision Performance Standards**

Subdivision activities must comply with Rule 34.7.

## **Rule 29.8 Assessment of Controlled Activities**

### **Rule 29.8.1 Introduction**

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 29.8.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 29.9; and
    - iv. the matters of control become matters of discretion and will be assessed as indicated in this section.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 29.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 29.12; and
    - iii. the assessment guidance in this section will also be considered.

### 29.8.2 Assessment of all controlled activities

Development activity	Matters of control	Guidance on the assessment of the resource consents
<p>1. Affecting a scheduled heritage building or a scheduled heritage structure:</p> <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected.</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.4</p>

## **Rule 29.9 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 29.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 29.9.2 - 29.9.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 29.9.2 - 29.9.5 apply as follows:
  - a. Rule 29.9.2 applies to all performance standard contraventions;
  - b. Rule 29.9.3 applies to land use performance standard contraventions;
  - c. Rule 29.9.4 applies to development performance standard contraventions; and
  - d. Rule 29.9.5 applies to subdivision performance standard contraventions.

### 29.9.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1. All performance standard contraventions</p>	<p><i>Relevant objectives and policies:</i></p> <p>a. Objective 29.2.1</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>b. The degree of non-compliance with the performance standard is minor.</p> <p>c. The need to meet other performance standards, or topography or other site specific factors, make meeting the standard impracticable.</p> <p>d. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</p> <p>e. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</p> <p><i>General assessment guidance:</i></p> <p>f. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</p> <p>g. In balancing consideration of the objectives and policies related to the maintenance of heritage values or heritage precinct streetscape character and those related to general amenity, greater weight will usually be placed on heritage policies.</p>

### 29.9.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Minimum mobility car parking	a. Effects on the safety and efficiency of the transport network b. Effects on accessibility	See Rule 6.10

### 29.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. Boundary treatments	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 29.2.2</li> <li>ii. Require landscaping that provides a reasonable level of streetscape amenity along the boundary of parking areas (Policy 29.2.2.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The landscaping will be effective in breaking up (softening) car parking areas when viewed from the street.</li> </ul>
2. Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
3. Location and screening of outdoor storage	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 29.2.2</li> <li>ii. Require outdoor storage areas, to be located or screened so they are not visible from ground level of a public place (Policy 29.2.2.2).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Screening would restrict accessibility by service vehicles or access to the service area for everyday use.</li> <li>iv. The site layout prevents the outdoor storage areas from being visible from any public place without additional screening being required.</li> </ul>
4. Affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> • Materials and design	a. Effects on heritage values	See Rule 13.5

### 29.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
5. Maximum height (no greater than 40m in height)	a. Effects on pedestrian amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 29.2.2</li> <li>ii. Buildings and structures are of a height that: <ul style="list-style-type: none"> <li>1. maintains adequate sunlight access to the adjoining Otago Museum Reserve; and</li> <li>2. avoids significant adverse wind effects (Policy 29.2.2.1).</li> </ul> </li> <li>iii. Buildings between 25m - 40m in height minimise, as far as practicable, adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, through the use of quality and contextually appropriate architectural design (Policy 29.2.2.5).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Sunlight admission to the footpath, street and Otago Museum Reserve is maintained</li> </ul>
6. Number, location and design of ancillary signs	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 29.2.2</li> <li>ii. Require ancillary signs visible from outside the zone to be located and designed to maintain the amenity of surrounding streets and the Otago Museum Reserve, including by being of an appropriate size and number to convey information to passing pedestrians and motorists, and not being too oversized or numerous for that purpose (Policy 29.2.2.3).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. An attractive streetscape is maintained.</li> <li>iv. The high amenity of the Otago Museum Reserve is maintained.</li> <li>v. The visual cohesion of the street is maintained by the increase in size or number of signs.</li> </ul>
	b. Effects on the safety and efficiency of the transport network	See Rule 6.10
7. Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
8. Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6

### 29.9.5 Assessment of subdivision performance standard contraventions

Performance standard		Guidance on the assessment of resource consents
1.	Subdivision performance standards	See Rule 34.9

## **Rule 29.10 Assessment of Restricted Discretionary Activities**

### **Rule 29.10.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 29.10.2 - 29.10.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 29.10.2 - 29.10.5 apply as follows:
  - a. Rule 29.10.2 applies to all restricted discretionary activities;
  - b. Rule 29.10.3 applies to restricted discretionary land use activities;
  - c. Rule 29.10.4 applies to restricted discretionary development activities; and
  - d. Rule 29.10.5 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 29.9; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 29.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 29.12; and
    - iii. the assessment guidance in this section will also be considered.

### 29.10.2 Assessment of all restricted discretionary activities

Activity	Guidance on the assessment of resource consents
1. All restricted discretionary activities	a. the degree of non-compliance with the performance standard is minor

### 29.10.3 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All high trip generators, which include: <ul style="list-style-type: none"> <li>any activities that generate 250 or more vehicle movements a day</li> </ul>	a. Effects on accessibility	See Rule 6.11
	b. Effects on the safety and efficiency of the transport network	
2. <ul style="list-style-type: none"> <li>Early childhood education - large scale</li> <li>Community and leisure - large scale</li> </ul>	a. Effects on the safety and efficiency of the transport network	See Rule 6.11

### 29.10.4 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. Activities affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> : <ul style="list-style-type: none"> <li>Additions and alterations that affect a protected part of a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b></li> <li>Removal for relocation</li> </ul>	a. Effects on heritage values	See Rule 13.6

### 29.10.5 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. Subdivision	a. Effects on the efficient and effective operation of Otago Museum	<i>Relevant objectives and policies:</i> <ul style="list-style-type: none"> <li>Objectives 29.2.1, 2.3.1</li> <li>Subdivision does not adversely affect the efficient and effective operation of Otago Museum (Policy 29.2.1.5.b).</li> </ul>
	See Rule 34.10	

## **Rule 29.11 Assessment of Discretionary Activities**

### **Rule 29.11.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 29.11.2 and 29.11.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 29.11.2 and 29.11.3 apply as follows:
  - a. Rule 29.11.2 applies to discretionary activities; and
  - b. Rule 29.11.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 29.11.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
<p>1. All discretionary land use activities which include:</p> <ul style="list-style-type: none"> <li>• Commercial activities (except conference, meeting and function, entertainment and exhibition, campus-affiliated office, commercial advertising and training and education)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objectives 2.3.1, 2.3.3</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 29.2.1</li> <li>e. Activities that are not provided for:               <ol style="list-style-type: none"> <li>i. are related to or necessary to support the Otago Museum, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Otago Museum;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 29.2.2 and its policies (Policy 29.2.1.3).</li> </ol> </li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>f. For discretionary land use activities, whether any associated development activities meet relevant development performance standards, or are otherwise consistent with relevant objectives and policies for development (see Rule 29.9 assessment of performance standard contraventions).</li> <li>g. All relevant land use performance standards are met, including noise and light spill standards.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>h. In assessing the significance of effects, consideration will be given to:               <ol style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ol> </li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>i. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>j. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>k. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ol>

### 29.11.3 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1.</p> <ul style="list-style-type: none"> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>
<p>2. Maximum height (buildings over 40m in height)</p>	<p><i>Relevant objectives and policies:</i></p> <p>a. Objective 29.2.2</p> <p>b. Buildings and structures are of a height that:</p> <ul style="list-style-type: none"> <li>i. maintains adequate sunlight access to the adjoining Otago Museum Reserve; and</li> <li>ii. avoids significant adverse wind effect (Policy 29.2.2.1).</li> </ul> <p>c. Only allow buildings over 40m in height where:</p> <ul style="list-style-type: none"> <li>i. the height is essential to the operation of Otago Museum; and</li> <li>ii. the height exceedance is minimal (Policy 29.2.2.6)</li> </ul> <p>Potential circumstances that may support a consent application include:</p> <p>d. Sunlight admission to the footpath, street and Otago Museum Reserve is maintained</p>

## **Rule 29.12 Assessment of Non-complying Activities**

### **Rule 29.12.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 29.12.2 and 29.12.3 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 29.12.2 and 29.12.3 apply as follows:
  - a. Rule 29.12.2 applies to non-complying activities; and
  - b. Rule 29.12.3 applies to non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 29.12.2 Assessment of non-complying activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying activities including but not limited to activities listed below</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.3.1, 2.3.3</li> <li>b. Objective 29.2.1</li> <li>c. Activities that are not provided for are only allowed where they:               <ul style="list-style-type: none"> <li>i. are related to or necessary to support the Otago Museum;</li> <li>ii. have other operational requirements which mean they need to locate within the zone;</li> <li>iii. will support the efficient and effective operation of Otago Museum;</li> <li>iv. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>v. are designed and operated in line with Objective 29.2.2 and its policies. (Policy 29.2.1.3).</li> </ul> </li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>d. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>e. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>f. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>
<p>2. Commercial advertising</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Policy 2.4.1.6.c</li> </ul>
<p>3. Demolition of a protected part of a scheduled heritage building or scheduled heritage structure</p>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1 and effects related to heritage values.</li> </ul>

### 29.12.3 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1. • Light spill - where the limit is exceeded by greater than 25% • Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</p>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ul>

## 30. Port

### 30.1 Introduction

Port Chalmers is located on the northern side of Otago Harbour. The locality, known to Māori as Kōpūtai, is where local Ngāi Tahu sold the Otago block to the New Zealand Company in 1844. A European town was founded there when Otago was settled in 1848. The Union Steam Ship Company started in 1875 and in 1882 the first frozen meat shipped from New Zealand to the northern hemisphere left from the port. Port Chalmers ('the Port') became the lower South Island's deep-water container port in 1977. The Port is a major exporter of meat, dairy, fish, forestry products and apples, and hosts cruise ships throughout the summer.

The key resource management issues with regard to the Port relate to noise, glare/light spill, and effects on the amenity of nearby residential land uses, as well as a need to provide for the expansion of port activities. Notably, while the Dunedin City District Plan (2006) applies a specific Port Zone to the Port, it does not provide for future expansion and changes in the nature of port activities.

In this Plan, the Port Zone applies to the existing operational area of the Port and includes land which extends from MacAndrew Road and Peninsula Beach Road to the coast, and sites on Beach Street.

The objectives of the zone are to enable the Port to operate efficiently and effectively as a key shipping and passenger port for the region, while managing effects on the amenity of surrounding zones so that adverse effects are avoided or mitigated as far as practicable, and people's health and safety is maintained.

Only industry, port and community and leisure - small scale activities are provided for in the zone. Industry and port activities are broadly defined, and incorporate all activities associated with the normal operation of the Port. Potential adverse effects of port activity on surrounding properties are managed through:

- performance standards focused on the management of the effects of noise (including through Port funded acoustic insulation of existing residential buildings within a noise affected property) within a mapped area (**port noise control mapped area**);
- managing the establishment of new noise sensitive activities within the **port noise control mapped area**;
- restricting the height of shipping container stacks, with a greater restriction at Back Beach and Boiler Point compared to the rest of the Port Zone;
- applying a light spill performance standard measured at the boundary of residential zoned sites; and
- requiring the storage of materials outside (including logs, woodchips or fertiliser) to be undertaken in a manner which ensures material will not become windblown or contaminate any off-site areas.

## 30.2 Objectives and Policies

<b>Objective 30.2.1</b>	
The Port at Port Chalmers is able to operate efficiently and effectively as a key shipping and passenger port for the region.	
Policy 30.2.1.1	Enable port activities, including activities that are ancillary to port activities.
Policy 30.2.1.2	Provide for industry in recognition that this activity is compatible with the operation of the Port and can support its efficient and effective operation.
Policy 30.2.1.3	Avoid the establishment of activities that are not related to the operation of the Port and may conflict with the ability of the Port to operate efficiently and effectively.
Policy 30.2.1.4	Only allow subdivision activities where necessary for: <ul style="list-style-type: none"> <li>a. the operation of the Port at Port Chalmers; or</li> <li>b. the disposal of surplus land in accordance with policies 2.3.1.4 and 2.3.1.6, and the objectives and policies of the Industrial Port Zone.</li> </ul>
<b>Objective 30.2.2</b>	
Land use, development and subdivision activities necessary for the Port at Port Chalmers to operate efficiently and effectively are enabled while: <ul style="list-style-type: none"> <li>a. adverse effects on the amenity of surrounding zones are avoided or mitigated as far as practicable; and</li> <li>b. people's health and safety is maintained.</li> </ul>	
Policy 30.2.2.1	Require buildings, structures and outdoor storage, including shipping containers, to be of a height that avoids or mitigates significant adverse effects on visual amenity and character in Port Chalmers and Careys Bay, as far as practicable.
Policy 30.2.2.2	Require fertiliser, woodchips and other materials to be stored in a location and manner where they are unlikely to become windblown and will not contaminate any off-site areas.
Policy 30.2.2.3	Require ancillary signs to be located and designed to maintain streetscape amenity including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles and not being oversized or too numerous for what is necessary for that purpose.
Policy 30.2.2.4	Require land use activities to operate, and development to be designed, to ensure that adverse effects from noise on the health of people will be avoided or minimised as far as practicable.

## Rules

### Rule 30.3 Activity Status

#### 30.3.1 Rule location

The activity status tables in rules 30.3.3 to 30.3.5 specify the activity status of land use activities, development activities, and subdivision activities in the Port Zone, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 30.3.2 Activity status introduction

1. The activity status tables in rules 30.3.3 - 30.3.5 show the activity status of activities in the Port Zone, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Performance Standards*

7. Performance standards are listed in the far right column of the activity status tables.
8. Performance standards apply to permitted, controlled, and restricted discretionary activities.
9. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
10. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

## Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity

### 30.3.3 Activity status table - land use activities

1.	Performance standards that apply to all land use activities		a. NA b. Light spill
Major facility activities		Activity status	Performance standards
2.	Port	P	a. Port Noise Management
3.	All other activities in the major facility activities category	NC	
Industrial activities		Activity status	Performance standards
4.	Industry	P	a. Minimum vehicle loading b. Noise
Commercial activities		Activity status	Performance standards
5.	All activities in the commercial activities category	NC	
Community activities		Activity status	Performance standards
6.	Community and leisure - small scale	P	
7.	All other activities in the community activities category	NC	
Rural activities		Activity status	Performance standards
8.	All activities in the rural activities category	NC	
Residential activities		Activity status	Performance standards
9.	All activities in the residential activities category	NC	

#### Note 30.3.3X- Other requirements outside of the District Plan

- Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

### 30.3.4 Activity status table - development activities

Buildings and structures activities		Activity status	Performance standards
1.	All buildings and structures activities	P	a. Maximum height b. Number, location and design of ancillary signs X. Setback from Critical Electricity Distribution Infrastructure
Site development activities		Activity status	Performance standards
2.	Outdoor storage	P	a. Location of outdoor storage (fertiliser, woodchips and logs) b. Maximum height
3.	Parking, loading and access	P	a. Parking, loading and access standards
4.	All other site development activities	P	

#### Note 30.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

### 30.3.5 Activity status table - subdivision activities

Subdivision activities		Activity status	Performance standards
1.	Subdivision activities	RD	a. Subdivision performance standards

#### Note 30.3.5A - Other RMA considerations

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

#### Note 30.3.5X - Other relevant District Plan provisions

1. Additional matters of discretion apply to the subdivision of land within a **Critical Electricity Distribution Infrastructure Corridor mapped area**. These are set out in Rule 19.10.

### **Rule 30.3.6 Transition to the Industrial Port Zone**

On receipt of written notice from the Port of Otago to Dunedin City Council confirming that all or part of the land within the Port Zone is surplus to the requirements of the Port of Otago, the provisions of the Port Zone will no longer apply to that parcel of land and the provisions of the Industrial Port Zone will apply in full.

## Rule 30.4 Notification

- Activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## Rule 30.5 Land Use Performance Standards

### 30.5.2 Light Spill

Land use activities must comply with Rule 9.3.5.

### 30.5.3 Minimum Vehicle Loading

- Land use activities must provide on-site vehicle loading and manoeuvring as follows:

Activity	Minimum vehicle loading
a. Industry	One loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10).

- Required vehicle loading must be designed and constructed to comply with Rule 6.6.2.
- Activities that contravene this performance standard are restricted discretionary activities.

### 30.5.4 Port Noise Management

- For all port activity, the Port Operator at Port Chalmers must:
  - develop a noise management and noise mitigation plan for Port Chalmers to provide for noise minimisation, mitigation of the effects of port noise and community liaison;
  - investigate and adopt the best practicable option to minimise port noise emissions, including specific measures to reduce the occurrence of loud, single noise events (including those associated with handling containers and logs);
  - produce and, at all times, operate in accordance with a port noise management plan, which must include, but is not limited to, the matters set out in Appendix 30A;
  - implement and annually update a port noise mitigation plan for the purchase or acoustic treatment of noise affected properties, which must include, but is not limited to, the matters set out in Appendix 30B; and
  - establish, maintain and participate in a port noise liaison committee, which must operate in accordance with the requirements set out in Appendix 30C.
- Port activity that contravenes the performance standard for Port Noise Management is a non-complying activity.

### 30.5.5 Noise

Industry must comply with Rule 9.3.6.

## Rule 30.6 Development Performance Standards

### 30.6.1 Location of Outdoor Storage

1. Woodchips and logs must not be stored in the **port wood exclusion mapped area** (see Figure 30.6.1A).
2. Fertiliser must not be stored outside, or in a building that is not fully enclosed.
3. Materials must be stored in a way that prevents materials contaminating any off-site area.

Figure 30.6.1A: **Port wood exclusion mapped area**

### 30.6.2 Maximum Height

1. The maximum height of new buildings and structures, additions and alterations, and outdoor storage, including the temporary storage of shipping containers, must not exceed 30m above ground level, except:

- a. in the **Boiler Point** and **Back Beach height mapped area** (see Figure 30.6.2A) the maximum height is 15m;
  - b. quayside and container cranes, and light towers are exempt from the maximum height limit; and
  - c. rooftop structures are exempt from the performance standard for height provided they do not exceed the maximum height limit for all other buildings and structures by more than one third of that limit or 5m, whichever is the lesser.
2. Activities that contravene this performance standard are restricted discretionary activities.

Figure 30.6.2A: Boiler Point and Back Beach height mapped area

### **30.6.3 Number, Location and Design of Ancillary Signs**

#### **30.6.3.1 General**

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are not visible from outside the Port Zone;
  - ii. regulatory signs, warning signs, or directional signs; and
  - iii. building names (excluding commercial sponsorship names).
- b. Signs located on or above the footpath must comply with Rule 6.7.2.
- c. Signs must comply with Rule 6.7.3 where visible from a road.
- d. Signs must not be illuminated or digital.
- e. Signs higher than 4m above ground level must only display the business name or major facility name.
- f. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### **30.6.3.2 Signs attached to buildings**

- a. The height, above ground level, at the highest point of any sign, attached to a building is 8m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs attached flat against a building must:
  - i. not cumulatively exceed 15% of the total wall area (excluding windows) that face the street frontage, or 8m<sup>2</sup>, whichever is lesser; and
  - ii. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.
- e. If attached on the underside of a verandah or protruding from a building façade, signs must:
  - i. where attached to the façade of a building, not protrude more than 1.5m from the façade;
  - ii. have a maximum area per display face of 2m<sup>2</sup>;
  - iii. have a maximum of 2 display faces per sign; and
  - iv. not exceed 1 sign per 15m of street frontage and a maximum of 3 signs per building.

### 30.6.3.3 Freestanding signs

- a. The maximum number of freestanding signs is:
  - i. 2 per site or 1 per 50m of street frontage, whichever is the lesser, for permanently fixed freestanding signs, and
  - ii. 2 per site or 1 per 50m of street frontage, whichever is the lesser, for portable freestanding signs.
- b. The maximum dimensions of freestanding signs are:
  - i. maximum height of 8m for permanently fixed freestanding signs;
  - ii. maximum height of 4m for portable freestanding signs;
  - iii. maximum area of 16m<sup>2</sup> per display face for permanently fixed freestanding signs;
  - iv. maximum area of 8m<sup>2</sup> per display face for portable freestanding signs;
  - v. maximum width of 2m; and
  - vi. maximum depth of 400mm.
- c. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.

#### **Note 30.6.3A - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy
  - c. Dunedin City Council Roadway Bylaw
  - d. Dunedin City Council Traffic and Parking Bylaw

### **30.6.4 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

### 30.6.X Setback from Critical Electricity Distribution Infrastructure

New buildings, new structures and additions and alterations must comply with Rule 5.6.X.1.

### Rule 30.7 Subdivision Performance Standards

Subdivision activities must comply with Rule 19.7.

### Rule 30.8 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

#### Rule 30.8.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 30.8.2 - 30.8.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 30.8.2 - 30.8.5 apply as follows:
  - a. Rule 30.8.2 applies to all performance standard contraventions;
  - b. Rule 30.8.3 applies to land use performance standard contraventions;
  - c. Rule 30.8.4 applies to development performance standard contraventions; and
  - d. Rule 30.8.5 applies to subdivision performance standard contraventions.

#### 30.8.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <p>a. The degree of non-compliance with the performance standard is minor.</p> <p><i>General assessment guidance:</i></p> <p>b. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</p>

#### 30.8.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents

### 30.8.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Minimum vehicle loading	a. Effects on the safety and efficiency of the transport network	See Rule 6.10.

### 30.8.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. Maximum height	a. Effects on amenity and character of surrounding residential zones.	<i>Relevant objectives and policies:</i> i. Objective 30.2.2. ii. Buildings, structures and outdoor storage, including shipping containers, are of a height that avoids or mitigates significant adverse effects on visual amenity and character in Port Chalmers and Careys Bay as far as practicable (Policy 30.2.2.1).
2. Number, location and design of ancillary signs	a. Effects on amenity of surrounding zones	<i>Relevant objectives and policies:</i> i. Objective 30.2.2. ii. Ancillary signs are located and designed to maintain streetscape amenity including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles and will not be oversized or too numerous for what is necessary for that purpose (Policy 30.2.2.3).
	b. Effects on the safety and efficiency of the transport network	See Rule 6.10.
3. Location of outdoor storage	a. Effects on amenity of surrounding zones	<i>Relevant objectives and policies:</i> i. Objective 30.2.2. ii. Fertiliser, woodchips and other materials are stored in a location and manner where they are unlikely to become windblown and will not contaminate any off-site areas (Policy 30.2.2.2).
4. Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10.

### 30.8.5 Assessment of subdivision performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. Subdivision performance standards	See Rule 19.9.

### 30.8.X Assessment of performance standard contraventions in a mapped area

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>1. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (buildings, structures and city-wide activities)</li> </ul>	<p>a. Effects on health and safety</p> <p>b. Effects on efficient and effective operation of network utilities</p>	<p>See Rule 5.7.</p>

## Rule 30.9 Assessment of Restricted Discretionary Activities

### Rule 30.9.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 30.9.2:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
4. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 30.8; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 30.10; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 30.11; and
    - iii. the assessment guidance in this section will also be considered.

### 30.9.2 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
----------	-----------------------	---

### 30.9.2 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All subdivision activities	a. Effects on the efficient and effective operation of the Port at Port Chalmers	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 30.2.1; Strategic Objective 2.3.1.</li> <li>ii. The subdivision is necessary for               <ul style="list-style-type: none"> <li>1. the operation of the Port at Port Chalmers or;</li> <li>2. the disposal of surplus land in accordance with policies 2.3.1.4 and 2.3.1.6 and the objectives and policies of the Industrial Port Zone (Policy 30.2.1.4).</li> </ul> </li> </ul>
	See Rule 19.10.	

## Rule 30.10 Assessment of Discretionary Activities

### Rule 30.10.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 30.10.2 provides guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 30.10.2 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Noise from industry - where the limit is exceeded by less than 5dB LAeq (15min) (Rule 9.3.6 Noise)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ol>

## **Rule 30.11 Assessment of Non-complying Activities**

### **Rule 30.11.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 30.11.2 and 30.11.3 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 30.11.2 and 30.11.3 apply as follows:
  - a. Rule 30.11.2 applies to non-complying activities; and
  - b. Rule 30.11.3 applies to non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 30.11.2 Assessment of non-complying activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying activities</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. The activity does not detract from, or preferably contributes to, the strategic directions objectives, including, but not limited to, those related to: <ul style="list-style-type: none"> <li>i. Objective 2.3.1.</li> <li>ii. Objective 2.3.2 and Policy 2.3.2.2.</li> <li>iii. Objective 2.4.3 and Policy 2.4.3.4.</li> </ul> </li> <li>b. The activity supports the purpose of the zone as outlined in objectives 30.2.1 and 30.2.2.</li> <li>c. In assessing the significance of effects, consideration will be given to: <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>d. the establishment of the activity is related to the operation of the Port and will not conflict with the ability of the Port to operate efficiently and effectively.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>e. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>f. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>g. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>
<p>2. • Cemeteries • Crematoriums • Landfills</p>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</li> </ul>
<p>3. Commercial advertising</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1.</li> <li>b. Policy 2.4.1.6.c.</li> </ul>

### 30.11.3 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. Light spill - where the limit is exceeded by greater than 25%	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>
2. • Noise from industry - where the limit is exceeded by 5dB LAeq (15 min) or more (Rule 9.3.6)	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>
3. Port Noise Management	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>Objective 30.2.2, Policy 30.2.2.4</p>

## Appendices

The following must be observed in relation to any measurements or assessments of port noise required by these Appendices:

1. Unless stated otherwise, port noise must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6809:1999 Acoustics – Port Noise Management and Land Use Planning, provided that:
  - a. measured Leq (15 minute) levels shall be adjusted for special audible characteristics in accordance with clause 7.3 and A6 of NZS6809:1999 except where the sound of interest arises from log handling or container handling activities; and
  - b. adjustments for any special audible characteristics to any Leq (15 min) made in accordance with clause 7.3 and A6 of NZS6809:1999 exclude audible warning devices.
2. For the purpose of comparison with noise criteria specified in Appendix 30B the following apply:
  - a. in calculating any Ldn (5 day average), one ship visit of up to five days duration will be deemed to be one occasion; and
  - b. in assessing any Leq (15 min) sound level between 10pm and 7am the following day, one ship visit of up to five days duration will be deemed to be one occasion.

## **Appendix 30A. Port Noise Management Plan**

### **30A.1 Minimum port noise management plan provisions**

The Port Noise Management Plan required by Rule 30.5.4 must contain the following:

1. Port Noise Management Plan objectives;
2. detailed procedures for the implementation of Rule 30.5.4, including the Port Noise Mitigation Plan outlined in Appendix 30B and the establishment and maintenance of a Port Noise Liaison Committee outlined in Appendix 30C;
3. a list of Port Noise Liaison Committee functions;
4. procedures for recommendations of the Port Noise Liaison Committee to be considered and determined by the Port Operator;
5. noise modelling, noise monitoring, auditing and reporting procedures;
6. complaint handling procedures;
7. procedures for achieving noise reduction through port operational procedures and staff and contractor training; and
8. procedures for alterations to, and the annual update of, the Port Noise Management Plan.

### **30A.2 Minimum monitoring and reporting requirements**

1. The Port Operator must maintain, at its expense, sound level monitoring equipment to ensure the continuous measurement of port noise emanating from port related activities 24 hours a day and seven days a week, including at least one monitor in a location representative of the Careys Bay residential community. All community noise monitors must record calibrated audio of noise events measured above 75 dB LAFmax between 10pm and 7am.
2. The Port Operator must provide the results of sound level monitoring to Council and the Port Noise Liaison Committee in a summary form showing Leq, calculated Ldn sound exposure and Lmax levels not less than four times a year. This monitoring must highlight significant port noise emissions and correlate these with port activity (using port CCTV imagery and equipment logs) and wind speed and wind direction data.
  - a. NA
  - b. NA
3. When sound level monitoring indicates that port noise may be exceeding 65 dBA Ldn (5 day average) or 65dBA Leq (15 min, 10pm - 7am) at noise affected properties that are not shown on the Port Noise Contour Map as eligible for mitigation under Appendix 30B.1, the exceedance must be recorded, investigated and reported to the Port Noise Liaison Committee. The investigation must identify as far as possible those noise affected properties receiving port noise at or above such levels.
4. The Port Operator must produce and include in the Port Noise Management Plan a port noise contour map based on a current busy 5 day operating scenario. The contour map must be updated at least on an annual basis or when a change to port operations is likely to affect the levels of port noise received in surrounding parts of the Township and Settlement, Rural Residential 2, Recreation, Industrial, Port Chalmers Principal Centre or the Hill Slopes Rural zones. Port noise contours must be modelled at 1dB intervals between 55Ldn and 70Ldn.
5. To ensure the accuracy of the Port Noise Contour Map, the Port Operator must perform field verification of calculated sound exposure levels and assessed Leq (15 min) levels of port noise at the agreed monitoring points identified in the Port Noise Management Plan.
6. Those noise affected properties confirmed as eligible for mitigation under Appendix 30B.1 must be identified on the Port Noise Contour Map.

7. The Port Operator must maintain an acoustic certificate register. A copy of the register and acoustic certificates for noise affected properties must be supplied to Council. Copies of the register and acoustic certificates must also be held at the offices of the Port Operator and the Dunedin City Council and made available to members of the public on request.
8. The Port Operator must make available to the Port Noise Liaison Committee or Council on request all information the Port Operator has as to noise and meteorological conditions.
9. When a noise complaint is received, the Port Operator will immediately advise the Dunedin City Council (if the complaint is not received through the Dunedin City Council).
10. The Port Operator must maintain a register of noise complaints and report the details of complaints and any action taken to investigate and resolve complaints to the Port Noise Liaison Committee at the earliest opportunity.
11. Copies of the Port Noise Management Plan are to be held at the offices of the Port Operator and the Dunedin City Council and on their respective websites, and made available to members of the public on request.

## **Appendix 30B. Port Noise Mitigation Plan**

### **30B.1 Mitigation for noise affected properties 65dBA and above**

The Port Operator must offer to purchase or provide acoustic treatment for noise affected properties which receive, at any point within their boundary, levels of port noise equal to or greater than an assessed 65 dBA Ldn (5 day average) or an assessed 65 dBA Leq (15 min, 10pm –7am) on more than three occasions (more than 24 hours apart) during any rolling 12 month period.

#### **30B.1.1 Owner to decide**

The owner of each such noise affected property must have the right to elect whether to accept either purchase or acoustic treatment, and there is no time limit on the owner's acceptance of the offer.

#### **30B.1.2 Purchase**

The fair market value of a noise affected property must be determined as if the property was situated in Port Chalmers, excluding the effect of port operation; plus an additional compensatory payment of \$1,000 for each year, up to 30 December 2003, that the owner was in prior occupation of the property. The minimum additional payment is to be \$2,000, up to a maximum of \$15,000, with adjustment for inflation to be in accordance with the method specified in the Port Noise Mitigation Plan.

#### **30B.1.3 Acoustic treatment**

Where acoustic treatment is provided, it must be done in accordance with rules 9.3.1.2, 9.3.1.3 and 9.3.1.6.

Acoustic treatment of noise affected properties must be carried out in accordance with procedures specified in the Port Noise Mitigation Plan up to a limit specified in the Port Noise Mitigation Plan.

Where the assessed costs of acoustic treatment exceed the limit specified in the Port Noise Mitigation Plan, the Port Operator must advise the property owner of the costs of acoustic treatment and offer the property owner the option of making up the difference in the costs of acoustic treatment to enable the Port Operator to obtain an acoustic certificate.

If port noise received by a noise affected property which has received acoustic treatment exceeds the certified level of port noise for that property, then the Port Operator must offer to purchase the affected property notwithstanding the previous election of acoustic treatment.

#### **30B.1.4 Residential use of properties purchased by the Port Operator**

Noise affected properties purchased under this provision may not be used for residential purposes unless they receive acoustic treatment.

### **30B.2 Mitigation for noise affected properties 60dBA and above**

The Port Operator must contribute to the costs of acoustic treatment for noise affected properties or may offer to purchase noise affected properties which are shown on the current Port Noise Contour Map as receiving at any point within their boundary port noise levels equal to or greater than 60 dBA Ldn (5 day average).

#### **30B.2.1 Purchase**

The Port Operator, on application by the owner of a noise affected property, must consider and decide whether to offer to purchase a noise affected property. The purchase will be on the basis of a "willing buyer/willing seller" and no additional compensatory payments will be necessary.

#### **30B.2.2 Acoustic treatment**

Where acoustic treatment is provided it must be done in accordance with rules 9.3.1.2, 9.3.1.3 and 9.3.1.6.

The Port Noise Liaison Committee, on a case by case basis, must provide a contribution to the costs of acoustic treatment utilising its annual mitigation budget. Acoustic treatment of noise affected properties must be carried out in accordance with procedures specified in the Port Noise Mitigation Plan, and the liaison committee will determine the level of the contribution up to a limit specified in the Port Noise Mitigation Plan.

### **30B.3 Mitigation for noise affected properties 55dBA to 60dBA**

The Port Noise Liaison Committee will provide technical advice to noise affected properties.

In special circumstances the Port Noise Liaison Committee, utilising its annual mitigation budget, may offer to contribute to the costs of acoustic treatment for noise affected properties which are shown on the current Port Noise Contour Map as receiving, at any point within their boundary, port noise levels equal to or greater than 55 dBA Ldn (5 day average). The rules in 30B.3.1 to 30B.3.2 apply to the provision of technical advice or an offer to provide acoustic treatment.

#### **30B.3.1 Technical advice**

An annual update of noise modelling information is to be made available to property owners.

An annual summary of the activities of the Port Noise Liaison Committee taken from the minutes of the liaison committee meetings is to be provided to property owners.

#### **30B.3.2 Acoustic treatment**

Acoustic treatment of noise affected properties must be carried out in accordance with procedures specified in the Port Noise Mitigation Plan.

Where the contribution to the costs of acoustic treatment is to be provided it must be up to a limit specified in the Port Noise Mitigation Plan.

## **Appendix 30C. Port Noise Liaison Committee**

1. The Port Noise Liaison Committee required under Rule 30.5.4 must include an independent chair who is paid for by Port Otago Limited and must comprise, but not be limited to, members appointed by the following organisations:
  - a. Port Operator
  - b. Otago Regional Council
  - c. Dunedin City Council
  - d. Careys Bay Association
  - e. Chalmers Community Board<sup>1</sup>
2. General duty to committee: The Port Operator must implement, to the extent reasonably possible, all recommendations of the Port Noise Liaison Committee that can be implemented within budget and without compromising the efficiency, safety and competitiveness of port operations.
3. Role of the Port Noise Liaison Committee: The Port Noise Liaison Committee must consider all noise issues arising from the port operation and carry out the functions identified in the Port Noise Management Plan and mitigation functions identified in Appendix 30B.
4. Port Noise Liaison Committee resourcing: The Port Operator must provide for the implementation and maintenance of the Port Noise Liaison Committee as follows:
  - a. The Port Operator must provide secretarial and logistic support for the Port Noise Liaison Committee.
  - b. The Port Operator must arrange for the Port Noise Liaison Committee to meet on not less than four occasions a year and must identify procedures in the Port Noise Management Plan for calling an emergency meeting of the committee.
  - c. The Port Operator must provide an annual budget for noise mitigation that reasonably provides for the Port Noise Liaison Committee.
  - d. The Port Operator must make copies of the minutes of the Port Noise Liaison Committee available on its website, and must supply copies on request.

<sup>1</sup>The board will be responsible for appointing resident representatives from areas of Port Chalmers, other than Careys Bay, affected by port noise.

## **31. Schools**

### **31.1 Introduction**

Dunedin's schools are a crucial educational resource for Dunedin. The Schools Zone encompasses all primary and secondary schools within the city, including state schools, state-integrated schools and private schools. The total number of schools managed under the Schools Zone is 72, located across the city.

School sites have traditionally also been used for community use, such as evening activities in school halls. This dual role is likely to increase in the future, as nationally schools are considered as community hubs and may, particularly in more remote communities, be used for services such as libraries, community health provision, social services and community produce markets. School facilities can also be used for conferences, theatre and concert performances, adult education and as community sports facilities. Early childhood education is often associated with schools and has similar environmental effects. The Schools Zone provides for these multiple uses.

Generally, Dunedin's schools are located within or close to residential environments, but can also be found adjacent to recreation and rural zoned land, and within close proximity to commercial areas. Activities on schools sites have the potential to generate effects which may adversely affect surrounding land uses, particularly residential areas. The provisions of the Schools Zone have been designed to enable education and community activities, and provide certainty regarding what land use activities can be expected to occur on school sites, while appropriately managing any adverse effects on surrounding land use activities and the transport network.

Several schools have scheduled heritage buildings or scheduled heritage structures. These are listed in Appendix A1.1.

State schools are also designated within the Plan (see Appendix A1.4). The conditions on the individual designations may differ from the rules contained within the Schools Zone. Where this is the case, the schools can choose to rely on their designations in relation to new development rather than the provisions within this section.

## 31.2 Objectives and Policies

<b>Objective 31.2.1</b>	
Dunedin's schools are able to operate efficiently and effectively and provide opportunities for local communities to use school facilities.	
Policy 31.2.1.1	Enable schools, early childhood education - small scale, training and education activity and student hostels on school sites.
Policy 31.2.1.2	Provide for community use of school facilities and activities that are ancillary to schools where they are designed and operated in line with Objective 31.2.2 and its policies.
Policy 31.2.1.3	Only allow activities that are not ancillary to school activity where all of the following apply: <ol style="list-style-type: none"> <li>the activities are related to or support the school, or have other operational requirements that mean they need to locate in the zone;</li> <li>they will support the efficient and effective operation of the school;</li> <li>they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>they are designed and operated in line with Objective 31.2.2 and its policies.</li> </ol>
Policy 31.2.1.4	Enable land that is surplus to the needs of the school to transition to the default zone listed in Appendix A9, so that future development that is not related to schools will be managed in accordance with the objectives and policies of that zone.
Policy 31.2.1.5	Only allow subdivision activities where: <ol style="list-style-type: none"> <li>they are in accordance with the provisions of the default zone listed in Appendix A9; and</li> <li>the subdivision does not adversely affect the efficient and effective operation of the school.</li> </ol>

### Objective 31.2.2

Land use activities and development necessary for schools to meet the reasonably foreseeable needs of students and staff is enabled, while ensuring development:

- a. achieves a good standard of on-site amenity for students and staff;
- b. maintains or enhances the amenity of the surrounding residential areas, as far as practicable; and
- c. maintains or enhances the residential amenity of surrounding sites.

Policy 31.2.2.1	Require buildings and structures to be of a height and setback from boundaries that ensures: <ol style="list-style-type: none"> <li>a. there are no more than minor effects on the sunlight access of current and potential future residential buildings and their outdoor living spaces; and</li> <li>b. any adverse effects on neighbourhood amenity are avoided or, if avoidance is not practicable, are no more than minor.</li> </ol>
Policy 31.2.2.2	Require development to maintain or enhance on-site and neighbourhood amenity by ensuring service areas are not visible from ground level outside the site.
Policy 31.2.2.3	Require fences adjoining roads or public places to be of a height and design that contributes positively to neighbourhood amenity.
Policy 31.2.2.4	Require ancillary signs visible outside the zone to be located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose.
Policy 31.2.2.5	Only allow early childhood education - large scale and community and leisure - large scale where they are designed to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the amenity of surrounding residential properties.
Policy 31.2.2.6	Require conference, meeting and function and use of schools' sports fields to be restricted in hours of operation in order to avoid or, if avoidance is not practicable, adequately mitigate, noise and other adverse effects on the amenity of surrounding residential properties.

## Rules

### Rule 31.3 Activity Status

#### 31.3.1 Rule location

The activity status tables in rules 31.3.3 to 31.3.5 specify the activity status of land use activities, development activities, and subdivision activities in the Schools Zone, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 31.3.2 Activity status introduction

1. The activity status tables in rules 31.3.3-31.3.5 show the activity status of activities in the Schools Zone and the overlay zones indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Additional activity status rules in hazard overlay zones*

7. For the purpose of the hazards provisions, activities are categorised as natural hazards sensitive activities, natural hazards potentially sensitive activities or natural hazards least sensitive activities. The activities that are in each hazards sensitivity category are included in the definitions section and in Section 11.1.
8. In the Hazard 2 (flood) Overlay Zone, the activity statuses in Rule 31.3.6 apply to the following activities:
  - a. natural hazards sensitive activities;
  - b. natural hazards potentially sensitive activities; and
  - c. new buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area.
9. Where the activity status in Rule 31.3.6 differs from that in rules 31.3.3 - 31.3.5, the most restrictive activity status always applies.

10. In addition to the rules in Rule 31.3.6, performance standards for development activities within hazard overlay zones are included in rules 31.3.3 - 31.3.5.
11. Activities in a hazard overlay zone must comply with all of the rules in 31.3.3 - 31.3.6.

*Performance Standards*

12. Performance standards are listed in the far right column of the activity status tables.
13. Performance standards apply to permitted, controlled, and restricted discretionary activities.
14. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
15. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

**Legend**

<b>Acronym</b>	<b>Meaning</b>
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
Haz1	Hazard 1 Overlay Zones
Haz2	Hazard 2 Overlay Zones
Haz3	Hazard 3 Overlay Zones

### 31.3.3 Activity status table - land use activities

1.	Performance standards that apply to all land use activities		<ul style="list-style-type: none"> <li>a. Acoustic insulation (noise sensitive activities)</li> <li>b. NA</li> <li>c. Light spill</li> <li>d. Noise</li> <li>e. Setback from National Grid (National Grid sensitive activities only)</li> <li>f. Hours of operation</li> </ul>
Major facility activities		Activity status	Performance standards
2.	Schools	P	a. Minimum mobility car parking
3.	All other activities in the major facility activities category	NC	
Community activities		Activity status	Performance standards
4.	Early childhood education - small scale	P	
5.	Early childhood education - large scale	RD	
6.	Community and leisure - small scale	P	
7.	Community and leisure - large scale	RD	
8.	Sport and recreation not involving the use of motorised vehicles	P	
9.	Sport and recreation involving the use of motorised vehicles	D	
10.	Conservation	P	
Commercial activities		Activity status	Performance standards
11.	Training and education	P	
12.	Conference, meeting and function	P	
13.	All other activities in the commercial activities category	NC	
Residential activities		Activity status	Performance standards
14.	Student hostels	P	a. Minimum mobility car parking
15.	All other activities in the residential activities category	NC	
Industrial activities		Activity status	Performance standards
16.	All activities in the industrial activities category	NC	
Rural activities		Activity status	Performance standards
17.	All activities in the rural activities category	NC	

### Note 31.3.3X- Other requirements outside of the District Plan

1. Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

### Note 31.3.3A - General advice

1. The Ministry of Education holds designations for a large number of schools and early childhood education centres within Dunedin. Details of the designations can be found in Appendix A1.4.

### 31.3.4 Activity status table - development activities

1.	Performance standards that apply to all development activities		<ol style="list-style-type: none"> <li>a. Maximum building site coverage and impermeable surfaces</li> <li>b. Setback from scheduled tree</li> </ol>
2.	Performance standards that apply to all buildings and structures activities		<ol style="list-style-type: none"> <li>a. Boundary setbacks</li> <li>b. Height in relation to boundary</li> <li>c. Maximum height</li> <li>d. Number, location and design of ancillary signs</li> <li>e. Natural hazards performance standards</li> <li>f. Setback from coast and water bodies</li> <li>g. Setback from National Grid</li> </ol>
Buildings and structures activities (excluding activities affecting a protected part of a scheduled heritage building <b>or</b> scheduled heritage structure. See rows 5 - 12)		Activity status	Performance standards
3.	Fences	P	<ol style="list-style-type: none"> <li>a. Fence height and design</li> </ol>
4.	All other buildings and structures activities	P	
Buildings and structures activities that affect a protected part of a scheduled heritage building <b>or</b> scheduled heritage structure		Activity status	Performance standards
5.	Repairs and maintenance	P	
6.	Restoration of a building or structure that has a Heritage New Zealand Category 1 listing as detailed in Appendix A1.1	C	
7.	Restoration of all other scheduled heritage buildings and structures	P	
8.	Earthquake strengthening where external features only are protected	C	<ol style="list-style-type: none"> <li>a. Materials and design</li> </ol>

9.	Signs attached to buildings or structures	P	
10.	All other additions and alterations	RD	
11.	Demolition	NC	
12.	Removal for relocation	RD	
Site development activities		Activity status	Performance standards
13.	Service areas	P	a. Location and screening of service areas
14.	Storage and use of hazardous substances	P	a. Hazardous substances quantity limits and storage requirements b. Setback from coast and water bodies
15.	Parking, loading and access	P	a. Parking, loading and access standards
16.	Vegetation clearance	P	a. Maximum area of vegetation clearance (UBMA)
17.	All other site development activities	P	

#### Note 31.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

#### 31.3.5 Activity status table - subdivision activities

Subdivision activities		Activity status	Performance standards
1.	Subdivision activities	RD	a. Subdivision performance standards

#### Note 31.3.5A - Other RMA considerations

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

### 31.3.6 Activity status in the Hazard 2 (flood) Overlay Zone

Activity	Activity status
Land Use Activities	
1. Natural hazards sensitive activities	RD
2. Natural hazards potentially sensitive activities	RD
Development Activities	
3. New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m <sup>2</sup> of new ground floor area	RD

#### Note 31.3.6A - Other RMA considerations

X Section 10 of the RMA (existing use rights) provides for land to be used in a manner that contravenes a rule in a district plan if the use was lawfully established before the rule became operative or the proposed plan was notified, and the effects of the use are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified.

- Accordingly, activities that are shown to have effects that are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified will not usually trigger the provisions for natural hazards sensitive activities and natural hazards potentially sensitive activities in Rule 31.3.6. However, Council will consider specific circumstances associated with the development and how this affects the character, intensity and scale of effects from the land use activity.

#### Note 31.3.6B - Other requirements outside the District Plan

- Clause E1 – Surface water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework (including earthworks) in relation to managing surface water and effects on other property.
- Buildings and structures that will divert water may require resource consent under the Otago Regional Plan: Water.
- If buildings and structures affect the flow of water, this effect is also subject to the common law principle of natural servitude.

### 31.3.7 Transition to default zone

On receipt of written notice from both the owner and operator (if different) of the school to Dunedin City Council in relation to all or part of the land within the part of the Schools Zone in which the school is located, the provisions of the Schools Zone will no longer apply to that parcel of land and the provisions of the relevant default zone, as indicated in Appendix A9, will apply in full.

## **Rule 31.4 Notification**

1. Applications for resource consent for the following activities will be considered without the need to obtain a written approval of affected persons and will not be notified in accordance with section 95A or 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:
  1. earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is not listed by Heritage New Zealand.
2. With respect to resource consent applications for the following activities, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:
  1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is listed by Heritage New Zealand.
3. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided:
  1. all restricted discretionary activities that list 'effect on cultural values of Manawhenua' as a matter for discretion; and
  2. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat in Appendix A4.
4. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## Rule 31.5 Land Use Performance Standards

### 31.5.1 Acoustic Insulation

Any noise sensitive activities in the following areas must comply with Rule 9.3.1.

1. within 20m of an industrial zone; and
2. within 70m of a railway line.

### 31.5.3 Hours of Operation

1. Conference, meeting and function and use of school sports fields must take place within the following hours:

Days of week		Hours of operation
a.	Sunday - Thursday	7.00am - 10.30pm
b.	Friday - Saturday	7.00am - 12.00am (midnight)

2. Flood lighting and sportsfield lighting on sites adjoining a residential zone boundary must not operate from 10.00pm - 6.00am.
3. Activities that contravene this performance standard are restricted discretionary activities.

### 31.5.4 Light Spill

Land use activities must comply with Rule 9.3.5.

### 31.5.5 Minimum Mobility Car Parking

Activity	Minimum number of parking spaces
1- 2. <b><i>Removed to comply with the National Policy Statement on Urban Development 2020 requirement to remove minimum car parking requirements. Rule numbering to be corrected at a later date.</i></b>	

3. Schools and student hostels must provide mobility parking spaces as follows:

Total number of parking spaces provided	Minimum number of these that must be mobility parking spaces
a. 1 - 20	1 parking space
b. 21 - 50	2 parking spaces
c. For every additional 50 parking spaces	1 additional parking space

4. NA.
5. Parking spaces may be shared between land use activities (i.e. the same parking spaces may be used to fulfil the minimum mobility car parking requirement for more than one land use activity), as long as the hours of operation of the land use activities do not overlap.
6. NA.
7. Activities that contravene this performance standard are restricted discretionary activities.

**Note 31.5.5A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

**31.5.6 Noise**

Land use activities must comply with Rule 9.3.6.

**31.5.7 Setback from National Grid**

National Grid sensitive activities must comply with Rule 5.6.1.1.

## **Rule 31.6 Development Performance Standards**

### **31.6.1 Fence Height and Design**

#### 31.6.1.1 Maximum Height

- a. The maximum height of fences along boundaries (including within the boundary setbacks required by Rule 31.6.10.1) is 2m.
- b. For the purposes of calculating maximum height, where a fence is erected atop a retaining wall, the height will be calculated as the combined height measured from ground level to the top of the fence.
- c. Fences that contravene this performance standard are restricted discretionary activities.

#### 31.6.1.2 Visual Permeability

- a. Fences along road boundaries (or within the boundary setbacks required by Rule 31.6.10.1) must be constructed to a length and/or height that maintains visual permeability for 50% of the length of the boundary measured at a height of 1.4m above ground level (see Figure 15.6.2.2A).
- b. Fences along the road boundary of a state highway are exempt from this requirement.
- c. Fences that contravene this performance standard are restricted discretionary activities.

### **31.6.2 Natural Hazards Performance Standards**

#### 31.6.2.1 Relocatable buildings

New buildings containing residential activity on the ground floor in the Hazard 3 (coastal) Overlay Zone must comply with Rule 11.3.3.

#### 31.6.2.2 Maximum area of vegetation clearance in the hazard overlay zones

Vegetation clearance in the Hazard 1 (land instability) or Hazard 2 (land instability) Overlay Zone must comply with Rule 11.3.2.

### **31.6.3 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **31.6.4 Height**

#### 31.6.4.1 Height in relation to boundary

New buildings and additions and alterations to buildings adjoining a residential zone must comply with the height in relation to boundary performance standard of that residential zone, along the adjoining boundary (see Rule 15.6.6.1).

#### 31.6.4.2 Maximum height

- a. The maximum height for new buildings and structures, and additions and alterations, must not exceed 12m above ground level.
- b. Rooftop structures are exempt from the performance standard for maximum height provided they do not exceed the maximum height limit by more than one third of that limit.
- c. Activities that contravene this performance standard are restricted discretionary activities.

### 31.6.5 Location and Screening of Service Areas

1. Service areas must be located or screened so that they are not visible at ground level from adjacent: residential activities, residential zoned properties, or public places.
2. Service areas must not encroach into required parking, loading or manoeuvring areas.
3. Activities that contravene this performance standard are restricted discretionary activities.

### 31.6.6 Materials and Design

Earthquake strengthening must comply with Rule 13.3.2.

### 31.6.7 Maximum Building Site Coverage and Impermeable Surfaces

1. The maximum building site coverage of buildings and impermeable surfaces is:

	<b>Default zone of the school, as indicated in Appendix A9</b>	<b>Maximum building site coverage by buildings (% of site)</b>	<b>Maximum total impermeable site coverage (buildings and impermeable surfaces % of site)</b>
a.	General Residential 2 Zone or Inner City Residential Zone	60%	80%
b.	All other zones	40%	70%

2. Activities that contravene this performance standard are restricted discretionary activities.

### 31.6.8 Number, Location and Design of Ancillary Signs

#### 31.6.8.1 General

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are not visible from outside the Schools Zone;
  - ii. regulatory signs, warning signs, or directional signs; and
  - iii. building names (excluding sponsorship names).
- b. Signs must comply with Rule 6.7.3 where visible from a road.
- c. Signs must not be illuminated or digital.
- d. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### 31.6.8.2 Signs attached to buildings

- a. The height above ground level at the highest point of any sign attached to a building is 4m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs attached to a building must:
  - i. not exceed 1 sign per 30m of road frontage;
  - ii. have a maximum area per display face of 2m<sup>2</sup>;
  - iii. have a maximum of 2 display faces per sign;
  - iv. where attached to the façade of a building, must not project more than 1m from the façade to which it is attached; and

- v. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.

#### 31.6.8.3 Freestanding signs

- a. The maximum number of freestanding signs is 2 per 50m of frontage.
- b. The maximum dimensions of freestanding signs are:
  - i. maximum height of 4m;
  - ii. maximum area of 4m<sup>2</sup>;
  - iii. maximum width of 2m; and
  - iv. maximum depth of 400mm
- c. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.

#### **Note 31.6.8A - Other requirements outside of the District Plan**

- 1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*
  - b. Dunedin City Council Commercial Use of Footpaths Policy
  - c. Dunedin City Council Roadway Bylaw
  - d. Dunedin City Council Traffic and Parking Bylaw

#### **31.6.9 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

### 31.6.10 Setbacks

#### 31.6.10.1 Boundary setbacks

- a. New buildings and structures, and additions and alterations, must be set back from boundaries as follows:

Building or structure		Setback from road boundary where default zone is General Residential 2 or Inner City Residential	Setback from road boundary where default zone is any other zone	Setback from other boundaries
i.	Buildings	3m	4.5m	4.5m
ii.	Structures greater than 3m tall or 10m <sup>2</sup> footprint	3m	4.5m	4.5m

- iii. Except:

1. fences and ancillary signs are exempt from the performance standard;
2. St. Hilda's Collegiate School adjoining Cobden Street and Heriot Row is exempt from the performance standard; and
3. Kavanagh College adjoining York Place, Tennyson Street, Smith Street, or the north side of Rattray Street, is exempt from the performance standard.

- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 31.6.10.2 Setback from coast and water bodies

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

#### 31.6.10.3 Setback from National Grid

New buildings and structures, and additions and alterations must comply with Rule 5.6.1.1.

#### 31.6.10.4 Setback from scheduled tree

New buildings and structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2.

### 31.6.11 Maximum Area of Vegetation Clearance (UBMA)

Vegetation clearance in an **urban biodiversity mapped area** (UBMA) must comply with Rule 10.3.2.4.

## **Rule 31.7 Subdivision Performance Standards**

Subdivision activities must comply with the subdivision performance standards of the default zone (the default zones are listed in Appendix A9).

## **Rule 31.8 Assessment of Controlled Activities**

### **Rule 31.8.1 Introduction**

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 31.8.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 31.9; and
    - iv. the matters of control become matters of discretion and will be assessed as indicated in this section.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 31.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 31.12; and
    - iii. the assessment guidance in this section will also be considered.

### 31.8.2 Assessment of all controlled activities

Development activity	Matters of control	Guidance on the assessment of the resource consents
<p>1. Affecting a scheduled heritage building or a scheduled heritage structure:</p> <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected.</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.4</p>

## **Rule 31.9 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 31.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 31.9.2 - 31.9.6
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 31.9.2 - 31.9.6 apply as follows:
  - a. Rule 31.9.2 applies to all performance standard contraventions;
  - b. Rule 31.9.3 applies to land use performance standard contraventions;
  - c. Rule 31.9.4 applies to development performance standard contraventions;
  - d. Rule 31.9.5 applies to subdivision performance standard contraventions; and
  - e. Rule 31.9.6 applies to performance standard contraventions in a mapped area.

### 31.9.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards, or other site specific factors, make meeting the standard impracticable.</li> <li>c. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> <li>e. The schools are able to operate efficiently and effectively.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>f. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> <li>g. In balancing consideration of the objectives and policies related to the maintenance of heritage values and those related to general amenity, greater weight will usually be placed on heritage policies.</li> </ul>

### 31.9.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Hours of operation	a. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 31.2.2</li> <li>ii. Conference, meeting and function and use of schools' sports fields avoid or, if avoidance is not practicable, adequately mitigate, noise and other adverse effects on the amenity of surrounding residential properties (Policy 31.2.2.6).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The extension of hours will not result in unreasonable nuisance from vehicle movements or other noise.</li> </ul>
3. Minimum mobility car parking	<ul style="list-style-type: none"> <li>a. Effects on the safety and efficiency of the transport network</li> <li>b. Effects on accessibility</li> </ul>	See Rule 6.10

### 31.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resources consents
----------------------	-----------------------	--

### 31.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resources consents
1. <ul style="list-style-type: none"> <li>Boundary setbacks</li> <li>Height in relation to boundary</li> <li>Maximum height</li> </ul>	a. Effects on amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 31.2.2</li> <li>ii. Buildings and structures are of a height and setback from boundaries that ensures there are no more than minor effects on the sunlight access of current and potential future residential buildings and their outdoor living spaces (Policy 31.2.2.1.a).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Residential buildings on neighbouring sites receive adequate natural light and privacy.</li> </ul>
	b. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 31.2.2</li> <li>ii. Buildings and structures are of a height and setback from boundaries that ensures adverse effects on neighbourhood amenity are avoided or, if avoidance is not practicable, are mitigated so that they are no more than minor (Policy 31.2.2.1.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The boundary setback is consistent with the setbacks of adjoining properties.</li> <li>iv. Landscaping or fences screen or soften the visual effects of buildings.</li> </ul>
2. Fence height and design	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 31.2.2</li> <li>ii. Fences adjoining roads or public places are of a height and design that contribute positively to neighbourhood amenity (Policy 31.2.2.3).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The increased height or reduced visual permeability is necessary to meet protection requirements, to provide security, minimise noise effects from a busy road or activity, or for public well-being.</li> <li>iv. The fence design maintains an attractive interface with the street.</li> <li>v. The fence will be screened by landscaping.</li> </ul>
	b. Effects on health and safety	See Rule 9.5

### 31.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resources consents
3. Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
4. Location and screening of service areas	a. Effects on neighbourhood amenity	<i>Relevant objectives and policies:</i> i. Objective 31.2.2 ii. Development maintains or enhances neighbourhood amenity by ensuring service areas are not visible from ground level outside the site (Policy 31.2.2.2).
5. Affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> • Materials and design	a. Effects on heritage values	See Rule 13.5
6. Maximum building site coverage and impermeable surfaces	a. Effects on efficiency and affordability of infrastructure	See Rule 9.5
7. Number, location and design of ancillary signs	a. Effects on neighbourhood amenity	<i>Relevant objectives and policies:</i> i. Objective 31.2.2 ii. Ancillary signs visible outside the zone are located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose (Policy 31.2.2.4).
	b. Effects on the safety and efficiency of the transport network	See Rule 6.10
8. Setback from coast and water bodies	a. Effects on biodiversity values and natural character of riparian margins and the coast	See Rule 10.5
	b. Effects on public access	See Rule 10.5
	c. Risk from natural hazards	See Rule 11.4

### 31.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resources consents
9. Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6
10. Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10

### 31.9.5 Assessment of subdivision performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. Subdivision performance standards	See the subdivision standards of the default zone (the default zones are listed in Appendix A9).

### 31.9.6 Assessment of restricted discretionary performance standard contraventions in a mapped area

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. In a <b>wāhi tūpuna mapped area</b> : <ul style="list-style-type: none"> <li>Setback from coast and water bodies</li> </ul>	a. Effects on cultural values of Manawhenua	See Rule 14.3
2. In an <b>urban biodiversity mapped area</b> : <ul style="list-style-type: none"> <li>Maximum area of vegetation clearance (UBMA)</li> </ul>	a. Effects on biodiversity values	See Rule 10.5
3. In a hazard overlay zone: <ul style="list-style-type: none"> <li>Relocatable buildings (Hazard 3 (coastal) Overlay Zone)</li> <li>Maximum area of vegetation clearance in the hazard overlay zones (Hazard 1 or 2 (land instability) overlay zones)</li> <li>Hazardous substances quantity limits and storage requirements</li> </ul>	a. Risk from natural hazards	See Rule 11.4

## **Rule 31.10 Assessment of Restricted Discretionary Activities**

### **Rule 31.10.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 31.10.2 - 31.10.4:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 31.10.2 - 31.10.4 apply as follows:
  - a. Rule 31.10.2 applies to restricted discretionary land use activities;
  - b. Rule 31.10.3 applies to restricted discretionary development activities; and
  - c. Rule 31.10.4 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 31.9; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 31.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 31.12; and
    - iii. the assessment guidance in this section will also be considered.

### 31.10.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All high trip generators: <ul style="list-style-type: none"> <li>• any activities that generate 250 or more vehicle movements a day</li> </ul>	a. Effects on accessibility b. Effects on the safety and efficiency of the transport network	See Rule 6.11
2. <ul style="list-style-type: none"> <li>• Community and leisure - large scale</li> <li>• Early childhood education - large scale</li> </ul>	a. Effects on the safety and efficiency of the transport network b. Effects on accessibility c. Effects on surrounding sites' residential amenity	See Rule 6.11  <i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>i. Objective 31.2.2</li> <li>ii. Early childhood education - large scale and community and leisure - large scale is designed to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 31.2.2.5).</li> </ol>

### 31.10.3 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>1. In the <b>Hazard 2 (flood) Overlay Zone</b> (see Rule 31.3.6):</p> <ul style="list-style-type: none"> <li>• New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area</li> <li>• Natural hazards sensitive activities</li> <li>• Natural hazards potentially sensitive activities</li> </ul>	<p>a. Risk from natural hazards</p>	<p>See Rule 11.5</p>
<p>2. Activities affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b>:</p> <ul style="list-style-type: none"> <li>• Additions and alterations that affect a protected part of a scheduled heritage building or scheduled heritage structure</li> <li>• Removal for relocation</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.6</p>

**31.10.4 Assessment of restricted discretionary subdivision activities**

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All subdivision activities	a. Effects on the efficient and effective operation of the school	<i>Relevant objectives and policies:</i> <ul style="list-style-type: none"> <li>i. Objectives 31.2.1, 2.3.1</li> <li>ii. Subdivision does not adversely affect the efficient and effective operation of the school (Policy 31.2.1.5.b).</li> </ul>
See the subdivision activities restricted discretionary assessment rule of the default zone (default zones are listed in Appendix A9).		

## **Rule 31.11 Assessment of Discretionary Activities**

### **Rule 31.11.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 31.11.2 - 31.11.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 31.11.2 - 31.11.3 apply as follows:
  - a. Rule 31.11.2 applies to all discretionary land use activities; and
  - b. Rule 31.11.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 31.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
<p>1. All discretionary land use activities listed below:</p> <ul style="list-style-type: none"> <li>• sport and recreation involving the use of motorised vehicles</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.3.1, 31.2.1</li> <li>b. Activities that are not ancillary to schools: <ul style="list-style-type: none"> <li>i. are related to or support the school, or have other operation requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of school;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 31.2.2 and its policies (Policy 31.2.1.3).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>c. For discretionary land use activities, whether any associated development activities meet relevant development performance standards, or are otherwise consistent with relevant objectives and policies for development.</li> <li>d. All relevant land use performance standards are met, including noise and light spill standards.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>e. In assessing the significance of effects, consideration will be given to: <ul style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>f. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>g. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>h. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>

### 31.11.3 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1.</p> <ul style="list-style-type: none"> <li>• Acoustic insulation</li> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>

## **Rule 31.12 Assessment of Non-complying Activities**

### **Rule 31.12.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 31.12.2 - 31.12.5 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 31.12.2 - 31.12.5 apply as follows:
  - a. Rule 31.12.2 applies to all non-complying activities;
  - b. Rule 31.12.3 applies to non-complying land use activities;
  - c. Rule 31.12.4 applies to non-complying development activities; and
  - d. Rule 31.12.5 applies to non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 31.12.2 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resources consents
<p>1. All non-complying activities</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.3.1, 14.2.1, 31.2.1</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Activities not ancillary to schools: <ul style="list-style-type: none"> <li>i. are related to or support the school, or have other operation requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of the school;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. they are designed and operated in line with Objective 31.2.2 and its policies (Policy 31.2.1.3).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>e. In assessing the significance of effects consideration will be given to: <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> <li>f. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>g. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>h. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>i. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>

31.12.3 Assessment of non-complying land use activities	
Activity	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Cemeteries</li> <li>• Crematoriums</li> <li>• Landfills</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</p>
2. Commercial advertising	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 2.4.1</p> <p>b. Policy 2.4.1.6.c</p>

31.12.4 Assessment of non-complying development activities	
Activity	Guidance on the assessment of resource consents
1. Demolition of a protected part of a scheduled heritage building or scheduled heritage structure	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1, and effects on heritage values.</p>

31.12.5 Assessment of non-complying performance standard contraventions	
Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>
2. Setback from National Grid	<p><i>Relevant guidance from other sections:</i></p> <p>a. See Section 5.10 for guidance on the assessment of resource consents in relation to Objective 5.2.X and effects related to the operation, maintenance, upgrading and development of the National Grid.</p>

## **32. Stadium**

### **32.1 Introduction**

The Forsyth Barr Stadium is located at Logan Point, immediately south of Logan Park. The area is approximately 5.1ha in size and is located between Anzac Avenue (SH 88), Ravensbourne Road, the Water of the Leith and the main south railway line. The Forsyth Barr Stadium has a capacity for up to 35,000 spectators and provides a venue for international and local sporting events as well as concerts, community events and conferences.

The zone is bordered by the Industrial Zone to the north-east, east and south, Princes, Parry and Harrow Street Zone to the west, Campus Zone to the north-west and Recreation Zone to the north. The University of Otago uses the University Plaza building at the western end of the stadium for campus activity. This building, and the plaza area in front of it, are zoned Campus. A large car park services the stadium.

The Forsyth Barr Stadium and its associated activities have the potential for visual, noise and traffic effects that may impact on surrounding land uses. The effects of activities within the area must be carefully managed to ensure that there are no adverse impacts on the rest of the city. Activities permitted within the Stadium Zone are limited to those clearly associated with the operation and function of the stadium, or that make use of the stadium facility itself.

## 32.2 Objectives and Policies

Objective 32.2.1	
The stadium is able to operate efficiently and effectively.	
Policy 32.2.1.1	Enable major recreation facility activity in the Stadium Zone.
Policy 32.2.1.2	Provide for activities ancillary to major recreation facility activity where they are designed and operated in line with Objective 32.2.2 and its policies.
Policy 32.2.1.3	Only allow activities that are not ancillary to major recreation facility activity where: <ul style="list-style-type: none"> <li>a. they are related to or support the Forsyth Barr Stadium, or have other operational requirements that mean they need to locate in the zone;</li> <li>b. they will support the efficient and effective operation of the Forsyth Barr Stadium;</li> <li>c. they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>d. they are designed and operated in line with Objective 32.2.2 and its policies.</li> </ul>
Policy 32.2.1.4	Enable land that is surplus to the needs of the Forsyth Barr Stadium to transition to the Campus Zone (except in the <b>hazard facility mapped area</b> ) or Industrial Zone (in the <b>hazard facility mapped area</b> ), so that future development that is not related to major recreation facility activity will be managed in accordance with the objectives and policies of those zones.
Policy 32.2.1.5	Only allow subdivision activities where the subdivision does not adversely affect the efficient and effective operation of the Forsyth Barr Stadium.
Policy 32.2.1.6	Enable car parking areas to be used for stand-alone car parking when not required for major recreation facility activity.

### Objective 32.2.2

Land use activities and development are designed and operated to:

- a. provide a good standard of on-site amenity for visitors;
- b. maintain or enhance the amenity of surrounding areas, as far as practicable; and
- c. avoid adverse effects on people's health and safety.

Policy 32.2.2.1	Require development along Ravensbourne Road ( <b>amenity route mapped area</b> ) to provide a high level of streetscape amenity by: <ol style="list-style-type: none"> <li>a. providing landscaping of a height and density adequate to maintain or enhance the amenity of the route; and</li> <li>b. setting back buildings an adequate distance to allow this landscaping.</li> </ol>
Policy 32.2.2.2	Only allow buildings greater than 20m in height where adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, are minimised as far as practicable through the use of quality and contextually appropriate architectural design.
Policy 32.2.2.3	Only allow buildings over 47m in height where: <ol style="list-style-type: none"> <li>a. the height is essential to the operation of the Forsyth Barr Stadium; and</li> <li>b. the height exceedance is minimal.</li> </ol>
Policy 32.2.2.4	Require ancillary signs visible from outside the zone to be located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose.
Policy 32.2.2.5	Require land use activities to operate, and development to be designed, to ensure that adverse effects from noise on the health of people will be avoided or, if avoidance is not practicable, are insignificant.
Policy 32.2.2.6	Require ancillary commercial activities to be designed, located and operated to primarily serve staff and visitors to the Forsyth Barr Stadium.
Policy 32.2.2.7	Require the Forsyth Barr Stadium to have predominantly muted colours, to minimise adverse effects on the skyline vista of the city and views across the harbour.

## Rules

### Rule 32.3 Activity Status

#### 32.3.1 Rule location

The activity status tables in rules 32.3.3 to 32.3.5 specify the activity status of land use activities, development activities, and subdivision activities in the Stadium Zone, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 32.3.2 Activity status introduction

1. The activity status tables in rules 32.3.3 - 32.3.5 show the activity status of activities in the Stadium Zone and the overlay zones indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Performance Standards*

7. Performance standards are listed in the far right column of the activity status tables.
8. Performance standards apply to permitted, controlled, and restricted discretionary activities.
9. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
10. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

## Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity

### 32.3.3 Activity status table - land use activities

1.	Performance standards that apply to all land use activities		a. Acoustic insulation (noise sensitive activities) b. NA c. Light spill d. Noise
Major facility activities		Activity status	Performance standards
2.	Major recreation facility	P	a. Minimum mobility car parking
3.	All other activities in the major facility activities category	NC	
Community activities		Activity status	Performance standards
4.	Early childhood education	NC	
X.	Community and leisure within a <b>hazard facility mapped area</b>	NC	
5.	All other activities in the community activities category outside a <b>hazard facility mapped area</b>	P	
Commercial activities		Activity status	Performance standards
6.	Commercial activities ancillary to major recreation facility activity	P	a. Location
7.	Visitor accommodation outside a <b>hazard facility mapped area</b>	D	
Y.	Visitor accommodation within a <b>hazard facility mapped area</b>	NC	
8.	Office outside a <b>hazard facility mapped area</b>	D	
Z.	Office within a <b>hazard facility mapped area</b>	NC	
9.	Stand-alone car parking	P	
10.	All other activities in the commercial activities category	NC	
Residential activities		Activity status	Performance standards
11.	All activities in the residential activities category	NC	
Industrial activities		Activity status	Performance standards
12.	All activities in the industrial activities category	NC	
Rural activities		Activity status	Performance standards
13.	All activities in the rural activities category	NC	

#### Note 32.3.3X- Other requirements outside of the District Plan

- Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility

(EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

### 32.3.4 Activity status table - development activities

1.	Performance standards that apply to all buildings and structures activities		<ul style="list-style-type: none"> <li>a. Building design</li> <li>b. Number, location and design of ancillary signs</li> <li>c. Maximum height</li> <li>d. Setback from coast and water bodies</li> </ul>
Buildings and structures activities		Activity status	Performance standards
2.	All new buildings and additions and alterations to buildings	P	a. Boundary setbacks
3.	All other buildings and structures activities	P	
Site development activities		Activity status	Performance standards
4.	Parking, loading and access	P	<ul style="list-style-type: none"> <li>a. Parking, loading and access standards</li> <li>b. Boundary treatments and other landscaping</li> </ul>
5.	New, or additions to, parking areas that result in 50 or more new parking spaces.	RD	<ul style="list-style-type: none"> <li>a. Boundary treatments and other landscaping</li> <li>b. Parking, loading and access standards</li> </ul>
6.	Storage and use of hazardous substances	P	<ul style="list-style-type: none"> <li>a. Hazardous substances quantity limits and storage requirements</li> <li>b. Setback from coast and water bodies</li> </ul>
7.	Vegetation clearance	P	
8.	All other site development activities	P	

#### Note 32.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within Dunedin. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

### 32.3.5 Activity status table - subdivision activities

Subdivision activities	Activity status	Performance standards
1. Subdivision activities	RD	a. Subdivision performance standards

**Note 32.3.5A - Other RMA considerations**

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

**Rule 32.3.6 Transition to Campus Zone or Industrial Zone**

1. On receipt of written notice from both the landowner and operator of Forsyth Barr Stadium (if different) to Dunedin City Council confirming that all or part of the land within the Stadium Zone is surplus to Forsyth Barr Stadium requirements, the provisions of the Stadium Zone will no longer apply to that parcel of land and the provisions of the following zones will apply in full:
  - a. to those parts of the Stadium Zone that are outside the **hazard facility mapped area**, the Campus Zone will apply; and
  - b. to those parts of the Stadium Zone that are inside the **hazard facility mapped area**, the Industrial Zone will apply.

## **Rule 32.4 Notification**

1. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided:
  1. all restricted discretionary activities that list 'effect on cultural values of Manawhenua' as a matter of discretion; and
  2. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat in Appendix A4.
2. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 32.5 Land Use Performance Standards**

### **32.5.1 Acoustic Insulation**

Noise sensitive activities in the Stadium Zone must comply with Rule 9.3.1.

### **32.5.3 Light Spill**

Land use activities must comply with Rule 9.3.5.

### **32.5.4 Location**

1. For commercial activities ancillary to major recreation facility activity, customer access must only be available from inside the stadium buildings.
2. Activities that contravene this performance standard are restricted discretionary activities.

### **32.5.5 Minimum Mobility Car Parking**

1. Major recreation facility activity must provide a minimum of five mobility parking spaces.
2. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 32.5.5A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### 32.5.6 Noise

#### 32.5.6.1 Noise

- a. Land use activities must comply with Rule 9.3.6, except stadium noise events (see Rule 32.5.6.2).

#### 32.5.6.2 Stadium Noise Events

- a. Stadium noise events must not exceed 75 dB LAeq (15 min) or 80 dB LAFmax measured at the **stadium noise mapped area** (see Figure 32.5.6.2A).

- b. The maximum number of stadium noise events allowed within the following noise ranges is:

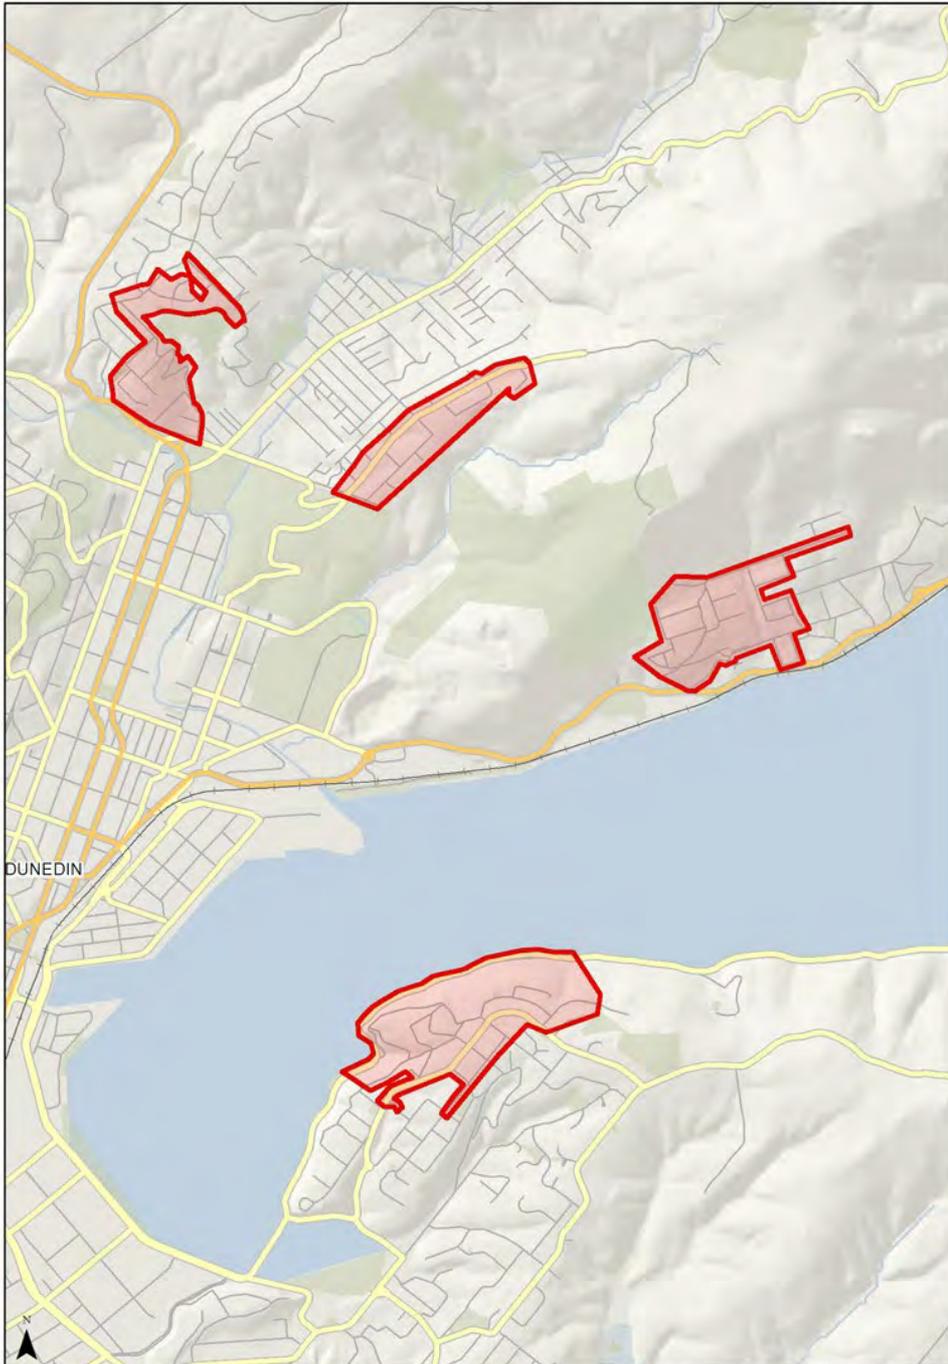

Noise measured at the boundary of the stadium noise mapped area		Maximum number of events per calendar year
i.	Between 65 dB LAeq (15 min) and up to 75 dB LAeq (15 min); or up to 80 dB LAF max	3
ii.	Between 55 dB LAeq (15 min) and up to 65 dB LAeq (15 min); or up to 75 dB LAF max	12 events
iii.	Up to 55 dB LAeq (15 min)	n/a

- c. Stadium noise events must not commence before 10.00am or finish after 12.00am (midnight) for events between 1 November and the end of February, or after 11.00pm for events between 1 March and 31 October. For clarity, the event may exceed four hours, but the period during which any noise is produced that exceeds the noise limits in Rule 9.3.6 must not exceed four hours.
- d. Stadium noise events must comply with the following restrictions:
- There must be no more than two stadium noise events in any one seven-day period, except for two weeks of the year which may have a maximum of four stadium noise events in any one seven-day period; and
  - There must be no more than two stadium noise events that exceed 55 dBA Leq (15 min) within any Sunday to Thursday period inclusive; and
  - Stadium noise events that exceed 55 dBA Leq (15 min) must not be held on consecutive days within any Sunday to Thursday period inclusive; and
  - There must be no more than two stadium noise events that exceed 55 dBA Leq (15 min) on consecutive days.
- e. The Forsyth Barr Stadium must either:
- have a permanent sound system that is commissioned and calibrated to achieve compliance with the above noise standards during stadium noise events, and with the noise standards specified in Rule 9.3.6 at all other times; or
  - for stadium noise events where a non-calibrated sound system is used, monitor and regulate the noise to ensure compliance with the noise standards specified above.
- f. Sound checks involving amplified music which exceed the noise limits specified in Rule 9.3.6 must be between the hours of 9.00am and 7.30pm and a maximum of two hours total duration per day. Sound checks must not exceed the noise limits specified in Rule 32.5.6.2.a.
- g. Stadium noise events expected to exceed 65dB LAeq (15 min) or 75 dB LAFmax must be publicised by:
- an advertisement in both the Otago Daily Times newspaper and Star community newspaper no more than 10 days prior to the event; or
  - a leaflet drop to the **stadium noise leaflet drop mapped area** (see Figure 32.5.6.2A) no more than

10 days prior to the event.

- h. A noise management plan must be provided to the DCC's Environmental Health Department at least 48 hours prior to all stadium noise events detailing:
  - i. the name and contact details of a noise management contact person who will be present at the stadium noise event; and
  - ii. methods by which noise will be managed to ensure it does not exceed the noise levels in Rule 32.5.6.2.a and b.
- i. Activities that exceed the noise limits in 32.5.6.2.a are a non-complying activity.
- j. Activities that contravene all other parts of this rule are a discretionary activity.

Figure 32.5.6.2A: Stadium noise leaflet drop mapped area

## **Rule 32.6 Development Performance Standards**

### **32.6.1 Boundary Treatments and Other Landscaping**

1. Along the Ravensbourne Road frontage (**amenity route mapped area**), where a building is not built to the road frontage, a landscaping area with a minimum width of 1.5m, must be provided along the full length of the road frontage (except for where vehicle access is provided). Landscaping areas must:
  - a. be planted with a mix of trees and shrubs and/or ground cover plants that achieves a total coverage of the ground area in planting (when mature), except for 10% of the area, which may be used for pedestrian paths;
  - b. have an average of one tree for every 5m of frontage;
  - c. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - d. be designed to allow surface water run-off from surrounding areas to enter;
  - e. be protected by a physical barrier that prevents cars from damaging plants;
  - f. for required trees, use trees that are at least 1.5m high at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting;
  - g. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and
  - h. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.
2. Any road boundary fences provided must be placed on the property side of any road frontage landscaping required by this rule.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **32.6.2 Building Design**

1. The Forsyth Barr Stadium must be at least 75% grey tones. Up to 25% of each façade may be any colour, but no one block of colour may occupy more than 5% of the façade.
2. Activities that contravene this performance standard are restricted discretionary activities.

### **32.6.3 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **32.6.4 Maximum Height**

1. The maximum height for new buildings and structures, and additions and alterations is 20m above ground level.
2. Rooftop structures are exempt from the performance standard for maximum height, provided they do not exceed the maximum height limit by more than 5m.
3. Activities that contravene the performance standard for maximum height but are no greater than 47m in height are a restricted discretionary activity.
4. Activities that contravene the performance standard for maximum height and are over 47m in height are a discretionary activity.

### **32.6.5 Number, Location and Design of Ancillary Signs**

#### **32.6.5.1 General**

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are not visible from outside the Stadium Zone;
  - ii. regulatory signs, warning signs, or directional signs; and
  - iii. building names (excluding sponsorship names).
- b. Signs located on or above the footpath must comply with Rule 6.7.2.
- c. Signs must comply with Rule 6.7.3 where visible from a road.
- d. Signs related to commercial activities ancillary to a major recreation facility must not be visible from outside the Stadium Zone.
- e. Signs higher than 4m above ground level must only display the major facility name.
- f. Signs must be set back a minimum of 100 metres from the State Highway 88/Ravensbourne Road roundabout.
- g. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### 32.6.5.2 Signs attached to buildings

- a. Signs must not be attached to roofs.
- b. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- c. Signs attached flat against a building must:
  - i. not exceed one sign per road frontage; and
  - ii. not exceed a display face area of 160m<sup>2</sup> per sign.
- d. If attached on the underside of a verandah or protruding from a building façade, signs must:
  - i. where attached to the façade of a building, not protrude more than 1.5m from the façade;
  - ii. have a maximum area per display face of 2m<sup>2</sup>;
  - iii. have a maximum of 2 display faces; and
  - iv. not exceed 1 sign per 30m of street frontage.

#### 32.6.5.3 Freestanding signs

- a. The maximum number of freestanding signs is:
  - i. 1 per 50m of street frontage.
- b. The maximum area of freestanding signs is 1m<sup>2</sup>, except one sign is allowed with the following maximum dimensions:
  - i. maximum height of 8m; and
  - ii. maximum area of 16m<sup>2</sup>.
- c. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.

#### **Note 32.6.7A - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.

- b. Dunedin City Council Commercial Use of Footpaths Policy.
- c. Dunedin City Council Roading Bylaw.
- d. Dunedin City Council Traffic and Parking Bylaw.

### **32.6.6 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

### **32.6.7 Setbacks**

#### 32.6.7.1 Boundary setbacks

- a. New buildings and structures, and additions and alterations must have a minimum set back from Ravensbourne Road (**amenity route mapped area**) of 10.5m.
- b. Fences and ancillary signs are exempt from this standard.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### 32.6.7.2 Setback from coast and water bodies

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

## **Rule 32.7 Subdivision Performance Standards**

Subdivision activities must comply with Rule 34.7 outside the **hazard facility mapped area** and Rule 19.7 within the **hazard facility mapped area**.

## **Rule 32.8 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 32.8.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 32.8.2 - 32.8.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 32.8.2 - 32.8.5 apply as follows:
  - a. Rule 32.8.2 applies to all performance standard contraventions;
  - b. Rule 32.8.3 applies to land use performance standard contraventions;
  - c. Rule 32.8.4 applies to development performance standard contraventions; and
  - d. Rule 32.8.5 applies to subdivision performance standard contraventions.

### 32.8.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards, or other site specific factors including topography, make meeting the standard impracticable.</li> <li>c. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>d. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> </ul>

### 32.8.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Location	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 32.2.1</li> <li>ii. Ancillary commercial activities are designed, located and operated to primarily serve staff and visitors to the Forsyth Barr Stadium (Policy 32.2.2.6).</li> </ul>
3. Minimum mobility car parking	<ul style="list-style-type: none"> <li>a. Effects on accessibility</li> <li>b. Effects on the safety and efficiency of the transport network</li> </ul>	See Rule 6.10

### 32.8.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Boundary setbacks	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 32.2.2</li> <li>ii. Development along Ravensbourne Road (<b>amenity route mapped area</b>) provides a high level of streetscape amenity by setting back buildings an adequate distance to allow landscaping (Policy 32.2.2.1.b).</li> </ul>
2.	Boundary treatments and other landscaping	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 32.2.2</li> <li>ii. Development along Ravensbourne Road (<b>amenity route mapped area</b>) provides a high level of streetscape amenity by providing landscaping of a height and density adequate to maintain or enhance the amenity of the route (Policy 32.2.2.1.a).</li> </ul>
3.	Building design	a. Effect on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 32.2.2</li> <li>ii. The Forsyth Barr Stadium is predominantly muted colours, to minimise adverse effects on the skyline vista of the city and views across the harbour (Policy 32.2.2.7).</li> </ul>
4.	Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
5.	Maximum height (buildings no greater than 47m in height)	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 32.2.2</li> <li>ii. Buildings greater than 20m in height minimise, as far as practicable, adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, through the use of quality and contextually appropriate architectural design (Policy 32.2.2.2).</li> </ul>

### 32.8.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
6.	Number, location and design of ancillary signs	a. Effects on amenity of surrounding area	<i>Relevant objectives and policies:</i> i. Objective 32.2.2 ii. Ancillary signs visible from outside the zone are located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose (Policy 32.2.2.4).
		b. Effects on the safety and efficiency of the transport network	See Rule 6.10
7.	Setback from coast and water bodies	a. Effects on public access	See Rule 10.5
		b. Effects on biodiversity values and natural character of riparian margins and the coast	
		c. Risk from natural hazards	See Rule 11.4
		d. In a <b>wāhi tupuna mapped area</b> , effects on cultural values of Manawhenua	See Rule 14.3
8.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10

### 32.8.5 Assessment of subdivision performance standard contraventions

Performance standard		Guidance on the assessment of resource consents
1.	Subdivision performance standards	See Rule 34.9 outside the <b>hazard facility mapped area</b> and Rule 19.9 within the <b>hazard facility mapped area</b> .

## **Rule 32.9 Assessment of Restricted Discretionary Activities**

### **Rule 32.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 32.9.2 - 32.9.3 list:
  - a. the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 32.9.2 - 32.9.3 apply as follows:
  - a. Rule 32.9.2 applies to restricted discretionary development activities; and
  - b. Rule 32.9.3 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 32.8; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 32.10; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 32.11; and
    - iii. the assessment guidance in this section will also be considered.

### 32.9.2 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. High trip generators: <ul style="list-style-type: none"> <li>New, or additions to, parking areas that result in 50 or more new parking spaces</li> </ul>	a. Effects on the safety and efficiency of the transport network b. Effects on accessibility	See Rule 6.11

### 32.9.3 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. Subdivision activities	a. Effects on the efficient and effective operation of the stadium	<i>Relevant objectives and policies:</i> i. Objectives 32.2.1, 2.3.1 ii. Subdivision activities do not adversely affect the efficient and effective operation of the stadium (Policy 32.2.1.5).
See Rule 34.10 outside the <b>hazard facility mapped area</b> and Rule 19.10 inside the <b>hazard facility mapped area</b> .		

## **Rule 32.10 Assessment of Discretionary Activities**

### **Rule 32.10.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 32.10.2 - 32.10.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 32.10.2 - 32.10.3 apply as follows:
  - a. Rule 32.10.2 applies to discretionary activities; and
  - b. Rule 32.10.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 32.10.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
<p>1. All discretionary activities which include:</p> <ul style="list-style-type: none"> <li>• Visitor accommodation outside a <b>hazard facility mapped area</b></li> <li>• Office outside a <b>hazard facility mapped area</b></li> </ul>	<p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>a. Objective 2.3.2 and Policy 2.3.2.2</li> <li>b. Objective 2.4.3 and Policy 2.4.3.4</li> <li>c. In assessing the significance of effects, consideration will be given to:               <ol style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ol> </li> <li>d. Objective 32.2.1</li> <li>e. Activities that are not ancillary to major recreation facility activity:               <ol style="list-style-type: none"> <li>i. are related to or support the Forsyth Barr Stadium, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. will support the efficient and effective operation of the Forsyth Barr Stadium;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 32.2.2 and its policies (Policy 32.2.1.3).</li> </ol> </li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>f. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>g. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>h. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ol>

### 32.10.3 Assessment of discretionary performance standard contraventions

Activity	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Acoustic insulation</li> <li>• Noise - where the limits in Rule 9.3.6 are exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health.</p>
2. Stadium noise events (except where limits in Rule 32.5.6.2.a are exceeded)	<p><i>Relevant objectives and policies:</i></p> <p>a. Objectives 32.2.1, 32.2.2 and 9.2.2</p> <p>b. Activities are designed and operated to ensure that adverse effects from noise on the health of people will be avoided or, if avoidance is not practicable, are insignificant (policies 9.2.2.1 and 32.2.2.5).</p>
3. Maximum height (buildings greater than 47m in height)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 2.4.1, Policy 2.4.1.4</p> <p>b. Objective 32.2.2</p> <p>c. Buildings over 47m in height:           <ol style="list-style-type: none"> <li>i. are essential to the operation of the Forsyth Barr Stadium; and</li> <li>ii. the height exceedance is minimal (Policy 32.2.2.3).</li> </ol> </p> <p>d. Buildings minimise, as far as practicable, adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, through the use of quality and contextually appropriate architectural design. (Policy 32.2.2.2).</p>

## **Rule 32.11 Assessment of Non-complying Activities**

### **Rule 32.11.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 32.11.2 - 32.11.3 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 32.11.2 - 32.11.3 apply as follows:
  - a. Rule 32.11.2 applies to non-complying land use activities; and
  - b. Rule 32.11.3 applies to non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 32.11.2 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying land use activities</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.3.1, 2.3.3</li> <li>b. Policy 2.3.3.2</li> <li>c. Objective 2.3.2 and Policy 2.3.2.2</li> <li>d. Objective 2.4.3 and Policy 2.4.3.4</li> <li>e. Objective 32.2.1</li> <li>f. Activities that are not ancillary to major recreation facility activity: <ul style="list-style-type: none"> <li>i. are related to or support the Forsyth Barr Stadium, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. will support the efficient and effective operation of the Forsyth Barr Stadium;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 32.2.2 and its policies (Policy 32.2.1.3).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>g. In assessing the significance of effects, consideration will be given to: <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities.</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> </li> <li>h. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>i. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>j. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>
<p>2. Commercial advertising</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Policy 2.4.1.6.c</li> </ul>

### 32.11.2 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
3. In a <b>hazard facility mapped area</b> , bulk fuel storage facilities sensitive activities	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and Policy 9.2.2.15 and the risks to people from an emergency event occurring at a hazard facility.</p>

### 32.11.3 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on assessment of resource consents
<p>1.</p> <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit in Rule 9.3.6 is exceeded by 5dB LAeq (15 min) or more</li> <li>• Stadium noise events - where the limit in Rule 32.5.6.2.a is exceeded</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health.</p>

## **33. Taieri Aerodrome**

### **33.1 Introduction**

The Taieri Aerodrome is situated on Stedman Road, North Taieri. The aerodrome occupies an area of approximately 38 hectares and is owned by the Dunedin City Council and leased and operated by the Otago Aero Club. The aerodrome is a highly valued recreational facility for the aeronautical community and enables recreational flying and flight training for private individuals and commercial pilots. It is the home of the Otago Rescue Helicopter Trust, which provides an emergency search and rescue service across Otago. It also serves as a secondary airport in the event of an emergency at Dunedin International Airport. The site was previously zoned industrial and there is a desire to allow ongoing industrial development on the site where this does not conflict with the operation of the aerodrome.

The aerodrome site is surrounded by several zones. To the north and west are areas of industrial zoned land, and to the south are areas of rural residential and general residential 1 land. To the west and east are areas of rural zoned land which are predominantly used for grazing and livestock. The aerodrome has particular requirements in terms of height of structures under and close to its approach and take-off flight fans. This issue is reflected in the height rules that relate to land in the vicinity of the flight path.

The activities located at the Taieri Aerodrome site have the potential to generate effects, particularly noise, which may adversely affect surrounding land uses. Noise sensitive activities, including housing, within and close to the zone are required to have acoustic insulation.

The zone enables development and land use associated with the operation and functioning of the aerodrome, and industry activities. Industrial development within the Taieri Aerodrome Zone is managed in the same way as in the neighbouring Industrial Zone. The zone provisions provide certainty for users and the wider community regarding the expected use of the aerodrome site, recognising the function of the aerodrome as a recreational resource for the community, while appropriately managing effects on neighbouring land uses.

There is a scheduled heritage building on the site, the former National Airways Hangar. Rules within the zone manage work undertaken on this building.

## 33.2 Objectives and Policies

<b>Objective 33.2.1</b>	
Taieri Aerodrome is able to operate efficiently and effectively.	
Policy 33.2.1.1	Enable Taieri Aerodrome and industry.
Policy 33.2.1.2	Provide for activities that are ancillary to Taieri Aerodrome or industry where they are designed and operated in line with Objective 33.2.2 and its policies.
Policy 33.2.1.3	Only allow activities that are not ancillary to Taieri Aerodrome where: <ol style="list-style-type: none"> <li>they are related to or support Taieri Aerodrome, or have other operational requirements that mean they need to locate in the zone;</li> <li>they will support the efficient and effective operation of the Taieri Aerodrome;</li> <li>they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>they are designed and operated in line with Objective 33.2.2 and its policies.</li> </ol>
Policy 33.2.1.4	Enable land that is surplus to the needs of the Taieri Aerodrome to transition to Industrial Zone, so that future development that is not related to Taieri Aerodrome activity will be managed in accordance with the objectives and policies of that zone.
Policy 33.2.1.5	Only allow subdivision activities where: <ol style="list-style-type: none"> <li>they are in accordance with the provisions of the Industrial Zone; and</li> <li>the subdivision does not adversely affect the efficient and effective operation of Taieri Aerodrome.</li> </ol>

<b>Objective 33.2.2</b>	
Land use activities and development necessary for the continued operation of the Taieri Aerodrome is enabled, while ensuring development maintains the amenity of the adjoining residential and rural areas, as far as practicable.	
Policy 33.2.2.1	Require buildings and structures to be of a height and setback from boundaries to maintain the amenity of surrounding areas.
Policy 33.2.2.2	Require materials stored outside, that may become airborne due to wind, to be adequately secured to prevent materials escaping and contaminating any off-site area.
Policy 33.2.2.3	Require ancillary signs visible from outside the zone to be located and designed to maintain neighbourhood amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose.
Policy 33.2.2.4	Require ancillary commercial activities to be designed and operated to primarily serve staff and visitors to the Taieri Aerodrome.

## Rules

### Rule 33.3 Activity Status

#### 33.3.1 Rule location

The activity status tables in rules 33.3.3 to 33.3.6 specify the activity status of land use activities, development activities, and subdivision activities in the Taieri Aerodrome Zone and relevant overlay zones, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 33.3.2 Activity status introduction

1. The activity status tables in rules 33.3.3 - 33.3.5 show the activity status of activities in the Taieri Aerodrome Zone and the overlay zones indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, and c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Additional activity status rules in hazard overlay zones*

7. For the purpose of the hazards provisions, activities are categorised as natural hazards sensitive activities, natural hazards potentially sensitive activities or natural hazards least sensitive activities. The activities that are in each hazards sensitivity category are included in the definitions section and in Section 11.1.
8. In the Hazard (flood) 2 Overlay Zone, the activity statuses in Rule 33.3.6 apply to the following activities:
  - a. natural hazards sensitive activities;
  - b. natural hazards potentially sensitive activities; and
  - c. new buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area.
9. Where the activity status in Rule 33.3.6 differs from that in rules 33.3.3 - 33.3.5, the most restrictive activity

status always applies.

10. In addition to the rules in Rule 33.3.6, performance standards for development activities within hazard overlay zones are included in rules 33.3.3 - 33.3.5.
11. Activities in a hazard overlay zone must comply with all of the rules in 33.3.3 - 33.3.5.

#### *Performance Standards*

12. Performance standards are listed in the far right column of the activity status tables.
13. Performance standards apply to permitted, controlled, and restricted discretionary activities.
14. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
15. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

#### **Legend**

<b>Acronym</b>	<b>Meaning</b>
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
Haz2	Hazard 2 Overlay Zones

### 33.3.3 Activity status table - land use activities

1.	Performance standards that apply to all land use activities		a. Acoustic insulation b. NA c. Light spill d. Noise
Major facility activities		Activity status	Performance standards
2.	Taieri Aerodrome	P	
3.	Airport	P	
4.	Emergency services	RD	
5.	All other activities in the major facility activities category	NC	
Commercial activities		Activity status	Performance standards
6.	Retail ancillary to Taieri Aerodrome or industry	P	a. Maximum gross floor area (retail ancillary to industry)
7.	Restaurants ancillary to Taieri Aerodrome or industry	P	a. Hours of operation
8.	All other activities in the commercial activities category	NC	
Residential activities		Activity status	Performance standards
9.	All activities in the residential activities category	NC	
Community activities		Activity status	Performance standards
10.	Community and leisure	P	
11.	Conservation	P	
12.	All other activities in the community activities category	D	
Rural activities		Activity status	Performance standards
13.	Grazing	P	
14.	Farming	P	
15.	Landfills	NC	
16.	All other activities in the rural activities category	D	
Industrial Activities		Activity status	Performance standards
17.	All activities in the industrial activities category	P	a. Minimum mobility car parking b. Minimum vehicle loading

#### Note 33.3.3X- Other requirements outside of the District Plan

- Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility

(EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

### 33.3.4 Activity status table - development activities

1.	Performance standards that apply to all buildings and structures activities		<ul style="list-style-type: none"> <li>a. Boundary setbacks</li> <li>b. Maximum height</li> <li>c. Number, location and design of ancillary signs</li> <li>d. Setback from coast and water bodies</li> </ul>
Building and structures activities (excluding activities affecting a protected part of a scheduled heritage building or scheduled heritage structure. See rows 3-10)		Activity status	Performance standards
2.	All buildings and structures activities	P	
Building and structures activities that affect a protected part of a scheduled heritage building or scheduled heritage structure		Activity status	Performance standards
3.	Repairs and maintenance	P	
4.	Restoration of a building or structure that has a Heritage New Zealand Category 1 listing as detailed in Appendix A1.1	C	
5.	Restoration of all other scheduled heritage buildings and structures	P	
6.	Earthquake strengthening where external features only are protected	C	<ul style="list-style-type: none"> <li>a. Materials and design</li> </ul>
7.	Signs attached to buildings or structures	P	
8.	All other additions and alterations	RD	
9.	Demolition	NC	
10.	Removal for relocation	RD	
Site development activities		Activity status	Performance standards
11.	Outdoor storage	P	<ul style="list-style-type: none"> <li>a. Location and screening of outdoor storage</li> </ul>
12.	Parking, loading and access	P	<ul style="list-style-type: none"> <li>a. Parking, loading and access standards</li> </ul>
13.	New, or additions to, parking areas that result in 50 or more new parking spaces.	RD	<ul style="list-style-type: none"> <li>a. Parking, loading and access standards</li> </ul>
14.	Storage and use of hazardous substances	P	<ul style="list-style-type: none"> <li>a. Hazardous substances quantity limits and storage requirements</li> <li>b. Setback from coast and water bodies</li> </ul>
15.	All other site development activities	P	

**Note 33.3.4A - General advice**

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.

**33.3.5 Activity status table - subdivision activities**

Subdivision activities	Activity status	Performance standards
1. Subdivision activities	RD	a. Subdivision performance standards

**Note 33.3.5A - Other RMA considerations**

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

### 33.3.6 Activity status in the Hazard 2 (flood) Overlay Zone

Activity	Activity status
Land Use Activities	
1. Natural hazards sensitive activities	RD
2. Natural hazards potentially sensitive activities	RD
Development Activities	
3. New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m <sup>2</sup> of new ground floor area	RD

#### Note 33.3.6A - Other RMA considerations

X Section 10 of the RMA (existing use rights) provides for land to be used in a manner that contravenes a rule in a district plan if the use was lawfully established before the rule became operative or the proposed plan was notified, and the effects of the use are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified.

- Accordingly, activities that are shown to have effects that are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified will not usually trigger the provisions for natural hazards sensitive activities and natural hazards potentially sensitive activities in Rule 33.3.6. However, Council will consider specific circumstances associated with the development and how this affects the character, intensity and scale of effects from the land use activity.

#### Note 33.3.6B - Other requirements outside the District Plan

- Clause E1 – Surface water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework (including earthworks) in relation to managing surface water and effects on other property.
- Buildings and structures that will divert water may require resource consent under the Otago Regional Plan: Water.
- If buildings and structures affect the flow of water, this effect is also subject to the common law principle of natural servitude.

### 33.3.7 Transition to the Industrial Zone

On receipt of written notice from both the landowner and operator of Taieri Aerodrome (if different) to Dunedin City Council confirming that all or part of the land within the Taieri Aerodrome Zone is surplus to Taieri Aerodrome requirements, the provisions of the Taieri Aerodrome Zone will no longer apply to that parcel of land and the provisions of the Industrial Zone (and the **Dukes Road North mapped area**) will apply in full.

## **Rule 33.4 Notification**

1. Applications for resource consent for the following activities will be considered without the need to obtain a written approval of affected persons and will not be notified in accordance with section 95A or 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:
  1. earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is not listed by Heritage New Zealand.
2. With respect to resource consent applications for the following activities, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:
  1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is listed by Heritage New Zealand.
3. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## Rule 33.5 Land Use Performance Standards

### 33.5.1 Acoustic Insulation

Noise sensitive activities in the Taieri Aerodrome Zone must comply with Rule 9.3.1.

### 33.5.3 Hours of Operation

1. Restaurants ancillary to Taieri Aerodrome or industry must not be open before 6.00am or after 6.00pm.
2. Activities that contravene this performance standard are restricted discretionary activities.

### 33.5.4 Light Spill

Land use activities must comply with Rule 9.3.5.

### 33.5.5 Maximum Gross Floor Area

1. The gross floor area used for retail ancillary to industry must not exceed 10% of the gross floor area of the premises.
2. Activities that contravene this performance standard are restricted discretionary activities.

### 33.5.6 Minimum Mobility Car Parking

1. NA.
2. Industry must provide mobility parking spaces as follows:

	<b>Total number of parking spaces provided</b>	<b>Minimum number of these that must be mobility parking spaces</b>
a.	1 - 20	1 parking space
b.	21 - 50	2 parking spaces
c.	For every additional 50 parking spaces	1 additional parking space

3. NA.
4. Parking spaces may be shared between land use activities (i.e. the same parking spaces may be used to fulfil the minimum mobility car parking requirement for more than one land use activity), as long as the hours of operation of the land use activities do not overlap.
5. NA.
6. NA.
7. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 33.5.6A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### 33.5.7 Minimum Vehicle Loading

1. Industry must provide one loading space, to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10).
2. Industrial ancillary tourism must provide one loading space to accommodate a coach (See Appendix 6B, Figure 6B.12).
3. Activities that contravene this performance standard are restricted discretionary activities.

### **33.5.8 Noise**

Land use activities must comply with Rule 9.3.6.

## **Rule 33.6 Development Performance Standards**

### **33.6.1 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **33.6.2 Location and Screening of Outdoor Storage**

1. Outdoor storage must not encroach into required parking, loading, manoeuvring, or outdoor living areas.
2. Outdoor storage must be managed in a way that does not result in unreasonable visual amenity effects or create nuisance effects.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **33.6.3 Materials and Design**

Earthquake strengthening must comply with Rule 13.3.2.

### **33.6.4 Maximum Height**

1. The maximum height for new buildings and structures, and additions and alterations, must not exceed 18m above ground level.
2. Rooftop structures are exempt from the performance standard for maximum height provided they do not exceed the maximum height limit by 5m.
3. New buildings and structures, and additions and alterations must not protrude through the height restriction for the Taieri Aerodrome approach and take-off fans shown on the **Taieri Aerodrome flight fan mapped area**.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **33.6.5 Number, Location and Design of Ancillary Signs**

#### **33.6.5.1 General**

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are not visible from outside the Taieri Aerodrome Zone;
  - ii. regulatory signs, warning signs, or directional signs; and
  - iii. building names (excluding sponsorship names).
- b. Signs related to ancillary retail and ancillary restaurants must not be visible outside the Taieri Aerodrome Zone.
- c. Signs must comply with Rule 6.7.3 where visible from a road.
- d. Signs must not be illuminated or digital.
- e. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### **33.6.5.2 Signs attached to buildings**

- a. The height, above ground level, at the highest point of any sign, attached to a building is 4m.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs attached to a building must:
  - i. not exceed one sign per 50m of road frontage;

- ii. have a maximum area per display face of 2m<sup>2</sup>;
- iii. have a maximum of two display faces per sign;
- iv. where attached to the façade of a building, must not project more than 1m from the façade to which it is attached; and
- v. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.

### 33.6.5.3 Freestanding signs

- a. The maximum number of permanently fixed freestanding signs is one per 50m of road frontage.
- b. The maximum number of portable freestanding signs is one per 50m of road frontage.
- c. The maximum dimensions of freestanding signs are:
  - i. maximum height of 4m;
  - ii. maximum area of 8m<sup>2</sup>;
  - iii. maximum width of 2m; and
  - iv. maximum depth of 400mm.
- d. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.

#### **Note 33.6.5A - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy.
  - c. Dunedin City Council Roadway Bylaw.
  - d. Dunedin City Council Traffic and Parking Bylaw.

### 33.6.6 Parking, Loading and Access Standards

Parking, loading and access must comply with Rule 6.6.

### 33.6.7 Setbacks

#### 33.6.7.1: Boundary setbacks

- a. New buildings and structures, and additions and alterations, must be set back from zone boundaries as follows:

Location		Setback distance
i.	From the boundary of a residential zone	5m
ii.	From the boundary fronting onto Dukes Road North	10.5m

- iii. Except fences and ancillary signs are exempt from the performance standard.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 33.6.7.2: Setback from coast and water bodies

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

## **Rule 33.7 Subdivision Performance Standards**

Subdivision activities must comply with Rule 19.7.

## **Rule 33.8 Assessment of Controlled Activities**

### **Rule 33.8.1 Introduction**

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 33.8.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 33.9; and
    - iv. the matters of control become matters of discretion and will be assessed as indicated in this section.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 33.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 33.12; and
    - iii. the assessment guidance in this section will also be considered.

### 33.8.2 Assessment of all controlled activities

Development activity	Matters of control	Guidance on the assessment of the resource consents
<p>1. Affecting a scheduled heritage building or a scheduled heritage structure:</p> <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.4</p>

## **Rule 33.9 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 33.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 33.9.2 - 33.9.6:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rule 33.9.2 - 33.9.5 apply as follows:
  - a. Rule 33.9.2 applies to all performance standard contraventions;
  - b. Rule 33.9.3 applies to land use performance standard contraventions;
  - c. Rule 33.9.4 applies to development performance standard contraventions; and
  - d. Rule 33.9.5 applies to subdivision performance standard contraventions.

### 33.9.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>The degree of non-compliance with the performance standard is minor.</li> <li>The need to meet other performance standards, or other site specific factors including topography, make meeting the standard impracticable.</li> <li>Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> <li>In balancing consideration of the objectives and policies related to the maintenance of heritage values and those related to general amenity, greater weight will usually be placed on heritage policies.</li> </ol>

### 33.9.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. <ul style="list-style-type: none"> <li>Hours of operation</li> <li>Maximum gross floor area</li> </ul>	<ol style="list-style-type: none"> <li>Effects on the vibrancy, and economic and social success of the CBD and centres</li> </ol>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>Objective 33.2.1</li> <li>Ancillary commercial activities are designed, located and operated primarily to serve users of Taieri Aerodrome (Policy 33.2.2.4).</li> </ol>
3. Minimum mobility car parking	<ol style="list-style-type: none"> <li>Effects on the safety and efficiency of the transport network</li> <li>Effects on accessibility</li> </ol>	See Rule 6.10
4. Minimum vehicle loading	<ol style="list-style-type: none"> <li>Effects on the safety and efficiency of the transport network</li> </ol>	See Rule 6.10

### 33.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>Boundary setbacks</li> <li>Maximum height</li> </ul>	a. Effects on the amenity of surrounding areas	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 33.2.2</li> <li>ii. Buildings and structures are of a height and setback from boundaries that maintains the amenity of surrounding areas (Policy 33.2.2.1).</li> </ul>
2. Hazardous substance quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
3. Location and screening of outdoor storage	a. Effect on the amenity of surrounding areas	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 33.2.2</li> <li>ii. Materials stored outside that may become airborne due to wind, are adequately secured to prevent materials escaping and contaminating any off-site area (Policy 33.2.2.2).</li> </ul>
4. Number, location and design of ancillary signs	a. Effect on the amenity of surrounding areas	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 32.2.2</li> <li>ii. Ancillary signs visible from outside the zone are located and designed to maintain neighbourhood amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose (Policy 33.2.2.3).</li> </ul>
	b. Effects on the safety and efficiency of the transport network	See Rule 6.10
5. Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
6. Setback from coast and water bodies	a. Effects on biodiversity values and natural character of the coast and riparian margins	See Rule 10.5
	b. Effects on public access	See Rule 10.5
	c. Risk from natural hazards	See Rule 11.4

### 33.9.5 Assessment of subdivision performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. Subdivision performance standards	See Rule 19.9

### 33.9.6 Assessment of restricted discretionary performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In the <b>Taieri Aerodrome flight fan mapped area</b> : <ul style="list-style-type: none"> <li>Maximum height (Rule 16.6.5.3)</li> </ul>	a. Effects on health and safety	See Rule 9.5
2. In a hazard overlay zone <ul style="list-style-type: none"> <li>Hazardous substances quantity limits and storage requirements</li> </ul>	a. Risk from natural hazards	See Rule 11.4
3. Affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> <ul style="list-style-type: none"> <li>Materials and design</li> </ul>	a. Effects on heritage values	See Rule 13.5

## **Rule 33.10 Assessment of Restricted Discretionary Activities**

### **Rule 33.10.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 33.10.2 - 33.10.4:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 33.10.2 - 33.10.4 apply as follows:
  - a. Rule 33.10.2 applies to restricted discretionary land use activities;
  - b. Rule 33.10.3 applies to restricted discretionary development activities; and
  - c. Rule 33.10.4 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 33.9; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 33.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 33.12; and
    - iii. the assessment guidance in this section will also be considered.

### 33.10.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All high trip generators: <ul style="list-style-type: none"> <li>• any activities that generate 250 or more vehicle movements a day</li> </ul>	a. Effects on accessibility	See Rule 6.11
	b. Effects on the safety and efficiency of the transport network	
2. Emergency services	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
	b. Positive effects for natural hazard resilience	<i>Relevant objectives and policies:</i> <ul style="list-style-type: none"> <li>i. Policy 2.2.1.11</li> </ul>

### 33.10.3 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. High trip generators: <ul style="list-style-type: none"> <li>New, or additions to, parking areas that result in 50 or more new parking spaces</li> </ul>	a. Effects on the safety and efficiency of the transport network b. Effects on accessibility	See Rule 6.11
2. Activities affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> : <ul style="list-style-type: none"> <li>Additions and alterations that affect a protected part of a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b></li> <li>Removal for relocation</li> </ul>	a. Effects on heritage values	See Rule 13.6
3. In the <b>Hazard 2 (flood) Overlay Zone</b> (see Rule 33.3.6): <ul style="list-style-type: none"> <li>New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area</li> </ul>	a. Risk from natural hazards	See Rule 11.5
4. In the <b>Hazard 2 (flood) Overlay Zone</b> : <ul style="list-style-type: none"> <li>Natural hazards sensitive activities</li> <li>Natural hazards potentially sensitive activities</li> </ul>	a. Risk from natural hazards	See Rule 11.5

### 33.10.4 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
----------	-----------------------	---

**33.10.4 Assessment of restricted discretionary subdivision activities**

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All subdivision activities	a. Effects on the efficient and effective operation of Taieri Aerodrome	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 33.2.1</li> <li>ii. Objective 2.3.1</li> <li>iii. Subdivision does not adversely affect the efficient and effective operation of Taieri Aerodrome (Policy 33.2.1.5.b).</li> </ul>
	See Rule 19.10	

## **Rule 33.11 Assessment of Discretionary Activities**

### **Rule 33.11.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 33.11.2 - 33.11.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 33.11.2 - 33.11.3 apply as follows:
  - a. Rule 33.11.2 applies to all discretionary activities; and
  - b. Rule 33.11.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

33.11.2 Assessment of all discretionary activities	
Activity	Guidance on the assessment of resource consents
<p>1. All discretionary land use activities listed below:</p> <ul style="list-style-type: none"> <li>• all activities in the community activities category (except community and leisure, and conservation)</li> <li>• all activities in the rural activities category (except grazing, farming and landfills)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>Objectives 2.3.1, 2.3.3, 33.2.1</li> <li>Activities that are ancillary to Taieri Aerodrome or industry are designed and operated in line with Objective 33.2.2 and its policies (Policy 33.2.1.2).</li> <li>Activities that are not ancillary to Taieri Aerodrome activity:             <ol style="list-style-type: none"> <li>are related to or support the Taieri Aerodrome, or have other operational requirements that mean they need to locate in the zone;</li> <li>support the efficient and effective operation of Taieri Aerodrome;</li> <li>are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>are designed and operated in line with Objective 33.2.2 and its policies (Policy 33.2.1.3).</li> </ol> </li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>For discretionary land use activities, whether any associated development activities meet relevant development performance standards, or are otherwise consistent with relevant objectives and policies for development.</li> <li>All relevant land use performance standards are met, including noise and light spill standards.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>In assessing the significance of effects, consideration will be given to:             <ol style="list-style-type: none"> <li>short to long term effects, including effects in combination with other activities; and</li> <li>the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ol> </li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ol>

### 33.11.3 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Acoustic insulation</li> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>

## **Rule 33.12 Assessment of Non-complying Activities**

### **Rule 33.12.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 33.12.2 - 33.12.5 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 33.12.2 - 33.12.5 apply as follows:
  - a. Rule 33.12.2 applies to all non-complying activities;
  - b. Rule 33.12.3 applies to non-complying land use activities;
  - c. Rule 33.12.4 applies to non-complying development activities; and
  - d. Rule 33.12.5 applies to non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 33.12.2 Assessment of all non-complying activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying land use activities listed below:</p> <ul style="list-style-type: none"> <li>• all activities in the major facility activities category (except Taieri Aerodrome, Airport, and emergency services)</li> <li>• all activities in the commercial activities category (except retail or restaurants ancillary to Taieri Aerodrome or industry)</li> <li>• all activities in the residential activities category</li> <li>• landfills</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objectives 2.3.1, 2.3.3</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 33.2.1 and Policy 33.2.1.3</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>e. In assessing the significance of effects consideration will be given to:               <ol style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ol> </li> <li>f. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>g. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>h. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>i. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ol>

### 33.12.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
1. Commercial advertising	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Policy 2.4.1.6.c</li> </ul>

### 33.12.4 Assessment of non-complying development activities

Activity	Guidance on the assessment of resource consents
1. Demolition of a protected part of a scheduled heritage building or scheduled heritage structures	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1 and effects related to heritage values.</li> </ul>

### 33.12.5 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ul>

## 34. Campus

### 34.1 Introduction

Tertiary education contributes to the social and cultural well-being of the community and creates significant economic activity in the city. It also gives rise to a range of effects that require management. The tertiary education providers within the Campus Zone are the University of Otago and Otago Polytechnic.

The University of Otago, founded in 1869 and opened in 1871, is New Zealand's oldest university. Otago Polytechnic traces its ancestry back to the Dunedin Technical School, which was established in 1889 and has been operating as the Otago Polytechnic since 1966.

The Campus Zone covers a relatively large area of the inner city, located between Dunedin's central city, Forsyth Barr Stadium, the North Dunedin residential area and the Dunedin Botanic Garden, and includes the campuses of the University of Otago and Otago Polytechnic. Included within the Campus Zone are a range of land use activities that include teaching, training, learning and research and any ancillary activities associated with the functioning of the University of Otago and Otago Polytechnic.

The key resource management issues that need to be managed through the proposed Campus Zone provisions relate to the economic importance of the tertiary education sector, maintaining and enhancing campus amenity, and addressing traffic and parking. These are further elaborated on as follows:

- Due to its economic importance, the Campus Zone needs to ensure that the University of Otago and Otago Polytechnic can continue to operate efficiently and effectively.
- Development needs to be designed to maintain the accessibility and amenity of the zone as maintaining the quality of the campus environment is vital to attracting staff and students. Also, as the campus borders residential zones on several sides it has the potential to affect the amenity of these areas, particularly in relation to building heights, which could cause shading or overshadowing of private residences.
- Activities associated with the University of Otago and Otago Polytechnic generate significant traffic and parking demand from staff, students, and visitors to the campus. These activities place pressure on on-street parking resources, thereby competing with the needs of residents and road users, and other activities in these areas.

Land use activities provided for in the Campus Zone include lecture theatres, laboratories, libraries, joint venture facilities, administrative services, and staff and student facilities, including student and staff employment, health and well-being support services, student union offices, student and staff clubs and organisations. Outside the Campus Zone, activities carried out by the University of Otago and Otago Polytechnic are provided for through other defined activities definitions, for example training and education activity, as well as in the **Campus mapped area**. The **Campus mapped area** extends across an area of the University of Otago Campus that is included in the Suburban Centre Zone that extends along Albany Street to enable the University of Otago's student services and retail hub in the Information Services Building/University Union complex. The **Campus mapped area** also extends along the northern end of the Steamer Basin in the Harbourside Edge Zone to facilitate redevelopment of that space.

Within the Campus Zone sport and recreation, entertainment and exhibition, training and education, conference, meeting and function, standard residential, visitor accommodation and campus-affiliated office activities are also provided for, as well as a limited range of retail activity and restaurants where they are ancillary to campus activities, and retail ancillary to industry. Performance standards apply within the Campus Zone which appropriately manage adverse effects within the zone and on the surrounding environment.

## 34.2 Objectives and Policies

<b>Objective 34.2.1</b>	
The Campus Zone enables the University of Otago and the Otago Polytechnic to operate efficiently and effectively as tertiary education and research facilities, while also providing for residential living and a limited range of specified activities that are closely associated to and compatible with these tertiary institutions.	
Policy 34.2.1.1	Enable campus activity within the Campus Zone.
Policy 34.2.1.2	Provide for: <ul style="list-style-type: none"> <li>a. standard residential activity at an inner city residential density, dairies, entertainment and exhibition and conference, meeting and function, training and education activities; and</li> <li>b. visitor accommodation, student hostels, early childhood education, community and leisure, and sport and recreation activities; and</li> <li>c. industry activity and retail ancillary to industry;</li> </ul> where the effects of these activities will be adequately managed in line with Objective 34.2.2 and its policies.
Policy 34.2.1.3	Provide for retail and restaurant ancillary to campus activity where they are designed and operated in line with Objective 34.2.2 and its policies.
Policy 34.2.1.4	Limit the size of working from home and dairies in the Campus Zone to a size that: <ul style="list-style-type: none"> <li>a. is compatible with the character and amenity of the Campus Zone; and</li> <li>b. does not detract from the vibrancy and functioning of the centres hierarchy.</li> </ul>
Policy 34.2.1.5	Only allow restaurants not ancillary to campus activity, office (other than campus-affiliated office, registered health practitioners and training and education) and supported living facilities (other than student hostels) where: <ul style="list-style-type: none"> <li>a. they are related to, or are necessary to support campus activity, or have other operational requirements which mean they need to locate in this zone; and</li> <li>b. they will support the efficient and effective operation of campus activity; and</li> <li>c. they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>d. they are designed and operated in line with Objective 34.2.2 and its policies.</li> </ul>
Policy 34.2.1.6	Avoid activities that are not compatible with the operation of campus activity or are most appropriately located in another zone.
Policy 34.2.1.7	Only allow subdivision activities: <ul style="list-style-type: none"> <li>a. if they are intended and/or capable of being used for standard residential activity, and they are in accordance with the objectives, policies and rules of the residential zones; or <ul style="list-style-type: none"> <li>X. if they are necessary for the efficient and effective operation of campus activity; or</li> </ul> </li> <li>b. if they are necessary for the disposal of surplus land in accordance with Policy 2.3.1.6.</li> </ul>
Policy 34.2.1.X	Limit the scale of retail ancillary to industry to a size that: <ul style="list-style-type: none"> <li>a. is clearly subordinate to and part of the operation of the primary industry activity;</li> <li>b. does not conflict with objectives 2.3.2 and 2.4.3; and</li> <li>c. does not create adverse effects on other industrial activities, for example from traffic, parking, or reverse sensitivity.</li> </ul>

### Objective 34.2.2

Land use, development and subdivision activities maintain or enhance:

- a. the distinctive character and overall amenity of the university and polytechnic campus environments and surrounding streets; and
- b. the amenity of residential properties and the Recreation Zone located adjacent to the Campus Zone, as far as practicable; and
- c. on-site amenity of residential activities located in the Campus Zone.

Policy 34.2.2.1	Require buildings and structures to be of a height, height in relation to boundary, and setback that: <ol style="list-style-type: none"> <li>a. maintains adequate sunlight access to adjoining sites used for residential activity, or adjoining residential and recreation zoned sites; and</li> <li>b. avoids or minimises, as far as practicable, significant adverse wind effects.</li> </ol>
Policy 34.2.2.2	Require outdoor storage to be located and stored in a way that does not result in unreasonable visual amenity effects or create nuisance effects.
Policy 34.2.2.3	Require standard residential activity, including any associated development activities, to meet the relevant policies and objectives and performance standards of the Inner City Residential Zone.
Policy 34.2.2.4	Require development activities to maintain a reasonable level of visual and environmental amenity adjacent to public roads.
Policy 34.2.2.5	Require fences to be of a height and design that contributes positively to streetscape amenity and the amenity of the Campus Zone.
Policy 34.2.2.6	Require ancillary signs to be located and designed to maintain streetscape amenity including by being of an appropriate size and number to convey information about the name, location and nature of the activity on site to passing pedestrians and vehicles and not being oversized or too numerous for what is necessary for that purpose.
Policy 34.2.2.7	Only allow buildings greater than 40m in height where: <ol style="list-style-type: none"> <li>a. the height is essential to the operation of campus activity; and</li> <li>b. the height exceedance is minimal.</li> </ol>
Policy 34.2.2.8	Only allow buildings greater than 25m in height where adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, are minimised as far as practicable through use of quality and contextually appropriate architectural design.
Policy 34.2.2.X	Only allow visitor accommodation where it is designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties.

## Rules

### Rule 34.3 Activity Status

#### 34.3.1 Rule Location

The activity status tables in rules 34.3.3 to 34.3.5 specify the activity status of land use activities, development activities, and subdivision activities in the Campus Zone, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 34.3.2 Activity Status Introduction

1. The activity status tables in rules 34.3.3 - 34.3.5 show the activity status of activities in the Campus Zone and the overlay zones indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Performance Standards*

7. Performance standards are listed in the far right column of the activity status tables.
8. Performance standards apply to permitted, controlled, and restricted discretionary activities.
9. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
10. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

## Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity

### 34.3.3 Land Use Activity Status Table

1.	Performance standards that apply to all land use activities		<ul style="list-style-type: none"> <li>a. Acoustic insulation (noise sensitive activities)</li> <li>b. NA</li> <li>c. Light spill</li> <li>d. Noise</li> </ul>
Major facility activities		Activity status	Performance standards
2.	Campus	P	a. Minimum mobility car parking
3.	All other activities in the major facility activities category	NC	
Community activities		Activity status	Performance standards
4.	Early childhood education	RD	a. Minimum mobility car parking
5.	Sport and recreation	P	a. Minimum mobility car parking
6.	Conservation	P	
7.	Community and leisure - small scale	P	a. Minimum mobility car parking
8.	Community and leisure - large scale	RD	a. Minimum mobility car parking
Commercial activities		Activity status	Performance standards
9.	Ancillary licensed premises	Same activity status as underlying activity	
10.	Entertainment and exhibition	P	a. Minimum mobility car parking
11.	Conference, meeting and function	P	a. Minimum mobility car parking
12.	Dairies	P	a. Maximum gross floor area
13.	Campus-affiliated office	P	
14.	Registered health practitioners	P	a. Minimum mobility car parking
X.	Training and education	P	
15.	All other office activity	D	
Y.	Retail ancillary to industry	P	a. Maximum gross floor area
16.	Retail and restaurants ancillary to campus	P	a. Location
17.	Restaurants not ancillary to campus	D	
18.	Retail not ancillary to campus	NC	
19.	Stand-alone car parking	P	
20.	Commercial advertising	NC	

Z.	Visitor accommodation	RD	a. Density b. Minimum vehicle loading
21.	All other activities in the commercial activities category	NC	
Residential activities		Activity status	Performance standards
22.	Standard residential	P	a. NA
23.	Student hostels	C	
24.	Working from home	P	a. Maximum gross floor area b. Minimum mobility car parking
25.	Other supported living facilities	D	
Industrial Activities		Activity status	Performance standards
26.	Industry	P	a. Location b. Minimum mobility car parking
Rural activities		Activity status	Performance standards
27.	All activities in the rural activities category	NC	

#### **Note 34.3.3X- Other requirements outside of the District Plan**

1. Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

### 34.3.4 Development Activity Status Table

1.	Performance standards that apply to all development activities		<ul style="list-style-type: none"> <li>a. Boundary treatments and other landscaping</li> <li>b. Setback from scheduled tree</li> <li>c. Maximum building site coverage and impermeable surfaces</li> </ul>
2.	Performance standards that apply to all buildings and structures activities		<ul style="list-style-type: none"> <li>a. Boundary setbacks</li> <li>b. Firefighting</li> <li>c. Height</li> <li>d. Natural hazards performance standards</li> <li>e. Setback from coast and water bodies</li> </ul>
All buildings and structures activities not covered in rows below		Activity status	Performance standards
3.	Signs attached to buildings and structures	P	<ul style="list-style-type: none"> <li>a. Number, location and design of ancillary signs</li> </ul>
4.	All other buildings and structures activities not covered in rows 5 to 20 below	P	<ul style="list-style-type: none"> <li>a. Fence height and design</li> <li>b. Number, location and design of ancillary signs</li> </ul>
Buildings and structures activities in a heritage precinct that are visible from an adjoining public place		Activity status	Performance standards
5.	New buildings	RD	
6.	Earthquake strengthening or restoration of a character-contributing building or non-protected part of a scheduled heritage building	P	<ul style="list-style-type: none"> <li>a. Materials and design</li> </ul>
7.	Demolition or removal for relocation of a character-contributing building or non-protected part of a scheduled heritage building	RD	
8.	All other additions and alterations to a character-contributing building or non-protected part of a scheduled heritage building (other than signs attached to buildings or structures)	RD	
9.	Additions and alterations to a non character-contributing building that: <ul style="list-style-type: none"> <li>• increase the footprint of the building by 10m<sup>2</sup> or more</li> <li>• increase the height of the building by more than 2m; or</li> <li>• replace a pitched roof with a mono-pitch roof.</li> </ul>	C	
10.	New retaining walls greater than 1m high	RD	

11.	All other new structures that are greater than 2.5m tall or have a footprint of 2m <sup>2</sup> or more	RD	a. Number, location and design of ancillary signs
Buildings and structures activities that affect a protected part of a scheduled heritage building or scheduled heritage structure		Activity status	Performance standards
12.	Repairs and maintenance	P	
13.	Restoration of a building or structure that has a Heritage New Zealand Category 1 listing as detailed in Appendix A1.1	C	
14.	Restoration of all other scheduled heritage buildings and structures	P	
15.	Earthquake strengthening where external features only are protected	C	a. Materials and design
16.	All other additions and alterations (other than signs attached to buildings or structures)	RD	
17.	Demolition	NC	
18.	Removal for relocation	RD	
Development activities on a scheduled heritage site, where visible from an adjoining public place or a public place within the heritage site		Activity status	Performance standards
19.	New structures that are greater than 2.5m high or have a footprint of 2m <sup>2</sup> or more	RD	a. Number, location and design of ancillary signs
20.	New buildings	RD	
21.	Parking, loading and access	RD	a. Parking, loading and access standards
Site development activities in all areas (except as covered by rows 19 to 21 above)		Activity status	Performance standards
22.	Outdoor storage	P	a. Location and screening of outdoor storage
23.	Parking, loading and access	P	a. Parking, loading and access standards
24.	Storage and use of hazardous substances	P	a. Hazardous substances quantity limits and storage requirements b. Setback from coast and water bodies
25.	All other site development activities	P	

### Note 34.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the

activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.

2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within Dunedin. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

### 34.3.5 Subdivision Activity Status Table

Subdivision activities	Activity status	Performance standards
1. Subdivision activities	RD	<ol style="list-style-type: none"> <li>a. Access</li> <li>b. Esplanade reserves and strips</li> <li>c. Firefighting</li> <li>d. Service connections</li> <li>e. Shape</li> </ol>

#### Note 34.3.5A - Other RMA considerations

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

### Rule 34.4 Notification

1. Applications for resource consent for the following activities will be considered without the need to obtain a written approval of affected persons and will not be notified in accordance with section 95A or 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:
  1. earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is not listed by Heritage New Zealand.
2. With respect to resource consent applications for the following activities, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:
  1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is listed by Heritage New Zealand.
3. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 34.5 Land Use Performance Standards**

### **34.5.1 Acoustic Insulation**

All noise sensitive activities within 20m of an industrial zone must comply with Rule 9.3.1.

### **34.5.2 Light Spill**

Land use activities must comply with Rule 9.3.5.

### **34.5.3 Location**

1. For retail and restaurants ancillary to campus all customer access:
  - a. must be internal to a building; or
  - b. if located with direct external access, this external access must not be orientated to a street frontage, except for emergency-only access/egress.
2. For all industrial activities that involve machinery or metal work the activity:
  - a. must be located within a part of a building that does not include any doors or windows that open onto a street frontage.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **34.5.4 Maximum Gross Floor Area**

#### **34.5.4.X Maximum gross floor area of working from home and dairies**

- a. The maximum gross floor area for working from home and dairies is 50m<sup>2</sup>. For working from home this includes any internal or external area occupied for storage of materials or goods.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### **34.5.4.Y Maximum gross floor area of retail ancillary to industry**

- a. Retail ancillary to industry must not occupy more than 10% of the gross floor area of the industry activity.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 34.5.4A - Other requirements outside of the District Plan**

1. Consent from DCC Environmental Health Department may be required for any working from home activity that involves dealing with food products.
2. Consent from DCC Liquor Licensing Department may be required for working from home activity that involves the sale or distribution of alcohol.
3. For more information please contact the DCC on 03 477 4000 or visit the DCC's website at [www.dunedin.govt.nz](http://www.dunedin.govt.nz)

### 34.5.5 Minimum Mobility Car Parking

Activity	Minimum car parking rate
1-10. <b><i>Removed to comply with the National Policy Statement on Urban Development 2020 requirement to remove minimum car parking requirements. Rule numbering to be corrected at a later date.</i></b>	

11. NA
- a. NA
- b. Parking spaces may be shared between land use activities (i.e. the same parking spaces may be used to fulfil the minimum mobility car parking requirement for more than one land use activity), as long as the hours of operation of the land use activities do not overlap.

12. Activities other than standard residential must provide mobility parking spaces as follows:

Total number of parking spaces provided	Minimum number of these that must be mobility parking spaces
a. 1 - 20	1 parking space
b. 21 - 50	2 parking spaces
c. For every additional 50 parking spaces	1 additional parking space

13. NA.

14. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 34.5.5A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### 34.5.6 Noise

Land use activities must comply with Rule 9.3.6.

### 34.5.X Density

- Visitor accommodation in the Campus Zone must not exceed a maximum development potential per site of 1 habitable room per 45m<sup>2</sup>.
- Visitor accommodation that contravenes the performance standard for density is a discretionary activity.

#### **Note 34.5.XA - General advice**

1. Maximum development potential may not be achievable on all sites as site size, shape, topography, and design will all influence development potential.

### 34.5.Y Minimum Vehicle Loading

- Land use activities must provide on-site vehicle loading as follows:

Activity	Minimum vehicle loading
a. Visitor accommodation with more than 50 visitor accommodation units	1 loading space to accommodate the turning circle of a coach (see Appendix 6B, Figure 6B.12).

2. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 34.5.YA - Other relevant District Plan provisions**

1. Vehicle loading must comply with the vehicle loading design performance standards in Section 6.6: Parking, Loading and Access Standards.

## **Rule 34.6 Development Performance Standards**

### **34.6.1 Boundary Treatments and Other Landscaping**

1. For any site or part of a site being developed for anything other than standard residential or campus activity, landscaping must be provided as follows:
  - a. where a building is not built to the street frontage, a landscaping area with a minimum 1.5m width must be provided along the full length of any road frontage (except for where vehicle access is provided), with an average of one tree for every 5m of frontage;
  - b. within any car parking area greater than 200m<sup>2</sup> (excluding loading areas), a minimum of 1m<sup>2</sup> of landscaped area must be provided for every car parking space, with an average of one tree per 10m<sup>2</sup> of landscaping.
2. Landscaping required by 34.6.1.1 must:
  - a. be fully and densely planted with trees, shrubs and ground cover plants, with total coverage of the ground area in planting (when mature) required except for 10% of the area, which may be used for pedestrian paths;
  - b. not have more than 10% cover in permeable surfaces (to allow for pedestrian paths);
  - c. have a physical barrier (border or curb) that prevents cars from damaging plants; and
  - d. as required, use trees that are at least 1.5m height at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting.

X. ensure planting associated with new buildings or site development must be completed prior to occupation of the relevant building(s) or upon completion of site development activities.

Y. be maintained to a high standard, including keeping areas free of rubbish and weeds, and ensuring trees and under-planting are healthy.
3. N/A
4. N/A
5. Any road boundary fences provided must be placed on the property side of road frontage landscaping required by this rule.
6. Activities that contravene this performance standard are restricted discretionary activities.

### **34.6.2 Fence Height and Design**

#### **34.6.2.1 Maximum Height**

- a. The maximum height of fences along boundaries (including within the boundary setbacks required by Rule

34.6.11) is 2m.

- b. For the purposes of calculating maximum height, where a fence is erected atop a retaining wall, the height will be calculated as the combined height measured from ground level to the top of the fence.
- c. Fences that contravene this performance standard are restricted discretionary activities.

#### 34.6.2.2 Visual Permeability

- a. Fences along road boundaries (or within the boundary setbacks required by Rule 34.6.11), or along a side or rear boundary with a residential zone, must be constructed to a length and/or height that maintains visual permeability for 50% of the length of the boundary measured at a height of 1.4m above ground level (see Figure 15.6.2.2A).
- b. The following fences are exempt from this requirement:
  - i. fences along the road boundary of a state highway; and
  - ii. fences required to meet Rule 34.6.7 (Location and Screening of Outdoor Storage).
- c. Fences that contravene this performance standard are restricted discretionary activities.

#### 34.6.3 Firefighting

New residential buildings must comply with Rule 9.3.3.

#### 34.6.4 Natural Hazards Performance Standards

##### 34.6.4.1 Relocatable buildings

New buildings containing residential activity on the ground floor in the Hazard 3 (coastal) Overlay Zone must comply with Rule 11.3.3.

#### 34.6.5 Hazardous Substances Quantity Limits and Storage Requirements

The storage and use of hazardous substances must comply with Rule 9.3.4.

#### 34.6.6 Height

##### 34.6.6.1 Height in relation to boundary

- a. On a site used for a standard residential activity, new buildings and additions and alterations to buildings must not protrude through a plane (see Figure 15.6.6.1B) rising at an angle of 45 degrees measured from a point 3m above ground level at side and rear boundaries, except:
  - i. for any new buildings and additions or alterations to buildings within 13m of a road boundary, the height in relation to boundary will be measured from 6.5m above ground level at side boundaries, provided that all buildings on the remainder of the site are set back from the side boundaries by at least 2m (see Figure 15.6.6.1D);
  - ii. where a new residential building (not a sleep out) is being built on a site where another residential building already exists, the height plane angle will be measured at a line midway between the two residential buildings;
  - iii. on boundaries adjacent to the Inner City Residential Zone or Recreation Zone, the height in relation to boundary rule of the adjacent zone applies;
  - iv. on boundaries with the commercial and mixed use, industrial, Dunedin Hospital, Otago Museum and Stadium zones, where this rule does not apply; and
  - v. where new buildings or additions and alterations to buildings are built to a common wall, any part of a building where the height and angle of the roofline are the same as the adjoining building is exempt from this standard.

- b. On a site not used for standard residential activity, and where the Campus Zone boundary is within the adjoining road or on the road boundary of the site, new buildings and additions and alterations to buildings along road frontages must not protrude through a plane rising at an angle of 30 degrees from a starting point 12m vertically above ground level measured at the zone boundary, except:
  - i. gable ends or dormers may protrude through the height in relation to boundary angle by a maximum of 1m (see Figure 15.6.6.1F); and
  - ii. rooftop structures are exempt from the performance standard for height in relation to boundary.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### 34.6.6.2 Maximum height

- a. The maximum height for new buildings and structures, and additions and alterations, must not exceed 12m above ground level:
  - i. at the boundary of the Campus Zone along road frontages;
  - ii. if they are a residential building (excluding student hostels); and
  - iii. anywhere within the **Leith Street height mapped area** (see Figure 34.6.6.2A).
- b. The maximum height of all other new buildings and structures, and additions and alterations, must not exceed 25m above ground level.
- c. Rooftop structures are exempt from the performance standard for maximum height, provided they do not exceed the maximum height limit by more than 5m.
- d. Activities that contravene the performance standard for maximum height but are no greater than 40m in height are a restricted discretionary activity.
- e. Activities that are over 40m in height are a discretionary activity.

### **34.6.7 Location and Screening of Outdoor Storage**

1. Shared service areas provided for 3 or more residential units must be located or screened so they are not visible at ground level from residential activities within the site, residential activities on adjacent site, or public place.
2. Outdoor storage, including service areas, must not encroach into required parking, loading, manoeuvring, or outdoor living areas.
3. Materials stored outside must be stored in a way that prevents them contaminating any off-site area.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **34.6.8 Materials and Design**

Earthquake strengthening must comply with Rule 13.3.2.

### **34.6.9 Number, Location and Design of Ancillary Signs**

#### **34.6.9.1 General**

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are ancillary to campus activity that are not visible from outside of the Campus Zone;
  - ii. regulatory signs, warning signs, or directional signs; and
  - iii. building names (excluding sponsorship names).
- b. Signs located on or above the footpath must comply with Rule 6.7.2.
- c. Signs must comply with Rule 6.7.3 where visible from a road.
- d. Signs must not be illuminated or digital.
- e. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### **34.6.9.2 Signs attached to buildings**

- a. The height, above ground level, at the highest point of any sign, is 4m.
- b. Maximum of one sign attached to a building per site for a non-campus activity.
- c. Maximum of one sign per public entrance of a building used for campus activity.
- d. Signs must not be attached to roofs.
- e. Signs must not project higher than the lowest point of the roof, except where mounted flat against a parapet or gable end.
- f. Signs attached flat to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.
- g. Signs attached flat to a building must have a maximum area of 3m<sup>2</sup> per display face.
- h. Where attached on the underside of a verandah or attached protruding from a façade of a building, signs must:
  - i. where attached to the façade of a building, not protrude from a building façade by more than 1.5m;
  - ii. not exceed an area of 2m<sup>2</sup> per display face; and
  - iii. not exceed 2 display faces per sign.

### 34.6.9.3 Freestanding signs

- a. Maximum of one freestanding sign per building.
- b. The maximum dimensions of freestanding signs are:
  - i. maximum height of 4m;
  - ii. maximum area of 3m<sup>2</sup> per display face;
  - iii. maximum of 2 display faces per sign;
  - iv. maximum width of 2m; and
  - v. maximum depth of 400mm.
- c. Freestanding signs must not obstruct driveways, parking or loading areas.
- d. Freestanding signs must be located within the site and cannot be located on the road reserve, except:
  - i. portable freestanding signs, must only be located on a footpath outside a non-campus activity where a premise is located on the upper floor and does not have ground floor street frontage; and
  - ii. must not exceed one portable sign per premise, except;
    1. where a site has street frontage of 30m or more, a maximum of 1 sign per 15m of street frontage.
- e. The maximum dimensions of portable freestanding signs are:
  - i. maximum height of 900mm; and
  - ii. maximum width of 600mm.
- f. Portable freestanding signs on footpaths must be a minimum of 5m apart from any other portable sign.

#### **Note 34.6.9A - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*
  - b. Dunedin City Council Commercial Use of Footpaths Policy
  - c. Dunedin City Council Roadway Bylaw
  - d. Dunedin City Council Traffic and Parking Bylaw

### **34.6.10 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

### 34.6.11 Setbacks

#### 34.6.11.1 Boundary setbacks

- a. New buildings and additions and alterations used for, or intended to be used for, standard residential activity must have a minimum setback from boundaries as follows:

Location of boundary		Distance
i.	Setback from road boundary	3m
ii.	Setback from side and rear boundaries	1m
iii.	Setback from boundary with right of way	1m

- b. All other new buildings and structures, and additions and alterations must have a minimum setback of 3m from the boundary of a site used for a residential activity or the boundary of a residential zone.
- c. Except fences and ancillary signs are exempt from this performance standard.
- d. Activities that contravene this performance standard are restricted discretionary activities.

#### 34.6.11.2 Setback from scheduled tree

New buildings and structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2.

#### 34.6.11.3 Setback from coast and water bodies

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

### 34.6.12 Maximum Building Site Coverage and Impermeable Surfaces

On sites used for standard residential activity, development must comply with the maximum building site coverage and impermeable surfaces performance standard for the Inner City Residential Zone in Rule 15.6.10.

## **Rule 34.7 Subdivision Performance Standards**

### **34.7.1 Access**

Subdivision activities must comply with Rule 6.8.1.

### **34.7.2 Esplanade Reserves and Strips**

Subdivision activities must comply with Rule 10.3.1.

### **34.7.3 Firefighting**

Subdivision activities must comply with Rule 9.3.3.

### **34.7.4 Service Connections**

Subdivision activities must comply with Rule 9.3.7.

### **34.7.5 Shape**

1. Each resultant site that is intended to be developed must be of a size and shape that is large enough to contain a building platform of at least 100m<sup>2</sup> that meets the performance standards of this Plan including, but not limited to:
  - a. NA;
  - b. setbacks from boundaries, water bodies, scheduled trees; and
  - c. esplanade reserves or strips.
2. Building platforms must have a slope of 12° (1:4.7 or 21%) or less and must not contain:
  - a. scheduled heritage buildings or scheduled heritage structures; or
  - b. right-of-way easements.
3. For unreticulated areas, resultant sites must provide for a wastewater disposal area to be located at least 50m from any water body and Mean High Water Springs.
4. Sites created and used solely for the following purposes are exempt from the shape standard:
  - a. Scheduled ASBV or QEII covenant;
  - b. reserve;
  - c. access;
  - d. network utility; or
  - e. road.
5. Activities that contravene this performance standard are restricted discretionary activities.

## **Rule 34.8 Assessment of Controlled Activities**

### **Rule 34.8.1 Introduction**

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 34.8.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 34.9; and
    - iv. the matters of control become matters of discretion and will be assessed as indicated in this section.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 34.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 34.12; and
    - iii. the assessment guidance in this section will also be considered.

### 34.8.2 Assessment of controlled activities

Activity	Matters of control	Guidance on the assessment of resource consents
<p>1. Affecting a <b>scheduled heritage building</b> or a <b>scheduled heritage structure</b>:</p> <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.4</p>
<p>2. Student hostels</p>	<p>a. Effects on the safety and efficiency of the transport network</p>	<p>See Rule 6.9</p>
	<p>b. Effects on accessibility</p>	<p>See Rule 6.9</p>
	<p>c. Effects on efficiency and affordability of infrastructure</p>	<p>See Rule 9.4</p>
<p>3. In a <b>heritage precinct</b>, additions and alterations to a non character-contributing building that involve:</p> <ul style="list-style-type: none"> <li>• an increase in the footprint of 10m<sup>2</sup> or more;</li> <li>• an increase in the height of the building by more than 2m; or</li> <li>• the replacement of a pitched roof with a mono-pitch roof.</li> </ul>	<p>a. Effect on heritage streetscape character</p>	<p>See Rule 13.4</p>

## **Rule 34.9 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 34.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 34.9.2 - 34.9.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 34.9.2 - 34.9.5 apply as follows:
  - a. Rule 34.9.2 applies to all performance standard contraventions;
  - b. Rule 34.9.3 applies to land use performance standard contraventions;
  - c. Rule 34.9.4 applies to development performance standard contraventions; and
  - d. Rule 34.9.5 applies to subdivision performance standard contraventions.

### 34.9.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1. All performance standard contraventions</p>	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards, site specific factors including topography, make meeting the standard impracticable.</li> <li>c. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>e. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> <li>f. In balancing consideration of the objectives and policies related to the maintenance of heritage values or heritage precinct streetscape character and those related to general amenity, greater weight will usually be placed on heritage policies.</li> </ul>

### 34.9.3 Assessment of land use performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
2.	Location	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 34.2.1</li> <li>ii. Retail and restaurant activity ancillary to campus activity are designed and operated in line with Objective 34.2.2 and its policies (Policy 34.2.1.3).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The ancillary activity is designed and managed so as to be unlikely to attract the general public.</li> <li>iv. There will be no external advertising on the street or facing the street, for the ancillary activity.</li> </ul>
3.	Maximum gross floor area	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 34.2.1</li> <li>ii. Working from home and dairies are a size that is compatible with the character and amenity of the Campus Zone; and does not detract from the vibrancy and functioning of the centres hierarchy (Policy 34.2.1.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The activity is related to or necessary to support campus activity, or has other locational requirements which mean they need to locate in this zone.</li> <li>iv. The activity will not have adverse effects on the amenity of surrounding residential properties or zones.</li> </ul>
		b. Effects on the character and amenity of the Campus Zone	
4.	Minimum mobility car parking	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
		b. Effects on accessibility	
X.	Maximum gross floor area (retail ancillary to industry)	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 34.2.1.</li> <li>ii. The size of retail ancillary to industry: <ul style="list-style-type: none"> <li>1. is clearly subordinate to and part of the operation of the primary industry activity;</li> <li>2. does not conflict with objectives 2.3.2 and 2.4.3; and</li> <li>3. does not create adverse effects on other industrial activities, for example from traffic, parking, or reverse sensitivity (Policy 34.2.1.X).</li> </ul> </li> </ul>
		b. Effects on ability of other industrial activities to operate	

### 34.9.3 Assessment of land use performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
Y.	Minimum vehicle loading	a. Effects on the safety and efficiency of the transport network	See Rule 6.10.

### 34.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Boundary setbacks</li> <li>• Maximum height - buildings and structures less than 40m (Rule 34.6.6.2.d)</li> <li>• Height in relation to boundary</li> </ul>	a. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 34.2.2</li> <li>ii. Buildings and structures are of a height, height in relation to boundary, and setback that maintains adequate sunlight access to adjoining sites used for residential activity, or adjoining residential and recreation zoned sites; and avoids or minimises, as far as practicable, significant adverse wind effects (Policy 34.2.2.1).</li> <li>iii. Buildings greater than 25m in height minimise, as far as practicable, adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, through the use of quality and contextually appropriate architectural design (Policy 34.2.2.8).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. The height, or height in relation to boundary, is consistent with surrounding properties.</li> </ul>
2. Boundary treatments and other landscaping	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 34.2.2</li> <li>ii. Development activities maintain a reasonable level of visual and environmental amenity adjacent to public roads (Policy 34.2.2.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. An alternative design will lead to better outcomes for streetscape amenity.</li> </ul>
3. Fence height and design	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 34.2.2</li> <li>ii. Fences are of a height and design that contributes positively to streetscape amenity and the amenity of the Campus Zone (Policy 34.2.2.5).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The increased height or reduced visual permeability is necessary to meet protection requirements, to provide security, minimise noise effects from a busy road or activity, or for public well-being.</li> <li>iv. An attractive interface with the street is maintained.</li> <li>v. The fence will be screened by landscaping.</li> </ul>
	b. Effects on the amenity of the campus	
	c. Effects on health and safety	See Rule 9.5

#### 34.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
4.	Firefighting	a. Effects on health and safety	See Rule 9.5
5.	In a hazard overlay zone: <ul style="list-style-type: none"> <li>Relocatable buildings (Hazard 3 (coastal) Overlay Zone)</li> </ul>	a. Risk from natural hazards	See Rule 11.4
6.	Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
7.	Location and screening of outdoor storage	a. Effects on streetscape amenity b. Effects on the amenity of the campus	<i>Relevant objectives and policies:</i> i. Objective 34.2.2 ii. Outdoor storage is located and stored in a way that does not result in unreasonable visual amenity effects or create nuisance effects (Policy 34.2.2.2).
8.	Materials and design	a. Effect on heritage values (scheduled heritage buildings and scheduled heritage structures) b. Effects on heritage streetscape character (where in a heritage precinct)	See Rule 13.5
9.	Maximum building site coverage and impermeable surfaces	a. Effects on neighbourhood residential character and amenity b. Effects on on-site amenity for residents c. Effects on efficiency and affordability of infrastructure	See Rule 15.10

### 34.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
10.	Number, location and design of ancillary signs	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
		b. Effects on streetscape amenity	<i>Relevant objectives and policies:</i> i. Objective 34.2.2. ii. Ancillary signs are located and designed to maintain streetscape amenity including by being of an appropriate size and number to convey information about the name, location and nature of the activity on the site to passing pedestrians and vehicles and not being oversized or too numerous for what is necessary for that purpose (Policy 34.2.2.6).
11.	In a <b>heritage precinct</b> : <ul style="list-style-type: none"> <li>Fence height and design</li> <li>Materials and design</li> <li>Maximum height (except Rule 34.6.6.2.e)</li> <li>Height in relation to boundary</li> </ul>	a. Effects on heritage streetscape character	See Rule 13.5
12.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
13.	Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6
14.	Setback from coast and water bodies	a. Effects on biodiversity values and natural character of riparian margins and the coast	See Rule 10.5
		b. Effects on public access	See Rule 10.5
		c. Risk from natural hazards	See Rule 11.4

### 34.9.5 Assessment of subdivision performance standard contraventions

Performance standard		Matters of discretion	Guide on the assessment of resource consents
1.	Access	a. Effects on accessibility	See Rule 6.10
2.	Esplanade reserves and strips	a. Effects on biodiversity values and natural character values of riparian margins and the coast.	See Rule 10.5
		b. Effects on public access	
3.	Firefighting	a. Effects on health and safety	See Rule 9.5
4.	Service connections	a. Effects on efficiency and affordability of infrastructure	

### 34.9.5 Assessment of subdivision performance standard contraventions

Performance standard	Matters of discretion	Guide on the assessment of resource consents
5. Shape		<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Subdivision is designed to ensure any future land use or development of the resultant site is able to meet the performance standards in the zone, unless: <ul style="list-style-type: none"> <li>i. a resource consent is approved for a development that does not meet the performance standard and the subdivision is intended for and capable of providing for that approved development; or</li> <li>ii. the resultant site is required for: <ul style="list-style-type: none"> <li>1. Scheduled ASBV; QEII covenant; or</li> <li>2. reserve; or</li> <li>3. access; or</li> <li>4. utility; or</li> <li>5. road (Policy 2.4.1.8).</li> </ul> </li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. Non-compliance with the performance standard for shape will be assessed based on which performance standard(s) the shape of the resultant site does not provide for compliance with. See matters of discretion and assessment rules in relation to performance standard contraventions for: <ul style="list-style-type: none"> <li>i. NA;</li> <li>ii. boundary setbacks;</li> <li>iii. setback from scheduled tree; and</li> <li>iv. setbacks from water bodies.</li> <li>v. NA.</li> </ul> </li> <li>d. For contravention of the building platform slope part of the shape performance standard (Rule 34.7.5.2), see the matters of discretion and assessment rules in relation to earthworks - large scale (Rule 8A.7.2.1).</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>e. Restrictions or conditions, including by way of consent notice, on land use or development activities allowed on the site.</li> <li>f. A building platform may be required to be registered against the title by way of consent notice.</li> </ul>

## **Rule 34.10 Assessment of Restricted Discretionary Activities**

### **Rule 34.10.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 34.10.2 - 34.10.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 34.10.2 - 34.10.5 apply as follows:
  - a. Rule 34.10.2 applies to all restricted discretionary activities;
  - b. Rule 34.10.3 applies to restricted discretionary land use activities;
  - c. Rule 34.10.4 applies to restricted discretionary development activities; and
  - d. Rule 34.10.5 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 34.9; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 34.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 34.12; and
    - iii. the assessment guidance in this section will also be considered.

### 34.10.2 Assessment of all restricted discretionary activities

Activity	Guidance on the assessment of resource consents
1. All restricted discretionary activities	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards, site specific factors including topography, make meeting the standard impracticable.</li> <li>c. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> <li>e. For restricted discretionary land use activities, whether any associated buildings or structures meet relevant development performance standards, or otherwise achieve the relevant policies for development (see Rule 34.9 for performance standard contraventions).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>f. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> <li>g. In balancing consideration of the objectives and policies related to the maintenance of heritage values or heritage precinct streetscape character and those related to general amenity, greater weight will usually be placed on heritage policies.</li> </ul>

### 34.10.3 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All high trip generators, which include: <ul style="list-style-type: none"> <li>• Any activities that generate 250 or more vehicle movements a day</li> </ul>	<ul style="list-style-type: none"> <li>a. Effects on accessibility</li> <li>b. Effects on the safety and efficiency of the transport network</li> </ul>	See Rule 6.11
2. <ul style="list-style-type: none"> <li>• Early childhood education</li> <li>• Community and Leisure - large scale</li> <li>• Visitor accommodation</li> </ul>	<ul style="list-style-type: none"> <li>a. Effects on the safety and efficiency of the transport network</li> </ul>	See Rule 6.11

### 34.10.3 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
X. Visitor accommodation	a. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 34.2.2.</li> <li>ii. Visitor accommodation is designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 34.2.2.X).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Communal outdoor gathering areas are located or screened to minimise effects on adjacent residential properties.</li> </ul>
	b. Effects on accessibility	See Rule 6.11.

### 34.10.4 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In a <b>heritage precinct</b> : <ul style="list-style-type: none"> <li>All restricted discretionary activities due to being in a heritage precinct</li> </ul>	a. Effects on heritage streetscape character  X. Effects on the efficient and effective operation of the Otago University and the Otago Polytechnic	See Rule 13.6  <i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>Objective 34.2.1.</li> <li>Campus activity is enabled within the Campus Zone (Policy 34.2.1.1).</li> </ol>
2. Activities affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> : <ul style="list-style-type: none"> <li>Additions and alterations that affect a protected part of a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b></li> <li>Removal for relocation</li> </ul>	a. Effects on heritage values	See Rule 13.6
3. Activities affecting a <b>scheduled heritage site</b> : <ul style="list-style-type: none"> <li>New buildings and structures on a <b>scheduled heritage site</b>, where visible from an adjoining public place or a publicly accessible place within the site</li> <li>Parking, loading and access on a <b>scheduled heritage site</b>, where visible from an adjoining public place or a publicly accessible place within the site</li> </ul>	a. Effects on heritage values	See Rule 13.6

### 34.10.5 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All subdivision activities	a. Effects on the efficient and effective operation of the Campus	<i>Relevant objectives and policies:</i> i. Objective 34.2.1.  ii. Subdivision activities are: 1. intended and/or capable of being used for standard residential activity, and they are in accordance with the objectives, policies and rules of the residential zones; or X. necessary for the efficient and effective operation of campus activities; or 2. necessary for the disposal of surplus land in accordance with Policy 2.3.1.6 (Policy 34.2.1.7).
	b. Effects on the safety and efficiency of the transport network	See Rule 6.11
	c. Effects on efficiency and affordability of infrastructure	See Rule 9.6
	d. Risk from natural hazards	See Rule 11.5
	e. Effects on public access	See Rule 10.6
	f. Effects on biodiversity values and natural character of riparian margins and the coast	
2. On sites containing a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> or on a <b>scheduled heritage site</b> : <ul style="list-style-type: none"> <li>• Subdivision activities</li> </ul>	a. Effects on heritage values (scheduled heritage sites)	See Rule 13.6

## Rule 34.11 Assessment of Discretionary Activities

### Rule 34.11.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 34.11.2 - 34.11.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 34.11.2 - 34.11.3 apply as follows:
  - a. Rule 34.11.2 applies to discretionary land use activities; and
  - b. Rule 34.11.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 34.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resources consents
<ol style="list-style-type: none"> <li>1.               <ul style="list-style-type: none"> <li>• Office (other than campus-affiliated office and registered health practitioners)</li> <li>• Restaurants not ancillary to campus</li> <li>• Supported living facilities (other than student hostels)</li> </ul> </li> </ol>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 2.3.1</li> <li>b. Objective 34.2.1</li> <li>c. Restaurants not ancillary to campus activity, office (other than campus affiliated office, registered health practitioners and training and education) and supported living facilities (other than student hostels):               <ol style="list-style-type: none"> <li>i. are related to, or are necessary to support campus activity, or have other operational requirements which mean they need to locate in this zone; and</li> <li>ii. support the efficient and effective operation of campus activity; and</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 34.2.2 and its policies (Policy 34.2.1.5).</li> </ol> </li> </ol> <p><i>Related strategic directions:</i></p> <ol style="list-style-type: none"> <li>d. Objective 2.3.2 and Policy 2.3.2.2</li> <li>e. Objective 2.4.3 and Policy 2.4.3.4</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>f. For discretionary land use activities, whether any associated buildings or structures meet relevant development performance standards, or otherwise achieve the relevant policies for development (see Rule 34.9</li> </ol>

### 34.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resources consents
	<p>numbers for performance standard contraventions).</p> <p>g. All relevant land use performance standards are met, including noise and light spill standards.</p> <p>h. The location of the activity in the Campus Zone is unlikely to create a precedent effect for similar activities to locate in the Campus Zone which would be more appropriately located in another zone.</p> <p><i>General assessment guidance:</i></p> <p>i. In assessing the significance of effects, consideration will be given to:</p> <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities.</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> <p>j. In assessing activities that are discretionary due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>k. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</p> <p>l. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</p> <p>m. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</p>

### 34.11.3 Assessment of discretionary performance standard contraventions

Performance standard		Guidance on the assessment of resource consents
1.	<ul style="list-style-type: none"> <li>• Acoustic insulation</li> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and the effects related to public health and safety.</p>
2.	Maximum height - buildings over 40m in height (Rule 34.6.6.2.e)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 34.2.2</p> <p>b. Buildings over 40m in height are only allowed where:</p> <ol style="list-style-type: none"> <li>i. the height is essential to operation of campus activity; and</li> <li>ii. the height exceedance is minimal (Policy 34.2.2.7).</li> </ol> <p>c. Buildings greater than 25m in height: minimise, as far as practicable, adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, through the use of quality and contextually appropriate architectural design (Policy 34.2.2.8).</p>
X.	Density	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 34.2.2 and Policy 34.2.2.X.</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>b. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.1 and effects related to the efficiency and affordability of infrastructure.</p>

## **Rule 34.12 Assessment of Non-complying Activities**

### **Rule 34.12.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 34.12.2 and 34.12.3 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 34.12.2 34.12.3 apply as follows:
  - a. Rule 34.12.2 applies to all non-complying activities; and
  - b. Rule 34.12.3 applies to non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 34.12.2 Assessment of all non-complying activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying activities</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. The activity does not detract from, or preferably contributes to, the strategic directions objectives, including, but not limited to, those related to:</p> <ul style="list-style-type: none"> <li>i. Dunedin has a hierarchy of vibrant centres anchored around one Central Business District (CBD), which provides a focus for economic and employment growth, driven by:               <ul style="list-style-type: none"> <li>1. attraction of businesses to these areas based on the high level of amenity and density of activity in the area;</li> <li>2. opportunities for social interaction, exchange of ideas and business cooperation;</li> <li>3. public investment in public amenities and other infrastructure in the CBD; and</li> <li>4. opportunities for agglomeration benefits from the co-location of activities (Objective 2.3.2).</li> </ul> </li> </ul> <p>b. The activity is compatible with the operation of campus activity or is not most appropriately located in another zone (Policy 34.2.1.6).</p> <p><i>Related strategic directions:</i></p> <p>c. Objective 2.4.3 and Policy 2.4.3.4</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>d. There are significant positive effects on the efficient and effective operation of a tertiary institution from the activity.</p> <p>e. There is no potential for cumulative effects to arise from precedence.</p> <p>f. The location of the activity in the Campus Zone will not have adverse effects on the vibrancy and viability of commercial and mixed use zones.</p> <p><i>General assessment guidance:</i></p> <p>g. In assessing the significance of effects consideration will be given to:         <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of resource consent.</li> </ul> </p> <p>h. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>i. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network</p>

### 34.12.2 Assessment of all non-complying activities

Activity	Guidance on the assessment of resource consents
	<p>and its affordability to the public.</p> <p>j. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</p> <p>k. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</p>
2. Commercial advertising	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 2.4.1</p> <p>b. Policy 2.4.1.6.c</p>
3. Demolition of a protected part of a scheduled heritage building or scheduled heritage structure	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1 and effects on heritage values.</p>

### 34.12.3 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1.</p> <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>

## **35. Wakari Hospital**

### **35.1 Introduction**

Wakari Hospital is Dunedin's second largest hospital. The hospital is situated on Taieri Road, Wakari, and extends over a large, extensively landscaped site, covering an area of approximately eight hectares. The hospital is operated by the Southern District Health Board (SDHB).

The hospital has been at its present site since 1915, and provides approximately 115 beds across a number of wards. The hospital provides mental health services as well as a range of other community health services. It serves as a teaching hospital with strong links to both the University of Otago and Otago Polytechnic and is the base for SDHB management.

Redevelopment of the hospital site is anticipated over the coming years, allowing facilities to be upgraded and added. This may involve construction of new buildings and the redevelopment of existing ones. The site is surrounded by the General Residential 1 Zone which provides for medium density residential living, and is close to the Wakari neighbourhood centre. There is a high level of residential amenity in the area, particularly to the east and west of the site, with land to the north and south being less developed and having significant established vegetation. While the buildings on the Wakari Hospital site are generally larger than would normally be expected in a residential environment, these are contained within a large site which is extensively bordered by trees and vegetation.

The Wakari Hospital Zone enables the provision of essential health services and future development of the site, while appropriately managing adverse effects on the surrounding General Residential 1 Zone and nearby neighbourhood centre.

## 35.2 Objectives and Policies

<b>Objective 35.2.1</b>	
Wakari Hospital is able to operate efficiently and effectively as a hospital and medical training and research facility.	
Policy 35.2.1.1	Enable hospital activity in the Wakari Hospital Zone.
Policy 35.2.1.2	Provide for activities that are ancillary to hospital activity where they are designed and operated in line with Objective 35.2.2 and its policies.
Policy 35.2.1.3	Only allow activities that are not ancillary to hospital activity where all of the following apply: <ul style="list-style-type: none"> <li>a. the activities are related to or support Wakari Hospital, or have other operational requirements that mean they need to locate in the zone;</li> <li>b. they will support the efficient and effective operation of Wakari Hospital;</li> <li>c. they are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>d. they are designed and operated in line with Objective 35.2.2 and its policies.</li> </ul>
Policy 35.2.1.4	Enable land that is surplus to the needs of Wakari Hospital to transition to the General Residential 1 Zone, so that future development that is not related to hospital activity will be managed in accordance with the objectives and policies of that zone.
Policy 35.2.1.5	Only allow subdivision activities where: <ul style="list-style-type: none"> <li>a. they are in accordance with the provisions of the General Residential 1 Zone; and</li> <li>b. the subdivision does not adversely affect the efficient and effective operation of Wakari Hospital.</li> </ul>

### Objective 35.2.2

Land use activities and development necessary for Wakari Hospital to meet the reasonably foreseeable health needs of the community is enabled, while ensuring development:

- a. achieves a good standard of on-site amenity for patients, staff and visitors; and
- b. maintains or enhances the amenity of the surrounding residential sites and areas, as far as practicable.

Policy 35.2.2.1	Require buildings and structures to be of a height and setback from boundaries that ensures: <ul style="list-style-type: none"> <li>a. there are no more than minor effects on the sunlight access and privacy of current and potential future residential buildings and their outdoor living spaces; and</li> <li>b. any adverse effects on neighbourhood amenity are avoided or, if avoidance is not practicable, are no more than minor.</li> </ul>
Policy 35.2.2.2	Require development to maintain or enhance neighbourhood amenity by ensuring service areas are not visible from ground level outside the site.
Policy 35.2.2.3	Require landscaping of the boundary of parking areas where adjacent to a road frontage to screen or soften these areas and ensure a high standard of visual amenity when viewed from the road.
Policy 35.2.2.4	Require fences on road boundaries to be of a height and design that contributes positively to neighbourhood amenity.
Policy 35.2.2.5	Require ancillary signs visible from outside the zone to be located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose.
Policy 35.2.2.6	Require ancillary commercial activities to be designed, located and operated to primarily serve staff, patients and visitors of Wakari Hospital.
Policy 35.2.2.7	Only allow early childhood education - large scale where it is designed to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties.

## Rules

### Rule 35.3 Activity Status

#### 35.3.1 Rule location

The activity status tables in rules 35.3.3 to 35.3.5 specify the activity status of land use activities, development activities and subdivision activities in the Wakari Hospital Zone, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 35.3.2 Activity status introduction

1. The activity status tables in rules 35.3.3 - 35.3.5 show the activity status of activities in the Wakari Hospital Zone, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Performance Standards*

7. Performance standards are listed in the far right column of the activity status tables.
8. Performance standards apply to permitted, controlled, and restricted discretionary activities.
9. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
10. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

## Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity

### 35.3.3 Activity status table - land use activities

1.	Performance standards that apply to all land use activities		a. NA b. Light spill c. Noise d. Setback from National Grid (National Grid sensitive activities only)
Major facility activities		Activity status	Performance standards
2.	Hospital	P	a. Minimum mobility car parking
3.	All other activities in the major facility activities category	NC	
Community activities		Activity status	Performance standards
4.	Community and leisure - small scale	P	
5.	Conservation	P	
6.	Early childhood education - small scale	P	
7.	Early childhood education - large scale	RD	
8.	All other activities in the community activities category	D	
Commercial activities		Activity status	Performance standards
9.	Commercial activities ancillary to hospital activity	P	a. Location
10.	Registered health practitioners	P	
11.	All other activities in the commercial activities category	NC	
Residential activities		Activity status	Performance standards
12.	All activities in the residential activities category	D	
Industrial activities		Activity status	Performance standards
13.	All activities in the industrial activities category	NC	
Rural activities		Activity status	Performance standards

14.	All activities in the rural activities category	NC	
-----	---	----	--

**Note 35.3.3X- Other requirements outside of the District Plan**

1. Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

**35.3.4 Activity status table - development activities**

1.	Performance standards that apply to all development activities		<ol style="list-style-type: none"> <li>a. Maximum building site coverage and impermeable surfaces</li> <li>b. Setback from scheduled tree</li> </ol>
2.	Performance standards that apply to all buildings and structures activities		<ol style="list-style-type: none"> <li>a. Boundary setbacks</li> <li>b. Height in relation to boundary</li> <li>c. Maximum height</li> <li>d. Number, location and design of ancillary signs</li> <li>e. Setback from National Grid</li> <li>X. Setback from Critical Electricity Distribution Infrastructure</li> </ol>
Buildings and structures activities		Activity status	Performance standards
3.	Fences	P	<ol style="list-style-type: none"> <li>a. Fence height and design</li> </ol>
4.	All other buildings and structures activities	P	
Site development activities		Activity status	Performance standards
5.	Parking, loading and access	P	<ol style="list-style-type: none"> <li>a. Boundary treatments and other landscaping</li> <li>b. Parking, loading and access standards</li> </ol>
6.	New, or additions to, parking areas that result in 50 or more new parking spaces.	RD	<ol style="list-style-type: none"> <li>a. Boundary treatments and other landscaping</li> <li>b. Parking, loading and access standards</li> </ol>
7.	Service areas	P	<ol style="list-style-type: none"> <li>a. Location and screening of service areas</li> </ol>
8.	Storage and use of hazardous substances	P	<ol style="list-style-type: none"> <li>a. Hazardous substances quantity limits and storage requirements</li> </ol>
9.	All other site development activities	P	

### Note 35.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within Dunedin. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

### 35.3.5 Activity status table - subdivision activities

Subdivision activities	Activity status	Performance standards
1. Subdivision activities	RD	a. Subdivision performance standards

### Note 35.3.5A - Other RMA considerations

1. Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

### Note 35.3.5X - Other relevant District Plan provisions

1. Additional matters of discretion apply to the subdivision of land within a **Critical Electricity Distribution Infrastructure Corridor mapped area**. These are set out in Rule 35.9.X.

### 35.3.6 Transition to General Residential 1 Zone

On receipt of written notice from both the landowner and operator of Wakari Hospital (if different) to Dunedin City Council in relation to all or part of the land within the Wakari Hospital Zone, the provisions of the Wakari Hospital Zone will no longer apply to that parcel of land and the provisions of the General Residential 1 Zone will apply in full.

## **Rule 35.4 Notification**

Activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 35.5 Land Use Performance Standards**

### **35.5.2 Light Spill**

Land use activities must comply with Rule 9.3.5.

### **35.5.3 Location**

1. For ancillary commercial activities, customer access must only be available from inside hospital buildings.
2. Activities that contravene this performance standard are restricted discretionary activities.

### **35.5.4 Minimum Mobility Car Parking**

1. Hospital activity must provide a minimum of 13 mobility parking spaces.
2. NA.
3. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 35.5.4A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### **35.5.5 Noise**

Land use activities must comply with Rule 9.3.6.

### **35.5.6 Setback from National Grid**

National Grid sensitive activities must comply with Rule 5.6.1.1.

## **Rule 35.6 Development Performance Standards**

### **35.6.1 Boundary Treatments and Other Landscaping**

1. Where a parking area is built within 5m of a road frontage, a landscaping area with a minimum 1.5m width must be provided along the full length of the road frontage (except for where vehicle access is provided).
2. Landscaping areas must:
  - a. be planted with a mix of trees and shrubs and/or ground cover plants that achieves a total coverage of the ground area in planting (when mature), except for 10% of the area, which may be used for pedestrian paths;
  - b. have an average of one tree for every 5m of frontage;
  - c. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - d. be designed to allow surface water run-off from surrounding areas to enter;
  - e. be protected by a physical barrier that prevents cars from damaging plants;
  - f. for required trees, use trees that are at least 1.5m high at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting;
  - g. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and
  - h. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.
3. Any road boundary fences provided must be placed on the property side of any road frontage landscaping required by this rule.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **35.6.2 Fence Height and Design**

#### **35.6.2.1 Maximum Height**

- a. The maximum height of fences along boundaries (including within the boundary setbacks required by Rule 35.6.9.1) is 2m.
- b. For the purposes of calculating maximum height, where a fence is erected atop a retaining wall, the height will be calculated as the combined height measured from ground level to the top of the fence.
- c. Fences that contravene this performance standard are restricted discretionary activities.

#### **35.6.2.2 Visual Permeability**

- a. Fences along road boundaries (or within the boundary setbacks required by Rule 35.6.9.1) must be constructed to a length and/or height that maintains visual permeability for 50% of the length of the boundary measured at a height of 1.4m above ground level (see Figure 15.6.2.2A).
- b. Fences along the road boundary of a state highway are exempt from this requirement.
- c. Fences that contravene this performance standard are restricted discretionary activities.

### **35.6.3 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **35.6.4 Height**

#### 35.6.4.1 Height in relation to boundary

New buildings and additions and alterations to buildings adjoining the residential zone must comply with the Height in Relation to Boundary performance standard of that residential zone, along the adjoining boundary (see Rule 15.6.6.1).

#### 35.6.4.2 Maximum height

- a. Maximum height for new buildings and structures, and additions and alterations must not exceed 22m above ground level.
- b. Rooftop structures are exempt from the performance standard for maximum height provided they do not exceed the maximum height limit by more than 5m.
- c. New buildings and structures, and additions and alterations must not exceed 10m in height within 20m of a residential zone, Recreation Zone or a school.
- d. Activities that contravene this performance standard are restricted discretionary activities.

### **35.6.5 Location and Screening of Service Areas**

1. Service areas must be located or screened so that they are not visible at ground level from adjacent: residential activities, residential zoned properties, or public places.
2. Service areas must not encroach into required parking, loading or manoeuvring areas.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **35.6.6 Maximum Building Site Coverage and Impermeable Surfaces**

1. The maximum building site coverage of buildings (% of the site) is 40%; and
2. The maximum total impermeable surface site coverage (buildings and impermeable surfaces % of the site) is 70%.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **35.6.7 Number, Location and Design of Ancillary Signs**

#### 35.6.7.1 General

- a. Signs must comply with the following standards, except the following signs are exempt from these standards:
  - i. signs that are not visible from outside the Wakari Hospital Zone;
  - ii. regulatory signs, warning signs, or directional signs; and
  - iii. building names (excluding sponsorship names).
- b. Signs related to ancillary retail and ancillary restaurants must not be visible outside the Wakari Hospital Zone.
- c. Signs must comply with Rule 6.7.3 where visible from a road.
- d. Signs must not be illuminated or digital.
- e. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### 35.6.7.2 Signs attached to buildings

- a. The height above ground level at the highest point of any sign attached to a building is 4m.
- b. Signs must not be attached to roofs.

- c. Signs must not project higher than the lowest point of the roof, except where mounted against a parapet or gable end.
- d. Signs attached to a building must:
  - i. not exceed one sign per building;
  - ii. have a maximum area per display face of 2m<sup>2</sup>;
  - iii. have a maximum of two display faces per sign;
  - iv. where attached to the façade of a building, must not project more than 1m from the façade to which it is attached; and
  - v. if attached to a verandah fascia, must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.

#### 35.6.7.3 Freestanding signs

- a. The maximum number of permanently fixed freestanding signs is one per 50m of road frontage.
- b. The maximum number of portable freestanding signs is one per 50m of road frontage.
- c. The maximum dimensions of freestanding signs are:
  - i. maximum height of 4m;
  - ii. maximum area of 8m<sup>2</sup>;
  - iii. maximum width of 2m; and
  - iv. maximum depth of 400mm.
- d. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within the site boundaries.

#### **Note 35.6.7A- Other requirements outside of the District Plan**

- 1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*
  - b. Dunedin City Council Commercial Use of Footpaths Policy
  - c. Dunedin City Council Roadway Bylaw
  - d. Dunedin City Council Traffic and Parking Bylaw

#### **35.6.8 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

### 35.6.9 Setbacks

#### 35.6.9.1 Boundary setbacks

New buildings and structures, and additions and alterations, must be set back from zone boundaries as follows:

Building		Setback from road boundary	Setback from other boundary
a.	Buildings, structures and additions and alterations not exceeding 3m in height and 6m in length (measured parallel to the boundary)	4.5m	1m
b.	Buildings, structures and additions and alterations not exceeding 9m in height <b>or</b> 250m <sup>2</sup> gross floor area	4.5m	4.5m
c.	Other buildings and structures	10m	10m

- d. Except fences and ancillary signs are exempt from the performance standard.
- e. All public entrances to buildings must be located at least 10m from a boundary with the General Residential 1 Zone.
- f. Activities that contravene this performance standard are restricted discretionary activities.

#### 35.6.9.2 Setback from scheduled tree

New buildings, structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2.

#### 35.6.9.3 Setback from National Grid

New buildings and structures, and additions and alterations must comply with Rule 5.6.1.1.

### 35.6.9.X Setback from Critical Electricity Distribution Infrastructure

New buildings, new structures and additions and alterations must comply with Rule 5.6.X.1.

## **Rule 35.7 Subdivision Performance Standards**

Subdivision activities must comply with performance standards for the General Residential 1 Zone within Rule 15.7.

## **Rule 35.8 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 35.8.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 35.8.2 - 32.8.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 35.8.2 - 32.8.5 apply as follows:
  - a. Rule 35.8.2 applies to all performance standard contraventions;
  - b. Rule 35.8.3 applies to land use performance standard contraventions;
  - c. Rule 35.8.4 applies to development performance standard contraventions; and
  - d. Rule 35.8.5 applies to subdivision performance standard contraventions.

### **35.8.2 Assessment of all performance standard contraventions**

Performance standard	Guidance on the assessment of resource consents
----------------------	---

<p>1. All performance standard contraventions</p>	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards or site specific factors, make meeting the standard impracticable.</li> <li>c. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>e. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> </ul>
---	--

### 35.8.3 Assessment of land use performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
2.	Location	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 35.2.2</li> <li>ii. Ancillary commercial activities are designed, located and operated primarily to serve staff, patients and visitors of Wakari Hospital (Policy 35.2.2.6).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The location of customer access is unlikely to result in the attraction of external customers, resulting in the ancillary activity becoming a stand-alone activity.</li> </ul>
3.	Minimum mobility car parking	<p>a. Effects on the safety and efficiency of the transport network</p> <p>b. Effects on accessibility</p>	See Rule 6.10

### 35.8.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>Boundary setbacks</li> <li>Height in relation to boundary</li> <li>Maximum height</li> </ul>	a. Effects on the amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 35.2.2</li> <li>ii. Buildings and structures are of a height and setback from boundaries that ensures there are no more than minor effects on the sunlight access and privacy of current and potential future residential buildings and their outdoor living spaces (Policy 35.2.2.1.a).</li> </ul> <p><i>In assessing the application Council will consider:</i></p> <ul style="list-style-type: none"> <li>iii. Existing sunlight access to neighbouring properties</li> <li>iv. Cumulative effects from incremental development.</li> </ul>
	b. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 35.2.2</li> <li>ii. Buildings and structures are of a height and setback from boundaries that ensures adverse effects on neighbourhood amenity are avoided or, if avoidance is not practicable, are no more than minor (Policy 35.2.2.1.b).</li> </ul>
2. Boundary treatments and other landscaping	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 35.2.2</li> <li>ii. Landscaping screens or softens the boundary of parking areas adjacent to a road frontage and ensures a high standard of visual amenity when viewed from the road (Policy 35.2.2.3).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Alternative landscaping or other screening will be effective in screening or softening car parking areas when viewed from the road.</li> </ul>
3. Fence height and design	a. Effects on health and safety	See Rule 9.5
	b. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 35.2.2</li> <li>ii. Fences on road boundaries are of a height and design that contribute positively to neighbourhood amenity (Policy 35.2.2.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The increased height or reduced visual permeability is necessary to meet protection requirements, to provide security, minimise noise effects from a busy road or activity, or for public well-being.</li> <li>iv. An attractive interface with the streetscape is achieved.</li> <li>v. The fence will be screened by landscaping.</li> </ul>

#### 35.8.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
4.	Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
5.	Location and screening of service areas	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 35.2.2</li> <li>ii. Development maintains or enhances neighbourhood amenity by ensuring service areas are not visible from ground level outside the site (Policy 35.2.2.2).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Screening would unduly restrict the usability of the service area.</li> <li>iv. The site layout prevents the service area from being visible from any public place without additional screening being required.</li> </ul>
6.	Maximum building site coverage and impermeable surfaces	a. Effects on efficiency and affordability of infrastructure	See Rule 9.5
7.	Number, location and design of ancillary signs	a. Effects on neighbourhood amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 35.2.2</li> <li>ii. Ancillary signs visible from outside the zone are located and designed to maintain streetscape amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on the site to passing pedestrians and vehicles, and not being oversized or too numerous for that purpose (Policy 35.2.2.5).</li> </ul>
		b. Effects on the safety and efficiency of the transport network	See Rule 6.10
8.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10

#### 35.8.5 Assessment of subdivision performance standard contraventions

Performance standard		Guidance on the assessment of resource consents
1.	Subdivision performance standards	See Rule 15.10

### 35.8.X Assessment of performance standard contraventions in a mapped area

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>1. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (buildings, structures and city-wide activities)</li> </ul>	<p>a. Effects on health and safety</p> <p>b. Effects on efficient and effective operation of network utilities</p>	<p>See Rule 5.7.</p>

## **Rule 35.9 Assessment of Restricted Discretionary Activities**

### **Rule 35.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 35.9.2 - 35.9.4:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 35.9.2 - 35.9.4 apply as follows:
  - a. Rule 35.9.2 applies to restricted discretionary land use activities;
  - b. Rule 35.9.3 applies to restricted discretionary development activities; and
  - c. Rule 35.9.4 applies to restricted discretionary subdivision activities.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 35.8; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 35.10; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 35.11; and
    - iii. the assessment guidance in this section will also be considered.

### 35.9.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All high trip generators, which include: <ul style="list-style-type: none"> <li>Any activities that generate 250 or more vehicle movements a day</li> </ul>	a. Effects on accessibility	See Rule 6.11
	b. Effects on the safety and efficiency of the transport network	
2. Early childhood education - large scale	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
	b. Effects on accessibility	
	c. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 35.2.2</li> <li>ii. Early childhood education - large scale is designed to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 35.2.2.7).</li> </ul>

### 35.9.3 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. High trip generators: <ul style="list-style-type: none"> <li>New, or additions to, parking areas that result in 50 or more new parking spaces</li> </ul>	a. Effects on safety and efficiency of the transport network	See Rule 6.11
	b. Effects on accessibility	
2. Setback from scheduled tree	a. Effects on long term health of scheduled tree	See Rule 7.6

### 35.9.4 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. Subdivision activities	a. Effects on efficient and effective operation of Wakari Hospital	<i>Relevant objectives and policies:</i> i. Objective 35.2.1 ii. Objective 2.3.1 iii. Subdivision does not adversely affect the efficient and effective operation of Wakari Hospital (Policy 35.2.1.5.b).
	See Rule 15.10	

### 35.9.X Assessment of restricted discretionary activities in a mapped area

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area:</b> • All subdivision activities	a. Effects on health and safety b. Effects on efficient and effective operation of network utilities	See Rule 5.8.

## **Rule 35.10 Assessment of Discretionary Activities**

### **Rule 35.10.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 35.10.2 - 35.10.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 35.10.2 - 35.10.3 apply as follows:
  - a. Rule 35.10.2 applies to all discretionary activities; and
  - b. Rule 35.10.3 applies to discretionary performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 35.10.2 Assessment of all discretionary activities

Activity

Guidance on the assessment of resource consents

<p>1. All discretionary land use activities listed below:</p> <ul style="list-style-type: none"> <li>• all other activities in the community activities category</li> <li>• all activities in the residential activities category</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 2.3.1</li> <li>b. Objective 35.2.1</li> <li>c. Activities that are ancillary to hospital activity are designed and operated in line with Objective 35.2.2 and its policies (Policy 35.2.1.2).</li> <li>d. Activities that are not ancillary to hospital activity:             <ol style="list-style-type: none"> <li>i. are related to or support the Wakari Hospital, or have other operational requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Wakari Hospital;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. are designed and operated in line with Objective 35.2.2 and its policies (Policy 35.2.1.3).</li> </ol> </li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>e. For discretionary land use activities, whether any associated development activities meet relevant development performance standards, or are otherwise consistent with relevant objectives and policies for development.</li> <li>f. All relevant land use performance standards are met, including noise and light spill standards.</li> </ol> <p><i>General assessment guidance</i></p> <ol style="list-style-type: none"> <li>g. In assessing the significance of effects, consideration will be given to:             <ol style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ol> </li> <li>h. In assessing activities that are discretionary due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>i. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>j. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>k. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ol>
--	---

### 35.10.3 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1.</p> <ul style="list-style-type: none"> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>

## **Rule 35.11 Assessment of Non-complying Activities**

### **Rule 35.11.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 35.11.2 - 35.11.3 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 35.11.2 - 35.11.3 apply as follows:
  - a. Rule 35.11.2 applies to non-complying land use activities;
  - b. Rule 35.11.3 applies to non-complying performance standard contraventions.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 35.11.2 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying land use activities listed below:</p> <ul style="list-style-type: none"> <li>• all activities in the major facilities activities category (except hospital)</li> <li>• all activities in the commercial activities category (except commercial activities ancillary to hospital activity and registered health practitioners)</li> <li>• all activities in the industrial activities category</li> <li>• all activities in the rural activities category</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 2.3.1</li> <li>b. Objective 2.3.2 and Policy 2.3.2.2</li> <li>c. Objective 2.4.3 and Policy 2.4.3.4</li> <li>d. Objective 35.2.1</li> <li>e. Activities not ancillary to hospital activity:               <ol style="list-style-type: none"> <li>i. are related to or support Wakari Hospital, or have other operation requirements that mean they need to locate in the zone;</li> <li>ii. support the efficient and effective operation of Wakari Hospital;</li> <li>iii. are not more appropriately located in another zone in line with Objective 2.3.2 and its policies; and</li> <li>iv. they are designed and operated in line with Objective 35.2.2 and its policies (Policy 35.2.1.3).</li> </ol> </li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>f. In assessing the significance of effects consideration will be given to:               <ol style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ol> </li> <li>g. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>h. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>i. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>j. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ol>
<p>2. Commercial advertising</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Policy 2.4.1.6.c</li> </ol>

### 35.11.3 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.
2. Setback from National Grid	<p><i>Relevant guidance from other sections:</i></p> a. See Section 5.10 for guidance on the assessment of resource consents in relation to Objective 5.2.X and effects related to the operation, maintenance, upgrading and development of the National Grid.

## F. Appendices

### A1. Schedules

#### A1.1 Schedule of Protected Heritage Items and Sites

##### Scheduled Heritage Buildings

Site Number	Item/Building Name	Address <sup>1</sup>	HNZ Category	HNZ List Number	Protection Required
<sup>1</sup> The address is not part of the listing details but is provided for information only. In the event that a scheduled heritage building is relocated within Dunedin City, this information will be updated as soon as practicable.					
B001	Alva House (Boarding House)	9 Alva Street Dunedin	2	4720	Entire external building envelope
B002	Jopp residence (former)	37 Ann Street Dunedin	2	2169	Entire external building envelope, including gables, barge-boards and fretwork to verandah
B003	Conway residence (former)	59 Ann Street Dunedin	2	2170	Entire external building envelope
B004	Station Mews, Stone's Publishers (former)	5A, 5B, 5C, 5D, 5E Anzac Avenue Dunedin			Façade to Anzac Ave, including fenestration, timber window joinery, unrendered brick, mouldings and architectural details, allowing for restoration of original architectural details.
B005	Dunedin Railway Station	20 Anzac Avenue Dunedin	1	59	Entire external building envelope and foyer, stained glass windows featuring locomotives, Royal Doulton facings at the ticket offices, Royal Doulton frieze of cherubs and foliage, wrought iron balustrades, and mosaic floor
B006	Knox College	9 Arden Street Dunedin	2	2187	Entire external building envelope and foyer
B007	Otago Boys High School	2 Arthur Street Dunedin	1	375	Entire external building envelope and foyer of original Tower Block
B008	Grants Braes Farmhouse	131 Belford Street Dunedin	2	4763	Entire external building envelope
B009	Wychwood	21 Belmont Lane Dunedin			Entire external building envelope

Site Number	Item/Building Name	Address <sup>1</sup>	HNZ Category	HNZ List Number	Protection Required
B010	Moritzson Building (former) / Stavely Building (former)	5 Jetty Street Dunedin	2	4752	Façades to Bond and Jetty Streets
B011	Consultancy House	7 Bond Street Dunedin	1	374	Entire external building envelope
B012	Commerce Club of Otago	15 Bond Street Dunedin			Façades to Crawford and Bond Street including fenestration, timber window joinery and entrance doors, leadlight windows, terrazzo doorsteps, parapet, inscription and unpainted brickwork. Excluding fire escapes and allowing for restoration of Queen Anne style timber windows on Bond Street façade. Interior: Timber framing, lead light windows and terrazzo floor in entrance lobby to Bond Street.
B013	Wood Adams Building	19 Bond Street Dunedin	2	3173	Façades to Bond and Crawford Streets
B014	Central Chambers Apartments	49 Bond Street, 54 Crawford Street Dunedin			Façades to Crawford Street and Bond Street, including fenestration, mouldings and architectural details, timber doors, iron castings.
B015	Salisbury House	104 Bond Street Dunedin			Façades to Bond and Police Streets
B016	J. Swift & Co. Building (former)	110 Bond Street Dunedin			Façades to Bond and Police Streets
B020	Winter Gardens (original portion)	901 Great King Street Nth Dunedin	2	4733	Entire square glasshouse
B021	Gasworks Fitting Shop	20 Braemar Street Dunedin	1	4401	Entire external building envelope and interior, including machinery
B022	Gasworks Exhauster & Boiler Houses	20 Braemar Street Dunedin	1	4399	Entire external building envelope, including the entire gasholder structure but allowing for restoration of missing elements

Site Number	Item/Building Name	Address <sup>1</sup>	HNZ Category	HNZ List Number	Protection Required
B024	St Leonards Playcentre Library	29 St Leonards Drive St Leonards	2	2211	Entire external building envelope, excluding the toilet block
B025	Burns Hall	415 Moray Place Dunedin	Historic Area	7072	Entire external building envelope
B026	North Road Post Office (former)	282 North Road Dunedin	2	2199	Entire external building envelope
B027	Residential building	26 Carr Street Dunedin	2	2174	Entire external building envelope, excluding addition from rear
B028	St Andrews Church (former)	66 Melville Street Dunedin	1	3185	Entire external building envelope and interior
B029	Central Fire Station	153 Castle Street Dunedin	2	7270	Façades to Castle and St Andrew Streets
B030	Cadbury Confectionery Ltd Buildings	280 Cumberland Street Dunedin	2	2143	Façades to Castle and Cumberland Streets
B031	Selwyn College Main Building	560 Castle Street Dunedin	2	2217	Façade and external bulk to Castle Street excluding ancillary buildings
B032	Residential building	689 Castle Street Dunedin	2	2181	Façade and external bulk to Castle Street
B033	Residential building	693 Castle Street Dunedin	2	2182	Façade and external bulk to Castle Street
B034	Glenavon Church	7 Chambers Street Dunedin	2	3371	Entire external building envelope
B036	Pinner House	15 Cliffs Road Dunedin	2	4761	Entire external building envelope, excluding the garage
B037	FW Petres house (formerly)	20 Cliffs Road Dunedin	2	4762	Entire external building envelope
B038	Residential building	1 Cobden Street Dunedin			Façade to Cobden Street
B040	Residential building	12 Cobden Street Dunedin			Entire external building envelope

Site Number	Item/Building Name	Address <sup>1</sup>	HNZ Category	HNZ List Number	Protection Required
B042	The Co-operative Fruitgrowers of Otago Ltd (former)	53 Bond Street Dunedin			Façades to Bond Street, Jetty Street and Crawford Street including fenestration remaining steel window joinery, timber entrance doors, mouldings and architectural details. Excluding white aluminium doors and window joinery to ground floor, roller garage doors, ducted chimney.
B043	Agricultural Hall (former)	83-89 Crawford Street Dunedin			Façades to Crawford Street and Vogel Street including fenestration and timber window joinery to both elevations. Mouldings and architectural details to Crawford Street allowing for restoration of original parapets and details. Unpainted and unrendered brick façade to Vogel Street, excluding modern door apertures.
B044	Sidey's Warehouse (former)	92 Crawford Street Dunedin			Façades to Crawford, Police and Bond Street including fenestration but allowing for restoration of original ground fenestration, remaining timber window joinery but excluding aluminium joinery and allowing for restoration of timber window joinery and doors, mouldings and architectural details.
B045	Hordern & White Dunedin Carriage Factory (former)	229 Crawford Street Dunedin			Façade only
B047	Railway Road Services Depot (former)	31 Queens Gardens Dunedin	1	3376	Façade and bulk appearance to Cumberland Street, interior concourse
B048	May & Co. Factory (former)	249 Cumberland Street Dunedin			Façade and bulk appearance to Cumberland Street

Site Number	Item/Building Name	Address <sup>1</sup>	HNZ Category	HNZ List Number	Protection Required
B049	Otago Settlers Museum	31 Queens Gardens Dunedin	2	2201	Façade and bulk appearance to Cumberland Street
B050	University of Otago Physical Education Department	655 Cumberland Street Dunedin	2	2228	Façade and bulk appearance to Cumberland Street
B051	Thomson residence (former)	692 Cumberland Street Dunedin	2	4696	Entire external building envelope
B052	All Saints Church	786 Cumberland Street Dunedin	1	2136	Entire external building envelope and interior of All Saints Church (the adjacent hall is not included in character contribution)
B053	Cable House	829 Cumberland Street Dunedin	2	2142	Entire external building envelope
B054	2 Dowling Street	2 Dowling Street Dunedin	2	4756	Entire external building envelope
B055	Imperial Building	1 Dowling Street Dunedin	2	4747	Entire external building envelope
B057	Orderly Rooms & Gun Shed (former)	7 Burlington Street Dunedin	1	3176	Façade to Dowling Street.
B058	Garrison Hall (former)	8 Dowling Street Dunedin	1	3176	Façades to Dowling and Burlington Streets
B059	Cromwell Chambers	9 Dowling Street Dunedin			Entire building envelope including fenestration and timber window joinery, leadlights, mouldings and architectural detail, unrendered and unpainted brick side wall.
B060	Les Mills	10-12 Dowling Street Dunedin			Entire building envelopes including fenestration, timber window joinery to rear elevations, surviving mouldings and architectural details, unpainted and unrendered brick and stone, original doors and windows to rear elevations. Excluding aluminium joinery allowing for restoration of original timber window joinery and other architectural details.

Site Number	Item/Building Name	Address <sup>1</sup>	HNZ Category	HNZ List Number	Protection Required
B061	Milford House (former New Zealand Clothing Factory)	20 Dowling Street Dunedin	1	2159	Façade to Dowling Street
B062	Trust Bank Otago (former)	30 Dowling Street Dunedin			Façade to Dowling Street including fenestration and steel window joinery, mouldings and architectural details.
B063	Excelsior Hotel (former)	152-158 Princes Street, 31-33 Dowling Street Dunedin	2	3368	Façades to Dowling and Princes Streets
B064	Salvation Army Fortress (former)	37 Dowling Street Dunedin	2	2215	Façade to Dowling Street
B065	Dundas Street Methodist Church & Sunday School (former)	50-52 Dundas Street Dunedin	2	3367	Façade and bulk appearance to Dundas Street
B066	Terrace House	62 Dundas Street Dunedin	2	3189	Façade to Dundas Street
B067	Terrace House	64 Dundas Street Dunedin	2	3189	Façade to Dundas Street
B068	Terrace House	66 Dundas Street Dunedin	2	3189	Façade to Dundas Street
B069	Terrace House	68 Dundas Street Dunedin	2	3189	Façade to Dundas Street
B070	Residential building	69 Dundas Street Dunedin			Façade to Dundas Street
B071	Terrace House	70 Dundas Street Dunedin	2	3189	Façade to Dundas Street
B072	Terrace House	72 Dundas Street Dunedin	2	3189	Façade to Dundas Street
B073	Terrace House	74 Dundas Street Dunedin	2	3189	Façade to Dundas Street
B074	Terrace House	76 Dundas Street Dunedin	2	3189	Façade to Dundas Street
B075	Terrace House	78 Dundas Street Dunedin	2	3189	Façade to Dundas Street
B076	Terrace House	80 Dundas Street Dunedin	2	3189	Façade to Dundas Street

Site Number	Item/Building Name	Address <sup>1</sup>	HNZ Category	HNZ List Number	Protection Required
B077	Terrace House	82 Dundas Street Dunedin	2	3189	Façade to Dundas Street
B078	Terrace House	84 Dundas Street Dunedin	2	3189	Façade to Dundas Street
B079	Terrace House	86 Dundas Street Dunedin	2	3189	Façade to Dundas Street
B080	Residential building	88 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B081	University of Otago H518 Student Flat	89 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B082	Residential building	90 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B083	Residential building	91 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B084	Terrace House	92 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B085	Residential building	93 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B086	Terrace House	94 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B087	Terrace House	96 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B088	Residential building	97 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B089	Terrace House	98 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B090	Terrace House	100 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B091	Terrace House	102 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B092	Terrace House	104 Dundas Street Dunedin			Façade and bulk appearance to Dundas Street
B093	Residential building	108 Dundas Street Dunedin			Façade to Dundas Street
B094	Residential building	110 Dundas Street Dunedin			Façade to Dundas Street

Site Number	Item/Building Name	Address <sup>1</sup>	HNZ Category	HNZ List Number	Protection Required
B095	Residential building	2 Elder Street Dunedin			Façades and bulk appearance to Pitt and Elder Street
B096	Residential building	7 Elder Street Dunedin			Entire external building envelope, excluding the conservatory to the Elder Street façade and the garaging to the rear of the site
B097	Residential building	11 Elder Street Dunedin			Entire external building envelope
B098	Residential building	17 Elder Street Dunedin	2	4776	Entire external building envelope
B099	Residential building	2 Fifield Street Dunedin	2	2161	Entire external building envelope
B100	Charles Begg Piano Factory (former)	12 Filleul Street Dunedin			Façade to Filleul Street including fenestration, mouldings and architectural details.
B101	Residential building	92 Filleul Street Dunedin			Façade and bulk form to Filleul Street including bluestone wall
B102	Residential building	94 Filleul Street Dunedin			Façade and bulk form to Filleul Street and London Street including bluestone wall
B103	Residential building	95 Filleul Street Dunedin			Entire external building envelope
B104	Faringdon Villa	29 Fitzroy Street Dunedin	2	4741	Entire external building envelope
B105	Residential building	48 Fitzroy Street Dunedin	2	4777	Entire external building envelope
B106	NZ Loans & Mercantile Building (former)	33 Thomas Burns Street Dunedin	2	4755 and 7767	Entire external building envelope
B107	74-78 George Street	74 George Street Dunedin			Façade to George Street above verandah including fenestration, timber window joinery, mouldings, parapet and other architectural details.

Site Number	Item/Building Name	Address <sup>1</sup>	HNZ Category	HNZ List Number	Protection Required
B108	Dreaver's Building (former)	149-165 George Street Dunedin			Façade to George Street above verandah including fenestration, timber window joinery, mouldings and architectural details. Shop front at 165 George Street including tiles, timber joinery, doors.
B109	Farmers Building	150 George Street Dunedin			Façade to George Street including fenestration, timber window joinery, mouldings and architectural features.
B110	City Boot Palace (former)	202 George Street Dunedin			Façades to George Street and St Andrew Street including fenestration, timber window joinery, mouldings and architectural details allowing for reinstatement of original parapet.
B111	Penroses Department Store (former)	205 George Street Dunedin	2	4744	Façades to St Andrew and George Streets
B112	Harvest Court	218 George Street Dunedin			Façade to George Street above verandah including fenestration, window joinery, mouldings and architectural details, verandah guys.
B114	Stafford House	245 George Street Dunedin			Façade to George Street above verandah including fenestration, timber window joinery, parapet, mouldings and architectural details, verandah guys and ironwork.
B115	City Dye Works (former)	250 George Street Dunedin			Façade to George Street above verandah including fenestration and steel window joinery but allowing for the restoration of timber sash windows, mouldings and architectural details, verandah guys. Rearward industrial buildings.

Site Number	Item/Building Name	Address <sup>1</sup>	HNZ Category	HNZ List Number	Protection Required
B116	Jubilee Buildings (former)	254 George Street Dunedin			Façade to George Street above verandah including fenestration and decorative glazing, clock face, mouldings and architectural details, allowing for removal of air conditioning units and other modern infrastructure on verandah.
B117	Glassons	260 George Street Dunedin			Façade to George Street above verandah including fenestration, timber window joiner, mouldings and architectural details, allowing for lowering of verandah to original height.
B118	Arthur Barnett Ltd (former)	267 George Street Dunedin			Façade to George Street above verandah, including fenestration, steel framed window joinery, mouldings and architectural details, decorative verandah guys. 'Can't Stop' sign and clock. Excluding other signs, banners.
B119	Commercial building	274-280 George Street Dunedin			Façade to George Street above verandah
B120	282 George Street	282 George Street Dunedin			Façade to George Street above verandah including fenestration, timber window joinery, mouldings and architectural details.
B121	284 George Street	284 George Street Dunedin			Façade to George Street above verandah including fenestration, timber window joinery, mouldings and architectural details.
B122	290 George Street	290 George Street Dunedin			Façade of 288 - 290 George Street above verandah including fenestration, timber window joinery, mouldings and architectural details. Excluding 1998 façade of 286 George Street.

Site Number	Item/Building Name	Address <sup>1</sup>	HNZ Category	HNZ List Number	Protection Required
B123	300 George Street	300 George Street Dunedin			Façades to George Street and Hanover Street above verandah including fenestration, timber window joinery, mouldings and architectural detail, unpainted brick.
B124	305 George Street	305 George Street Dunedin			Façade to George Street above verandah including fenestration, timber window joinery, mouldings and architectural details.
B125	309 George Street	309 George Street Dunedin			Façade to George Street above verandah including fenestration, timber window joinery allowing for restoration of the original window joinery, mouldings, unpainted and unrendered brick, excluding the fire escapes.
B126	Adams Bruce Ltd (former)	310 George Street Dunedin	2	4717	Façade to George Street including fenestration, timber and steel window joinery, leadlighting, shop front and entrance, mouldings and architectural details.
B127	314 George Street	314 George Street Dunedin			Façade to George Street including fenestration, steel window joinery to first floor, mouldings and architectural details. Ground floor tiles and leadlight shop front at 316 George Street. Excluding the aluminium joinery.
B128	Harris' Building	315 George Street Dunedin			Façade to George Street above verandah including fenestration, mouldings and architectural details, including building name. Excluding aluminium window joinery.

Site Number	Item/Building Name	Address <sup>1</sup>	HNZ Category	HNZ List Number	Protection Required
B129	318-322 George Street	318-322 George Street Dunedin			Façade to George Street above verandah including fenestration, timber window joinery.
B130	319 George Street	319 George Street Dunedin			Façade to George Street above verandah including fenestration, mouldings and architectural details. Excluding aluminium joinery allowing for reinstatement of timber sashes.
B131	J. & T. Christie Building (former)	321 George Street Dunedin			Façade to George Street above verandah including fenestration, steel window joinery, unpainted and un-rendered brick work, mouldings and architectural details, rain head.
B132	332-334 George Street	332-334 George Street Dunedin			Façade to George Street above verandah including fenestration, timber window joinery, mouldings and architectural details including relief building date.
B133	332-334 George Street	332-334 George Street Dunedin			Façade to George Street including fenestration, timber window joinery, doors, leadlights, mouldings and architectural details, tiled entrance ways.

## Archaeological Sites

Site Number	NZAA Site Number	Item	Address	HNZ Category	HNZ List Number
A001	I43/ 1	Huriawa Pa	Huriawa historic reserve Karitane	2	5673, 9560
A002	I44/ 1	Occupation site, Omimi	477 Coast Road Waikouaiti	2	5676
A003	I44/ 5	Occupation site / midden, Brighton Domain	Brighton Domain, in Blk 1, Otokia SD	2	5677
A004	I44/ 17	Māpoutahi Pa	Māpoutahi Pa Hist reserve	2	5678
A005	I44/ 20	Occupation site, Whareakeake	169 Whareakeake Road Blueskin	2	5679
A006	I44/ 21, 216	Occupation site, Purakaunui Inlet and Wellers whaling base	Osborne Road Purakaunui	2	5680
A007	I44/ 23	Occupation site, Long Beach	Long Beach area	2	5681
A008	I44/ 76, I44/12, I44/47, I44/343, I44/391	Occupation site, Harwood	Harwood area	2	5682
A009	I44/137, 138, 139, 140, 141	Occupation site, Acheron Head	289 & 323 Aramoana Road Port Chalmers	2	5683, 5684, 5685, 5686, 5687
A014	J43/ 4	Occupation site / midden, Pleasant River mouth	76 Tumai Station Road Waikouaiti (Pleasant River Estuary)	2	5701
A016	J44/ 2	Occupation site / midden in cave, Pipikaretu	Otakou Maori Reserve - Pakihau Road Portobello	2	5707
A017	J44/ 19	Occupation site / midden in cave, Pyramid Cove	1 Riddell Road Peninsula Pyramid Cove	2	5708
A018	J44/ 46	Occupation site / midden, south side Papanui Inlet	South side Papanui Inlet	2	5709
A019	J44/ 47, J44/ 89, 90, 91, 92, 93	Occupation site / midden, north side Papanui Inlet	North side Papanui Inlet	2	5710, 5713, 5714, 5715, 5716, 5717
A020	J44/ 68	Occupation site / oven, Cape Saunders Road	588 Cape Saunders Road Portobello	2	5711

Site Number	NZAA Site Number	Item	Address	HNZ Category	HNZ List Number
A021	J44/ 88	Wreck of Victory (Shipwreck)	Victory Beach	2	5712
A027	J44/ 100, J44/101	Occupation site / midden, Aramoana Road	853 Aramoana Road Port Chalmers	2	5718, 5719
A030	J44/6, 104, 106, 107, 108, 109, 110, 111, 112	Tau Muraki occupation site, south side Papanui Inlet	MacKay Road Papanui Inlet	2	5721, 5722
A032	J44/120, J44/121, J44/1	Occupation site / ovens, Papanui Beach	588 Cape Saunders Road Portobello	2	5723
A034	J44/ 122	Occupation site / oven, McKay Road	34 McKay Road Portobello	2	5725
A035	I44/ 221	Puketahi caves	Shore Street Road Reserve, Andersons Bay Dunedin City	1	6708
A036	J44/4, J44/103	Pukekura Pa / Taiaroa Head	Harington Point Road Taiaroa Head	2	5720, 6710
A037	I44/121	St Clair moa hunting site	St Clair		
A038	I44/68	Occupation site, Sandfly Bay	Sandymount Road Peninsula		
A039	I44/302	Otago Harbour walls	Southern Grassy Point headland Portobello Road	1	4726
A040	I44/177	Warrington moa hunting site	Warrington		
A041	I44/604	Hoopers Inlet and Papanui Inlet sea walls	Hoopers Inlet & Papanui Inlet		
A042	J44/5	Wellers Rock whaling station site	Harington Point Road Peninsula		
A043	I44/366	19th century bread ovens	392 Princes Street Dunedin		
A044	H44/1060, H44/1061	Deep Stream Water Race	Lee Stream		
A045	H42/136	Central Otago rail site	Hyde - Middlemarch		
A046	I44/88, I44/543	Harbour Cone gold battery and mining site	Eastern slopes Harbour Cone Hoopers Inlet		
A047	H43/138	Cottesbrook farmstead	Moonlight Road Middlemarch		
A048	I42/117	Fullartons deep sinkings	2338 Hartfield Road Hyde		

Site Number	NZAA Site Number	Item	Address	HNZ Category	HNZ List Number
A049	I44/310, 311, 313-317	Quarantine Island	Quarantine Island Port Chalmers	Historic Area	7503
A050	I44/468	Birch Street Wharf	Birch & Kitchener Streets Dunedin		
A051	I44/81, 83, 84, 447	Limestone kilns complex	Sandymount Road Peninsula		377
A052	I44/340	Torpedo mole	135 Aramoana Road Deborah Bay		
A053	I44/394	Cold Water Creek fresh water weir	Lewis Street Deborah Bay		
A054	I43/153	Nenthorn railway construction camp	100 Reefs Road Middlemarch		
A055	J44/162	Aramoana mole	Aramoana		

## **A1.2 Schedule of Areas of Significant Biodiversity Value**

### **Introduction to Areas of Significant Biodiversity Value**

The extent of indigenous vegetation and habitat in Dunedin is now a fraction of what it was prior to the arrival of humans. While the wholesale removal of vegetation cover has largely ceased, incremental loss still threatens the long term viability of indigenous vegetation and habitats. Under section 6(c) of the Resource Management Act (1991) local authorities are obliged to protect areas of significant indigenous vegetation and significant habitats of indigenous fauna. In Dunedin these areas are listed in a schedule as Areas of Significant Biodiversity Value (ASBV) in the district plan. Because ASBVs are only listed in the district plan with the consent of land owners Council also recognises other forms of protection, including QEII covenants.

ASBVs extend through most of Dunedin's diverse landscapes and ecosystems from the sea shore and off shore islands, Otago Peninsula, estuaries, inlets and lagoons, wetlands, forests, uplands and the Strath Taieri and its surrounds. There is a diversity of indigenous flora and fauna within these landscapes, some of which are endemic to Dunedin and are rare and/or subject to threats.

Landowners who have a site they wish to be listed as an ASBV require an ecological assessment to be undertaken which considers the ecological characteristics of the area against the criteria for significance.

The criteria for identification of ASBVs have been reviewed in accordance with national best practice and are outlined below:

### **Protected Areas**

- a. Existing protected areas: habitat or indigenous vegetation that has been specially set aside by statute or covenant for protection and preservation of indigenous biodiversity.

### **Recognised Areas**

- b. Areas within the Dunedin City boundaries that are listed in an operative Otago Regional Council Regional Plan as having significant indigenous biodiversity value.

### **Rarity**

- c. Rare species: the area provides habitat for indigenous species that are threatened, or at risk, or uncommon, nationally or within an ecological district, including those listed in Appendix 10A.1 and 10A.2. For mobile fauna and categories of at risk other than 'declining', the area must provide important habitat for the species, such as an area supporting large numbers of individuals, or providing refuge from predation, or key habitat for migration, feeding, breeding, or resting.
- d. Rare ecosystems: the area contains indigenous vegetation and/or fauna habitat in an originally rare ecosystem.
- e. Rare vegetation and habitat types: the area contains indigenous vegetation or habitat of indigenous fauna that has been reduced to less than 20% of its former extent nationally, regionally or within a relevant land environment, ecological district, or freshwater environment including wetlands.

### **Distinctiveness**

- f. Distinctiveness: The area supports or provides habitat for:
  - i. indigenous species at their distributional limit within Dunedin or nationally;
  - ii. indigenous species that are endemic to the Otago region; or
  - iii. indigenous vegetation or an association of indigenous species that is distinctive, of restricted occurrence, or has developed as a result of an unusual environmental factor or combinations of factors.

## **Representativeness**

- g. Representativeness: Areas that are examples of an indigenous vegetation type or habitat that is typical or characteristic of the natural diversity of the relevant ecological district. This can include degraded examples of their type, or represent all that remains of indigenous vegetation and habitats of indigenous fauna in some areas.

## **Ecological Context**

- h. Ecological context: The area:
  - i. has important connectivity value allowing dispersal of indigenous vegetation and fauna between different areas;
  - ii. performs an important buffering function that helps to protect the values of an adjacent area or feature; or
  - iii. is important for indigenous fauna, on a regular or temporary basis, for breeding, refuge, feeding or resting.

## **Diversity**

- i. Diversity: The area supports a high diversity of indigenous ecosystem types, indigenous taxa or has changes in species composition reflecting the existence of diverse natural features or gradients.

## **Size**

- j. Size: the area is a large example of a type of vegetation, habitat, or ecosystem, or supports a large population of indigenous fauna, within the relevant ecological district.

The schedule below provides a summary of the location, description and ecological values of the ASBVs that are identified and protected in the Plan.

## Schedule

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C001	Rock and Pillar Scenic Reserve	7453.9200	High altitude subalpine/alpine herbfields with four species unique to the Rock and Pillar Range. Includes a bog wetland area- cushion bog of Regional Significance.	DOC (H43 008); Wetland - WERI Database (Regional Significance)
C002	Salt Lake Scenic Reserve and Wetland Management Area	147.4600	Rocky tor landscape with lowland tussock grassland and a salt lake. The association of the salt lake and tussock grassland and rock face flora (including succulent herb swamp, rush and sedge swamp) is a unique feature in the District. Regional/Local Significance	DOC (H43 017); Wetland - WERI Database; (Regional/ Local Significance)
C003	Mt McKay Covenant	1.6400	Small area of rocky tors with undisturbed native grasses which is a habitat for giant skink and Otago skink.	DOC (H43 022)
C004	Black Rock	51.7300	Lowland snow tussock area (now rare within the Waipori Ecological District). Scientifically important as an opportunity to monitor changes occurring in tussock grassland	DOC (H44 007)
C005	Mill Creek	1,136.4500	Deep sided valley that flows into the Waipori Valley. Area contiguous with Waipori Falls and the Maungatua Range Scenic Reserve. Largest remnant of silver beech forest in eastern Otago north of the Catlins.	DOC (H44 076, H44 077, H44 086)
C008	Maungatua Summit Wetland Management Area and Maungatua Scenic Reserve	1440.4500	Rolling tussock and boggy tops descending to deeply dissected gullies with beech forest remnants. Tarn restiag bog and tussockland cushion bog. Typical alpine wetland cushionfield, shrubland and grassland at low altitude of National Significance. Forested slopes on the eastern side of the Maungatua Range at the end of Grainger Road which contains regenerating native forest and remnant silver beech forest.	DOC (H44 088); DOC (H44 087); Wetland - WERI Database; (National Significance)
C010	Stoney Hill Run Covenant	26.5900	Small gully system on moderate to steep slopes which contains remnant kanuka-manuka/broadleaf and tussock grasslands and fernlands.	DOC (I43 024)
C011	Garden Bush	30.8400	Broadleaf forest on steep valley side which are the remnant representative of Waikouaiti Ecological District	DOC (I43 027)
C012	Hawksbury Quarry Reserve	3.9500	Eastern slopes of Mt Baldie which contain lowland coastal forest remnant including ngaio, kowhai, broadleaf, fuchsia.	DOC (I43 028)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C014	Waikouaiti River Estuary Wetland and Ellison Saltmarsh and Merton Arm Wildlife Management Reserve	96.3500	River margins adjacent to important river habitats. These riparian areas are important in maintaining the quality of the adjoining significant water habitat for whitebait and other species.	DOC (I43 032); DOC (I43 034); DOC (I43 035); DOC (I43 037)
C017	Seacliff Bush Covenant	14.7300	Coastal light bush remnant which include fuchsia dominant, kowhai, mahoe.	DOC (I43 044)
C018	Seacliff Wetlands Covenant	0.6100	Small wetland adjacent to Scenic Reserve which has habitat values for birds and aquatic species.	DOC (I43 045)
C019	Seacliff Scenic Reserve	22.5800	Coastal light bush remnant of fuchsia dominant, kowhai and mahoe.	DOC (I43 046)
C020	Seacliff Scenic Reserve	32.2400	Remnant coastal bush and bushclad hillside - kowhai dominant, matai, kahikatea, broadleaf, totara.	DOC (I43 051)
C021	Hawksbury Lagoon and Hawksbury Lagoon Wildlife Refuge	54.0100	Two lagoons fed by channel. Causeways dissect lagoons. Natural values include wetland habitat values for native bird and fish species.	DOC (I43 069)
C022	Taieri River Gorge	4.9200	Marginal strip along Taieri River adjoining the Taieri Gorge Scenic Reserve. Botanical and fauna values - including long-tailed bat habitat.	DOC (I44 009)
C023	Taieri Gorge	514.9300	Long narrow reserve made up of steep forested slopes adjacent to the Taieri River. Botanical and fauna values - long-tailed bat habitat.	DOC (I44 010)
C024	Taieri Gorge Scenic Reserve	0.5100	Steep forested slopes of Taieri River Gorge. Two uncommon vegetation types. Reported sightings of long tailed bat.	DOC (I44 011)
C025	McKays Triangle Wildlife Management Reserve	40.8400	Wetland area on the Taieri Plain 10 km south west of Mosgiel. Important wildfowl breeding area.	DOC (I44 024)
C026	Allanton Wildlife Management Reserve	6.0500	Oxbow of Taieri River. The quality of the margins of this reserve are important in maintaining the habitat values of the wetland for native wildfowl.	DOC (I44 027)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C027	Allanton Wildlife Management Reserve	13.6100	Oxbow of Taieri River. The quality of the margins of this reserve are important in maintaining the habitat values of the wetland for native wildfowl.	DOC (I44 029)
C028	Allanton Wildlife Management Reserve	0.6300	Oxbow of Taieri River. The quality of the margins of this reserve are important in maintaining the habitat values of the wetland for native wildfowl.	DOC (I44 030)
C029	Hope Hill	26.1100	Area of native vegetation east of Allanton in gully systems. Broadleaf forest, bracken, scrub, kanuka.	DOC (I44 032)
C030	Hope Hill Scenic Reserve	173.9800	Area of native vegetation east of Allanton in gully systems, including broadleaf forest and kanuka.	DOC (I44 033)
C031	Silverpeaks	3421.4400	The Silverpeaks hills west of Dunedin. Contains silver beech forest, snow tussocklands, broadleaf forest, kanuka, cassinia/inaka shrubland and is the habitat for native falcon, fernbirds and a large number of invertebrates.	DOC (I44 039)
C032	Silverpeaks Scenic Reserve	50.5400	Part of Silverpeaks Hills west of Dunedin. Important for native flora and fauna.	DOC (I44 042)
C033	Careys Creek Conservation Area	641.6300	Gully area west of Blueskin Harbour. Contains stands of broadleaf forest and kanuka.	DOC (I44 043)
C034	Orokonui Scenic Reserve	12.8100	Estuarine area feeding into Blueskin Bay. Margins around saltmarsh area important for freshwater and saltwater fish spawning - especially important whitebait spawning area and native invertebrates.	DOC (I44 058)
C035	Reserve for Waiora Yellow Grey Earth	5.3000	Area of land on spur between Boulder Hill and Powder Hill. A site of international importance supporting a rare soil type (Waiora Yellow Grey Earth) and manuka scrub threatened with extinction.	DOC (I44 063)
C036	Chalkies	202.9000	Area of native vegetation on the western side of the Silverstream Valley approximately 10.5 km north west of Dunedin city. This area contains podocarp broadleaf forest merging into snow tussock grasslands.	DOC (I44 065)
C037	Westwood Recreation Reserve	42.8500	Area of sandhills just north of Brighton between the sea and the road. Important site of remnant pingao - uncommon in this area.	DOC (I44 110)
C038	Tunnel Beach	4.1600	Headland projecting from irregular coastline about 30m above sea level. This is one of few remaining areas of salt tolerant herb vegetation. Also important for invertebrates.	DOC (I44 134)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C039	Leith Valley Scenic reserve	6.9000	Small areas of mixed broadleaf forest on very steep south west slope above Leith river. Remnants of native bush - Halls totara, rimu and miro.	DOC (I44 180)
C040	Orokonui Reserve	246.5600	Generally steep northeast aspect covered in regenerating scrub and forest containing a major stream catchment. This area contains an example of succession from pasture to forest. The estuary and stream are important habitat and spawning areas for whitebait and native freshwater fish.	DOC (I44 205)
C041	Orokonui Stream	1.5000	Narrow strip of land beside stream running from forested catchment down to estuary. Marginal protection. Aquatic stream has native freshwater fish species and whitebait spawning.	DOC (I44 206)
C042	Orokonui Walkway	0.1000	Track from car park, beside estuary and stream, up to native forest. An unusual association of exotic tress and native vegetation. An example of succession from pasture to forest.	DOC (I44 207)
C043	Mihiwaka	7.4700	Sub-alpine vegetation on slopes of Mt Mihiwaka.	DOC (I44 209)
C044	Grahams Bush	20.4500	Moderate to steep southwest slope with deep forested gully and small stream at northern end. Important podocarp kamahi broadleaf remnants.	DOC (I44 211)
C046	Goat Island Scenic Reserve	4.5600	Small scrub covered island in the middle of Otago Harbour between Portobello and Port Chalmers. Remnant native bush representative of former cover occurring on this island and the Otago Peninsula.	DOC (I44 229)
C047	Quarantine (St Martin's) Island Recreation Reserve	15.5700	Reasonable sized island in Otago Harbour between Portobello and Port Chalmers. Remnant and regenerating bush with restorative values. Contains many uncommon plant species.	DOC (I44 230)
C048	Taiaroa Head Nature Reserve	8.2800	Northern most point of Otago Peninsula a predominantly grassed promontory. Wildlife - albatross breeding colony, Stewart Island shags (only mainland sites for both species), spotted shags, sooty shearwater, little blue penguins, black backed and red billed gulls, fur seals.	DOC (I44 238)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C049	Heyward Point Scenic Reserve, Aramoana Beach yellow-eyed penguin habitat	56.8200	Promontory and high steep cliffs running down to open sea. Important coastal native forest remnants and habitat values for bush birds, shags, redbilled and black billed gulls nesting, seals breeding. Habitat for yellow-eyed penguin ( <i>Megadyptes antipodes</i> ), which have a threat classification of Threatened-Nationally Endangered.	DOC (I44 241); DOC (I44 242); DOC (I44 377)
C051	Papanui Beach/Cape Saunders	9.1000	Steep coastal cliffs exposed to the sea. Habitat - nesting for spotted shags.	DOC (I44 265)
C052	Cicily Beach	2.1000	Coastal strip including low rocky headlands and small sandy beaches. Small breeding area for yellow-eyed penguins. Haulout area for fur seals and sealions. Colonies of pingao still survive.	DOC (I44 267), DOC (I44 268)
C053	Cicily Beach	2.4700	Coastal strip including low rocky headlands and small sandy beaches. Small breeding area for yellow-eyed penguins. Haulout area for fur seals and sealions. Colonies of pingao still survive.	DOC (I44 267); DOC (I44 268)
C054	Allans Beach Recreation Reserve	54.2200	Rocky headland and very small sandy beach. Rough pasture mixed with coastal tussock hebe elliptica. Habitat for yellow eyed and little blue penguins, sealion haul out area. Good stands of coastal tussock.	DOC (I44 269)
C055	Allans Beach Wildlife Reserve and Hoopers Inlet Swamp	38.7200	Salt marsh and marginal vegetation. Important saltmarsh area - wildlife habitat.	DOC (I44 270); ORC wetland
C056	Sandymount Wildlife Refuge	20.5800	Steep hillside of coastal bush and clear areas of tussock and rough pasture. Habitat values for yellow-eyed and little blue penguins, haul out for fur seals with breeding colonies nearby, occasional elephant seal visits. Sooty shearwater may still breed here.	DOC (I44 273)
C057	Sandfly Bay	161.1400	Extensive sand dune area with large open sand below. Coastal Bay covered in lupin and other coastal shrubs. Sand blow rising from beach to ridge. Yellow-eyed and little blue penguin breeding area, fur seal/hooker sealion haulout area, small sooty shearwater breeding area. Remnant pingao plants.	DOC (I44 361)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C058	Boulder Beach WWF Block	39.6100	Coastal cliffs with rank pasture flax and hebe elliptica. Major yellow eyed penguin breeding area, small number of seals.	DOC (I44 275)
C059	Boulder Beach-Highcliff Block	74.6000	Steep coastal cliffs with remnants of coastal vegetation. Major yellow-eyed penguin breeding area. Remnant coastal vegetation and part of a revegetation project for yellow-eyed penguin habitat.	DOC (I44 276)
C060	Burns Park and Burns Park North	88.5300	Most of the remaining bush in the steep easterly aspect overlooking Otago Harbour and containing podocarps. Bush remnants - Halls totara, rimu and miro. Burns Park North - Broadleaved and kanuka forest on hillslopes.	DOC (I44 332) and DCC Natural Reserve
C061	R B Allen Covenant	5.8500	Bush adjoining Burns Park. Contains examples of Halls totara, rimu and miro.	DOC (I44 336)
C062	Sandymount Recreation Reserve	188.1900	Broad headland rising to the summit of Sandymount (319 m). Wildlife habitat - sooty shearwater, little blue penguins, gulls, seal breeding. Patches of pingao, other rare or restricted plants, tussock.	DOC (I44 344)
C063	Collinswood Conservation Covenant	1.3300	A remnant of forest on gentle slopes above Collinswood, includes remnant kowhai and lacebark.	DOC (I44 345)
C064	Taieri Gorge-Blair Acquisition	50.3500	Part of bush-clad Taieri River Valley system. Large stands of kanuka with occasional podocarp present.	DOC (I44 346)
C065	Peggys Hill Conservation Covenant	1.7800	A patch of dense low forest with a large number of plants not found elsewhere on the Otago Peninsula.	DOC (I44 356)
C066	Sullivans Bush	39.5200	Bush remnant including podocarps and native fauna in small catchment above Taieri plains.	DOC (I44 362)
C067	Aramoana Conservation Area and Estuarine Edge	114.0800	Buffer area (pasture) dunes and sand spit. Breeding grounds for insects and feeding grounds for many birds. The salt marsh area above mean high water springs lies adjacent to the second largest representation of dune slacks area in New Zealand. Incorporates Otago Regional Council significant wetland Aramoana Saltmarsh. Estuary - succulent herb swamp, salt rush and reed swamp, estuarine shrub swamp, sandflat. International/National Significance.	DOC (I44 363); Wetland - WERI Database (International/National Significance)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C068	S J McGrouther Covenant	7.0600	Coastal cliff and tops sparse native grasses and pasture. Habitat values - sooty shearwater.	DOC (I44 366)
C069	Part of the Taieri Gorge Scenic Reserve	120.8300	Native bush margins to Scenic Reserve on steep slope.	DOC (I44 367)
C070	Sandymount Conservation Covenant Sandymount Conservation Covenant	1.1500	Remnant native bush including fuchsia and mahoe on Peninsula hill.	DOC (I44 370)
C071	Everys Scientific Reserve	0.8500	Native bush on hillside above Otago Harbour. Habitat for native fauna.	DOC (I44 371)
C072	Tappers Conservation Covenant	0.6400	Small outcrop of tors with native grasses which are a habitat for skinks.	DOC (I44 372)
C073	Part of Taieri River Scenic Reserve	41.1300	Steep sided bush clad gully flowing the Taieri River upstream from Taieri Mouth. Includes Podocarp, silver beech, broadleaf species and kanuka.	DOC (I45 014)
C074	Henley Reserve	25.7800	Forest remnant of podocarp/broadleaf and kanuka on hillside above Taieri River.	DOC (I45 035)
C075	McLarens Gully Covenant	39.2600	Native bush gullies. Area of podocarps including totara and kahikatea.	DOC (I45 036)
C076	Okia Flat Wetland Management Area	238.2000	Low coastal forest, scrub, and wetland on sand flats. Habitat of yellow-eyed penguin.	DCC Natural Reserve; Wetland - WERI Database; Regional Significance
C077	Flagstaff Scenic Reserve and adjacent parks area	100.4500	Natural area of sub alpine tussock grasslands, flaxes, native herbs, and shrubs, with many important insect species.	DCC Natural Reserve
C078	Mt Cargill Scenic Reserve (including Bethunes Gully)	287.9800	Alpine/subalpine area of native herbs, shrubs, and tussock grasslands close to urban centre with important populations of native insects. Broadleaved and kanuka forest on hillslope and gully.	DCC Natural Reserve and DOC (I44 217)
C079	Caversham Bush Reserve	3.4000	Habitat of rare and significant native fauna.	DCC Natural Reserve

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C080	Woodhaugh Gardens and Pine Hill	9.2300	Contains remnant totara, matai, and kahikatea - important as a type locality for many native insects. Broadleaved forest, broadleaved/kanuka forest, on steep scarp above river.	DCC Natural Reserve
C081	QEII Trust Covenant	6.8800	Forest remnant and mineral spring.	QEII Trust Covenant
C082	QEII Trust Covenant	13.8400	Forest remnant.	QEII Trust Covenant
C083	QEII Trust Covenant	2.4100	Coastal regenerating hardwood forest and forest revegetation.	QEII Trust Covenant
C084	QEII Trust Covenant	2.1600	Coastal regenerating hardwood forest and forest revegetation.	QEII Trust Covenant
C085	QEII Trust Covenant	15.4900	Coastal broadleaf/podocarp forest and parkland.	QEII Trust Covenant
C086	QEII Trust Covenant	2.0800	Coastal broadleaf/podocarp forest.	QEII Trust Covenant
C087	QEII Trust Covenant	8.9200	Sand dune habitat and coastal forest.	QEII Trust Covenant
C088	QEII Trust Covenant	24.2200	Regenerating beech forest remnant.	QEII Trust Covenant
C089	QEII Trust Covenant	19.9400	Lowland regenerating kanuka/manuka forest remnant.	QEII Trust Covenant
C090	QEII Trust Covenant (part)	20.8000	Forest remnant and wildlife habitat. Grazing of existing pastures.	QEII Trust Covenant
C091	QEII Trust Covenant	2.0600	Podocarp/broadleaf forest.	QEII Trust Covenant
C092	QEII Trust Covenant	1.7300	Forest remnant.	QEII Trust Covenant
C093	QEII Trust Covenant	17.9600	Semi-coastal regenerating podocarp/broadleaf forest remnant.	QEII Trust Covenant
C094	QEII Trust Covenant	5.7700	Lowland regenerating forest remnant.	QEII Trust Covenant
C095	QEII Trust Covenant	2.6700	Forest remnant.	QEII Trust Covenant
C096	QEII Trust Covenant	3.3800	Forest remnant and foreshore.	QEII Trust Covenant
C097	QEII Trust Covenant	82.3000	Semi-coastal regenerating tussock shrub land and broadleaf/podocarp forest remnant.	QEII Trust Covenant

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C099	Great Moss Swamp	378.7400	Swamp/Lake - restiad bog and tussockland, rush and sedge swamp. National/Regional Significance.	Wetland - WERI Database (National/Regional Significance)
C100	Edge of Hoopers Inlet	1.1500	Estuary mudflat, salt marsh and reed swamp, succulent herb swamp. National/Local Significance.	Wetland - WERI Database (National/Local Significance)
C102	Papanui Inlet Saltmarsh	6.4200	Estuary - mudflat, succulent herb swamp. National/Local Significance.	Wetland - WERI Database (National/Local Significance)
C103	Swampy Summit Swamp	48.5100	Bog tarn, restiad bog and tussockland. National/Regional Significance.	Wetland - WERI Database (National/Regional Significance)
C104	Edge of Blueskin Bay	7.7000	Estuary - mudflat, salt rush and reed swamp, succulent herb swamp. Regional/Local Significance.	Wetland - WERI Database (Regional/Local Significance)
C106	Edge of Kaikorai Estuary, Estuary and Lagoon	67.1400	Estuary mudflat, salt marsh and reed swamp, succulent herb swamp. Regional Significance.	Wetland - WERI Database (Regional Significance)
C107	Edge of Pleasant River Estuary	1.6100	Estuary succulent herb swamp, mudflat, salt rush and reed swamp. Regional Significance	Wetland - WERI Database (Regional Significance)
C108	Edge of Purakaunui Inlet	1.6900	Estuary - rush and sedge swamp, succulent herb swamp, salt rush and reed swamp, estuarine shrub swamp. Regional/Local Significance.	Wetland - WERI Database (Regional/Local Significance)
C112	Edge of Tomahawk Lagoon	31.6600	Lake - lowland lake, reed swamp. Regional/Local Significance.	Wetland - WERI Database (Regional/Local Significance)
C114	Waipori Boot Wildlife Management Reserve	80.8600	Lagoon - rush and sedge swamp, broadleaved tree swamp, lowland swamp. Regional Significance.	Wetland - WERI Database (Regional Significance)
C116	Pilots Beach Recreation Reserve	3.8100	Provides habitat for a number of species, including little blue penguins, fur seals, hooker sea lions, elephant seals and leopard seals.	DCC Natural Reserve

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C117	Otekiho Local Purpose (Wildlife) Reserve	4.4400	Provides habitat for a number of wildlife species, including yellow-eyed penguins, fur seals, hooker sea lions, elephant seals and leopard seals.	DCC Natural Reserve
C118	Green Island/Okaihae	4.0600	Green Island/Okaihae rises to 42 metres above sea level, and is partly covered in coastal scrub and herbaceous vegetation. Provides habitat for a number of wildlife species, including yellow eyed penguins, blue penguins, royal spoonbill, Stewart Island shag, sooty shearwater, fairy prion, and variable oystercatcher. A small number of New Zealand fur seals also haul out on Green Island/Okaihae.	DOC
C119	Ross Creek	3.7300	Broadleaved and kanuka forest in gully. Area includes flood protection works for Water of the Leith and a bolder trap.	DCC Natural Reserve
C120	Rabbit Island Blueskin Bay	52.4100	Dune vegetation. Salt marsh and scrub on estuarine sandflat island.	DCC Natural Reserve
C121	Mount Pleasant Scenic Reserve	15.2500	Broadleaf / podocarp forest remnant	DOC
C123	Harbour Cone Parks land	34.1000	Broadleaved low forest and scrub on rocky summit. Rimu/pokaka forest and kanuka forest on low spur. Broadleaved forest on gully side. Broadleaved low forest on steep upper hillslope.	DCC Natural Reserve
C124	Burns Park extensions (Stevenson Bush)	14.1100	Broadleaved, kanuka and podocarp forest.	DCC Natural Reserve
C125	Frasers Gully	39.9600	Podocarp/broadleaved forest with kanuka forest in lowland gullies.	DCC Natural Reserve
C126	Mt Cargill City Forests area	10.1500	Distinctive and representative cloud forest vegetation with a range of successional stages which will allow continued regeneration of important indigenous tree species.	City Forest
C127	Fortification Stream Headwaters Swamp	25.8400	Swamp 500m above sea level located south west of Wallace Ford Road and Mount Gowie Road intersection in Clarks Junction. Swamps are scarce in Otago with less than 15% remaining. Contains red tussock, Juncus species	ORC Wetland
C128	Adjacent Chingford Park	10.4400	Podocarp/broadleaved and forest on mid hillslope.	DCC Natural Reserve

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C129	Pleasant River	14.2700	Estuarine edge of Pleasant River. Includes mudflat, salt marsh, reed and succulent swamp	LINZ
C130	Craigieburn Reserve	6.6000	Podocarp/broadleaved forest, kanuka forest, broadleaved low forest, around broad ridge crest.	DCC Natural Reserve
C131	Fernhill Marsh	0.7000	Marsh located 2km south east of Sutton and 200m above sea level. Scarce with less than 15% of marshes remaining in Otago	ORC Wetland
C132	North branch Waikouaiti River 1	508.4600	Tussock grassland, montane scrub, kanuka scrub and forest, broadleaved forest, podocarp/broadleaved forest on hillslopes and boulderfields occupying entire height of Mt Watkin.	DCC Reserve
C133	Black Rock Marshes	40.5000	Located 1.5km southwest of Black Rock and 16km east of Middlemarch at 480m above sea level. Marshes scarce in Otago with less than 15% remaining. Contains red tussock	ORC wetland
C136	Karetai Ledge	1.1000	Remnant coastal vegetation	DCC Natural Reserve
C137	Prospect Park Reserve (Lachlan)	4.9300	Includes Woodhaugh Gardens, Prospect Park, part Botanic Garden (not including Northern Cemetery), Willowbank and traffic island. Kanuka forest, broadleaved forest, on midslope. Kanuka/broadleaved forest on hillslope.	DCC Natural Reserve
C138	Parks Maori	6.7100	Broadleaf forest on midslope in town belt	DCC Reserve
C139	Lawyers Head	0.4000	Two nationally threatened plants present and significant habitat for sea birds	DCC Natural Reserve
C140	Cliff waterfall catchment above Tunnel Beach	2.8100	Remnant cliff top coastal vegetation	DCC Reserve
C141	Sanda Road and Cockerill Park, Brockville	6.5200	Broadleaf forest on midslope in town belt	DCC Natural Reserve
C142	Henley Swamp	9.1800	Significant swamp located south of Henley. Important habitat for waterfowl. Scarce with less than 15% of swamps remaining in Otago.	ORC Wetland
C143	Parks Wallace	7.9000	Lowland broadleaf forest dominated by mahoe, tree fuchsia, tarata and surrounded by residential suburbs	DCC Reserve

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C144	City Forests Whare Flat Silverstream and Flagstaff Forest	176.8400	Extensive area of representative dry land forest vegetation within City Forests plantation. Supports a high diversity of indigenous habitats and species some of which are nationally or locally uncommon	City Forest
C145	Glyn Wye Wetland Management Area	43.3200	Medium turf ephemeral tarns on broad ridge crest (380-440m above sea level), east of Middlemarch. Habitat for threatened herbaceous species and high diversity of indigenous rushes, herbs and other species.	ORC Wetland
C146	Jennings Creek Marsh	2.6400	Coastal marsh 2km northwest of Aramoana. Scarce in Otago less than 15% of marshes remain in Otago	ORC Wetland
C147	Lamb Hill Fen Complex	37.5200	Area of copper tussock wetland / swamp on gully floors (640m-740m above sea level) in the southern part of Macraes Ecological District. Copper tussock, toetoe, purei and common rush make up the canopy and various mosses, liverworts, rushes and herbs make up the ground layer. Scarce in Otago with less than 15% of swamps remaining.	ORC Wetland
C148	Lower Otokia Creek Marsh	3.0300	Northwest of the intersection of McIntosh Road and Sea View Road, Brighton. Scarce with less than 15% of marshes remaining in Otago. Habitat of waterfowl including Black Stilt.	ORC Wetland
C149	McGregor Swamp	2.9400	Located west of the intersection of Beach Street and Stewart Street, Waikouaiti. Swamps are scarce in Otago with less than 15% remaining. Spawning grounds for whitebait/inanga.	ORC Wetland
C150	McLachlan Road Marsh	10.2100	Located southeast of the intersection of Round Hill Road and McLachlan Road, Karitane. Scarce because less than 15% of marshes remain in Otago. Spawning grounds for whitebait/inanga.	ORC Wetland
C151	MurraysRoad Inland Saline Wetland Management Area	1.4800	A salt pan (180m-200m above sea level) on the Tor Plateau which flows into a small wetland. Located south of the intersection of Longford Road and Murrays Road, Middlemarch. Scarce wetland type and only known salt pan within the Macraes Ecological District. Less than 18% of inland saline areas remain in Otago. Salt pan contains native salt tolerant plants and wet area natives sedges and rushes.	ORC Wetland

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C152	Office Creek Seepage	2.7900	Seepage area (500m-600m above sea level) surrounded by forestry, located 8km northwest of the intersection of Maungatua Road and Waipori Falls Road. Habitat for nationally and internationally rare or threatened species or communities, which includes eldon's galaxias.	ORC Wetland
C153	Old Dunstan Road Swamp	5.7400	Swamp 520m-560m above sea level located 6.5 km northwest of the intersection of Old Dunstan Road and Rocklands Road, Clarks Junction. Scarce with less than 15% of swamps remaining in Otago.	ORC Wetland
C154	Otokia Swamp	8.3700	Rush and sedge swamp adjacent to SH1 near Henley. Water levels fluctuate throughout the year. Scarce with less than 15% of swamps remaining in Otago. Regionally significant breeding area for waterfowl including NZ Shoveller, Pukeko, Pied Stilt and Spur-winged Plover	ORC Wetland
C155	Peat Moss Hills Fen Complex	35.2300	Fen and seepage area (620-680m above sea level) located 8km southwest of the intersection of Ramrock Road and Townsend Road, Middlemarch. Has as a high degree of naturalness.	ORC Wetland
C156	Reefs Pond Margins	0.4900	Swamp (320m-340m above sea level) located 4km southeast of the intersection of Reefs Road and Barewood Road, Clarks Junction. Scarce less than 15% of swamps remain in Otago.	ORC Wetland
C157	Takitaoa Swamp	65.5500	Large flat valley floor wetland located 2.3km southwest of the intersection of Takitakitoa Road and Otokia-Kuri Bush Road East, Henley. Habitat for nationally or internationally rare or threatened species or communities, including South Island Fern Bird. Also habitat for inanga and potential habitat for kokopu. Scarce with less than 15% of swamps remaining in Otago. Vegetation includes rushlands, shrubs , ribbonwood and tussock in the southern part of the wetland.	ORC Wetland
C158	Te Matai Marsh Complex	1.0700	Marsh located 1.8km northwest of the intersection of Dick and Weir Road, Portobello. Scarce with less than 15% of marshes remaining in Otago.	ORC Wetland
C160	Whareakeake Marsh	1.7600	Beach wetland forming part of a chain of coastal wetlands located in Purakaunui, north Dunedin. Marshes scarce with less than 15% remaining in Otago. Presence of pukio, ribbonwood, frogs and native bird habitat.	ORC Wetland

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C161	Braeside Swamp	2.6400	Located 1.6km northeast of Waipori Falls, Berwick. Less than 15% of swamps remain in Otago.	ORC Wetland
C162	Andersons Pond Margins	2.5900	Swamp located north east of Clarks Junction 360m above sea level. Swamps are scarce with less than 15% remaining in Otago.	ORC Wetland
C163	Alexanders Creek	29.5900	Podocarp/broadleaved forest in gullies. Alexanders Creek supports banded kokopu, longfin eel, koura, and the At Risk amphipod Austridotea benhami. Birds include kereru, tomtit, brown creeper, rifleman and other common forest birds.	QEII Trust Covenant registered 2-6-2010
C164	Grassy Point	1.7100	Contains significant coastal forest that provides habitat for one nationally at risk and seven locally important plant species and a representative assemblage of indigenous forest birds.	NA
C165	Harbour Cone - North	9.1	Dry kanuka forest with a broadleaved understorey. Supports locally important tree species such as ngaio, pokaka, kowhai and Hall's totara and indigenous forest birds.	NA
C1XX	Chain Hills - Morris Road	5.2460	Regenerating kanuka-broadleaved forest supporting a locally important tree species (totara) and indigenous forest birds.	NA
C1YY	Patmos Avenue	9.33	Tall diverse regenerating kanuka forest and broadleaved (tree fuchsia-mahoe) forest with remnant canopy podocarps including rimu and totara.	NA
C1ZZ	Normanby (Signal Hill) slopes	21.6	Important remnant of a much-reduced podocarp-broadleaved dry forest type dominated by kowhai, narrow-leaved lacebark, lowland ribbonwood, matai and totara. Includes areas of regenerating forest dominated by kanuka. Supports 60 indigenous plant species including 1 nationally at-risk and 9 locally important plant species.	Protective covenant on land title
C1AAA	Double Hill Road	8.93	Comprised of six individual stands of regenerating podocarp-broadleaf forest, ranging in size from 0.65 – 4.16ha. The stands are comprised of species that are commonly found in regenerating bush throughout Dunedin, including: mahoe, kanuka, kotukutuku (fuchsia), makomako (wineberry), kapuka (broadleaf) and several species of coprosma. The more notable emergent species found in two of the areas are miro, matai and kahikatea.	NA

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C1AAB	Ōtākou Golf Course Road	6.58	Dune slack wetland vegetation communities including rushes, sedges and turf plants. Indigenous plants include rautahi, pukio (sedge grasses), wī (rush) and herbs such as silverweed, native <i>Lobelia</i> and water milfoil species as well as a nationally at risk species ( <i>Centrolepis minima</i> ). The presence of aquatic plants such as red pondweed and water fern in areas with no standing water indicates the presence of ephemeral wetland habitat. Important habitat values for birds.	NA

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C001	Rock and Pillar Scenic Reserve	7453.9200	High altitude subalpine/alpine herbfields with four species unique to the Rock and Pillar Range. Includes a bog wetland area- cushion bog of Regional Significance.	DOC (H43 008); Wetland - WERI Database (Regional Significance)
C002	Salt Lake Scenic Reserve and Wetland Management Area	147.4600	Rocky tor landscape with lowland tussock grassland and a salt lake. The association of the salt lake and tussock grassland and rock face flora (including succulent herb swamp, rush and sedge swamp) is a unique feature in the District. Regional/Local Significance	DOC (H43 017); Wetland - WERI Database; (Regional/ Local Significance)
C003	Mt McKay Covenant	1.6400	Small area of rocky tors with undisturbed native grasses which is a habitat for giant skink and Otago skink.	DOC (H43 022)
C004	Black Rock	51.7300	Lowland snow tussock area (now rare within the Waipori Ecological District). Scientifically important as an opportunity to monitor changes occurring in tussock grassland	DOC (H44 007)
C005	Mill Creek	1,136.4500	Deep sided valley that flows into the Waipori Valley. Area contiguous with Waipori Falls and the Maungatua Range Scenic Reserve. Largest remnant of silver beech forest in eastern Otago north of the Catlins.	DOC (H44 076, H44 077, H44 086)
C008	Maungatua Summit Wetland Management Area and Maungatua Scenic Reserve	1440.4500	Rolling tussock and boggy tops descending to deeply dissected gullies with beech forest remnants. Tarn restiag bog and tussockland cushion bog. Typical alpine wetland cushionfield, shrubland and grassland at low altitude of National Significance. Forested slopes on the eastern side of the Maungatua Range at the end of Grainger Road which contains regenerating native forest and remnant silver beech forest.	DOC (H44 088); DOC (H44 087); Wetland - WERI Database; (National Significance)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C010	Stoney Hill Run Covenant	26.5900	Small gully system on moderate to steep slopes which contains remnant kanuka-manuka/broadleaf and tussock grasslands and fernlands.	DOC (I43 024)
C011	Garden Bush	30.8400	Broadleaf forest on steep valley side which are the remnant representative of Waikouaiti Ecological District	DOC (I43 027)
C012	Hawksbury Quarry Reserve	3.9500	Eastern slopes of Mt Baldie which contain lowland coastal forest remnant including ngaio, kowhai, broadleaf, fuchsia.	DOC (I43 028)
C014	Waikouaiti River Estuary Wetland and Ellison Saltmarsh and Merton Arm Wildlife Management Reserve	96.3500	River margins adjacent to important river habitats. These riparian areas are important in maintaining the quality of the adjoining significant water habitat for whitebait and other species.	DOC (I43 032); DOC (I43 034); DOC (I43 035); DOC (I43 037)
C017	Seacliff Bush Covenant	14.7300	Coastal light bush remnant which include fuchsia dominant, kowhai, mahoe.	DOC (I43 044)
C018	Seacliff Wetlands Covenant	0.6100	Small wetland adjacent to Scenic Reserve which has habitat values for birds and aquatic species.	DOC (I43 045)
C019	Seacliff Scenic Reserve	22.5800	Coastal light bush remnant of fuchsia dominant, kowhai and mahoe.	DOC (I43 046)
C020	Seacliff Scenic Reserve	32.2400	Remnant coastal bush and bushclad hillside - kowhai dominant, matai, kahikatea, broadleaf, totara.	DOC (I43 051)
C021	Hawksbury Lagoon and Hawksbury Lagoon Wildlife Refuge	54.0100	Two lagoons fed by channel. Causeways dissect lagoons. Natural values include wetland habitat values for native bird and fish species.	DOC (I43 069)
C022	Taieri River Gorge	4.9200	Marginal strip along Taieri River adjoining the Taieri Gorge Scenic Reserve. Botanical and fauna values - including long-tailed bat habitat.	DOC (I44 009)
C023	Taieri Gorge	514.9300	Long narrow reserve made up of steep forested slopes adjacent to the Taieri River. Botanical and fauna values - long-tailed bat habitat.	DOC (I44 010)
C024	Taieri Gorge Scenic Reserve	0.5100	Steep forested slopes of Taieri River Gorge. Two uncommon vegetation types. Reported sightings of long tailed bat.	DOC (I44 011)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C025	McKays Triangle Wildlife Management Reserve	40.8400	Wetland area on the Taieri Plain 10 km south west of Mosgiel. Important wildfowl breeding area.	DOC (I44 024)
C026	Allanton Wildlife Management Reserve	6.0500	Oxbow of Taieri River. The quality of the margins of this reserve are important in maintaining the habitat values of the wetland for native wildfowl.	DOC (I44 027)
C027	Allanton Wildlife Management Reserve	13.6100	Oxbow of Taieri River. The quality of the margins of this reserve are important in maintaining the habitat values of the wetland for native wildfowl.	DOC (I44 029)
C028	Allanton Wildlife Management Reserve	0.6300	Oxbow of Taieri River. The quality of the margins of this reserve are important in maintaining the habitat values of the wetland for native wildfowl.	DOC (I44 030)
C029	Hope Hill	26.1100	Area of native vegetation east of Allanton in gully systems. Broadleaf forest, bracken, scrub, kanuka.	DOC (I44 032)
C030	Hope Hill Scenic Reserve	173.9800	Area of native vegetation east of Allanton in gully systems, including broadleaf forest and kanuka.	DOC (I44 033)
C031	Silverpeaks	3421.4400	The Silverpeaks hills west of Dunedin. Contains silver beech forest, snow tussocklands, broadleaf forest, kanuka, cassinia/inaka shrubland and is the habitat for native falcon, fernbirds and a large number of invertebrates.	DOC (I44 039)
C032	Silverpeaks Scenic Reserve	50.5400	Part of Silverpeaks Hills west of Dunedin. Important for native flora and fauna.	DOC (I44 042)
C033	Careys Creek Conservation Area	641.6300	Gully area west of Blueskin Harbour. Contains stands of broadleaf forest and kanuka.	DOC (I44 043)
C034	Orokonui Scenic Reserve	12.8100	Estuarine area feeding into Blueskin Bay. Margins around saltmarsh area important for freshwater and saltwater fish spawning - especially important whitebait spawning area and native invertebrates.	DOC (I44 058)
C035	Reserve for Waiora Yellow Grey Earth	5.3000	Area of land on spur between Boulder Hill and Powder Hill. A site of international importance supporting a rare soil type (Waiora Yellow Grey Earth) and manuka scrub threatened with extinction.	DOC (I44 063)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C036	Chalkies	202.9000	Area of native vegetation on the western side of the Silverstream Valley approximately 10.5 km north west of Dunedin city. This area contains podocarp broadleaf forest merging into snow tussock grasslands.	DOC (I44 065)
C037	Westwood Recreation Reserve	42.8500	Area of sandhills just north of Brighton between the sea and the road. Important site of remnant pingao - uncommon in this area.	DOC (I44 110)
C038	Tunnel Beach	4.1600	Headland projecting from irregular coastline about 30m above sea level. This is one of few remaining areas of salt tolerant herb vegetation. Also important for invertebrates.	DOC (I44 134)
C039	Leith Valley Scenic reserve	6.9000	Small areas of mixed broadleaf forest on very steep south west slope above Leith river. Remnants of native bush - Halls totara, rimu and miro.	DOC (I44 180)
C040	Orokonui Reserve	246.5600	Generally steep northeast aspect covered in regenerating scrub and forest containing a major stream catchment. This area contains an example of succession from pasture to forest. The estuary and stream are important habitat and spawning areas for whitebait and native freshwater fish.	DOC (I44 205)
C041	Orokonui Stream	1.5000	Narrow strip of land beside stream running from forested catchment down to estuary. Marginal protection. Aquatic stream has native freshwater fish species and whitebait spawning.	DOC (I44 206)
C042	Orokonui Walkway	0.1000	Track from car park, beside estuary and stream, up to native forest. An unusual association of exotic tress and native vegetation. An example of succession from pasture to forest.	DOC (I44 207)
C043	Mihiwaka	7.4700	Sub-alpine vegetation on slopes of Mt Mihiwaka.	DOC (I44 209)
C044	Grahams Bush	20.4500	Moderate to steep southwest slope with deep forested gully and small stream at northern end. Important podocarp kamahi broadleaf remnants.	DOC (I44 211)
C046	Goat Island Scenic Reserve	4.5600	Small scrub covered island in the middle of Otago Harbour between Portobello and Port Chalmers. Remnant native bush representative of former cover occurring on this island and the Otago Peninsula.	DOC (I44 229)
C047	Quarantine (St Martin's) Island Recreation Reserve	15.5700	Reasonable sized island in Otago Harbour between Portobello and Port Chalmers. Remnant and regenerating bush with restorative values. Contains many uncommon plant species.	DOC (I44 230)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C048	Taiaroa Head Nature Reserve	8.2800	Northern most point of Otago Peninsula a predominantly grassed promontory. Wildlife - albatross breeding colony, Stewart Island shags (only mainland sites for both species), spotted shags, sooty shearwater, little blue penguins, black backed and red billed gulls, fur seals.	DOC (I44 238)
C049	Heyward Point Scenic Reserve, Aramoana Beach yellow-eyed penguin habitat	56.8200	Promontory and high steep cliffs running down to open sea. Important coastal native forest remnants and habitat values for bush birds, shags, redbilled and black billed gulls nesting, seals breeding. Habitat for yellow-eyed penguin ( <i>Megadyptes antipodes</i> ), which have a threat classification of Threatened-Nationally Endangered.	DOC (I44 241); DOC (I44 242); DOC (I44 377)
C051	Papanui Beach/Cape Saunders	9.1000	Steep coastal cliffs exposed to the sea. Habitat - nesting for spotted shags.	DOC (I44 265)
C052	Cicily Beach	2.1000	Coastal strip including low rocky headlands and small sandy beaches. Small breeding area for yellow-eyed penguins. Haulout area for fur seals and sealions. Colonies of pingao still survive.	DOC (I44 267), DOC (I44 268)
C053	Cicily Beach	2.4700	Coastal strip including low rocky headlands and small sandy beaches. Small breeding area for yellow-eyed penguins. Haulout area for fur seals and sealions. Colonies of pingao still survive.	DOC (I44 267); DOC (I44 268)
C054	Allans Beach Recreation Reserve	54.2200	Rocky headland and very small sandy beach. Rough pasture mixed with coastal tussock <i>hebe elliptica</i> . Habitat for yellow eyed and little blue penguins, sealion haul out area. Good stands of coastal tussock.	DOC (I44 269)
C055	Allans Beach Wildlife Reserve and Hoopers Inlet Swamp	38.7200	Salt marsh and marginal vegetation. Important saltmarsh area - wildlife habitat.	DOC (I44 270); ORC Wetland
C056	Sandymount Wildlife Refuge	20.5800	Steep hillside of coastal bush and clear areas of tussock and rough pasture. Habitat values for yellow-eyed and little blue penguins, haul out for fur seals with breeding colonies nearby, occasional elephant seal visits. Sooty shearwater may still breed here.	DOC (I44 273)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C057	Sandfly Bay	161.1400	Extensive sand dune area with large open sand below. Coastal Bay covered in lupin and other coastal shrubs. Sand blow rising from beach to ridge. Yellow-eyed and little blue penguin breeding area, fur seal/hooker sealion haulout area, small sooty shearwater breeding area. Remnant pingao plants.	DOC (I44 361)
C058	Boulder Beach WWF Block	39.6100	Coastal cliffs with rank pasture flax and hebe elliptica. Major yellow eyed penguin breeding area, small number of seals.	DOC (I44 275)
C059	Boulder Beach-Highcliff Block	74.6000	Steep coastal cliffs with remnants of coastal vegetation. Major yellow-eyed penguin breeding area. Remnant coastal vegetation and part of a revegetation project for yellow-eyed penguin habitat.	DOC (I44 276)
C060	Burns Park and Burns Park North	88.5300	Most of the remaining bush in the steep easterly aspect overlooking Otago Harbour and containing podocarps. Bush remnants - Halls totara, rimu and miro. Burns Park North - Broadleaved and kanuka forest on hillslopes.	DOC (I44 332) and DCC Natural Reserve
C061	R B Allen Covenant	5.8500	Bush adjoining Burns Park. Contains examples of Halls totara, rimu and miro.	DOC (I44 336)
C062	Sandymount Recreation Reserve	188.1900	Broad headland rising to the summit of Sandymount (319 m). Wildlife habitat - sooty shearwater, little blue penguins, gulls, seal breeding. Patches of pingao, other rare or restricted plants, tussock.	DOC (I44 344)
C063	Collinswood Conservation Covenant	1.3300	A remnant of forest on gentle slopes above Collinswood, includes remnant kowhai and lacebark.	DOC (I44 345)
C064	Taieri Gorge-Blair Acquisition	50.3500	Part of bush-clad Taieri River Valley system. Large stands of kanuka with occasional podocarp present.	DOC (I44 346)
C065	Peggys Hill Conservation Covenant	1.7800	A patch of dense low forest with a large number of plants not found elsewhere on the Otago Peninsula.	DOC (I44 356)
C066	Sullivans Bush	39.5200	Bush remnant including podocarps and native fauna in small catchment above Taieri plains.	DOC (I44 362)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C067	Aramoana Conservation Area and Estaurine Edge	114.0800	Buffer area (pasture) dunes and sand spit. Breeding grounds for insects and feeding grounds for many birds. The salt marsh area above mean high water springs lies adjacent to the second largest representation of dune slacks area in New Zealand. Incorporates Otago Regional Council significant wetland Aramoana Saltmarsh. Estuary - succulent herb swamp, salt rush and reed swamp, estuarine shrub swamp, sandflat. International/National Significance.	DOC (I44 363); Wetland - WERI Database (International/ National Significance)
C068	S J McGrouther Covenant	7.0600	Coastal cliff and tops sparse native grasses and pasture. Habitat values - sooty shearwater.	DOC (I44 366)
C069	Part of the Taieri Gorge Scenic Reserve	120.8300	Native bush margins to Scenic Reserve on steep slope.	DOC (I44 367)
C070	Sandymount Conservation Covenant Sandymount Conservation Covenant	1.1500	Remnant native bush including fuchsia and mahoe on Peninsula hill.	DOC (I44 370)
C071	Every's Scientific Reserve	0.8500	Native bush on hillside above Otago Harbour. Habitat for native fauna.	DOC (I44 371)
C072	Tappers Conservation Covenant	0.6400	Small outcrop of tors with native grasses which are a habitat for skinks.	DOC (I44 372)
C073	Part of Taieri River Scenic Reserve	41.1300	Steep sided bush clad gully flowing the Taieri River upstream from Taieri Mouth. Includes Podocarp, silver beech, broadleaf species and kanuka.	DOC (I45 014)
C074	Henley Reserve	25.7800	Forest remnant of podocarp/broadleaf and kanuka on hillside above Taieri River.	DOC (I45 035)
C075	McLarens Gully Covenant	39.2600	Native bush gullies. Area of podocarps including totara and kahikatea.	DOC (I45 036)
C076	Okia Flat Wetland Management Area	238.2000	Low coastal forest, scrub, and wetland on sand flats. Habitat of yellow-eyed penguin.	DCC Natural Reserve; Wetland - WERI Database; Regional Significance

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C077	Flagstaff Scenic Reserve and adjacent parks area	100.4500	Natural area of sub alpine tussock grasslands, flaxes, native herbs, and shrubs, with many important insect species.	DCC Natural Reserve
C078	Mt Cargill Scenic Reserve (including Bethunes Gully)	287.9800	Alpine/subalpine area of native herbs, shrubs, and tussock grasslands close to urban centre with important populations of native insects. Broadleaved and kanuka forest on hillslope and gully.	DCC Natural Reserve and DOC (144 217)
C079	Caversham Bush Reserve	3.4000	Habitat of rare and significant native fauna.	DCC Natural Reserve
C080	Woodhaugh Gardens and Pine Hill	9.2300	Contains remnant totara, matai, and kahikatea - important as a type locality for many native insects. Broadleaved forest, broadleaved/kanuka forest, on steep scarp above river.	DCC Natural Reserve
C081	QEII Trust Covenant	6.8800	Forest remnant and mineral spring.	QEII Trust Covenant
C082	QEII Trust Covenant	13.8400	Forest remnant.	QEII Trust Covenant
C083	QEII Trust Covenant	2.4100	Coastal regenerating hardwood forest and forest revegetation.	QEII Trust Covenant
C084	QEII Trust Covenant	2.1600	Coastal regenerating hardwood forest and forest revegetation.	QEII Trust Covenant
C085	QEII Trust Covenant	15.4900	Coastal broadleaf/podocarp forest and parkland.	QEII Trust Covenant
C086	QEII Trust Covenant	2.0800	Coastal broadleaf/podocarp forest.	QEII Trust Covenant
C087	QEII Trust Covenant	8.9200	Sand dune habitat and coastal forest.	QEII Trust Covenant
C088	QEII Trust Covenant	24.2200	Regenerating beech forest remnant.	QEII Trust Covenant
C089	QEII Trust Covenant	19.9400	Lowland regenerating kanuka/manuka forest remnant.	QEII Trust Covenant
C090	QEII Trust Covenant (part)	20.8000	Forest remnant and wildlife habitat. Grazing of existing pastures.	QEII Trust Covenant
C091	QEII Trust Covenant	2.0600	Podocarp/broadleaf forest.	QEII Trust Covenant
C092	QEII Trust Covenant	1.7300	Forest remnant.	QEII Trust Covenant

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C093	QEII Trust Covenant	17.9600	Semi-coastal regenerating podocarp/broadleaf forest remnant.	QEII Trust Covenant
C094	QEII Trust Covenant	5.7700	Lowland regenerating forest remnant.	QEII Trust Covenant
C095	QEII Trust Covenant	2.6700	Forest remnant.	QEII Trust Covenant
C096	QEII Trust Covenant	3.3800	Forest remnant and foreshore.	QEII Trust Covenant
C097	QEII Trust Covenant	82.3000	Semi-coastal regenerating tussock shrub land and broadleaf/podocarp forest remnant.	QEII Trust Covenant
C099	Great Moss Swamp	378.7400	Swamp/Lake - restiad bog and tussockland, rush and sedge swamp. National/Regional Significance.	Wetland - WERI Database (National/Regional Significance)
C100	Edge of Hoopers Inlet	1.1500	Estuary mudflat, salt marsh and reed swamp, succulent herb swamp. National/Local Significance.	Wetland - WERI Database (National/Local Significance)
C102	Papanui Inlet Saltmarsh	6.4200	Estuary - mudflat, succulent herb swamp. National/Local Significance.	Wetland - WERI Database (National/Local Significance)
C103	Swampy Summit Swamp	48.5100	Bog tarn, restiad bog and tussockland. National/Regional Significance.	Wetland - WERI Database (National/Regional Significance)
C104	Edge of Blueskin Bay	7.7000	Estuary - mudflat, salt rush and reed swamp, succulent herb swamp. Regional/Local Significance.	Wetland - WERI Database (Regional/Local Significance)
C106	Edge of Kaikorai Estuary, Estuary and Lagoon	67.1400	Estuary mudflat, salt marsh and reed swamp, succulent herb swamp. Regional Significance.	Wetland - WERI Database (Regional Significance)
C107	Edge of Pleasant River Estuary	1.6100	Estuary succulent herb swamp, mudflat, salt rush and reed swamp. Regional Significance	Wetland - WERI Database (Regional Significance)
C108	Edge of Purakaunui Inlet	1.6900	Estuary - rush and sedge swamp, succulent herb swamp, salt rush and reed swamp, estuarine shrub swamp. Regional/Local Significance.	Wetland - WERI Database (Regional/Local Significance)

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C112	Edge of Tomahawk Lagoon	31.6600	Lake - lowland lake, reed swamp. Regional/Local Significance.	Wetland - WERI Database (Regional/ Local Significance)
C114	Waipori Boot Wildlife Management Reserve	80.8600	Lagoon - rush and sedge swamp, broadleaved tree swamp, lowland swamp. Regional Significance.	Wetland - WERI Database (Regional Significance)
C116	Pilots Beach Recreation Reserve	3.8100	Provides habitat for a number of species, including little blue penguins, fur seals, hooker sea lions, elephant seals and leopard seals.	DCC Natural Reserve
C117	Otekiho Local Purpose (Wildlife) Reserve	4.4400	Provides habitat for a number of wildlife species, including yellow -eyed penguins, fur seals, hooker sea lions, elephant seals and leopard seals.	DCC Natural Reserve
C118	Green Island/Okaihae	4.0600	Green Island/Okaihae rises to 42 metres above sea level, and is partly covered in coastal scrub and herbaceous vegetation. Provides habitat for a number of wildlife species, including yellow eyed penguins, blue penguins, royal spoonbill, Stewart Island shag, sooty shearwater, fairy prion, and variable oystercatcher. A small number of New Zealand fur seals also haul out on Green Island/Okaihae.	DOC
C119	Ross Creek	3.7300	Broadleaved and kanuka forest in gully. Area includes flood protection works for Water of the Leith and a bolder trap.	DCC Natural Reserve
C120	Rabbit Island Blueskin Bay	52.4100	Dune vegetation. Salt marsh and scrub on estuarine sandflat island.	DCC Natural Reserve
C121	Mount Pleasant Scenic Reserve	15.2500	Broadleaf / podocarp forest remnant	DOC
C123	Harbour Cone Parks land	34.1000	Broadleaved low forest and scrub on rocky summit. Rimu/pokaka forest and kanuka forest on low spur. Broadleaved forest on gully side. Broadleaved low forest on steep upper hillslope.	DCC Natural Reserve
C124	Burns Park extensions (Stevenson Bush)	14.1100	Broadleaved, kanuka and podocarp forest.	DCC Natural Reserve
C125	Frasers Gully	39.9600	Podocarp/broadleaved forest with kanuka forest in lowland gullies.	DCC Natural Reserve

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C126	Mt Cargill City Forests area	10.1500	Distinctive and representative cloud forest vegetation with a range of successional stages which will allow continued regeneration of important indigenous tree species.	City Forest
C127	Fortification Stream Headwaters Swamp	25.8400	Swamp 500m above sea level located south west of Wallace Ford Road and Mount Gowie Road intersection in Clarks Junction. Swamps are scarce in Otago with less than 15% remaining. Contains red tussock, Juncus species	ORC Wetland
C128	Adjacent Chingford Park	10.4400	Podocarp/broadleaved and forest on mid hillslope.	DCC Natural Reserve
C129	Pleasant River	14.2700	Estuarine edge of Pleasant River. Includes mudflat, salt marsh, reed and succulent swamp	LINZ
C130	Craigieburn Reserve	6.6000	Podocarp/broadleaved forest, kanuka forest, broadleaved low forest, around broad ridge crest.	DCC Natural Reserve
C131	Fernhill Marsh	0.7000	Marsh located 2km south east of Sutton and 200m above sea level. Scarce with less than 15% of marshes remaining in Otago	ORC Wetland
C132	North branch Waikouaiti River 1	508.4600	Tussock grassland, montane scrub, kanuka scrub and forest, broadleaved forest, podocarp/broadleaved forest on hillslopes and boulderfields occupying entire height of Mt Watkin.	DCC Reserve
C133	Black Rock Marshes	40.5000	Located 1.5km southwest of Black Rock and 16km east of Middlemarch at 480m above sea level. Marshes scarce in Otago with less than 15% remaining. Contains red tussock	ORC Wetland
C136	Karetai Ledge	1.1000	Remnant coastal vegetation	DCC Natural Reserve
C137	Prospect Park Reserve (Lachlan)	4.9300	Includes Woodhaugh Gardens, Prospect Park, part Botanic Garden (not including Northern Cemetery), Willowbank and traffic island. Kanuka forest, broadleaved forest, on midslope. Kanuka/broadleaved forest on hillslope.	DCC Natural Reserve
C138	Parks Maori	6.7100	Broadleaf forest on midslope in town belt	DCC Reserve
C139	Lawyers Head	0.4000	Two nationally threatened plants present and significant habitat for sea birds	DCC Natural Reserve
C140	Cliff waterfall catchment above Tunnel Beach	2.8100	Remnant cliff top coastal vegetation	DCC Reserve

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C141	Sanda Road and Cockerill Park, Brockville	6.5200	Broadleaf forest on midslope in town belt	DCC Natural Reserve
C142	Henley Swamp	9.1800	Significant swamp located south of Henley. Important habitat for waterfowl. Scarce with less than 15% of swamps remaining in Otago.	ORC Wetland
C143	Parks Wallace	7.9000	Lowland broadleaf forest dominated by mahoe, tree fuchsia, tarata and surrounded by residential suburbs	DCC Reserve
C144	City Forests Whare Flat Silverstream and Flagstaff Forest	176.8400	Extensive area of representative dry land forest vegetation within City Forests plantation. Supports a high diversity of indigenous habitats and species some of which are nationally or locally uncommon	City Forest
C145	Glyn Wye Wetland Management Area	43.3200	Medium turf ephemeral tarns on broad ridge crest (380-440m above sea level), east of Middlemarch. Habitat for threatened herbaceous species and high diversity of indigenous rushes, herbs and other species.	ORC Wetland
C146	Jennings Creek Marsh	2.6400	Coastal marsh 2km northwest of Aramoana. Scarce in Otago less than 15% of marshes remain in Otago	ORC Wetland
C147	Lamb Hill Fen Complex	37.5200	Area of copper tussock wetland / swamp on gully floors (640m-740m above sea level) in the southern part of Macraes Ecological District. Copper tussock, toetoe, purei and common rush make up the canopy and various mosses, liverworts, rushes and herbs make up the ground layer. Scarce in Otago with less than 15% of swamps remaining.	ORC Wetland
C148	Lower Otokia Creek Marsh	3.0300	Northwest of the intersection of McIntosh Road and Sea View Road, Brighton. Scarce with less than 15% of marshes remaining in Otago. Habitat of waterfowl including Black Stilt.	ORC Wetland
C149	McGregor Swamp	2.9400	Located west of the intersection of Beach Street and Stewart Street, Waikouaiti. Swamps are scarce in Otago with less than 15% remaining. Spawning grounds for whitebait/inanga.	ORC Wetland
C150	McLachlan Road Marsh	10.2100	Located southeast of the intersection of Round Hill Road and McLachlan Road, Karitane. Scarce because less than 15% of marshes remain in Otago. Spawning grounds for whitebait/inanga.	ORC Wetland

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C151	Murrays Road Inland Saline Wetland Management Area	1.4800	A salt pan (180m-200m above sea level) on the Tor Plateau which flows into a small wetland. Located south of the intersection of Longford Road and Murrays Road, Middlemarch. Scarce wetland type and only known salt pan within the Macraes Ecological District. Less than 18% of inland saline areas remain in Otago. Salt pan contains native salt tolerant plants and wet area natives sedges and rushes.	ORC Wetland
C152	Office Creek Seepage	2.7900	Seepage area (500m-600m above sea level) surrounded by forestry, located 8km northwest of the intersection of Maungatua Road and Waipori Falls Road. Habitat for nationally and internationally rare or threatened species or communities, which includes eldon's galaxias.	ORC Wetland
C153	Old Dunstan Road Swamp	5.7400	Swamp 520m-560m above sea level located 6.5 km northwest of the intersection of Old Dunstan Road and Rocklands Road, Clarks Junction. Scarce with less than 15% of swamps remaining in Otago.	ORC Wetland
C154	Otokia Swamp	8.3700	Rush and sedge swamp adjacent to SH1 near Henley. Water levels fluctuate throughout the year. Scarce with less than 15% of swamps remaining in Otago. Regionally significant breeding area for waterfowl including NZ Shoveller, Pukeko, Pied Stilt and Spur-winged Plover	ORC Wetland
C155	Peat Moss Hills Fen Complex	35.2300	Fen and seepage area (620-680m above sea level) located 8km southwest of the intersection of Ramrock Road and Townsend Road, Middlemarch. Has as a high degree of naturalness.	ORC Wetland
C156	Reefs Pond Margins	0.4900	Swamp (320m-340m above sea level) located 4km southeast of the intersection of Reefs Road and Barewood Road, Clarks Junction. Scarce less than 15% of swamps remain in Otago.	ORC Wetland

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C157	Takitoa Swamp	65.5500	Large flat valley floor wetland located 2.3km southwest of the intersection of Takitakitoa Road and Otokia-Kuri Bush Road East, Henley. Habitat for nationally or internationally rare or threatened species or communities, including South Island Fern Bird. Also habitat for inanga and potential habitat for kokopu. Scarce with less than 15% of swamps remaining in Otago. Vegetation includes rushlands, shrubs, ribbonwood and tussock in the southern part of the wetland.	ORC Wetland
C158	Te Matai Marsh Complex	1.0700	Marsh located 1.8km northwest of the intersection of Dick and Weir Road, Portobello. Scarce with less than 15% of marshes remaining in Otago.	ORC Wetland
C160	Whareakeake Marsh	1.7600	Beach wetland forming part of a chain of coastal wetlands located in Purakaunui, north Dunedin. Marshes scarce with less than 15% remaining in Otago. Presence of pukio, ribbonwood, frogs and native bird habitat.	ORC Wetland
C161	Braeside Swamp	2.6400	Located 1.6km northeast of Waipori Falls, Berwick. Less than 15% of swamps remain in Otago.	ORC Wetland
C162	Andersons Pond Margins	2.5900	Swamp located north east of Clarks Junction 360m above sea level. Swamps are scarce with less than 15% remaining in Otago.	ORC Wetland
C163	Alexanders Creek	29.5900	Podocarp/broadleaved forest in gullies. Alexanders Creek supports banded kokopu, longfin eel, koura, and the At Risk amphipod Austridotea benhami. Birds include kereru, tomtit, brown creeper, rifleman and other common forest birds.	QEII Trust Covenant registered 2-6-2010
C164	Grassy Point	1.7100	Contains significant coastal forest that provides habitat for one nationally at risk and seven locally important plant species and a representative assemblage of indigenous forest birds.	NA
C165	Harbour Cone - North	9.1	Dry kanuka forest with a broadleaved understorey. Supports locally important tree species such as ngaio, pokaka, kowhai and Hall's totara and indigenous forest birds.	NA
C1XX	Chain Hills - Morris Road	5.2460	Regenerating kanuka-broadleaved forest supporting a locally important tree species (totara) and indigenous forest birds.	NA

Site Number	Name (Location)	Area (ha)	Description and values	Other protection status
C1YY	Patmos Avenue	9.33	Tall diverse regenerating kanuka forest and broadleaved (tree fuchsia-mahoe) forest with remnant canopy podocarps including rimu and totara.	NA
C1ZZ	Normanby (Signal Hill) slopes	21.6	Important remnant of a much-reduced podocarp-broadleaved dry forest type dominated by kowhai, narrow-leaved lacebark, lowland ribbonwood, matai and totara. Includes areas of regenerating forest dominated by kanuka. Supports 60 indigenous plant species including 1 nationally at-risk and 9 locally important plant species.	Protective covenant on land title

## A1.3 Schedule of Trees

### Introduction to Tree Schedule

The Trees Schedule contains a list of trees, or groups of trees, that have been identified through the STEMs assessment system as being particularly worthy of protection from modification and removal because of their contribution to the maintenance or enhancement of amenity and the quality of the environment.

### Schedule

Tree Number	Tree Location	Tree Species	Tree Common Name	Tree Maori Name
G003	55 Burma Road Dunedin	Sequoia sempervirens (group)	Californian redwood	
G004	125 Gladstone Road Sth Mosgiel	Exotic group	Exotic	
G006	120 Dukes Road Sth Taieri	Quercus robur (12)	English oak	
G007	3 Chelivode Street Waitati	Eucalyptus regnans (group)	Mountain ash	
G008	R Anzac Avenue Dunedin	Ulmus sp (avenue)	Elm	
G010	36 Barclay Street Dunedin	Cupressus macrocarpa (group of 5)	Monterey cypress	
G012	66 Bayfield Road Dunedin	Eucalyptus sp (group of 5)	Gum	
G013	20 Beaconsfield Road Portobello	Podocarpus totara (group)	Totara	
G014	R Bedford Street Dunedin	Quercus robur (group of 2)	Oak	
G015	11 Bellevue Place Port Chalmers	Eucalyptus sp (group of 4)	Gum	
G016	R Belmont Lane Dunedin	Quercus robur (group)	Oak	
G017	49 Birchfield Avenue Dunedin	Cupressus macrocarpa (group)	Monterey cypress	
G018	35 Braeside Mosgiel	Quercus robur (group of 6)	Oak	
G019	26 Braeview Crescent Dunedin	Nothofagus fusca (group)	Red beech	Tawhairaunui
G021	R Braeview Crescent Dunedin	Sophora microphylla (group of 3)	Kowhai	Kowhai

Tree Number	Tree Location	Tree Species	Tree Common Name	Tree Maori Name
G022	893 Brighton Road Brighton	Metrosideros excelsa (group of 9)	Pohutukawa	Pohutukawa
G023	123 Brockville Road Dunedin	Cupressus macrocarpa (group)	Macrocarpa	
G024	108 Brockville Road Dunedin	Pseudotsuga menziesii (group of 3)	Douglas fir	
G025	118 Brockville Road Dunedin	Nothofagus menziesii (group of 2)	Silver beech	Tawhai
G026	31 Burwood Avenue Dunedin	Podocarpus totara (group of 2)	Totara	Totara
G027	145 Camp Road Pukehiki	Eucalyptus sp (group)	Gum	
G028	R Camp Road Pukehiki	Cupressus macrocarpa / Pinus radiata (avenue)	Monterey cypress / Monterey pine	
G029	81 Chain Hills Road Taieri	Eucalyptus sp (group)	Gum	
G030	19E Highgrove Dunedin	Cupressus macrocarpa (group)	Monterey cypress	
G031	348 Coast Road Waikouaiti	Sophora microphylla (group)	Kowhai	Kowhai
G032	173 Mount Stoker Road Middlemarch	Populus nigra var. Italica (group of 6-7)	Lombardy poplar	
G033	R Dalziel Road Dunedin	Cupressus macrocarpa / Pinus radiata (avenue)	Monterey cypress/ Monterey pine	
G034	145 Doctors Point Road Waitati	Quercus robur (group)	Oak	
G035	182 Doctors Point Road Waitati	Pseudopanax crassifolius (group)	Lancewood	Horoeka
G038	275 Factory Road Mosgiel	Fagus sylvatica 'Riversii' (group of 2)	Copper beech	
G039	R Ferntree Drive Dunedin	Larix decidua (group of 4)	Larch	
G040	12 Fifield Street Dunedin	Ulmus procera (group of 2)	Elm	
G041	47A Fulton Road Dunedin	Acacia melanoxylon (group of 3)	Blackwood	

Tree Number	Tree Location	Tree Species	Tree Common Name	Tree Maori Name
G042	860 Gladbrook Road Middlemarch	Fraxinus excelsior (avenue)	Ash	
G043	860 Gladbrook Road Middlemarch	Sequoiadendron giganteum (group)	Wellingtonia	
G045	100 Gladstone Road Dunedin	Nothofagus fusca (group of 2)	Red beech	Tawhairaunui
G047	171 Gladstone Road Sth Mosgiel	Sequoiadendron giganteum (group of 3)	Wellingtonia	
G049	85 Glenelg Street Dunedin	Pseudotsuga menziesii (group)	Douglas fir	
G050	85 Glenelg Street Dunedin	Sequoiadendron giganteum (group)	Wellingtonia	
G051	R Glengyle Street Dunedin	Pinus radiata (group of 2)	Monterey pine	
G053	58 Grendon Street Dunedin	Sequoiadendron giganteum (group of 3-4)	Wellingtonia	
G054	1711 Highcliff Road Dunedin	Eucalyptus globulus (group of 7-8)	Blue gum	
G055	1711 Highcliff Road Dunedin	Quercus robur (group of 5)	Oak	
G056	1 Quarantine Island Port Chalmers	Cupressus macrocarpa (group)	Monterey cypress	
G057	3 Quarantine Island Port Chalmers	Pinus sylvestris (group of 5-6)	Scots pine	
G058	190 Kaikorai Valley Road Dunedin	Rhododendron sp (group)	Rhododendron	
G060	626 Gladbrook Road Middlemarch	Quercus robur (group)	Oak	
G061	R Leith Walk Dunedin	Fagus sylvatica (group of 8)	English Beech	
G062	154 Macandrew Road Dunedin	Betula pendula (group of 3)	Silver birch	
G063	103 Maryhill Terrace Dunedin	Sequoia sempervirens (group of 4)	Sequoia	
G064	197 McGrath Road Waikouaiti	Tilia x europaea (group of 15)	Lime	

Tree Number	Tree Location	Tree Species	Tree Common Name	Tree Maori Name
G065	197 McGrath Road Waikouaiti	Corylus avellana (group of 5)	Hazelnut	
G067	3 McMeakin Road Dunedin	Eucalyptus sp (group)	Eucalyptus	
G068	41 Milburn Street Dunedin	Eucalyptus globulus (group of 2)	Blue gum	
G069	73 Mold Street Middlemarch	Ulmus sp (group of 2)	Elm	
G070	86 Mold Street Middlemarch	Quercus robur (group of 5)	Oak	
G071	105 Moonlight Road Middlemarch	Quercus robur (group of 14)	Oak	
G072	1011 Mount Cargill Road Waitati	Eucalyptus globulus (avenue)	Blue gum	
G073	1 - 73 Buccleugh Street Dunedin	Sequoia sempervirens (group of 13)	Sequoia	
G074	45 McMeakin Road Abbotsford	Pinus radiata / Cupressus macrocarpa (group of 4)	Monterey pine / Monterey cypress	
G075	123 North Taieri Road Abbotsford	Rhododendron sp (group of 6)	Rhododendron	
G076	123 North Taieri Road Abbotsford	Metrosideros robusta (group of 2)	Northern rata	Rata
G077	95 Norwood Street Dunedin	Eucalyptus sp (group)	Gums/conifer	
G079	41 Purakaunui Road Purakaunui	Pinus radiata (group)	Pine	
G080	41 Purakaunui Road Purakaunui	Cupressus macrocarpa (group)	Monterey cypress	
G081	39 Purakaunui Station Road Purakaunui	Fraxinus excelsior (group of 5)	Ash	
G082	119 Ramrock Road Waikouaiti	Quercus robur (group - avenue)	Oak	
G083	22 Gladstone Road Sth Mosgiel	Quercus robur (avenue)	Oak	
G084	186 Reservoir Road Sawyers Bay	Sequoiadendron giganteum (group of 3)	Wellingtonia

## **A1.4 Designations**

### **Introduction to Designation Scheduling and Mapping**

Designations are shown in this Plan as a schedule for each requiring authority. Where multiple requiring authorities are jointly listed e.g. Chorus N Z Limited & Spark N Z Trading Limited, both requiring authorities are jointly responsible for the designations listed.

#### **Schedules**

The schedule(s) for each requiring authority shows the full text of the designation, and identifies:

- the Plan reference for the designation e.g. D023;
- the name of the requiring authority responsible for the designation;
- the purpose of the designation;
- the location or address of the designation;
- whether there are conditions that apply to the designation;
- the legacy of the designation;
- whether the designation is a rollover designation from the previous district plan; and
- the lapse date which is the date the designation lapses unless it has already been given effect to.

For each designation, the conditions that apply are set out in full.

Please note that if the lapse date of the designation is changed by giving effect to the designation, the lapse date of the designation may be updated without an alteration to the designation using Section 181 of the RMA.

For land subject to more than one designation, the provisions of Section 177 of the RMA apply.

#### **Map**

The 2GP Planning Map details the extent of the designation boundaries. Designations on the Planning Map are identified by a dark blue outline and the designation reference in dark blue inside each polygon of the designation.

Where there are multiple designations over the same land, the Planning Map shows the location of these areas and provides an indicative priority for the multiple designations.

## A1.4.1 Airways Corporation of New Zealand Limited

### D388 Mosgiel NDB and 12ILS Outer Marker Beacon

<b>Designation Number</b>	D388
<b>Requiring Authority</b>	Airways Corporation of New Zealand Limited
<b>Designation Purpose</b>	Mosgiel NDB - Navigation Aids (Non Directional Beacon)
<b>Location (address)</b>	245 Riccarton Road West Mosgiel
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D388 Conditions

*Note: In all conditions below reference to "AS/NZS2772.1 (Interim):1998", shall be read as to include "AS/NZS2772.1 (Interim):1998 (or any new standard which is designed to replace this interim standard)".*

1. An outline plan of proposed works shall be submitted to the Council for assessment prior to the construction of any new work which does not meet the following criteria:
  - a. Like for like replacement structures.
  - b. Buildings up to a maximum height of 10 metres.
  - c. Poles and masts up to either the maximum height of the pole or mast which existing on the site at 12 September 1996 or 12 metres, whichever is greater.
2. Any interference with the performance of telecommunications and radiocommunications equipment, where this equipment is operated by a party other than the requiring authority, or with radio and television signal reception that is directly attributable to activities carried out on the subject site will be remedied forthwith by the requiring authority at its cost.
3. The facility shall at all times be operated in accordance with AS/NZS2772.1 (Interim):1998 in all places the public may reasonably access, and the level of radio frequency fields shall be kept as low as reasonably achievable.
4. The requiring authority shall notify the Council of any proposed changes to transmitting equipment which will have the effect of increasing radio frequency exposures in publicly accessible areas around the facility to a level greater than 25% of the applicable maximum exposure in AS/NZS2772.1 (Interim):1998 and shall provide the Council with an estimate of the likely maximum exposure which can be expected as a result of the change. If estimated exposures exceed 25% of the public limit of AS/NZS2772.1 (Interim):1998, a measurement survey will be undertaken by a suitably qualified independent radiation monitoring authority once the changes have been installed and commissioned, and the results provided to Council.

### D389 Henley NDB and Circle Guidance Light No. 1

<b>Designation Number</b>	D389
<b>Requiring Authority</b>	Airways Corporation of New Zealand Limited
<b>Designation Purpose</b>	Henley NDB and Circle Guidance Light No 1 - Air Navigation Aids (Non Directional Beacon and Circle Guidance Light)

<b>Location (address)</b>	150 Poplar Road West Otokia
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D389 Conditions

*Note: In all conditions below reference to "AS/NZS2772.1 (Interim):1998", shall be read as to include "AS/NZS2772.1 (Interim):1998 (or any new standard which is designed to replace this interim standard)".*

1. An outline plan of proposed works shall be submitted to the Council for assessment prior to the construction of any new work which does not meet the following criteria:
  - a. Like for like replacement structures.
  - b. Buildings up to a maximum height of 10 metres.
  - c. Poles and masts up to either the maximum height of the pole or mast which existing on the site at 12 September 1996 or 12 metres, whichever is greater.
2. Any interference with the performance of telecommunications and radiocommunications equipment, where this equipment is operated by a party other than the requiring authority, or with radio and television signal reception that is directly attributable to activities carried out on the subject site will be remedied forthwith by the requiring authority at its cost.
3. The facility shall at all times be operated in accordance with AS/NZS2772.1 (Interim):1998 in all places the public may reasonably access, and the level of radio frequency fields shall be kept as low as reasonably achievable.
4. The requiring authority shall notify the Council of any proposed changes to transmitting equipment which will have the effect of increasing radio frequency exposures in publicly accessible areas around the facility to a level greater than 25% of the applicable maximum exposure in AS/NZS2772.1 (Interim):1998 and shall provide the Council with an estimate of the likely maximum exposure which can be expected as a result of the change. If estimated exposures exceed 25% of the public limit of AS/NZS2772.1 (Interim):1998, a measurement survey will be undertaken by a suitably qualified independent radiation monitoring authority once the changes have been installed and commissioned, and the results provided to Council.

### D390 Dunedin Airport DVOR/DME Station

<b>Designation Number</b>	D390
<b>Requiring Authority</b>	Airways Corporation of New Zealand Limited
<b>Designation Purpose</b>	Dunedin Airport DVOR/DME Station - Air Navigation Aids (Very High Frequency Omni Directional Radio Range and Distance Measuring Equipment Station)
<b>Location (address)</b>	520 Flagstaff-Whare Flat Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D390 Conditions

*Note: In all conditions below reference to "AS/NZS2772.1 (Interim):1998", shall be read as to include "AS/NZS2772.1 (Interim):1998 (or any new standard which is designed to replace this interim standard)".*

1. In the event that any earthworks are undertaken in conjunction with the activity, all disturbed land shall be rehabilitated to a standard which is consistent with that of immediately adjacent land.
2. Any interference with the performance of telecommunications and radiocommunications equipment, where this equipment is operated by a party other than the requiring authority, or with radio and television signal reception that is directly attributable to activities carried out on the subject site will be remedied forthwith by the requiring authority at its cost.
3. The maximum height of any new building or other structure shall be no greater than the maximum height of the tallest equivalent structure existing at the site on 3 December 1996.
4. Any new structure shall be finished in the same or similar colour, hue and materials as the most similar structure existing at the site on 3 December 1996.
5. The maximum floor area of any new building or structure shall be no more than 50 percent of the floor area of the largest equivalent structure existing at the site on 3 December 1996.
6. The maximum floor area of any addition to any structure existing on the site at 3 December 1996 shall be 100 percent of the floor area of the existing structure.
7. The maximum height of any addition to any structure existing on the site at 3 December 1996 shall be the maximum height of the existing structure.
8. Any addition to any structure existing on the site at 3 December 1996 shall be finished in the same or similar colour, hue and materials as the existing structure.
9. The facility shall at all times be operated in accordance with AS/NZS2772.1 (Interim):1998 in all places the public may reasonably access, and the level of radio frequency fields shall be kept as low as reasonably achievable.
10. The requiring authority shall notify the Council of any proposed changes to transmitting equipment which will have the effect of increasing radio frequency exposures in publicly accessible areas around the facility to a level greater than 25% of the applicable maximum exposure in AS/NZS2772.1 (Interim):1998 and shall provide the Council with an estimate of the likely maximum exposure which can be expected as a result of the change. If estimated exposures exceed 25% of the public limit of AS/NZS2772.1 (Interim):1998, a measurement survey will be undertaken by a suitably qualified independent radiation monitoring authority once the changes have been installed and commissioned, and the results provided to Council.

### D391 Dunedin Airport NDB

<b>Designation Number</b>	D391
<b>Requiring Authority</b>	Airways Corporation of New Zealand Limited
<b>Designation Purpose</b>	Dunedin Airport NDB - Air Navigation Aids (Non Directional Beacon)
<b>Location (address)</b>	520 Flagstaff-Whare Flat Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D391 Conditions

*Note: In all conditions below reference to "AS/NZS2772.1 (Interim):1998", shall be read as to include "AS/NZS2772.1 (Interim):1998 (or any new standard which is designed to replace this interim standard)".*

1. All land disturbed by earthworks shall be rehabilitated to a standard which is consistent with that of immediately adjacent land.
2. Any interference with the performance of telecommunications and radiocommunications equipment, where this equipment is operated by a party other than the requiring authority, or with radio and television signal reception that is directly attributable to activities carried out on the subject site will be remedied forthwith by the requiring authority at its cost.
3. The maximum height of any new building or other structure shall be no greater than the maximum height of the tallest equivalent structure existing at the site on 3 December 1996.
4. Any new structure shall be finished in the same or similar colour, hue and materials as the most similar structure existing at the site on 3 December 1996.
5. The maximum floor area of any new building or structure shall be no more than 50 percent of the floor area of the largest equivalent structure existing at the site on 3 December 1996.
6. The maximum floor area of any addition to any structure existing on the site at 3 December 1996 shall be 100 percent of the floor area of the existing structure.
7. The maximum height of any addition to any structure existing on the site at 3 December 1996 shall be the maximum height of the existing structure.
8. Any addition to any structure existing on the site at 3 December 1996 shall be finished in the same or similar colour, hue and materials as the existing structure.
9. A perimeter fence which prevents public access shall be erected and maintained around the facility at any point at which radio frequency radiation emission readings meet, or are within, the New Zealand Standard for radio frequency levels AS/NZ2772.1 (Interim):1998.
10. The level of radio frequency fields shall be kept as low as reasonably achievable.
11. A sign warning of the potential health hazard associated with the facility shall be erected on the perimeter fence.
12. The requiring authority shall notify the Council of any proposed changes to transmitting equipment which will have the effect of increasing radio frequency exposures in publicly accessible areas around the facility to a level greater than 25% of the applicable maximum exposure in AS/NZS2772.1 (Interim):1998 and shall provide the Council with an estimate of the likely maximum exposure which can be expected as a result of the change. If estimated exposures exceed 25% of the public limit of AS/NZS2772.1 (Interim):1998, a measurement survey will be undertaken by a suitably qualified independent radiation monitoring authority once the changes have been installed and commissioned, and the results provided to Council.

### D392 Dunedin Airport VHF Transmitter Station

<b>Designation Number</b>	D392
<b>Requiring Authority</b>	Airways Corporation of New Zealand Limited
<b>Designation Purpose</b>	Dunedin Airport VHF Transmitter Station - Air Navigation Aids (Radio Communications Station)
<b>Location (address)</b>	520 Flagstaff-Whare Flat Road Dunedin
<b>Conditions</b>	Yes

<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D392 Conditions

*Note: In all conditions below reference to "AS/NZS2772.1 (Interim):1998", shall be read as to include "AS/NZS2772.1 (Interim):1998 (or any new standard which is designed to replace this interim standard)".*

1. In the event that any earthworks are undertaken in conjunction with the activity, all disturbed land shall be rehabilitated to a standard which is consistent with that of immediately adjacent land.
2. Any interference with the performance of telecommunications and radiocommunications equipment, where this equipment is operated by a party other than the requiring authority, or with radio and television signal reception that is directly attributable to activities carried out on the subject site will be remedied forthwith by the requiring authority at its cost.
3. The maximum height of any new building or other structure shall be no greater than the maximum height of the tallest equivalent structure existing at the site on 3 December 1996.
4. Any new structure shall be finished in the same or similar colour, hue and materials as the most similar structure existing at the site on 3 December 1996.
5. The maximum floor area of any new building or structure shall be no more than 50 percent of the floor area of the largest equivalent structure existing at the site on 3 December 1996.
6. The maximum floor area of any addition to any structure existing on the site at 3 December 1996 shall be 100 percent of the floor area of the existing structure.
7. The maximum height of any addition to any structure existing on the site at 3 December 1996 shall be the maximum height of the existing structure.
8. Any addition to any structure existing on the site at 3 December 1996 shall be finished in the same or similar colour, hue and materials as the existing structure.
9. The facility shall at all times be operated in accordance with AS/NZS2772.1 (Interim):1998 in all places the public may reasonably access, and the level of radio frequency fields shall be kept as low as reasonably achievable.
10. The requiring authority shall notify the Council of any proposed changes to transmitting equipment which will have the effect of increasing radio frequency exposures in publicly accessible areas around the facility to a level greater than 25% of the applicable maximum exposure in AS/NZS2772.1 (Interim):1998 and shall provide the Council with an estimate of the likely maximum exposure which can be expected as a result of the change. If estimated exposures exceed 25% of the public limit of AS/NZS2772.1 (Interim):1998, a measurement survey will be undertaken by a suitably qualified independent radiation monitoring authority once the changes have been installed and commissioned, and the results provided to Council.

### D396 Circle Guidance Light No. 2

<b>Designation Number</b>	D396
<b>Requiring Authority</b>	Airways Corporation of New Zealand Limited
<b>Designation Purpose</b>	Circle Guidance Light No 2 - Air Navigation Aids (Circle Guidance Light)
<b>Location (address)</b>	193 Marshall Road West Otokia
<b>Conditions</b>	Yes

<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D396 Conditions

1. An outline plan of proposed works shall be submitted to the Council for assessment prior to the construction of any new work which does not meet the following criteria:
  - a. Guidance Light Support Poles up to a maximum height of 12 metres.

### D397 Circle Guidance Light No. 3

<b>Designation Number</b>	D397
<b>Requiring Authority</b>	Airways Corporation of New Zealand Limited
<b>Designation Purpose</b>	Circle Guidance Light No 3 - Air Navigation Aids (Circle Guidance Light)
<b>Location (address)</b>	350 Marshall Road West Otokia
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D397 Conditions

1. An outline plan of proposed works shall be submitted to the Council for assessment prior to the construction of any new work which does not meet the following criteria:
  - a. Guidance Light Support Poles up to a maximum height of 12 metres.

### D398 Circle Guidance Light No. 4

<b>Designation Number</b>	D398
<b>Requiring Authority</b>	Airways Corporation of New Zealand Limited
<b>Designation Purpose</b>	Circle Guidance Light No 4 - Air Navigation Aids (Circle Guidance Light)
<b>Location (address)</b>	SEC 1 Outram Road, Outram
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D398 Conditions

1. An outline plan of proposed works shall be submitted to the Council for assessment prior to the construction of any new work which does not meet the following criteria:
  - a. Guidance Light Support Poles up to a maximum height of 12 metres.

### D399 Circle Guidance Light No. 5

<b>Designation Number</b>	D399
<b>Requiring Authority</b>	Airways Corporation of New Zealand Limited
<b>Designation Purpose</b>	Circle Guidance Light No 5 - Air Navigation Aids (Circle Guidance Light)
<b>Location (address)</b>	510 Maungatua Road Outram
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D247 Conditions**

1. The maximum height of all new structures shall be either the height of the tallest structure present on the site as at 13 September 1996 or 9 metres, whichever is the greater.
2. The following yard requirements shall apply in respect of all new structures.
  - a. Front yard - 3 metres.
  - b. Side and rear yards - 1 metre.
3. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
4. A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be erected on each accessway.
5. The strength of electric and magnetic fields generated by infrastructure located at the site shall not, within all publicly and accessible areas, exceed the limits for continuous non-occupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (1990), or any subsequent amendments thereof or substitutes for.
6. Oil spill containment facilities shall be installed on the site once the total oil volume associated with sub-station operations exceeds 2,500 litres.
7. Operation of the sub-station is to be in accordance with a facility management plan that: (a) sets out procedures for routine management of the site, with particular reference to minimising the risk of spillage of insulating oil; and (b) sets out emergency response procedures relating to the spillage of insulating oil. The facility management plan is to be prepared by Aurora Energy Limited and reviewed by that organisation on an annual basis. The facility management plan is to become effective on the first anniversary of this designation being made operative.

## D248 South City Zone Substation

<b>Designation Number</b>	D248
<b>Requiring Authority</b>	Aurora Energy Limited
<b>Designation Purpose</b>	South City Zone Substation - Electricity Purposes
<b>Location (address)</b>	17 Crawford Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

## D248 Conditions

1. The maximum height of all new structures shall be either the height of the tallest structure present on the site as at 13 September 1996 or 11 metres, whichever is the greater.
2. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
3. A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be erected on each accessway.
4. An outline plan of proposed work shall be submitted to the Council for consideration prior to undertaking any building construction, building maintenance or building alteration activity within that part of the site which is shown on the District Plan maps as being located within a Townscape precinct and which does not meet one or more of the following criteria:
  - a. the alteration or addition to a building, provided that the activity is not visible from any adjoining public place;
  - b. the painting or re-painting of a building in hues that are the same or similar to the building's existing colour scheme (*NB This does not provide for the painting of presently unpainted buildings or parts of buildings.*);
  - c. the erection, alteration, demolition or removal of accessory buildings, provided that the building is not visible from any adjoining public place;
  - d. the placement of verandah signs and verandah fascia signs, provided that they comply with the signs rules for the underlying zone as prescribed in the District Plan;
  - e. the undertaking of works on buildings where the work is for the sole purpose of restoration or repair of any existing fabric or detailing, such works to be undertaken using the same type of material to that originally used and retaining the original design of the feature under repair.
5. Any outline plan submitted to the Council in accordance with this condition shall contain the following information:
  - a. the external design and appearance of the building;
  - b. the proposed location of the work on the site; and
  - c. the measures proposed for the mitigation of potential adverse effects of the work on the values of the Warehouse Industrial Commercial Heritage Precinct. (*NB In assessing all outline plans, the Council will have particular regard to the provisions of the Warehouse Industrial Commercial Heritage Precinct as specified in Appendix A2.2.7.*)

6. The strength of electric and magnetic fields generated by infrastructure located at the site shall not, within all publicly and accessible areas, exceed the limits for continuous non-occupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (1990), or any subsequent amendments thereof or substitutes for.
7. Oil spill containment facilities shall be installed on the site by the first anniversary of this designation being made operative.
8. Operation of the sub-station is to be in accordance with a facility management plan that: (a) sets out procedures for routine management of the site, with particular reference to minimising the risk of spillage of insulating oil; and (b) sets out emergency response procedures relating to the spillage of insulating oil. The facility management plan is to be prepared by Aurora Energy Limited and reviewed by that organisation on an annual basis. The facility management plan is to become effective on the first anniversary of this designation being made operative.

## **D255 Conditions**

1. The maximum height of all new buildings or structures shall be 15 metres.
2. That if kōiwi tangata (human skeletal remains), taonga or archaeological artefacts are discovered during site construction, the requiring authority shall, without delay:
  - a. cease all work within a 50m radius of the discovery and secure the area;
  - b. notify their nominated archaeologist, the consent authority, Kāi Tahu ki Otago, the New Zealand Historic Places Trust, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police;
  - c. enable a site inspection by the New Zealand Historic Places Trust and the appropriate runanga, and their advisors, who shall determine the nature of the discovery and the further action required, including whether an Archaeological Authority is required under the Historic Places Act 1993;
  - d. any kōiwi tangata or taonga shall be handled and removed by tribal elders responsible for the tikanga (custom) appropriate to its removal and preservation;
  - e. ensure that the further action identified in accordance in part (c) of this condition is undertaken; and
  - f. upon completions of tasks (a) to (e) above, and provided all statutory permissions have been obtained, the requiring authority may recommence site construction following consultation with the consent authority, Kāi Tahu ki Otago, the New Zealand Places Trust, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police.

### A1.4.3 Chorus N Z Limited

#### D317 Andersons Bay Exchange

<b>Designation Number</b>	D317
<b>Requiring Authority</b>	Chorus N Z Limited
<b>Designation Purpose</b>	Andersons Bay Exchange - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).
<b>Location (address)</b>	59A Silverton Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### D317 Conditions

1. For any new buildings (excluding masts, aerials, antennas and attached transmission and reception equipment) the following shall apply:
  - a. Maximum Height - 9 metres.
  - b. Height Plane Envelope - No new building shall protrude through a plane, originating on the boundary line at ground level, which inclines at an angle of 63° (i.e. 1:2 distance from boundary:height ratio) up to the maximum height specified above.
  - c. Minimum Yards:
    - i. Front Yard - 4.5 metres
    - ii. All other Yards - 2.0 metres.
2. For any new masts, aerials, antennas and attached transmission and reception equipment the following shall apply:
  - a. Minimum Yards:
    - i. Front Yard - 4.5 metres.
    - ii. All other Yards - 2.0 metres.
3. An outline plan of proposed work shall be submitted to the Council for consideration prior to the erection or construction of any new work, only where the proposed work does not meet one or more of the following criteria. Where these criteria are met, the requirement to submit an outline plan shall be deemed to be waived in accordance with section 176A(2)(c) of the Resource Management Act:
  - a. like-for-like replacement structures;
  - b. masts up to a maximum height of 11m. No slimline mast shall be greater than 1.25m in diameter up to a height of 4.5m, and no greater than 0.5m in diameter up to a height of 11m. No lattice mast shall be greater than 4.0m<sup>2</sup> in cross sectional area up to a height of 4.5m, and no greater than 2.5m<sup>2</sup> in cross sectional area up to a height of 11m;
  - c. aerials located up to a maximum height of 12m with a cross sectional area no greater than 1.0m<sup>2</sup>;

- d. antenna dish with: a maximum diameter of 0.6m; a maximum height of 0.9m above the building to which it is fixed; and finished with a colour which is similar to that of the structure or building on which it is fixed.
4. In addition to the matters which must be addressed under section 176A of the Resource Management Act 1991, any outline plan submitted to the Council in accordance with this condition shall contain the following information:
- a. the proposed shape and dimensions of the work;
  - b. the proposed location of the work on the site; and
  - c. the measures proposed for the mitigation of potential adverse effects of any work on visual and open space amenity.

### D318 Brighton Exchange

<b>Designation Number</b>	D318
<b>Requiring Authority</b>	Chorus N Z Limited
<b>Designation Purpose</b>	Brighton Exchange - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).

<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D318 Conditions

1. For any new buildings (excluding masts, aerials, antennas and attached transmission and reception equipment) the following shall apply:
  - a. Maximum Height - 9 metres.
  - b. Height Plane Envelope - No new building shall protrude through a plane, originating on the boundary line at ground level, which inclines at an angle of 63° (i.e. 1:2 distance from boundary:height ratio) up to the maximum height specified above.
  - c. Minimum Yards:
    - i. Front Yard - 4.5 metres.
    - ii. All other Yards - 2.0 metres.
2. For any new masts, aerials, antennas and attached transmission and reception equipment the following shall apply:
  - a. Minimum Yards:
    - i. Front Yard - 4.5 metres.
    - ii. All other Yards - 2.0 metres.
3. An outline plan of proposed work shall be submitted to the Council for consideration prior to the erection or

construction of any new work, only where the proposed work does not meet one or more of the following criteria. Where these criteria are met, the requirement to submit an outline plan shall be deemed to be waived in accordance with section 176A(2)(c) of the Resource Management Act:

- a. like-for-like replacement structures;
  - b. masts up to a maximum height of 11m. No slimline mast shall be greater than 1.25m in diameter up to a height of 4.5m, and no greater than 0.5m in diameter up to a height of 11m. No lattice mast shall be greater than 4.0m<sup>2</sup> in cross sectional area up to a height of 4.5m, and no greater than 2.5m<sup>2</sup> in cross sectional area up to a height of 11m;
  - c. aerials located up to a maximum height of 12m with a cross sectional area no greater than 1.0m<sup>2</sup>;
  - d. antenna dish with: a maximum diameter of 0.6m; a maximum height of 0.9m above the building to which it is fixed; and finished with a colour which is similar to that of the structure or building on which it is fixed.
4. In addition to the matters which must be addressed under section 176A of the Resource Management Act 1991, any outline plan submitted to the Council in accordance with this condition shall contain the following information:
- a. the proposed shape and dimensions of the work;
  - b. the proposed location of the work on the site; and
  - c. the measures proposed for the mitigation of potential adverse effects of any work on visual and open space amenity.

### D322 Henley Exchange

<b>Designation Number</b>	D322
<b>Requiring Authority</b>	Chorus N Z Limited
<b>Designation Purpose</b>	Henley Exchange - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).
<b>Location (address)</b>	197 Otokia Road West Otokia
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D322 Conditions

1. For any new buildings (excluding masts, aerials, antennas and attached transmission and reception equipment) the following shall apply:
  - a. Maximum Height - 10 metres.
2. An outline plan of proposed work shall be submitted to the Council for consideration prior to the erection or construction of any new work, only where the proposed work does not meet one or more of the following criteria. Where these criteria are met, the requirement to submit an outline plan shall be deemed to be waived in accordance with section 176A(2)(c) of the Resource Management Act:

- a. like-for-like replacement structures;
  - b. temporary structures erected to enable servicing of existing structures provided that the temporary structure is completely removed within six months of its erection;
  - c. masts up to a maximum height of 12m. No slimline mast shall be greater than 1.25m in diameter up to a height of 5m, and no greater than 0.5m in diameter up to a height of 12m. No lattice mast shall be greater than 4.0m<sup>2</sup> in cross sectional area up to a height of 5m, and no greater than 2.5m<sup>2</sup> in cross sectional area up to a height of 12m.
  - d. aerials located up to a maximum height of 13m with a cross sectional area no greater than 1.0m<sup>2</sup>.
  - e. antenna dish with: a maximum diameter of 1.2m; a maximum height of 1.8m above the building to which it is fixed; and are finished with a colour which blends the antenna into its backdrop.
3. In addition to the matters which must be addressed under section 176A of the Resource Management Act 1991, any outline plan submitted to the Council in accordance with this condition shall contain the following information:
- a. the proposed shape and dimensions of the work;
  - b. the proposed location of the work on the site; and
  - c. the measures proposed for the mitigation of potential adverse effects of any work on visual and open space amenity.

*NB. In assessing all outline plans for D322 (Henley Exchange) the Council will have particular regard to the visual and shading effects any structure at the designated site has on the nearby dwelling and its yards.*

### D323 Hyde SMA

No lattice mast shall be greater than 4.0m<sup>2</sup> in cross sectional area up to a height of 4.5m, and no greater than 2.5m<sup>2</sup> in cross sectional area up to a height of 11m.
  - c. aerials located up to a maximum height of 12m with a cross sectional area no greater than 1.0m<sup>2</sup>.
  - d. antenna dish with: a maximum diameter of 0.6m; a maximum height of 0.9m above the building to which it is fixed; and finished with a colour which is similar to that of the structure or building on which it is fixed.
4. In addition to the matters which must be addressed under section 176A of the Resource Management Act 1991, any outline plan submitted to the Council in accordance with this condition shall contain the following information:
  - a. the proposed shape and dimensions of the work;
  - b. the proposed location of the work on the site; and
  - c. the measures proposed for the mitigation of potential adverse effects of any work on visual and open space amenity.

### D325 Middlemarch Exchange

<b>Designation Number</b>	D325
<b>Requiring Authority</b>	Chorus N Z Limited
<b>Designation Purpose</b>	Middlemarch Exchange - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).
<b>Location (address)</b>	27 Snow Avenue Middlemarch
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D325 Conditions

1. For any new buildings (excluding masts, aerials, antennas and attached transmission and reception equipment) the following shall apply:
  - a. Maximum Height - 9 metres.
  - b. Height Plane Envelope - No new building shall protrude through a plane, originating on the boundary line at ground level, which inclines at an angle of 63° (i.e. 1:2 distance from boundary:height ratio) up to the maximum height specified above.
  - c. Minimum Yards:
    - i. Front Yard - 4.5 metres.
    - ii. All other Yards - 2.0 metres.
2. For any new masts, aerials, antennas and attached transmission and reception equipment the following shall apply:
  - a. Minimum Yards:
    - i. Front Yard - 4.5 metres
    - ii. All other Yards - 2.0 metres.
3. An outline plan of proposed work shall be submitted to the Council for consideration prior to the erection or construction of any new work, only where the proposed work does not meet one or more of the following criteria. Where these criteria are met, the requirement to submit an outline plan shall be deemed to be waived in accordance with section 176A(2)(c) of the Resource Management Act:
  - a. like-for-like replacement structures;
  - b. masts up to a maximum height of 11m. No slimline mast shall be greater than 1.25m in diameter up to a height of 4.5m, and no greater than 0.5m in diameter up to a height of 11m. No lattice mast shall be greater than 4.0m<sup>2</sup> in cross sectional area up to a height of 4.5m, and no greater than 2.5m<sup>2</sup> in cross sectional area up to a height of 11m.
  - c. aerials located up to a maximum height of 12m with a cross sectional area no greater than 1.0m<sup>2</sup>.
  - d. antenna dish with: a maximum diameter of 0.6m; a maximum height of 0.9m above the building to which it is fixed; and finished with a colour which is similar to that of the structure or building on which it is

fixed.

4. In addition to the matters which must be addressed under section 176A of the Resource Management Act 1991, any outline plan submitted to the Council in accordance with this condition shall contain the following information:
- the proposed shape and dimensions of the work;
  - the proposed location of the work on the site; and
  - the measures proposed for the mitigation of potential adverse effects of any work on visual and open space amenity.

### D328 North East Valley Exchange

<b>Designation Number</b>	D328
<b>Requiring Authority</b>	Chorus N Z Limited
<b>Designation Purpose</b>	North East Valley Exchange - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).
<b>Location (address)</b>	6 Glendining Avenue Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D328 Conditions

- For any new buildings (excluding masts, aerials, antennas and attached transmission and reception equipment) the following shall apply:
  - Maximum Height - 9 metres.
  - Height Plane Envelope - No new building shall protrude through a plane, originating on the boundary line at ground level, which inclines at an angle of 63° (i.e. 1:2 distance from boundary:height ratio) up to the maximum height specified above.
  - Minimum Yards:
    - Front Yard - 4.5 metres.
    - All other Yards - 2.0 metres.
- For any new masts, aerials, antennas and attached transmission and reception equipment the following shall apply:
  - Minimum Yards:
    - Front Yard - 4.5 metres.
    - All other Yards - 2.0 metres.

<b>Designation Number</b>	D341
<b>Requiring Authority</b>	Chorus N Z Limited
<b>Designation Purpose</b>	Leith Valley RLU - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).
<b>Location (address)</b>	224 Malvern Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D341 Conditions

1. For any new buildings (excluding masts, aerials, antennas and attached transmission and reception

equipment) the following shall apply:

- a. Maximum Height - 9 metres.
  - b. Height Plane Envelope - No new building shall protrude through a plane, originating on the boundary line at ground level, which inclines at an angle of 63° (i.e. 1:2 distance from boundary:height ratio) up to the maximum height specified above.
  - c. Minimum Yards:
    - i. Front Yard - 4.5 metres.
    - ii. All other Yards - 2.0 metres.
2. For any new masts, aerials, antennas and attached transmission and reception equipment the following shall apply:
- a. Minimum Yards:
    - i. Front Yard - 4.5 metres.
    - ii. All other Yards - 2.0 metres.
3. An outline plan of proposed work shall be submitted to the Council for consideration prior to the erection or construction of any new work, only where the proposed work does not meet one or more of the following criteria. Where these criteria are met, the requirement to submit an outline plan shall be deemed to be waived in accordance with section 176A(2)(c) of the Resource Management Act:
- a. like-for-like replacement structures;
  - b. masts up to a maximum height of 11m. No slimline mast shall be greater than 1.25m in diameter up to a height of 4.5m, and no greater than 0.5m in diameter up to a height of 11m. No lattice mast shall be greater than 4.0m<sup>2</sup> in cross sectional area up to a height of 4.5m, and no greater than 2.5m<sup>2</sup> in cross sectional area up to a height of 11m;
  - c. aerials located up to a maximum height of 12m with a cross sectional area no greater than 1.0m<sup>2</sup>;
  - d. antenna dish with: a maximum diameter of 0.6m; a maximum height of 0.9m above the building to which it is fixed; and finished with a colour which is similar to that of the structure or building on which it is fixed.
4. In addition to the matters which must be addressed under section 176A of the Resource Management Act 1991, any outline plan submitted to the Council in accordance with this condition shall contain the following information:
- a. the proposed shape and dimensions of the work;
  - b. the proposed location of the work on the site; and
  - c. the measures proposed for the mitigation of potential adverse effects of any work on visual and open space amenity.

### **D342 Maori Hill Exchange**

<b>Designation Number</b>	D342
<b>Requiring Authority</b>	Chorus N Z Limited
<b>Designation Purpose</b>	Maori Hill Exchange - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).

<b>Location (address)</b>	20A Oban Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D342 Conditions

1. For any new buildings (excluding masts, aerials, antennas and attached transmission and reception equipment) the following shall apply:
  - a. Maximum Height - 9 metres.
  - b. Height Plane Envelope - No new building shall protrude through a plane, originating on the boundary line at ground level, which inclines at an angle of 63° (i.e. 1:2 distance from boundary:height ratio) up to the maximum height specified above.
  - c. Minimum Yards:
    - i. Front Yard - 4.5 metres.
    - ii. All other Yards - 2.0 metres.
  
2. For any new masts, aerials, antennas and attached transmission and reception equipment the following shall apply:
  - a. Minimum Yards:
    - i. Front Yard - 4.5 metres.
    - ii. All other Yards - 2.0 metres.
  
3. An outline plan of proposed work shall be submitted to the Council for consideration prior to the erection or construction of any new work, only where the proposed work does not meet one or more of the following criteria. Where these criteria are met, the requirement to submit an outline plan shall be deemed to be waived in accordance with section 176A(2)(c) of the Resource Management Act:
  - a. like-for-like replacement structures;
  - b. masts up to a maximum height of 11m. No slimline mast shall be greater than 1.25m in diameter up to a height of 4.5m, and no greater than 0.5m in diameter up to a height of 11m. No lattice mast shall be greater than 4.0m<sup>2</sup> in cross sectional area up to a height of 4.5m, and no greater than 2.5m<sup>2</sup> in cross sectional area up to a height of 11m;
  - c. aerials located up to a maximum height of 12m with a cross sectional area no greater than 1.0m<sup>2</sup>;
  - d. antenna dish with: a maximum diameter of 0.6m; a maximum height of 0.9m above the building to which it is fixed; and finished with a colour which is similar to that of the structure or building on which it is fixed.
  
4. In addition to the matters which must be addressed under section 176A of the Resource Management Act 1991, any outline plan submitted to the Council in accordance with this condition shall contain the following information:
  - a. the proposed shape and dimensions of the work;
  - b. the proposed location of the work on the site; and
  - c. the measures proposed for the mitigation of potential adverse effects of any work on visual and open space amenity.

### D344 Port Chalmers Exchange

<b>Designation Number</b>	D344
<b>Requiring Authority</b>	Chorus N Z Limited
<b>Designation Purpose</b>	Port Chalmers Exchange - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).
<b>Location (address)</b>	29 George Street Port Chalmers
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D344 Conditions

1. For any new buildings (excluding masts, aerials, antennas and attached transmission and reception equipment) the following shall apply:
  - a. Maximum Height - 9 metres.
  - b. Minimum Yards:
    - i. Side Yard - 3.0 metres alongside residential boundaries.
    - ii. Rear Yard - 6.0 metres alongside residential boundaries.
  - c. The following standards shall apply in respect of any replacement of the main exchange building on the site:
    - i. Any replacement of the main exchange building shall be constructed to the street frontage, from side boundary to side boundary (excluding vehicle access).
    - ii. If any replacement of the main exchange building consists of one storey, the building must feature a significant parapet to give vertical structure to the façade, being no lower than 4m and no higher than 9m, excluding radiocommunication and telecommunication masts, aerials and antennae.
    - iii. Any doors and windows in the façade shall have a shape and size which conforms with the characteristics of the heritage precinct.
2. For any new masts, aerials, antennas and attached transmission and reception equipment the following shall apply:
  - a. Minimum Yards:
    - i. Side Yard - 3.0 metres alongside residential boundaries.
    - ii. Rear Yard - 6.0 metres alongside residential boundaries.
3. An outline plan of proposed work shall be submitted to the Council for consideration prior to the erection or construction of any new work, only where the proposed work does not meet one or more of the following criteria. Where these criteria are met, the requirement to submit an outline plan shall be deemed to be waived in accordance with section 176A(2)(c) of the Resource Management Act:
  - a. like-for-like replacement structures;

- b. temporary structures erected to enable servicing of existing structures provided that the temporary structure is completely removed within six months of its erection.
4. In addition to the matters which must be addressed under section 176A of the Resource Management Act 1991, any outline plan submitted to the Council in accordance with this condition shall contain the following information:
  - a. the proposed shape and dimensions of the work;
  - b. the proposed location of the work on the site; and
  - c. the measures proposed for the mitigation of potential adverse effects of any work on visual and open space amenity.

<b>Lapse Date</b>	Given effect to - no lapse date

#### **D614 Conditions**

1. Prior to any addition to existing works, an outline plan of the proposed work shall be submitted to the Council for consideration. The outline plan shall provide details of:
  - a. the shape, dimension and design of the proposed work;
  - b. any landscaping to be provided;
  - c. any external lighting to be installed; and
  - d. any provision for vehicle access, parking and manoeuvring.

#### **D615 Mosgiel Service Centre**

<b>Designation Number</b>	D615
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Mosgiel Service Centre - Dunedin City Service Centre and Library
<b>Location (address)</b>	7 Hartstonge Avenue Mosgiel
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### **D615 Conditions**

1. Prior to any addition to existing works, an outline plan of the proposed work shall be submitted to the Council for consideration. The outline plan shall provide details of:
  - a. the shape, dimension and design of the proposed work;
  - b. any landscaping to be provided;
  - c. any external lighting to be installed; and
  - d. any provision for vehicle access, parking and manoeuvring.

#### **D617 Civic Centre, Town Hall and Municipal Chambers**

<b>Designation Number</b>	D617
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Civic Centre, Library, Town Hall and Municipal Chambers - Dunedin City Council Offices, Library and Town Hall
<b>Location (address)</b>	50 The Octagon Dunedin
<b>Conditions</b>	Yes

<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D617 Conditions

1. Prior to any addition to existing works, an outline plan of the proposed work shall be submitted to the Council for consideration. The outline plan shall provide details of the shape, dimension and design of the proposed work.

*(NB In assessing an outline plan submitted in accordance with this condition, the Council will have particular regard to the heritage precinct values identified in Appendix A2.2.2 of the District Plan).*

### D618 Waikouaiti Library

<b>Designation Number</b>	D618
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Waikouaiti Library - Library
<b>Location (address)</b>	192 Main Road Waikouaiti
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D618 Conditions

1. Prior to any addition to existing works, an outline plan of the proposed work shall be submitted to the Council for consideration. The outline plan shall provide details of:
  - a. the shape, dimension and design of the proposed work;
  - b. any landscaping to be provided, and
  - c. any external lighting to be installed.

### D619 Port Chalmers Service Centre

<b>Designation Number</b>	D619
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Port Chalmers Service Centre - Dunedin City Service Centre, Library and Community Hall
<b>Location (address)</b>	1 Grey Street Port Chalmers
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D619 Conditions

1. Prior to any addition to existing works, an outline plan of the proposed work shall be submitted to the Council for consideration. The outline plan shall provide details of the shape, dimension and design of the proposed work.

*(NB In assessing an outline plan submitted in accordance with this condition, the Council will have particular regard to the heritage precinct values identified in Appendix A2.2.8 in the District Plan.)*

### D623 Lee Stream Hall

<b>Designation Number</b>	D623
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Lee Stream Hall - Community Hall
<b>Location (address)</b>	2522 Clarks Junction-Lee Stream Road Deep Stream
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D623 Conditions

1. Prior to any addition to existing works, an outline plan of the proposed work shall be submitted to the Council for consideration. The outline plan shall provide details of:
  - a. the shape, dimension and design of the proposed work;
  - b. any landscaping to be provided;
  - c. any external lighting to be installed; and
  - d. any provision for vehicle access, parking and manoeuvring.

### D624 Karitane Community Hall

<b>Designation Number</b>	D624
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Karitane Community Hall - Community Hall
<b>Location (address)</b>	1381 Coast Road Karitane
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D624 Conditions

1. Prior to any addition to existing works, an outline plan of the proposed work shall be submitted to the Council for consideration. The outline plan shall provide details of:

- a. the shape, dimension and design of the proposed work;
- b. any landscaping to be provided;
- c. any external lighting to be installed; and
- d. any provision for vehicle access, parking and manoeuvring.

### **D625 Dunedin Heliport**

<b>Designation Number</b>	D625
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Dunedin Heliport - Heliport - Emergency Purposes Only
<b>Location (address)</b>	33 Kitchener Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D625 Conditions**

1. The site shall be fenced along the northern, western and southern boundaries.
2. Signs advising of the site's purpose, and warning of the hazards associated with helicopter operations shall be erected on all boundaries.

### **D631 Green Island Waste Water Treatment Plant**

<b>Designation Number</b>	D631
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Green Island Waste Water Treatment Plant - Waste Water Treatment Plant
<b>Location (address)</b>	20 Taylor Street Green Island
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D631 Conditions**

1. The maximum height for all new structures shall be either the height of the tallest structure present on the site at 3 October 1996 or 10 metres, whichever is the greater.
2. The following yard requirements shall apply in respect of all new structures proposed for the site with the exception of that boundary of the site which faces the Kaikorai Stream:
  - a. Front yard - 20 metres;
  - b. Side and rear yards - 6 metres.
3. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.

4. A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be erected on each accessway.

### **D632 Burkes Transfer**

<b>Designation Number</b>	D632
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Burkes Transfer - Burkes No. 1 Wastewater Pumping Station
<b>Location (address)</b>	21 Burkes Drive Ravensbourne
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D632 Conditions**

1. The maximum height for all new structures shall be either the height of the tallest structure present on the site at 3 October 1996 or 9 metres, whichever is the greater.
2. The following yard requirements shall apply in respect of all new structures proposed for the site:
  - a. Front yard - 4.5 metres;
  - b. Side and rear yards - 2 metres.
3. The site shall be fenced in such a manner as to discourage public access.
4. A sign warning of the potential danger to public health and safety shall be erected on fences around the site.

### **D633 Mosgiel Waste Water Treatment Plant and Carlyle Road Stormwater Pumping Station**

<b>Designation Number</b>	D633
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Mosgiel Waste Water Treatment Plant and Carlyle Road Stormwater Pumping Station - Waste Water Treatment Plant and Stormwater Pumping Station
<b>Location (address)</b>	PT SEC 1 Goodall Street, Mosgiel
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D633 Conditions**

1. The maximum height for all new structures shall be either the height of the tallest structure present on the site at 3 October 1996 or 9 metres, whichever is the greater.
2. The following yard requirements shall apply in respect of all new structures proposed for the site:
  - a. Front yard - 4.5 metres;
  - b. Side and rear yards - 2 metres.

3. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
4. A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be erected on each accessway.

### **D634 Middlemarch Waste Water Treatment Plant**

<b>Designation Number</b>	D634
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Middlemarch Waste Water Treatment Plant - Waste Water Treatment Plant
<b>Location (address)</b>	11 Garthmyl Lane Middlemarch
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D634 Conditions**

1. The maximum height for all new structures shall be either the height of the tallest structure present on the site at 3 October 1996 or 10 metres, whichever is the greater.
2. The following yard requirements shall apply in respect of all new structures proposed for the site:
  - a. Front yard - 20 metres;
  - b. Side and rear yards - 6 metres.

<b>Designation Purpose</b>	Waikouaiti Waste Water Treatment Plant - Waste Water Treatment Plant
<b>Location (address)</b>	11 Matanaka Drive Waikouaiti
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D635 Conditions**

1. The maximum height for all new structures shall be either the height of the tallest structure present on the site at 3 October 1996 or 10 metres, whichever is the greater.
2. The following yard requirements shall apply in respect of all new structures proposed for the site:

- a. Front yard - 20 metres;
  - b. Side and rear yards - 6 metres.
3. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
  4. A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be erected on each accessway.

### **D636 Seacliff Waste Water Treatment Plant**

<b>Designation Number</b>	D636
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Seacliff Waste Water Treatment Plant - Waste Water Treatment Plant
<b>Location (address)</b>	41 Kilgour Street Seacliff
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D636 Conditions**

1. The maximum height for all new structures shall be either the height of the tallest structure present on the site at 3 October 1996 or 10 metres, whichever is the greater.
2. The following yard requirements shall apply in respect of all new structures proposed for the site:
  - a. Front yard - 20 metres;
  - b. Side and rear yards - 6 metres.
3. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
4. A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be erected on each accessway.

### **D637 Ocean Grove Waste Water Treatment Plant**

<b>Designation Number</b>	D637
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Ocean Grove Pumping Station - Waste Water Pumping Station
<b>Location (address)</b>	7 Luke Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D367 Conditions**

1. The maximum height for all new structures shall be either the height of the tallest structure present on the site

- at 3 October 1996 or 9 metres, whichever is the greater.
2. The following yard requirements shall apply in respect of all new structures proposed for the site:
    - a. Front yard - 4.5 metres;
    - b. Side and rear yards - 2 metres.
  3. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.

### D639 Musselburgh Pumping Station and Tainui Stormwater Pumping Station

<b>Designation Number</b>	D639
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Musselburgh Pumping Station and Tainui Stormwater Pumping Station - Waste water treatment plant and stormwater pumping station
<b>Location (address)</b>	36 Rona Street St Kilda
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D639 Conditions

1. The maximum height for all new structures shall be either the height of the tallest structure present on the site at 3 October 1996 or 9 metres, whichever is the greater.
2. The following yard requirements shall apply in respect of all new structures proposed for the site with the exception of the Rona Street boundary of the site:
  - a. Front yard - 4.5 metres;
  - b. Side and rear yards - 2 metres.
3. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
4. A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be erected on each accessway.
5. Noise generated by any activity on the site shall comply with the following standards at the boundary of the site: 50 Dt/40Nt dBA, 45 SP dBA. (Note these levels are subject to an adjustment of minus 5 dBA for noise emissions having special audible characteristics.)

### D640 Waikouaiti Landfill

<b>Designation Number</b>	D640
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Waikouaiti Landfill - Landfilling and Associated Refuse Processing Operations and Activities
<b>Location (address)</b>	140 Edinburgh Street Waikouaiti
<b>Conditions</b>	Yes
<b>Legacy</b>	

<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D640 Conditions

- Noise generated by any activity on the site shall comply with the following standards within 50 metres of the nearest house existing at the date on which the designation becomes operative - 55Dt/40Nt dBA. *(NB These levels are subject to an adjustment of minus 5dBA for noise emissions having special audible characteristics).*
- All vegetation established in conjunction with landscaping of the site shall be maintained in a healthy state at all times.

### D641 Waikouaiti Landfill (Cover Material)

<b>Designation Number</b>	D641
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Waikouaiti Landfill - Proposed Cover Material
<b>Location (address)</b>	4 Kirkwall Street Waikouaiti
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D642 Closed Middlemarch Landfill

<b>Designation Number</b>	D642
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Closed Middlemarch Landfill - Refuse Processing Operations and Activities
<b>Location (address)</b>	110 Garthmyl Road Middlemarch
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D642 Conditions

- Noise generated by any activity on the site shall comply with the following standards within 50 metres of the nearest house existing at the date on which the designation becomes operative - 55Dt/40Nt dBA.

*(NB These levels are subject to an adjustment of minus 5dBA for noise emissions having special audible characteristics).*

### D643 Milners Pit/Closed North Taieri Tip

<b>Designation Number</b>	D643
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Milners Pit/Closed North Taieri Tip - Hard Fill Disposal, Composting and Quarry
<b>Location (address)</b>	101 Milners Road North Taieri
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D643 Conditions**

1. Conditions relating exclusively to the clean fill activities:
  - a. Only cleanfill shall be deposited at the site. For the purpose of this condition, "cleanfill" is defined as: "Generally a natural material such as clay, soil, and rock, and such other materials as concrete, brick, or demolition products are free of combustible or organic matter and are, therefore, not subject to biological or chemical breakdown."
2. Conditions relating exclusively to the quarrying activities:
  - a. Noise generated by any activity on the site shall comply with the following standards within 50 metres of the nearest house existing at the date on which the designation becomes operative - 55Dt/40Nt dBA. *(NB These levels are subject to an adjustment of minus 5dBA for noise emissions having special audible characteristics.)*
  - b. At no time shall any noise exceed L(max) or 75dBA within 50 metres of the nearest house existing at the date on which this designation becomes operative.
  - c. The requiring authority shall provide noise level readings, for two hours at times representative of the operation and at which maximum noise levels can be assessed, for the purpose of determining compliance with Conditions (a) and (b) of these conditions. These readings shall be provided annually. These readings shall be provided at the requiring authority's expense.
  - d. A plan illustrating progressive rehabilitation works and the final landform and appearance of the site shall be prepared by the Requiring Authority under the direction of a suitably qualified professional and submitted to the Dunedin City Council for approval within 12 months of this designation becoming operative. The quarry shall be operated at all times in accordance with the approved plan.
3. Conditions applying to all activities undertaken at the site:
  - a. Within 12 months of this designation becoming operative a landscape plan which reflects the proposed development of the site shall be prepared by the Requiring Authority under the direction of a qualified landscape architect. This plan shall:
    - i. accommodate all activities undertaken at the site;
    - ii. ensure that the site is integrated as much as is practicable within its broader landscape setting; and
    - iii. ensure that any potential adverse effects on landscape quality are minimised. The site shall be developed in accordance with this Plan and all prescribed landscaping shall be undertaken no later than one planting season after each stage of development is completed. All vegetation established in conjunction with landscaping of the site shall be maintained in a healthy state at all times.

## D653 Tahuna Waste Water Treatment Plant

<b>Designation Number</b>	D653
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Tahuna Waste Water Treatment Plant - Waste Water Treatment Plant
<b>Location (address)</b>	10 Tahuna Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D653 Conditions

1. The maximum height for all new structures shall be either the height of the tallest structure present on the site at 3 October 1996 or 9 metres, whichever is the greater.
2. The following yard requirements shall apply in respect of all new structures proposed for the site:
  - a. Front yard - 25 metres;
  - b. Side and rear yards - 1 metres.
3. All facilities which have the potential to generate odour shall be appropriately enclosed, vented and appropriately managed to minimise odour. All vehicles accessing or leaving the site which carry material that has the potential to generate odour shall be appropriately enclosed and the loading/unloading of the material shall be appropriately managed to minimise odour.
4. All facilities shall be designed to ensure that the noise, glare and lighting performance standards of Rule 21.5 Environmental Issues Section of the Proposed Dunedin City District Plan are met. These are:
  - a. Maximum L10 noise levels shall be:
    - i. 50dBA between 8am and 6pm, Monday to Saturday;
    - ii. 45dBA between 7am and 8am, Monday to Friday;
    - iii. 45dBA between 6pm and 9pm, Monday to Saturday; and
    - iv. 40dBA on Monday to Thursday evenings between 9pm and 7am the following day;
    - v. 40dBA between 9pm Friday and 8am Saturday, between 9pm Saturday to 7am Monday and all Statutory days;
    - vi. However, if the sound level is constant, the plant shall be designed not to exceed 40dBA at any time, at the boundary of any other property;
    - vii. Between 9pm and 7am the following day no noise shall exceed an Lmax of 75dBA;
    - viii. Noise to be measured at the boundary or within any other property; and
    - ix. Noise from construction is exempt.
  - b. Glare and light from the site shall result in no greater than 16 lux of light onto any other site measured inside that site, and 8 lux of light measured at the windows of any residentially occupied building.
5. Reasonable precautions against unauthorised public access are to be undertaken at all times. This includes the provision of signage at each accessway advising that public access is restricted and which warns of the dangers associated with trespass.

- Existing landscaping shall be maintained, including ongoing weed control and replacement of plants that do not survive, to mitigate adverse visual effects of above ground structures.

### **D654 Waikouaiti Effluent Irrigation Area**

<b>Designation Number</b>	D654
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Waikouaiti Effluent Irrigation Area - Waikouaiti Waste Water Effluent Irrigation Area
<b>Location (address)</b>	10 Matanaka Drive Waikouaiti
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D654 Conditions**

- The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
- A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be erected on each accessway.

### **D655 Waikouaiti Landfill**

<b>Designation Number</b>	D655
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Waikouaiti Landfill - Landfilling and Associated Refuse Processing Operations and Activities
<b>Location (address)</b>	20 Haddington Street Waikouaiti
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D655 Conditions**

- A landscape plan for the land contained within D655 is to be prepared and implemented by the Waste Services Department to the satisfaction of a suitably qualified professional person engaged by the Council. This landscaping is to be undertaken no later than one planting season after the inclusion of this designation in the proposed District Plan and is to be maintained at all times.

### D656 Warrington Waste Water Treatment Plant

<b>Designation Number</b>	D656
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Warrington Waste Water Treatment Plant - Warrington Waste Water Treatment Plant and Waste Water Effluent Irrigation Area
<b>Location (address)</b>	1 Esplanade Warrington
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### D656 Conditions

1. The maximum height for all new structures shall be either the height of the tallest structure present on the site at 3 October 1996 or 10 metres, whichever is the greater.
2. The following yard requirements shall apply in respect of all new structures proposed for the site:
  - a. Front yard - 20 metres;
  - b. Side and rear yards - 6 metres.
3. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
4. A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be erected on each accessway.

### D657 Waldronville Pumping Station and Surge Chamber

<b>Designation Number</b>	D657
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Waldronville Pumping Station and Surge Chamber - Waste Water Pumping Station and Surge Chamber
<b>Location (address)</b>	395 Brighton Road Green Island
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### D657 Conditions

1. The maximum height for all new structures shall be either the height of the tallest structure present on the site at 3 October 1996 or 10 metres, whichever is the greater.
2. The following yard requirements shall apply in respect of all new structures proposed for the site:
  - a. Front yard - 20 metres;
  - b. Side and rear yards - 6 metres.

3. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
4. A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be erected on each accessway.

### D658 Green Island Landfill

<b>Designation Number</b>	D658
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Green Island Landfill - Landfilling and Associated Refuse Processing Operations and Activities
<b>Location (address)</b>	20 Taylor Street Green Island
<b>Conditions</b>	Yes
<b>Legacy</b>

(*NB These levels are subject to an adjustment of minus 5dBA for noise emissions having special audible characteristics*).
2. Operation of the facilities is to be in accordance with a facility management plan that:
  - a. sets out procedures for routine management of the site, with particular reference to minimising the risk of spillage of hazardous substances;
  - b. sets out emergency response procedures relating to the spillage of hazardous substances; and
  - c. the facility management plan is to be prepared by the Requiring Authority within 12 months of the date on which this designation becomes operative. This plan is to be reviewed by the Requiring Authority on an annual basis.

#### D746 Southern Reservoir Water Treatment Plant and Treated Water Reservoirs

<b>Designation Number</b>	D746
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Southern Reservoir Water Treatment Plant and Treated Water Reservoirs - Treated Water Reservoir and Water Treatment Plant
<b>Location (address)</b>	10 Mount Grand Road Burnside
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

## D746 Conditions

1. a. Any noise generated as a result of the activities associated with the water treatment plant and shall not exceed:
  - i. 55dBA (L10) day time within 50 m from a residence or site boundary if the residence is closer than 50 m.
  - ii. 40dBA (L10) night time within 50 m from a residence or site boundary if the residence is closer than 50 m.
- b. *Noise levels shall be measured in accordance with the provisions of New Zealand Standard 6801:1991 Measurement of Sound and assessed in accordance with the provisions of New Zealand Standard 6892:1991 Assessment of Environment Sound. In the event that special audible characteristics are identified, the specified noise limits shall be reduced by 5 dBA.*
- c. That prior to the issue of any building consent for any building containing noise producing equipment, a detailed acoustic design report shall be prepared by an acoustic consultant approved by the Council to demonstrate that noise from the entire designation site will comply with the noise limits given in Condition (a).
2. Any lighting shall be installed in accordance with a Lighting Plan, prepared in consultation with the submitters and subject to the approval of the District Planner.
3. No building or other structures (other than fences) shall be located within 6 metres of the property boundary.
4. No buildings shall exceed a height of 10 metres above ground level.
5. The maximum site coverage of all buildings shall be 35%.
6. Buildings and other structures on the site shall be painted in colours approved by the District Planner.
7. Landscaping shall be undertaken on the site, in accordance with the Landscaping Plan which shall include:
  - a. Planting of trees on the steeper slopes overlooking Donald Street to enhance long term stability;
  - b. screening of the Reservoir Road frontage; and
  - c. the Landscaping Plan shall be prepared in consultation with the submitters and is subject to the approval of the District Planner. The landscaping shall be undertaken within 9 months of completion of the buildings for the facility.
8. Excavated areas and slopes are to be revegetated as soon as practicable after exposure.
9. Stormwater runoff from buildings shall be specifically designed to ensure that down-slope land instability is not induced from its discharge to ground. Details of stormwater runoff shall be provided at the time of application for a building consent.

## D748 West Taieri Rural Water Scheme Treated Water Reservoir

<b>Designation Number</b>	D748
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	West Taieri Rural Water Scheme - Treated Water Reservoir
<b>Location (address)</b>	280 Munro Road Berwick
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes

<b>Lapse Date</b>	Given effect to - no lapse date
-------------------	---------------------------------

### D785 Emerson Street Cemetery

<b>Designation Number</b>	D785
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Emerson Street Cemetery - Cemetery
<b>Location (address)</b>	133 Emerson Street Concord
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D785 Conditions

1. There shall be no provision for a crematorium to be established at the site.
2. There shall be only one point of access and egress to the site, and that point shall be located on the south side of Emerson Street approximately 150 metres to the west of the Emerson Street/Blackhead Road intersection.
3. If any burial, kōiwi tangata or cultural materials are discovered during cemetery operations:
  - a. all work shall immediately cease; and
  - b. Iwi shall be contacted as soon as is reasonably practicable to allow an assessment of the “find” and to enable retrieval or re-burial action to be undertaken as appropriate.
4. That part of the site on the western corner of the intersection of Emerson Street and Blackhead Road shall be kept clear of all vegetation which might otherwise have the effect of reducing sight distances for traffic using either road.
5. Noise emissions arising from operations at the site shall comply with the following standards: 55Dt/40Nt dBA within 50 metres of a residence.
6. All works, including earthworks and drainage, shall be carried out in compliance with NZS4404: 1981 Code of Practice for Urban Land Subdivision.
7. The site shall not be developed for cemetery purposes below the development line restriction shown on Opus Drawing No.97/583/59/40704, other than for landscaping and for stormwater disposal undertaken in accordance with Condition 9.
8. All stormwater that is not collected and discharged to a roadside water table shall be collected and discharged to natural water bodies in a controlled manner that avoids saturation of slopes below the development line restriction shown on Opus Drawing No.97/583/59/40704.
9. The maximum height of headstones shall be 1.1 metres above ground level.
10. The site shall be landscaped in general accordance with the landscape concept plans submitted by the Dunedin City Council on 20 February 1998.

*(NB The provision of additional landscaping for the purpose of avoiding, remedying or mitigating potential adverse visual effects in respect of two properties located on the north side of Emerson Street (viz. Sec 128 Ocean Beach S.D. and Lot 1 DP 22576) is the subject of separate agreements between the Requiring Authority and the owners of those properties. Such agreements are necessary because it is unlawful for the Council to impose conditions on a*

designation in respect of properties that are not subject to that designation).

### D793 Green Island Quarry

<b>Designation Number</b>	D793
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Green Island Quarry - Quarry
<b>Location (address)</b>	SEC 162 Church Hill Road, Green Island
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D793 Conditions

1. Noise generated by any activity on the site shall comply with the following standards within 50 metres of the nearest house existing at the date on which this designation becomes operative: 55Dt/40Nt dBA (*NB These levels are subject to an adjustment of minus 5dBA for noise emissions having special audible characteristics*).
2. The requiring authority shall provide noise level readings, for two hours at times representative of the operation and at which maximum noise levels can be assessed, for the purpose of determining compliance with Condition (1) of these conditions. These readings shall initially be provided within 1 week of the quarry being operated following the date on which this designation becomes operative. Thereafter, readings shall be provided at the time of every subsequent operation of the site. These readings shall be provided at the requiring authority's expense.
3. No explosives shall be used during the operation of this quarry.
4. Quarrying operations are to cease within 4 years from the date of commencement of quarrying. This condition does not preclude rehabilitation and other landscaping work beyond this time.
5. Quarrying shall not take place for more than 20 days per year.
6. There shall be no crushing or screening of rock on site.
7. A programme of screen planting designed to mitigate adverse visual effects as viewed from adjacent residential areas shall be commenced within one month of this designation becoming operative. All planting shall be in accordance with a landscape plan prepared by a qualified landscape architect and all vegetation established as part of this programme shall be maintained in a healthy state at all times.
8. An outline plan of proposed work shall be submitted to the Council for assessment prior to the commencement of quarrying or associated activities on the site. The outline plan shall describe the operations proposed for the site and the measures proposed to address the following potential effects:
  - a. noise;
  - b. vibration;
  - c. visual amenity;
  - d. public safety, in terms of securing the site against public access; and
  - e. public safety, in terms of obtaining access/egress from public roads

*(NB In assessing an outline plan submitted in accordance with this condition, the Council will have particular regard to the amenity objectives for the underlying zone and/or any adjoining residential zone, and to the transportation*

objectives for Dunedin City, as set out in the District Plan).

### **D798 McLaren Gully Road Quarry Reserve**

<b>Designation Number</b>	D798
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	McLaren Gully Road Quarry Reserve - Quarry
<b>Location (address)</b>	SEC 35 McLaren Gully Road, Otokia
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### **D798 Conditions**

1. Noise generated by any activity on the site shall comply with the following standards within 50 metres of the nearest house existing at the date on which this designation becomes operative: 55Dt/40Nt dBA (NB These levels are subject to an adjustment of minus 5dBA for noise emissions having special audible characteristics).
2. The requiring authority shall provide noise level readings, for two hours at times representative of the operation and at which maximum noise levels can be assessed, for the purpose of determining compliance with Condition (1) of these conditions. These readings shall initially be provided within 1 week of the quarry being operated following the date on which this designation becomes operative. Thereafter, readings shall be provided at the time of every subsequent operation of the site. These readings shall be provided at the requiring authority's expense.
3. Quarrying shall not take place for more than 20 days per year.
4. A programme of screen planting designed to mitigate adverse visual effects as viewed from adjacent residential areas shall be commenced within one month of this designation becoming operative. All planting shall be in accordance with a landscape plan prepared by a qualified landscape architect and all vegetation established as part of this programme shall be maintained in a healthy state at all times.
5. An outline plan of proposed work shall be submitted to the Council for assessment prior to the commencement of quarrying or associated activities on the site. The outline plan shall describe the operations proposed for the site and the measures proposed to address the following potential effects:
  - a. noise;
  - b. vibration;
  - c. visual amenity;
  - d. public safety, in terms of securing the site against public access; and
  - e. public safety, in terms of obtaining access/egress from public roads.

*(NB In assessing an outline plan submitted in accordance with this condition, the Council will have particular regard to the amenity objectives for the underlying zone and to the transportation objectives for Dunedin City, as set out in the District Plan).*

### D799 Mount Stoker Quarry

<b>Designation Number</b>	D799
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Mount Stoker Quarry - Quarry
<b>Location (address)</b>	2 Bray Road Middlemarch
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes

### D802 Conditions

- Noise generated by any activity on the site shall comply with the following standards within 50 metres of the nearest house existing at the date on which this designation becomes operative: 55Dt/40Nt dBA (NB These levels are subject to an adjustment of minus 5dBA for noise emissions having special audible characteristics).
- The requiring authority shall provide noise level readings, for two hours at times representative of the operation and at which maximum noise levels can be assessed, for the purpose of determining compliance with Condition (1) of these conditions. These readings shall initially be provided within 1 week of the quarry being operated following the date on which this designation becomes operative. Thereafter, readings shall be provided at the time of every subsequent operation of the site. These readings shall be provided at the requiring authority's expense.
- A plan illustrating progressive rehabilitation works and the final landform and appearance of the site shall be prepared by the requiring authority under the direction of a suitably qualified professional and submitted to the Dunedin City Council for approval within 12 months of this designation becoming operative. The quarry shall be operated at all times in accordance with the approved plan.
- A valid copy of the written agreement between the landowner and the Council in relation to access arrangements shall be held with the Dunedin City Council records at all times.
- Quarrying shall take place for no more than 40 days each year.

### D825 Dukes Road Widening

<b>Designation Number</b>	D825
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Dukes Road Widening - Road Widening
<b>Location (address)</b>	22 Dukes Road Nth North Taieri
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes

<b>Lapse Date</b>	Given effect to – no lapse date
-------------------	---------------------------------

### **D843 Hagart Alexander Drive Road Extension and Widening**

<b>Designation Number</b>	D843
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Hagart Alexander Drive - Road Extension and Widening for Proposed Local Arterial Road
<b>Location (address)</b>	
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

#### **D843 Conditions**

1. An outline plan of proposed work which details the following information shall be submitted to the Council for consideration prior to any construction commencing:
  - a. the shape and dimensions of the proposed work;
  - b. detailed landscaping plan(s) proposed; and
  - c. the measures proposed for the mitigation of noise.

*(NB The Council will assess the outline plan in terms of the potential adverse effects on visual amenity and noise amenity, and will have particular regard to the measures identified in Section 3 of this Decision with respect to the avoidance, remedy or mitigation of such effects.)*

### **D844 Andersons Bay Road/Strathallan Street Intersection**

<b>Designation Number</b>	D844
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Andersons Bay Road/Strathallan Street Intersection – Intersection Widening
<b>Location (address)</b>	250 Andersons Bay Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

#### **D844 Conditions**

1. That the designation only be given effect to in conjunction with the additional works shown on MWH plans entitled "Strathallan St Left Turn Lane 6 Lane Option - Car Yard" Sheets No. C616 Rev. A and C613 Rev.C, dated 29/01/08. This work includes the following:
  - a. the creation of new vehicle drop crossings on both the Andersons Bay Road and the Strathallan Street frontage;

- b. the creation of "no parking" zones on Strathallan Street;
  - c. the creation of a new parking bay on Andersons Bay Road; and
  - d. the incorporation of the red hatched area shown on the plans (shown as "Road to be Stopped") into the car yard.
2. That prior to commencement of any work on the site, a construction management plan shall be prepared for approval by Council's Planning Policy Manager. That plan shall include, as a minimum, the following:
    - a. mitigation measures to reduce adverse effects on traffic flow at the intersection;
    - b. mitigation measures to reduce adverse effects on the operation of the car yard, including access, dust, noise and safety of people visiting the car yard; and
    - c. outline the process to occur should condition (3) below be invoked.
  3. If kōiwi tākata (human skeletal remains), taonga or archaeological artefacts are discovered during site construction, the consent holder shall, without delay:
    - a. Cease all work within a 50m radius of the discovery and secure the area;
    - b. Notify their nominated archaeologist, the consent authority, Kāi Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tākata (skeletal remains), the New Zealand Police;
    - c. Enable a site inspection by Heritage New Zealand and the appropriate rūnaka, and their advisors, who shall determine the nature of the discovery and the further action required, including whether an Archaeological Authority is required under the Heritage New Zealand Pouhere Taonga Act 2014;
    - d. Any kōiwi takata or taoka shall be handled and removed by tribal elders responsible for the tikanga (custom) appropriate to its removal and preservation;
    - e. Ensure that the further action identified in accordance in part (c.) of this condition is undertaken; and
    - f. Upon completion of tasks (a.) to (e.) above, and provided all statutory permissions have been obtained, the consent holder may recommence site construction following consultation with the consent authority, Kai Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tākata (skeletal remains), the New Zealand Police.

### **D845 Harbourside Arterial Link**

<b>Designation Number</b>	D845
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Harbourside Arterial Link - Construction and Operation of Arterial Road Corridor
<b>Location (address)</b>	80 Anzac Avenue Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### **D845 Conditions**

1. That Dunedin City Council as Requiring Authority shall apply for an archaeological authority from Heritage New Zealand, under the Heritage New Zealand Pouhere Taonga Act 2014, prior to commencing work, and that the Council shall comply with the conditions of that authority.
2. That prior to the commencement of any work on the site, a construction management plan shall be submitted

- to Dunedin City Council. That plan shall include, as a minimum, the following:
- a. Mitigation measures to reduce adverse effects on traffic management in relation to any nearby intersections or arterial roads;
  - b. Mitigation measures to reduce adverse effects on adjoining properties, including, dust, noise and the safety of people visiting the sites; and
  - c. Outline the process to occur should condition (3) below be invoked.
3. That if kōiwi tangata (human skeletal remains), taonga or archaeological artefacts are discovered during site construction, the Requiring Authority shall, without delay:
- a. Cease all work within a 50m radius of the discovery and secure the area;
  - b. Notify their nominated archaeologist, the consent authority, Kāi Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (human skeletal remains), the New Zealand Police;
  - c. Enable a site inspection by Heritage New Zealand and the appropriate runanga, and their advisors, who shall determine the nature of the discovery and the further action required, including whether an Archaeological Authority is required under the Heritage New Zealand Pouhere Taonga Act 2014;
  - d. Any kōiwi tangata or taonga shall be handled and removed by tribal elders responsible for the tikanga (custom) appropriate to its removal and preservation;
  - e. Ensure that the further action identified in accordance in part (c) of this condition is undertaken; and
  - f. Upon completions of tasks (a) to (e) above, and provided all statutory permissions have been obtained, the Requiring Authority may recommence site construction following consultation with the consent authority, Kai Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (human skeletal remains), the New Zealand Police.
4. That the final design option for the Harbourside Arterial Link shall be chosen following consultation with affected land owners and occupiers.
5. That the final design option chosen for the Harbourside Arterial Link shall not prevent access to 170 Frederick Street, Dunedin, being that land legally described as Lot 2 DP 17329.
6. That the final design option chosen for the Harbourside Arterial Link shall ensure safe egress and ingress to 3 Wickliffe Street, Dunedin, being that land legally described as Sec 7 DP 3552.
7. That, prior to the commencement of any work on the site, a heritage assessment of buildings on Parry Street that are affected by the Harbourside Arterial Link shall be undertaken. If any buildings to be demolished to make way for the Arterial are found to be of heritage value, a full documentary photographic record of affected properties shall be compiled and provided to Heritage New Zealand and the University of Otago Library Hocken Collections.
8. That the Outline Plan to be submitted in accordance with Section 176A of the Act shall address, but not be limited to, the following matters:
- a. Areas within the designation that is not required for the roadway, footpaths or cycleways shall be landscaped;
  - b. Footpaths and cycleways shall be identified that will allow for access for pedestrians and cyclists along Anzac Avenue and between the city centre and Harbourside;
  - c. Footpaths and cycleways shall be designed in accordance with the principles of Crime Prevention through Environmental Design (CPTED);
  - d. Landscaping shall be used to minimise the visual intrusion of road structures;
  - e. The Outline Plan shall contain a detailed design of the bridge across the Owheo/Water of Leith (aesthetic as well as functional matters will be considered by the Territorial Authority when assessing this design);

- f. The Outline Plan shall be prepared in consultation with the New Zealand Transport Agency;
- g. The design of the Arterial shall meet the specifications set out in the New Zealand Heavy Haulage Association document Road Design Specifications for Overdimension Loads (Revision 3, August 2006);
- h. The Arterial shall be designed and constructed to the Territorial Authority's satisfaction to ensure the continued safe operation of the Liquigas facility at 254 Fryatt Street, being that land legally described as Lot 3 DP 17945;
- i. Consideration shall be given to whether it is necessary or desirable to provide for a one way street connecting Frederick Street with the northern section of Anzac Avenue; and
- j. Consideration shall be given to whether or not mitigation measures should be provided to address any adverse economic impacts on Anzac Avenue businesses due to a decline in trade from passing traffic, in the event that such impacts are caused by the construction of the Harbourside Arterial Link.

### **D846 Dunedin Harbourside Arterial Link**

<b>Designation Number</b>	D846
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Dunedin Harbourside Arterial Link - Arterial Road and Stormwater Infrastructure
<b>Location (address)</b>	R Ravensbourne Road Ravensbourne
<b>Conditions</b>	No
<b>Legacy</b>	Created by NoR DIS-2013-1 on 12 November 2014
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

## D900 Mosgiel Community and Recreation Area

<b>Designation Number</b>	D900
<b>Requiring Authority</b>	Dunedin City Council
<b>Designation Purpose</b>	Enable the existing recreational and community activities to continue to operate and to develop, but also to provide the framework for a new Aquatic Centre to be developed somewhere within the area to be designated.
<b>Location (address)</b>	Memorial Park (Gordon Road), Peter Johnstone Park (Reid Avenue), 215 Gordon Road and part of the Reid Avenue road reserve
<b>Conditions</b>	Yes
<b>Legacy</b>	Created by NoR DIS-2018-1 on 15 March 2019
<b>Rollover Designation</b>	
<b>Lapse Date</b>	Given effect to - no lapse date

### D900 Conditions

1. Height
  - a. New buildings and structures and extensions to existing buildings and structures must not exceed a maximum height of 10m, excluding servicing equipment on a roof provided the servicing equipment does not exceed the maximum height by more than 3m, except that:
  - b. New lighting towers and goal posts must not exceed a maximum height of 30m.
2. Building footprint (per building)
  - a. The maximum building footprint for any individual building (new or extensions to existing buildings) is 3200m<sup>2</sup>.
3. Combined building site coverage
  - a. The maximum combined building site coverage within the designation area is 5.5%.
4. Minimum building and structure setbacks from boundaries and height in relation to boundaries
  - a. The minimum setback for buildings from designation boundaries is 4.5m. This condition does not apply to structures such as fences.
  - b. For all designation boundaries other than road boundaries, buildings and structures (excluding lighting towers, goal posts and fences) must not protrude through a plane rising at an angle of 45 degrees measured from ground level at the designation boundary.
  - c. For all designation boundaries other than road boundaries, lighting towers and goal posts must not protrude through a plane rising at an angle of 75 degrees measured from ground level at the boundary.
  - d. There are no boundary setback or height plane controls for fences.
5. Building design and appearance
  - a. The maximum length of the façade of any new building or extension to existing buildings is 65m, however any building façade greater than 20m in length must have glazing or other architectural feature to break up the solid appearance of the building.
  - b. For any portion of a building closer than 10m from the designation boundary other than a road boundary, the maximum length of that portion of the building (as measured parallel to the boundary) must reduce from 65m by 5m for every 1m the building is closer to that boundary.

- c. Painted finishes for new or extended existing buildings must not exceed Light Reflectance Values (LRV) of 35%.
6. Landscape treatment to car parking areas
- a. New or extended car parking areas are to be set back a minimum of 1.5m from all designation boundaries and the setback areas are to be planted to mitigate adverse effects of the car parks on adjacent residential properties, including from light spill from vehicles.
  - b. New or extended car parking areas are to have a minimum of 12% of the total area of the car park planted, including at least 1 tree per 120m<sup>2</sup> of the total car park area. Such trees must be expected to grow to at least 3m high. When planted:
    - i. exotic trees must be a minimum of 2m in height and 35mm litre grade;
    - ii. New Zealand native trees must be a minimum of 1m in height and Pb 6.5 grade.
7. New signage
- Signs erected after 14 March 2019 must comply with the following conditions, except that regulatory signs, directional signs and warning signs that do not exceed 0.25m<sup>2</sup> are exempt from these standards:
- a. General:
    - i. Signs visible from a public place must meet all of the following performance standards, which are relevant.
    - ii. Signs must also comply with Rule 6.7.3 of the DCC Second Generation Plan where visible from a road.
    - iii. Signs must not be illuminated or digital.
  - b. Performance standards that apply to all ancillary signs, except commercial sponsorship signs:
    - i. Ancillary signs must only display the name, and logo of the relevant land use activity or organisation (e.g. DCC), locational, directional or informative information relevant to the area, or rules of the area or use of the area.
    - ii. Ancillary signs that promote or advertise retail, restaurants, or conference, meeting and function ancillary to sport and recreation must not be visible from a public place outside the recreation area.
  - c. Signs attached to buildings:
    - i. any signs displaying the club(s) name on clubrooms must not exceed a maximum total area of 5m<sup>2</sup> per building face;
    - ii. the maximum number of permanent commercial sponsorship signs is one sign for the naming rights sponsor of the sport and recreation activity (club), with a maximum area of 3m<sup>2</sup>, except: for clubs that operate in an enclosed area that is only open to members, apart from during events, there is no maximum number of commercial sponsorship signs, provided those signs are not visible from outside of the enclosed area;
    - iii. other signs must not exceed a total maximum area of 1m<sup>2</sup> per building face;
    - iv. signs must remain entirely within the visual profile of the building or structure; and
    - v. signs must not project higher than the lowest point of the roof, except as mounted flat against a parapet or gable end.
  - d. Freestanding signs:
    - i. must not exceed a maximum total area of all display faces of 3m<sup>2</sup>; and each display face must not exceed 1.5m<sup>2</sup> in area;
    - ii. must not exceed a maximum height above ground level of 4m; and

- iii. must be positioned within the designation boundaries and located so they do not obstruct any parking, loading or access areas.
- e. Portable freestanding signs:
  - i. Commercial sponsorship and other signs erected for matches, competitions, or events must not be displayed for more than one day before the competition/event, and must be removed within one day of completion of the competition/event.
  - ii. Any other portable signs must not exceed one sign per activity, and 0.9m in height and 0.6m in width.
  - iii. Signs must be positioned within designation boundaries.
- 8. Tree protection
  - a. Any trees that are removed through the development of community and recreational facilities must be replaced with suitable trees.
- 9. Lighting
  - a. Light spill measured at any point of the vertical plane that marks the boundary of a residential zone or any site used for residential purposes must not exceed the following limits:
- 10. Otago Regional Council Lower Taieri Flood Protection Scheme Designation
  - a. No buildings can be located within Otago Regional Council's Designation D217 (Lower Taieri Flood Protection Scheme).
- 11. Noise
  - a. Activities on the site must not exceed the following noise emission limits:

Time	Limit
i. 7.00am - 10.00pm	10 Lux
ii. 10.00pm - 7.00am	3 Lux

- b. This standard does not apply to light spill from the headlights of motor vehicles.
- c. Light spill must not be emitted in the angles above the horizontal.
- d. All outdoor lighting, except street lighting, must be shielded from or directed away from adjacent roads and designation boundaries.

Zoning of receiving property		Noise level measured at the boundary of the receiving property (i.e. outside the designation boundary) or the notional boundary of noise sensitive activities in a rural zone		
		1. 7.00am to 7.00pm	2. 7.00pm to 10.00pm	3. 10.00pm to 7.00am
i.	Residential	50 dB LAeq (15 min)	45 dB LAeq (15 min)	1. 40 dB LAeq (15 min); and 2. 70 dB LAFmax
ii.	Taieri Plain (rural)	55 dB LAeq (15 min)	50 dB LAeq (15 min)	1. 40 dB LAeq (15 min); and 2. 70 dB LAFmax

Zoning of receiving property		Noise level measured at the boundary of the receiving property (i.e. outside the designation boundary) or the notional boundary of noise sensitive activities in a rural zone		
		1. 7.00am to 7.00pm	2. 7.00pm to 10.00pm	3. 10.00pm to 7.00am
iii.	Principal Centre	60 dB LAeq (15 min)	60 dB LAeq (15 min)	1. 60 dB LAeq (15 min); and 2. 85 dB LAFmax

- b. Except:
- i. sport and recreation not involving the use of motor vehicles, amplified sound, or firearms are exempt from this standard;
  - ii. construction noise is exempt from this standard and must be measured and assessed in accordance with NZS6803:199 Acoustics Construction Noise; and
  - iii. noise generated by pyrotechnics and firing of a ceremonial cannon.
- c. Unless stated otherwise noise must be measured in accordance with NZS 6801:2008 – Acoustics – Measurement of environmental sound, and assessed in accordance with NZS 6802:2008 Acoustics – Environmental noise.

12. Accidental discovery

If the requiring authority

- a. discovers koiwi tangata (human skeletal remains), waahi taoka (resources of importance), waahi tapu (places or features of special significance) or other Maori artefact material, the consent holder must, without delay:
- i. notify the Consent Authority, Tangata whenua and Heritage New Zealand and in the case of skeletal remains, the New Zealand Police.
  - ii. stop work within the immediate vicinity of the discovery to allow a site inspection by Heritage New Zealand and the appropriate runanga and their advisors, who must determine whether the discovery is likely to be extensive, if a thorough site investigation is required, and whether an Archaeological Authority is required.

Any koiwi tangata discovered should be handled and removed by tribal elders responsible for the tikanga (custom) appropriate to its removal or preservation.

Site work must recommence following consultation with the Consent Authority, Heritage New Zealand, Tangata whenua, and in the case of skeletal remains, the New Zealand Police, provided that any relevant statutory permissions have been obtained.

- b. discovers any feature or archaeological material that predates 1900, or heritage material, or disturbs a previously unidentified archaeological or heritage site, the consent holder must without delay:
- i. stop work within the immediate vicinity of the discovery or disturbance; and
  - ii. advise the Consent Authority, Heritage New Zealand, and in the case of Maori features or materials, the Tangata whenua, and if required, should make an application for an Archaeological Authority pursuant to the Historic Places Act 1993; and
  - iii. arrange for a suitably qualified archaeologist to undertake a survey of the site.

Site work must only recommence following consultation with the Consent Authority.

13. Aquatic Centre location
  - a. There must be no aquatic centre or parking area for an aquatic centre located within the Mosgiel Memorial Gardens as identified in Figure 1.

In addition to requirements of s176A, outline plans must include, where relevant, the information set out in conditions 14 - 22:

14. Screening of service and storage areas
  - a. Service and storage areas associated with new or extended existing buildings demonstrating effective screening to maintain amenity within the parks, on adjacent streets, and for neighbours.
15. Tree protection
  - a. The location and details of suitable replacement trees removed through the development of community and recreational facilities (refer Condition 8).
16. Car parking and access requirements
  - a. Demonstration of 1 car park to every 3 people a new building will be designed for. A reduced level of car parking may be provided where an Integrated Transport Assessment (which may include a Travel Management Plan) identifies that fewer additional parking spaces are required. Consideration should also be given to providing overflow car parking spaces using permeable surfacing.
  - b. For any development that increases traffic movement, consideration of whether upgrade or reconfiguration of the vehicle access into the site is necessary to manage increased traffic flows.
  - c. Demonstration of consultation undertaken with the New Zealand Transport Agency to identify the most effective, efficient and safe access to SH87 for the development of the aquatic centre, stating how the outcomes of the consultation have been addressed.
  - d. An assessment of on-site parking areas against Rule 6.6 Parking, Loading and Access, of the Dunedin City Council Second Generation District Plan, including justification of any non-compliances and any mitigation proposed.
17. Noise
  - a. Where any new car parking area is within 5m of a residential site, a noise control fence constructed from a durable material of at least 10kg/m<sup>2</sup> free from cracks, gaps and holes should be considered in consultation with the adjoining landowner. Where a noise control fence is agreed to be required, the car park should be designed so that any parked car is at least 1m from any fence.
  - b. Suitable noise insulation for buildings and plant should be utilised to ensure noise generated onto adjacent residential properties achieves the night time noise levels of condition 11 above.
  - c. For buildings that may accommodate functions, a Noise Management Plan should be prepared to ensure noise generated onto adjacent residential properties achieves the night time noise levels of condition 11 above.
18. 3-Water infrastructure  
Water services
  - a. Provision of average and peak daily flow demand to allow inclusion in Dunedin City Council's hydraulic water model.  
Stormwater services
  - a. For any increase in impermeable area consideration of drainage patterns and stormwater management to ensure works do not create or exacerbate flooding. For any increase in impermeable area of more

than 2000m<sup>2</sup>, a stormwater management plan is required to determine whether a site-specific stormwater solution is necessary, including potential for direct flow to Silverstream via pump.

- b. As part of such an assessment, consideration must be given to whether stormwater detention via wetlands/greenspace is appropriate.

#### Wastewater services

- a. Average and peak daily flows of wastewater to allow assessment of effects of the anticipated wastewater discharge impact on the reticulated wastewater network.

#### Existing services

- a. For any development or earthworks within 3m of any 3-Waters infrastructure, written approval from the Development Engineer, 3-Waters must accompany the outline plan. This approval may include consideration for an easement in gross in favour of DCC over any existing, relocated or new 3 Waters infrastructure.
- b. New trees must not be planted such that once fully grown the dripline, or the distance from the trunk equivalent to half the height of the tree, whichever is the greater, is expected to be within 1.5m of Council pipes.

#### 19. Minimum floor levels

- a. An assessment of effects of flooding, including setting floor levels in any new buildings, additions to buildings or change of use of existing buildings.

#### 20. Earthworks

- a. An assessment of the effects of earthworks, including the effects on any adjoining properties or stop bank, and whether a sediment control plan is required.

#### 21. Hours of operation

- a. Consideration of whether the hours of operation should be controlled.

#### 22. Construction

- a. An assessment of the effects of construction, including noise, vibration, traffic movement and hours of work, including mitigation as appropriate.

Figure 1: Mosgiel Community and Recreation Area Designation identifying Memorial Garden

---

## A1.4.6 Dunedin International Airport Limited

### D273 Dunedin Airport

<b>Designation Number</b>	D273
<b>Requiring Authority</b>	Dunedin International Airport Limited
<b>Designation Purpose</b>	Dunedin Airport - airport activities, operation and runway extension
<b>Location (address)</b>	25 Miller Road Momona
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D273 Conditions

1. Permitted Activities:
  - a. 'Airport' activities which include the use of land and buildings for:
    - i. aircraft operations, aircraft servicing and fuel storage;
    - ii. ancillary activities necessary for the functioning of an aerodrome includes the construction and use of roads, runways, taxiways and aprons, building and infrastructure, navigational aids and

- lighting, car parking, offices and signage;
  - iii. accessory activities such as retailing, cafeteria, rental car businesses, freight forwarding and public passenger facilities;
  - iv. customs and quarantine facilities;
  - v. training activities and facilities associated with the aeronautical industry; and
  - vi. temporary accommodation for air crews, training and airport related personal.
- b. The establishment, operation and control of barrier arms for the purpose of stopping traffic movement on the portion of Centre Road that runs through Designation 273 or on any section of road where traffic within that road causes a breach of any obstacle limitation surface described in Designation 274.
2. New Buildings and Extensions - Pursuant to section 176A(3) of the RMA an outline plan of works shall be submitted to the Council in respect of any new works intended to be undertaken as part of the designation.
  3. Landscaping - In respect of any new or revised site layout (vehicle manoeuvring and parking areas) Dunedin Airport Limited shall submit a landscape plan to the Council not less than 14 days prior to construction commencing. The landscaping shall be implemented not later than the planting season following commissioning of the new or revised site layout.
  4. Lighting - All on-site lighting (other than runway, navigational and other operational lighting) shall be positioned, directed and maintained so that light spill outside the designation boundary shall not exceed 16 lux measured 10 metres outside the designation boundary and measured in both the horizontal and vertical planes. All monitoring of this condition shall be undertaken with the runway, navigation and associated operational lighting turned off.
  5. Noise Control - The Dunedin Airport is to be operated so that the noise from aircraft operation shall not exceed a Day/Night sound level ( $L_{dn}$ ) of:
    - a. 65dBA at any position outside the 65 $L_{dn}$  contour as shown on the attached plan entitled "Airport Designation D273 – Noise Contours". For the purpose of this control aircraft noise will be measured in accordance with NZS 6805:1992 and calculated as a 90 day rolling logarithmic average.
    - b. 55dBA at any position outside the 55  $L_{dn}$  contour as shown on the attached plan entitled "Airport Designation D273 – Noise Contours". For the purpose of this control, aircraft noise shall be predicted as stated in NZS 6805:1992, (s.1.4.2.2) using the F.A.A Integrated Noise Model (INM) and records of actual aircraft operations, and calculated as a 90 day logarithmic average.

Note: For the purpose of this condition, aircraft operation includes aircraft taking-off and landing, but does not include airport ground based activities. Military aircraft movements are also not included in the condition.

6. Before undertaking the proposed runway extension Dunedin Airport Limited shall offer to acoustically treat any existing dwelling situated on Lot 2 DP 2592 within the Airport Noise Boundary, shown on the attached plan entitled "Airport Designation D273 – Noise Contours" immediately to the south west of the runway extension. If this offer is accepted by the registered owner at that time then any acoustic treatment of the dwelling shall be performed at the cost of Dunedin Airport Limited and shall be of a standard which will achieve an indoor design level of 40 dBA  $L_{dn}$  within any kitchen, dining area, living room, study or bedroom.

## **D274 Take-off and Approach Fan, Transitional (side) Surface, Horizontal and Conical Surfaces**

<b>Designation Number</b>	D274
<b>Requiring Authority</b>	Dunedin International Airport Limited
<b>Designation Purpose</b>	Take-off and Approach Fan, Transitional (side) Surface, Horizontal and Conical Surfaces - Airport Approach and Land Use Controls

<b>Location (address)</b>	
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

## D274 Conditions

1. Background and Requirement:
  - a. Airspace around airports is required to be protected under the Civil Aviation Act 1990. The Civil Aviation Authority promotes New Zealand Aerodrome Design Rules and Standards to prevent the encroachment of obstructions into airspace that may affect aircraft operations.
  - b. Protection is provided by way of Obstacle Limitation Surfaces (OLS) that are described in this designation. These surfaces are illustrated in the Dunedin Airport and Land Use Controls Map attached as **Appendix A** below. The OLS depicted on the Map in **Appendix A** are indicative only, the precise positioning of these surfaces is set out in the text of this designation.
2. Survey co-ordinate and elevation datum - All survey co-ordinates in this designation are Geodetic Datum 2000 – North Taieri Circuit, and elevations are in terms of Dunedin Vertical Datum 1958 (Local Mean Sea Level). The aerodrome reference height is 1.22m.
3. Main Runway - The main runway once extended will be 2,400m long by 45m wide. Provision is included for 170m long starter extensions at each end contained within the runway strip and runway end safety area.
4. Runway Strip:
  - a. The extended main runway is contained within the runway strip. The runway strip is 2,520m long by 300m wide. The edges are parallel to and 150m either side of the runway centreline and the ends extend 60m beyond each threshold and are perpendicular to the runway extended centreline.
  - b. The coordinates and elevations of the ends of the runway strip on the extended runway centreline, which are also the take off and approach OLS origin points, are listed in Table 1 below:
  - c.

**Table 1: Runway strip end and takeoff and approach OLS origin points**

	mN	mE	Elevation
North End	793035.15	394254.88	2.20m
South End	791625.00	392166.43	2.00m

5. Horizontal Surface - The horizontal surface is a horizontal plane above the runway with an elevation of 45m having its out limit at a locus of 4000m measured from the periphery of the 300m wide runway strip.
6. Conical Surface - The conical surface slopes upwards and outwards from the periphery of the horizontal surface at a gradient of 1 vertical to 20 horizontal (1:20) to an elevation of 150m above aerodrome datum.
7. Takeoff Surface - The takeoff surface extends outwards and upwards from each end of the runway strips as described below:
  - a. North takeoff surface:
    - i. The north takeoff surface centreline commences at the north end origin point in Table 1. It climbs at a gradient of 1 in 62.5 on a bearing of 56.07° grid for a distance of 10642m at which point the surface turns east at radius 2450m onto bearing 108° grid. The surface continues for a total distance of 18750m.

- ii. The edges of the surface commence 90m either side of the origin point and expand at 12.5% of the centreline distance to a maximum width of 900m either side of centreline at 6480m from the origin. From this point until the end of the surface at 18750m from the origin the edges of the surface remain parallel 900m either side of its centerline.
  - b. South takeoff surface:
    - i. The south takeoff surface centreline commences at the south end origin point in Table 1 climbs at a gradient of 1 in 62.5 on a bearing of 236.07° grid for a distance of 2324m at which point the surface turns abruptly east onto bearing 226° grid. The surface continues for a total distance of 18750m.
    - ii. The edges of the surface commence 90m either side of the origin point and expand at 12.5% of the centreline distance to a maximum width of 900m either side of centreline at 6480m from the origin. From this point until the end of the surface at 18750m from the origin the edges of the surface remain parallel 900m either side of its centerline.
8. Approach Surface - The approach surface extends outwards and upwards from each end of the runway strip as described below:
  - a. North approach surface:
    - i. The north approach surface centreline commences at the north end origin point in Table 1 climbs at a gradient of 1 in 50 on a bearing of 56.07° grid for a distance of 15000m at which point the surface ends.
    - ii. The edges of the surface commence 150m either side of the origin point and expand at 15.0% of the centreline distance to a width of 2400m either side of centreline at the end of the surface.
  - b. South approach surface:
    - i. The south approach surface centreline commences at the south end origin point in Table 1 climbs at a gradient of 1 in 50 on a bearing of 236.07° grid for a distance of 15000m at which point the surface ends.
    - ii. The edges of the surface commence 150m either side of the origin point and expand at 15.0% of the centreline distance to a width of 2400m either side of centreline at the end of the surface.
9. Transitional Surfaces - The transitional surfaces arise upwards and outwards from the sides of runway strip at a gradient of 1 in 7 to intercept the approach surfaces at each runway end and the horizontal surface.
10. Controlling Surface - At any point where any two surfaces overlap and are at differing elevations, the lower of the two surfaces shall apply for the purposes of the height controls specified at 11. below.
11. Height Controls - Prior to any resource consent application, building consent application, carrying out works involving the establishment of forestry, constructing any structure which includes any building, aerial, antennae or other object, on land that is covered by any of the surfaces specified in this designation, the person(s) wishing to obtain consent or carry out the work must:
  - a. Provide written notice to the Dunedin International Airport Limited of the work they wish to carry out; and
  - b. Demonstrate to Dunedin International Airport Limited that the work will not penetrate in any way any of the surfaces specified in this designation; or
  - c. Obtain the written approval of the Dunedin International Airport Limited if the surfaces specified in this designation will be penetrated in any way. Where the written approval of the Dunedin International Airport Limited is required, then that approval may be given subject to the payment of the reasonable costs incurred by Dunedin International Airport Limited in assessing any application for approval.

**Appendix A: Dunedin Airport Approach and Land Use Controls Map (including OLS)**

## A1.4.7 Kiwirail Holding Limited

### D419 Main South Railway

<b>Designation Number</b>	D419
<b>Requiring Authority</b>	Kiwirail Holdings Limited
<b>Designation Purpose</b>	Main South Railway - Railway Purposes
<b>Location (address)</b>	
<b>Conditions</b>	Yes
<b>Legacy</b>	2GP Review 2015 - increase extent to incorporate tunnels from previous designations D424, D426, D427, D428
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D419 Conditions

1. Activities undertaken within tunnels shall specifically include, but not be limited to:
  - a. the operation of the railway system throughout the tunnel;
  - b. activities which have the effect of maintaining, improving and upgrading the railway system throughout the tunnel, such as
    - i. re-sleeping;
    - ii. re-railing;
    - iii. re-ballasting;
    - iv. grouting or repairs to the tunnel linings or rock faces, descaling the rock face, the placement of rock anchors or additional minor support structures;
    - v. the laying of new communication cables, power cables, work on OHL systems, installing signalling equipment, upgrading or changing it; and
    - vi. drainage repairs, renewals or cleaning.
  - c. activities which have the effect of lowering the tunnel floor, other than by re-ballasting;
  - d. activities associated with routine maintenance of the track and rail structure such as rail grinding, tamping, aligning the track, and ballast cleaning; and
  - e. activities associated with the effect of maintaining or providing for the safety of trains, crews and passengers in tunnels.
2. In respect of activities in tunnels relating to the designated rail purpose an outline plan shall not be required for those activities specified.

### D420 Taieri Branch Railway

<b>Designation Number</b>	D420
<b>Requiring Authority</b>	Kiwirail Holdings Limited
<b>Designation Purpose</b>	Taieri Branch Railway - railway purposes
<b>Location (address)</b>	256 Gladstone Road Nth Mosgiel

<b>Conditions</b>	No
<b>Legacy</b>	2GP Review 2015 - change name from Otago Central Branch Railway and add in rail corridor land
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### **D422 Port Chalmers Branch Railway**

<b>Designation Number</b>	D422
<b>Requiring Authority</b>	Kiwirail Holdings Limited
<b>Designation Purpose</b>	Port Chalmers Branch Railway - Railway Purposes
<b>Location (address)</b>	
<b>Conditions</b>	No
<b>Legacy</b>	2GP Review 2015 - incorporate tunnel designation D425
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### **D423 Hillside Depot**

<b>Designation Number</b>	D423
<b>Requiring Authority</b>	Kiwirail Holdings Limited
<b>Designation Purpose</b>	Hillside Depot - railway purposes
<b>Location (address)</b>	
<b>Conditions</b>	Yes
<b>Legacy</b>	2GP Review 2015 - change name from Transtec Engineering Hillside
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### **D423 Conditions**

1. An outline plan of proposed works is to be submitted to the Council for assessment prior to modification (including demolition) of existing buildings or structures; or prior to construction of new buildings or structures. Consideration will also be given in the outline plan to providing separate entry and exit points (or two-way access) between the loading area on the site and Hillside Road.
2. All materials which are stored outside buildings on the site for any purpose other than display or sale shall be screened from view from adjoining properties and from any road adjoining the site. For the sake of clarity this does not apply to storage areas which are currently visible from adjoining properties or from any road adjoining the site.
3. In respect of new signs relating to the purpose of the designation, an outline plan will not be required where the sign meets Rules 19.5.7 (i) to (v) "Signs permitted in the Industry, Port 1 and Port 2 Zones" and Rule 19.5.8 "Conditions on all Permitted Signs" of the Dunedin City District Plan. Note that the designation only

provides for signs that relate to the purpose of the designation, any other sign would require a resource consent.

4. The requiring authority shall adopt the best practical option to ensure that the emission of noise from the site at the boundaries of residential properties in the area does not exceed a reasonable level.

## A1.4.8 Kordia Limited

### D297 Anzac Avenue Site

<b>Designation Number</b>	D297
<b>Requiring Authority</b>	Kordia Limited
<b>Designation Purpose</b>	Anzac Avenue Site - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).
<b>Location (address)</b>	182 Albany Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D297 Conditions

Note: *In all conditions below reference to "AS/NZS2772.1 (Interim):1998". shall be read as to include "AS/NZS2772.1 (Interim): 1998 (or any subsequent amendment thereof or substitute for)".*

1. The facility shall at all times be operated in accordance with AS/NZS 2772.1 ((Interim) 1998 in places beyond the designation boundary, and unnecessary exposure shall be avoided, consistent with achievement of the service objective.

### D310 Cowan Road Transmitter Site

<b>Designation Number</b>	D310
<b>Requiring Authority</b>	Kordia Limited
<b>Designation Purpose</b>	Cowan Road Transmitter Site - Broadcasting and telecommunications being the reception and transmission of radio (wireless) signals (which includes television signals) and also signals received for onward transmission by cable
<b>Location (address)</b>	280 Cowan Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D310 Conditions

1. The erection of all new ancillary structures and equipment, including antennae, shall be confined to the modified areas of the site, and where possible structures are to be co-sited on to existing structures.
2. Should any areas be disturbed as the result of future work, these areas shall be revegetated and reinstated to their original condition.

3. The Requiring Authority shall control all weeds and wilding pines on the site.
4. There shall be only one permanent tower on the site, with a maximum height of 130 metres, unless a temporary tower is required while remedial work is undertaken on the existing tower or while a new, permanent, tower is under construction.
5. The following equipment shall be permitted to be attached to or erected on the existing tower and building or at the site on a permanent basis:
  - a. One dish antenna with a diameter of greater than 5.0m but less than 10.0m (erected at ground level).
  - b. Up to six dish antennae with a maximum diameter greater than 2.5m but less than 4.0m.
  - c. Broadcasting, telecommunication or radiocommunication antennae including whip, grid, yagi, dipoles and panels or similar and ancillary equipment, but no single dish or panel antenna shall have a solid frontal surface area of greater than 7.0m<sup>2</sup> of 2.5m diameter in the case of dish antennae, unless otherwise specified in 5(a) and (b) above.
6. Where practicable, all new structures and equipment erected on this site are to be finished in colours that do not reflect light.
7. In those areas accessible to the public, the levels of electro-magnetic radiation emissions from the facilities on the site are to meet the New Zealand Standard NZS6609.1.

## A1.4.9 Meteorological Service of New Zealand Limited

### D488 Dunedin Airport (Meteorological Site)

<b>Designation Number</b>	D488
<b>Requiring Authority</b>	Meteorological Service of New Zealand Limited
<b>Designation Purpose</b>	Dunedin Airport - Meteorological Purposes
<b>Location (address)</b>	25 Miller Road Momona
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D488 Conditions

1. The maximum height of all new structures shall be either the height of the tallest structure present on the site at 20 November 1996 or 10 metres, whichever is greater.

## A1.4.10 Minister for Courts

### D001 Dunedin Court House

<b>Designation Number</b>	D001
<b>Requiring Authority</b>	Minister For Courts
<b>Designation Purpose</b>	Dunedin Court House - Court House
<b>Location (address)</b>	1 Stuart Street Dunedin
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

## A1.4.11 Minister for Children

### D137 Puketai Residential Centre

<b>Designation Number</b>	D137
<b>Requiring Authority</b>	Minister for Children
<b>Designation Purpose</b>	Puketai Residential Centre for children and young persons up to the age of seventeen years - Social Welfare and Education Purposes: (i) a residential facility for the care, education, control, secure care and custodial detention for remand, of children and young people; and (ii) related Puketai Residential Centre administration facilities.
<b>Location (address)</b>	40 Elliot Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### D137 Conditions

1. That the Centre shall operate at all times in accordance with the protocol established between the Director-General of Social Welfare and the Andersons Bay residents dated 25 October 1997.
2. That the Children, Young Persons and Their Families Service shall supply to the Dunedin City Council, St Brigid's School, Andersons Bay Kindergarten, Bayfield Kindergarten and Andersons Bay School a monitoring report within 12 months of the protocol being given effect to and on every subsequent anniversary.
3. Existing landscaping and plantings within the bounds of the designation is to be maintained at all times.
4. At no time shall programmes specifically designed to provide therapy or treatment in relation to juvenile sexual abusers occur on the site.
5. The number of beds provided as part of the residential facility shall not exceed eleven (11) being eight (8) residential care and three (3) secure care.

### D138 Middleton Road Family Home

<b>Designation Number</b>	D138
<b>Requiring Authority</b>	Minister for Children
<b>Designation Purpose</b>	Middleton Road Family Home - Social Welfare Purposes: Residence for the care and control of children and young persons.
<b>Location (address)</b>	259 Middleton Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### **D138 Conditions**

1. The following bulk and location performance standards shall apply in respect of the site:
  - a. front yard - 4.5 metres;
  - b. side and rear yards - 2.0 metres;
  - c. maximum height - 9 metres;
  - d. height plane envelope - all buildings erected on site shall be contained within a height plan envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63° into the site; and
  - e. site coverage - 40%

## A1.4.12 Minister of Defence

### D158 Waitati Rifle Range

<b>Designation Number</b>	D158
<b>Requiring Authority</b>	Minister of Defence
<b>Designation Purpose</b>	Waitati Rifle Range - defence purposes (as described in s5 of the Defence Act 1990)
<b>Location (address)</b>	108 Miller Road Waitati
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### D158 Conditions

1. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
2. Signs which advise that public access is prohibited and which warn of the dangers associated with trespass shall be erected adjacent to all public access points.
3. Works and projects that comply with the permitted activity rules of the underlying zoning are incorporated into this designation and, in accordance with s176A(2)(b) RMA, no outline plan is required for those activities.
4. For the avoidance of doubt, maintenance activities do not require an outline plan.

### D159 Kensington Army Hall

<b>Designation Number</b>	D159
<b>Requiring Authority</b>	Minister of Defence
<b>Designation Purpose</b>	Kensington Army Hall - defence purposes (as described in s5 of the Defence Act 1990)
<b>Location (address)</b>	24 Bridgman Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### D159 Conditions

1. Works and projects that comply with the permitted activity rules of the underlying zoning are incorporated into this designation and, in accordance with s176A(2)(b) RMA, no outline plan is required for those activities.
2. For the avoidance of doubt, maintenance activities do not require an outline plan.

### **D161 Royal New Zealand Navy Volunteer Reserve Centre**

<b>Designation Number</b>	D161
<b>Requiring Authority</b>	Minister of Defence
<b>Designation Purpose</b>	Royal New Zealand Navy Volunteer Reserve Centre - defence purposes (as described in s5 of the Defence Act 1990)
<b>Location (address)</b>	211 St Andrew Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### **D161 Conditions**

1. Works and projects that comply with the permitted activity rules of the underlying zoning are incorporated into this designation and, in accordance with s176A(2)(b) RMA, no outline plan is required for those activities.
2. For the avoidance of doubt, maintenance activities do not require an outline plan.

### A1.4.13 Minister of Education

#### D022 Pine Hill Primary School

<b>Designation Number</b>	D022
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Pine Hill Primary School - Primary School
<b>Location (address)</b>	2 Wilkinson Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

#### D022 Conditions

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

#### D023 Balmacewen Intermediate School

<b>Designation Number</b>	D023
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Balmacewen Intermediate School - Intermediate School
<b>Location (address)</b>	44 Chapman Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

#### D023 Conditions

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### **D024 Otago Boys High Hostel**

<b>Designation Number</b>	D024
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Otago Boys High Hostel - Secondary School Hostel
<b>Location (address)</b>	25 Melrose Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### **D024 Conditions**

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### **D026 Kaikorai Primary School**

<b>Designation Number</b>	D026
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Kaikorai Primary School - Primary School
<b>Location (address)</b>	22 Tyne Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### **D026 Conditions**

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### **D027 Otago Boys High School Tennis Courts and School Hostel**

<b>Designation Number</b>	D027
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Otago Boys High School Tennis Courts Secondary School
<b>Location (address)</b>	355 Stuart Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

#### **D027 Conditions**

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### **D028 Mornington Primary School**

<b>Designation Number</b>	D028
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Mornington Primary School - Primary School and Early Childhood Education Centre
<b>Location (address)</b>	34 Elgin Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

#### **D028 Conditions**

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### **D029 George Street Normal Primary School**

<b>Designation Number</b>	D029
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	George Street Normal Primary School - Primary School
<b>Location (address)</b>	989 George Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

#### **D029 Conditions**

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### **D030 Wakari Primary School**

<b>Designation Number</b>	D030
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Wakari Primary School - Primary School
<b>Location (address)</b>	150 Helensburgh Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

#### **D030 Conditions**

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### **D031 St Leonards Primary School**

<b>Designation Number</b>	D031
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	St Leonards Primary School - Primary School and Early Childhood Education Centre
<b>Location (address)</b>	29 St Leonards Drive St Leonards
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### **D031 Conditions**

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### **D033 Ravensbourne Primary School**

<b>Designation Number</b>	D033
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Ravensbourne Primary School - Primary School and Early Childhood Education Centre
<b>Location (address)</b>	8 Wanaka Street Ravensbourne
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### **D033 Conditions**

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### D034 Logan Park High School

<b>Designation Number</b>	D034
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Logan Park High School - Secondary School
<b>Location (address)</b>	74 Butts Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

#### D034 Conditions

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### D035 Dunedin North Intermediate School

<b>Designation Number</b>	D035
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Dunedin North Intermediate School - Intermediate School
<b>Location (address)</b>	34 North Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

#### D035 Conditions

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### D036 North East Valley Normal Primary School

<b>Designation Number</b>	D036
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	North East Valley Normal Primary School - Primary School
<b>Location (address)</b>	248 North Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### D036 Conditions

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### D037 Opoho Primary School

<b>Designation Number</b>	D037
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Opoho Primary School - Primary School
<b>Location (address)</b>	96 Signal Hill Road Dunedin
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### D038 Halfway Bush Primary School

<b>Designation Number</b>	D038
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Halfway Bush Primary School - Primary School
<b>Location (address)</b>	54 Ashmore Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes

<b>Lapse Date</b>	Given effect to – no lapse date
-------------------	---------------------------------

### **D038 Conditions**

1. The following performance standards shall apply in respect of all boundaries of the site which lie adjacent to land with a residential zoning:
  - a. Side and rear yard - 2 metres;
  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

### **D039 Brockville Primary School**

<b>Designation Number</b>	D039
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Brockville Primary School - Primary School
<b>Location (address)</b>	263 Brockville Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

  - b. Height plane envelope - all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of

63 degrees into the site.

### **D118 Kura Kaupapa Maori Language School**

<b>Designation Number</b>	D118
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Kura Kaupapa Maori Language School - Primary School
<b>Location (address)</b>	378 Main South Road Green Island
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

### **D118 Conditions**

1. The only access to the site shall be via existing crossing place 6A as shown on Ministry of Works and Development plan number LA/70/14/12 as held in Transit New Zealand's Dunedin office (i.e. the existing access).
2. The following improvements to access shall be undertaken:
  - a. A right-hand turn bay shall be installed on State Highway 1, with associated seal widening of the carriageway;
  - b. Work details and specifications for construction and sealing undertaken on State Highway 1 shall be approved by Transit New Zealand prior to construction;
  - c. The access shall be sealed back as far as the level of the car park;
  - d. Construction carried out on State Highway 1 shall have a six month maintenance period during which time the Ministry of Education will be responsible for any remedial work;
  - e. A sign shall be erected within the site which conveys the general meaning to drivers of vehicles that turning right from the site on to State Highway 1 may be dangerous due to the volume and speed of passing traffic and that a left turn is advisable accordingly. This sign shall be erected in such a position that it is clearly visible to the drivers of vehicles but does not restrict visibility to or from the site accessway.
  - f. Vegetation adjacent to the existing access shall be removed to improve sight distances.
  - g. The lighting column on the northern side of the existing access shall be relocated.
  - h. A 130 m merge land will be constructed between the school access and Abbots Creek Bridge.
3. Sufficient space shall be provided on site to enable all vehicles entering the site to manoeuvre and exit from the site in a forward gear.
4. Sufficient space shall be provided on site to enable all vehicles entering the site to set-down and pick-up passengers without queuing on to the State Highway 1.
5. The following performance standards shall apply in respect of the site:
  - a. Side yards – 2 metres.
  - b. Height plane envelope: all buildings erected on site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 63 degrees into the site.

- c. Maximum site coverage – 40%
6. An outline plan of proposed works shall be submitted to the Council for assessment prior to the construction of any new structures at the site as outlined under section 176A of the Resource Management Act 1991.
  7. With the exception of the sign referred to in Condition 2(v) of these conditions, only one sign shall be erected on the site and the maximum dimensions of that sign shall be 2 square metres. This sign shall be located in such a position that it does not restrict visibility to or from the property access.
  8. The following performance standards shall apply to that part of the site which is identified in Figure 5 of Appendix 1 of the consultant planner’s report as having significant urban landscape conservation values:
    - a. The maximum area of any structure shall be 20 square metres and the maximum height shall be 5 metres;
    - b. The maximum extent of any earthworks shall be 10 cubic metres and the maximum change in ground level shall be 1 metre.

### **D120 Ako Early Childhood Centre**

<b>Designation Number</b>	D120
<b>Requiring Authority</b>	Minister of Education
<b>Designation Purpose</b>	Ako Early Childhood Centre, Corstorphine Kindergarten - early childhood education centre

<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D295 Conditions

*Note: In all conditions below reference to "NZS 2772.1:1999". shall be read as to include "NZS 2772.1:1999 (or any subsequent amendment thereof or substitute for)".*

1. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
2. A sign which advised that public access is prohibited and which warns of the dangers associated with trespass shall be erected on each accessway.
3. At all times the facility shall be operated such that NZS 2772.1:1999 is met at all places beyond the designation boundary, and unnecessary exposure shall be minimised accordingly.
4. The requiring authority shall notify the Council of any proposed changes to transmitting equipment which will have the effect of increasing radio frequency exposures in places beyond the designation boundary to a level greater than 25% of the applicable maximum exposure in NZS 2772.1:1999 and shall provide the Council with an estimate of the likely maximum exposure which can be expected as a result of the change. If estimated exposures exceed 25% of the public limit of NZS 2772.1:1999 , a measurement survey be undertaken by a suitably qualified independent radiation monitoring authority once the changes have been installed and commissioned, and the results provided to Council.
5. An outline plan of proposed work shall be submitted to the Council for consideration prior to the erection or construction of any new work, except work which meets one or more of the following criteria, provided that the Council reserves its discretion to waive the requirement for an outline plan under section 176A of the Resource Management Act 1991 for works which do not meet the following criteria:
  - a. like-for-like replacement structures;
  - b. temporary structures erected to enable servicing of existing structures provided that the temporary structure is completely removed within six months of its erection;
  - c. existing structures relocated on the site;
  - d. masts (including lattice masts) with a solid width up to and including 150mm in diameter;
  - e. antennas with a solid width of up to and including 300mm or a surface area up to and including 0.20m<sup>2</sup>

on any one profile, except that antenna dishes up to and including 1.8m in diameter shall also not require an outline plan provided that they are screened from public viewpoints or located so that they are seen against a backdrop of buildings, trees or land and are finished in a colour which blends with their backdrop;

- f. erection of buildings and structures within 50 metres of an existing building provided:
    - i. the existing building has a floor area at least 50 percent greater than the floor area of the proposed building or structure; and
    - ii. the height of the proposed building or structure is no greater than the maximum height of the existing building;
    - iii. the proposed building or structure shall be finished in the same or similar colour and hue as the existing building.
  - g. additions to existing buildings provided:
    - i. the additions increase the floor area of the existing building by no more than 100%;
    - ii. no part of the addition shall exceed the maximum height of the existing building;
    - iii. the addition shall be finished in the same or similar colour, hue and materials as the existing building.
6. Any outline plan submitted to the Council in accordance with this condition shall contain the following information:
- a. the height, shape and bulk of the public work, project or work;
  - b. the location on the site of the public work, project or work;
  - c. the likely finished contour of the site;
  - d. the vehicular access, circulation and the provision for parking;
  - e. the landscaping proposed; and
  - f. any other matters to avoid, remedy, or mitigate any adverse effects on the environment.

### A1.4.16 N Z Transport Agency

#### D448 SH 1 Tumai Bypass

<b>Designation Number</b>	D448
<b>Requiring Authority</b>	N Z Transport Agency
<b>Designation Purpose</b>	SH 1 - Tumai Bypass - State Highway Purposes (SH1)
<b>Location (address)</b>	111 Main Road Waikouaiti
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### D449 SH 1 DCC/WDC Boundary to Waitati

<b>Designation Number</b>	D449
<b>Requiring Authority</b>	N Z Transport Agency
<b>Designation Purpose</b>	SH 1 - DCC/WDC Boundary to Waitati - State Highway Purposes (SH 1)
<b>Location (address)</b>	
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### D450 SH 1 Northern Motorway (Waitati to Pine Hill Road)

<b>Designation Number</b>	D450
<b>Requiring Authority</b>	N Z Transport Agency
<b>Designation Purpose</b>	SH 1 - Northern Motorway (Waitati to Pine Hill Road) - Motorway Purposes (SH 1)
<b>Location (address)</b>	
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D451 SH 1 McArthurs Bend Realignment

Designation Number	D451
Requiring Authority	N Z Transport Agency
Designation Purpose	SH 1 - McArthurs Bend Realignment - Motorway Purposes (SH 1)
Location (address)	
Conditions	No
Legacy	
Rollover Designation	Yes
Lapse Date	Given effect to - no lapse date

### D452 SH 1 Portion of Pine Hill Road

Designation Number	D452
Requiring Authority	N Z Transport Agency
Designation Purpose	SH 1 - Portion of Pine Hill Road - State Highway Purposes (SH 1)
Location (address)	
Conditions	No
Legacy	
Rollover Designation	Yes
Lapse Date	Given effect to - no lapse date

### D453 SH 1 South Bound One-way System

Designation Number	D453
Requiring Authority	N Z Transport Agency
Designation Purpose	SH 1 - South Bound One-Way System (Cumberland Street - Gowland Street - Castle Street - Lower High Street - Cumberland Street - Andersons Bay Road) - State Highway Purposes (SH 1)
Location (address)	
Conditions	No
Legacy	
Rollover Designation	Yes
Lapse Date	Given effect to - no lapse date

#### D454 SH 1 North Bound One-way System

Designation Number	D454
Requiring Authority	N Z Transport Agency
Designation Purpose	SH 1 - North Bound One-Way System (Andersons Bay Road - Crawford Street - Lower High Street - Cumberland Street - Malcolm Street - Great King Street) - State Highway Purposes (SH 1)
Location (address)	
Conditions	No
Legacy	
Rollover Designation	Yes
Lapse Date	Given effect to - no lapse date

#### D455 SH 1 Motorway (from Andersons Bay Road to Sydney Street)

Designation Number	D455
Requiring Authority	N Z Transport Agency
Designation Purpose	SH 1 - Motorway (from Andersons Bay Road to Sydney Street) - Motorway Purposes (SH 1)
Location (address)	
Conditions	No
Legacy	
Rollover Designation	Yes
Lapse Date	Given effect to - no lapse date

#### D456 SH 1 Caversham Valley Road (from Sydney Street to Lookout Point)

Designation Number	D456
Requiring Authority	N Z Transport Agency
Designation Purpose	SH 1 - Caversham Valley Road (from Sydney Street to Lookout Point) - State Highway Purposes (SH 1)
Location (address)	
Conditions	No
Legacy	
Rollover Designation	Yes
Lapse Date	Given effect to - no lapse date

#### **D457 SH 1 Southern Motorway**

<b>Designation Number</b>	D457
<b>Requiring Authority</b>	N Z Transport Agency
<b>Designation Purpose</b>	SH 1 - Southern Motorway (from Lookout Point to between Abbotsford Road and Sunnyvale Lane) - Motorway Purposes (SH 1)
<b>Location (address)</b>	
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### **D458 SH 1 Westland Street**

<b>Designation Number</b>	D458
<b>Requiring Authority</b>	N Z Transport Agency
<b>Designation Purpose</b>	SH 1 - Westland Street - State Highway Purposes (SH 1)
<b>Location (address)</b>	
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### **D461 SH 1 Saddlevue Place, Fairfield to Mosgiel Interchange**

<b>Designation Number</b>	D461
<b>Requiring Authority</b>	N Z Transport Agency
<b>Designation Purpose</b>	SH 1 - Saddlevue Place, Fairfield to Mosgiel Interchange - Motorway Purposes (SH 1)
<b>Location (address)</b>	
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### **D463 SH 1 Mosgiel Interchange to Waipori River**

<b>Designation Number</b>	D463
<b>Requiring Authority</b>	N Z Transport Agency
<b>Designation Purpose</b>	SH 1 - Mosgiel Interchange to Waipori River - State Highway Purposes (SH 1)
<b>Location (address)</b>	
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### **D464 SH 87 Mosgiel Interchange to DCC/CODC Boundary North of Hyde**

<b>Designation Number</b>	D464
<b>Requiring Authority</b>	N Z Transport Agency
<b>Designation Purpose</b>	SH 87 - Mosgiel Interchange to DCC/CODC Boundary North of Hyde - State Highway Purposes (SH 87)
<b>Location (address)</b>	
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

#### **D465 SH 88 Anzac Avenue to Beach Street, Port Chalmers**

<b>Designation Number</b>	D465
<b>Requiring Authority</b>	N Z Transport Agency
<b>Designation Purpose</b>	SH 88 - Anzac Avenue to Beach Street, Port Chalmers - State Highway Purposes (SH 88)
<b>Location (address)</b>	
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D466 SH 1 Fairfield Bypass

<b>Designation Number</b>	D466
<b>Requiring Authority</b>	N Z Transport Agency
<b>Designation Purpose</b>	SH 1 - Fairfield Bypass - Motorway Purposes (SH 1)
<b>Location (address)</b>	
<b>Conditions</b>	No
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

## A1.4.17 OtagoNet Joint Venture

### D847 Clarks Substation

<b>Designation Number</b>	D847
<b>Requiring Authority</b>	OtagoNet Joint Venture
<b>Designation Purpose</b>	Clarks Substation - Electricity Zone Substation and Ancillary Purposes
<b>Location (address)</b>	R Mount Gowrie Road Hindon
<b>Conditions</b>	Yes
<b>Legacy</b>	Previously licensed to Occupy - New designation 2GP
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to – no lapse date

### D847 Conditions

1. The maximum height for all new structures (excluding overhead line support structures/poles and communications equipment masts) associated with the reception, transformation and distribution of electrical power must be either the height of the tallest structure present on the site as at 26 September 2015 or 10 metres, whichever is the greater.
2. The floor area of structures, excluding overhead lines and their support structures, must not cover more than 50% of the site, except where the site is less than 420m<sup>2</sup> in area in which case the maximum site coverage shall be 70% of the site.  
Note: Notwithstanding any definition in the Plan, for the purposes of this designation the following definition will apply: For the purposes of condition 2: *The area of a "Structure" must be measured as the total ground area covered by a building or structure, but must not include landscaped areas, open sealed or unsealed outdoor storage areas, car parking and vehicle access areas, drainage systems, underground lines, underground earthing grids, fences or land covered by overhead lines and their support structures.*
3. The strength of electric and magnetic fields generated by infrastructure located at the site must not, within publicly accessible areas, exceed the limits for continuous nonoccupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (1990), or any subsequent amendments thereof or substitutes for.
4. Any new noise generating equipment installed after 26 September 2015 must not exceed the following noise limits:
  - a. At the boundary of the site: Between 9:00pm on any night and 7:00am the following day: - L<sub>max</sub> 75 dBA
  - b. Measured at or within the notional boundary\* of any dwelling not on the same site:

Between the hours of 7:00am and 9:00pm	L10 55 dBA
Between the hours of 9:00pm and 7:00am the following day and includes 24 hours on Sundays and statutory holidays	L10 40 dBA

\* 'Notional boundary' means the line 50m from the façade of any dwelling, except that if the dwelling is located closer than 50m to the site boundary the notional boundary is the site boundary.

- c. All measurements will be undertaken in accordance with NZS 6801:1991 “Measurement of Sound” (or subsequent amendments).
5. Where existing site noise already exceeds the levels in condition 4 above, then any new noise generating equipment (excluding any electricity equipment required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary. A noise assessment may need to be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. Construction noise shall comply with the New Zealand Standard for Acoustics – Construction Noise (NZS 6803: 1999).

### D848 Hindon Substation

<b>Designation Number</b>	D848
<b>Requiring Authority</b>	OtagoNet Joint Venture
<b>Designation Purpose</b>	Hindon Substation - Electricity Zone Substation and Ancillary Purposes
<b>Location (address)</b>	2271 George King Memorial Drive Outram
<b>Conditions</b>	Yes
<b>Legacy</b>	New designation 2GP
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to – no lapse date

### D848 Conditions

1. The maximum height for all new structures (excluding overhead line support structures/poles and communications equipment masts) associated with the reception, transformation and distribution of electrical power must be either the height of the tallest structure present on the site as at 26 September 2015 or 10 metres, whichever is the greater.
2. The floor area of structures, excluding overhead lines and their support structures, must not cover more than 50% of the site, except where the site is less than 420m<sup>2</sup> in area in which case the maximum site coverage shall be 70% of the site.  
 Note: Notwithstanding any definition in the Plan, for the purposes of this designation the following definition will apply: For the purposes of condition 2: *The area of a “Structure” must be measured as the total ground area covered by a building or structure, but must not include landscaped areas, open sealed or unsealed outdoor storage areas, car parking and vehicle access areas, drainage systems, underground lines, underground earthing grids, fences or land covered by overhead lines and their support structures.*
3. The strength of electric and magnetic fields generated by infrastructure located at the site must not, within publicly accessible areas, exceed the limits for continuous nonoccupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (1990), or any subsequent amendments thereof or substitutes for.
4. Any new noise generating equipment installed after 26 September 2015 must not exceed the following noise limits:
  - a. At the boundary of the site: Between 9:00pm on any night and 7:00am the following day: - Lmax 75 dBA
  - b. Measured at or within the notional boundary\* of any dwelling not on the same site:

Between the hours of 7:00am and 9:00pm	L10 55 dBA
Between the hours of 9:00pm and 7:00am the following day and includes 24 hours on Sundays and statutory holidays	L10 40 dBA

\* 'Notional boundary' means the line 50m from the façade of any dwelling, except that if the dwelling is located closer than 50m to the site boundary the notional boundary is the site boundary.

- c. All measurements will be undertaken in accordance with NZS 6801:1991 "Measurement of Sound" (or subsequent amendments).
5. Where existing site noise already exceeds the levels in condition 4 above, then any new noise generating equipment (excluding any electricity equipment required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary. A noise assessment may need to be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
  6. Construction noise shall comply with the New Zealand Standard for Acoustics – Construction Noise (NZS 6803: 1999).

### D849 Middlemarch Substation

<b>Designation Number</b>	D849
<b>Requiring Authority</b>	OtagoNet Joint Venture
<b>Designation Purpose</b>	Middlemarch Substation - Electricity Zone Substation and Ancillary Purposes
<b>Location (address)</b>	15 South Road Middlemarch
<b>Conditions</b>	Yes
<b>Legacy</b>	New designation 2GP
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to – no lapse date

### D849 Conditions

1. The maximum height for all new structures (excluding overhead line support structures/poles and communications equipment masts) associated with the reception, transformation and distribution of electrical power must be either the height of the tallest structure present on the site as at 26 September 2015 or 10 metres, whichever is the greater.
2. The floor area of structures, excluding overhead lines and their support structures, must not cover more than 50% of the site, except where the site is less than 420m<sup>2</sup> in area in which case the maximum site coverage shall be 70% of the site.  
 Note: Notwithstanding any definition in the Plan, for the purposes of this designation the following definition will apply: For the purposes of condition 2: *The area of a "Structure" must be measured as the total ground area covered by a building or structure, but must not include landscaped areas, open sealed or unsealed outdoor storage areas, car parking and vehicle access areas, drainage systems, underground lines, underground earthing grids, fences or land covered by overhead lines and their support structures.*
3. The strength of electric and magnetic fields generated by infrastructure located at the site must not, within

publicly accessible areas, exceed the limits for continuous nonoccupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (1990), or any subsequent amendments thereof or substitutes for.

4. Any new noise generating equipment installed after 26 September 2015 must not exceed the following noise limits:
- At the boundary of the site: Between 9:00pm on any night and 7:00am the following day: - L<sub>max</sub> 75 dBA
  - Measured at or within the notional boundary\* of any dwelling not on the same site:

Between the hours of 7:00am and 9:00pm	L10 55 dBA
Between the hours of 9:00pm and 7:00am the following day and includes 24 hours on Sundays and statutory holidays	L10 40 dBA

\* 'Notional boundary' means the line 50m from the façade of any dwelling, except that if the dwelling is located closer than 50m to the site boundary the notional boundary is the site boundary.

- All measurements will be undertaken in accordance with NZS 6801:1991 "Measurement of Sound" (or subsequent amendments).
5. Where existing site noise already exceeds the levels in condition 4 above, then any new noise generating equipment (excluding any electricity equipment required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary. A noise assessment may need to be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. Construction noise shall comply with the New Zealand Standard for Acoustics – Construction Noise (NZS 6803: 1999).

## D850 Hyde Substation

<b>Designation Number</b>	D850
<b>Requiring Authority</b>	OtagoNet Joint Venture
<b>Designation Purpose</b>	Hyde Substation - Electricity Zone Substation and Ancillary Purposes
<b>Location (address)</b>	1 Cemetery Road Hyde
<b>Conditions</b>	Yes
<b>Legacy</b>	New designation 2GP
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to – no lapse date

## D850 Conditions

- The maximum height for all new structures (excluding overhead line support structures/poles and communications equipment masts) associated with the reception, transformation and distribution of electrical power must be either the height of the tallest structure present on the site as at 26 September 2015 or 10 metres, whichever is the greater.

2. The floor area of structures, excluding overhead lines and their support structures, must not cover more than 50% of the site, except where the site is less than 420m<sup>2</sup> in area in which case the maximum site coverage shall be 70% of the site.
- Note: Notwithstanding any definition in the Plan, for the purposes of this designation the following definition will apply: For the purposes of condition 2: *The area of a “Structure” must be measured as the total ground area covered by a building or structure, but must not include landscaped areas, open sealed or unsealed outdoor storage areas, car parking and vehicle access areas, drainage systems, underground lines, underground earthing grids, fences or land covered by overhead lines and their support structures.*

3. The strength of electric and magnetic fields generated by infrastructure located at the site must not, within publicly accessible areas, exceed the limits for continuous nonoccupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (1990), or any subsequent amendments thereof or substitutes for.
4. Any new noise generating equipment installed after 26 September 2015 must not exceed the following noise limits:
- At the boundary of the site: Between 9:00pm on any night and 7:00am the following day: - Lmax 75 dBA
  - Measured at or within the notional boundary\* of any dwelling not on the same site:

Between the hours of 7:00am and 9:00pm	L10 55 dBA
Between the hours of 9:00pm and 7:00am the following day and includes 24 hours on Sundays and statutory holidays	L10 40 dBA

\* ‘Notional boundary’ means the line 50m from the façade of any dwelling, except that if the dwelling is located closer than 50m to the site boundary the notional boundary is the site boundary.

- All measurements will be undertaken in accordance with NZS 6801:1991 “Measurement of Sound” (or subsequent amendments).
5. Where existing site noise already exceeds the levels in condition 4 above, then any new noise generating equipment (excluding any electricity equipment required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary. A noise assessment may need to be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. Construction noise shall comply with the New Zealand Standard for Acoustics – Construction Noise (NZS 6803: 1999).

### D851 Merton Substation

<b>Designation Number</b>	D851
<b>Requiring Authority</b>	OtagoNet Joint Venture
<b>Designation Purpose</b>	Merton Substation - Electricity Zone Substation and Ancillary Purposes
<b>Location (address)</b>	3292 Waikouaiti-Waitati Road Merton
<b>Conditions</b>	Yes
<b>Legacy</b>	New designation 2GP

<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to – no lapse date

### D851 Conditions

1. The maximum height for all new structures (excluding overhead line support structures/poles and communications equipment masts) associated with the reception, transformation and distribution of electrical power must be either the height of the tallest structure present on the site as at 26 September 2015 or 10 metres, whichever is the greater.
2. The floor area of structures, excluding overhead lines and their support structures, must not cover more than 50% of the site, except where the site is less than 420m<sup>2</sup> in area in which case the maximum site coverage shall be 70% of the site.  
Note: Notwithstanding any definition in the Plan, for the purposes of this designation the following definition will apply: For the purposes of condition 2: *The area of a “Structure” must be measured as the total ground area covered by a building or structure, but must not include landscaped areas, open sealed or unsealed outdoor storage areas, car parking and vehicle access areas, drainage systems, underground lines, underground earthing grids, fences or land covered by overhead lines and their support structures.*
3. The strength of electric and magnetic fields generated by infrastructure located at the site must not, within publicly accessible areas, exceed the limits for continuous nonoccupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (1990), or any subsequent amendments thereof or substitutes for.
4. Any new noise generating equipment installed after 26 September 2015 must not exceed the following noise limits:
  - a. At the boundary of the site: Between 9:00pm on any night and 7:00am the following day: - Lmax 75 dBA
  - b. Measured at or within the notional boundary\* of any dwelling not on the same site:

Between the hours of 7:00am and 9:00pm	L10 55 dBA
Between the hours of 9:00pm and 7:00am the following day and includes 24 hours on Sundays and statutory holidays	L10 40 dBA

\* ‘Notional boundary’ means the line 50m from the façade of any dwelling, except that if the dwelling is located closer than 50m to the site boundary the notional boundary is the site boundary.

- c. All measurements will be undertaken in accordance with NZS 6801:1991 “Measurement of Sound” (or subsequent amendments).
5. Where existing site noise already exceeds the levels in condition 4 above, then any new noise generating equipment (excluding any electricity equipment required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary. A noise assessment may need to be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. Construction noise shall comply with the New Zealand Standard for Acoustics – Construction Noise (NZS 6803: 1999).

## D852 Waitati Substation

<b>Designation Number</b>	D852
<b>Requiring Authority</b>	OtagoNet Joint Venture
<b>Designation Purpose</b>	Waitati Substation - Electricity Zone Substation and Ancillary Purposes
<b>Location (address)</b>	1 Killarney Street Waitati
<b>Conditions</b>	Yes
<b>Legacy</b>	New designation 2GP
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to – no lapse date

## D852 Conditions

1. The maximum height for all new structures (excluding overhead line support structures/poles and communications equipment masts) associated with the reception, transformation and distribution of electrical power must be either the height of the tallest structure present on the site as at 26 September 2015 or 10 metres, whichever is the greater.
2. The floor area of structures, excluding overhead lines and their support structures, must not cover more than 50% of the site, except where the site is less than 420m<sup>2</sup> in area in which case the maximum site coverage shall be 70% of the site.  
 Note: Notwithstanding any definition in the Plan, for the purposes of this designation the following definition will apply: For the purposes of condition 2: *The area of a “Structure” must be measured as the total ground area covered by a building or structure, but must not include landscaped areas, open sealed or unsealed outdoor storage areas, car parking and vehicle access areas, drainage systems, underground lines, underground earthing grids, fences or land covered by overhead lines and their support structures.*
3. The strength of electric and magnetic fields generated by infrastructure located at the site must not, within publicly accessible areas, exceed the limits for continuous nonoccupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (1990), or any subsequent amendments thereof or substitutes for.
4. Any new noise generating equipment installed after 26 September 2015 must not exceed the following noise limits:
  - a. At the boundary of the site: Between 9:00pm on any night and 7:00am the following day: - L<sub>max</sub> 75 dBA
  - b. Measured at or within the notional boundary\* of any dwelling not on the same site:

Between the hours of 7:00am and 9:00pm	L10 55 dBA
Between the hours of 9:00pm and 7:00am the following day and includes 24 hours on Sundays and statutory holidays	L10 40 dBA

\* ‘Notional boundary’ means the line 50m from the façade of any dwelling, except that if the dwelling is located closer than 50m to the site boundary the notional boundary is the site boundary.

- c. All measurements will be undertaken in accordance with NZS 6801:1991 “Measurement of Sound” (or subsequent amendments).

5. Where existing site noise already exceeds the levels in condition 4 above, then any new noise generating equipment (excluding any electricity equipment required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary. A noise assessment may need to be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. Construction noise shall comply with the New Zealand Standard for Acoustics – Construction Noise (NZS 6803: 1999).

### D853 Waikouaiti Substation

<b>Designation Number</b>	D853
<b>Requiring Authority</b>	OtagoNet Joint Venture
<b>Designation Purpose</b>	Waikouaiti Substation - Electricity Zone Substation and Ancillary Purposes
<b>Location (address)</b>	42 Quarry Road Waikouaiti
<b>Conditions</b>	Yes
<b>Legacy</b>	New designation 2GP
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	November 2025

### D853 Conditions

1. The maximum height for all new structures (excluding overhead line support structures/poles and communications equipment masts) associated with the reception, transformation and distribution of electrical power must be either the height of the tallest structure present on the site as at 26 September 2015 or 10 metres, whichever is the greater.
2. The floor area of structures, excluding overhead lines and their support structures, must not cover more than 50% of the site, except where the site is less than 420m<sup>2</sup> in area in which case the maximum site coverage shall be 70% of the site.  
 Note: Notwithstanding any definition in the Plan, for the purposes of this designation the following definition will apply: For the purposes of condition 2: *The area of a “Structure” must be measured as the total ground area covered by a building or structure, but must not include landscaped areas, open sealed or unsealed outdoor storage areas, car parking and vehicle access areas, drainage systems, underground lines, underground earthing grids, fences or land covered by overhead lines and their support structures.*
3. The strength of electric and magnetic fields generated by infrastructure located at the site must not, within publicly accessible areas, exceed the limits for continuous nonoccupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (1990), or any subsequent amendments thereof or substitutes for.
4. Any new noise generating equipment installed after 26 September 2015 must not exceed the following noise limits:
  - a. At the boundary of the site: Between 9:00pm on any night and 7:00am the following day: - L<sub>max</sub> 75 dBA
  - b. Measured at or within the notional boundary\* of any dwelling not on the same site:

Between the hours of 7:00am and 9:00pm	L10 55 dBA
Between the hours of 9:00pm and 7:00am the following day and includes 24 hours on Sundays and statutory holidays	L10 40 dBA

\* 'Notional boundary' means the line 50m from the façade of any dwelling, except that if the dwelling is located closer than 50m to the site boundary the notional boundary is the site boundary.

- c. All measurements will be undertaken in accordance with NZS 6801:1991 "Measurement of Sound" (or subsequent amendments).
5. Where existing site noise already exceeds the levels in condition 4 above, then any new noise generating equipment (excluding any electricity equipment required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary. A noise assessment may need to be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. Construction noise shall comply with the New Zealand Standard for Acoustics – Construction Noise (NZS 6803: 1999).
7. Landscaping: Prior to the establishment of a substation, a landscape plan shall be submitted to the Consent Authority as part of an Outline Plan. The landscape plan shall indicate how the visual impact of the substation on rural amenity values is to be mitigated, with particular reference to views into the site from the adjacent road, and shall include details of the number and species of plants proposed. Any planting detailed in the landscaping plan shall be undertaken within six months of the substation becoming operational and shall be maintained on an ongoing basis thereafter.

Note: That no outline plan shall be required for the replacement of any transformers, poles, support structures, switchgear, cables or conductors provided where there is no overall increase in the height of the facility and no increase in noise.

### **D854 Blueskin Substation**

<b>Designation Number</b>	D854
<b>Requiring Authority</b>	OtagoNet Joint Venture
<b>Designation Purpose</b>	Blueskin Bay Substation - Electricity Zone Substation and Ancillary Purposes
<b>Location (address)</b>	1 Manse Road Evansdale
<b>Conditions</b>	Yes
<b>Legacy</b>	New designation 2GP
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	September 2025

### **D854 Conditions**

1. The maximum height for all new structures (excluding overhead line support structures/poles and communications equipment masts) associated with the reception, transformation and distribution of electrical power must be either the height of the tallest structure present on the site as at 26 September 2015 or 10

metres, whichever is the greater.

2. The floor area of structures, excluding overhead lines and their support structures, must not cover more than 50% of the site, except where the site is less than 420m<sup>2</sup> in area in which case the maximum site coverage shall be 70% of the site.

Note: Notwithstanding any definition in the Plan, for the purposes of this designation the following definition will apply: For the purposes of condition 2: *The area of a “Structure” must be measured as the total ground area covered by a building or structure, but must not include landscaped areas, open sealed or unsealed outdoor storage areas, car parking and vehicle access areas, drainage systems, underground lines, underground earthing grids, fences or land covered by overhead lines and their support structures.*

3. The strength of electric and magnetic fields generated by infrastructure located at the site must not, within publicly accessible areas, exceed the limits for continuous nonoccupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (1990), or any subsequent amendments thereof or substitutes for.
4. Any new noise generating equipment installed after 26 September 2015 must not exceed the following noise limits:
  - a. At the boundary of the site: Between 9:00pm on any night and 7:00am the following day: - L<sub>max</sub> 75 dBA
  - b. Measured at or within the notional boundary\* of any dwelling not on the same site:

Between the hours of 7:00am and 9:00pm	L10 55 dBA
Between the hours of 9:00pm and 7:00am the following day and includes 24 hours on Sundays and statutory holidays	L10 40 dBA

\* ‘Notional boundary’ means the line 50m from the façade of any dwelling, except that if the dwelling is located closer than 50m to the site boundary the notional boundary is the site boundary.

- c. All measurements will be undertaken in accordance with NZS 6801:1991 “Measurement of Sound” (or subsequent amendments).
5. Where existing site noise already exceeds the levels in condition 4 above, then any new noise generating equipment (excluding any electricity equipment required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary. A noise assessment may need to be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. Construction noise shall comply with the New Zealand Standard for Acoustics – Construction Noise (NZS 6803: 1999).
7. Landscaping: Prior to the establishment of a substation, a landscape plan shall be submitted to the Consent Authority as part of an Outline Plan. The landscape plan shall indicate how the visual impact of the substation on rural amenity values is to be mitigated, with particular reference to views into the site from the adjacent road, and shall include details of the number and species of plants proposed. Any planting detailed in the landscaping plan shall be undertaken within six months of the substation becoming operational and shall be maintained on an ongoing basis thereafter.

Note: That no outline plan shall be required for the replacement of any transformers, poles, support structures, switchgear, cables or conductors provided where there is no overall increase in the height of the facility and no increase in noise.

## A1.4.18 Otago Regional Council

### D211 Regional House

<b>Designation Number</b>	D211
<b>Requiring Authority</b>	Otago Regional Council
<b>Designation Purpose</b>	Regional House - Principal Premises of the Otago Regional Council - all Otago Regional Council functions and ancillary activities.
<b>Location (address)</b>	70 Stafford Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to – no lapse date

#### D211 Conditions

1. The following yard requirements shall apply in respect of all new structures proposed for the site:
  - a. Front yard - 3 metres.
  - b. Side and rear yards - 1 metre.
2. Height Plane Envelope: all buildings erected on the site shall be contained within a height plane envelope created by forming a plane originating on the boundary line at ground level and inclining at an angle of 72° into the site.
3. The maximum height of all new structures at the site shall be the height of the tallest structure present at the site on 4 September 1996.

### D214 To allow for Proposed Principal Premises

<b>Designation Number</b>	D214
<b>Requiring Authority</b>	Otago Regional Council
<b>Designation Purpose</b>	Proposed Principal Premises – All Otago Regional Council functions and ancillary activities.
<b>Location (address)</b>	15 Birch Street Dunedin, 39 Kitchener Street Dunedin, and 49 Kitchener Street, Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	Created by Notice of Requirement DIS-2007-2 in the 1999 District Plan
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	September 2025

#### D214 Conditions

1. Prior to the commencement of construction of the principal premises, the Requiring Authority shall submit an Outline Plan to the Dunedin City Council that shall include the following:

- a. The final design of the building and overall site plan; and
  - b. Details of landscaping and urban design elements of public space areas on the site, including public access to the harbour edge.
  - c. Describes how car parking will be provided for the principal premises.
2.
    - a. The height of buildings on the site shall not exceed 16m unless the underlying zone permits greater in which case the underlying zone height will be the maximum height.
    - b. Yard setbacks are permitted.
    - c. Up to a maximum of 80% of the designated site shall be covered in buildings and structures.
  3.
    - a. Noise during construction of the principal premises shall comply with the requirements of NZS 6803:1999 "Acoustics – Construction Noise".
    - b. Operational noise generated on the site designation area shall comply with the applicable limits for the underlying zone.
  4. The building shall be acoustically insulated to achieve an indoor design sound level of 40 dBA L10 in spaces intended for office work or similar, under all uses of the existing slipway. A qualified acoustic engineer shall certify that the proposed building construction will achieve this internal design noise level. The certification shall be independently peer reviewed by another qualified acoustic engineer who shall also certify this internal design noise level can be achieved prior to completion of the building design.
  5. Prior to the commencement of construction of the principal premises, the Requiring Authority shall submit to the Dunedin City Council a Site Operation Plan that addresses the ongoing management of the operations of the principal premises and the slipway. The plan shall as a minimum cover:
    - a. A communication protocol to ensure that the Otago Regional Council and the slipway operator (Port Otago Limited) are aware in advance of each other's outdoor activities; and
    - b. Documentation of existing and developing environmental management protocols
  6. The principal premises shall not be occupied until such a time as the adjacent wharf at Birch Street has been upgraded to the following wharf design targets:
    - a. Targeted structural loading for the wharf areas will be normal highway bridge design loadings, engineering advice received states that this loading would allow an 80 tonne crane to access the slipway area;
    - b. Structural design life of not less than 50 years; and
    - c. Materials sympathetic with the existing heritage nature of the wharfs.
  7. An accidental discovery protocol shall be in place during construction activity. If any archaeological features are found, they shall not be further disturbed until they have been examined by an archaeologist. Any archaeological deposits found should either be left untouched and reburied (preferable), or properly sampled, recorded and a full report prepared. Any artefactual material found at the site should be properly recorded and curated. Final disposal of any such material should be negotiated between the landowner, Otago Museum and Heritage New Zealand. Should the geotechnical investigation monitoring suggest it is necessary for an archaeological authority to carry out works at the site, this will be obtained by the requiring authority.
  8. If the requiring authority:
    - a. Discovers kōiwi tangata (human skeletal remains), waahi taoka (resources of importance), waahi tapu (places or features of special significance) or other Maori artefact material, the requiring authority shall without delay:
      - i. Notify the Consent Authority, tangata whenua and Heritage New Zealand, and in the case of skeletal remains, the New Zealand Police.
      - ii. Stop work within the immediate vicinity of the discovery to allow a site inspection by Heritage

New Zealand and the appropriate runanga and their advisors, who shall determine whether the discovery is likely to be extensive, if a thorough site investigation is required, and whether an archaeological authority is required.

- b. Any kōiwi tangata discovered shall be handled and removed by tribal elders responsible for the tikanga (custom) appropriate to its removal or preservation.
- c. Site work shall recommence following consultation with the requiring authority, Heritage New Zealand, tangata whenua, and in the case of skeletal remains, the New Zealand Police, provided that any relevant statutory permissions have been obtained.
- d. Prior to construction of the principal premises at the site confirmation of building levels required to appropriately manage potential inundation effects will be obtained from a suitably qualified expert.

### **D215 Leith Flood Protection Scheme**

<b>Designation Number</b>	D215
<b>Requiring Authority</b>	Otago Regional Council
<b>Designation Purpose</b>	Leith Flood Protection Scheme - includes all works, structures, facilities, devices and appliances associated with the scheme and all activities relating to the scheme including construction, operation, maintenance, repair, reconstruction, extension modification and replacement.
<b>Location (address)</b>	15 Birch Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	2GP Review 2015 - New
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to - no lapse date

### **D215 Conditions**

1. For the purpose of this designation, normal working hours are between 7.30am and 7pm, Monday to Friday, and 8am and 6pm, Saturday, with the operation of noisy machinery restricted to 8am to 6pm, Monday to Saturday. No work shall be undertaken on-site on Sundays and public holidays. Where in the opinion of the requiring authority there is an imminent or immediate risk to people or property, the requiring authority may undertake the works at any time.
2. Where maintenance works are to occur, and where practicable, the consent holder shall advise landowners affected by the works of the proposed works at least ten working days prior to the maintenance works occurring.
3. Any disturbed ground must be stabilised as soon as practicable.
4. Construction and other works shall generally comply with the following noise limits as defined by NZS 6803:1999:

Upper limits for construction noise received in Residential zones and the Campus Zone.

Time of week	Time period	Duration of work					
		Typical duration (dBA)		Short-term duration (dBA)		Long-term duration (dBA)	
		Leq	Lmax	Leq	Lmax	Leq	Lmax
Weekdays	0630-0730	60	75	65	75	55	75
	0730-1800	75	90	80	95	70	85
	1800-2000	70	85	75	90	65	80
	2000-0630	45	75	45	75	45	75
Saturdays	0630-0730	45	75	45	75	45	75
	0730-1800	75	90	80	95	70	75
	1800-2000	45	75	45	75	45	75
	2000-0630	45	75	45	75	45	75
Sundays and public holidays	0630-0730	45	75	45	75	45	75
	0730-1800	55	85	55	85	55	85
	1800-2000	45	75	45	75	45	75
	2000-0630	45	75	45	75	45	75

5. The requiring authority must avoid, as far as practicable, dust and fumes arising from maintenance activities beyond the boundary of the designation.
6. Clearing of vegetation for access, maintenance, and construction work shall be kept to the minimum extent necessary
7. The requiring authority must implement suitable measures to avoid deposition of any debris on roads by vehicles moving to and from the site. If any material is deposited on any roads, the requiring authority shall take immediate action, at its expense, to clean the roads.
8. The DCC Reserves Team shall be consulted prior to lodgement of any outline plan for future works within the Urban Landscape Conservation Areas.
9. Heritage New Zealand shall be consulted prior to lodgement of any outline plan for future works that may affect a heritage structure with a HNZ classification.
10. The University of Otago shall be consulted prior to the construction of any new works or lodgement of any outline plan for future works within the University Campus Area and the Dunedin City Council shall be advised of the outcome of the consultation.
11. All use of agrichemicals shall be carried out in accordance with the conditions and specifications of NZS 8409:2004 Management of Agrichemicals or any replacement standard. The requiring authority must ensure that any contractor undertaking spraying of pest plants shall either hold current Growsafe certification or shall be directly supervised by an individual with a current Growsafe certification.
12. That if kōiwi tangata (human skeletal remains), taonga or archaeological artefacts are discovered during site construction, the Requiring Authority shall, without delay:
  - a. Cease all work within a 50m radius of the discovery and secure the area unless there is a risk to life or property;

- b. Notify their nominated archaeologist, the consent authority, Kāi Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police;
- c. Enable a site inspection by Heritage New Zealand and the appropriate runanga, and their advisors, who shall determine the nature of the discovery and the further action required, including whether an Archaeological Authority is required under the Heritage New Zealand Pouhere Taonga Act 2014;
- d. Any kōiwi tangata or taonga shall be handled and removed by tribal elders responsible for the tikanga (custom) appropriate to its removal and preservation;
- e. Ensure that the further action identified in accordance in part (c.) of this condition is undertaken; and
- f. Upon completions of tasks (a.) to (e.) above, and provided all statutory permissions have been obtained, the Requiring Authority may recommence site construction following consultation with the consent authority, Kai Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police.

### **D216 Lindsay Creek River Works**

<b>Designation Number</b>	D216
<b>Requiring Authority</b>	Otago Regional Council
<b>Designation Purpose</b>	Lindsay Creek River Works which includes all works, structures, facilities, devices and appliances associated with flood protection, river control and erosion protection and includes all activities relating to such works including construction, operation, maintenance, repair, reconstruction, extension, modification, replacement and improvement.
<b>Location (address)</b>	
<b>Conditions</b>	Yes
<b>Legacy</b>	2GP Review 2015 - New
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to - no lapse date

### **D216 Conditions**

1. For the purpose of this designation, normal working hours are between 7.30am and 7pm, Monday to Friday, and 8am and 6pm, Saturday, with the operation of noisy machinery restricted to 8am to 6pm, Monday to Saturday. No work shall be undertaken on-site on Sundays and public holidays. Where in the opinion of the requiring authority there is an imminent or immediate risk to people or property, the requiring authority may undertake the works at any time.
2. Where practicable, the consent holder shall advise landowners affected by the works of the proposed works at least ten working days prior to the maintenance works occurring.
3. Any disturbed ground must be stabilised as soon as practicable.
4. The requiring authority must avoid, as far as practicable, discharging dust and fumes arising from maintenance activities beyond the boundary of the designation.
5. The requiring authority must implement suitable measures to avoid deposition of any debris on roads by vehicles moving to and from the site. If any material is deposited on any roads, the requiring authority shall take immediate action, at its expense, to clean the roads.
6. The DCC Reserves Team shall be consulted prior to lodgement of any outline plan for future works within the

Urban Landscape Conservation Areas.

7. Any works exercised under this designation on the Memorial Walkway bund will be in accordance with the standing agreement between the Otago Regional Council and the Otago Community Hospice.
8. Heritage New Zealand shall be consulted prior to lodgement of any outline plan for future works that may affect a heritage structure with a HNZ classification.
9. Clearing of vegetation for access, maintenance, and construction work shall be kept to the minimum extent necessary.
10. All use of agrichemicals shall be carried out in accordance with the conditions and specifications of NZS 8409:2004 Management of Agrichemicals or any replacement standard.
11. The requiring authority must ensure that any contractor undertaking spraying of pest plants shall either hold current Growsafe certification or shall be directly supervised by an individual with a current Growsafe certification.
12. That if kōiwi tangata (human skeletal remains), taonga or archaeological artefacts are discovered during site construction, the Requiring Authority shall, without delay:
  - a. Cease all work within a 50m radius of the discovery and secure the area unless doing so will put life and property at risk;
  - b. Notify their nominated archaeologist, the consent authority, Kāi Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police;
  - c. Enable a site inspection by Heritage New Zealand and the appropriate runanga, and their advisors, who shall determine the nature of the discovery and the further action required, including whether an Archaeological Authority is required under the Heritage New Zealand Pouhere Taonga Act 2014;
  - d. Any kōiwi tangata or taonga shall be handled and removed by tribal elders responsible for the tikanga (custom) appropriate to its removal and preservation;
  - e. Ensure that the further action identified in accordance in part (c.) of this condition is undertaken; and
  - f. Upon completions of tasks (a.) to (e.) above, and provided all statutory permissions have been obtained, the Requiring Authority may recommence site construction following consultation with the consent authority, Kai Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police.

## D217 Lower Taieri Flood Protection Scheme

<b>Designation Number</b>	D217
<b>Requiring Authority</b>	Otago Regional Council
<b>Designation Purpose</b>	Lower Taieri Flood Protection Scheme - includes all works, structures, facilities, devices and appliances associated with the scheme and all activities relating to the scheme including construction, operation, maintenance, repair, reconstruction, extension modification and replacement.
<b>Location (address)</b>	
<b>Conditions</b>	Yes
<b>Legacy</b>	2GP Review 2015 - New
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to - no lapse date

## D217 Conditions

1. For the purpose of this designation, normal working hours are between 7.30am and 7pm, Monday to Friday, and 8am and 6pm, Saturday, with the operation of noisy machinery restricted to 8am to 6pm, Monday to Saturday. No work shall be undertaken on-site on Sundays and public holidays. Where in the opinion of the requiring authority there is an imminent or immediate risk to people or property, the requiring authority may undertake the works at any time.
2. Any disturbed ground must be stabilised as soon as practicable.
3. The requiring authority must avoid, as far as practicable, discharging dust and fumes arising from maintenance activities beyond the boundary of the designation.
4. The requiring authority must implement suitable measures to avoid deposition of any debris on roads by vehicles moving to and from the site. If any material is deposited on any roads, the requiring authority shall take immediate action, at its expense, to clean the roads.
5. Spraying:
  - a. All use of agrichemicals shall be carried out in accordance with the conditions and specifications of NZS 8409:2004 Management of Agrichemicals or any replacement standard.
  - b. The requiring authority must ensure that any contractor undertaking spraying of pest plants shall either hold current Growsafe certification or shall be directly supervised by an individual with a current Growsafe certification.
  - c. A register of organic farms must be included in the Operation and Maintenance Manuals for the scheme.
6. That if kōiwi tangata (human skeletal remains), taonga or archaeological artefacts are discovered during site construction, the Requiring Authority shall, without delay:
  - a. Cease all work within a 50m radius of the discovery and secure the area unless there is a risk to life or property;
  - b. Notify their nominated archaeologist, the consent authority, Kāi Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police;
  - c. Enable a site inspection by Heritage New Zealand and the appropriate runanga, and their advisors, who shall determine the nature of the discovery and the further action required, including whether an Archaeological Authority is required under the Heritage New Zealand Pouhere Act 2014;
  - d. Any kōiwi tangata or taonga shall be handled and removed by tribal elders responsible for the tikanga (custom) appropriate to its removal and preservation;
  - e. Ensure that the further action identified in accordance in part (c.) of this condition is undertaken; and
  - f. Upon completions of tasks (a.) to (e.) above, and provided all statutory permissions have been obtained, the Requiring Authority may recommence site construction following consultation with the consent authority, Kai Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police.

## D218 East Taieri Drainage Scheme

<b>Designation Number</b>	D218
<b>Requiring Authority</b>	Otago Regional Council

<b>Designation Purpose</b>	East Taieri Drainage Scheme - includes all works, structures, facilities, devices and appliances associated with the scheme and all activities relating to the scheme including construction, operation, maintenance, repair, reconstruction, extension modification and replacement.
<b>Location (address)</b>	
<b>Conditions</b>	Yes
<b>Legacy</b>	2GP Review 2015 - New
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to - no lapse date

### D218 Conditions

1. For the purpose of this designation, normal working hours are between 7.30am and 7pm, Monday to Friday, and 8am and 6pm, Saturday, with the operation of noisy machinery restricted to 8am to 6pm, Monday to Saturday. No work shall be undertaken on-site on Sundays and public holidays. Where in the opinion of the requiring authority there is an imminent or immediate risk to people or property, the requiring authority may undertake the works at any time.
2. Any disturbed ground must be stabilised as soon as practicable.
3. The requiring authority must avoid, as far as practicable, discharging dust and fumes arising from maintenance activities beyond the boundary of the designation.
4. The requiring authority must implement suitable measures to avoid deposition of any debris on roads by vehicles moving to and from the site. If any material is deposited on any roads, the requiring authority shall take immediate action, at its expense, to clean the roads.
5. Spraying:
  - a. All use of agrichemicals shall be carried out in accordance with the conditions and specifications of NZS 8409:2004 Management of Agrichemicals or any replacement standard.
  - b. The requiring authority must ensure that any contractor undertaking spraying of pest plants shall either hold current Growsafe certification or shall be directly supervised by an individual with a current Growsafe certification.
  - c. A register of organic farms must be included in the Operation and Maintenance Manuals for the scheme.
6. That if kōiwi tangata (human skeletal remains), taonga or archaeological artefacts are discovered during site construction, the Requiring Authority shall, without delay:
  - a. Cease all work within a 50m radius of the discovery and secure the area unless there is a risk to life or property;
  - b. Notify their nominated archaeologist, the consent authority, Kāi Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police;
  - c. Enable a site inspection by Heritage New Zealand and the appropriate runanga, and their advisors, who shall determine the nature of the discovery and the further action required, including whether an Archaeological Authority is required under the Heritage New Zealand Pouhere Taonga Act 2014;
  - d. Any kōiwi tangata or taonga shall be handled and removed by tribal elders responsible for the tikanga (custom) appropriate to its removal and preservation;
  - e. Ensure that the further action identified in accordance in part (c.) of this condition is undertaken; and
  - f. Upon completions of tasks (a.) to (e.) above, and provided all statutory permissions have been

obtained, the Requiring Authority may recommence site construction following consultation with the consent authority, Kai Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police.

### D219 West Taieri Drainage Scheme

<b>Designation Number</b>	D219
<b>Requiring Authority</b>	Otago Regional Council
<b>Designation Purpose</b>	West Taieri Drainage Scheme - includes all works, structures, facilities, devices and appliances associated with the scheme and all activities relating to the scheme including construction, operation, maintenance, repair, reconstruction, extension modification and replacement.
<b>Location (address)</b>	
<b>Conditions</b>	Yes
<b>Legacy</b>	2GP Review 2015 - New
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to - no lapse date

### D219 Conditions

1. For the purpose of this designation, normal working hours are between 7.30am and 7pm, Monday to Friday, and 8am and 6pm, Saturday, with the operation of noisy machinery restricted to 8am to 6pm, Monday to Saturday. No work shall be undertaken on-site on Sundays and public holidays. Where in the opinion of the requiring authority there is an imminent or immediate risk to people or property, the requiring authority may undertake the works at any time.
2. Any disturbed ground must be stabilised as soon as practicable.
3. The requiring authority must avoid, as far as practicable, discharging dust and fumes arising from maintenance activities beyond the boundary of the designation.
4. The requiring authority must implement suitable measures to avoid deposition of any debris on roads by vehicles moving to and from the site. If any material is deposited on any roads, the requiring authority shall take immediate action, at its expense, to clean the roads.
5. Spraying:
  - a. All use of agrichemicals shall be carried out in accordance with the conditions and specifications of NZS 8409:2004 Management of Agrichemicals or any replacement standard.
  - b. The requiring authority must ensure that any contractor undertaking spraying of pest plants shall either hold current Growsafe certification or shall be directly supervised by an individual with a current Growsafe certification.
  - c. A register of organic farms must be included in the Operation and Maintenance Manuals for the scheme.
6. That if kōiwi tangata (human skeletal remains), taonga or archaeological artefacts are discovered during site construction, the Requiring Authority shall, without delay:
  - a. Cease all work within a 50m radius of the discovery and secure the area unless there is a risk to life or property;
  - b. Notify their nominated archaeologist, the consent authority, Kāi Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police;

- c. Enable a site inspection by Heritage New Zealand and the appropriate runanga, and their advisors, who shall determine the nature of the discovery and the further action required, including whether an Archaeological Authority is required under the Heritage New Zealand Pouhere Act 2014;
- d. Any kōiwi tangata or taonga shall be handled and removed by tribal elders responsible for the tikanga (custom) appropriate to its removal and preservation;
- e. Ensure that the further action identified in accordance in part (c.) of this condition is undertaken; and
- f. Upon completions of tasks (a.) to (e.) above, and provided all statutory permissions have been obtained, the Requiring Authority may recommence site construction following consultation with the consent authority, Kai Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police.

### **D220 Kaikorai Stream River Works**

<b>Designation Number</b>	D220
<b>Requiring Authority</b>	Otago Regional Council
<b>Designation Purpose</b>	Kaikorai Stream River Works which includes all works, structures, facilities, devices and appliances associated with flood protection, river control and erosion protection and all activities relating to such works including construction, operation, maintenance, repair, reconstruction, extension modification, replacement and improvement.
<b>Location (address)</b>	
<b>Conditions</b>	Yes
<b>Legacy</b>	2GP Review 2015 - New
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to - no lapse date

### **D220 Conditions**

1. For the purpose of this designation, normal working hours are between 7.30am and 7pm, Monday to Friday, and 8am and 6pm, Saturday, with the operation of noisy machinery restricted to 8am to 6pm, Monday to Saturday. No work shall be undertaken on-site on Sundays and public holidays. Where in the opinion of the requiring authority there is an imminent or immediate risk to people or property, the requiring authority may undertake the works at any time.
2. Where practicable, the consent holder shall advise landowners affected by the works of the proposed works at least ten working days prior to the maintenance works occurring.
3. Any disturbed ground must be stabilised as soon as practicable.
4. The requiring authority must avoid, as far as practicable, discharging dust and fumes arising from maintenance activities beyond the boundary of the designation.
5. The requiring authority must implement suitable measures to avoid deposition of any debris on roads by vehicles moving to and from the site. If any material is deposited on any roads, the requiring authority shall take immediate action, at its expense, to clean the roads.
6. Clearing of vegetation for access, maintenance, and construction work shall be kept to the minimum extent necessary.
7. All use of agrichemicals shall be carried out in accordance with the conditions and specifications of NZS

8409:2004 Management of Agrichemicals or any replacement standard.

8. The requiring authority must ensure that any contractor undertaking spraying of pest plants shall either hold current Growsafe certification or shall be directly supervised by an individual with a current Growsafe certification.
9. That if kōiwi tangata (human skeletal remains), taonga or archaeological artefacts are discovered during site construction, the Requiring Authority shall, without delay:
  - a. Cease all work within a 50m radius of the discovery and secure the area unless doing so would put life or property at risk;
  - b. Notify their nominated archaeologist, the consent authority, Kāi Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police;
  - c. Enable a site inspection by Heritage New Zealand and the appropriate runanga, and their advisors, who shall determine the nature of the discovery and the further action required, including whether an Archaeological Authority is required under the Heritage New Zealand Pouhere Act 2014;
  - d. Any kōiwi tangata or taonga shall be handled and removed by tribal elders responsible for the tikanga (custom) appropriate to its removal and preservation;
  - e. Ensure that the further action identified in accordance in part (c.) of this condition is undertaken; and
  - f. Upon completions of tasks (a.) to (e.) above, and provided all statutory permissions have been obtained, the Requiring Authority may recommence site construction following consultation with the consent authority, Kai Tahu ki Otago, Heritage New Zealand, and in the case of kōiwi tangata (skeletal remains), the New Zealand Police.

### **D221 Dukes Road Taieri Depot**

<b>Designation Number</b>	D221
<b>Requiring Authority</b>	Otago Regional Council
<b>Designation Purpose</b>	Dukes Road Taieri Depot
<b>Location (address)</b>	173 Dukes Road Nth North Taieri
<b>Conditions</b>	Yes
<b>Legacy</b>	2GP Review 2015 - New
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to - no lapse date

### **D221 Conditions**

1. The noise generated on site shall be in general compliance with the noise limits for the underlying zone as set out in the Dunedin City District Plan, and during any construction activities, noise shall comply with NZS6803:1999.
2. A minimum of 12 parking spaces shall be provided on site to cater for the requirements of the requiring authority's activities.
3. All necessary approvals relating to the storage and handling of dangerous goods and to the storage, use and disposal of hazardous substances shall be obtained. The storage, use and disposal of hazardous substances shall be in accordance with the Otago Regional Council's standard specifications for pest control, which shall include observance of all relevant statutory requirements. A copy of the operative specifications shall be provided to the Dunedin City Council for reference.

## D222 Central City Bus Hub

<b>Designation Number</b>	D222
<b>Requiring Authority</b>	Otago Regional Council
<b>Designation Purpose</b>	Central City Bus Hub - The establishment, operation, maintenance and upgrading of the Bus Hub for Dunedin public transport service purposes and provision of public transport services described in the Otago's Regional Council's Public Transport Plan, and to provide any site works, buildings or structures integral and ancillary to the operation of the Dunedin public transport system.
<b>Location (address)</b>	R Great King Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	22 December 2022

### D222 Conditions

1. Prior to submitting an Outline Plan for the establishment of the Bus Hub, the requiring authority shall obtain the agreement of Dunedin City Council (Group Manager, Transport) for works required on the following seven intersections outside the designation that are necessary to address any adverse effects on the transportation network resulting from changes to the bus routes associated with operation of the Bus Hub.
  - a. George St / St Andrew St
  - b. Moray Place / Lower Stuart St
  - c. Moray Place / Burlington St
  - d. Moray Place / Princes St
  - e. Great King St / Frederick St
  - f. Moray Place / Upper Stuart St
  - g. Castle St / Lower Stuart Street

Such agreement will include the timing of the works including those works the Group Manager, Transport considers necessary prior to the Bus Hub becoming operational. For the avoidance of doubt, this condition relates to the establishment of the Bus Hub and not subsequent Outline Plans of Works that may be required for future changes to the Bus Hub.

2. The requiring authority shall consult with Heritage New Zealand Pouhere Taonga prior to any Outline Plan being submitted for proposed works adjacent to any protected heritage façade identified in the District Plan. A record of the consultation is to be included as part of the submitted Outline Plan.
3. Where any new structures are to be located adjacent to any heritage item scheduled in the District Plan, the structure shall be sited, designed, and finished, to be sympathetic to the heritage values of the heritage item, taking into account the operational requirements of the Bus Hub. Although the preference is for structures to not be located in the road reserve in front of the heritage item, if there are operational requirements, then the structure should be designed to enable maintenance of the heritage item. For structures to be located beside a heritage item, the structure should be designed and/or sited to enable maintenance of the heritage item.
4. The requiring authority shall consult with Ngāi Tahu Justice Holdings Limited (or any subsequent legal entity as

the owners of Sec 41 and Sec 42 Town of Dunedin), prior to any Outline Plan being submitted for proposed works that have a potential effect on the Police Station. A record of the consultation is to be included as part of the submitted Outline Plan.

5. An Outline Plan of Works for the establishment of the Bus Hub shall be submitted to Dunedin City Council under section 176A of the RMA. The Outline Plan is to address potential adverse amenity and safety effects within the designated Bus Hub, having regard to the following matters:
  - a. Safe pedestrian crossings, including light-controlled crossings at each end of the Bus Hub, and a mid-block pedestrian crossing;
  - b. Where practicable, providing unbroken footpath surfaces across vehicle access ways to adjacent properties so as to indicate pedestrian priority;
  - c. Shelter within the Bus Hub (including staging if necessary) with a preference for continuous shelter above footpaths as far as practical; and
  - d. Streetscape design (for instance such elements as paving, shelters, street furniture, lighting, signage, landscaping, public toilet): The Outline Plan shall state the outcome of consultation with Dunedin City Council Urban Design team leader in the development of the materials palette proposed for the Bus Hub.
6. A Construction Management Plan (CMP) shall be submitted as part of the Outline Plan for the establishment of the Bus Hub, to deal with any adverse effects that may occur during the construction phase. The CMP shall include, as a minimum, the following:
  - a. Mitigation measures to reduce adverse effects on traffic management in relation to any nearby intersections or roads; and
  - b. Mitigation measures to reduce adverse effects on adjoining properties, including dust, noise, access to properties, and safety of people visiting the site.
7. Activities associated with the Bus Hub shall be carried out to achieve the following noise outcomes:
  - a. noise during construction activities shall comply with the requirements of NZS 6803:1999 “Acoustics – Construction Noise”.
  - b. noise generated by activities being undertaken in accordance with the designation, shall comply with the applicable limits for the underlying zone at the time the Notice of Requirement is lodged, or the applicable Second Generation District Plan for Dunedin rules, if these are more lenient, except that vehicles operating within the designated site (including buses), are exempt from these requirements, and shall comply with the Land Transport (Road Users) Rule 2004, clause 7.4.
8. Signage is limited to information associated with the Bus Hub, Dunedin Public Transport Network and associated facilities, including signage associated with coffee kiosks, community events and public announcements.
9. A maximum of two coffee kiosks may be located within the designation site.
10. If an unidentified archaeological site is located during works, and if an archaeological authority is required for the works, the find shall be managed in accordance with the conditions of the relevant archaeological authority as granted by Heritage New Zealand Pouhere Taonga. Alternatively, if the works did not require archaeological authority pursuant to the Heritage New Zealand Pouhere Taonga Act 2014, then:
  - a. Work shall cease immediately at that place, and within 20m around the site;
  - b. The contractor must shut down all machinery, secure the area, and advise the requiring authority;
  - c. The requiring authority shall secure the site and notify the Heritage New Zealand Pouhere Taonga Regional Archaeologist;
  - d. If the site is of Maori origin, the requiring authority shall notify the Heritage New Zealand Pouhere Taonga Regional Archaeologist, and the appropriate iwi groups or kaitiaki representative, of the

discovery, and ensure site access to enable appropriate cultural procedures and tikanga to be undertaken, as long as all statutory requirements under legislation are met (Heritage New Zealand Pouhere Taonga Act, Protected Objects Act);

- e. If human remains (kōiwi tangata) are uncovered, the requiring authority shall advise the Heritage New Zealand Pouhere Taonga Regional Archaeologist, NZ Police and the appropriate iwi groups or kaitiaki representative, and the above process under d shall apply. Remains are not to be moved until such time as iwi and Heritage New Zealand have responded;
- f. Works affecting the archaeological site and any human remains (kōiwi tangata) shall not resume until Heritage New Zealand Pouhere Taonga gives written approval for work to continue;
- g. Where iwi so request, any information recorded as the result of the find such as a description of location and content, is to be provided for their records;
- h. Heritage New Zealand Pouhere Taonga will determine if an archaeological authority under the Heritage New Zealand Pouhere Taonga Act 2014 is required for works to continue; and
- i. The requiring authority will carry out any archaeological assessment required by Heritage New Zealand Pouhere Taonga.

Note: It is an offence under S87 of the Heritage New Zealand Pouhere Taonga Act 2014, to modify or destroy an archaeological site without an authority from Heritage New Zealand, irrespective of whether the works are permitted, or a consent or Outline Plan has been issued under the Resource Management Act.

11. As part of the Outline Plan for the establishment of the Bus Hub, the requiring authority shall include measures to mitigate the following adverse effects arising from the Bus Hub on the Community House:
  - a. Noise associated with the Bus Hub on the noise sensitive activities within the Community House;
  - b. Modification to air intakes to maintain air quality and ventilation within the Community House; and
  - c. Window tinting (or alternative measures) to mitigate loss of privacy for ground floor rooms adjacent to the Bus Hub.

This condition will be met if a separate commercial agreement is reached between the requiring authority and the Community House Trust.

12. No landscaping, buildings and structures higher than 700mm shall be located within the red shaded area shown in Figure 1, to ensure sight distances for drivers of vehicles entering or existing the Police Station, are provided. This condition shall not apply to a pole required to demarcate the pedestrian crossing, or a pole for a light within the red shaded area.
13. The requiring authority shall provide New Zealand Police access to the data from CCTV installed to monitor the Bus Hub.

## A1.4.19 Radio N Z Limited & N Z M E. Radio Limited

### D294 Highcliff Road Site

<b>Designation Number</b>	D294
<b>Requiring Authority</b>	Radio N Z Limited & N Z M E. Radio Limited
<b>Designation Purpose</b>	Highcliff Road Site - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).
<b>Location (address)</b>	740 Highcliff Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D294 Conditions

*Note: In all conditions below reference to "NZS 2772.1:1999". shall be read as to include "NZS 2772.1:1999 (or any subsequent amendment thereof or substitute for)".*

*Note: For clarification, Radio New Zealand has primary financial responsibility for this designation.*

1. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
2. A sign which advised that public access is prohibited and which warns of the dangers associated with trespass shall be erected on each accessway.
3. At all times the facility shall be operated such that NZS 2772.1:1999 is met at all places beyond the designation boundary, and unnecessary exposure shall be minimised accordingly.
4. The requiring authority shall notify the Council of any proposed changes to transmitting equipment which will have the effect of increasing radio frequency exposures in places beyond the designation boundary to a level greater than 25% of the applicable maximum exposure in NZS 2772.1:1999 and shall provide the Council with an estimate of the likely maximum exposure which can be expected as a result of the change. If estimated exposures exceed 25% of the public limit of NZS 2772.1:1999 , a measurement survey be undertaken by a suitably qualified independent radiation monitoring authority once the changes have been installed and commissioned, and the results provided to Council.
5. An outline plan of proposed work shall be submitted to the Council for consideration prior to the erection or construction of any new work, except work which meets one or more of the following criteria, provided that the Council reserves its discretion to waive the requirement for an outline plan under section 176A of the Resource Management Act 1991 for works which do not meet the following criteria:
  - a. like-for-like replacement structures;
  - b. temporary structures erected to enable servicing of existing structures provided that the temporary structure is completely removed within six months of its erection;
  - c. existing structures relocated on the site;
  - d. masts (including lattice masts) with a solid width up to and including 150mm in diameter;

- e. antennas with a solid width of up to and including 300mm or a surface area up to and including 0.20m<sup>2</sup> on any one profile, except that antenna dishes up to and including 1.8m in diameter shall also not require an outline plan provided that they are screened from public viewpoints or located so that they are seen against a backdrop of buildings, trees or land and are finished in a colour which blends with their backdrop;
  - f. erection of buildings and structures within 50 metres of an existing building provided:
    - i. the existing building has a floor area at least 50 percent greater than the floor area of the proposed building or structure; and
    - ii. the height of the proposed building or structure is no greater than the maximum height of the existing building;
    - iii. the proposed building or structure shall be finished in the same or similar colour and hue as the existing building.
  - g. additions to existing buildings provided:
    - i. the additions increase the floor area of the existing building by no more than 100%;
    - ii. no part of the addition shall exceed the maximum height of the existing building;
    - iii. the addition shall be finished in the same or similar colour, hue and materials as the existing building.
6. Any outline plan submitted to the Council in accordance with this condition shall contain the following information:
- a. the height, shape and bulk of the public work, project or work;
  - b. the location on the site of the public work, project or work;
  - c. the likely finished contour of the site;
  - d. the vehicular access, circulation and the provision for parking;
  - e. the landscaping proposed; and
  - f. any other matters to avoid, remedy, or mitigate any adverse effects on the environment.

### **D296 Karetai Road Site**

<b>Designation Number</b>	D296
<b>Requiring Authority</b>	Radio N Z Limited & N Z M E. Radio Limited
<b>Designation Purpose</b>	Karetai Road Site - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).

  - f. erection of buildings and structures within 50 metres of an existing building provided:
    - i. the existing building has a floor area at least 50 percent greater than the floor area of the proposed building or structure; and
    - ii. the height of the proposed building or structure is no greater than the maximum height of the existing building;
    - iii. the proposed building or structure shall be finished in the same or similar colour and hue as the existing building.
  - g. additions to existing buildings provided:
    - i. the additions increase the floor area of the existing building by no more than 100%;
    - ii. no part of the addition shall exceed the maximum height of the existing building;
    - iii. the addition shall be finished in the same or similar colour, hue and materials as the existing building.
6. Any outline plan submitted to the Council in accordance with this condition shall contain the following information:

- a. the height, shape and bulk of the public work, project or work;
- b. the location on the site of the public work, project or work;
- c. the likely finished contour of the site;
- d. the vehicular access, circulation and the provision for parking;
- e. the landscaping proposed; and
- f. any other matters to avoid, remedy, or mitigate any adverse effects on the environment.

## A1.4.20 Spark N Z Trading Limited

### D319 Dunedin Exchange

<b>Designation Number</b>	D319
<b>Requiring Authority</b>	Spark N Z Trading Limited
<b>Designation Purpose</b>	Dunedin Exchange - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).
<b>Location (address)</b>	18 Tennyson Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D319 Conditions

1. An outline plan of proposed work shall be submitted to the Council for consideration prior to the erection of construction of any new work only where the proposed work does not meet one or more of the following criteria. Where these criteria are met, the requirement to submit an outline plan shall be deemed to be waived in accordance with section 176A(2)(c) of the Resource Management Act:
  - a. like-for-like replacement structures;
  - b. temporary structures erected to enable servicing of existing structures provided that the temporary structure is completely removed within six months of its erection;
  - c. masts up to a maximum height of 13m. No slimline mast shall be greater than 1.25m in diameter up to a height of 5.5m, and no greater than 0.5m in diameter up to a height of 13m. No lattice mast shall be greater than 4.0m<sup>2</sup> in cross sectional area up to a height of 5.5m, and no greater than 2.5m<sup>2</sup> in cross sectional area up to a height of 13m.
  - d. aerials located up to a maximum height of 14m with a cross sectional area no greater than 1.0m<sup>2</sup>.
  - e. antenna dish with: a maximum diameter of 1.8m; a maximum height of 2.7m above the building to which it is fixed; and finished with a colour which is similar to that of the structure or building on which it is fixed.
2. In addition to the matters which must be addressed under section 176A of the Resource Management Act 1991, any outline plan submitted to the Council in accordance with this condition shall contain the following information:
  - a. the proposed shape and dimensions of the work;
  - b. the proposed location of the work on the site; and
  - c. the measures proposed for the mitigation of potential adverse effects of any work on visual and open space amenity.

### D332 Signal Hill Landmobile Station

<b>Designation Number</b>	D332
<b>Requiring Authority</b>	Spark N Z Trading Limited
<b>Designation Purpose</b>	Signal Hill Landmobile Station - Telecommunication and radiocommunication purposes and associated land uses, including installing, operating, maintaining, removing, replacing and upgrading telecommunication or radiocommunication facilities (which means any mast, aerial, antenna, antenna dish, radio station, radio apparatus or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication or radiocommunication).
<b>Location (address)</b>	253 Signal Hill Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D332 Conditions

1. For any new buildings (excluding masts, aerials, antennas and attached transmission and reception equipment) the following shall apply:
  - a. Maximum Height - 10 metres.
2. An outline plan of proposed work shall be submitted to the Council for consideration prior to the erection or construction of any new work, only where the proposed work does not meet one or more of the following criteria. Where these criteria are met, the requirement to submit an outline plan shall be deemed to be waived in accordance with section 176A(2)(c) of the Resource Management Act:
  - a. like-for-like replacement structures;
  - b. temporary structures erected to enable servicing of existing structures provided that the temporary structure is completely removed within six months of its erection;
  - c. erection of buildings and structures (excluding masts and attached transmission equipment) within 50m of an existing building provided:
    - i. the existing building has a floor area at least 50% greater than the floor area of the proposed building or structure; and
    - ii. the height on the proposed building or structure is no greater than the maximum height of the existing building.
  - d. additions to existing buildings (excluding masts and attached transmission equipment) provided:
    - i. the additions increase the floor area of the existing building by no more than 100%;
    - ii. no part of the addition shall exceed the maximum height of the existing building;
    - iii. the addition shall be finished in the same or similar colour, hue and materials as the existing building.
3. In addition to the matters which must be addressed under section 176A of the Resource Management Act 1991, any outline plan submitted to the Council in accordance with this condition shall contain the following information:
  - a. the proposed shape and dimensions of the work;

- b. the proposed location of the work on the site; and
- c. the measures proposed for the mitigation of potential adverse effects of any work on visual and open space amenity.

## A1.4.21 Taieri Gorge Railway Limited

### D364 Taieri Gorge Railway

<b>Designation Number</b>	D364
<b>Requiring Authority</b>	Taieri Gorge Railway Limited
<b>Designation Purpose</b>	Taieri Gorge Railway - Railway purposes
<b>Location (address)</b>	
<b>Conditions</b>	Yes
<b>Legacy</b>	2GP Review 2015 - New
<b>Rollover Designation</b>	No
<b>Lapse Date</b>	Given effect to - no lapse date

### D364 Conditions

1. Activities undertaken within any tunnels shall be confined to:
  - a. the operation of the railway system throughout the tunnel;
  - b. activities which have the effect of maintaining and improving the railway system throughout the tunnel, specifically: re-sleepering; re-railing; re-ballasting; grouting or repairs to the tunnel linings or rock faces; the placement of rock anchors or additional minor support structures; and the laying of new communication cables; and
  - c. activities which have the effect of lowering the tunnel floor, other than by re-ballasting.
2. Only signs that are essential for the safe and efficient operation of the railway are to be erected on land subject to designation.

## A1.4.22 Transpower New Zealand Limited

### D365 Berwick Substation

<b>Designation Number</b>	D365
<b>Requiring Authority</b>	Transpower New Zealand Limited
<b>Designation Purpose</b>	Berwick Substation - National grid activities (including electricity substation and associated ancillary infrastructure)
<b>Location (address)</b>	54 Waipori Falls Road Berwick
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D365 Conditions

1. An outline plan will be submitted for any work in accordance with Section 176A of the Resource Management Act 1991. However, in accordance with Section 176A(2)(b), and Outline Plan need not be submitted for the following activities or work:
  - a. Replacement of existing structures 'like for like'.
  - b. Structures which do not exceed a maximum height of 12.8 metres (where 12.8 metres = the height of the tallest equivalent structure on the site existing as at 13 March 2015).
  - c. Buildings which do not exceed a maximum height of 10 metres.
2. Operation of the installation is to be in accordance with Transpower Approved Specification TP.SS 02.84 "Station Oil Services Maintenance" and Transpower Approved Policy TP.GS 54.01 "Oil Spill Management" or any new specification or policy which is designed to replace these documents.
3. In the event of any major oil spill (being an oil spill incident that cannot be controlled without immediate additional assistance), whether confined by bunding or not, or any unconfined oil spill in excess of 15 litres which enters the environment or any Council owned reticulated system, the requiring authority shall notify Council of that spill as soon as reasonably practicable, and the requiring authority shall provide Council with an incident report which includes a description of the measures taken to mitigate any effects of that spill.
4. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
5. A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be maintained on each accessway.
6. The facility shall at all times be operated in accordance with AS/NZS2772.1:1999 in all places the public may reasonably access.
7. The requiring authority shall notify the Council of any proposed changes to transmitting equipment which will have the effect of increasing radio frequency or electromagnetic field exposures in publicly accessible areas around the facility to a level greater than 25% of the applicable maximum exposure in AS/NZS2772.1: 1999 and shall provide the Council with an estimate of the likely maximum exposure which can be expected as a result of the change. If estimated exposures exceed 25% of the public limit of AS/NZS2772.1:1999, a measurement survey be undertaken by a suitably qualified independent radiation monitoring authority once the changes have been installed and commissioned, and the results provided to Council.
8. The strength of electric and magnetic fields generated by infrastructure located at the site shall not, within all

publicly accessible areas, exceed the limits for continuous non-occupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (2010), or any new limits which are designed to replace this standard.

### D366 Halfway Bush Substation

<b>Designation Number</b>	D366
<b>Requiring Authority</b>	Transpower New Zealand Limited
<b>Designation Purpose</b>	Halfway Bush Substation - National grid activities (including electricity substation and associated ancillary infrastructure)
<b>Location (address)</b>	48 Wakari Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D366 Conditions

1. Where the designated site shares a boundary with a residential zoned property the following bulk and location requirements shall apply along that boundary in respect of all new works:
  - a. Front yard - 4.5 metres.
  - b. Side and rear yards - 2 metres.
  - c. Maximum height - 33 metres (where 33m = the height of the tallest structure present at the site on 13 March 2015).
2. Operation of the installation is to be in accordance with the Transpower Approved Specification TP.SS 02.84 "Station Oil Services and Maintenance" and Transpower Approved Policy TP.GS 54.01 "Oil Spill Management" or any new specification or policy which is designed to replace these documents.
3. In the event of any major oil spill (being an oil spill incident that cannot be controlled without immediate additional assistance), whether confined by bunding or not, or any unconfined oil spill in excess of 15 litres which enters the environment or any Council owned reticulated system, the requiring authority shall notify Council of that spill as soon as reasonably practicable, and the requiring authority shall provide Council with an incident report which includes a description of the measures taken to mitigate any effects of that spill.
4. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
5. A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be maintained on each accessway.
6. The facility shall at all times be operated in accordance with AS/NZS2772.1:1999 in all places the public may reasonably access.
7. The requiring authority shall notify the Council of any proposed changes to transmitting equipment which will have the effect of increasing radio frequency or electromagnetic field exposures in publicly accessible areas around the facility to a level greater than 25% of the applicable maximum exposure in AS/NZS2772.1:1999 and shall provide the Council with an estimate of the likely maximum exposure which can be expected as a result of the change. If estimated exposures exceed 25% of the public limit of AS/NZS2772.1:1999, a measurement survey be undertaken by a suitably qualified independent radiation monitoring authority once the changes have been installed and commissioned, and the results provided to Council.

8. The strength of electric and magnetic fields generated by infrastructure located at the site shall not, within all publicly accessible areas, exceed the limits for continuous non-occupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (2010), or any new limits which are designed to replace this standard.

### **D367 South Dunedin Substation**

<b>Designation Number</b>	D367
<b>Requiring Authority</b>	Transpower New Zealand Limited
<b>Designation Purpose</b>	South Dunedin Substation - National grid activities (including electricity substation and associated ancillary infrastructure)
<b>Location (address)</b>	46 Otaki Street Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### **D367 Conditions**

1. Operation of the installation is to be in accordance with the Transpower Approved Specification TP.SS 02.84 "Station Oil Services and Maintenance" and Transpower Approved Policy TP.GS 54.01 "Oil Spill Management" or any new specification or policy which is designed to replace these documents.
2. In the event of any major oil spill (being an oil spill incident that cannot be controlled without immediate additional assistance), whether confined by bunding or not, or any unconfined oil spill in excess of 15 litres which enters the environment or any Council owned reticulated system, the requiring authority shall notify Council of that spill as soon as reasonably practicable, and the requiring authority shall provide Council with an incident report which includes a description of the measures taken to mitigate any effects of that spill.
3. The requiring authority shall take all reasonable precautions against unauthorised public access at all times.
4. A sign which advises that public access is prohibited and which warns of the dangers associated with trespass shall be maintained on each accessway.
5. The facility shall at all times be operated in accordance with AS/NZS2772.1:1999 in all places the public may reasonably access, and unnecessary exposure shall be avoided.
6. The requiring authority shall notify the Council of any proposed changes to transmitting equipment which will have the effect of increasing radio frequency or electromagnetic field exposures in publicly accessible areas around the facility to a level greater than 25% of the applicable maximum exposure in AS/NZS2772.1:1999 and shall provide the Council with an estimate of the likely maximum exposure which can be expected as a result of the change. If estimated exposures exceed 25% of the public limit of AS/NZS2772.1:1999, a measurement survey be undertaken by a suitably qualified independent radiation monitoring authority once the changes have been installed and commissioned, and the results provided to Council.
7. The strength of electric and magnetic fields generated by infrastructure located at the site shall not, within all publicly accessible areas, exceed the limits for continuous non-occupational exposure confirmed by the International Commission on Non-Ionising Radiation Protection (2010), or any new limits which are designed to replace this standard.

### D368 Three Mile Hill Switching Station

<b>Designation Number</b>	D368
<b>Requiring Authority</b>	Transpower New Zealand Limited
<b>Designation Purpose</b>	Three Mile Hill Switching Station - National grid activities (including electricity substation and associated ancillary infrastructure)
<b>Location (address)</b>	231 Three Mile Hill Road Dunedin
<b>Conditions</b>	Yes
<b>Legacy</b>	
<b>Rollover Designation</b>	Yes
<b>Lapse Date</b>	Given effect to - no lapse date

### D368 Conditions

1. Operation of the installation is to be in accordance with the Transpower Approved Specification TP.SS 02.84 "Station Oil Services and Maintenance" and Transpower Approved Policy TP.GS 54.01 "Oil Spill Management" or any new specification or policy which is designed to replace these documents.
2. In the event of any major oil spill (being an oil spill incident that cannot be controlled without immediate additional assistance), whether confined by bunding or not, or any unconfined oil spill in excess of 15 litres which enters the environment or any Council owned reticulated system, the requiring authority shall notify Council of that spill as soon as reasonably practicable, and the requiring authority shall provide Council with an incident report which includes a description of the measures taken to mitigate any effects of that spill.

## A1.5 Scheduled Mining Activities

Scheduled mining activity number	Mine name	Mine location	Related performance standard
SMA001	Aramoana Quarry	Pt Secs 47 to 49 Blk V North Harbour Survey District (CT 13C/755)	Rule 16.5.16
SMA002	Blackhead Quarry	Sec 3 Blk XIV Dunedin & East Taieri SD and Secs 153-155 Green Island Bush SD (CTs 255/200 & 255/278)	Rule 16.5.16
SMA003	Mt Kettle Quarry	Secs 57/58 Blk VII North Harbour & Blueskin SD	Rule 16.5.16
SMA004	Fairfield Sandpit No. 3	Lot 3 DP 475506	Rule 16.5.16
SMA005	Fairfield Sand Pit No. 1	Lots 1-3 DP 474064, Pt Secs 33-37 and Pt Sec 53 Green Island West SD	Rule 15.5.15
SMA006	Waldronville Gun Club Sand Pit	Part of the Island Park Recreation Reserve as defined by Mining Licence No 41740	Rule 20.5.10
SMA007	Saddle Hill Upper Quarry	Part Lot 3 DP 317701	Rule 16.5.16
SMA008	Saddle Hill Lower Quarry	Lot 8 DP 317701	Rule 16.5.16

## **A2. Heritage Precinct Values**

### **A2.1 Residential Heritage Precinct Values**

#### **A2.1.1 York Place - Stuart Street - Arthur Street Residential Heritage Precinct**

##### A2.1.1.1 Description of area

The York Place - Stuart Street - Arthur Street Residential Heritage Precinct is located on the slopes rising from the central city below the town belt to Otago Boys High School. It encompasses the top of York Place, Cargill Street, and parts of Stuart Street. The area is defined by the large number of historic and character buildings with a preponderance of middle class homes and 'townhouses', in comparison to the grander homes of the nearby Royal Terrace - Pitt Street - Heriot Row Residential Heritage Precinct or the working class homes characteristic of the Dundas Street - Castle Street Heritage Precinct near the campus.

Because it is located on the slopes rising from the city on a busy arterial route, the precinct is highly visible from the city centre. The complex cluster of rooflines and variation in building forms defines the look and feel of the area, and new development within the precinct should avoid introducing forms such as large expanses of single materials or long horizontal planes that could easily become visually dominant when viewed from outside the precinct. Buildings are generally two storeys at the road frontage, though due to topography some will extend to three storeys. Fences, hedges and retaining walls are an integral part of the street frontage.

Although not located within the precinct, the imposing buildings of Otago Boys High School and King Edward Technical College form visually dominant bookends at the lower and upper ends of the precinct. Building activity that obscures views of these landmarks from within the precinct should be avoided.

The area contains a diverse range of architectural styles from a range of periods of Dunedin's history. While the Victorian style and period is most well represented there are also quality examples of Edwardian, Arts and Crafts, Art Deco, and modern architectural styles within the precinct. The diverse styles within the area reflect the area's proximity to the city centre and its popularity with an aspiring class. Similar to the nearby Royal Terrace - Pitt Street - Heriot Row Residential Heritage Precinct, this has resulted in a more eclectic mix of architectural styles, with a strong focus on quality as a key characteristic in this area too.

Whereas the wealth of the Royal Terrace - Pitt Street - Heriot Row Residential Heritage Precinct encouraged the development of large homes with substantial curtilages of gardens and lawns, the York Place - Stuart Street - Arthur Street Residential Heritage Precinct's lower socio-economic status meant both sites and buildings were generally smaller, although still of a relatively large scale compared to other parts of Dunedin. Houses here typically occupy a high percentage of the site, and tend to be located close to the front boundary, creating a relatively consistent building line and strongly urban feel from the street. The location of buildings in this manner has also created enclosed green spaces at the rear that link to form green corridors visible from the more elevated parts of the precinct, creating private backyards and imparting a very different character for the inward facing views from the homes.

There are relatively few modern buildings in the precinct. Those buildings constructed of good quality materials and using materials, bulk and location and scale consistent with established buildings in the precinct have tended to sit more comfortably than those that have paid less attention to context.

Future new buildings should reflect a residential scale, although this can obviously be of relatively large scale given the size of many of the existing buildings. With the eclectic architectural styles in the area, there are a range of design influences that can be drawn upon, and a focus on architectural quality rather than duplicating a specific style is more likely to lead to positive insertions in the precinct.

As a well-preserved residential heritage precinct in the city that is highly demonstrative of a sector of Dunedin's early society and economy, every effort should be made to maintain the quality, consistency, and integrity of the precinct

as a showcase of the city's heritage. The growing interest in the area from student housing developers needs to be managed to ensure the character is not lost as a result of the insertion of new buildings of low aesthetic quality.

#### A2.1.1.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. The large number of scheduled heritage buildings in the area
- b. Residential dwellings of substantial scale with high levels of site coverage
- c. Buildings located close to the front of the site
- d. A general lack of visible off-street car parking, including garages and carports
- e. Established gardens and trees
- f. A strong focus on architectural quality.

#### A2.1.1.3 Principal threats to values

- a. The demolition of existing scheduled heritage and character-contributing buildings
- b. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- c. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- d. The removal of original materials and features from heritage buildings
- e. Car parking in front of buildings
- f. The loss of established trees and gardens
- g. High fences and walls reducing the interplay between the public realm and front yards
- h. The visibility of infrastructure and services related to student/medium-density housing where not well planned (rubbish and recycling bins, etc.)
- i. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

A2.1.1.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage buildings or character-contributing buildings.	Suggested
b. Bulk and location		
i.	Houses should be orientated so that the front wall is parallel with the street.	Preferred
ii.	Buildings at the front of the site should be built close to the road boundary, consistent with the adjacent scheduled heritage building or character-contributing building.	Preferred
c. Car parking		
i.	Where possible, parking areas should be located discreetly to the rear of dwelling units. Where they are located at the front of the site, they should be set back from the road frontage and where possible, incorporate fencing, walls, hedges or landscaping to reduce the negative amenity effects and visibility of vehicles.	Preferred
ii.	Where garages or carports are visible from the road front they should be integrated into the building, or if stand-alone they must be single and similar in style and materials to the scheduled heritage building or character-contributing building they are associated with. Garages are preferred over carports.	Preferred
d. Design		
i.	New buildings should be sympathetic to existing scheduled heritage buildings or character-contributing buildings in the part of the precinct they are located in.	Preferred
ii.	New buildings will generally draw important design cues from Victorian, Edwardian, Arts and Crafts or Deco heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitch, window alignment, materials and details, although these may be expressed in a simpler fashion than on historic buildings.	Suggested
iii.	Road facing façades should clearly look like the front of a building.	Preferred
iv.	Buildings should have a clear entrance way, visible from the street. This entrance should include some architectural detail and should not be not be a ranch slider.	Preferred
v.	Window placement and alignment must be a key component of the design of the building.	Preferred
vi.	Roof pitch should be between 30° and 45°. Pitch may be lower where the roof is concealed behind a parapet.	Preferred
e. Materials		
i.	Building façades should be clad in materials such as plaster, brick, stone, concrete or weatherboards, which are visually consistent with the traditional materials of the precinct.	Preferred
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials to create shadow/depth and visual interest in the façade.	Suggested
iii.	Unrendered brick and stone should remain unrendered on existing buildings.	Preferred

Features or characteristics		Suggested/Preferred
f. Fences and walls		
i.	Front fences should preferably be no higher than 1400mm on road frontages to protect views of buildings. Side fences should only go higher once they have passed the building setback. Fences higher than 1400mm should be visually permeable.	Preferred
ii.	Fences should be made from similar materials to those traditionally associated with scheduled heritage and character-contributing buildings in the area e.g. wrought iron, timber, brick or stone. Concrete block and basic pool fencing should be avoided.	Suggested
iii.	Retaining walls should be constructed of materials such as rendered concrete block, crib walling or stone, rather than gabion baskets, timber or sheet materials such as iron.	Suggested
g. Colour		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick and stone on existing buildings should remain unpainted.	Preferred
h. Signs		
i.	Signs are discreet and kept to a minimum.	Preferred
ii.	Signs on buildings should not dominate façades or conceal windows or architectural features.	Preferred
i. Other		
i.	Building utilities should be located in a way that reduces visual clutter. Where located in areas visible to the public, they should be installed discreetly or screened from view.	Preferred

## **A2.1.2 Royal Terrace - Pitt Street - Heriot Row Residential Heritage Precinct**

### A2.1.2.1 Description of area

The Royal Terrace - Pitt Street - Heriot Row Place Residential Heritage Precinct is located on the slopes rising from the central city below the town belt. It encompasses the area bounded by Royal Terrace, Pitt Street and London Street. The area is strongly defined not only by the large number of original, impressive, high quality mansions, but also the backdrop of the town belt, and the mature trees and large gardens of many of the properties.

The area contains a diverse range of architectural styles, from a range of periods of Dunedin's history. While the Victorian style and period is most well represented there are also quality examples of Edwardian, Arts and Crafts, Art Deco, and modern architectural styles within the precinct. The diverse styles within the area reflect the area's popularity as an address for many of the city's wealthiest early residents and entrepreneurs, whose homes were a testament to their wealth and influence. Their wealth and resources, in addition to their exposure to overseas architectural and cultural trends, encouraged them to experiment with different architectural styles, altering and redeveloping or replacing homes in the area. The result is a more eclectic mix of architectural styles, with a strong focus on quality.

This wealth also influences another characteristic of the precinct - a tendency towards larger residential buildings. The precinct is strongly defined by the number of large homes and mansions and their adjoining grounds and gardens. These large homes dominate the streetscape. While there are some clusters of smaller homes (particularly at the northern end of Heriot Row and towards London Street), these are less typical of the precinct and tend to be built on much smaller sites, with a high level of site coverage. Buildings are generally two storeys at the road frontage, although there is greater flexibility in height in this precinct than in others. Fences, hedges and retaining walls are an integral part of the street frontage.

There are relatively few modern buildings in the precinct and while the most recent have been designed sympathetically, buildings from the 1960s-1990s are generally less sensitive to their context. St Hilda's school buildings are also a less sensitive insertion into the precinct. While they clearly have their own architectural merit, their scale means they have a rather overbearing impact on the surrounding area.

Future new buildings should reflect a residential scale, though this can obviously be of relatively large scale, given the size of many of the existing buildings. With the eclectic architectural styles in the area, there are a range of influences that can be drawn upon, and a focus on architectural quality rather than duplicating a specific style is more likely to lead to positive insertions in the precinct.

As a well-preserved residential precinct in the city that is highly demonstrative of the wealth of Dunedin's early society and economy, every effort should be made to maintain quality, consistency, and integrity of the precinct as a showcase of the city's heritage. The growing interest in the area from student housing developers needs to be managed to ensure the character is not lost as a result of the insertion of new buildings of low aesthetic quality.

### A2.1.2.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. The large number of scheduled heritage and character-contributing buildings in the area
- b. Residential dwellings of substantial scale with appropriate curtilage
- c. A general lack of visible off-street car parking, including garages and carports
- d. Established gardens and trees
- e. A strong focus on architectural quality

### A2.1.2.3 Principal threats to values

- a. The demolition of existing scheduled heritage and character-contributing buildings

- b. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- c. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- d. The removal of original materials and features from scheduled heritage buildings
- e. Car parking in front of buildings
- f. The loss of established trees and gardens
- g. High fences and walls reducing the interplay between the public realm and front yards
- h. The visibility of infrastructure and services related to student/medium-density housing where not well planned (rubbish and recycling bins, etc.)
- i. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.1.2.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage buildings or character-contributing buildings.	Suggested
b. Bulk and location		
i.	Houses should be orientated so that the front wall is parallel with the street.	Preferred
ii.	New buildings should be consistent with the building line of adjacent scheduled heritage buildings or character-contributing buildings, as far as practicable.	Preferred
c. Car parking		
i.	Where possible, parking areas should be located discreetly to the rear of dwelling units. Where they are located at the front of the site, they should be set back from the road frontage and where possible, incorporate fencing, walls, hedges or landscaping to reduce the negative amenity effects and visibility of vehicles.	Preferred
ii.	Where garages or carports are visible from the road front they should be integrated into the building, or if stand-alone they must be single and similar in style and materials to the scheduled heritage building or character-contributing building they are associated with. Garages are preferred over carports.	Preferred
d. Design		
i.	New buildings should be sympathetic to existing scheduled heritage buildings or character-contributing buildings in the part of the precinct they are located in.	Preferred

i. Other		
i.	Building utilities should be located in a way that reduces visual clutter. Where located in areas visible to the public, they should be installed discreetly or screened from view.	Preferred

## **A2.1.3 Dundas Street - Castle Street Residential Heritage Precinct**

### **A2.1.3.1 Description of area**

The Dundas Street - Castle Street Residential Heritage Precinct is located at the heart of the student residential area, centered on Dundas Street and Castle Street. It extends from the Botanic Garden to St David Street within the University Campus, and from Clyde Street to Cumberland Street. The area is most strongly defined by its early working class housing stock and the concentration of students who now live in the area, giving it a distinctive and lively character.

While the overriding theme in the architectural character of the area is its working class housing stock, there are a number of styles represented. The most common forms are the double bay villa, bungalow, and terrace. The terrace style is strongly represented in the area, with a number of large blocks located on the northern side of Dundas Street giving this area a distinctive character within Dunedin and within the campus area itself. In this part of the precinct buildings are generally two storeys at the road frontage. On Castle Street, the single-storey villa is the most common form. Fences and hedges are an integral part of the road frontage.

Generally there is a strong connection between individual houses and the street, with dwellings facing the street. This allows for a high level of interaction between street and on-site activity. This interaction is encouraged by the shallow setbacks of buildings, low front fences and visible front yards, clear entranceways, and large numbers of front verandahs and balconies.

Over the last few years, there has been a growing number of new buildings constructed in the precinct, almost exclusively built as student accommodation, responding to the high demand for accommodation in close proximity to the campus. These vary in quality and the degree to which they blend into the neighbourhood. The most successful exhibit a scale and level of detailing that is consistent with the buildings around them. The less successful ones demonstrate less attention to their surrounds, leading to inconsistent scale, setback or form, and the use of materials that are inconsistent with those typical of the precinct. In addition, large developments near the north and south fringes of the precinct demonstrate the potential adverse effects of incompatible style when it is magnified to a large scale. It is important that new buildings visible from the street are sensitive to the character of the area.

Alterations to existing character-contributing and heritage buildings, as these are altered or extended for student use, can also have adverse effects on the character of individual buildings and the overall amenity and character of the area. It is important that these additions and alterations are undertaken as sensitively as possible to ensure they do not undermine the character of the area.

As with other heritage precincts close to the University, the strong redevelopment demand and regular refurbishment of student flats means there is a great deal of pressure on the character of the precinct. There is a risk that this character will be gradually eroded over time. The significance of this area as a working class neighbourhood means that controls over new development and the alteration of existing buildings are necessary to defend the historic character from development primarily aimed at maximising density.

However, the Plan also acknowledges the importance of the University of Otago and Otago Polytechnic to the city's economic and social wellbeing and has strategic objectives around supporting the efficient and effective operation of these institutions. This is particularly relevant in both the Campus Zone and in the adjoining residential areas (in particular **Forth Street mapped area**). This requires balancing the potential need for development in these parts of the heritage precinct to support these institutions with development design that maintains the heritage character and values in the precinct. To achieve this, assessment rules for redevelopment within these areas allow for consideration of the positive effects on the efficient and effective operation of the University of Otago and Otago Polytechnic.

### **A2.1.3.2 Values to be protected**

The following features and characteristics have been identified as important to protect:

- a. The large number of scheduled heritage buildings in the area

- b. The repetition and symmetry within blocks
- c. The visibility of small front gardens with low fences, walls or hedges
- d. The strong focus on verticality in design
- e. A general lack of visible off-street car parking, including garages and carports
- f. The focus on buildings facing the street and presenting attractive and welcoming façades
- g. The dominance of terraced housing as a building form on Dundas Street

#### A2.1.3.3 Principal threats to values

- a. The demolition of existing scheduled heritage and character-contributing buildings
- b. Insufficient maintenance of buildings
- c. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- d. The removal of original materials and features from scheduled heritage buildings
- e. The use of inconsistent materials or styles in alterations to existing heritage and character buildings
- f. Car parking in front of buildings
- g. The loss of established trees and gardens
- h. High fences and walls reducing the interplay between the public realm and front yards
- i. The visibility of infrastructure and services related to student/medium-density housing where not well planned (rubbish and recycling bins, etc.)
- j. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.1.3.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage buildings or character-contributing buildings.	Suggested
b. Bulk and location		
i.	Houses should be orientated so that the front wall is parallel with the street.	Preferred
ii.	Buildings at the front of the site should be built close to the road boundary, consistent with the adjacent scheduled heritage buildings or character-contributing buildings.	Preferred
c. Car parking		
i.	Where possible, parking areas should be located discreetly to the rear of dwelling units. Where they are located at the front of the site, they should be set back from the road frontage and where possible, incorporate fencing, walls, hedges or landscaping to reduce the negative amenity effects and visibility of vehicles.	Preferred
ii.	Where garages or carports are visible from the road front they should be integrated into the building, or if stand-alone they must be single and similar in style and materials to the scheduled heritage building or character-contributing building they are associated with. Garages are preferred over carports.	Preferred
d. Design		

Features or characteristics		Suggested/Preferred
i.	New buildings should be sympathetic to existing scheduled heritage buildings or character-contributing buildings.	Preferred
ii.	New buildings will generally draw important design cues from Victorian or Edwardian heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitch, window alignment, materials and details, although these may be expressed in a simpler fashion than on historic buildings.	Suggested
iii.	Larger buildings should use methods such as detailing, rhythm, division into bays and the use of a variety of materials etc. in order to reduce the perceived scale of buildings.	Suggested
iv.	Buildings should accentuate a vertical dimension.	Suggested
v.	Buildings should present a balanced, symmetrical façade to the street.	Suggested
vi.	Road facing façades should clearly look like the front of a building.	Preferred
vi.	Buildings should have a clear entrance way, visible from the street. This entrance should include some architectural detail and should not be a ranch slider.	Preferred
vii.	Window placement and alignment should be a key component of the design of the building, accentuating the verticality and symmetry of the building.	Preferred
viii.	Roof pitch should be between 30° and 45°. Pitch may be lower where the roof is concealed behind a parapet.	Suggested
ix.	Roofs should be gabled. At least one gable should face the road frontage, unless the building is a terraced house or cottage.	Preferred
<b>e. Materials</b>		
i.	Building façades should be clad in materials such as plaster, brick, stone, concrete or weatherboards, which are visually consistent with the traditional materials of the precinct.	Preferred
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials to create shadow/depth and visual interest in the façade.	Suggested
iii.	Unrendered brick and stone should remain unrendered on existing buildings.	Preferred
<b>f. Fences and walls</b>		
i.	Front fences should preferably be no higher than 1400mm on road frontages to protect views of buildings. Side fences should only go higher once they have passed the building setback. Fences higher than 1400mm should be visually permeable.	Preferred
ii.	Fences should be made from similar materials to those traditionally associated with scheduled heritage and character-contributing buildings in the area e.g. wrought iron, timber, brick or stone. Concrete block and basic pool fencing should be avoided.	Suggested
<b>g. Colour</b>		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested

<b>Features or characteristics</b>		<b>Suggested/Preferred</b>
ii.	Unpainted brick and stone on existing buildings should remain unpainted.	Preferred
h. Signs		
i.	Signs are discreet and kept to a minimum.	Preferred
ii.	Signs on buildings should not dominate façades or conceal windows or architectural features.	Preferred
i. Other		
i.	Building utilities should be located in a way that reduces visual clutter. Where located in areas visible to the public, they should be installed discreetly or screened from view.	Preferred

## **A2.1.4 North Ground Residential Heritage Precinct**

### **A2.1.4.1 Description of area**

The North Ground Residential Heritage Precinct surrounds the North Ground Reserve, taking in parts of St David Street, Great King Street North, Dundas Street, and Cumberland Street North. The area is strongly defined by the reserve and established trees at its heart, the large number of pre-1940 homes, and the area's proximity to the University of Otago.

The area exhibits a range of building styles from periods of the 1890s to 1930s. There are two styles that are most strongly represented; 1930s bungalows and Victorian two-storey homes. Archetypal buildings from these periods most strongly define the character of the precinct.

Victorian/Edwardian period and style buildings tend to cluster in the northern half of the precinct. There are a range of residential styles evident from this period. While there are a few typical Dunedin double-bay villas, these are much less common in this area than in other heritage precincts in the city. Instead, there are a greater number of two-storeyed residences, commonly in a duplex or terrace form, or tall and narrow and built close to the front boundary. There are relatively few large Victorian homes. Fences and hedges are an integral part of the street frontage.

The other common style is represented by buildings built in the 1930s. These buildings tend to cluster more in the southern half of the precinct. These mid-1930s buildings are a mix of single level bungalows and two storey townhouses. They are generally of high quality construction and design.

Also prominent within the precinct are two church buildings with associated halls: The Dundas Street former Methodist Church and All Saints church. Apart from the University buildings at the boundary, these churches are the largest buildings in the precinct, and their scale and design adds architectural quality and height to the precinct.

The predominance of red brick as a construction material is a unifying characteristic that is consistent throughout the precinct. Masonry and/or roughcast are also common materials, often in combination with brick to create architectural detail in façades. There are fewer timber buildings than is common elsewhere in Dunedin. Due to the small site sizes, dwellings tend to be built close to the front boundary and side boundaries and occupy a high overall percentage of the site.

There are a small number of modern buildings in the precinct. These are almost exclusively along the state highways and comprise flats, motels and large student flats on Great King Street, and buildings associated with All Saints Church and the University on Cumberland Street North. The architectural cohesiveness along Cumberland Street has been eroded over time with a mix of building styles that are inconsistent with the character of the area. In addition to this eroded edge, the other main discordant notes are the impact of off-street parking at the front of sites, and out-of-character alterations to the existing character buildings, such as the installation of modern windows.

This remains a well-preserved and distinct residential precinct on the periphery of the University. It houses an interesting mix of pre-WW2 housing styles with a cohesive materials palette and preponderance of red brick. The growing influence of the University over time can be seen in the precinct, along with other pillars of Dunedin's history, religion and sport. The location straddling the state highway system makes this a highly visible microcosm of Dunedin's architectural and social heritage that should be protected and enhanced in coming years.

### **A2.1.4.2 Values to be protected**

The following features and characteristics have been identified as important to protect:

- a. The large number of heritage and character-contributing buildings in the area
- b. The open space/sports ground at the heart of the precinct surrounded by established trees
- c. The use of red brick in construction
- d. The consistent building setbacks and heights

- e. The visibility of small front gardens with low fences, walls or hedges
- f. A general lack of visible off-street car parking, including garages and carports
- g. The focus on buildings presenting attractive and welcoming façades to the street

#### A2.1.4.3 Principal threats to values

- a. The demolition of existing scheduled heritage and character-contributing buildings
- b. Insufficient maintenance of buildings
- c. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- d. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- e. The removal of original materials and features from scheduled heritage buildings
- f. The use of inconsistent materials or styles in alterations to existing heritage and character buildings
- g. Car parking in front of buildings
- h. The loss of established trees and front gardens
- i. High fences and walls reducing the interplay between the public realm and front yards
- j. The visibility of infrastructure and services related to student/medium-density housing where not well planned (rubbish and recycling bins, etc.)
- k. Construction of further large multi-unit residential or commercial residential developments where these are out of scale with surrounding development
- l. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.1.4.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage buildings or character-contributing buildings.	Suggested
b. Bulk and location		
i.	Houses should be orientated so that the front wall is parallel with the street.	Preferred
ii.	Buildings at the front of the site should be built close to the road boundary, consistent with the adjacent scheduled heritage buildings or character-contributing buildings.	Preferred
c. Car parking		
i.	Where possible, parking areas should be located discreetly to the rear of dwelling units. Where they are located at the front of the site, they should be set back from the road frontage and where possible, incorporate fencing, walls, hedges or landscaping to reduce the negative amenity effects and visibility of vehicles.	Preferred
ii.	Where garages or carports are visible from the road front they should be integrated into the building, or if stand-alone they must be single and similar in style and materials to the scheduled heritage building or character-contributing building they are associated with. Garages are preferred over carports.	Preferred

Features or characteristics		Suggested/Preferred
<b>d. Design</b>		
i.	New buildings should be sympathetic to existing scheduled heritage buildings or character-contributing buildings in the part of the precinct they are located in.	Preferred
ii.	New buildings will generally draw important design cues from Victorian, Edwardian or 1930s heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitch, window alignment, materials and details, although these may be expressed in a simpler fashion than on historic buildings.	Suggested
iii.	Larger buildings should use methods such as detailing, rhythm, division into bays and the use of a variety of materials etc. in order to reduce the perceived scale of buildings.	Suggested
iv.	Buildings should present a balanced, symmetrical façade to the street.	Suggested
v.	Road facing façades should clearly look like the front of a building.	Preferred
vi.	Buildings should have a clear entrance way, visible from the street. This entrance should include some architectural detail and should not be not be a ranch slider.	Preferred
vii.	Window placement and alignment should be a key component of the design of the building, accentuating a balanced form and adding architectural detail to the building.	Preferred
viii.	Roof pitch should be between 30° and 45°. Pitch may be lower where the roof is concealed behind a parapet.	Suggested
<b>e. Materials</b>		
i.	Building façades should be clad in materials such as plaster, brick, stone, concrete or weatherboards, which are visually consistent with the traditional materials of the precinct. Timber weatherboards may be used in detailing, but not as the main cladding material.	Preferred
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials to create shadow/depth and visual interest in the façade.	Suggested
iii.	Unrendered brick and stone should remain unrendered on existing buildings.	Preferred
<b>f. Fences and walls</b>		
i.	Front fences should preferably be no higher than 1400mm on road frontages to protect views of buildings. Side fences should only go higher once they have passed the building setback. Fences higher than 1400mm should be visually permeable.	Preferred
ii.	Fences should be made from similar materials to those traditionally associated with scheduled heritage and character-contributing buildings in the area e.g. wrought iron, timber, brick or stone. Concrete block and basic pool fencing should be avoided.	Suggested
<b>g. Colour</b>		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick and stone on existing buildings should remain unpainted.	Preferred
<b>h. Signs</b>		

<b>Features or characteristics</b>		<b>Suggested/Preferred</b>
i.	Signs are discreet and kept to a minimum.	Preferred
ii.	Signs on buildings should not dominate façades or conceal windows or architectural features.	Preferred
i. Other		
i.	Building utilities should be located in a way that reduces visual clutter. Where located in areas visible to the public, they should be installed discreetly or screened from view.	Preferred

## **A2.1.5 George Street North Residential Heritage Precinct**

### **A2.1.5.1 Description of area**

The George Street North Residential Heritage Precinct is centred on the residential part of George Street north of Albany Street. Like other precincts in this area it has come to have a strongly student character, adjoining the University Campus, North Ground, Willowbank and Dundas residential heritage precincts and this concentration of students, gives it a distinctive and lively character.

The area contains a broad mix of historic housing types including cottages, villas, terraced houses, and a greater number of large mansions than the other northern residential areas, reflecting its more affluent location closer to the city centre. This means the precinct can more comfortably accommodate larger buildings than many of its neighbouring precincts. There are numerous motels and a growing number of new dwellings, reflective of the area's popularity as a student rental precinct. However, the number, scale, and visibility of the many historic character homes still dominate the heritage character and amenity of the area. Buildings are generally two storeys at the road frontage, and fences and hedges are an integral part of the road frontage.

Generally there is a strong connection between individual houses and the street, with dwellings facing the street. This allows for a high level of interaction between street activity and private activity. This interaction is encouraged by the shallow setbacks of buildings, low front fences and visible front yards, clear entrance ways and large numbers of front verandahs and balconies.

On the western side of George Street the topography means that in some areas houses are set back further on the properties. In these situations stone, brick, or textured concrete retaining walls built to complement the houses they are associated with are common on the front boundary.

Over the last few years, there have been a growing number of new buildings constructed in the precinct, almost exclusively built as student accommodation, responding to the high demand for accommodation in close proximity to the campus. These vary in quality and the degree to which they blend into the neighbourhood. The most successful exhibit a scale and level of detailing that is consistent with the buildings around them. The less successful ones demonstrate less attention to their surrounds, leading to inconsistent scale, setback or form, and the use of materials that are inconsistent with those typical of the precinct. It is important that new buildings visible from the street are sensitive to the character of the area.

The style and appearance of alterations to existing character and heritage buildings, as these are altered or extended for student use, can also have significant adverse effects on the character of individual buildings and the overall amenity and character of the area. It is important that these additions and alterations are undertaken as sensitively as possible.

Consistent with other heritage residential precincts close to the University, the strong redevelopment demand, combined with regular refurbishment undertaken on student flats, means there is a great deal of pressure on the character of the precinct. There is a risk that this character will be gradually eroded over time. The significance of this area as an entrance to the city means that controls over the design of new development/alterations of existing buildings are necessary to protect the historic character from development primarily aimed at maximising density.

### **A2.1.5.2 Values to be protected**

The following features and characteristics have been identified as important to protect:

- a. The large number of scheduled heritage buildings in the area
- b. The visibility of small front gardens with low fences, walls or hedges
- c. The strong focus on verticality in design
- d. A general lack of visible off-street car parking, including garages and carports

- e. The focus on buildings facing the street and presenting attractive and welcoming façades

#### A2.1.5.3 Principal threats to values

- a. The demolition of existing scheduled heritage and character-contributing buildings
- b. Insufficient maintenance of buildings
- c. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- d. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- e. The removal of original materials and features from scheduled heritage buildings
- f. Car parking in front of buildings
- g. The loss of established trees and front gardens
- h. High fences and walls reducing the interplay between the public realm and front yards
- i. The visibility of infrastructure and services related to student/medium-density housing where not well planned (rubbish and recycling bins, etc.)
- j. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.1.5.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage buildings or character-contributing buildings.	Suggested
b. Bulk and location		
i.	Houses should be orientated so that the front wall is parallel with the street.	Preferred
ii.	Buildings at the front of the site should be built close to the road boundary, consistent with the adjacent scheduled heritage buildings or character-contributing buildings.	Preferred
c. Car parking		
i.	Where possible, parking areas should be located discreetly to the rear of dwelling units. Where they are located at the front of the site, they should be set back from the road frontage and where possible, incorporate fencing, walls, hedges or landscaping to reduce the negative amenity effects and visibility of vehicles.	Preferred
ii.	Where garages or carports are visible from the road front they should be integrated into the building, or if stand-alone they must be single and similar in style and materials to the scheduled heritage building or character-contributing building they are associated with. Garages are preferred over carports.	Preferred
d. Design

## **A2.1.6 High Street Residential Heritage Precinct**

### **A2.1.6.1 Description of area**

The High Street Residential Heritage Precinct lies on the hill slopes that rise immediately to the west of the Exchange. It encompasses both High Street and Stafford Street, from Clark Street on High Street and Hope Street on Stafford Street, to Alva Street. While the precinct primarily covers residential zoned land, the lower part is zoned CBD. Despite this, the precinct is strongly residential in character. Settlement of this area dates back to 1849, and it remains primarily a residential area. The overwhelming majority of houses in the area date from the 19th and early 20th centuries.

The influence of the cable car is more present here than any other area of the City. There are very few garages to the street front and few vehicle crossings, even on many of the largest homes in the area. The steepness of the hill results in a sense of verticality which characterises the precinct, and many houses feature towers, gables, finials and turrets which emphasise not only the vertical stature of each individual building, but also the verticality of the overall streetscape. The steepness of the area means that roofs are often visible, meaning more effort has been put into the design of interesting rooflines and use of robust, quality materials, like Marseilles tiles and slate.

The houses in the precinct also tend to be of a larger scale than those found in many other heritage residential precincts, similar to those in the Royal Terrace - Pitt Street - Heriot Row Residential Heritage Precinct. The houses in the High Street precinct, however, tend to have higher site coverage and less curtilage, a product of the steeper topography, early settlement and proximity to what was once the hub of the central city. Fences and hedges are an integral part of the street frontage. Buildings are generally two or three storeys at the road frontage.

The design elements and the scale of the buildings also reflect the area's former wealth and the prominence of its early residents. This can be seen in the large number of homes demonstrating diverse architectural styles and a greater focus, in comparison to most of the other heritage precincts, on the individual houses as distinct elements, rather than as part of a consistent streetscape. A number of the houses were built for professionals such as doctors, dentists and lawyers, and incorporate architectural features specifically tailored for professionals. This housing of professional classes is an important element of the area's social history, still clearly seen in its architectural form.

A range of materials are used in the construction of buildings in the precinct. However, reflecting a focus on architectural expression and the quality of buildings, there is common use of brick and masonry. There are fewer timber buildings in this precinct than in other Dunedin heritage precincts. The number of masonry buildings lends a sense of permanence and solidity to the area.

In Stafford Street and adjoining streets there are a greater number of duplexes and multiple unit dwellings. However, even these historic multi-unit developments tend to exhibit a higher degree of design and ornamentation than similar styles elsewhere in the city.

The view down into the Exchange and out to the harbour is an important aspect of the character of the precinct.

### **A2.1.6.2 Values to be protected**

The following features and characteristics have been identified as important to protect:

- a. The large number of scheduled heritage and character-contributing buildings in the area
- b. A strong focus on grand, individual architecturally designed homes
- c. The use of ornamentation and detail in design
- d. The use of red brick and masonry in construction
- e. A general lack of visible off-street car parking, including garages and carports
- f. Established gardens and trees

- g. The focus on buildings presenting attractive and welcoming façades to the street

#### A2.1.6.3 Principal threats to values

- a. The demolition of existing scheduled heritage and character-contributing buildings
- b. Insufficient maintenance of buildings
- c. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- d. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- e. The removal of original materials and features from scheduled heritage buildings
- f. Car parking in front of buildings
- g. The loss of established trees and gardens
- h. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.1.6.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage buildings or character-contributing buildings.	Suggested
b. Bulk and location		
i.	Houses should be orientated so that the front wall is parallel with the street.	Preferred

i. Other		
i.	Building utilities should be located in a way that reduces visual clutter. Where located in areas visible to the public, they should be installed discreetly or screened from view.	Preferred

## **A2.1.7 Willowbank Residential Heritage Precinct**

### **A2.1.7.1 Description of Area**

The Willowbank Residential Heritage Precinct is located at the northern end of George Street and encompasses parts of Queen Street and Duke Street, in the area adjoining Woodhaugh Gardens and the Water of Leith. The area is strongly defined not only by the large number of original homes and their quality and consistency, but also the unique setting of Woodhaugh Gardens, the Leith, and mature trees and gardens.

The most common architectural style in the area is the double bay villa. There are large numbers of this archetypal style of building in consistent blocks throughout Willowbank. These strongly define the precinct.

Underscoring the area's importance of a microcosm of Dunedin's early society and economy there are also a large number of working class homes in the area, including terraces and cottages (often built to service nearby industries), side by side with larger mansion homes on much larger sites. Buildings are generally two storeys at the road frontage and fences and hedges are an integral part of the road frontage.

There are only a small number of modern buildings in the precinct, mostly built as student accommodation. These vary in quality and the degree to which they blend into the neighbourhood. The most successful exhibit a scale and level of detailing that is consistent with the buildings around them. The less successful modern buildings exhibit inconsistent scale and setbacks, or insufficient verticality. Insensitive alterations of historic buildings have also occurred. Future new buildings within the precinct should ideally be situated off the main George Street axis and be more consistent in scale and form with other buildings in the precinct.

As one of the best-preserved residential precincts in the city and demonstrative of the Dunedin's early society and economy, every effort should be made to maintain the quality, consistency, and integrity of the precinct as a showcase of the city's heritage and as an entranceway to the city.

### **A2.1.7.2 Values to be protected**

The following features and characteristics have been identified as important to protect:

- a. The large number of scheduled heritage buildings in the area
- b. The consistency of building setbacks and heights
- c. The consistency of repetition and symmetry within blocks
- d. The visibility of small front gardens with low fences, walls or hedges
- e. The strong focus on verticality in design
- f. A general lack of visible off-street parking, including garages and carports
- g. Established gardens and trees
- h. The focus on buildings presenting attractive and welcoming façades to the street

### **A2.1.7.3 Principal threats to values**

- a. The demolition of existing scheduled heritage and character-contributing buildings
- b. Insufficient maintenance of buildings
- c. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- d. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- e. The removal of original materials and features from scheduled heritage buildings
- f. Car parking in front of buildings

- g. The loss of established trees and gardens
- h. High fences and walls reducing the interplay between the public realm and front yards
- i. The visibility of infrastructure and services related to student/medium-density housing where not well planned (rubbish and recycling bins, etc.)
- j. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.1.7.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage buildings or character-contributing buildings.	Suggested
b. Bulk and location		
i.	Houses should be orientated so that the front wall is parallel with the street.	Preferred
ii.	Buildings at the front of the site should be built close to the road boundary, consistent with the adjacent scheduled heritage buildings or character-contributing buildings.	Preferred
c. Car parking		
i.	Where possible, parking areas should be located discreetly to the rear of dwelling units. Where they are located at the front of the site, they should be set back from the road frontage and where possible, incorporate fencing, walls, hedges or landscaping to reduce the negative amenity effects and visibility of vehicles.	Preferred
ii.	Where garages or carports are visible from the road front they should be integrated into the building, or if stand-alone they must be single and similar in style and materials to the scheduled heritage building or character-contributing building they are associated with. Garages are preferred over carports.	Preferred
d. Design		
i.	New buildings should be sympathetic to existing scheduled heritage buildings or character-contributing buildings.	Preferred
ii.	New buildings will generally draw important design cues from Victorian or Edwardian heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitch, window alignment, materials and details, although these may be expressed in a simpler fashion than on historic buildings.	Suggested
iii.	Buildings should present a balanced, symmetrical façade to the street.	Suggested
iv.	Road facing façades should clearly look like the front of a building.	Preferred
v.	Buildings should have a clear entrance way, visible from the street. This entrance should include some architectural detail and should not be a ranch slider.	Preferred
vi.	Window placement and alignment should be a key component of the design of the building, accentuating a balanced form and adding architectural detail to the building.	Preferred
vii.	Roof pitch should be between 30° - 45°. Pitch may be lower where the roof is concealed behind a parapet.	Suggested

Features or characteristics		Suggested/Preferred
viii.	Roofs should be gabled. At least one gable should face the road frontage, unless the building is a terraced house or cottage.	Preferred
e. Materials		
i.	Building façades should be clad in materials such as plaster, brick, stone, concrete or weatherboards, which are visually consistent with the traditional materials of the precinct.	Preferred
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials to create shadow/depth and visual interest in the façade.	Suggested
iii.	Unrendered brick and stone should remain unrendered on existing buildings.	Preferred
f. Fences and walls		
i.	Front fences should preferably be no higher than 1400mm on road frontages to protect views of buildings. Side fences should only go higher once they have passed the building setback. Fences higher than 1400mm should be visually permeable.	Preferred
ii.	Fences should be made from similar materials to those traditionally associated with scheduled heritage and character-contributing buildings in the area e.g. wrought iron, timber, brick or stone. Concrete block and basic pool fencing should be avoided.	Suggested
g. Colour		
i.	Colours should be chosen from a heritage palette and avoid bright colours as base colours for buildings, though colour can be used effectively for highlighting architectural details.	Suggested
ii.	Unpainted brick and stone on existing buildings should remain unpainted.	Preferred
h. Signs		
i.	Signs are discreet and kept to a minimum.	Preferred
ii.	Signs on buildings should not dominate façades or conceal windows or architectural features.	Preferred
i. Other		
i.	Building utilities should be located in a way that reduces visual clutter. Where located in areas visible to the public, they should be installed discreetly or screened from view.	Preferred

## **A2.1.8 Windle Settlement Residential Heritage Precinct**

### **A2.1.8.1 Description of Area**

The following description is sourced from Heritage NZ.

The Windle Settlement Workers' Dwellings Historic Area consists of the first twenty houses built in Dunedin under the Workers' Dwellings Act 1905 as part of the first government state housing schemes. These were the only houses built under the Act in Dunedin and form an intact area reflecting the principles and practices of the Liberal Government housing policy.

The Windle Settlement was established in 1906-07 along with settlements in Auckland, Christchurch and Wellington. This was an integral part of the Liberal Government's administration of radical social policies, such as votes for women, old age pensions and housing for all. An impetus to the establishment of the Workers' Dwellings Act was a general assumption about the positive relationship between home ownership and social order, as revolutionaries did not come from 'men with happy homes in pleasant surroundings'. The Windle Settlement is an embodiment of these ideals, which foreshadowed the 1930s Welfare State promoted by the first Labour Government.

The Windle Settlement is located in one of Dunedin's finer established hill suburbs, Belleknowes, formerly in the Borough of Mornington, on Rosebery and Newport streets. The Windle Settlement was the only such settlement to be established in Dunedin. It is highly significant that the outward aspect of the Windle houses subscribes to British and American Arts and Crafts influences that were adopted by a select group of architects working in New Zealand at the time, most of whom had received their training in Britain. The Garden City Movement was also a factor in setting an aesthetic and practical ideal for the 'healthy' settlement of New Zealand workers and their families.

The Windle Settlement, with its elegant array of one and two-storeyed houses, interspersed with semi-detached houses (separated by a firewall), forms a modest, yet picturesque ideal of early twentieth century suburban living in New Zealand. The design and three-dimensional treatments uphold the progressive ideas that recommended white upper-working class families should be settled in suburban houses to give an appearance, or 'culture', of respectability.

### **A2.1.8.2 Values to be protected**

- a. The continued presence of houses built as part of the Windle Settlement in the area
- b. The consistency of the Arts and Craft style in design
- c. The consistency of materials and key design elements
- d. The visibility of small front gardens with low fences, walls or hedges
- e. Established gardens and trees
- f. The focus on buildings presenting attractive and welcoming façades to the street

### **A2.1.8.3 Principal threats to values**

- a. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings and key elements of the Arts and Craft style
- b. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- c. The removal of original materials and features from the Windle Settlement houses
- d. The loss of established trees and gardens
- e. High fences and walls reducing the interplay between the public realm and front yards
- f. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.1.8.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with other buildings in the precinct.	Suggested
b. Bulk and location		
i.	Houses should be orientated so that the front wall is parallel with the street.	Preferred
ii.	Buildings at the front of the site should be built close to the road boundary, consistent with the adjacent scheduled heritage buildings or character-contributing buildings.	Preferred
c. Car parking		
i.	Where possible, parking areas should be located discreetly to the rear of dwelling units. Where they are located at the front of the site, they should be set back from the road frontage and where possible, incorporate fencing, walls, hedges or landscaping to reduce the negative amenity effects and visibility of vehicles.	Preferred
ii.	Where garages or carports are visible from the road front they should be integrated into the building, or if stand-alone they must be single and similar in style and materials to the scheduled heritage building or character-contributing building they are associated with. Garages are preferred over carports.	Preferred
d. Design		
i.	New buildings should be sympathetic to existing character-contributing buildings.	Preferred
ii.	New buildings will generally draw important design cues from the Arts and Craft style of the Windle Settlement houses in the precinct, including scale, orientation, roof pitch, window alignment, materials and details, although these may be expressed in a simpler fashion than on those buildings.	Suggested
iii.	Road facing façades should clearly look like the front of a building.	Preferred
iv.	Buildings should have a clear entrance way, visible from the street. This entrance should include some architectural detail and should not be a ranch slider.	Preferred
v.	Window placement and alignment should be a key component of the design of the building, accentuating a balanced form and adding architectural detail to the building.	Preferred
vi.	Existing window patterns and the use of multi-light windows on front façades should be protected on Windle settlement buildings.	Preferred
v.	Roof pitch should be between 30° - 45°.	Suggested
vi.	Roofs should be gabled. At least one gable should face the road frontage.	Preferred
e. Materials		
i.	Building façades should be clad in weatherboards but may make use of plaster or other similar materials for detailing, which are visually consistent with the traditional materials of the precinct.	Preferred
ii.	Buildings should avoid use a mix of materials or diverse application of the main materials to create shadow/depth and visual interest in the façade.	Suggested

Features or characteristics		Suggested/Preferred
f. Fences and walls		
i.	Front fences should preferably be no higher than 1400mm on road frontages to protect views of buildings. Side fences should only go higher once they have passed the building setback. Fences higher than 1400mm should be visually permeable.	Preferred
ii.	Fences should be made from similar materials to those traditionally associated with scheduled heritage and character-contributing buildings in the area e.g. wrought iron, timber. Concrete block and basic pool fencing should be avoided.	Suggested
g. Colour		
i.	Colours should be chosen from a heritage palette and avoid bright colours as base colours for buildings, though colour can be used effectively for highlighting architectural details.	Suggested
h. Signs		
i.	Signs are discreet and kept to a minimum.	Preferred
ii.	Signs on buildings should not dominate façades or conceal windows or architectural features.	Preferred
i. Other		
i.	Building utilities should be located in a way that reduces visual clutter. Where located in areas visible to the public, they should be installed discreetly or screened from view.	Preferred

## **A2.1.9 City Rise Residential Heritage Precinct**

### **A2.1.9.1 Description of area**

City Rise is located to the west of Canongate and Rattray Street and to the east of the Town Belt. The area is best defined by its nineteenth century residential character on a sloping site immediately above the city centre, with steep changes in ground level to its south and east in particular. It is also notable for its collection of buildings on its eastern corner associated with the nearby Catholic Cathedral.

Larger, wealthier nineteenth century houses can often be found on higher ground where views across the harbour are better, notably on York Place. Two and one-storey villas make up most of the historical housing stock. There are several rows of finely detailed two-storey terraces, such as on Adam Street and Arthur Street. On the most sloping sites, often south facing, extensive historical subdivision occurred creating small pockets of cottages, particularly off Russell Street, Elm Row and Canongate. Properties between Bishops Road and Rattray Street tend to be larger and more formal in design reflecting their close links to St. Joseph's Cathedral to the north.

This range of residential property sizes is indicative of parts of nineteenth century Dunedin, where unmetalled roads, a lack of public transport, the restriction of the Town Belt and the hilly landscape led to a juxtaposition of larger, more prestigious properties on more valuable land close to less valuable parcels of land containing smaller but more numerous houses.

Materials vary according to age, scale and status of the property, with a slow evolution from timber to brick over time. Generally there is a strong connection between individual houses and the street, with dwellings facing the street. Boundaries are usually low and visually permeable, with a strong amount of planting framed by the Town Belt to the west.

More recent development in the area is not of such high quality, and is primarily made up of the replacement of historic homes or the subdivision of their gardens for the development of small scale apartment blocks or larger houses. In most cases the quality of the design does not match the surrounding historic properties. Many of the newer apartment blocks do not address the street, while infill development on former front gardens hides historic properties from the street. There has been a limited amount of loss of details from heritage buildings but the primary risk to the character of the neighbourhood is through demolition and inappropriate replacements. This has been heightened by the disproportionate level of replacement housing construction on corner sites.

The significance of this area for its architectural and historical values means that controls over new development and the alteration of existing buildings are necessary to defend the historic character from development primarily aimed at maximising density at the expense of the street scene.

### **A2.1.9.2 Values to be protected**

The following features and characteristics have been identified as important to protect:

- a. The repetition within small groups of houses
- b. The visibility of small front gardens with low fences, walls or hedges
- c. The strong focus on verticality in design
- d. The focus on buildings facing the street and presenting attractive and welcoming façades

### **A2.1.9.3 Principal threats to values**

- a. The demolition of existing scheduled heritage and character-contributing buildings
- b. Insufficient maintenance of buildings
- c. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- d. The removal of original materials and features from scheduled heritage buildings and character-contributing

buildings

- e. The use of inconsistent materials or styles in alterations to existing heritage and character buildings
- f. The loss of established trees and gardens
- g. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.1.9.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height to immediate neighbours where these are scheduled heritage buildings or character-contributing buildings.	Suggested
b. Bulk and location		
i.	Houses should be orientated so that the front wall is parallel with the street.	Preferred
ii.	Buildings at the front of the site should be built close to the road boundary, consistent with the adjacent scheduled heritage building or character-contributing buildings.	Preferred
c. Car parking		
i.	Where possible, parking areas should be located discreetly to the rear of dwelling units. Where they are located at the front of the site, they should be set back from the road frontage and where possible, incorporate fencing, walls, hedges or landscaping to reduce the negative amenity effects and visibility of vehicles.	Preferred
ii.	Where garages or carports are visible from the road front they should be integrated into the building. Garages are preferred over carports.	Preferred
d. Design		
i.	New buildings should be sympathetic to existing scheduled heritage buildings or character-contributing buildings.	Preferred
ii.	New buildings will generally draw important design cues from character-contributing buildings in the precinct, including scale, orientation, roof pitch, window alignment, materials and details, although these may be expressed in a simpler fashion than on historic buildings.	Suggested
iii.	Larger buildings should use methods such as detailing, rhythm, division into bays and the use of a variety of materials etc. in order to reduce the perceived scale of buildings.	Suggested
iv.	Road facing façades should clearly look like the front of a building.	Preferred
v.	Buildings should accentuate a vertical dimension.	Suggested
vi.	Buildings should have a clear entrance way, visible from the street. This entrance should include some architectural detail and should not be a ranch slider.	Preferred
vii.	Window placement and alignment should be a key component of the design of the building, accentuating the verticality of the building.	Preferred
viii.	Roof pitch should be between 30° and 45°. Pitch may be lower where the roof is concealed behind a parapet.	Suggested

Features or characteristics		Suggested/Preferred
iv.	Roofs should be gabled. At least one gable should face the road frontage, unless the building is a terraced house or cottage.	Preferred
e. Materials		
i.	Building façades should be clad in materials such as plaster, brick, concrete or weatherboards, which are visually consistent with the traditional materials of the precinct.	Preferred
ii.	Unrendered brick and stone should remain unrendered on existing buildings.	Preferred
f. Fences and walls		
i.	Front fences should preferably be no higher than 1400mm on road frontages to protect views of buildings. Side fences should only go higher once they have passed the building setback. Fences higher than 1400mm should be visually impermeable.	Preferred
ii.	Fences should be made from similar materials to those traditionally associated with scheduled heritage and character-contributing buildings in the area e.g. wrought iron, timber, brick or stone. Concrete block and basic pool fencing should be avoided.	Suggested
g. Colour		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick and stone on existing buildings should remain unpainted.	Preferred
h. Signs		
i.	Signs are discreet and kept to a minimum.	Preferred
ii.	Signs on buildings should not dominate façades or conceal windows or architectural features.	Preferred
i. Other		
i.	Building utilities should be located in a way that reduces visual clutter. Where located in areas visible to the public, they should be installed discreetly or screened from view.	Preferred

## **A2.2 Commercial Heritage Precincts**

### **A2.2.1 George Street Commercial Heritage Precinct**

#### A2.2.1.1 Description of area

George Street is Dunedin's main retail area and one of its most important heritage precincts. The area is home to the city's main retailers, banks, numerous offices, services, restaurants and cafes. Clusters of activities have emerged over time, related to retail patterns: cafes and restaurants closest to the University; comparison retail in the middle blocks, including three interconnected malls; and banking/service oriented businesses closer to the Octagon and the larger office blocks.

Overall, George Street remains a remarkably intact heritage precinct. Victorian and Edwardian architectural styles predominate. Throughout much of George Street and adjoining side streets, heritage buildings still dominate the streetscape and there is remarkable consistency in terms of scale, form, and rhythm within the street. Buildings are most commonly two storeys high with shop fronts at the ground floor, and vertically orientated, symmetrical windows in solid façades above. They tend to be narrow or divided into bays when wider. Brick and masonry are the most common construction materials. While some buildings have been stripped of their earlier architectural detail, most retain at least their basic original form and constitute an important fabric, even if they are not iconic individual buildings.

There are many buildings that do retain architectural detail, including cornices, pediments and balusters, the decorative nature of which demonstrates Dunedin's earlier wealth and imparts an important character to the area today. Though there are fewer buildings with original ground floor façades below verandah level, due to the long history of retail use in the area and constant changes of businesses, there do remain a large number of shop fronts from the pre-WW2 period, which add visual interest and character at street level.

While there are some conspicuous modern buildings, particularly on corners, the loss of historic buildings and façades has declined since precinct protections were first put in place. This situation has been helped by the fact that other common drivers for demolition or replacement have also been weaker: the demand for space along George Street and growth of the university has meant the area has been well-tenanted and buildings maintained to a better standard than in many other parts of the city. Modern buildings in the precinct tend to fall into two distinct styles: modernist buildings built between the 1960s-1980s that are much larger in scale than surrounding buildings and make little effort to blend into the precinct, boldly defining a non-heritage character; or postmodern buildings that have tried to replicate architectural features of surrounding buildings, particularly in terms of adding decorative features. These buildings vary in quality and the success of their insertion into the streetscape: some have dated badly and detract more than they contribute to the area. Alternatives to the interpretation of heritage features have been full replicas and façade only protection. This has been pursued in only a small number of cases, but has generally been more successful from a streetscape perspective than the interpretative approach, although it has still resulted in the loss of original heritage fabric.

New buildings in the precinct should be more consistent and sensitive in terms of scale, positioning, and style and aspire to a higher quality. This does not mean that new buildings need to replicate heritage buildings or features, *per se*, but should be of higher architectural value and insert more seamlessly into the streetscape by reflecting features of the surrounding heritage and character-contributing buildings that give the area its character. New buildings should use creative design to enhance the urban feel of the area and reflect the core values below without dominating the existing heritage architecture.

New buildings should also protect and enhance the environmental conditions of the precinct. The lower heights of the existing heritage buildings compared to other parts of the city, and the area's topography, have contributed to an attractive environment where there is good solar access, protection from prevailing winds, and views out to the hills surrounding Dunedin. Compared to other parts of the central city, there is a better microclimate in this area, being sunnier and more sheltered. New buildings and alterations should maintain this attractive environment and the positive

human scale in the precinct, given the importance of these factors in making the area a people-friendly and successful commercial area.

#### A2.2.1.2 Values to be protected or enhanced

The following features and characteristics have been identified as important to protect or enhance:

- a. The remaining heritage and historic buildings in the area
- b. Lower building heights to maximise solar access and avoid creation of wind tunnels
- c. Buildings built to the front boundary
- d. Consistent building heights and scales
- e. The use of rhythm, modulation, and permanent materials in design
- f. A minimum of vehicle crossings
- g. A strong focus on pedestrian amenity at ground floor
- h. Remaining historic shop fronts

#### A2.2.1.3 Principal threats to values

- a. Further demolition of existing scheduled heritage and character-contributing buildings
- b. Emergence of gaps in the streetscape
- c. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings or to the public space they surround
- d. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area (e.g. aluminium windows in street façades)
- e. The removal of original materials and features from heritage and character-contributing buildings
- f. Removal of early character shop fronts and their replacement with inappropriate ground floor shop fronts
- g. Ground level off-street car parking visible within the streetscape
- h. Insufficient building maintenance
- i. Proliferation of signage and corporate colour schemes
- j. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.2.1.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage or character-contributing buildings, unless these buildings are inconsistent with the typical heights in the precinct.	Preferred
b. Bulk and location		
i.	Building frontages should be constructed within 400 mm of the road boundary. Buildings should occupy the full width of the site.	Preferred
c. Car parking		
i.	Off street car parking is not visible from the road, and is either located behind or within the building.	Preferred
ii.	Vehicle crossings should be kept to a minimum. Crossings built into buildings are more acceptable than those that mean the building does not occupy the full width of its site.	Preferred
d. Design		
i.	Buildings should reference the area's commercial/retail heritage and be sympathetic to surrounding heritage and character-contributing buildings.	Preferred
ii.	New buildings will generally draw important design cues from Victorian and Edwardian heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitches, window alignment, materials and details, although these may be expressed in a simpler fashion than on historic buildings.	Preferred
iii.	Façades should have a solid appearance.	Suggested
iv.	Corner buildings should have architectural detail to all road frontages.	Preferred
v.	Façades should be visually subdivided and the composition (including windows) should emphasise a vertical dimension consistent with heritage and character-contributing buildings in the precinct.	Suggested
vi.	Division of the façade should be consistent with floor levels of neighbouring heritage or character-contributing buildings wherever possible.	Suggested
v.	Buildings are typically narrow. Long façades should be broken into vertical bays.	Suggested
vi.	Rooflines should be concealed behind parapets or other architectural features.	Suggested
vii.	Ornament or detail should be included as an integral part of the design of the façade.	Suggested
viii.	Window layout should be symmetrical and/or rhythmical.	Suggested
iv.	Windows on long façades should be arranged in groups.	Suggested
x.	Windows should be largely transparent.	Preferred
xi.	Verandahs should be continuous, except where installation of a verandah will compromise the architecture of a scheduled heritage building.	Preferred
xii.	In existing scheduled heritage buildings, original ground floor apertures should be retained, limiting the amount of ground floor glazing.	Preferred

Features or characteristics		Suggested/Preferred
xiii.	In scheduled heritage and character-contributing buildings, historic shop front details such as glazing, lead-lighting and tiles should be retained.	Preferred
xiv.	Mirrored glass and heavy tinting should be avoided.	Suggested
xv.	Car parking buildings should be designed with the same design criteria as other buildings above in mind, although they may replace glazing with other façade treatments. Cars should be only minimally visible from public places through the façade.	Preferred
<b>e. Materials</b>		
i.	Building façades should be clad in materials such as plaster, brick, stone or concrete which are visually consistent with the traditional materials of the precinct.	Suggested
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials or variations in their use to create shadow/depth and visual interest in the façade.	Suggested
iii.	Unrendered brick, stone and concrete should remain unrendered on existing buildings except where this does not contribute to the character of the building.	Preferred
<b>f. Colour</b>		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick, stone, and concrete should remain unpainted on existing buildings except where this does not contribute to the character of the building.	Preferred
iii.	Painted heritage signs on the side and rear of buildings should be retained and not removed or painted over.	Preferred
<b>g. Signs</b>		
i.	Signs should not dominate façades or conceal windows or architectural features.	Preferred
<b>h. Other</b>		
i.	Service areas and building utilities should not be located on façades, in order to reduce visual clutter. Where located at the side of buildings in areas visible to the public, they should be installed discreetly or screened from view.	Preferred
ii.	Public spaces, including footpaths, should be kept free of unnecessary clutter and infrastructure to ensure maximum enjoyment of the public space, other than where the development contributes to improved vibrancy and public use of the area.	Preferred
iii.	Street furniture is of high quality and sympathetic to the heritage values and character of the area. However, this does not mean it has to be Victorian replica in style.	Preferred
iv.	Above ground network utilities should be avoided wherever possible. Where they cannot be avoided, they should be located sensitively and efforts undertaken to reduce the visual impact of the infrastructure, including paying particular attention to design and materials, or disguising the form through the incorporation of art, furniture or design elements.	Preferred

## **A2.2.2 The Octagon Commercial Heritage Precinct**

### **A2.2.2.1 Description of area**

The Octagon is Dunedin's pre-eminent civic and public open space. Laid out in the first street surveys a year before the first British settlers arrived in 1849, the Octagon remains a key focal point of the city, both geographically and culturally. The Octagon occupies an important physical axis where George Street, Princes Street and Stuart Street meet, around which the rest of the central city is shaped. Over the last decade the area has become an increasingly important entertainment destination, with the lower half of the Octagon occupied by many bars, cafes and restaurants spilling out onto the streets, and the western side of the Octagon housing a multiplex cinema, the Regent Theatre, and Dunedin Public Art Gallery. There is also access to the Dunedin Centre and Town Hall from the Octagon, connecting these spaces into the broader entertainment precinct. The open area of the Octagon makes it a hub for a wide range of special events and there is a high degree of informal use of the Octagon, particularly on sunny days. The place attracts a wide range of people, including workers taking a break, locals meeting others or relaxing, and tourists photographing buildings or orientating themselves on a tour of the city. In addition to these event and entertainment uses, the Octagon is also home to St Paul's Cathedral and the Dunedin City Council Municipal buildings, both busy sites of activity at specific times.

Such a diverse range of uses makes it a busy and sometimes contested and congested space. The continued transit of vehicles through and around the space, the location of bus stops on either side of the busy central carriageway on George and Princes Streets, and its use by tour buses and taxis, also add to this complex environment. There have been on-going and growing calls for changes to the way the area operates and the comparative importance given to motor vehicles and pedestrians within this space.

In terms of the form of buildings surrounding the Octagon, there is a great deal of variation. While there are impressive architectural heritage icons like St Paul's and the Municipal Chambers and well-preserved Victorian and Edwardian buildings like the Regent, former Hallensteins Building, and Bacchus building, there are also a number of less iconic buildings from the pre-war WW2 era. While these buildings still contribute to the character of the area, they do not stand out as the type of buildings that would typically occupy such an important civic space. There are also a number of large buildings constructed in the 1960s-1980s, when there was a strong focus on redevelopment - particularly on iconic corner sites. While these buildings vary in architectural merit, their height and scale in comparison to surrounding buildings means they dominate the area and they have also reduced the penetration of sunlight into the Octagon. More recent additions reflect a postmodern interpretation of the most appropriate architectural style within heritage precincts, and their architectural merit is similarly debated.

It is only by excluding monumental modernist additions that a greater sense of architectural cohesion can be defined, similar to adjoining areas of Lower Stuart Street and George Street - buildings of two to three storeys, typically symmetrical, stressing vertical elements, a differentiation of base, middle, and top, and built to the full width of the site. Central to the character is also the continued development of buildings to the front boundary of the site in order to enforce the octagonal form of the space. To both enhance the character of the Octagon, to protect the attractiveness of the environment (the penetration of sunlight, avoidance of wind issues etc), future development should reinforce a lower built form, rather than adding large amounts of additional height or replicating the experimentation with large office blocks overpowering what is not a large civic space. Future development should also defer in height to the Cathedral and Municipal Chambers tower in order to reinforce their architectural pre-eminence in the space. Views towards the Railway Station and the First Church spire should also be protected.

Any new buildings or alterations to existing buildings in the precinct should be more consistent with the scale, positioning, and style of the Octagon's historic buildings, given it is these buildings that continue to be favoured by the community. New buildings should also aspire to a higher quality than earlier additions. This does not mean that new buildings need to replicate heritage buildings or features, per se, but should be of high architectural value, and insert more sensitively into the streetscape by reflecting the features of the surrounding heritage buildings that give the area its quality and character. New buildings should use creative design to enhance the urban feel of the area and reflect the core values below without attempting to dominate the existing heritage architecture in terms of scale or design.

Any new buildings or alterations should also respect the important heritage vistas through the precinct.

While the Octagon was substantially redeveloped in 1990-1991 it is envisaged that the public space will be redeveloped during the life of this Plan. Given the growing expectations of use of the area as a people space rather than a transit space, it could be expected that redevelopment of the space will enhance the safety of those using the area, pay increased attention to the human scale, and increase the attractiveness of the area as a place to spend time. Focus should also be directed to making the Octagon feel like an integrated whole again and on refocusing attention back towards the architectural merit of its key heritage buildings - the Municipal Chambers, St Paul's Cathedral and the Regent and Bacchus buildings.

#### A2.2.2.2 Values to be protected or enhanced

The following features and characteristics have been identified as important to protect or enhance:

- a. The remaining heritage and character-contributing buildings in the area
- b. Buildings built to the front boundary to reinforce the octagonal form of the Octagon
- c. Heights to maximise solar access
- d. The use of rhythm, modulation, and permanent materials in design
- e. A lack of vehicle crossings
- f. A strong focus on pedestrian amenity and outdoor dining at ground floor
- g. Design and activities to encourage use of the area as a public space

#### A2.2.2.3 Principal threats to values

- a. Demolition of remaining scheduled heritage and character-contributing buildings
- b. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- c. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area, particularly on the large-scale modernist buildings in the precinct
- d. The development of new buildings that are taller than the Cathedral and reduce solar access in the Octagon
- e. The removal of original materials and features from heritage and character-contributing buildings
- f. The proliferation of signage and advertising for hospitality venues in the Octagon
- g. The loss of the feeling of open space in the Octagon
- h. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition

#### A2.2.2.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage or character-contributing buildings, unless these buildings are inconsistent with the typical heights in the precinct.	Preferred
ii.	Building heights should be planned to maximise solar access into the public space of the Octagon and avoid obscuring views through the Octagon to the Railway Station, St Paul's Cathedral and First Church.	Preferred

Features or characteristics		Suggested/Preferred
iii.	Buildings should not exceed the height of St Paul's Cathedral and the Municipal Chamber tower.	Preferred
b. Bulk and location		
i.	Building frontages should be constructed within 400 mm of the road boundary. Buildings should occupy the full width of the site in order to reinforce the octagonal form of the space.	Preferred
c. Car parking		
i.	Off-street car parking is not visible from the road, either located behind or within the building.	Preferred
ii.	There are no vehicle crossings onto the Octagon.	Preferred
d. Design		
i.	Buildings should reference the area's commercial/retail heritage and be sympathetic to surrounding heritage and character-contributing buildings.	Preferred
ii.	New buildings will generally draw important design cues from Victorian and Edwardian heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitches, window alignment, materials and details, although these may be expressed in a simpler fashion than on historic buildings.	Preferred
iii.	Façades should have a solid appearance.	Suggested
iv.	Corner buildings should have architectural detail to all road frontages.	Preferred
v.	Façades should be visually subdivided and the composition (including windows) should emphasise a vertical dimension consistent with heritage and character-contributing buildings in the precinct.	Suggested
vi.	Division of the façade should be consistent with floor levels of neighbouring heritage or character-contributing buildings wherever possible.	Suggested
vii.	Long façades should be broken into vertical bays.	Suggested
viii.	Rooflines should be concealed behind parapets or other architectural features.	Suggested
ix.	Ornament or detail should be included as an integral part of the design of the façade.	Suggested
x.	Window layout should be symmetrical and/or rhythmical.	Suggested
xi.	Windows on long façades should be arranged in groups.	Suggested
xii.	Windows should be largely transparent.	Preferred
xiii.	Verandahs should be continuous, except where installation of a verandah will compromise the architecture of a scheduled heritage building.	Preferred
xiv.	In existing scheduled heritage buildings, original ground floor apertures should be retained, limiting the amount of ground floor glazing.	Preferred
xv.	In scheduled heritage and character-contributing buildings, historic shop front details such as glazing, lead-lighting and tiles should be retained.	Preferred

Features or characteristics		Suggested/Preferred
xvi.	Mirrored glass and heavy tinting should be avoided.	Suggested
xvii.	Car parking buildings should be designed with the same design criteria as other buildings above in mind, although they may replace glazing with other façade treatments. Cars should be only minimally visible from public places through the façade.	Preferred
e. Materials		
i.	Building façades should be clad in materials such as plaster, brick, stone or concrete which are visually consistent with the traditional materials of the precinct.	Suggested
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials or variations in their use to create shadow/depth and visual interest in the façade.	Suggested
c.	Unrendered brick, stone and concrete should remain unrendered on existing buildings except where this does not contribute to the character of the building.	Preferred
f. Colour		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick, stone, and concrete should remain unpainted on existing buildings except where this does not contribute to the character of the building.	Preferred
iii.	Painted heritage signs on the side and rear of buildings should be retained and not removed or painted over.	Preferred
g. Signs		
i.	Signs should not dominate façades or conceal windows or architectural features.	Preferred
ii.	Freestanding signs within the Octagon should be kept to a minimum to avoid clutter of the public space.	Preferred
iii.	Signs (other than small information and direction signs) should be avoided on the Municipal Chambers, St Paul's Cathedral and Regent Theatre buildings. Preference should be given to small stand-alone signs for these buildings to avoid negative effects on the architecture of the building.	Preferred
h. Other		
i.	Service areas and building utilities should not be located on façades, in order to reduce visual clutter. Where located at the side of buildings in areas visible to the public, they should be installed discreetly or screened from view.	Preferred
ii.	Public spaces, including footpaths, should be kept free of unnecessary clutter and infrastructure to ensure maximum enjoyment of the public space, other than where the development contributes to improved vibrancy and public use of the area.	Preferred
iii.	Street furniture is of high quality and sympathetic to the heritage values and character of the area. However, this does not mean it has to be Victorian replica in style.	Preferred

Features or characteristics		Suggested/Preferred
iv.	Above ground network utilities should be avoided wherever possible. Where they cannot be avoided, they should be located sensitively and efforts undertaken to reduce the visual impact of the infrastructure, including paying particular attention to design and materials, or disguising the form through the incorporation of art, furniture or design elements.	Preferred

## **A2.2.3 Stuart Street Commercial Heritage Precinct**

### **A2.2.3.1 Description of Area**

The Stuart Street Commercial Heritage Precinct encompasses the area between the Octagon and the Railway Station, including Lower Stuart Street, parts of Moray Place, Cumberland Street, Castle Street, Dunbar Street and Anzac Square.

The area retains a very strong heritage character, anchored by the large number of heritage buildings and important vistas down Stuart Street to the Railway Station and beyond to the Peninsula, and up Stuart Street to the Octagon with St Paul's Cathedral and the tower of the Municipal Chambers visible above the trees. The area is an important pedestrian link between the Octagon and Railway Station and is heavily frequented by visitors to Dunedin.

The area is notable for the very small number of modern buildings. The architectural styles of the area's older buildings are varied, with buildings from the Victorian, Edwardian, and inter-war periods all represented. Notwithstanding this diversity, there is a great sense of cohesion in the streetscape, reinforced by consistency in terms of bulk and location, materials, the quality of architecture, and the lack of gaps resulting from demolition. There is a common attention to detail in many of the façades through the use of mouldings, fenestration, and materials, creating substantial architectural interest above verandah height.

At street level, although there has been a change over time to modern shop fronts, there are a higher proportion that retain early leadlight glazing, entranceway tiling, and historical architectural details in this precinct than elsewhere, something which adds further character to the street. In the lower part of the precinct the buildings become more monumental, with a number of significant municipal and governmental buildings in the form of the Railway Station, Law Courts, former prison and police station, in addition to the large ODT/Evening Star complex. Overall, the area presents a strong commercial heritage architectural character.

The relatively enclosed nature of Lower Stuart Street contrasts with the more open character of Anzac Square and the area around the Railway Station. This openness affords opportunities to view the Railway Station unencumbered by other buildings. Unfortunately, the channelling of State Highway One in front of the Railway Station along Castle Street fragments Anzac Square, and inhibits opportunities to improve the area as a people-orientated space. The one-way system also creates severance mid-way through the precinct at Cumberland Street, creating a barrier to improved pedestrian and cycle flows and undermining the quality of the pedestrian experience between the Railway Station and Octagon.

The precinct is home to a wide range of activities, from newspaper production to judicial activities and commercial office activity. The shops in the area have gradually become more specialised, and there is an increasing number of bars, cafes and restaurants, particularly in the blocks closest to the Octagon where there is a strong entertainment hub.

The small number of more modern buildings in the precinct do not share the style or form of earlier heritage and character-contributing buildings. The design of these buildings has also typically paid less attention to detailing and the relationship of the ground floor to the pedestrian environment. Because these buildings are few in number and clustered together, they do not detract too strongly from the character of the precinct.

New buildings or alterations in the precinct should be more consistent in terms of scale, positioning, and style and aspire to a higher quality. This does not mean that new buildings need to replicate heritage buildings or features, per se, but should be of high architectural value, creative, and insert more seamlessly into the streetscape by reflecting features of the surrounding heritage buildings that give the area its quality and character. New buildings should use creative design to enhance the urban feel of the area and reflect the core values detailed below without attempting to dominate the existing heritage architecture, which should remain the key defining characteristic of the area. Any new buildings or alterations should also respect the important heritage vistas through the precinct towards the Railway Station and St Paul's Cathedral.

#### A2.2.3.2 Values to be protected or enhanced

The following features and characteristics have been identified as important to protect or enhance:

- a. Protect
  - i. The large number of scheduled heritage and character-contributing buildings in the area
  - ii. A dense concentration of buildings creating a strong urban feel
  - iii. The use of rhythm, modulation, and permanent materials in design
  - iv. The views through the Precinct to the Railway Station and the Octagon/St Paul's Cathedral
  - v. The cluster of monumental, civic buildings at the lower end of the precinct.
- b. Enhance
  - i. Restoration and re-use of existing buildings
  - ii. The quality of the pedestrian environment

#### A2.2.3.3 Principal threats to values

- a. Demolition of existing scheduled heritage and character-contributing buildings
- b. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- c. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- d. The removal or original materials and features from heritage and character-contributing buildings
- e. Further intensification of the state highway network and condition of one-way system
- f. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.2.3.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage or character-contributing buildings, unless these buildings are inconsistent with the typical heights in the precinct.	Preferred
b. Bulk and location		
i.	Building frontages should be constructed within 400 mm of the road boundary. Buildings should occupy the full width of the site.	Preferred
c. Car parking		
i.	Off street car parking is not visible from the road, either located behind or within the building.	Preferred
ii.	Vehicle crossings should be kept to a minimum. Crossings built into buildings are more acceptable than those that mean the building does not occupy the full width of its site.	Preferred
d. Design		
i.	Buildings should reference the area's commercial/retail heritage and be sympathetic to surrounding heritage and character-contributing buildings.	Preferred

Features or characteristics		Suggested/Preferred
ii.	New buildings will generally draw important design cues from Victorian, Edwardian or inter-war heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitches, window alignment, materials and details, although these may expressed in a simpler fashion than on historic buildings.	Preferred
iii.	Façades should have a solid appearance.	Preferred
iv.	Corner buildings should have architectural detail to all road frontages.	Preferred
v.	Façades should be visually subdivided and the composition (including windows) should emphasise a vertical dimension consistent with heritage and character-contributing buildings in the precinct.	Suggested
vi.	Division of the façade should be consistent with floor levels of neighbouring heritage or character-contributing buildings wherever possible.	Suggested
vii.	Long façades should be broken into vertical bays.	Suggested
viii.	Rooflines should be concealed behind parapets or other architectural features.	Suggested
ix.	Ornament or detail should be included as an integral part of the design of the façade.	Suggested
x.	Window layout should be symmetrical and/or rhythmical.	Suggested
xi.	Windows on long façades should be arranged in groups.	Preferred
xii.	Windows should be largely transparent.	Preferred
xiii.	Verandahs should be continuous, except where installation of a verandah will compromise the architecture of a scheduled heritage building.	Suggested
xiv.	In existing scheduled heritage buildings, original ground floor apertures should be retained, limiting the amount of ground floor glazing.	Preferred
xv.	In scheduled heritage and character-contributing buildings, historic shop front details such as glazing, lead-lighting and tiles should be retained.	Preferred
xvi.	Entrances should be well defined.	Preferred
xvii.	Mirrored glass and heavy tinting should be avoided.	Suggested
xviii.	Car parking buildings should be designed with the same design criteria as other buildings above in mind, although they may replace glazing with other façade treatments. Cars should be only minimally visible from public places through the façade.	Preferred
<b>e. Materials</b>		
i.	Building façades should be clad in materials such as plaster, brick, stone or concrete, which are visually consistent with the traditional materials of the precinct.	Suggested
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials or variations in their use to create shadow/depth and visual interest in the façade.	Suggested
iii.	Unrendered brick, stone and concrete should remain unrendered on existing buildings except where this does not contribute to the character of the building.	Preferred
<b>f. Colour</b>		

<b>Features or characteristics</b>		<b>Suggested/Preferred</b>
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick, stone, and concrete should remain unpainted on existing buildings except where this does not contribute to the character of the building.	Preferred
iii.	Painted heritage signs on the side and rear of buildings should be retained and not removed or painted over.	Preferred
<b>g. Signs</b>		
i.	Signs should not dominate façades or conceal windows or architectural features.	Preferred
ii.	Signs (other than small information and direction signs) should be avoided on the Dunedin Prison, Railway Station, and Law Courts buildings. Preference should be given to stand-alone signs for these buildings to avoid negative effects on the architecture of the building.	Preferred
<b>h. Other</b>		
i.	Service areas and building utilities should not be located on façades, in order to reduce visual clutter. Where located at the side of buildings in areas visible to the public, they should be installed discreetly or screened from view.	Preferred
ii.	Public spaces, including footpaths, should be kept free of unnecessary clutter and infrastructure to ensure maximum enjoyment of the public space, other than where the development contributes to improved vibrancy and public use of the area.	Preferred
iii.	Street furniture is of high quality and sympathetic to the heritage values and character of the area. However, this does not mean it has to be Victorian replica in style.	Preferred
iv.	Above ground network utilities should be avoided wherever possible. Where they cannot be avoided, they should be located sensitively and efforts undertaken to reduce the visual impact of the infrastructure, including paying particular attention to design and materials, or disguising the form through the incorporation of art, furniture or design elements.	Preferred
v.	Visual connections between the Octagon and Railway Station should be unimpeded.	Preferred
vi.	The curtilage in front of Railway Station, Law Courts and former Dunedin Prison is kept free of unnecessary clutter/structures to ensure that the architectural detail of these buildings is not obstructed.	Preferred

## **A2.2.4 Moray Place - Dowling Street Commercial Heritage Precinct**

### A2.2.4.1 Description of area

The Moray Place - Dowling Street Commercial Heritage Precinct is comprised of Moray Place south of Stuart Street and adjoining areas of Dowling Street and Burlington Street. It adjoins the Princes Street - Exchange Commercial Heritage Precinct and The Octagon Commercial Heritage Precinct.

The area is dominated by large, monumental, high quality heritage buildings, demonstrating architectural styles popular from the late 1800s through to the 1920s. These reflect the area's early history as a commercial hub for the city. Although the retail and office role of the area has declined over time, many of the buildings are being repurposed and attracting new uses to the area, including a growing amount of residential activity. There is an emerging arts hub in the area with many of the city's galleries located in and around Moray Place and Dowling Street. Unfortunately, much of the area was omitted from the streetscape upgrade in the 1990s, although this does not appear to have affected the current investment in building re-use or the quality of businesses that have chosen to locate in the area.

The buildings in this part of the city tend to be taller than in other parts of the central city, similar to the adjoining Princes Street - Exchange Commercial Heritage Precinct, typically between three and five storeys high, excluding basements. Buildings tend to be constructed of solid, permanent materials like stone, brick and masonry, with a strong emphasis on architectural detail and expression. Many heritage buildings retain original ground floor fenestration or highly detailed historic retail shop fronts (particularly from the 1920s and 1930s) and have not been altered or modernised to the same degree as their counterparts on George or Princes Streets. These give a unique quality to the streetscape and contribute to the attractive pedestrian environment. There are fewer verandahs in the area than elsewhere in the central city, which provides more opportunities to appreciate the architectural quality of the buildings, but also means there is less protection from the elements for pedestrians. Also important are the number of interesting alleys and spaces created to the sides and rear of buildings, which offer opportunities for urban renewal and improved connectivity between this and other precincts.

First Church provides a strong focal point within the precinct. The open grounds assist to emphasise the verticality and quality architecture of the building. The grounds and established vegetation add important green space to the central city, offering respite from the dense urban environment around it. The exposed rock and narrowness of Burlington Street is reinforced by buildings like Burns Hall, Garrison Hall, and the Commerce building. These features combine to create a sense of enclosure which is important to retain, and could be further reinstated with construction on the vacant site at the foot of Bell Hill.

In the lower part of the precinct there are important views into Queens Gardens and down the long, straight roads towards South Dunedin, the harbour and peninsula. The topography at Dowling and Burlington Streets provides for elevated views out from the precinct and interesting architectural responses to the changes in elevation.

There are a small number of more modern buildings in the precinct dating from the 1960s/1970s. Unfortunately, these are not all of a high architectural quality or built in a style that is sensitive to the surrounding character. Often these buildings have deviated from the otherwise consistent building line, added substantial height or contrasting materials, and interrupted the rhythm of the streetscape. These buildings have also typically paid less attention to detailing and the relationship of their ground floor to the pedestrian environment.

New buildings in the precinct should be consistent with the Victorian and Edwardian buildings in terms of scale, positioning, and style and aspire to a high quality. This does not mean that new buildings need to replicate heritage buildings or features, per se, but should be of high architectural value, creative, and insert seamlessly in the streetscape by reflecting features of the surrounding heritage buildings that give the area its quality and character. New buildings should use creative design to enhance the urban feel of the area and reflect the core values below without attempting to dominate the existing heritage architecture, which should remain the key defining characteristic of the area.

#### A2.2.4.2 Values to be protected or enhanced

The following features and characteristics have been identified as important to protect or enhance:

- a. Protect
  - i. The large number of scheduled heritage and character-contributing buildings in the area
  - ii. A dense concentration of buildings creating a strong urban feel
  - iii. The use of rhythm, modulation, and permanent materials in design
  - iv. Original ground floor fenestration and historic shopfronts
  - v. Alleyways
- b. Enhance
  - i. Consistent building lines with buildings built to the front boundary
  - ii. More consistency in building height and scale
  - iii. A stronger focus on pedestrian amenity at ground floor
  - iv. Re-building in gaps in the streetscape, particularly those created by the demolition of the former Otago Daily Times buildings and others along the former alignment of High Street

#### A2.2.4.3 Principal threats to values

- a. Further demolition of existing scheduled heritage and character-contributing buildings
- b. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- c. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- d. The development of new buildings that are taller than First Church or the loss of the green space around the church grounds
- e. The removal of original materials and features from heritage and character-contributing buildings, including modern buildings where these materials were chosen to be consistent with the character of the area
- f. At-grade off-street car parking visible within the streetscape
- g. Gaps in the streetscape
- h. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.2.4.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage or character-contributing buildings, unless these buildings are inconsistent with the typical heights in the precinct.	Preferred
b. Bulk and location		
i.	Building frontages should be constructed within 400 mm of the road boundary. Buildings should occupy the full width of the site.	Preferred
c. Car parking		

Features or characteristics		Suggested/Preferred
i.	Off-street car parking is not visible from the road, either located behind or within the building.	Preferred
ii.	Vehicle crossings should be kept to a minimum. Crossings built into buildings are more acceptable than those that mean the building does not occupy the full width of its site.	Preferred
d. Design		
i.	Buildings should reference the area's commercial heritage and be sensitive to surrounding heritage and character-contributing buildings which are characterised by their quality, substantial and monumental design.	Preferred
ii.	New buildings will generally draw important design cues from Victorian and Edwardian heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitches, window alignment, materials and details, although these may be expressed in a simpler fashion than on historic buildings.	Preferred
iii.	Façades should have a solid appearance.	Suggested
iv.	Corner buildings should have architectural detail to all road frontages.	Preferred
v.	Façades should be visually subdivided (base, middle and top), and the composition (including windows) should emphasise a vertical dimension consistent with heritage and character-contributing buildings in the precinct.	Suggested
vi.	Division of the façade should be consistent with floor levels of neighbouring heritage or character-contributing buildings wherever possible.	Suggested
vii.	Rooflines should be concealed behind parapets or other architectural features.	Suggested
viii.	Ornament or detail should be included as an integral part of the design of the façade.	Suggested
ix.	Window layout should be symmetrical and/or rhythmical.	Suggested
x.	Windows on long façades should be arranged in groups.	Suggested
xiv.	Windows should be largely transparent.	Preferred
xv.	Verandahs should be continuous, except where installation of a verandah will compromise the architecture of a scheduled heritage building.	Suggested
xvi.	In existing scheduled heritage buildings, original ground floor apertures should be retained, limiting the amount of ground floor glazing.	Preferred
xvii.	In scheduled heritage and character-contributing buildings, historic shop front details such as glazing, lead-lighting and tiles should be retained.	Preferred
xviii.	Entrances should be well defined.	Preferred
xix.	Mirrored glass and heavy tinting should be avoided.	Suggested
xx.	Car parking buildings should be designed with the same design criteria as other buildings above in mind, although they may replace glazing with other façade treatments. Cars should be only minimally visible from public places through the façade.	Preferred
e. Materials		

<b>Features or characteristics</b>		<b>Suggested/Preferred</b>
i.	Building façades should be clad in permanent, robust materials such as plaster, brick, stone or concrete, which are visually consistent with the traditional materials of the precinct.	Suggested
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials or variations in their use to create shadow/depth and visual interest in the façade.	Suggested
iii.	Unrendered brick, stone and concrete should remain unrendered on existing buildings except where this does not contribute to the character of the building.	Preferred
<b>f. Colour</b>		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick, stone, and concrete should remain unpainted on existing buildings except where this does not contribute to the character of the building.	Preferred
iii.	Painted heritage signs on the side and rear of buildings should be retained and not removed or painted over.	Preferred
<b>g. Signs</b>		
i.	Signs should not dominate façades or conceal windows or architectural features.	Preferred
<b>h. Other</b>		
i.	Service areas and building utilities should not be located on façades, in order to reduce visual clutter. Where located at the side of buildings in areas visible to the public, they should be installed discreetly or screened from view.	Preferred
ii.	Public spaces, including footpaths, should be kept free of unnecessary clutter and infrastructure to ensure maximum enjoyment of the public space, other than where the development contributes to improved vibrancy and public use of the area.	Preferred
iii.	Street furniture is of high quality and sympathetic to the heritage values and character of the area. However, this does not mean it has to be Victorian replica in style.	Preferred
iv.	Above ground network utilities should be avoided wherever possible. Where they cannot be avoided, they should be located sensitively and efforts undertaken to reduce the visual impact of the infrastructure, including paying particular attention to design and materials, or disguising the form through the incorporation of art, furniture or design elements.	Preferred

## **A2.2.5 Princes Street - Exchange Commercial Heritage Precinct**

### A2.2.5.1 Description of area

The Princes Street - Exchange Commercial Heritage Precinct is comprised of Princes Street south of Moray Place to the five way intersection at Jetty/Princes/Stafford/Manse Street. It includes the Exchange and adjoining areas of Stafford and High Streets.

The Toitū tauraka waka, now located under the Exchange Plaza, was one of several Kāi Tahu landing places in the Otago Harbour at the time of colonial settlement of the Otago region. Situated beside the Toitū creek as it emptied into the harbour, the tauraka waka site provided a softly sloped beach for landing waka, a good point of entry to the surrounding bush and mahika kai, as well as access to fresh water.

The area is dominated by many of the city's largest and tallest office buildings and most of its major hotels. These large buildings represent key periods of the city's development and give the area a more diverse range of architectural styles than other parts of the central city. The area is home to buildings from almost every decade of the twentieth century and there are prominent examples from the Victorian, Inter-war, Modern, and post-Modern periods, which contribute to the character of the area. Unfortunately, not all of this past architectural innovation in the area has been positive. While there are some good examples of architectural styles, not all buildings are of high architectural value. Nor have they all contributed positively to the surrounding area.

The desire to make a contemporary design statement and promote "regeneration" has, in the past, seen too much focus on the individual site and building and too little reference to the surrounding area, local characteristics or environmental factors. Characteristics like height, materials and layout have exacerbated issues such as shadowing, wind funnelling, a lack of active frontage and passive surveillance, and the creation of awkward spaces that have undermined the attractiveness of the area as a people space. Some of the area's better modern architecture has also been negatively impacted by later alterations which have undermined the original design qualities without improving the overall contribution to the character of the wider area.

The heritage and character-contributing buildings in the area are similarly mixed in terms of style, scale, quality, condition and authenticity. They range from small two storeyed shops with modified façades to significant, monumental heritage buildings that still demonstrate the early wealth of the city and this area's role as its commercial hub. Unfortunately, this area has also experienced the greatest loss of its early architecture (including the building the Exchange area was named after), both to facilitate the redevelopment discussed above and, increasingly, to provide open-air car parks which have symbolised the area's declining fortunes. The number of gaps in the streetscape has grown over time, particularly in side streets off Princes Street. This has led to a reduction of the size of the earlier townscape precinct.

On the positive side, in recent years there have been some of the city's most impressive and innovative re-use and restoration efforts in the area. Buildings like the former National Bank, Bank of New Zealand, Standard building, Bing Harris/Clarion buildings, and former Chief Post Office have demonstrated the potential for the area's heritage buildings as contemporary work spaces and as promoters of physical and economic urban regeneration. There are positive signs of a growing regeneration in the area, assisted by high-profile heritage re-use and restoration projects and growing revitalisation in the neighbouring Warehouse Industrial Commercial Heritage Precinct.

The above factors mean that the area is less consistent in terms of design and physical form than other parts of the city. Buildings range from 1 to 14 storeys and are constructed from a range of different materials from brick and masonry, concrete and stone, to glass curtain wall construction. Styles are eclectic, with varying setbacks and building form.

While the area is more mixed than many other heritage precincts, the guidelines draw most strongly on the character of the heritage (Victorian and Edwardian) buildings in the area. This is due to the quality of these buildings and the fact that these buildings have a style, scale and character that is most highly appreciated by the city's residents. New development should seek to positively transform the precinct, increase legibility, contribute to regeneration,

encourage visitation, and respect the area's history. This is not to say that new buildings should slavishly replicate heritage buildings. However, they should be of high architectural value, creative, and insert more seamlessly into the streetscape by reflecting features of the surrounding heritage buildings, to restore and enhance the area's character into the future.

#### A2.2.5.2 Values to be protected or enhanced

The following features and characteristics have been identified as important to protect or enhance:

- a. Protect:
  - i. The large number of scheduled heritage and character-contributing buildings in the area
  - ii. A dense concentration of buildings creating a strong urban feel
  - iii. The use of rhythm, modulation, and permanent materials in design
  - iv. A lack of vehicle crossings
  - v. Kāi Tahu values
- b. Enhance:
  - i. Consistent building lines with buildings built to the front boundary
  - ii. More consistent building heights and scale
  - iii. A stronger focus on pedestrian amenity at ground floor
  - iv. Recognition of Kāi Tahu values through collaboration with Kāi Tahu in the design of public spaces, including planting, use of Kāi Tahu place names, public art works, and interpretive material.

#### A2.2.5.3 Principal threats to values

- a. Further demolition of existing scheduled heritage and character-contributing buildings
- b. Low levels of maintenance and investment
- c. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- d. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- e. The removal of original materials and features from heritage and character-contributing buildings, including modern buildings, where these materials were chosen to be consistent with the character of the area
- f. Off-street car parking visible within the streetscape
- g. Gaps in the streetscape
- h. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.2.5.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage or character-contributing buildings, unless these buildings are inconsistent with the typical heights in the precinct.	Preferred
b. Bulk and location		

<b>Features or characteristics</b>		<b>Suggested/Preferred</b>
i.	Building frontages should be constructed within 400 mm of the road boundary. Buildings should occupy the full width of the site.	Preferred
<b>c. Car parking</b>		
i.	Off-street car parking is not visible from the road, either located behind or within the building.	Preferred
ii.	Vehicle crossings should be kept to a minimum. Crossings built into buildings are more acceptable than those that mean the building does not occupy the full width of its site.	Preferred
<b>d. Design</b>		
i.	Buildings should reference the area's commercial heritage and be sensitive to surrounding heritage and character-contributing buildings which are characterised by their quality, substantial and monumental design.	Preferred
ii.	New buildings will generally draw important design cues from Victorian and Edwardian heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitches, window alignment, materials and details, although these may be expressed in a simpler fashion than on historic buildings.	Preferred
iii.	Façades should have a solid appearance.	Suggested
iv.	Corner buildings should have architectural detail to all road frontages.	Preferred
v.	Façades should be visually subdivided (base, middle and top), and the composition (including windows) should emphasise a vertical dimension consistent with heritage and character-contributing buildings in the precinct.	Suggested
vi.	Division of the façade should be consistent with floor levels of neighbouring heritage or character-contributing buildings wherever possible.	Suggested
vii.	Rooflines should be concealed behind parapets or other architectural features.	Suggested
viii.	Ornament or detail should be included as an integral part of the design of the façade.	Suggested
ix.	Window layout should be symmetrical and/or rhythmical.	Suggested
x.	Windows on long façades should be arranged in groups.	Suggested
xi.	Windows should be largely transparent.	Preferred
xii.	Verandahs should be continuous, except where installation of a verandah will compromise the architecture of a scheduled heritage building.	Suggested
xiii.	In existing scheduled heritage buildings, original ground floor apertures should be retained, limiting the amount of ground floor glazing.	Preferred
xiv.	In scheduled heritage and character-contributing buildings, historic shop front details such as glazing, lead-lighting and tiles should be retained.	Preferred
xv.	Entrances should be well defined.	Preferred
xvi.	Mirrored glass and heavy tinting should be avoided.	Suggested

Features or characteristics		Suggested/Preferred
xvii.	Car parking buildings should be designed with the same design criteria as other buildings above in mind, although they may replace glazing with other façade treatments. Cars should be only minimally visible from public places through the façade.	Preferred
e. Materials		
i.	Building façades should be clad in permanent, robust materials such as plaster, brick, stone or concrete, which are visually consistent with the traditional materials of the precinct.	Suggested
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials or variations in their use to create shadow/depth and visual interest in the façade.	Suggested
iii.	Unrendered brick, stone and concrete should remain unrendered on existing buildings except where this does not contribute to the character of the building.	Preferred
f. Colour		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick, stone, and concrete should remain unpainted on existing buildings except where this does not contribute to the character of the building.	Preferred
iii.	Painted heritage signs on the side and rear of buildings should be retained and not removed or painted over.	Preferred
g. Signs		
i.	Signs should not dominate façades or conceal windows or architectural features.	Preferred
h. Other		
i.	Service areas and building utilities should not be located on façade, in order to reduce visual clutter. Where located at the side of buildings in areas visible to the public, they should be installed discreetly or screened from view.	Preferred
ii.	Public spaces, including footpaths, should be kept free of unnecessary clutter and infrastructure to ensure maximum enjoyment of the public space, other than where the development contributes to improved vibrancy and public use of the area.	Preferred
iii.	Street furniture is of high quality and sympathetic to the heritage values and character of the area. However, this does not mean it has to be Victorian replica in style.	Preferred
iv.	Above ground network utilities should be avoided wherever possible. Where they cannot be avoided, they should be located sensitively and efforts undertaken to reduce the visual impact of the infrastructure, including paying particular attention to design and materials, or disguising the form through the incorporation of art, furniture or design elements.	Preferred

## **A2.2.6 South Princes Commercial Heritage Precinct**

### **A2.2.6.1 Description of area**

The South Princes Commercial Heritage Precinct comprises the area of South Princes Street from Jetty Street to Hope Street. The area is strongly defined by its Victorian commercial buildings and while a number have been stripped of some of their earlier detail or re-façaded in more modern styles, there is a consistency of scale and rhythm in addition to the continued existence of heritage features away from the Princes Street façades.

South Princes Street was an integral part of the city's earliest commercial-retail hub and a number of the buildings date from this early period of the city's development, as some of its first permanent buildings. Over time, as the retail heart of the city has moved northward to George Street, lower levels of private and public investment have seen the area decline in comparison to other parts of the city. At the time of developing this Plan, retail and office occupancy is low although there are some signs of early regeneration in the area, building on investment in adjacent areas.

In 1852, after being petitioned by Māori, Walter Mantell, Commissioner of Crown Lands wrote to Governor Grey asking him to grant "a small portion of land" in Dunedin and Port Chalmers for the building of houses. The "small portion of land" in Dunedin became known as the Princes Street Reserve. The loss of the reserve formed part of the Ngāi Tahu Waitangi Tribunal claim.

Lower pressure for redevelopment has meant there remain a larger number of 19th and early 20th century buildings here than in many other precincts. These buildings are typically commercial in character, with retail at the ground floor and offices or residential activity above. Buildings are constructed of solid, permanent materials, with a strong emphasis on architectural detail and expression.

On the western side of the Precinct the buildings are two-three storeys high at Princes Street. On the eastern side they are two storeys at Princes Street, but those through the middle of the block have a further one-two basement levels below Princes Street opening to an alleyway accessed off Bond Street. The alley itself is formed by the fact these buildings do not extend over the full depth of their sites. This alleyway is one of Dunedin's most unique and significant service lanes and is a slice of Victorian Dunedin. The alleyway has been relatively unchanged over time, and still exhibits early advertising signs painted onto the brick of the upper levels of the buildings, stone foundations, workshop doors, loading docks and hoists used to load goods from what was sea level. This alley has substantial potential for improved use and interpretation in future and should be protected as robustly as the façades to Princes Street.

The lower levels of investment and lesser value attributed to the area over preceding decades means that alterations to buildings in the precinct have not always been of a high architectural quality and modern insertions have not been particularly sensitive to the context of the precinct. New buildings in the precinct should be more consistent in terms of scale, positioning, and style and aspire to a higher quality. This does not mean that new buildings need to replicate heritage buildings or features, per se, but should be of higher architectural value, creative, and insert more seamlessly into the streetscape, by reflecting features of the surrounding heritage buildings that give the area its quality and character. New buildings should use creative design to enhance the urban feel of the area and reflect the core values below with attempting to dominate the existing heritage architecture, which should remain the key defining characteristic of the area. Alterations to existing buildings should aim to enhance or restore the Victorian character of the area, rather than detracting from it further.

The topography and street layout allow significant views to both of the city's northern and southern hill suburbs. The Princes Street carriageway is unusually wide compared to other central city streets in comparison to the scale of the buildings, which reduces the sense of enclosure but also enables good solar access. New developments should protect this good solar access for existing buildings and public spaces. However, future changes to the precinct (both in terms of private and public space developments) could also contribute positively to the sense of enclosure and legibility within the precinct, particularly by improving the built form at the edges of the precinct, for example on the former Century Theatre site and at the southern entrance to the precinct.

#### A2.2.6.2 Values to be protected or enhanced

- a. The large number of scheduled heritage and character-contributing buildings in the area
- b. Consistent building lines with buildings built to the front boundary
- c. Consistent building heights and scales
- d. The use of rhythm, modulation, and permanent materials in design
- e. A lack of vehicle crossings
- f. A strong focus on pedestrian amenity at ground floor
- g. Recognition of Kāi Tahu values through collaboration with Kāi Tahu in the design of public spaces, including planting, use of Kāi Tahu place names, public art works, and interpretive material.

#### A2.2.6.3 Principal threats to values

- a. Further demolition of existing scheduled heritage and character-contributing buildings
- b. Low levels of maintenance and investment
- c. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- d. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- e. The removal of original materials and features from heritage and character-contributing buildings
- f. Ground level off-street car parking visible within the streetscape
- g. Gaps in the streetscape
- h. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.2.6.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage or character-contributing buildings, unless these buildings are inconsistent with the typical heights in the precinct.	Preferred
b. Bulk and location		
i.	Building frontages should be constructed within 400 mm of the road boundary. Buildings should occupy the full width of the site.	Preferred
ii.	Buildings to the lower side of Princes Street (between 377 Princes Street and 417 Princes Street) should not be built to the rear boundary, protecting the unique alley accessible from Bond Street.	Suggested
c. Car parking		
i.	Off street car parking is not visible from the road, either located behind or within the building.	Preferred
ii.	Vehicle crossings should be kept to a minimum. Crossings built into buildings are more acceptable than those that mean the building does not occupy the full width of its site.	Preferred

Features or characteristics		Suggested/Preferred
d. Design		
i.	Buildings should reference the area's commercial/retail heritage and be sympathetic to surrounding heritage and character-contributing buildings.	Preferred
ii.	New buildings will generally draw important design cues from Victorian and Edwardian heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitches, window alignment, materials and details, although these may expressed in a simpler fashion than on historic buildings.	Preferred
iii.	Façades should have a solid appearance.	Suggested
iv.	Corner buildings should have architectural detail to all road frontages.	Preferred
v.	Façades should be visually subdivided and the composition (including windows) should emphasise a vertical dimension consistent with heritage and character-contributing buildings in the precinct.	Suggested
vi.	Façades to the Bond St alley should reflect a more utilitarian and industrial character, sympathetic to existing heritage buildings in that area.	Preferred
vii.	Division of the façade should be consistent with floor levels of neighbouring heritage or character-contributing buildings wherever possible.	Suggested
viii.	Buildings are typically narrow. Long façades should be broken into vertical bays.	Suggested
ix.	Rooflines should be concealed behind parapets or other architectural features.	Suggested
x.	Ornament or detail should be included as an integral part of the design of the façade.	Suggested
xi.	Window layout should be symmetrical and/or rhythmical.	Suggested
xii.	Windows on long façades should be arranged in groups.	Suggested
xiii.	Windows should be largely transparent.	Suggested
xiv.	Ground floors to the Bond St alleyway may include garage doors, but these should be in character style and faced with timber.	
xv.	Verandahs should be continuous, except where installation of a verandah will compromise the architecture of a scheduled heritage building.	Suggested
xvi.	In existing scheduled heritage buildings, original ground floor apertures should be retained, limiting the amount of ground floor glazing.	Preferred
xvii.	In scheduled heritage and character-contributing buildings, historic shop front details such as glazing, lead-lighting and tiles should be retained.	Preferred
xviii.	Mirrored glass and heavy tinting should be avoided.	Suggested
xix.	Car parking buildings should be designed with the same design criteria as other buildings above in mind, although they may replace glazing with other façade treatments. Cars should be only minimally visible from public places through the façade.	Preferred
e. Materials		

Features or characteristics		Suggested/Preferred
i.	Building façades should be clad in materials such as plaster, brick, stone or concrete, which are visually consistent with the traditional materials of the precinct.	Suggested
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials or variations in their use to create shadow/depth and visual interest in the façade.	Suggested
iii.	Unrendered brick, stone and concrete should remain unrendered on existing buildings except where this does not contribute to the character of the building.	Preferred
f. Colour		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick, stone, and concrete should remain unpainted on existing buildings except where this does not contribute to the character of the building.	Preferred
iii.	Painted heritage signs on the side and rear of buildings should be retained and not removed or painted over.	Preferred
g. Signs		
i.	Signs should not dominate façades or conceal windows or architectural features.	Preferred
ii.	Signs to Bond St alley should be limited in scale and on basement ground floor only.	Preferred
h. Other		
i.	Service areas and building utilities should not be located on façades, in order to reduce visual clutter. Where located at the side of buildings in areas visible to the public, they should be installed discreetly or screened from view.	Preferred
ii.	Public spaces, including footpaths, should be kept free of unnecessary clutter and infrastructure to ensure maximum enjoyment of the public space, other than where the development contributes to improved vibrancy and public use of the area.	Preferred
iii.	Street furniture is of high quality and sympathetic to the heritage values and character of the area. However, this does not mean it has to be Victorian replica in style.	Preferred
iv.	Above ground network utilities should be avoided wherever possible. Where they cannot be avoided, they should be located sensitively and efforts undertaken to reduce the visual impact of the infrastructure, including paying particular attention to design and materials, or disguising the form through the incorporation of art, furniture or design elements.	Preferred

## **A2.2.7 Warehouse Industrial Commercial Heritage Precinct**

### A2.2.7.1 Description of area

The Warehouse Industrial Commercial Heritage Precinct comprises the area south of Queens Gardens to Police Street, including parts of Cumberland Street, Vogel Street, Crawford Street and Bond Street running north to south, and Rattray Street/Queens Gardens, Water Street, Jetty Street and Police Street running east to west.

The precinct occupies land reclaimed during the late 19th century, which gradually extended the earlier foreshore well beyond its original alignment closer to Princes Street. Traces of the early foreshore can be seen in the topography along the edge of the Precinct where it joins the Princes Street - Exchange and South Princes Commercial Heritage precincts. Some of the buildings along this edge pre-date the completion of the reclamations and their sites would have once been on the foreshore. Parts of Vogel Street also have an important historic association with the New Zealand and South Seas Exhibition of 1889-1890, which occupied recently reclaimed land.

Due to the area's proximity to the railway and port, and its flat topography, the area became popular with industrial, shipping and warehousing businesses. These businesses constructed the numerous Victorian and Edwardian industrial and warehousing buildings that still define the character of the area today. The area's proximity to the city's commercial and banking hub in the Exchange also meant it was a popular location for insurance, financial and other commercial businesses, which chose to locate their head offices in the area. The area's important commercial role and the wealth of Dunedin at the time are evidenced in the quality and style of the buildings that were constructed here. These buildings are typically large scale, constructed in stone, brick and concrete and include substantial architectural detail. Even where the more elaborate Victorian detail has been removed to modernise the buildings in the past, the basic Victorian forms, rhythm and scale of buildings have been retained, meaning there is a sense of cohesion to the area. The area also retains its industrial character, with its wide streets, relative absence of large glazed shop fronts and verandahs, continued widespread existence of loading docks and garage doors, evidence of cellars, and block-wide multiple frontage buildings. "No-name" alley, off Bond Street, is one of the city's gems, complete with painted signs and towering brick and stone walls punctuated by loading docks for the shops above which front to Princes Street some two floors up.

The area's economic importance to the city declined in the middle part of the 20th century, as commerce and industry relocated from Dunedin. Like the neighbouring Exchange, this led to the demolition of buildings, although here it more often resulted in their non-replacement when they were damaged by events like fires or judged to be uneconomic to retain. This non-replacement of buildings means there have been a number of sites vacant for many years, used for open air car parking rather than being redeveloped with modern buildings. While this has left gaps in the streetscape, it also means there are few modern buildings to detract from the earlier historic character. Filling these gaps with character-contributing buildings and avoiding the loss of further buildings in the future is important to protect and enhance the character of the area.

New buildings in the precinct should be more consistent with the area's heritage buildings in terms of scale, bulk, location and character. This does not mean that new buildings need to replicate heritage buildings or features, per se, but should be of high architectural value, creative, and insert more seamlessly into the streetscape by reflecting features of the surrounding heritage buildings that give the area its quality and character. Importantly, in this heritage precinct, new buildings should reference to the area's industrial past and robust architectural style. New buildings should use creative design to enhance the urban feel of the area and reflect the core values listed below without attempting to dominate the existing heritage architecture, which should remain the key defining characteristic of the area.

In recent years, revitalisation of the area has been occurring, with a growing number of the area's buildings being restored and re-purposed for residential, office, and other commercial uses. This adaptive re-use has built upon the popularity of the area for the creative sector, who have found the former industrial spaces ideal for their purposes. At the time of Plan development, the area is experiencing a renaissance, supported by co-operation between the private sector and the Dunedin City Council, which is investing in the public realm and a number of policy initiatives in order to

facilitate the enhancement of a vibrant creative precinct in the area. Future development should focus on sustaining this regeneration and the evolution of the area into a unique, mixed use inner city neighbourhood.

#### A2.2.7.2 Values to be protected or enhanced

The following features and characteristics have been identified as important to protect or enhance:

- a. Protect:
  - i. The large number of scheduled heritage buildings in the area
  - ii. A dense concentration of buildings creating a strong urban feel
  - iii. The use of rhythm, modulation, and permanent materials in design
  - iv. The alleyway in Bond Street
  - v. The industrial-commercial character
- b. Enhance:
  - i. Rebuilding on vacant sites
  - ii. Improved building maintenance and condition
  - iii. Restoration and re-use of existing buildings
  - iv. Reducing the impact of the transport network through the precinct

#### A2.2.7.3 Principal threats to values

- a. Further demolition of existing scheduled heritage and character-contributing buildings
- b. Low levels of maintenance and investment
- c. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- d. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- e. The removal of original materials and features from heritage and character-contributing buildings
- f. Ground level off-street car parking visible within the streetscape
- g. Gaps in the streetscape
- h. Further intensification of the state highway network and condition of one-way system
- i. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.2.7.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage or character-contributing buildings, unless these buildings are inconsistent with the typical heights in the precinct.	Preferred
b. Bulk and location		
i.	Building frontages should be constructed within 400 mm of the road boundary. Buildings should occupy the full width of the site.	Preferred
c. Car parking		

Features or characteristics		Suggested/Preferred
i.	Off-street car parking is not visible from the road, either located behind or within the building.	Preferred
ii.	Vehicle crossings should be kept to a minimum. Entrances to garages and loading bays are acceptable, but should be finished so they contribute to the historic industrial character of the area.	Preferred
<b>d. Design</b>		
i.	Buildings should reference the area's commercial heritage and be sensitive to surrounding heritage and character-contributing buildings which are characterised by their quality, substantial and monumental design.	Preferred
ii.	New buildings will generally draw important design cues from Victorian and Edwardian heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitches, window alignment, materials and details, although these may expressed in a simpler fashion than on historic buildings.	Preferred
iii.	Façades should have a solid appearance.	Suggested
iv.	Corner buildings should have architectural detail to all road frontages.	Preferred
v.	Façades should be visually subdivided (base, middle and top), and the composition (including windows) should emphasise a vertical dimension consistent with heritage and character-contributing buildings in the precinct.	Suggested
vi.	Division of the façade should be consistent with floor levels of neighbouring heritage or character-contributing buildings wherever possible.	Suggested
vii.	Buildings are typically narrow. Long façades should be broken into vertical bays.	Suggested
viii.	Rooflines should be concealed behind parapets or other architectural features.	Suggested
ix.	Restrained ornament or detail may be included as part of the façade design.	Suggested
x.	Window layout should be symmetrical and/or rhythmical.	Suggested
xi.	Windows on long façades should be arranged in groups.	Suggested
xii.	Windows should be largely transparent.	Preferred
xiii.	Verandahs are generally discouraged on buildings, but smaller shelters over doors may be considered where these are simple and do not detract from the design of the building or the character of the streetscape.	Suggested
xiv.	In existing scheduled heritage buildings, original ground floor apertures should be retained, limiting the amount of ground floor glazing.	Preferred
xv.	In scheduled heritage and character-contributing buildings, historic shop front details such as glazing, lead-lighting and tiles. should be retained.	Preferred
xvi.	Mirrored glass and heavy tinting should be avoided.	Suggested
xvii.	Car parking buildings should be designed with the same design criteria as other buildings above in mind, although they may replace glazing with other façade treatments. Cars should be only minimally visible from public places through the façade.	Preferred

Features or characteristics		Suggested/Preferred
e. Materials		
i.	Building façades should be clad in permanent, robust materials such as plaster, brick, stone or concrete, which are visually consistent with the traditional materials of the precinct.	Suggested
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials or variations in their use to create shadow/depth and visual interest in the façade.	Suggested
iii.	Unrendered brick, stone and concrete should remain unrendered on existing buildings except where this does not contribute to the character of the building.	Preferred
f. Colour		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick, stone, and concrete should remain unpainted on existing buildings except where this does not contribute to the character of the building.	Preferred
iii.	Painted heritage signs on the side and rear of buildings should be retained and not removed or painted over.	Preferred
g. Signs		
i.	Signs should not dominate façades or conceal windows or architectural features.	Preferred
h. Other		
i.	Service areas and building utilities should not be located on façades, in order to reduce visual clutter. Where located at the side of buildings in areas visible to the public, they should be installed discreetly or screened from view.	Preferred
ii.	Public spaces, including footpaths, should be kept free of unnecessary clutter and infrastructure to ensure maximum enjoyment of the public space, other than where the development contributes to improved vibrancy and public use of the area.	Preferred
iii.	Street furniture is of high quality and sympathetic to the heritage values and character of the area. However, this does not mean it has to be Victorian replica in style.	Preferred
iv.	Above ground network utilities should be avoided wherever possible. Where they cannot be avoided, they should be located sensitively and efforts undertaken to reduce the visual impact of the infrastructure, including paying particular attention to design and materials, or disguising the form through the incorporation of art, furniture or design elements.	Preferred

## **A2.2.8 Port Chalmers Commercial Heritage Precinct**

### **A2.2.8.1 Description of area**

Port Chalmers is typical of early New Zealand coastal towns and ports, still having its original street layout based around one road which follows the coast, intersected at right angles by a road leading inland from the sea. It is these two roads, Beach Street and George Street, that form the Port Chalmers Commercial Heritage Precinct. The precinct extends up George Street from the port entrance to the brow of the hill, taking in the area of highest density of heritage buildings.

In 1852, after being petitioned by Māori, Walter Mantell, Commissioner of Crown Lands wrote to Governor Grey asking him to grant "a small portion of land" in Dunedin and Port Chalmers for the building of houses. The "small portion of land" in Port Chalmers became known as the Koputai Native Reserve, now on Beach Street. Refer to A4.27 Koputai (Port Chalmers).

George Street slopes down to the wharf, effectively increasing the focus on the wharf and associated activity. Further, all angles lead toward this view. Although the appearance and operations of the port have changed dramatically over the years, the port area remains the strongest influence on the character of the precinct, with the presence of ships, cranes and containers. These are in constant change.

The economic buoyancy of the Port in the last century produced a range of Victorian architecture that is unusual for a settlement of its size. The face of the precinct has changed little over recent decades, although demolition and redevelopment in the southern end of the commercial centre have seen the protected precinct area shrink.

Overall, Port Chalmers remains a remarkably intact heritage precinct. Like the George Street Commercial Heritage Precinct in Dunedin, heritage buildings still dominate the streetscape, particularly along the main street, and there is remarkable consistency in terms of scale, form, and rhythm within the street. Victorian and Edwardian architectural styles predominate. Buildings are most commonly two storeys high with shop fronts at the ground floor and vertically orientated, symmetrical windows in solid façades above. One storey buildings often have a significant parapet that give vertical stature to the façade. Buildings tend to be narrow or divided into bays when wider. Brick and masonry are the most common construction materials. While some buildings have been stripped of their earlier architectural detail, most retain at least their basic original form and constitute an important fabric, even if they are not iconic buildings individually. There are also many buildings that do retain this architectural detail, including cornices, pediments and balusters, the decorative nature of which demonstrates the settlement's earlier wealth and impart an important character to the area today. Although there are fewer buildings with original ground floor façades below verandah level, due to the long history of retail use in the area and repeated changes of businesses, there do remain a large number of shop fronts from the pre-WW2 period, which add visual interest and character at street level.

There are a small number of modern buildings in the precinct. These modern buildings are generally non-contextual and non-character contributing, being of different scale and rhythm.

While there is not a strong pressure for redevelopment in the precinct, where new buildings are planned in the precinct they should be more consistent and sensitive in terms of scale, positioning and style, and aspire to a higher quality. This does not mean that new buildings need to replicate heritage buildings or features, per se, but should be of higher architectural value and insert more seamlessly into the streetscape by reflecting features of the surrounding heritage buildings that give the area its character. New buildings should use creative design to enhance the urban feel of the area and reflect the core values below without dominating the existing heritage architecture.

New buildings should also protect and enhance the broader character of the precinct, focusing towards the port and providing continued views across the port to the harbour beyond.

### **A2.2.8.2 Values to be protected or enhanced**

- a. The remaining heritage and character-contributing buildings in the area

- b. Lower building heights to maximise solar access and protect views of the port and harbour
- c. Buildings built to the front boundary
- d. Consistent building heights and scales
- e. The use of rhythm, modulation and permanent materials in design
- f. A minimum of vehicle crossings
- g. A strong focus on pedestrian amenity at ground floor
- h. Remaining historic shop fronts
- i. Recognition of Kāi Tahu values through collaboration with Kāi Tahu in the design of public spaces, including planting, use of Kāi Tahu place names, public art works, and interpretive material.

#### A2.2.8.3 Principal threats to values

- a. Further demolition of existing scheduled heritage and character-contributing buildings
- b. Emergence of gaps in the streetscape
- c. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings or to the public space they surround
- d. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area (e.g. aluminium windows in street façades)
- e. The removal or original materials and features from heritage and character-contributing buildings
- f. Removal of early character shop fronts and their replacement with inappropriate ground floor shop fronts
- g. Ground level off-street car parking visible with the streetscape
- h. Insufficient building maintenance
- i. Proliferation of signage
- j. Over-engineering and dominance of road for state highway network at expense of human and historic scale
- k. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.2.8.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage or character-contributing buildings, unless these buildings are inconsistent with the typical heights in the precinct.	Preferred
b. Bulk and location		
i.	Building frontages should be constructed within 400 mm of the road boundary. Buildings should occupy the full width of the site.	Preferred
c. Car parking		
i.	Off-street car parking is not visible from the road, either located behind or within the building.	Preferred
ii.	Vehicle crossings should be kept to a minimum.	Preferred

Features or characteristics		Suggested/Preferred
d. Design		
i.	Buildings should reflect a commercial/retail character and be sympathetic to existing heritage and character-contributing buildings. References to the area's port character should be considered.	Preferred
ii.	New buildings will generally draw important design cues from Victorian and Edwardian heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitches, window alignment, materials and details, although these may expressed in a simpler fashion than on historic buildings.	Preferred
iii.	Façades should have a solid appearance.	Suggested
iv.	Corner buildings should have architectural detail to all road frontages.	Preferred
v.	Façades should be visually subdivided (base, middle and top), and the composition (including windows) should emphasise a vertical dimension consistent with heritage and character-contributing buildings in the precinct.	Suggested
vi.	Division of the façade should be consistent with floor levels of neighbouring heritage or character-contributing buildings wherever possible.	Suggested
vii.	Buildings are typically narrow. Long façades should be broken into vertical bays.	Suggested
viii.	Rooflines should be concealed behind parapets or other architectural features.	Suggested
ix.	Ornament or detail should be included as an integral part of the design of the façade.	Suggested
x.	Window layout should be symmetrical and/or rhythmical.	Suggested
xi.	Windows on long façades should be arranged in groups.	Suggested
xii.	Windows should be largely transparent.	Preferred
xiii.	Verandahs should be continuous, except where installation of a verandah will compromise the architecture of a scheduled heritage building.	Suggested
xiv.	In existing scheduled heritage buildings, original ground floor apertures should be retained, limiting the amount of ground floor glazing.	Preferred
xv.	In scheduled heritage and character-contributing buildings, historic shop front details such as glazing, lead-lighting and tiles should be retained.	Preferred
xvi.	Mirrored glass and heavy tinting should be avoided.	Suggested
xvii.	Car parking buildings should be designed with the same design criteria as other buildings above in mind, although they may replace glazing with other façade treatments. Cars should be only minimally visible from public places through the façade.	
e. Materials		
i.	Building façades should be clad in materials such as plaster, brick, stone or concrete, which are visually consistent with the traditional materials of the precinct.	Suggested
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials or variations in their use to create shadow/depth and visual interest in the façade.	Suggested

Features or characteristics		Suggested/Preferred
iii.	Unrendered brick, stone and concrete should remain unrendered on existing buildings except where this does not contribute to the character of the building.	Preferred
f. Colour		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick, stone, and concrete should remain unpainted on existing buildings except where this does not contribute to the character of the building.	Preferred
iii.	Painted heritage signs on the side and rear of buildings should be retained and not removed or painted over.	Preferred
g. Signs		
i.	Signs should not dominate façades or conceal windows or architectural features.	Preferred
h. Other		
i.	Service areas and building utilities should not be located on façades, in order to reduce visual clutter. Where located at the side of buildings in areas visible to the public, they should be installed discreetly or screened from view.	Preferred
ii.	Public spaces, including footpaths, should be kept free of unnecessary clutter and infrastructure to ensure maximum enjoyment of the public space, other than where the development contributes to improved vibrancy and public use of the area.	Preferred
iii.	Street furniture is of high quality and sympathetic to the heritage values and character of the area. However, this does not mean it has to be Victorian replica in style.	Preferred
iv.	Above ground network utilities should be avoided wherever possible. Where they cannot be avoided, they should be located sensitively and efforts undertaken to reduce the visual impact of the infrastructure, including paying particular attention to design and materials, or disguising the form through the incorporation of art, furniture or design elements.	Preferred

## **A2.2.9 View Street Commercial Heritage Precinct**

### **A2.2.9.1 Description of area**

The View Street Commercial Heritage Precinct incorporates View Street between Moray Place and Tennyson Street. The area is strongly defined by its mix of heritage buildings, its location on the edge of the commercial heart of the CBD, and the imposing form of Otago Girls High School, which bounds the precinct to the south west and provides a strong visual anchor in the precinct. The view up View Street from Moray Place to Otago Girls High School is particularly important to protect and is well-framed by the buildings on either side of View Street.

The area exhibits a range of building styles, which tend to cluster in groups within the precinct.

The section encompassing the northern side of View Street and western section of Tennyson Street is dominated by brick early 20th century Edwardian buildings, predominantly built in brick with plaster detailing and anchored by the three impressive town houses (one a former manse) and the former Sunday school building. These buildings have small but important curtilage and setbacks, with front gardens, attractive walls and fences creating a more suburban feel. They generally have gabled roofs, are often clad in slate or tile, and with bay windows to the street frontage.

The section encompassing the southern side of View Street and eastern section of Tennyson Street houses a more eclectic style and range of building periods, with older properties at the lower end of View Street (plastered to give a 'modernised' appearance) large moderne/deco apartment blocks from 1934 dominating the top half of View Street, and two Victorian buildings defining the Tennyson Street section. Buildings on this side of View Street are built closer to the front boundary, if not on it, and present a much higher density, inner city feel. Roofs are concealed behind parapets and the buildings exhibit a more streamlined architectural appearance. The buildings present as larger complexes and flats rather than individual homes. The two Victorian buildings on Tennyson Street are set back further from the street frontages allowing historically for gardens, through both are currently used for car parking. Locating future development on these sites and the car park at 32A Tennyson Street more closely to the street would be positive for the consistency of the precinct.

In general terms, then, there are two dominant characteristics within the area: an Edwardian residential character to the north and a moderne/deco or Victorian character to the south. These differences should be recognised in assessing alterations and additions to existing buildings and any new buildings that are constructed in the precinct.

### **A2.2.9.2 Values to be protected or enhanced**

The following features and characteristics have been identified as important to protect:

- a. The large number of heritage and character-contributing buildings in the area
- b. The view of Otago Girls High School up View Street from Moray Place
- c. A general lack of visible off-street car parking, including garages and carports

#### **Northern section**

- d. Retaining red brick as primary construction material
- e. The visibility of small front gardens with low fences, walls or hedges
- f. The focus on buildings presenting attractive and welcoming façades to the street (fronts of building)
- g. Façades facing streets look like the front of a building with a clearly defined entrance way
- h. Buildings appear as individual residential homes
- i. Verticality in design

#### **Southern section**

- j. Use of concrete, plaster or equivalent as primary construction material

- k. Retaining predominant use of plaster and streamlined lines in design
- l. Shallow set backs on View Street
- m. New or additional development on Tennyson Street could benefit from being built closer to the street
- n. Verticality in design of Victorian buildings and a greater focus on horizontality in Art Deco buildings

**A2.2.9.3 Principal threats to values**

- a. The demolition of existing scheduled heritage and character-contributing buildings
- b. Insufficient maintenance of buildings
- c. Development of new buildings that are unsympathetic to existing buildings
- d. The replacement of building elements that make up key design features (e.g. replacement of original windows in Victorian, Edwardian or Art Deco buildings with insensitive window design)
- e. The removal of original materials and features from heritage buildings
- f. The use of inconsistent materials or styles in alterations to existing heritage and character buildings
- g. Large open car park sites
- h. The visibility of infrastructure and services related to student/medium-density housing where not well planned (rubbish and recycling bins, etc.)
- i. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

**A2.2.9.4 Features and characteristics to be incorporated into design**

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage or character-contributing buildings, unless these buildings are inconsistent with the typical heights in the precinct.	Preferred
b. Bulk and location		
i.	Buildings should be built close to the front boundary, consistent with the building line of adjacent scheduled heritage or character-contributing buildings.	Preferred
c. Car parking		
i.	Where possible, parking areas should be located discreetly to the rear of building. Where they are located at the front of the site, they should be set back from the road frontage and where possible, incorporate fencing, walls, hedges or landscaping to reduce the negative amenity effects and visibility of vehicles.	Preferred
ii.	Vehicle crossings should be kept to a minimum.	Preferred
d. Design		
i.	Building façades should reference the area's residential character and scale and be sympathetic to existing scheduled heritage and character-contributing buildings.	

Features or characteristics		Suggested/Preferred
ii.	<p>On the northern side of View Street new buildings will generally draw important design cues from the Victorian and Edwardian scheduled heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitches, window alignment, materials and details, although these may expressed in a simpler fashion than on historic buildings.</p> <p>On the southern side of View Street, new buildings can either draw design cues from the Victorian and Edwardian buildings in the precinct or the Art Deco character-contributing buildings in the precinct, including scale, orientation, concealed rooflines, a greater emphasis on horizontality, materials and details, although these may expressed in a simpler fashion than on historic buildings.</p>	Preferred
iii.	Façades should have a solid appearance.	Suggested
iv.	Corner buildings should have architectural detail to all road frontages.	Preferred
v.	Division of the façade should be consistent with floor levels of neighbouring heritage or character-contributing buildings wherever possible.	Suggested
vi.	On the northern side of View Street roofs should be gabled, with at least one gable facing the street. Roof pitch should be 30° to 45°. Rooflines on the southern side of View Street may be lower and may be concealed behind parapets or other architectural features.	Suggested
vii.	Ornament or detail should be included as an integral part of the design of the façade.	Suggested
viii.	Window layout should be symmetrical and/or rhythmical.	Suggested
ix.	Windows on long façades should be arranged in groups.	Suggested
x.	Windows should be largely transparent.	Preferred
xi.	Verandahs are generally discouraged on buildings, but smaller shelters over doors may be considered where these are simple and do not detract from the design of the building or the character of the streetscape.	Suggested
xii.	In existing scheduled heritage buildings, original ground floor apertures should be retained, limiting the amount of ground floor glazing.	Preferred
xiii.	Mirrored glass and heavy tinting should be avoided.	Preferred
xiv.	Car parking buildings should be designed with the same design criteria as other buildings above in mind, although they may replace glazing with other façade treatments. Cars should be only minimally visible from public places through the façade.	Preferred
<b>e. Materials</b>		
i.	<p>On the northern side of View Street, building façades should be clad in materials such as plaster, red brick, stone or concrete. Timber weatherboards may be used in detailing, but not as the predominant cladding material.</p> <p>On the southern side of View Street, façades should be clad in materials such as plaster, concrete or timber.</p>	Suggested

Features or characteristics		Suggested/Preferred
ii.	On the northern side of View Street, buildings should avoid the use of single cladding materials and use a mix of materials to create shadow/depth and visual interest in the façade. On the southern side of View Street, buildings should use architectural details to create shadow/depth and visual interest in the façade.	Suggested
iii.	Unrendered brick, stone and concrete should remain unrendered on existing buildings except where this does not contribute to the character of the building.	Preferred
f. Colour		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick, stone, and concrete should remain unpainted on existing buildings except where this does not contribute to the character of the building.	Preferred
iii.	Painted heritage signs on the side and rear of buildings should be retained and not removed or painted over.	Preferred
g. Signs		
i.	Signs should not dominate façades or conceal windows or architectural features.	Preferred
h. Other		
i.	Service areas and building utilities should not be located on façades, in order to reduce visual clutter. Where located at the side of buildings in areas visible to the public, they should be installed discreetly or screened from view.	Preferred
ii.	Public spaces, including footpaths, should be kept free of unnecessary clutter and infrastructure to ensure maximum enjoyment of the public space, other than where the development contributes to improved vibrancy and public use of the area.	Preferred
iii.	Street furniture is of high quality and sympathetic to the heritage values and character of the area. However, this does not mean it has to be Victorian replica in style.	Preferred
iv.	Above ground network utilities should be avoided wherever possible. Where they cannot be avoided, they should be located sensitively and efforts undertaken to reduce the visual impact of the infrastructure, including paying particular attention to design and materials, or disguising the form through the incorporation of art, furniture or design elements.	Preferred

## **A2.2.10 Stafford Street Industrial Commercial Heritage Precinct**

### **A2.2.10.1 Description of area**

The Stafford Street Industrial Commercial Heritage Precinct comprises the area of Stafford Street between Princes Street and Hope Street.

The area was surveyed and settled early in the city's history and was intensely developed from the first gold rush in 1861. From this time it became a popular location for industrial, service, and merchant activities. Many well-known Dunedin companies had associations with sites and buildings in the area, including Farras, Sew Hoy, NZ Express Co., and perhaps most famously Kempthorne and Prosser, who over time built or occupied many of the buildings that still stand in the precinct.

The area between Stafford Street and Carroll Streets also has close associations with Dunedin's Chinese community, who owned land, buildings, and businesses in the area. The association with the Sew Hoy family is particularly strong.

The long-standing industrial and commercial uses are clearly demonstrated in the built architecture the precinct. The buildings are predominantly former factories and warehouses and while they are more functional in their style than the more exuberant buildings in the Exchange, it is this modesty and utilitarian nature that is an important component of the precinct's character. Unusually, many of the buildings retain important early architectural features that illustrate these uses, including original ground floor fenestration, relative absence of large glazed shop fronts and verandahs, evidence of cellars, and continued existence of loading docks and doors.

The changing nature of this commercial and industrial activity is also evident in the precinct's architecture, with the former Kempthorne and Prosser Warehouse at 34 Stafford Street (1870), Ross and Glendinning factory at 8 Stafford Street (1866/1874/1919) and International Harvester Co. of NZ building at 25 Stafford Street (1950), demonstrating the changing building technologies and business needs of industry in the area over time.

There are relatively few vacant sites or non character-contributing buildings to detract from the character of the precinct. The former Kempthorne and Prosser office building at 31 Stafford Street is the building that has the least architectural consistency with the rest of the buildings in the precinct, although it does have obvious historic links to the company whose presence defined the area for many decades.

New buildings and alterations in the precinct should be more consistent with the area's heritage buildings in terms of scale, bulk, location and character. This does not mean that they need to replicate heritage buildings or features, per se, but should be of high architectural value, creative, and insert more seamlessly into the streetscape by reflecting features of the surrounding heritage buildings that give the area its quality and character. Importantly, in this heritage precinct, new buildings should reference to the area's industrial past and robust architectural style. New buildings should use creative design to enhance the urban feel of the area and reflect the core values listed below without attempting to dominate the existing heritage architecture, which should remain the key defining characteristic of the area.

### **A2.2.10.2 Values to be protected or enhanced**

The following features and characteristics have been identified as important to protect or enhance:

- a. Protect:
  - i. The large number of scheduled heritage buildings and character-contributing buildings in the area
  - ii. A dense concentration of buildings creating a strong urban feel
  - iii. The use of rhythm, modulation, and permanent materials in design
  - iv. The industrial-commercial character
- b. Enhance:

- i. Improved building maintenance and condition
- ii. Restoration and re-use of existing buildings
- iii. Consistent building lines with buildings built to the front boundary

#### A2.2.10.3 Principal threats to values

- a. Further demolition of existing scheduled heritage and character-contributing buildings
- b. Low levels of maintenance and investment
- c. Development of new buildings and alterations to existing buildings that are unsympathetic to existing buildings
- d. The use of materials in new buildings or alterations to existing buildings that are inconsistent with those used in the area
- e. The removal of original materials and features from heritage and character-contributing buildings
- f. Ground level off-street car parking visible within the streetscape
- g. Gaps in the streetscape
- h. The cumulative negative effects on heritage streetscape character of the incremental loss of heritage and character-contributing buildings through additions and alterations and demolition.

#### A2.2.10.4 Features and characteristics to be incorporated into design

Features or characteristics		Suggested/Preferred
a. Height		
i.	New buildings should be consistent in height with immediate neighbours where these are scheduled heritage or character-contributing buildings, unless these buildings are inconsistent with the typical heights in the precinct.	Preferred
b. Bulk and location		
i.	Building frontages should be constructed within 400 mm of the road boundary. Buildings should occupy the full width of the site.	Preferred
c. Car parking		
i.	Off-street car parking is not visible from the road, either located behind or within the building.	Preferred
ii.	Vehicle crossings should be kept to a minimum. Entrances to garages and loading bays are acceptable, but should be finished so they contribute to the historic industrial character of the area.	Preferred
d. Design		
i.	Buildings should reference the area's commercial heritage and be sensitive to surrounding heritage and character-contributing buildings which are characterised by their solid and substantial design.	Preferred
ii.	New buildings will generally draw important design cues from Victorian and Edwardian heritage and character-contributing buildings in the precinct, including scale, orientation, roof pitches, window alignment, materials and details, although these may be expressed in a simpler fashion than on historic buildings.	Preferred
iii.	Façades should have a solid appearance.	Suggested

Features or characteristics		Suggested/Preferred
iv.	Corner buildings should have architectural detail to all road frontages.	Preferred
v.	Façades should be visually subdivided (base, middle and top), and the composition (including windows) should emphasise a vertical dimension consistent with heritage and character-contributing buildings in the precinct. Suggested	Suggested
vi.	Division of the façade should be consistent with floor levels of neighbouring heritage or character-contributing buildings wherever possible.	Suggested
vii.	Buildings are typically narrow. Long façades should be broken into vertical bays.	Suggested
viii.	Rooflines should be concealed behind parapets or other architectural features.	Suggested
ix.	Restrained ornament or detail may be included as part of the façade design.	Suggested
x.	Window layout should be symmetrical and/or rhythmical.	Suggested
xi.	Windows on long façades should be arranged in groups.	Suggested
xii.	Windows should be largely transparent.	Preferred
xiii.	Verandahs are generally discouraged on buildings, but smaller shelters over doors may be considered where these are simple and do not detract from the design of the building or the character of the streetscape.	Suggested
xiv.	In existing scheduled heritage buildings and character-contributing buildings, original ground floor apertures should be retained, limiting the amount of ground floor glazing.	Preferred
xv.	Mirrored glass and heavy tinting should be avoided.	Suggested
xvi.	Car parking buildings should be designed with the same design criteria as other buildings above in mind, although they may replace glazing with other façade treatments. Cars should be only minimally visible from public places through the façade.	Preferred
<b>e. Materials</b>		
i.	Building façades should be clad in permanent, robust materials such as plaster, brick, stone or concrete, which are visually consistent with the traditional materials of the precinct.	Suggested
ii.	Buildings should avoid the use of single cladding materials and use a mix of materials or variations in their use to create shadow/depth and visual interest in the façade.	Suggested
iii.	Unrendered brick, stone and concrete should remain unrendered on existing buildings except where this does not contribute to the character of the building.	Preferred
<b>f. Colour</b>		
i.	Base colours for walls and roofs should be chosen from a palette of heritage or neutral colours. Bright colours should be avoided, although colour can be used effectively for highlighting details.	Suggested
ii.	Unpainted brick, stone, and concrete should remain unpainted on existing buildings except where this does not contribute to the character of the building.	Preferred

Features or characteristics		Suggested/Preferred
iii.	Painted heritage signs on the side and rear of buildings should be retained and not removed or painted over.	Preferred
g. Signs		
i.	Signs should not dominate façades or conceal windows or architectural features.	Preferred
h. Other		
i.	Service areas and building utilities should not be located on façades, in order to reduce visual clutter. Where located at the side of buildings in areas visible to the public, they should be installed discreetly or screened from view.	Preferred
ii.	Public spaces, including footpaths, should be kept free of unnecessary clutter and infrastructure to ensure maximum enjoyment of the public space, other than where the development contributes to improved vibrancy and public use of the area.	Preferred
iii.	Street furniture is of high quality and sympathetic to the heritage values and character of the area. However, this does not mean it has to be Victorian replica in style.	Preferred
iv.	Above ground network utilities should be avoided wherever possible. Where they cannot be avoided, they should be located sensitively and efforts undertaken to reduce the visual impact of the infrastructure, including paying particular attention to design and materials, or disguising the form through the incorporation of art, furniture or design elements.	Preferred

## A3. Landscape Values

### A3.1 Outstanding Natural Features

#### A3.1.1 Aramoana Salt Marsh Outstanding Natural Feature

##### A3.1.1.1 Description of feature

Encompasses a portion of The Spit, tidal flats, salt marsh and relict transgressive dunes near the north-western head of the Otago Harbour to the south of the Aramoana settlement. Whilst its natural character is modified to some extent on its western landward edge by agricultural land use and Aramoana Road, its eastern portion is essentially unmodified. Aramoana is mapped as a Coastal Protection Area in the Otago Regional Plan: Coast - for Kāi Tahu cultural and spiritual values and estuarine values. The site is recognised as a regionally significant wetland in the Otago Regional Plan: Water.

The site is identified as a wāhi tūpuna - see Appendix A4.22. It is also identified as having high natural coastal character values - see Appendix A5.2.1.

##### A3.1.1.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. The Aramoana salt marsh and adjacent terrestrial environment is of recognised international/national importance for its largely intact vegetation sequence from tidal to dry land including dune slacks. The Aramoana salt marsh is extensive and largely intact.
  - ii. The Aramoana tidal flats are a very significant wader bird habitat and the area is important nationally as a fish breeding and nursery area, with significant ecological values.

- b. *Cultural/historic values:*
- i. The salt marsh and spit at Aramoana have mahika kai, kāika, wāhi taoka and archaeological values. This site is a wāhi tūpuna. See Appendix A4.22 for details.
- c. *Aesthetic and amenity values:*
- i. High naturalness values based on natural landforms and vegetation sequences. The area is a memorable wetland landscape. Due to its tidal rhythms and various moods associated with different weather conditions. These values are considered to be outstanding due to the minimal influence of buildings, structures and earthworks.

### **A3.1.2 Blackhead Organ Pipes Outstanding Natural Feature**

#### A3.1.2.1 Description of feature

This natural feature is located on a distinctive headland on the southern coast between Brighton and St Clair. The Organ Pipes formations (also known as the “Roman Baths” and the “Dock”) are on the southern extremity of the headland. Blackhead Organ Pipes are listed in the Geo-preservation index, and provide a good example of columnar jointing in basalt lava flows. The columns were formed when molten lava cooled creating geometric interlocking polygonal shapes. The rest of the headland, which is not mapped within this Outstanding Natural Feature, has been drastically modified by quarrying. The Blackhead Organ Pipes are dramatic and memorable formations with high geological and aesthetic values and are assessed as having overall high and outstanding landscape values. Public awareness of this feature is modest and access is difficult.

#### A3.1.2.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Blackhead Organ Pipes are listed in the Otago inventory of important geological sites and landforms for their highly legible formations expressive of their geological origins and erosive marine processes.
  - ii. Habitat for seals and marine birds.
- b. *Cultural/historic values:*
  - i. Blackhead was an important stone gathering site.
- c. *Aesthetic and amenity values:*
  - i. Natural, memorable, wild and scenic values are high especially when viewed against the adjacent quarry which has resulted in a highly modified and less natural landform.
  - ii. The extent of this ONF is free of built structures and quarry activities.

### **A3.1.3 Goat Island/Rakiriri Outstanding Natural Feature**

#### A3.1.3.1 Description of feature

Goat Island/Rakiriri is the smaller of the two mid Otago Harbour islands. Goat Island is covered in indigenous bush. There are two flattened areas retained by rock walling dating back to its use for quarantine purposes. An electricity pylon is located on the summit. Goat Island/Rakiriri has highly significant cultural and historic values and high natural and aesthetic values. Overall, landscape values are assessed as high and outstanding.

#### A3.1.3.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Goat Island has ecological values for remnant/regenerating native bush. Good example of Ngaio/Kohuhu forest. Pest free, with plant life in better condition than mainland sites.
  - ii. One of few areas in the harbour with a natural rocky shoreline.
  - iii. The island is a breeding site for shags.
  - iv. Common presence of marine birds and occasional presence of marine mammals.
- b. *Cultural/historic values:*
  - i. Rakiriri (Goat Island) is a very significant site. It is an important landmark and according to tradition, the abode of Takaroa, guardian of the sea. It is a wāhi tūpuna with wāhi tapu values. See Appendix A4.25.
- c. *Aesthetic and amenity values:*
  - i. High naturalness values given its natural shoreline and indigenous bush cover - reduced to some extent by the presence of the pylon on its summit.
  - ii. High - moderate memorability. An important natural element in the harbour landscape.

### **A3.1.4 Green Island Outstanding Natural Feature**

#### **A3.1.4.1 Description of feature**

An island approximately two kilometres south of Kaikorai Stream/Lagoon, with distinctive natural values and an important landmark. It is surrounded by reefs. The vegetation is dominated by *Coprosma repens* (taupata). Green Island has very high values generally, and particularly as a wildlife haven. It has a nature reserve status. Overall, landscape values are assessed as high and outstanding.

The island has been identified as a wāhi tūpuna - see Appendix A4.53. It has also been identified as having outstanding natural coastal character values - see Appendix A5.1.2.

#### **A3.1.4.2 Values to be protected**

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. A highly significant bird habitat for a wide range of species. Also habitat for rare *Lepidium oleraceum*, Cook's scurvy grass and gecko. Fur seal haul-out on this island.
  - ii. A highly legible feature - expressive of its geological formation, created by marine erosion processes.
- b. *Cultural/historic values:*
  - i. The island is known to Māori as Okaihae, and is identified as a wāhi tūpuna. It has wāhi taoka and mahika kai values. See Appendix A4.53.
- c. *Aesthetic and amenity values:*
  - i. High naturalness, memorability and wild and scenic values.
  - ii. An abundance of birdlife.

### **A3.1.5 Harbour Cone Outstanding Natural Feature**

#### A3.1.5.1 Description of feature

A notably distinctive volcanic cone located in the middle of Otago Peninsula. The ONF area includes the summit and the more visually prominent higher slopes. Overall, landscape values are assessed as high and outstanding.

#### A3.1.5.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values*
  - i. A very distinctive and well recognised volcanic feature.
- b. *Cultural/historic values*
  - i. Harbour cone (Pukemaka) is a significant site for Manawhenua. It is a wāhi tūpuna with mauka, wāhi taoka and archaeological remains identified as values. See Appendix A4.39.
- c. *Aesthetic and amenity values*
  - i. Very high aesthetic/memorability values – an ‘icon’ of the Otago Peninsula.

### **A3.1.6 Heyward Point - Aramoana Cliffs Outstanding Natural Feature**

#### A3.1.6.1 Description of feature

This is a volcanic headland at the end of the major ridgeline on the northern side of the Otago Harbour. The headland is characterised by impressive cliffs up to 180 metres in height. At the southern end the cliffs are bordered by a sandy beach. There are stacks and reefs off Heyward Point itself. Behind the cliffs the land is predominantly pasture, but there is a significant area of indigenous forest within the Heyward Point Scenic Reserve. Aramoana - Heyward Point lava flows are listed in the Otago inventory of important geological sites and landforms as a well exposed stratigraphic sequence of lava flows.

There is a small lighthouse on Heyward Point but otherwise, no structures of significant scale. Heyward Point Scenic Reserve is recognised as an Area of Significant Biodiversity Value in the Dunedin City District Plan. Heyward Point and Aramoana Beach (adjacent to the cliffs) are recognised coastal recreational destinations - largely on account of their landscape and natural character attributes. This feature is significant primarily for its geological and aesthetic values. Overall, landscape values are assessed as high and outstanding.

#### A3.1.6.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values*
  - i. Heyward Point Scenic Reserve is significant for its coastal native forest remnants and habitat values. A significant area of indigenous forest remains at Heyward Point. It has several species now rare in the Dunedin area, e.g. matai.
  - ii. Heyward Point is a seal breeding site.
  - iii. Naturalness values are high, based on the highly coherent natural landform, minimal impact of structures and the presence of native forest and scrub.
- b. *Cultural/historic values*
  - i. The wider coastline was an area of pre-European settlement generally.
  - ii. There was a traditional foot track along the top of the cliffs.
- c. *Aesthetic and amenity values*
  - i. Memorability/wild and scenic values are high due to the dramatic cliffs, presence of wildlife and expansive coastal views.

### **A3.1.7 Karitane Peninsula Outstanding Natural Feature**

#### A3.1.7.1 Description of feature

The Karitane Peninsula (Huriawa) is an eroded tombolo headland of sedimentary rock connected to the mainland by beach deposits. The landforms are highly expressive of coastal erosive processes. It was the location of a pā, and later, a whaling station. It is now largely grass covered although residential development has encroached onto its landward end.

The peninsula is listed in the Geo-preservation inventory as an easily appreciated, well defined feature. It has high geological, geomorphological and habitat values, and high takata whenua and historic heritage values. It also has high aesthetic and memorability values.

Despite encroachment by residential development it has been assessed as a natural feature with high and outstanding landscape values. Karitane Peninsula is recognised as an Outstanding Natural Feature Landscape in the Otago Regional Plan: Coast.

#### A3.1.7.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural Science values:*
  - i. An important source of fossils and bird habitat (off-shore stacks).
- b. *Cultural/historic Values:*
  - i. This is a significant site in terms of pre-European history. It is identified as a wāhi tūpuna. See Appendix A4.6.
  - ii. Archaeological, including pre-European, remains.
- c. *Aesthetic and amenity values:*
  - i. The naturalness of the headland, including its striking and highly memorable landform.
  - ii. The occasional presence of wildlife is significant in this area.
  - iii. Karitane is a surf break of national significance.

### **A3.1.8 Lower Taieri River Gorge Outstanding Natural Feature**

#### **A3.1.8.1 Description of feature**

Although largely in Clutha District, this feature extends into Dunedin City District at its northern edge along the seaward section of the Taieri River Gorge. The wider ONF encompasses the lower section of the Taieri River gorge from the Taieri Mouth bridge to the end of the schist section. Within the Dunedin city area, it encompasses a small section of the gorge, approximately 4 km upstream from the river mouth.

The Taieri River is tidal, with significant marine influence right through the gorge. The lower gorge is classed as a Scenic Reserve, and has high natural values, including areas of significant podocarp forest, impressive rock bluffs and saltmarsh wetland margins. Overall, landscape values are assessed as high and outstanding. The Taieri River Scenic Reserve is listed as an area of significant biodiversity value in the Dunedin City District Plan.

The Taieri River Mouth gorge is recognised in the Otago inventory of important geological sites and landforms as an unmodified and well defined coastal gorge.

The wider area was significant in pre-European history. It is the site of two wāhi tūpuna - the Taieri River, which was an important trail, means of transport and mahika kai, and the Taieri Māori Reserve, much of which is still in Māori ownership. There remains a strong connection with this land.

This area has been identified as having high natural coastal character values - see Appendix A5.2.3.

#### **A3.1.8.2 Values to be protected**

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Natural vegetation sequences.
  - ii. The gorge landform.
- b. *Cultural/historic values:*
  - i. Ongoing values of significance to Manawhenua. See Appendices A4.60 and A4.62.
- c. *Aesthetic values and amenity values:*
  - i. High naturalness, although this has been modified by the influence of forestry on skylines and higher slopes in places, and the presence of weedy species such as gorse.
  - ii. A highly memorable gorge landform with wild and scenic qualities

### **A3.1.9 Matanaka Sea Caves Outstanding Natural Feature**

#### A3.1.9.1 Description of feature

Matanaka (Cornish Head) north of Waikouaiti Bay is the southern extent of what has been called “the two most significant kilometres of coastline in the world for sea caves”<sup>1</sup>. The cliffs of Caversham sandstone are around 20 to 40 metres high and include some of the longest sea caves in the world, some of them extend hundreds of metres inland, linked via intersecting passages. The caves are accessible from the coast in suitable conditions.

The feature includes a rock slump on the southern face of the sea cave complex (the Cornish Head rock slump). This is listed in the inventory of important geological sites and landforms in the Otago region. The headland is comprised of sedimentary rock with volcanic material coinciding with the summit of the hill. The area has highly significant geomorphological and aesthetic values. Whilst these are its core values, its proximity to the Matanaka Historic Reserve also gives it heritage significance. Overall, landscape values are assessed as high and outstanding.

The south face of Matanaka (known as Matainaka) was the site of an ancient fortified Waitaha settlement and urupā. It is identified as a wāhi tāpuna, with urupā, kāika and archaeological values. See Appendix A4.1.

<sup>1</sup>“Caves of Otago” Nicolas Barth. *New Zealand Speleological Bulletin no 206*.

#### A3.1.9.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. The significant and impressive sea caves.
  - ii. The highly legible landform, expressive of coastal erosive processes.
- b. *Cultural/historic values:*
  - i. Values of significance to Manawhenua. See Appendix A4.1.
  - ii. The relationship with the Matanaka farm historic site.
- c. *Aesthetic and amenity values:*
  - i. The lack of any built structures, which results in high natural and coastal character values.
  - ii. The slump forms of the headland.
  - iii. The sea caves and access for recreational caving activities.

### **A3.1.10 Māpoutahi Outstanding Natural Feature**

#### A3.1.10.1 Description of values

Māpoutahi is a rugged promontory of volcanic origin defining the western end of Purakaunui Beach. There are no structures other than some wooden steps. The vegetation cover is rough grassland, regenerating native scrub and some scattered pine and macrocarpa trees. Vegetation patterns reflect human modification but naturalness is still high. It is a distinctive coastal feature with moderately high natural character values.

Māpoutahi is an ancient pā site and sacred area. It was the site of a massacre in pre-European times. It is identified as a wāhi tūpuna, with wāhi tapu values. See Appendix A4.17. It is highly significant culturally and historically, and is assessed as outstanding primarily on this basis.

#### A3.1.10.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. A volcanic headland feature expressive of coastal erosive processes.
- b. *Cultural/historic Values:*
  - i. Values of significance to Manawhenua. See Appendix A4.17.
- c. *Aesthetic and amenity values:*
  - i. High naturalness
  - ii. A dramatic and memorable coastal headland, with high scenic values.
  - iii. A popular coastal recreational area appreciated for its landscape values.

### **A3.1.11 Mt Holmes Organ Pipes Outstanding Natural Feature**

#### A3.1.11.1 Description of feature

This is a volcanic feature located within the Flagstaff/Mt Cargill Significant Natural Landscape, north-east of Flagstaff and Butters Peak at around 530 metres elevation. It consists of jointed basalt columns, originally formed when molten lava cooled creating geometric interlocking polygonal shapes. It is similar to those at the Roman Baths, Blackhead, south-west of Dunedin. A distinctive feature with recognised geological values and an important amenity destination.

The site is located within a wāhi tūpuna area, the peaks from Mihiwaka and Mount Kettle to Mt Cargill, which are a cultural identity marker. See Appendix A4.28.

#### A3.1.11.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. A recognised geological feature and a good example of a columnar jointed basalt formation.
- b. *Aesthetic and amenity values:*
  - i. Well recognised locally as a distinctive and relatively unusual feature close to Dunedin City.

### **A3.1.12 Mt Watkin/Hikaroroa Outstanding Natural Feature**

#### A3.1.12.1 Description of feature

A strikingly dominant isolated volcanic feature north west of Waikouaiti, close to the northern boundary of Dunedin city. It has an aesthetically interesting conical form, with landmark significance, however its naturalness has been modified to some extent by quarrying. The Mt Watkin/Hikaroroa basalt boulder stream is a talus of columnar jointed basalt which is included in the Geopreservation inventory. It is New Zealand's best example of a boulder stream in association with a block field.

Mt Watkin/Hikaroroa has a highly regarded example of dry coastal forest in Otago.

Hikaroroa was one of the paramount tīpuna ariki (ancestors) from the waka Arai te Uru. The view of Hikaroroa from Puketeraki marae is significant to Kāti Huirapa Rūnaka ki Puketeraki. It is the dominant landscape feature and is referred to in mihi.

The site is outstanding on the basis of its natural science and cultural values.

#### A3.1.12.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values*
  - i. Dominant volcanic feature, valued as a landmark
  - ii. The columnar jointed basalt boulder stream and block field.
  - iii. Dry coastal forest.
- b. *Cultural/historic values:*
  - i. Values of significance to Manawhenua. See Appendix A4.10.

### **A3.1.13 Quarantine Island/Kamau Taurua Outstanding Natural Feature**

#### **A3.1.13.1 Description of features**

Quarantine Island / Kamau Taurua is the larger of the two mid-Otago Harbour islands, and is considered an important harbour landmark. It is comprised of volcanic rock from earlier eruptive phases of the Dunedin volcano and its elongated shape reflects its origins as part of a ridge running through the middle of what is now the harbour.

The island is predominantly under pasture cover although there are significant areas of regenerating native bush present as well. The island is free of many pest species, resulting in good quality regeneration. There are a few buildings, including a restored barracks building dating from its use as a quarantine station, along with other relics from the early 20th century. There is a jetty and some historic hulks in the bay nearest the buildings. Two pylons are present on its western end.

The island served as the quarantine station for Otago from 1863 until 1924. When ships arrived in Otago Harbour with infectious diseases, the passengers were sent to Quarantine Island until they were well or died. There is a small cemetery on the island. Quarantine Island/Kamau Taurua was awarded the status of an Historic Area by the Heritage New Zealand in 2001. Evidence of this former use includes hospital and residential buildings, flattened areas and rock walling.

The island was the site of a Māori settlement, and is identified as a wāhi tūpuna, with mahika kai and archaeological values.

The island has significant historic and cultural values and high or high - moderate natural and aesthetic values. It has a strong sense of place and the overall landscape values are assessed as high and outstanding, largely on account of its cultural/historic significance.

#### **A3.1.13.2 Values to be protected**

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Ecological values associated with regenerating native bush.
  - ii. Natural rocky shoreline.
  - iii. Breeding site for shag, and other marine birds are regularly present.
- b. *Cultural/historic values:*
  - i. Values of significance to Manawhenua. See Appendix A4.26.
- c. *Aesthetic and amenity values:*
  - i. High - medium naturalness values, based on the natural shoreline, presence of bush and coherent landform.

### **A3.1.14 Saddle Hill Outstanding Natural Feature**

#### A3.1.14.1 Description of feature

A distinctive and memorable volcanic double domed landform located south-west of Dunedin between the Taieri Plain and the southern coast. It has notable natural science values, significant cultural and historic values, and is highly regarded as a locally important feature.

Saddle Hill is a wāhi tūpuna, with the peaks known as Pukemakamaka and Turimakamaka. These represent two humps of the taniwha Matamata. See Appendix A4.54.

#### A3.1.14.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Saddle Hill and Jaffray Hill are significant volcanic plugs. Along with Scroggs Hill, they are much higher than the majority of the range, with Saddle Hill being 473 metres and Jaffray Hill 430 metres.
  - ii. There is extensive indigenous vegetation on Saddle Hill and some remnant forest trees on Jaffray Hill.
- b. *Cultural/historic values:*
  - i. Values of significance to Manawhenua. See Appendix A4.54.
  - ii. Historical significance - Named by James Cook.
- c. *Aesthetic/amenity values:*
  - i. Saddle Hill and its iconic cone shape is experienced from a very large visual catchment extending over the more eastern and northern parts of the city, including elevated portions of the peninsula; the Brighton coast; the Taieri Plain; and from State Highway 87 when travelling from Middlemarch towards Outram.
  - ii. The shape and height of this landscape is important and requires protection. The main existing modification to the natural landform is the Jaffray Hill quarry.
  - iii. Roading and other earthworks are relatively inconspicuous. and the natural landforms remain dominant.

### **A3.1.15 Sandfly Bay Outstanding Natural Feature**

#### A3.1.15.1 Description of feature

Located on the remote coast south of Peggy's Hill and Harbour Cone, adjacent to the Peninsula Coast Outstanding Natural Landscape. The feature is a transgressive dune system which extends from Sandfly Beach over the ridge to Hoopers Inlet. The feature includes an earthflow which extends inland for some distance. The dunes are vegetated to varying extents from none to indigenous forest cover on the Hoopers Inlet side. Listed in the Geo-preservation inventory as an excellent example of multi-coloured coastal sand dune system with lag gravel surfaces and actively forming ventifacts. The Sandfly Bay dunes are dynamic and constantly changing and therefore have very high natural science, aesthetic, transient and shared and recognised values. Overall, landscape values are assessed as high and outstanding. The area is popular for eco-tourism with highly memorable features including a nesting area for yellow-eyed penguin and habitat for Hooker's sea lion. This feature is included within the Otago Peninsula Outstanding Natural Feature Landscape in the Otago Regional Plan: Coast. Values specifically mention "regionally significant earthflow at Sandfly Bay".

The feature is identified as a wāhi tūpuna - see Appendix A4.40. It is also identified as having high natural coastal character values - see Appendix A5.24.

#### A3.1.15.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Sandfly Bay lag surface, ventifacts and earthflow are listed in the Otago inventory of important geological sites and landforms - together providing an excellent example of a multi-coloured coastal sand dune system.
  - ii. Largely unmodified indigenous broadleaf/hardwood forest at the Hoopers Inlet end, and around the active dunes of Sandfly Bay.
  - iii. Sandfly Bay is an important habitat (including breeding areas) for wildlife - yellow eyed penguin, seals and sea lions and sooty shearwater.
- b. *Aesthetic/amenity values:*
  - i. A highly legible landform feature - expressive of processes of coastal erosion and deposition.
  - ii. High naturalness values.
  - iii. High wild and scenic values.
- c. *Cultural/historic values*
  - i. Values of significance to Manawhenua. See Appendix A4.40.

### **A3.1.16 Sutton Salt Lake Outstanding Natural Feature**

#### A3.1.16.1 Description of feature

This is an unusual inland saline lake located south of Middlemarch. It is the only salt lake in New Zealand and an easily accessible example of lowland tors, as listed in the Geo-preservation inventory. It is outstanding on the basis of its natural science and aesthetic values, and is also listed as an Outstanding Natural Feature in the Otago Regional Plan: Water; and as a significant wetland in the Otago Regional Plan: Water. Overall the lake is regarded as outstanding, mainly due to significant natural science uniqueness.

#### A3.1.16.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Important sequences of halophytic vegetation around lake margins.
  - ii. Free from grazing animals.
- b. *Aesthetic/amenity values:*
  - i. Well regarded as an attractive and interesting destination.
  - ii. Well known tourist and recreational destination.
  - iii. Memorable tor landscape.

### **A3.1.17 Taiaroa Head Outstanding Natural Feature**

#### A3.1.17.1 Description of feature

A distinctive and memorable volcanic coastal landform located at the outermost point of the Otago Peninsula, close to the entrance of Otago Harbour. It is a rounded basalt headland with steep cliffs on its ocean facing side. The feature includes Pilots Beach (because of its high natural values and historic linkages with Taiaroa Head) and all the area included within the nature and local purpose reserves. Taiaroa Head has been the focus of human activity both before and after European settlement and structures that exist today include the lighthouse, the Armstrong Disappearing Gun, Observation Post, Signal Station, Observatory and Royal Albatross Visitor Centre. As well, there are tracks, roads, parking areas and historic structure remnants.

The vegetation cover is mainly grassland. It has outstanding natural science values and very significant cultural values, and adjoins the Peninsula Coast Outstanding Natural Landscape. It also forms part of the Coastal Protection area in the Regional Plan: Coast. Taiaroa Head (Pukekura) has widely recognised natural habitat and wild and scenic aesthetic values. It is also of great cultural and historic significance. Pukekura was an important pā site in the context of southern South Island history. It is identified as a wāhi tūpuna. See Appendices A4.29 and A4.34.

Overall, landscape values are assessed as high and outstanding.

#### A3.1.17.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Taiaroa Head is the only mainland breeding site for Royal Albatross in the southern hemisphere.
  - ii. Other bird species feed and nest on the headland including shags, sooty shearwaters, gulls, variable oyster catchers and royal spoonbills.
  - iii. Pilots Beach is an important habitat for Little Blue Penguins, seals and sea lions, with leopard seals and elephant seals being rare visitors.
  - iv. Highly significant values associated with the presence of wildlife.
- b. *Cultural/historic values:*
  - i. Values of significance to Manawhenua. See appendices A4.29 and A4.34.
  - ii. Site of the Armstrong Disappearing Gun. There are also gun emplacements and other military relics in the wider area.
  - iii. There is significant history associated with its use for navigational purposes. Relevant features include the lighthouse and fog station as well as an early sea wall.
  - iv. Pilot's Beach was the site of whaling activity and takes its name from the days when pilot boats were launched from there.
- c. *Aesthetic/amenity values:*
  - i. Whilst the headland has a significant overlay of structures, these are dominated by the strength of the natural elements and patterns.
  - ii. Wild, scenic, and memorability values associated with the rugged landforms, exposed position and expansive sea views are very high.

### **A3.1.18 The Chasm/Lovers Leap Outstanding Natural Feature**

#### A3.1.18.1 Description of feature

Two spectacular coastal features south east of Sandymount – a well exposed volcanic cliff section and a significant sea arch, as listed in the Geo-preservation inventory. Encompassing a section of the cliffs with highly dramatic erosional columnar jointed basalt. These features are located adjacent to the Peninsula Coast Outstanding Natural Landscape. Lovers Leap and the Chasm have very high natural science, aesthetic, and shared and recognised values. Overall, landscape values are assessed as high and outstanding. This feature is included within the Otago Peninsula Outstanding Natural Feature Landscape in the Otago Regional Plan: Coast. Values specifically mention, "visually impressive landforms including Lovers Leap and the Chasm".

This feature is part of the wider Sandymount area which has been identified as having outstanding natural coastal character - see Appendix A5.1.3.

#### A3.1.18.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Lovers' Leap volcanic section and sea arch is listed in the Otago inventory of important geological sites and landforms - well exposed volcanic section and spectacular sea arch.
  - ii. A highly legible natural landform feature - expressive of processes of volcanic and coastal erosion.
- b. *Aesthetic/amenity values:*
  - i. Spectacular and highly memorable landform features with high natural science values and notable wild and scenic qualities.

### **A3.1.19 The Pyramids Outstanding Natural Feature**

#### A3.1.19.1 Description of feature

The Pyramids are impressive stranded marine stacks situated adjacent to the Peninsula Coast Outstanding Natural Landscape on marine flats north of Papanui Inlet, listed in the Geo-preservation inventory. They are outcrops of columnar basalt that have been eroded by the sea but which are now stranded far inland by beach aggradation, covered in indigenous scrub and bush. The Pyramids have significant natural science, aesthetic, shared and recognised and cultural values. Overall, their landscape values are assessed as high and outstanding.

#### A3.1.19.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. The Pyramids (abandoned marine stacks) are listed in the Otago inventory of important geological sites and landforms.
  - ii. Highly legible volcanic coastal landscape.
  - iii. Vegetation is floristically rich.
- b. *Aesthetic/amenity values:*
  - i. Visually memorable with high natural character values.

### **A3.1.20 Tunnel Beach Outstanding Natural Feature**

#### A3.1.20.1 Description of feature

Tunnel Beach, including its immediate locality, is an Outstanding Natural Feature on the basis of its particular aesthetic/memorability values. Tunnel Beach is located on the south coast between Blackhead and St Clair. The feature includes the sea arch, tunnel and beach and the immediate hinterland. The tunnel was formed by John Cargill for access for his family to the beach in the 1870s. It is included as an Outstanding Natural Landscape Feature in the Otago Regional Plan: Coast. Overall, landscape values are assessed as high and outstanding.

The Tunnel Beach Outstanding Natural Feature includes an area above St Clair known as Te Uraka a Te Raki, which is identified as a wāhi tūpuna. See Appendix A4.46. Tunnel Beach has also been identified as having high natural coastal character values - see Appendix A5.2.5.

#### A3.1.20.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Tunnel Beach sandstone cliffs are listed in the Inventory of important geological sites and landforms in the Otago Region. This is a fine example of sandstone cliffs. This is a highly legible landscape expressive of its geological formation and erosive marine processes.
  - ii. Rare salt tolerant herb vegetation at Tunnel Beach.
- b. *Cultural/historic values:*
  - i. The tunnel at Tunnel Beach was cut by John Cargill (son of Captain William Cargill) for access to the beach for his family.
  - ii. Values of significance to Manawhenua. See Appendix A4.46.
- c. *Aesthetic/amenity values:*
  - i. Naturalness is high - modified to an extent by exotic shrub species on the slopes above the cliffs.
  - ii. Minimal influence of buildings, structures or earthworks which create high wild and scenic values. These are enhanced by the dramatic coastal landforms.

### **A3.1.21 Wharekakahu Outstanding Natural Feature**

#### A3.1.21.1 Description of feature

Wharekakahu is a small island to the eastern side of Allans Beach, 250 metres from the shore off Alfred and Cicily Beaches. It is a sparsely vegetated rock stack with steep cliff sides, noted as being part of an Outstanding Natural Feature Landscape (ONFL) in the Otago Regional Plan. Wharekakahu has very high natural character and aesthetic values. Overall, its landscape values are assessed as high and outstanding.

Wharekakahu is part of the wider Cape Saunders area which has been identified as having high natural coastal character values - see Appendix A5.2.2. Wharekakahu is also identified as a wāhi tūpuna. See Appendix A4.53.

#### A3.1.21.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. High habitat values for sooty shearwater, fairy prion and shag.
  - ii. Absence of introduced mammals - refuge for indigenous and endemic plants and animals that would otherwise have been eliminated.
  - iii. Haul out site for seals.
- b. *Cultural/historic values:*
  - i. Values of significance to Manawhenua. See Appendix A4.53.
- c. *Aesthetic/amenity values:*
  - i. High naturalness values.
  - ii. High memorability and wild and scenic values - rugged coastal island and focal point.

## **A3.2 Outstanding Natural Landscapes**

### **A3.2.1 High Country Outstanding Natural Landscape**

#### A3.2.1.1 Description of area

The High Country Outstanding Natural Landscape Area extends along the north west boundary of Dunedin City District, incorporating the high country Rock and Pillar and Lammermoor Range ridgelines rising above the Strath Taieri Plain. These have a north-east/south-west orientation typical of Central Otago ridgelines further to the west, and they define the Strath Taieri basin. The area extends towards Deep Stream south of Sutton township and east of the Strath Taieri Plain towards elevated parts of the Taieri Ridge. The eastern boundary runs along the skyline of the eastern ranges and extends north just beyond and to the east of the Hyde-Macraes Road. The area also includes the northern (and most scenic) part of the Taieri Gorge.

This highly significant and visible high country landscape area contains the distinctive and rugged landform features of the Rock and Pillar Range and Taieri Ridge, and is centred around the Strath Taieri Plain. It is characterised by strongly defined landform and minimal influence of human elements. The scale is large and expansive. Although much of the area is grazed and managed under an extensive pastoral regime, the vegetative cover, in the main, retains its natural patterns and character.

The landscape is highly coherent with rock outcrops creating particular interest. The skyline in many places is dramatic on account of these.

The majority of people experience this landscape from State Highway 87 or from the Otago Excursion Train line. The landscape forms part of the skyline visible from the Middlemarch area and the Strath Taieri Plain. Views of the area are generally expansive, particularly from the Strath Taieri Plain area around Middlemarch. The Old Dunstan Road provides a significant internal viewing corridor. Although this is a seldom used route, its heritage and historic significance gives it, and the areas visible from it, added importance.

This is arguably a landscape of national scenic significance. It is definitely of regional significance, particularly because of its actual and potential value for the regional tourist industry.

The vegetation is predominantly grassland, and human elements have minimal apparent influence. This adds to a sense of vast scale and openness and a remote isolated character. The homogeneity of the vegetative cover means that the area is very visually sensitive to change. Most of the area is managed under an extensive pastoral land use regime or the conservation estate. This has resulted in many areas with the substantial modification of the original tussock grasslands. Despite this, the vegetation cover generally retains the tawny colours and characteristic textures of indigenous tussock grasslands.

It is the coherence of the expansive views in combination with the complexity of the detail that makes this an area of unusually high quality. The rugged character of the landform and the large scale of this landscape combine to create an effect which is distinctively Central Otago.

The area includes three areas identified as wāhi tūpuna: Patea (Mt Stoker), Patearoa (the Rock and Pillar Range) and the Taieri River. See Appendices A4.66, A4.67 and A4.62.

### A3.2.1.2 Values to be protected

The following features and characteristics have been identified as important to protect:

a. *Natural science values:*

- i. Historic iconic landmark ridgelines including: Rock and Pillar Range; the Lammerlaw Range; the Lammermoor Range; and elevated sections of the Taieri Ridge.
- ii. The lowland tor landscape (listed as a significant landform (NZ Geological Society Geopreservation Inventory for the Otago Region).
- iii. Rock outcrops which give rise to a dramatic skyline and a highly memorable landscape.
- iv. Significant landform features, i.e. Rock and Pillar solifluction features (NZ Geological Society Geopreservation Inventory for the Otago Region).
- v. Highly coherent natural landform under an apparently largely unmodified grassland vegetative cover. This is landmark high country area distinctive in Dunedin, particularly within the Rock and Pillar Range.
- vi. Fragile ecosystems, e.g. cushion bogs.
- vii. Intact scrub and snow tussock vegetation sequences progressing to sub-alpine herbfields. The retention of enough tussock grassland to give the impression of a semi-natural vegetative character.
- viii. Skink habitat beneath rocky outcrops.
- ix. Mt Ross, Gladsmuir Crater, Conical Hill and Mt Stoker, all assessed as being significant.
- x. Distinctive features within the Outstanding Natural Landscape Area including: Bald Hill; Yellow Hill; and Scratchback Hill.

b. *Cultural and historic values:*

- i. Values of significance to Manawhenua. See Appendices A4.66, A4.67 and A4.62.
- ii. Central Otago Rail Trail between Hyde and Tiroiti, which includes heritage engineering features.
- iii. Historic traditional farming stations with associated routes and tracks.
- iv. Human made elements which emphasise local character and contribute to visual quality, e.g. stone buildings, rock fence posts.

c. *Aesthetic and amenity values:*

- i. The large scale, open, expansive, remote wilderness character.
- ii. A skyline which is almost entirely free of human structures when viewed from the Middlemarch valley or from the Upper Taieri Gorge Railway line.
- iii. Limited visual impact of human imposed elements such as tracks, buildings and exotic tree plantings. The relative visual dominance of the natural landscape elements over these is a fundamental characteristic.
- iv. Snow tussock grassland. The extent and quality of the visual contribution made by these highly significant intact areas.
- v. Recreational values. Sub-alpine tramping and links with Central Otago tracks. Mountain biking and four wheel driving along Dunstan Road, and other access ways; i.e., Department of Conservation tracks within the Rock and Pillar Range.
- vi. A night sky with outstanding capacity to view astronomical features free from light pollution.

### A3.2.1.3 Principal threats to values

<b>Threat</b>	<b>Description</b>
Forestry blocks	<p>a. For most of the high country areas, exotic forestry would have an adverse effect on landscape values and should not be located here.</p> <p>b. Where it does occur, inappropriate siting, scale and layout of forestry blocks may diminish the character of the underlying landform and other natural features.</p>
Wilding trees and weeds	Wilding tree and weed spread, if not controlled, can rapidly extend and threaten existing traditional land use patterns and open landscape values.
Roads and tracks	Roads and tracks can have an adverse effect on visual quality if they are poorly sited; for example if they cut across the landform rather than follow it, or if they are of inappropriate scale and design and become visually dominant.
Quarries and mining activity	Quarries and mining activity can become visually dominant focal points, depending on the scale of operations or the degree of inappropriate siting.
Buildings and structures	Buildings and structures can become visually dominant from public viewpoints if they are inappropriately sited, or if the design, scale and finish of structures conflict with established high country values.
Shelterbelts	Inappropriate siting, scale and design of shelterbelts may diminish the visual coherence of the natural landform character.
Reduction of areas of indigenous vegetation	Reduction of areas of indigenous vegetation threatens patterns which reinforce and reflect landform character and fragile ecosystems that contribute significantly to the values identified for the High Country Outstanding Natural Landscape.
Overgrazing or burning	Overgrazing and burning can threaten the more sensitive high country vegetative cover.
Light pollution	Lighting from development associated with residential and other land use activities, particularly external lights and street lights, significantly diminishes the ability to view and enjoy astronomical features.

A.3.2.1.4 Key design elements to be required or encouraged

Threat	Key design elements
Forestry blocks	<ul style="list-style-type: none"> <li>a. Highly visible areas should be avoided for forestry planting;</li> <li>b. For other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>c. Visually recessive areas such as gullies may be acceptable for planting forestry blocks.</li> <li>d. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies. Forestry blocks should be established to avoid unnatural lines or rectangular patterns. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist.</li> <li>e. Large blocks of single aged monocultures is discouraged. Smaller compartments of different aged trees should be established that can be harvested over a staggered timeframe, thereby reducing the environmental effects occurring at this stage of the forest growing cycle.</li> <li>f. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>
Wilding trees and weeds	<ul style="list-style-type: none"> <li>a. There should be active on-going management to avoid wilding tree and nuisance weed spread. Avoid planting species which are likely to create wilding tree spread problems e.g. Lodgepole Pine (<i>Pinus contorta</i>), Scotts Pine (<i>Pinus sylvestris</i>), Austrian Pine (<i>Pinus nigra</i>), Douglas Fir (<i>Pseudotsuga menziesii</i>) and Larch (<i>Larix decidua</i>).</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. Roads and tracks should wherever possible follow contours rather than cut across them.</li> <li>c. Construction of roads and tracks should be designed to minimise the amount of cut and fill slopes in visually sensitive areas.</li> </ul>
Quarries and mining activity	<ul style="list-style-type: none"> <li>a. Any quarries and mining activity undertaken in the High Country Outstanding Natural Landscape should be designed with an awareness of the visual quality of the setting.</li> <li>b. Wherever possible activities should be sited away from prominent viewing points;</li> <li>c. Visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an on-going basis with appropriate planting and restorative earthworks.</li> </ul>

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Buildings and structures should be designed with the intention of preserving or enhancing existing values.</li> <li>b. Buildings and structures should be located as far as reasonably practical away from prominent public viewing points.</li> <li>c. Buildings and structures should utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>d. Good design should relate to the specific character and location of each site, but other general principles include ensuring building elevation and overall size are not too dominant; and rural planting schemes need to be of a scale and character appropriate to the landscape.</li> <li>e. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>
Reduction of areas of indigenous vegetation	<ul style="list-style-type: none"> <li>a. Areas of indigenous vegetation should be retained and enhanced.</li> </ul>
Overgrazing or burning	<ul style="list-style-type: none"> <li>a. To avoid degradation to the more sensitive high country vegetative cover overgrazing or burning should be discouraged.</li> </ul>
Light pollution	<ul style="list-style-type: none"> <li>a. External lighting should be designed to have only negligible effects on the viewing of the night sky and astronomical features, and light sources should be shielded and/or filtered.</li> </ul>

## **A3.2.2 Mihiwaka to Heyward Coast Outstanding Natural Landscape**

### **A3.2.2.1 Description of area**

The Mihiwaka to Heyward Coast Outstanding Natural Landscape extends along the ridgetops of Mihiwaka and Mopanui, and encompasses the enclosed volcanic skyline visible from parts of the outer Otago Harbour, Pūrākaunui catchment and Blueskin Bay. East of these defining ridgetops, this landscape embraces the open coastal area, from Potato Point in the north to Aramoana Beach in the south. It includes: Long Beach and the associated lower lying area; the coastal extents of Pilots Point, Whareakeake Beach and the gully extending inland; Purehurehu Point and Kaikai Beach. At the eastern extent, it adjoins the Heyward Point/Aramoana Cliffs Outstanding Natural Feature. The coastal area encompasses a sequence of volcanic rock headlands separated by beaches, dunes and flats. There is a distinctive pattern to this landscape with headlands being characterised by cliffs, stacks and reefs, and beaches being backed by dunes and wetlands.

Terrestrial vegetation is predominantly pastoral with some patches of native forest and scrub. There are a few cribs at Whareakeake, some established ridgetop farming operations with associated farm buildings and dwellings along Pūrākaunui Road and Heyward Point Road, and a house and farm shed on Potato Point. The elevated western boundary occupies the upper edge of the Ōrokonui Ecosanctuary including visitor facilities and an associated predator proof fence. The remaining landscape is otherwise devoid of significant structures.

The area includes seven areas identified as wāhi tūpuna. It is also part of a wider culturally significant landscape. See Appendices A4.28, A4.32, A4.21, A4.22, A4.19, A4.20 and A4.14.

### **A3.2.2.2 Values to be protected**

The following values have been identified as important to protect:

a. *Biophysical values:*

- i. Eroded multi-era volcanic landscape, which remains legible in the topography and in rock exposures through limited landform modification.
- ii. Sequence of geopreservation sites include the North Dunedin phonolite domes (Mihiwaka, Mopanui and Hare Hill), and Aramoana-Heyward Point lava flows along ridgetops to the coast.
- iii. High natural character values of the waterways, coastal environment and wetland areas.
- iv. Jennings Creek Marsh and Whareakeake Marsh are regionally significant wetlands in the Otago Regional Plan: Water and are both scheduled as Area of Significant Biodiversity Value. See Appendix A1.2 (C146 and C160).
- v. Areas of regenerating forest or remnant forest including on the slopes of Mopanui and Mihiwaka, and Mihiwaka Valley.
- vi. Aramoana beach, which provides a habitat for Hoiho (yellow eyed penguin).
- vii. Part of the Ōrokonui Ecosanctuary including visitor facilities and an associated predator proof fence.

b. *Sensory values:*

- i. Highly memorable landscape due to the volcanic landform structure surmounted by Mihiwaka and Mopanui and extending down to the coast between Potato Point and Aramoana.
- ii. The landscape is highly expressive of the eroded volcanic landform and marine erosive and depositional processes, including at the harbour mouth and other headlands through to Potato Point.
- iii. Remote with limited structures with a sense of wildness and isolation including its open ocean facing aspect.
- iv. Legibility of the natural landform and associated visual coherence of the landscape i.e. patterns of land use reflecting the topography with low impact of built elements, earthworks, and exotic tree plantings

which retain an uncluttered character.

- v. High rural amenity values and scenic values of this diverse mountain to sea landscape.
- vi. Natural darkness of the night sky.
- vii. The natural tidal rhythm of the ocean interfaces.
- viii. The extent and quality of views across the landscape from public roads and tracks.
- ix. Transient values include the mist and cloud which frequent the hilltops of this ONL.

c. *Associative values:*

- i. Values of significance to Manawhenua. Wāhi tūpuna include Whareakeake beach, Wharauwerawera (Long Beach), with parts of the ONL also intersecting with wāhi tūpuna overlaying Mihiwaka, Potato Point and the views from Ōtākou Marae (see Appendices A4.19, A4.20, A4.28 and A4.14). Mihiwaka is a cultural identity marker for Kāi Tahu.
- ii. An ancient settlement and Pā were sited in the bush behind the beach at Whareakeake. This was the site of an infamous fight between the brig Sophia and local Māori.
- iii. Both Aramoana and Wharauwerawera (Long Beach) are of significance for Mahika kai and Kāika values. There were settlements on the Aramoana spit and against the hill close to the present-day settlement.
- iv. Popular recreational destinations include the Heyward Point Track, Aramoana Beach and Mole, and Whareakeake Beach.
- v. Long Beach was a popular camping and picnic destination for Dunedin families from around 1900 and was later developed as a crib settlement.
- vi. Historic and cultural features which are relics of the past and sensitive to change, e.g. remnant shelter plantings.
- vii. Legacies of early European Settlement including historic buildings and structures, plus shelter and amenity planting.
- viii. Returning servicemen settled in this area and established dairy farms.
- ix. Aramoana is associated with the 1990 massacre and the “Save Aramoana Campaign” to stop a proposed aluminium smelter.
- x. The Aramoana Mole and pilot houses are heritage structures.

A3.2.2.3 Principal threats to values

Threat	Description
Continuing encroachment into pastoral areas.	<p>Incremental change within this rural environment could result in the proliferation of smaller rural farm blocks and as a consequence, the loss of viable operations.</p> <ul style="list-style-type: none"> <li>a. Houses and associated roading infrastructure would significantly alter the rural character of the area, downgrading the natural character and amenity values with the fragmented landscape that results.</li> <li>b. A multitude of land uses, each requiring its own system of management and servicing, contrasts strongly with the open pastoral character that is maintained under a traditional farming system.</li> <li>c. Such continuing encroachment into pastoral areas is a threat to this area. The greatest pressure for change is now likely to be on higher elevated land with good views towards the coast.</li> </ul>

Threat	Description
Reduction of values related to significant habitats, wildlife, landforms and geological features.	a. Important habitat, wildlife and geology values relies on protection from land use threats such as the spread of pest species both animal and plant pests. Lack of maintenance and management of these areas results in reduction of values.
Loss of historic features and heritage farming character.	a. The traditional character and aesthetic of the historic farming landscape is an important component and value of this landscape. b. The demise of traditional features such as stone walls, for example, could potentially undermine the existing aesthetic values of the area.
Conflicts between traditional agricultural practices and recreational and tourist demands.	a. There are tourist demands and expectations which need to be carefully managed alongside maintaining existing landscape values, which includes traditional farming.
Buildings and structures.	a. Buildings and structures can become visually dominant from public viewpoints if they are inappropriately sited, or if the design, scale and finish of structures conflict with established values.
Erosion.	a. Removal of protective vegetation, steep slopes and sometimes harsh weather conditions can promote accelerated erosion in this sensitive area.
Roads and tracks.	a. Roads and tracks can have an adverse effect on visual quality if they are poorly sited; for example if they cut across the landform rather than follow it, or if they are of inappropriate scale and design and become visually dominant.
Forestry blocks.	a. In most of the area here establishment of exotic forestry blocks is completely contrary to maintaining important values of openness and retaining existing natural character. If care is not exercised, inappropriate siting and scale and layout of forestry blocks may diminish the character of the underlying landform and other natural features.
Quarries and mining activity	a. Quarries and mining activity can have adverse effects on visual quality if sites are visible from significant public viewing points and if care is not taken to appropriately mitigate adverse effects on existing natural topography and vegetation values.
Reduction of areas of indigenous vegetation	a. Indigenous vegetation patterns which reinforce and reflect landform character and fragile ecosystems contribute significantly to the values identified for the Heyward Coast Outstanding Natural Landscape.
Light pollution	a. Lighting from development associated with residential and other land use activities, particularly external lights and street lights, significantly diminishes the ability to view and enjoy astronomical features.

#### A3.2.2.4 Key design elements to be required or encouraged

Threat	Key design elements
--------	---------------------

Continuing encroachment into pastoral areas	<ul style="list-style-type: none"> <li>a. The distinctive natural and open pastoral values of this Outstanding Natural Landscape require their protection from inappropriate development.</li> <li>b. The potential for clustering of buildings, and the subsequent retention of viable farm land should be considered for any new development.</li> <li>c. In many cases, the stewardship of the land is synonymous with maintaining and retaining the values of interest to visitors.</li> </ul>
Reduction of values related to significant habitats, wildlife, landforms and geological features	<ul style="list-style-type: none"> <li>a. Continue to conserve the natural, aesthetic and amenity values of the immediate coast through appropriate management and protection.</li> <li>b. Recognise the importance of the pronounced ridged volcanic landform with conical peaks by protecting key Outstanding Natural Features.</li> <li>c. Encourage protection and restoration of remnant vegetation stands on the coastal slopes, as part of on-going land management practices.</li> </ul>
Loss of historic features and heritage farming character	<ul style="list-style-type: none"> <li>a. Preserve the traditional character and aesthetic of historic farming landscape, including protection of historic shelter belts and dry-stone walls.</li> </ul>
Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing existing values.</li> <li>b. They should be located as far as reasonably practical away from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding landscape; and any designed rural planting schemes need to be of a scale and character appropriate to the landscape. <ul style="list-style-type: none"> <li>X. Future residences would need to be very carefully sited in relation to the exposed steep spur and gully terrain descending from Heyward Point Road. There is limited capacity for new residential development within the immediate seaward slopes towards Heyward Point. Alternative locations include potentially siting individual dwellings along Heyward Point ridgeline, in sympathy with the existing pattern of farmstead locations, or more dense development capacity within existing coastal settlements. Both of these locations would be consistent with traditional settlement patterns.</li> </ul> </li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Erosion	<ul style="list-style-type: none"> <li>a. Discourage removal of erosion protective vegetation and enhance protection and restoration of remnant vegetation.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them.</li> <li>c. Construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>

Threat	Key design elements
Forestry blocks	<ul style="list-style-type: none"> <li>a. Highly visible areas should be avoided for forestry planting; for other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. Visually recessive areas such as gullies may be acceptable for planting. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns.</li> <li>c. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist.</li> <li>d. Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the environmental effects occurring at this stage of the forest growing cycle.</li> <li>e. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>
Quarries and mining activity	<ul style="list-style-type: none"> <li>a. This should not be sited in visually prominent areas if it can be avoided. Where this may not be possible, quarrying should be managed with appropriate mitigation to reduce adverse effects on visual amenity.</li> </ul>
Reduction of areas of indigenous vegetation	<ul style="list-style-type: none"> <li>a. Areas of indigenous vegetation should be retained and enhanced.</li> </ul>
Light pollution	<ul style="list-style-type: none"> <li>a. External lighting should be designed to have only negligible effects on the viewing of the night sky and astronomical features, and light sources should be shielded and/or filtered.</li> </ul>

### **A3.2.3 Otago Peninsula Outstanding Natural Landscape**

#### **A3.2.3.1 Description of area**

The area extends between Taiaroa Head and Andersons Bay. It encompasses the headland, upper slopes and volcanic ridgetops of the Otago Harbourside, through to the land with a south facing aspect extending from the most elevated parts of the Peninsula down to the coast. A dramatic coastal profile of prominent headlands and offshore stacks incised by broad tidal inlets, flats and sandy bays is reflected in the pronounced volcanic topography of the Peninsula landform. The sheltered Hooper and Papanui Inlets bring the tidal waters of the Southern Ocean in close proximity to the Otago Harbour south of Portobello. At Sandymount and Cape Saunders, sheer cliffs have been sculpted by natural southerly forces, whilst shifting dunefields occupy the adjacent sandy bays. These extremes of coastal habitats support a range of unique wildlife associations that favour the remoteness of the immediate coastline.

The steep seaward slopes of the Otago Peninsula coast are traditionally farmed in spite of limited access and inclement weather – windshorn vegetation is indicative of the harsh prevailing climate. Native vegetation persists patchily within the deep gullies and hillside slopes, but the interior landscape has been largely stripped of its natural cover to reveal the conical profiles of volcanic landmarks such as Mt Charles/Poatiri and Harbour Cone/Hereweka. Original farming settlement and farm buildings are sporadically located within the seaward slopes and often surrounded by shelterbelts and amenity plantings. Traditional stone walls, along with macrocarpa shelterbelts are frequent boundary features of this heritage working landscape.

The area contains the following Outstanding Natural Features: Sandfly Bay, The Chasm - Lovers Leap, Harbour Cone, Wharekakahu Island, The Pyramids and Taiaroa Head (see Appendix A3.1).

Several areas of the Otago Peninsula Coast have also been identified as having outstanding or high natural coastal character values, including Highcliff - Pudneys Cliff (see Appendix A5.1.1), Sandymount (see Appendix A5.1.3) and Cape Saunders (see Appendix A5.2.2).

The area is a culturally significant landscape to Kāi Tahu and includes several wāhi tūpuna. See Appendices A4.33, A4.34, A4.37, A4.70, A4.36, A4.29, A4.69, A4.38, and A4.41.

#### **A3.2.3.2 Values to be protected**

The following values have been identified as important to protect:

- a. *Biophysical values:*
  - i. The complex geological history, with the series of volcanic eras beginning 15 million years ago displayed across and along the Peninsula, and their interface with deposition lands, resulting in important displays of geodiversity.
  - ii. Distinctive natural landforms include Peggys Hill, Sandfly Bay dunefields and Sandymount Sea Arch.
  - iii. Geology and vegetative cover reflect the extreme climatic conditions of the area.
  - iv. Tall cliffs, bays and beaches result from the high level of coastal erosion.
  - v. Sea stacks and extensive sand blown dunes, as well as dramatic cliff features.
  - vi. Geological features include the Sandymount Sea Arch and Terracettes.
  - vii. Hoopers and Papanui Inlets and associated dunefields are significant depositional features.
  - viii. Native coastal bush remnants contained within steep gullies and on cliffs at Ōkia Reserve.
  - ix. Saltmarsh and salt meadows provide valued habitat for numerous native and exotic species at the Papanui and Hoopers Inlets.
  - x. Coastal wildlife includes internationally renowned colonies of Tora/Northern Royal Albatross and Hoiho/Yellow-Eyed Penguin as well as New Zealand sea lions and seals.

- xi. Identified significant wetlands (Otago Regional Plan: Water) include: Papanui Inlet Salt Marsh, Ōkia Flat dune hollows, and Hoopers Inlet swamp.
  - xii. The interplay between marine and terrestrial environments.
  - xiii. Areas of remnant/regenerating forest and duneland/wetland (e.g. Taiaroa Bush and Ōkia Reserve).
- b. *Sensory values:*
- i. Volcanic formative processes remain highly legible.
  - ii. Striking and dramatic landscape reflecting the extreme climatic conditions on the seaward flank and rounded volcanic-coned summits and ridgetops which contain and define the harbour.
  - iii. The dominance of underlying natural patterns, processes and elements.
  - iv. The characteristic and signature biota evident or known; terrestrial, avian and marine.
  - v. High aesthetic and coherence provided through the range and drama of the array of landforms experienced as encircled by the contrasting lengths of ocean coast and inlets.
  - vi. Qualities of wilderness and isolation and associated scenic qualities including the natural darkness of the night sky.
  - vii. Transient values include opportunities to view the Aurora Australis from Hoopers Inlet, as well as the presence of wildlife e.g. penguins, albatross, sea lions, seals), the biota of reef and inlet habitats, the weather - storms, southerly winds and presence of fog, sea state, and light effects.
  - viii. Widely recognised views across the landscape from public roads and tracks.
  - ix. Low impact of built elements, earthworks and exotic tree plantings and the significant relative dominance of natural landscape elements.
- c. *Associative values:*
- i. Values of importance to Manawhenua: Various peninsula slopes and summit lands are important to Te Rūnanga o Ōtākou hapū identity including the Upper slopes and peaks of Otago Peninsula recognised as wāhi tupuna.
  - ii. This landscape adjoins Pukekura (Taiaroa Head), a significant pā and kāika site.
  - iii. The Native Reserve land at the eastern end of the Peninsula was retained by Kāi Tahu during the land sales of 1844 and a strong ancestral connection is felt to this area of historic settlement and use by Manawhenua. It has a number of significant values including Pā tawhito, Tūāha, Wāhi pakanga, Urupā, Kāika, Wāhi taoka, Mahika kai, Ingoa tawhito and Mana.
  - iv. Ancient villages dating back to Waitaha and Kāti Mamoe settlement existed at Okia Flats and Papanui Inlet, with numerous urupā, wāhi taoka and middens (including moa remains) in these areas. Other kāika were also located in the outer parts of Otago Peninsula.
  - v. Several important historic and heritage associations including Larnach Castle and stables within the Otago Harbour.
  - vi. Legacies of early European settlement including historic buildings and structures and shelter and amenity plantings.
  - vii. Shipwrecks, including the "Victory" off Victory Beach.
  - viii. Important tourist destination for wildlife observation incorporating local walks and nature reserves.
  - ix. A night sky with outstanding capacity to view astronomical features.

### A3.2.3.3 Principal threats to values

Threat	Description
--------	-------------

Continuing encroachment of development into pastoral areas	<ul style="list-style-type: none"> <li>a. Incremental change within this rural environment could result in the proliferation of smaller rural farm blocks and as a consequence, the loss of viable farming operations.</li> <li>b. Houses and associated roading infrastructure would significantly alter the rural character of the area, downgrading the natural character and amenity values with the fragmented landscape that results.</li> <li>c. A multitude of land uses, each requiring its own system of management and servicing, contrasts strongly with the open pastoral character that is maintained under a traditional farming system.</li> <li>d. Such continuing encroachment into pastoral areas is a threat to this area. The greatest pressure for change is likely to be surrounding Hoopers and Papanui Inlets, which are both relatively sheltered and accessible from Portobello. The peninsula areas closest to the built up part of Dunedin city are also of greatest threat from increased subdivision development pressures over time.</li> </ul>
Reduction of values related to significant habitats, wildlife, landforms and geological features	<ul style="list-style-type: none"> <li>a. The essence of maintaining important habitat, wildlife and geology values relies on protection from land use threats such as the spread of gorse.</li> </ul>
Loss of historic features and heritage farming character	<ul style="list-style-type: none"> <li>a. The traditional character and aesthetic of the historic farming landscape is an important component and value of this landscape.</li> <li>b. The demise of traditional features such as stone walls, for example, could both potentially undermine the existing aesthetic values of the Peninsula.</li> </ul>
Conflicts between traditional agriculture practices and recreational and tourist demands	<ul style="list-style-type: none"> <li>a. There are tourist demands and expectations of the Peninsula landscape as a whole, which need to be carefully managed alongside maintaining existing landscape values, which include traditional farming.</li> </ul>
Buildings and structures	<ul style="list-style-type: none"> <li>a. Buildings and structures can become visually dominant from public viewpoints if they are inappropriately sited, or if the design, scale and finish of structures conflict with established Otago Peninsula coast values.</li> </ul>
Erosion	<ul style="list-style-type: none"> <li>a. Removal of protective vegetation, steep slopes and sometimes harsh weather conditions can promote accelerated erosion in this sensitive area.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. Roads and tracks can have an adverse effect on visual quality if they are poorly sited; for example if they cut across the landform rather than follow it, or if they are of inappropriate scale and design and become visually dominant.</li> </ul>
Forestry blocks	<ul style="list-style-type: none"> <li>a. In some areas of the Otago Peninsula landscape establishment of exotic forestry blocks is completely contrary to maintaining important values of openness and retaining existing natural character. In others, if care is not exercised, inappropriate siting, scale and layout of forestry blocks may diminish the character of the underlying landform and other natural features.</li> </ul>
Quarries and mining activity	<ul style="list-style-type: none"> <li>a. Quarries and mining activity can have adverse effects on visual quality if sites are visible from significant public viewing points and if care is not taken to appropriately mitigate adverse effects on existing natural topography and vegetation values.</li> </ul>

Threat	Description
Reduction of areas of indigenous vegetation	a. Indigenous vegetation patterns which reinforce and reflect landform character and fragile ecosystems contribute significantly to the values identified for the Otago Peninsula Outstanding Natural Landscape.
Light pollution	a. Lighting from development associated with residential and other land use activities, particularly external lights and street lights, significantly diminishes the ability to view and enjoy astronomical features.

#### A3.2.3.4 Key design elements to be required or encouraged

Threat	Key design elements
Continuing encroachment of development into pastoral areas	<ul style="list-style-type: none"> <li>a. The distinctive natural and open pastoral values of this Outstanding Natural Landscape requires their protection from inappropriate development.</li> <li>b. The potential for clustering of buildings, and the subsequent retention of viable farm land should be considered for any new development.</li> <li>c. In many cases, the stewardship of the land is synonymous with maintaining and retaining the values of interest to visitors.</li> </ul>
Reduction of values related to significant habitats, wildlife, landforms and geological features	<ul style="list-style-type: none"> <li>a. Continue to conserve the natural, aesthetic and amenity values of the immediate coast through appropriate management and protection.</li> <li>b. Recognise the importance of the pronounced ridged volcanic landform with conical peaks by protecting key Outstanding Natural Features such as Taiaroa Head, The Pyramids and Harbour Cone.</li> <li>c. Encourage protection and restoration of remnant vegetation stands on the coastal slopes, as part of on-going land management practices.</li> </ul>
Loss of historic features and heritage farming character	<ul style="list-style-type: none"> <li>a. Preserve the traditional character and aesthetic of historic farming landscape, including protection of historic shelter belts and dry-stone walls.</li> </ul>
Conflicts between traditional agriculture practices and recreation and tourist demands	<ul style="list-style-type: none"> <li>a. These two sometimes conflicting requirements need to be carefully managed so that values for each are not compromised.</li> </ul>
Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing existing values.</li> <li>b. They should be located as far as reasonably practical away from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding landscape; and any designed rural planting schemes need to be of a scale and character appropriate to the landscape.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>

Threat	Key design elements
Erosion	a. Discourage removal of erosion protective vegetation and enhance protection and restoration of remnant vegetation.
Roads and tracks	a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas. b. They should wherever possible follow contours rather than cut across them. c. Construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.
Forestry blocks	a. Highly visible areas should be avoided for forestry planting; for other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape. b. Visually recessive areas such as gullies may be acceptable for planting. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns. c. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist. d. Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the environmental effects occurring at this stage of the forest growing cycle. e. See Appendix A11 for design guidelines for forestry blocks.
Quarries and mining activity	a. Quarries and mining activity should not be sited in visually prominent areas if it can be avoided. Where this may not be possible, quarrying should be managed with appropriate mitigation to reduce adverse effects on visual amenity.
Reduction of areas of indigenous vegetation	a. Areas of indigenous vegetation should be retained and enhanced.
Light pollution	a. External lighting should be designed to have only negligible effects on the viewing of the night sky and astronomical features, and light sources should be shielded and/or filtered.

## **A3.2.X Mt Cargill/Kapukataumahaka Outstanding Natural Landscape**

### A3.2.X.1 Description of area

The Mt Cargill/Kapukataumahaka Outstanding Natural Landscape encompasses the peaks and higher slopes of the volcanic landforms of Mount Cargill, Buttars Peak, Mount Holmes, Mount Cutten and Mount Kettle reaching elevations of between 530 metres and 680 metres. The area surrounds the Mt Holmes Organ Pipes which are an excellent and easily accessible example of columnar jointing and identified as an Outstanding Natural Feature in the plan. The ONL adjoins the Mihiwaka to Heyward Coast ONL along the upper slopes and ridgetops beyond the northern edge of the Otago Harbour and is otherwise surrounded by the Flagstaff - Mount Cargill SNL.

A legible change in native vegetation typically differentiates this prominent ridgetop and skyline from significant natural landscape values which remain coherent as the Mount Cargill – Flagstaff Significant Natural Landscape (see Appendix A3.3.2). This distinction also recognises the importance of a larger legible sequence of volcanic processes, increased importance of sensory and transient values including ‘cloud forest’. This landscape has strong cultural values to Manawhenua and is a wāhi tūpuna. See Appendix A4.28.

### A3.2.X.2 Values to be protected

The following values have been identified as important to protect:

- a. *Biophysical values:*
  - i. Mount Cargill, Buttars Peak and Mount Holmes remain as largely intact volcanic landforms along the skyline.
  - ii. Contains an intact group of four volcanic domes including Mount Kettle, Mount Cutten (excluding the quarry), Mount Cargill and Mount Martin.
  - iii. Large area of regenerating indigenous forest on the northern and southern slopes of Mount Cargill considered to be of important biodiversity value including values wildlife.
  - iv. Silver Beech forest is present in the Mount Cargill Scenic Reserve and is one of four remaining remnants in the Dunedin Ecological District (DCC, 2006) as well as Ozothamnus/Dracophyllum shrubland.
- b. *Sensory values:*
  - i. Volcanic formative processes remain highly legible.
  - ii. Memorable feature within the Otago Harbour landscape and easily viewed from both the Otago Harbour and State Highway 1 in the north.
  - iii. High naturalness values and coherence associated with the regenerating indigenous forest.
  - iv. Transmission tower on Mount Cargill appears as isolated landmark in context of very high natural values.
  - v. Low impact of built elements and earthworks, of exotic tree plantings, and the significant relative dominance of natural landscape elements.
  - vi. Naturalness attributes of the rural landscape which provide backdrop and containment to the discrete harbourside settlements.
  - vii. Transient values include the mist and cloud which frequent the hilltops, seasonal snow cover, and the wide range of bird life which inhabit the forest.
- c. *Associative values:*
  - i. Significant to Manawhenua as a dominant landscape feature and a cultural identity marker (wāhi tohu). Mt Cargill/Kapukataumahaka forms part of the sequence of peaks from Mihiwaka and Mt Kettle to Mt Cargill/Kapukataumahaka recognised as wāhi tūpuna.

- ii. Important views from Ōtākou Marae across the harbour and its enclosure, with the peaks visible from the marae an important cultural marker.
- iii. High recreational value with tracks leading to the summit of Mount Cargill and to the Organ Pipes (Mount Holmes) offering panoramic views of the city.

#### A3.2.X.3 Principal threats to values

Threat	Description
Buildings and structures	a. Inappropriate siting, design, scale density and finish of buildings and structures such that they become visually dominant from public viewpoints.
Roads and tracks	a. Inappropriate siting, scale and design of roads and tracks such that they cut across the landform rather than follow it and become visually dominant features.
Loss of existing native vegetation and habitat	a. The protection of native vegetation and restoring the extent and connections between existing forest and bush stands should be a priority within this landscape.
Shelterbelts	a. Inappropriate siting, scale and design of shelterbelts may diminish the visual coherence of the natural landform character.
Quarries and mining activity	a. Removal of significant landform features by quarrying and mining activity. Inappropriate siting and scale of quarries and other excavations such that they become visually dominant focal points.
Forestry blocks	a. Inappropriate siting, scale and layout of forestry blocks such that the character of the underlying landform or other natural features is diminished.
Loss of historic and cultural features	a. Loss of heritage landscape features such as traditional drystone walls and shelterbelts.

#### A3.2.X.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Buildings and structures should be designed with the intention of preserving or enhancing landscape values.</li> <li>b. Buildings and structures should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Encourage clustering of buildings and structures. This will ensure more sensitive and visible landscapes in other areas that remain free of buildings and structures. Applying visual controls and limiting development to low densities are some of the ways adverse impacts of buildings and structures can be reduced.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. Roads and tracks should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>

Threat	Key design elements
Loss of existing native vegetation and habitat	<ul style="list-style-type: none"> <li>a. Wherever practicable existing native vegetation areas should be retained and enhanced.</li> <li>b. Encourage protection and restoration of remnant vegetation and planting of new appropriate vegetation as part of on-going land management practices.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible areas, otherwise it should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>
Quarries and mining	<ul style="list-style-type: none"> <li>a. This should not be sited in visually prominent areas if it can be avoided. Where this may not be possible, quarrying should be managed with appropriate mitigation to reduce adverse effects on visual amenity.</li> </ul>
Forestry blocks	<ul style="list-style-type: none"> <li>a. Highly visible areas should be avoided for forestry planting. For other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact of the visual integrity of the landscape. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns.</li> <li>b. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist. Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the environmental effects occurring at this stage of the forest growing cycle.</li> <li>c. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>
Loss of historic and cultural features	<ul style="list-style-type: none"> <li>a. Retention of heritage landscape features such as traditional drystone walls and shelterbelts.</li> </ul>

### **A3.2.Y Harbour Islands and Portobello Peninsula Outstanding Natural Landscape**

#### A3.2.Y.1 Description of area

The Harbour Islands and Portobello Peninsula Outstanding Natural Landscape encompasses Rakiriri/Goat Island, Kamau Taurua/Quarantine Island and the Portobello Peninsula. The islands and peninsula are an integral part of the Otago Harbour and a natural focal point within the surrounding landscape. This area is characterised by a volcanic underlying geology, areas of regenerating indigenous forest and extensive areas of pasture. The Outstanding Natural Landscape wholly encompasses both islands, with the Peninsula extent of the area ending toward the north-western end of Lamlash Bay and northern end of Latham Bay.

Terrestrial vegetation is largely pastoral land, however Rakiriri Island and Kamau Taurua Island both contain regenerating indigenous vegetation. Rakiriri Island remains covered in indigenous vegetation.

Built elements are limited to a few buildings and jetty at the south-eastern end of Kamau Taurua Island and a discreet dwelling located along the eastern edge of the peninsula. An access road is also present from Latham Bay to the head of the Peninsula as well as fencing and limited structures supporting ongoing rural land use. The Portobello Marine Laboratory at the north-western end of the Portobello Peninsula is omitted from the outstanding natural landscape.

The two motu (islands) are identified as wāhi tūpuna and the area is also part of a wider Ōtākou Harbour culturally significant landscape. See Appendices A4.23, A4.25, A4.26.

### A3.2.Y.2 Values to be protected

The following values have been identified as important to protect:

a. *Biophysical values:*

- i. Legible remnants of the Dunedin Volcano Vent, which remain largely intact.
- ii. The natural character values of the coastal environment.
- iii. Very limited modification along the coastal edge retains dynamic cues to natural land-sea relationships.
- iv. Rakiriri Island remains covered in intact indigenous bush including ngaio and kōhūhū forest.
- v. Kamau Taurua Island and Portobello Peninsula contain areas of regenerating indigenous bush.
- vi. Both Rakiriri Island and Kamau Taurua Island are breeding sites for marine birds such as shags.
- vii. Indigenous biodiversity and habitat for indigenous wildlife.

b. *Sensory values:*

- i. Highly legible and natural volcanic landforms expressive of their formative processes.
- ii. Visual coherence of the landscape i.e. patterns of land use reflecting the topography with few structures and retention of indigenous vegetation.
- iii. Memorable and central features within the Otago Harbour landscape and a natural focal point for the city.
- iv. High rural amenity values due to coherent pastoral landscape with areas of regenerating indigenous vegetation.
- v. Transient values include interactions with the tides, and seasonal occupation by marine birds.
- vi. High wildness, isolation and scenic values and interactions with the coastal environment, legibility of the volcanic landforms and retention of indigenous vegetation.
- vii. High sense of remoteness.
- viii. Low impact of built elements, earthworks, and exotic tree plantings and the significant relative dominance of natural landscape elements.
- ix. The quality of views to and across the three natural features forming the landscape.
- x. The distinctiveness of each natural feature and their harbour relationships.

c. *Associative values:*

- i. High scenic values associated with the wider volcanic landscape.
- ii. Rakiriri Island and Kamau Taurua Island are wāhi tūpuna to Kai Tāhu, with the ONL also contributing to the wider Ōtākou harbour cultural landscape. Rakiriri is a very sacred (wāhi tapu) site, being the traditional home of Takaroa, the guardian of the sea. Kamau Taurau was the site of a kāika or settlement.
- iii. Both islands were used for quarantine purposes and the structures associated with this still remain, particularly on Kamau Taurua Island.
- iv. Both islands have Heritage New Zealand Historic Area classifications.
- v. Historic structures, wharves and roads present.

### A3.2.Y.3 Principal threats to values

Threat	Description
Buildings and structures	a. Buildings and structures can become visually dominant from public viewpoints if they are inappropriately sited, or if the design, scale and finish of structures conflict with established values.
Shelterbelts	a. Inappropriate siting, scale and design of shelterbelts may diminish the visual coherence of the natural landform character.
Roads and tracks	a. Roads and tracks can have an adverse effect on visual quality if they are poorly sited; for example if they cut across the landform rather than follow it, or if they are of inappropriate scale and design and become visually dominant.
Forestry blocks	a. Exotic forestry blocks would likely have an adverse effect on landscape values. Inappropriate siting and scale and layout of forestry blocks may diminish the character of the underlying landform and other natural features.
Quarries and mining activity	a. Quarries and mining activity can have adverse effects on visual quality if sites are visible from significant public viewing points and if care is not taken to appropriately mitigate adverse effects on existing natural topography and vegetation values.
Reduction of areas of indigenous vegetation	a. Indigenous vegetation patterns which reinforce and reflect landform character and fragile ecosystems contribute significantly to the values identified for the Harbour Islands and Portobello Peninsula Outstanding Natural Landscape.
Encroachment into pastoral areas	<p>a. Incremental change within this rural environment could result in the proliferation of smaller rural farm blocks and as a consequence, the loss of viable operations.</p> <p>b. Houses and associated roading infrastructure would significantly alter the rural character of the area, downgrading the natural character and amenity values with the fragmented landscape that results.</p> <p>c. A multitude of land uses, each requiring its own system of management and servicing, contrasts strongly with the open pastoral character that is maintained under a traditional farming system.</p>
Loss of historic and cultural features	a. Activities that disturb wāhi tupuna or result in the loss of historic structures, wharves or roads.

#### A3.2.Y.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<p>a. Buildings and structures should be designed with the intention of preserving or enhancing existing values.</p> <p>b. They should be located with an awareness of being viewed from prominent public viewing points.</p> <p>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding landscape; and rural planting schemes need to be of a scale and character appropriate to the landscape.</p> <p>d. See Appendix A11 for design guidelines for buildings and structures.</p>

Threat	Key design elements
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible areas, otherwise it should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas;</li> <li>b. They should wherever possible follow contours rather than cut across them; and</li> <li>c. Construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Forestry blocks	<ul style="list-style-type: none"> <li>a. Highly visible areas should be avoided for forestry planting; for other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. Visually recessive areas such as gullies may be acceptable for planting. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns.</li> <li>c. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist.</li> <li>d. Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the environmental effects occurring at this stage of the forest growing cycle.</li> <li>e. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>
Quarries and mining	<ul style="list-style-type: none"> <li>a. This should not be sited in visually prominent areas if it can be avoided. Where this may not be possible, quarrying should be managed with appropriate mitigation to reduce adverse effects on visual amenity.</li> </ul>
Reduction of areas of indigenous vegetation	<ul style="list-style-type: none"> <li>a. Areas of indigenous vegetation should be retained and enhanced.</li> </ul>
Encroachment into pastoral areas	<ul style="list-style-type: none"> <li>a. The distinctive natural and open pastoral values of this Outstanding Natural Landscape require their protection from inappropriate development.</li> </ul>
Loss of historic and cultural features	<ul style="list-style-type: none"> <li>a. Protection of wāhi tupuna, and retention of historic structures, wharves and roads.</li> </ul>

## **A3.3 Significant Natural Landscapes**

### **A3.3.1 Durdan Hill Significant Natural Landscape**

#### **A3.3.1.1 Description of Area**

Pahatea/Durdan Hill is a significant domed hill around 440 metres in elevation located 3-4 kilometres north-west of Waikouaiti, and just south of the Dunedin City District northern boundary. It has visually prominent higher slopes largely devoid of taller vegetation or any structures, and it has a predominantly pastoral land use.

It forms a distinctive backdrop to the main highway and associated coastal settlements.

### A3.3.1.2 Values to be Protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Coherent natural volcanic landform with an aesthetically interesting conical shape.
- b. *Aesthetic and amenity values:*
  - i. Aesthetic Coherence. The area has high rural amenity values based on a coherent and memorable volcanic form. It has an uncluttered appearance and a sense of remoteness in places due to the absence of buildings and other structures.
  - ii. Provides a significant visual backdrop to coastal features. High aesthetic values and memorability.

### A3.3.1.3 Principal threats to values

Threat	Description
Structures	Inappropriate siting, design, scale, density and finish of structures such that they become visually dominant from public viewpoints.
Forestry blocks	Inappropriate siting, design, scale and layout of forestry blocks such that the character of the underlying landform or other natural features is diminished.
Roads and tracks	Inappropriate siting, scale and design of roads and tracks such that they cut across the landform rather than follow it and become visually dominant features.
Shelterbelts	Inappropriate siting, scale and design of shelterbelts such that they diminish the visual coherence of the natural landform character.
Quarries and mining activity	Removal of significant landform features by quarrying and mining activity. Inappropriate siting and scale of quarries and other excavations such that they become visually dominant focal points.

### A3.3.1.4 Key design elements to be required or encouraged

Threat	Key design elements
Structures	a. Structures should be designed with the intention of preserving or enhancing existing values. They should be located as far as reasonably practical away from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.

Threat	Key design elements
Forestry blocks	<ul style="list-style-type: none"> <li>a. Highly visible areas, which includes a considerable proportion of this Significant Natural Landscape, should be avoided for forestry planting. For other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact of the visual integrity of the landscape. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns.</li> <li>b. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist. Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the environmental effects occurring at this stage of the forest growing cycle.</li> <li>c. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas; they should wherever possible follow contours rather than cut across them; and construction activity should minimise the amount of cut and ensure that this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt plantings should avoid highly visible areas, otherwise they should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>
Quarries and mining activity	<ul style="list-style-type: none"> <li>a. Any quarries and mining activity should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points; visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.</li> </ul>

## **A3.3.2 Flagstaff - Mt Cargill Significant Natural Landscape**

### **A3.3.2.1 Description of area**

This Significant Natural Landscape covers the hills to the north of urban Dunedin including Flagstaff (Whānau-paki), Swampy Summit (Whawha-raupō), and the lower slopes of Mount Cargill (Kapuketaumahaka), below the Mt Cargill ONL, to Signal Hill. The geology is largely volcanic and the hills reach elevations of 739 metres (Swampy Summit). The area is the catchment for numerous small rivers and streams, most notably the Waitati River, Water of Leith and Lindsay Creek.

Land cover/land use is a mix of remnant indigenous vegetation (forest and grassland), agriculture, forestry, rural residential development and exotic scrub. The main northern approaches to Dunedin traverse these hills and the hills provide the northern backdrop to the city and the west harbour, as well as the southern backdrop to the Blueskin Bay area. The area is host to a number of utility structures, as well as quarries.

The peaks are a cultural identity marker for Manawhenua and are identified as a wāhi tūpuna. See Appendices A4.28, A4.32, and A4.49.

### **A3.3.2.2 Values to be protected**

The following values have been identified as important to protect:

**a. *Biophysical values:***

- i. The extent and integrity of the natural landscape elements including wildlife.
- ii. Flagstaff Peak patterned ground is a regionally significant geopreservation site.
- iii. Volcanic Peaks and associated landforms including the summits of Flagstaff and Swampy Summit and the sequence of legible and largely intact eroded volcanic spurs which extend below the summit.
- iv. Podocarp Broadleaf forests e.g. Moore's Bush.
- v. Cloud forest (Libocedrus and podocarps) on Leith Saddle.
- vi. Broadleaf forest e.g. Burns Park.
- vii. Regenerating indigenous forest on the slopes of Flagstaff.
- viii. *Ozothamnus/Dracophyllum* shrublands at Swampy Summit.
- ix. Snow tussocklands on Flagstaff.

**b. *Sensory values:***

- i. Volcanic landscape which remains expressive of its formative processes.
- ii. Legibility of the natural landform and associated visual coherence of the landscape i.e. patterns of land use reflecting the topography.
- iii. Low impact of built elements, earthworks, and exotic tree plantings, and the significant relative dominance of natural landscape elements.
- iv. Naturalness of elevated landforms.
- v. Landform and vegetative altitudinal connectivity present.
- vi. The extent and quality of views across the landscape from public roads and tracks.
- vii. Naturalness attributes of the rural landscape which provides backdrop and containment to the discrete harbourside settlements.
- viii. Naturalness of the foreground to the Mt Cargill ONL above.
- ix. Forms much of the backdrop to urban Dunedin.

- x. The landforms are striking and memorable and many are iconic landmark features of Dunedin.
  - xi. Native vegetation cover and vegetation patterns that reflect the natural topography and natural skylines.
  - xii. Has very high levels of visibility from significant population centres and major roads.
  - xiii. High rural amenity value.
  - xiv. Transient values include the cloud cap and seasonal snow cover and wildlife.
  - xv. The ridges and peaks are connected by a network of popular walks and mountain bike tracks incorporating scenic recreation and nature reserves.
  - xvi. Expansive and panoramic views over Dunedin city and beyond are afforded from the accessible summits.
  - xvii. Overall, the landforms are striking and memorable and many are iconic landmark features of Dunedin.
- c. *Associative values:*
- i. Flagstaff (Whānau-paki) is considered wāhi tupuna, is referred to in mihi as a cultural identity and is a boundary marker between hapū.
  - ii. Both Flagstaff (Whānau-paki) and Swampy Summit (Whawharaupō) were part of traditional trails (ara tawhito) running between the Taieri Plain and Blueskin Bay.
  - iii. The ring of encircling hills has been referred to as the outer town belt.
  - iv. The hilltops are distinctive city landmarks and provide a natural approach to the city.
  - v. Flagstaff refers to the flagpole that was used in early European times to alert the wider population that a ship had entered the harbour. An alternative explanation is that the name refers to the poles that were used to mark the original track northwards from Dunedin which ran along the Flagstaff and Swampy summit tops to Hightop.
  - vi. Historic buildings and structures and shelter and amenity plantings are present.
  - vii. Heritage landscape qualities including the legibility of the previous more intensive dairy farming land use.

### A3.3.2.3 Principal threats to values

Threat	Description
Buildings and structures	Inappropriate siting, design, scale density and finish of buildings and structures such that they become visually dominant from public viewpoints. This is a more significant issue at higher elevations.
Roads and tracks	Inappropriate siting, scale and design of roads and tracks such that they cut across the landform rather than follow it and become visually dominant features.
Loss of existing native vegetation and habitat	The protection of native vegetation and restoring the extent and connections between existing forest and bush stands should be an important priority within this landscape.
Shelterbelts	Inappropriate siting, scale and design of shelterbelts such that they are not sympathetic with underlying topography or natural landform character.
Quarries and mining activity	Removal of significant landform features by quarrying and mining activity. Inappropriate siting and scale of quarries and other excavations such that they become visually dominant focal points.
Forestry blocks	Inappropriate siting, scale and layout of forestry blocks such that the character of the underlying landform or other natural features is diminished.

Threat	Description
Loss of historic and cultural features	Retention of heritage landscape features such as traditional drystone walls and shelterbelts

A3.3.2.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Buildings and structures should be designed with the intention of preserving or enhancing landscape values.</li> <li>b. Buildings and structures should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Encourage clustering of buildings and structures or farm/forest park development layouts. This will ensure more sensitive and visible landscapes in other areas that remain free of buildings and structures. Applying visual controls and limiting development to low densities are some of the ways adverse impacts of buildings and structures can be reduced.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. Roads and tracks should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Loss of existing native vegetation and habitat	<ul style="list-style-type: none"> <li>a. Wherever practicable existing native vegetation areas should be retained and enhanced.</li> <li>b. Encourage protection and restoration of remnant vegetation and planting of new appropriate vegetation as part of on-going land management practices.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible areas, otherwise they should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>
Quarries and mining activity	<ul style="list-style-type: none"> <li>a. Any quarries and mining activity should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points; visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.</li> </ul>

Threat	Key design elements
Forestry blocks	<ul style="list-style-type: none"> <li>a. Highly visible areas, which includes a considerable proportion of this Significant Natural Landscape, should be avoided for forestry planting. For other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact of the visual integrity of the landscape. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns.</li> <li>b. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist. Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the environmental effects occurring at this stage of the forest growing cycle.</li> <li>c. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>
Loss of historic and cultural features	<ul style="list-style-type: none"> <li>a. Retention of heritage landscape features such as traditional drystone walls and shelterbelts.</li> </ul>

### **A3.3.3 Pūrākaunui and Ōrokonui Significant Natural Landscape**

#### **A3.3.3.1 Description of area**

The Pūrākaunui and Ōrokonui Significant Natural Landscape encircles the Pūrākaunui Inlet, from just south of the Pūrākaunui township, to the Ōrokonui Ecosanctuary beyond the coastal edge of Doctors Point in the west, stretching inland to the lower and mid slopes of Mopanui, below the ridgetops of the Heyward Coast Outstanding Natural Landscape. Pūrākaunui Inlet is located at the end of the largest of the valleys formed from the secondary ridges leading off the main ridge defining the northern side of the Otago Harbour landscape.

Land cover/land use is a mix of forestry and pastoral farming with areas of native scrub and forest in the steeper slopes and gullies. A more extensive area of coastal Otago forest is also encountered within Ōrokonui Ecosanctuary. The settlements of Pūrākaunui and Osborne are located adjacent to this Significant Natural Landscape.

The area includes wāhi tūpuna. See Appendices A4.14, A4.16, A4.17 and A4.18.

#### **A3.3.3.2 Values to be protected**

The following values have been identified as important to protect:

**a. *Biophysical values:***

- i. Intact drowned valley and intertidal estuary.
- ii. Pūrākaunui Inlet is a regionally significant geopreservation site considered an easily accessible, almost pristine example of a small drowned valley forming an intertidal estuary with a sand dune barrier across the entrance.
- iii. The coastal edge of Doctors Point is part of the Blueskin Bay Geopreservation Inventory.
- iv. Areas of Significant Biodiversity Value along the edge of the Pūrākaunui Inlet including natural coastal-estuarine habitats.
- v. Presence of native scrub, duneland and regenerating native forest.
- vi. Ōrokonui Ecosanctuary – predator proof habitat for native flora and fauna.

**b. *Sensory values:***

- i. High rural amenity value expressing a mosaic of rural land use.
- ii. The landscape is remote from major urban centres or main roads but is the landscape context for the settlements of Pūrākaunui and Osborne.
- iii. Coherent and memorable volcanic landform and high naturalness based on the presence of areas of native vegetation and the vegetation pattern that generally reflects the landform.
- iv. Sense of remoteness in places due to the limited impact of buildings and other structures, and the open ocean facing aspect.
- v. Part of a broader legible volcanic landform.
- vi. Low impact of built elements, earthworks, and exotic tree plantings, and the significant relative dominance of natural landscape elements.
- vii. Naturalness of the Inlet slopes, the ridgeline and the coastal landforms.
- viii. The extent and quality of views across the landscape from public roads and tracks.
- ix. Naturalness attributes of the rural coastal landscape which contributes to the Inlet setting.
- x. Transient values include a birdlife in the inlet and coastal cloud cap.
- xi. For Manawhenua, the outer lands including the forest blanketed sand barrier and the ocean coast from Pūrākaunui Bay and Māpoutahi around Blueskin Cliff to Doctors Point, contribute high

pupuri/memorability.

c. *Associative values:*

- i. Māpoutahi is an ancient Pā site and the site of a battle.
- ii. Pūrākaunui Bay is an important mahika kai area, the site of a former kāika, and also contains urupā.
- iii. Forms the setting of the popular recreational destinations/lifestyle settlements of Pūrākaunui and Osborne.
- iv. Returning servicemen settled in this area and established dairy farms.
- v. Pūrākaunui Inlet was the site of whaling activity.

#### A3.3.3.3 Principal threats to values

Threat	Description
Buildings and structures.	Inappropriate siting, design, scale, density and finish of buildings and structures such that they become visually dominant from public viewpoints.
Roads and tracks.	Inappropriate siting, scale and design of roads and tracks such that they cut across the landform rather than follow it and become visually dominant features.
Reduction of areas of indigenous vegetation.	Reduction of areas of indigenous vegetation threatens patterns which reinforce and reflect landform character and fragile ecosystems that contribute significantly to the values identified for the Pūrākaunui and Ōrokonui Significant Natural Landscape.
Shelterbelts.	Inappropriate siting, scale and design of shelterbelts such that they are not sympathetic with underlying topography or natural landform character.
Quarries and mining activity.	Removal of significant landform features by quarrying and mining activity. Inappropriate siting and scale of quarries and other excavations such that they become visually dominant focal points.
Forestry blocks.	Inappropriate siting, scale and layout of forestry blocks such that the character of the underlying landform or other natural features is diminished.
Loss of historic and cultural features.	Retention of heritage landscape features such as traditional drystone walls and shelterbelts.

#### A3.3.3.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures.	<ol style="list-style-type: none"> <li>a. Buildings and structures should be designed with the intention of preserving or enhancing existing values. They should be located as far as reasonably practicable away from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant and rural planting schemes need to be of a scale and character appropriate to the landscape.</li> <li>b. See Appendix A11 for design guidelines for buildings and structures.</li> </ol>
Roads and tracks.	<ol style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas; they should wherever possible follow contours rather than cut across them; and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ol>

Threat	Key design elements
Reduction of areas of indigenous vegetation	a. Areas of indigenous vegetation should be retained and enhanced.
Shelterbelts	<p>a. If practically feasible, shelterbelt planting should avoid highly visible areas, otherwise they should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</p> <p>b. See Appendix A11 for design guidelines for shelterbelts.</p>
Quarries and mining activity	a. Any quarries and mining activity should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points; visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.
Forestry blocks.	<p>a. Some highly visible areas should be avoided for forestry planting; for other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist. Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the environmental effects occurring at this stage of the forest growing cycle.</p> <p>b. See Appendix A11 for design guidelines for forestry blocks.</p>
Loss of historic and cultural features	a. Retention of heritage landscape features such as traditional drystone walls and shelterbelts

### **A3.3.4 Maungatua Significant Natural Landscape**

#### **A3.3.4.1 Description of area**

This area includes the higher slopes on both sides of the Maungatua Range and parts of the Mill Creek and Waipori Gorge areas. The Maungatua Range is a schist block mountain typical of the Central Otago region with a broad rounded summit reaching 895 metres in height and its eastern face is a scarp associated with the Maungatua fault. Lower parts of the Maungatua Significant Natural Landscape (MSNL) are covered in a mixture of pasture, scrub and native forests. The upland parts are mainly under snowgrass cover with areas of shrubland and farmland. The land use is a mixture of pastoral agriculture and Department of Conservation reserve and there is little modification to the landscape in the form of built structures.

Maungatua is significant to Kāi Tahu and is identified as a wāhi tūpuna. See Appendix A4.64.

#### **A3.3.4.2 Values to be protected**

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Prominent natural landform: the interior Maungatua Range is elevated above the main nearby ridgelines, and features distinctive character, unique geology, aspect and associated vegetation types. The Maungatua Range is well recognised as a local landmark.
  - ii. Natural character: there is an unbroken sequence of native vegetation communities from valley floor mixed forest beech forest, through to montane shrubland, low alpine snowgrass and cushion bog (Waipori Gorge - Maungatua tops). These communities provide habitat for a range of insects and moths. There are also rare plant species.
  - iii. Maungatua summit wetland: this area has a significant wetland of a scarce type. Although modified by fires, grazing and trampling, the Maungatua wetlands are the only remaining examples of high altitude wetlands on the eastern side of the Waipori Ecological District.
- b. *Cultural/historic values:*
  - i. Values of significance to Manawhenua. See appendix A4.64.
  - ii. The Maungatua Range is a notable landmark of the wider Dunedin area. Its natural character values are recognised in the Otago Conservancy Management Strategy and the Otago Regional Council Regional Plan Water.
- c. *Aesthetic and amenity values:*
  - i. Visual prominence. The Maungatua Range is the dominant topographical feature of the Taieri Plain and a significant landmark. It is highly visible from surrounding areas. It has high memorability values based on its scale and distinctive block mountain form.
  - ii. Natural landform values. Naturalness values are high based on the natural skyline, lack of structures and presence of rock outcrops, native grassland and indigenous forest cover. At lower altitudes the landscape is more modified, but here too naturalness values are generally high due to the mainly harmonious relationship of vegetation/land use patterns with natural landforms. Natural altitudinal vegetation sequences are highly legible in this landscape. Seasonal snow cover and light effects which highlight the natural landforms can also contribute to landscape values.
  - iii. Recreation. The Maungatua Range has very distinctive amenity values which relate closely to its landscape character and features. It is recognised for recreation pursuits, predominantly walking and hunting.

#### A3.3.4.3 Principal threats to values

Threat	Description
Forestry blocks	Inappropriate siting, scale and layout of forestry blocks such that the character of the underlying landform or other natural features is diminished. This is mainly an issue for the more elevated parts of the Maungatua Range and areas on the western slope overlooking the Strath Taieri.
Wilding trees and other weeds	The establishment and spread of wilding trees and other weeds such as hieracium, gorse and broom can have an adverse effect on landscape values, particularly in the subalpine grassland areas.
Reduction of areas of indigenous vegetation	Removal or diminution of areas of indigenous vegetation, particularly native grasslands at higher altitudes.
Buildings and structures	Inappropriate siting, design, scale density and finish of buildings and structures such that they become visually dominant from public viewpoints.
Roads and tracks	Inappropriate siting, scale and design of roads and tracks such that they cut across the landform rather than follow it, and consequently become visually dominant features.
Shelterbelts	Inappropriate siting, scale and design of shelterbelts such that they diminish the visual coherence of the natural landform character. This is mainly an issue for the more elevated parts of the Maungatua Range and the western slope overlooking the Strath Taieri, where the landform character is determined by the predominant grassland cover.

#### A3.3.4.4 Key design elements to be required or encouraged

Threat	Key design elements
Forestry blocks	<ol style="list-style-type: none"> <li>Highly visible areas should be avoided for forestry planting. On the Maungatua Range all exotic forestry should be avoided at higher altitudes.</li> <li>For other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>At lower altitudes forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns.</li> <li>Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the environmental effects occurring at this stage of the forest growing cycle.</li> <li>See Appendix A11 for design guidelines for forestry blocks.</li> </ol>
Wilding trees and other weeds	<ol style="list-style-type: none"> <li>Active ongoing management to avoid wilding tree and nuisance weed spread should be promoted.</li> </ol>
Reduction of areas of indigenous vegetation	<ol style="list-style-type: none"> <li>Removal or reduction of significant areas of indigenous vegetation should be avoided.</li> <li>Opportunities to reinforce and enhance these areas with additional appropriate planting should be encouraged.</li> <li>It is important to retain and enhance the unbroken indigenous vegetation pattern, characterised by sequences extending from valley floor mixed forest communities to subalpine grassland communities.</li> </ol>

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Buildings and structures should be designed with the intention of preserving or enhancing the landscape values.</li> <li>b. Buildings and structures should be located with an awareness of being viewed from prominent public viewing points on the Taieri Plain or from the Lee Stream and wider Strath Taieri locations to the north.</li> <li>c. Good design should relate to the specific character and location of each site. General principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding landscape; and rural planting schemes need to be of a scale and character appropriate to the landscape.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. Roads and tracks should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible areas, particularly upper altitudes.</li> <li>b. If established, shelterbelts should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>c. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>

### **A3.3.5 Inner Peninsula Bays Significant Natural Landscape**

#### **A3.3.5.1 Description of area**

The Inner Peninsula Bays Significant Natural Landscape extends between the urban area of Dunedin and Portobello Peninsula and joins up with the Ōtākou SNL along the northern aspect of Otago Peninsula within Otago Harbour. The lower boundary is defined to exclude the harbour-side settlements and more developed lower slopes while the upper boundary adjoins the Otago Peninsula Outstanding Natural Landscape.

The geology is volcanic, the harbour being an eroded volcanic crater. This is the sheltered, sunny side of the Otago Peninsula, located close to the main urban area, and this is reflected in the presence of a number of settlements dotted along the harbour shoreline. Apart from the residential areas the land is largely managed as pastoral farms but there are also some small areas of plantation forestry and areas of remnant or regenerating native bush.

The iconic Harbour Cone sits centrally in the Otago Peninsula, providing a significant backdrop to the harbourside settlements of Broad Bay and Portobello. The rural landscape here is a very special one, highly expressive of its formative processes, both natural and cultural. The uniform pasture covering the majority of the landscape clearly shows the natural landforms, with the scattering of remnant bush coinciding with the steep, wet areas that have been unsuitable for grazing.

It provides a significant portion of the setting, visual containment and skyline for the urban areas of Dunedin and the harbour communities. It therefore has a substantial impact on the visual quality of the wider area.

The area includes a wāhi tūpuna encompassing part of the upper slopes and peaks of Otago Peninsula See Appendix A4.41.

#### **A3.3.5.2 Values to be protected**

The following values have been identified as important to protect:

a. *Biophysical values:*

- i. Defining elements include steep spur and gully hillsides descending from prominent volcanic ridgelines.
- ii. Eroded volcanic landform remains legible and largely intact.
- iii. The area surrounding the iconic Harbour Cone (an ONF) provides a significant backdrop to the harbourside settlements of Broad Bay and Portobello.
- iv. Small areas of regenerating indigenous forest.
- v. Interconnections with the marine environment.
- vi. Indigenous biodiversity and habitat for indigenous wildlife.

b. *Sensory values:*

- i. Legibility of the natural landform and associated visual coherence of the landscape i.e. patterns of land use reflecting the underlying topography.
- ii. Naturalness of landforms, including lowlands, slopes, summits and ridgelines.
- iii. Naturalness attributes of the rural landscape which provide backdrop and containment to the discrete harbourside settlements.
- iv. The extent, integrity, coherence and naturalness of the major natural elements such as landform, streams and areas of indigenous vegetation. A key feature here is the extent and quality of areas of regenerating indigenous bush.
- v. Outstanding panoramic views which are available both of the area and from the area.
- vi. Expressive of the landscape's eroded volcanic formative processes.

- vii. High rural amenity with low impact of built elements, earthworks, exotic tree plantings, and the significant relative dominance of natural landscape elements.
  - viii. Open views across the landscape from roads and tracks.
- c. *Associative values:*
- i. The upper slopes and peaks of the Peninsula are highly valued including by Manawhenua and have wāhi taoka values.
  - ii. High tourism and recreational values.
  - iii. European cultural features throughout the area include drystone walls and remnant Macrocarpa shelter trees and building sites.
  - iv. Rural character contributes to the shared and recognised natural and amenity values of the harbour landscape.
  - v. Otago Peninsula has high tourism and recreational values and is viewed as a special area of Dunedin.

#### A3.3.5.3 Principal threats to values

Threat	Description
Buildings and structures	Inappropriate siting, design, scale, density and finish of buildings and structures such that they become visually dominant from public viewpoints.
Roads and tracks	Inappropriate siting, scale and design of roads and tracks such that they cut across the landform rather than follow it and become visually dominant features.
Loss of rural production/rural character.	Incremental change within this rural environment has resulted in the proliferation of small rural farm blocks and as a consequence, the loss of viable farming operations. Houses and associated roading infrastructure significantly alter the rural character of the area, downgrading the amenity values with the fragmented landscape that results. A multitude of land uses, each requiring its own system of management and servicing, contrasts strongly with the open pastoral character that is maintained under a traditional farming system. Such continuing encroachment into pastoral areas is a threat to this area. Rolling landforms above the Macandrew Bay and Company Bay settlements are potentially attractive for rural lifestyle development. The better soils and sheltered sites of this area, considered alongside their highly visible position, requires their protection from inappropriate development.
Shelterbelts:	Inappropriate siting, scale and design of shelterbelts such that they diminish the visual coherence of the natural landform character.
Quarries and mining activity	Removal of significant landform features by quarrying and mining activity. Inappropriate siting and scale of quarries and other excavations such that they become visually dominant focal points.

#### A3.3.5.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Buildings and structures should be designed with the intention of preserving or enhancing existing values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding landscape; and rural planting schemes need to be of a scale and character appropriate to the landscape.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas;</li> <li>b. They should wherever possible follow contours rather than cut across them; and</li> <li>c. Construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Loss of rural production / rural character.	<ul style="list-style-type: none"> <li>a. The potential for clustering of housing, and the subsequent retention of viable farm land should be considered. Ecological restoration that creates corridors throughout the landscape needs to form a fundamental component of any development activity.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible areas, otherwise they should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>
Quarries and mining activity	<ul style="list-style-type: none"> <li>a. Any quarrying and mining activity undertaken should be designed with an awareness of the visual quality of the setting.</li> <li>b. Wherever possible activities should be sited away from prominent viewing points;</li> <li>c. Visible quarries and mining surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.</li> </ul>

### **A3.3.X Careys Bay to Te Ngaru Significant Natural Landscape**

#### **A3.3.X.1 Description of area**

The Careys Bay to Te Ngaru Significant Natural Landscape extends between Careys Bay and the Aramoana Salt Marsh, adjacent to the Heyward Coast Outstanding Natural Landscape along its length.

Beyond the more immediate backdrop to Aramoana at the entrance to Otago Harbour, the land above the harbour edge includes a mosaic of varied rural land use including pasture with pockets of exotic trees and regenerating indigenous vegetation, reinforcing a strong settled rural character. Human modification is apparent along the harbour's coastal edge and includes a continuous seawall and road tracing the shoreline accessing Aramoana and there are several pockets of established residential development adjoining the coastal edge.

The area includes a wāhi tūpuna, 'Views from Ōtākou Marae around Upper Harbour'. See Appendix A4.32.

#### **A3.3.X.2 Values to be protected**

The following values have been identified as important to protect:

- a. *Biophysical values:*
  - i. Seaward flanks to the harbour display earlier eroded volcanic formations.
  - ii. Intact basalt volcanic landforms supporting rural land use with limited structures.
  - iii. Mosaic of rural land use including areas of pasture with regenerating native species and exotic forestry.
  - iv. Secondary native forest above Deborah Bay.
- b. *Sensory values:*
  - i. High rural amenity values expressing a mosaic of rural land use.
  - ii. Low impact of built elements, earthworks, and exotic tree plantings, and the significant relative dominance of natural landscape elements.
  - iii. Modified road and seawall with pockets of residential development along harbour edge.
  - iv. Volcanic landform remains expressive of formative processes above accessible harbour edge.
  - v. Transient values include the mist and cloud which obscure the hilltops and upper slopes.
  - vi. Qualities of wilderness and isolation and natural darkness of the night sky.
  - vii. Natural tidal rhythms of harbour interface.
  - viii. Scenic values which contribute to the diverse mountain to sea landscape.
  - ix. The extent and quality of views across the landscape from public roads and tracks.
- c. *Associative values:*
  - i. Identified as wāhi tūpuna - views from Ōtākou Marae across the Upper Harbour.
  - ii. Relationship with Mihiwaka, a cultural identity marker for Kāi Tahu.
  - iii. Otaheiti (Acheron Point) was the site of a Pā and the home of the raketira Taiaroa before he lived at Ōtākou. Values include Pā tawhito and Urupā.
  - iv. Backdrop to the harbour which is significant for mahika kai.
  - v. Legacies of early European settlement including historic buildings and structures, plus shelter and amenity plantings.

#### **A3.3.X.3 Principal threats to values**

<b>Threat</b>	<b>Description</b>
---------------	--------------------

Buildings and structures	a. Inappropriate siting, design, scale, density and finish of buildings and structures such that they become visually dominant from public viewpoints.
Roads and tracks	a. Inappropriate siting, scale and design of roads and tracks such that they cut across the landform rather than follow it and become visually dominant features.
Loss of existing native remnants	a. As traditional agricultural practices have removed much of the indigenous native vegetation cover, it is important to retain the remaining remnants of coastal forest and scrub.
Shelterbelts	a. Inappropriate siting, scale and design of shelterbelts may diminish the visual coherence of the natural landform character.
Quarries and mining activity	a. Removal of significant landform features by quarrying and mining activity. Inappropriate siting and scale of quarries and other excavations such that they become visually dominant focal points.
Forestry blocks	a. Inappropriate siting, scale and layout of forestry blocks such that the character of the underlying landform or other natural features is diminished.
Loss of historic and cultural features	a. Loss of heritage landscape features such as traditional drystone walls and shelterbelts.

#### A3.3.X.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Buildings and structures should be designed with the intention of preserving or enhancing landscape values.</li> <li>b. Buildings and structures should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Encourage clustering of buildings and structures. This will ensure more sensitive and visible landscapes in other areas that remain free of buildings and structures. Applying visual controls and limiting development to low densities are some of the ways adverse impacts of buildings and structures can be reduced.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. Roads and tracks should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Loss of existing native vegetation and habitat	<ul style="list-style-type: none"> <li>a. Wherever practicable existing native vegetation areas should be retained and enhanced.</li> <li>b. Encourage protection and restoration of remnant vegetation and planting of new appropriate vegetation as part of on-going land management practices.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible areas, otherwise they should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>

Threat	Key design elements
Quarries and mining activity	a. Any quarries and mining activity should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points; visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.
Forestry blocks	<p>a. Highly visible areas should be avoided for forestry planting. For other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact of the visual integrity of the landscape. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns.</p> <p>b. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist. Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the environmental effects occurring at this stage of the forest growing cycle.</p> <p>c. See Appendix A11 for design guidelines for forestry blocks.</p>
Loss of historic and cultural features	a. Retention of heritage landscape features such as traditional drystone walls and shelterbelts.

### A3.3.Y Ōtākou Significant Natural Landscape

#### A3.3.Y.1 Description of area

The Ōtākou Significant Natural Landscape extends between Portobello Peninsula and the established settlement at Harington Point near Taiaroa Head. Divided from the Inner Peninsula Bays SNL to the south by Allans Beach Road, it includes the hillsides above Portobello Bay, Harwood, Akapatiki Flat, Ōtākou, Te Umukuri/Wellers Rock and Te Rauone Beach, but excludes Taiaroa Head itself, which is wholly included in the Otago Peninsula Outstanding Natural Landscape. At the southern end of the SNL, the harbour-side boundary is defined by Harington Point Road, while further north the boundary rises slightly higher above sea level to roughly follow the 40m contour. To the south and east, the SNL boundary adjoins the Otago Peninsula ONL.

The geology of the area is characterised by the open eroded volcanic landforms that adjoin the harbour edge, contributing to a memorable landscape based on the enclosure of settlements by the well-vegetated or pastoral, landform-dominated rural landscape, and the associations with harbour waters and overall harbour landform. Numerous areas of remnant and/or regenerating native forest are present, including on roadsides. The area has a limited scatter of structures and highly legible natural landforms.

The area is within a culturally significant landscape, including part of the Ōtākou Native Reserve east of Akapatiki Flat (see Appendix A4.34), upper slopes and peaks of Otago Peninsula (see Appendix A4.41) and much of the land surrounding the Ōtākou Marae.

#### A3.3.Y.2 Values to be protected

The following values have been identified as important to protect:

- a. *Biophysical values:*
  - i. Seaward flanks to the harbour display earlier eroded volcanic formations.
  - ii. Intact basalt volcanic landforms supporting rural land use with limited structures.

- iii. Mosaic of rural land use including areas of pasture with regenerating native species and exotic forestry.
  - iv. Secondary native forest above Deborah Bay.
- b. *Sensory values:*
- i. High rural amenity.
  - ii. Naturalness of landforms, including lowlands, slopes, summits and ridgelines.
  - iii. Highly legible natural landform expressive of the landscape's eroded volcanic formative processes.
  - iv. Naturalness attributes of the rural landscape which provide backdrop and containment to the discrete harbourside settlements.
  - v. The extent, integrity, coherence and naturalness values of the major natural elements such as landform, streams and areas of indigenous vegetation.
  - vi. Part of a broader memorable harbour landscape based on the enclosure of settlements, well-vegetated or pastoral slopes and landform-dominated rural landscape.
  - vii. Naturalness is somewhat modified by adjoining settlements, harbourside roads and reclamation.
  - viii. Low impact built elements and earthworks through exotic tree plantings.
  - ix. Part of a broader memorable harbour landscape based on the enclosure of settlements, well-vegetated or pastoral slopes and landform-dominated rural landscape.
  - x. Has natural characteristics which contrast with the developed harbour edge settlements, and which provide a fundamental characteristic of the harbour landscape.
  - xi. Transient values include lighting effects on the hillslope and various moods associated with different weather conditions.
- c. *Associative values:*
- i. The upper slopes and peaks of the peninsula are highly valued including by Manawhenua and have wāhi taoka values.
  - ii. Ōtākou Marae Reserve (see Appendix A4.31), adjacent to the SNL, is the cultural and ceremonial centre of the local hapū.
  - iii. The Native Reserve land at the eastern end of the Peninsula was retained by Kāi Tahu during the land sales of 1844 and a strong ancestral connection is felt to this area of historic settlement and use by Manawhenua. It has a number of significant values including Pā tawhito, Tūāha, Wāhi pakanga, Urupā, Kāika, Wāhi taoka, Mahika kai, Ingoa tawhito and Mana. The promontory at Ōhinetū Point is a natural landmark and has historic significance.
  - iv. Otago Peninsula has high tourism and recreational values and is viewed as a special area of Dunedin.
  - v. Historic cultural features throughout the area include drystone walls and remnant Macrocarpa shelter trees and building sites.

### A3.3.Y.3 Principal threats to values

Threat	Description
Buildings and structures	a. Buildings and structures can become visually dominant from public viewpoints if they are inappropriately sited, or if the design, scale and finish of structures conflict with established values.
Shelterbelts	a. Inappropriate siting, scale and design of shelterbelts may diminish the visual coherence of the natural landform character.

Threat	Description
Roads and tracks	a. Roads and tracks can have an adverse effect on visual quality if they are poorly sited; for example if they cut across the landform rather than follow it, or if they are of inappropriate scale and design and become visually dominant.
Quarries and mining activity	a. Quarries and mining activity can have adverse effects on visual quality if sites are visible from significant public viewing points and if care is not taken to appropriately mitigate adverse effects on existing natural topography and vegetation values.
Loss of rural production/rural character	<p>a. Incremental change within this rural environment has resulted in the proliferation of small rural farm blocks and as a consequence, the loss of viable farming operations.</p> <p>b. Houses and associated roading infrastructure significantly alter the rural character of the area, downgrading the amenity values with the fragmented landscape that results.</p> <p>c. A multitude of land uses, each requiring its own system of management and servicing, contrasts strongly with the open pastoral character that is maintained under a traditional farming system.</p> <p>d. Such continuing encroachment into pastoral areas is a threat to this area.</p>
Loss of historic and cultural features	a. Loss of heritage landscape features such as traditional drystone walls and shelterbelts.

#### A3.3.Y.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<p>a. Buildings and structures should be designed with the intention of preserving or enhancing existing values.</p> <p>b. They should be located with an awareness of being viewed from prominent public viewing points.</p> <p>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding landscape; and rural planting schemes need to be of a scale and character appropriate to the landscape.</p> <p>d. See Appendix A11 for design guidelines for buildings and structures.</p>
Shelterbelts	<p>a. If practically feasible, shelterbelt planting should avoid highly visible areas, otherwise they should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</p> <p>b. See Appendix A11 for design guidelines for shelterbelts.</p>
Roads and tracks	<p>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas;</p> <p>b. They should wherever possible follow contours rather than cut across them; and</p> <p>c. Construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</p>

Threat	Key design elements
Quarries and mining activity	a. This should not be sited in visually prominent areas if it can be avoided. Where this may not be possible, quarrying should be managed with appropriate mitigation to reduce adverse effects on visual amenity.
Loss of rural production/rural character	a. The potential for clustering of housing, and the subsequent retention of viable farm land should be considered. Ecological restoration that creates corridors throughout the landscape needs to form a fundamental component of any development activity.
Loss of historic and cultural features	a. Retention of heritage landscape features such as traditional drystone walls and shelterbelts.

### A3.3.6 Saddle Hill Significant Natural Landscape

#### A3.3.6.1 Description of area

Excluding the more elevated parts of Saddle Hill and Jaffray Hill, generally above 300 metres, this Significant Natural Landscape includes the higher slopes, generally above the 80 metre contour. It encompasses Saddle Hill, Jaffray Hill, Scroggs Hill and the ridge to the south of Scroggs Hill to a spur just to the north of McClarens Gully. The geology of these hills is complex, including schist, sandstone, siltstone and mudstone, as well as the volcanic rocks that form the dominant hill forms. There are areas where past large scale landslides can be discerned in the landforms. Land use is a mix of pastoral farming and forestry, with some areas also under exotic scrub cover and indigenous vegetation.

The uppermost slopes of Saddle Hill and Jaffray Hill are considered an Outstanding Natural Feature (ONF). The hills define the south-eastern side of the northern Taieri Plain and separate this area from the coast.

Saddle and Jaffray Hill (Pukemakaka and Turimakamaka) are identified as a wāhi tūpuna. See Appendices A4.54 and A4.55.

#### A3.3.6.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Distinctive natural landforms. An important and visually dominant part of the volcanic landscape of Dunedin. The conical landforms of Saddle Hill and Scroggs Hill are expressive of their volcanic origins.
  - ii. Natural character. Along with the significant landforms indigenous forest remnants allude to what was a naturally forested area.
  - iii. Scroggs Hill. This volcanic hill form provides a distinctive and memorable landmark.
  - iv. Coastal Broadleaf Podocarp Forest Areas, some of which are protected under QE2 Covenants.
- b. *Cultural/historic values:*
  - i. Values of significance to Manawhenua. See Appendices A4.54 and A4.55.
  - ii. The area is very visible from many vantage points, has high naturalness values and has featured prominently in many aspects of Dunedin's earlier development. It has cultural significance to both Māori and Pakeha.
  - iii. While the peaks are the predominant focus, the surrounding slopes have a high level of picturesque appeal and a high level of visual amenity.
- c. *Aesthetic and amenity values:*
  - i. Visual prominence. The landscape offers extensive impressive views from many public routes and viewpoints, and the skyline is generally defined by natural elements. The area is visually prominent and

forms an important part of the hill backdrop to the Brighton coast, Kaikorai Estuary and the northern end of the Taieri Plain, including Mosgiel.

- ii. Landmarks. The landscape visual quality has a substantial impact on wider areas. Scroggs Hill is valued as local landmarks.

### A3.3.6.3 Principal threats to values

Threat	Description
Buildings and structures	Inappropriate siting, design, scale density and finish of buildings and structures such that they become visually dominant from public viewpoints. Generally development at higher elevations should be avoided.
Roads and tracks	Inappropriate siting, scale and design of roads and tracks such that they cut across the landform rather than follow it and become visually dominant features.
Reduction of areas of indigenous vegetation	Removal or diminution of areas of indigenous vegetation.
Quarries and mining activity	Removal of significant landform features by quarrying and mining activity. Inappropriate siting and scale of quarries and other excavations such that they become visually dominant focal points.
Forestry blocks	Inappropriate siting, scale and layout of forestry blocks such that the character of the underlying landform or other natural features is diminished.
Shelterbelts	Inappropriate siting, scale and design of shelterbelts such that they are not sympathetic with underlying topography or natural landform character.

### A3.3.6.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Buildings and structures should be designed with the intention of preserving or enhancing the landscape values. Higher elevated areas in this landscape are the most sensitive part of this landscape in this regard.</li> <li>b. Buildings and structures should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site. General principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding landscape; and rural planting schemes need to be of a scale and character appropriate to the landscape.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. Roads and tracks should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Reduction of areas of indigenous vegetation	<ul style="list-style-type: none"> <li>a. Removal or reduction of significant areas of indigenous vegetation should be avoided.</li> <li>b. Opportunities to reinforce and enhance these areas with additional appropriate planting should be encouraged.</li> </ul>

Threat	Key design elements
Quarries and mining activity	<ul style="list-style-type: none"> <li>a. Any quarries and mining activity undertaken should be designed with an awareness of the visual quality of the setting.</li> <li>b. Wherever possible activities should be sited away from prominent viewing points.</li> <li>c. Visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.</li> </ul>
Forestry blocks	<ul style="list-style-type: none"> <li>a. Some highly visible areas should be avoided for forestry planting. For other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns.</li> <li>c. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist.</li> <li>d. Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the environmental effects occurring at this stage of the forest growing cycle.</li> <li>e. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible areas, otherwise they should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>

### **A3.3.7 Seacliff Significant Natural Landscape**

#### A3.3.7.1 Description of area

This area includes the seaward facing slopes between Warrington and Puketeraki. It extends to the summits of Porteous and Hammond Hills, reaching 410m and 438m respectively. The geology of this area is a mixture of sandstone, siltstone and volcanic rocks and the topography is essentially comprised of gently rising slopes, often with hummocky forms indicative of past land movement. The land use is predominantly pastoral farming with patches of bush and farm dwellings dotted about.

This is a broadly defined coastal landscape incorporating a range of both inland and coastal landforms and features. In addition to the high natural values of the immediate coast and important estuarine habitats, the area holds significance for both Māori and European histories. Many of these historical associations are still evident in the working rural landscape of today. It is also valued as a scenic corridor which forms an alternative northern gateway to Dunedin city.

#### A3.3.7.2 Values to be protected

The following features and characteristics have been identified as important to protect:

- a. *Natural science values:*
  - i. Natural landforms: the general visual dominance of natural landform and other natural elements over cultural or human-made landscape elements. A notable feature is the coastal erosion of Seacliff. Geological instability is highly legible in the landforms.
  - ii. Natural character: the area's rural amenity values contribute to the natural character of the wider coastal environment. Indigenous vegetation cover is low on developed farmland but substantial patches of indigenous scrub can be found in steep gullies and coastal cliffs.
  - iii. Ecological significance: a defining element is the prevalence of significant natural coastal-estuarine habitats within bays and inlets. The presence of native bush is expressive of the natural vegetation character of the area. There are a number of covenants protecting areas of indigenous vegetation. Coastal cliffs are likely to provide roosting and nesting habitat for seabirds.
- b. *Cultural/historic values:*
  - i. This larger landscape includes several wāhi tūpuna of significance to Manawhenua. See Appendices A4.13, A4.14, and A4.12.
  - ii. The Coast Road and railway are recognised as valuable scenic routes in this area. The Waikouaiti coast and hills represent a strategic transport gateway into Dunedin City from the north.
  - iii. Historical significance: The ruins of Seacliff Hospital (once New Zealand's largest building) is located in this area and has associations with both Sir Truby King (founder of the Plunket Society) and writer Janet Frame.
- c. *Aesthetic and amenity values:*
  - i. Backdrop and coastal views: this area is usually viewed either as distant coastal hill country from viewpoints south of Blueskin Bay, or as the immediate landscape context of Coast Road and the Main South Railway. Its visual prominence is therefore moderate in terms of profile from major population centres and roads. Coast Road is recognised as a scenic route for its magnificent coastal views.
  - ii. Aesthetic coherence: this is a modified rural landscape but naturalness and aesthetic coherence values are high due to the generally coherent natural landform and the presence of areas of native bush and scattered native and exotic trees. It forms an attractive rural foreground to highly memorable coastal viewpoints such as Coast Road.

### A3.2.7.3 Principal threats to values

Threat	Description
Buildings and structures	Inappropriate siting, design, scale, density and finish of buildings and structures such that they become visually dominant from public viewpoints.
Roads and tracks	Inappropriate siting, scale and design of roads and tracks such that they cut across the landform rather than follow it and become visually dominant features.
Loss of natural coastal landscapes	<p>a. This is generally a visually sensitive landscape. The aesthetic appearance of the land is therefore important, as is maintenance of key views and vistas from public viewing locations across it.</p> <p>b. Inappropriate development could significantly impact upon the perceived quality of this landscape, particularly if important views of the coast are obscured.</p> <p>c. Ultimately, the natural values of the coastal environment, as the key focus of this landscape, require the highest protection. It is also important that the coastal and estuarine environments can be directly experienced and enjoyed by locals and visitors.</p>
Shelterbelts	Inappropriate siting, scale and design of shelterbelts such that they diminish the visual coherence of the natural landform character
Quarries and mining activity	<p>a. Removal of significant landform features by quarrying and mining activity.</p> <p>b. Inappropriate siting and scale of quarries and other mining activity such that they become visually dominant focal points.</p>
Forestry blocks	Inappropriate siting, scale and layout of forestry blocks such that the character of the underlying landform or other natural features is diminished.
Loss of historic and cultural features	Retention of heritage landscape features such as traditional drystone walls and shelterbelts

### A3.3.7.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<p>a. Structures should be designed with the intention of preserving or enhancing the landscape values. Higher elevated areas in this landscape are the most sensitive part of this landscape in this regard.</p> <p>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</p> <p>c. Good design should relate to the specific character and location of each site. General principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding landscape; and rural planting schemes need to be of a scale and character appropriate to the landscape.</p> <p>d. See Appendix A11 for design guidelines for buildings and structures.</p>

Threat	Key design elements
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Loss of natural coastal landscapes	<ul style="list-style-type: none"> <li>a. Ultimately, the natural values of the coastal environment, as the key focus of this landscape, require the highest protection. It is also important that the coastal and estuarine environments can be directly experienced and enjoyed by locals and visitors.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible areas, otherwise they should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>
Quarries and mining activity	<ul style="list-style-type: none"> <li>a. Any quarries and mining activity should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points; visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.</li> </ul>
Forestry blocks	<ul style="list-style-type: none"> <li>a. Some highly visible areas should be avoided for forestry planting; for other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns.</li> <li>c. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist.</li> <li>d. Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the adverse environmental effects occurring at this stage of the forest growing cycle.</li> <li>e. Encourage the provision of appropriate edge planting.</li> <li>f. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>
Loss of historic and cultural features	<ul style="list-style-type: none"> <li>a. Retention of heritage landscape features such as traditional drystone walls and shelterbelts</li> </ul>

## **A3.3.8 Silver Peaks Significant Natural Landscape**

### **A3.3.8.1 Description of area**

The Silverpeaks significant natural landscape comprises a distinctive ridgeline north of Swampy Summit following the watershed boundary between the Taieri River catchment to the west and south (including the Silverstream), and the Waikouaiti River catchment to the east. The geology is schist and the topography is a sharply peaked ridgeline (at around 750m elevation) with the valleys a deeply dissected part of the Otago peneplain.

Two major sections of plantation forest lie in the south-west and the north-east. They are located on grey brown silt loams which are of low fertility and free draining soils, making them prone to drying out on the steeper slopes. To the south and east there are large swathes of beech and podocarp forest with snow tussock on the ridgelines. To the west, the land is mainly covered in tussock grasslands or exotic forestry.

The area is remote, largely unoccupied and undeveloped (except for forestry in places) and a popular tramping destination. It has limited vehicle access. Much of the area is managed as Department of Conservation reserve.

### **A3.3.8.2 Values to be protected**

The following features and characteristics have been identified as important to protect:

- a. *Natural Science values:*
  - i. Distinctive natural landform. A dramatic rugged peaked ridgeline landform sequence which forms the backdrop to the north-west of Dunedin city and coast. It is a significant drainage watershed, with networks of deeply incised streams and gullies.
  - ii. Pulpit Rock. A distinctive elevated feature on the Silver Peaks track which allows extensive views of the coast and inland ranges.
  - iii. Natural Character. The area is a large swathe of rugged hill country predominantly under indigenous vegetation cover and as such has significant natural character and scenic values.
  - iv. Ecological significance. Values include snow tussock grasslands, broadleaf forest, kanuka forest, Cassinia/Inaka shrubland, habitat for native falcon, fernbirds, other birds and a large number of invertebrates. Silver Stream Valley has the only population of South Island Robin in East Otago.
  - v. Remnant vegetation sequences. This includes beech and podocarp forest, kanuka scrub and snow tussockland within the Silverpeaks Reserve, Silver Stream Reserve and the Chalkies / Silver Beech Forest. Significant in that the trees here are at the eastern extremity of their range and are important markers in Otago's vegetation history.
- b. *Cultural/ historic values:*
  - i. The area is identified as a wāhi tūpuna and has values of significance to Manawhenua. See Appendix A4.50.
  - ii. Historic walking route between Dunedin and Waitati for travelling Māori, evidenced by rock caves.
  - iii. Historic water supply: the Silver Stream valley has significance for the historic Dunedin water supply water race, completed in 1881 and abandoned in the 1960s.
- c. *Aesthetic and amenity values:*
  - i. Significance as a landmark. The distinctive ridgeline north of Swampy Summit is generally seen as a distant backdrop from population centres and major roads and its visual prominence is generally low. As a distant skyline however it does have some landmark significance. It also has qualities of remoteness and isolation.
  - ii. Recreational Qualities. Remoteness, lack of motorised access, a rugged and attractive landscape and

ready access to Dunedin have made the area highly favoured for recreational activities, especially tramping and hunting. The area has a long tradition of being walked, and formed an early access route for Māori travelling between Dunedin and Waitati.

#### A3.3.8.3 Principal threats to values

Threat	Description
Forestry blocks	Inappropriate siting, scale and layout of forestry blocks such that the character of the underlying landform or other natural features is diminished.
Reduction of areas of indigenous vegetation	Removal or diminution of significant areas of indigenous vegetation.
Erosion related to exotic forestry activity	The two plantations areas here are placed directly alongside tributaries of major waterways (the Taieri River in the south and Waikouaiti in the north). Given their underlying soils the potential for erosion on these steep slopes needs to be considered when harvesting occurs. Increased erosion on the newly exposed slopes has a very real adverse effect on waterways. Increased sedimentation pollutes the water, affecting its quality and impacting the numerous species inhabiting it.
Buildings and structures	Inappropriate siting, design, scale, density and finish of structures such that they become visually dominant from public viewpoints.
Roads and Tracks	Inappropriate siting, scale and design of roads and tracks such that they cut across the landform rather than follow it and become visually dominant features.
Quarries and mining activity	Removal of significant landform features by quarrying and mining activity. Inappropriate siting and scale of quarries and other excavations such that they become visually dominant focal points.

#### A3.3.8.4 Key design elements to be required or encouraged

Threat	Key design elements
Forestry blocks	<ul style="list-style-type: none"> <li>a. Some highly visible areas should be avoided for forestry planting. For other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns.</li> <li>c. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist.</li> <li>d. Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the adverse environmental effects occurring at this stage of the forest growing cycle.</li> <li>e. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>
Reduction of areas of indigenous vegetation	<ul style="list-style-type: none"> <li>a. Removal or reduction of areas of indigenous vegetation should be avoided.</li> </ul>

Threat	Key design elements
Erosion related to exotic forestry activity	<p>a. There is the possibility of establishing buffer zones to reduce the adverse impacts of exotic forestry felling on waterways. Such a buffer zone should be established by allowing native regeneration to take place along riversides and gullies containing significant tributaries, which will slow the rate of sediments entering the waterways.</p>
Building and structures	<p>a. Buildings and structures should be designed with the intention of preserving or enhancing these existing values.</p> <p>b. Buildings and structures should be located as far as reasonably practical away from prominent public viewing points.</p> <p>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding landscape; and rural planting schemes need to be of a scale and character appropriate to the landscape.</p> <p>d. See Appendix A11 for design guidelines for buildings and structures.</p>
Roads and Tracks	<p>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas; they should wherever possible follow contours rather than cut across them; and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</p>
Quarries and mining activity	<p>a. Any quarries and mining activity should be designed with an awareness of the visual quality of the setting.</p> <p>b. Wherever possible activities should be sited away from prominent viewing points.</p> <p>c. Visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.</p>

## A4. Wāhi Tūpuna Values

### Introduction

The first people of the South Island, Te Waipounamu, were the Waitaha people. The first place name applied to any site in the Dunedin area is believed to be Kaikarae - the Kaikorai estuary, where the chief Rakaihautu made camp and ate a meal of seabird (karae). Successive waves of iwi followed, firstly the Kāti Mamoe and finally Kāi Tahu, who migrated from the North Island. Over time the three iwi merged through conquest, marriage and peace alliances. Kāi Tahu are therefore an amalgam of Waitaha, Kāti Mamoe and Kāi Tahu whakapapa, generally referred to collectively as Kāi Tahu whānui. After the loss of inland moa as a significant food source, settlements were generally located around the coast, due to the reliance on the sea as a means of transport and for the availability of kai moana and fish. Locally, there were a number of settlements on the Taieri Plain, taking advantage of the rich food sources available from the wetlands and streams. Seasonally, trips would be made to inland Otago to collect food and stone resources, and south to the mutton bird islands. Trails along the coast and inland became well established; waterways and the coastal waters also provided transport routes. At the time of European settlement there were significant populations of takata whenua in the Puketeraki/Waikouaiti (now Karitāne) area, in the coastal bays and inlets, notably Pūrākaunui and Whareakeake, towards Aramoana, adjacent to the Otago Harbour, on Otago Peninsula and on the Taieri Plain/Taieri Mouth.

The strong connection Kāi Tahu whānui have with their ancestors make the many sites and areas that were formerly settlements, pā, battle and burial grounds, spiritual sites, food collecting areas or trail markers, significant wāhi tūpuna for present day Manawhenua. This significance remains even though some of these landscapes are modified or have been dramatically altered. Views from settlements and present day marae, and of significant landmarks, are also important, playing an important part in ceremonial speech making and the mana of the marae.

The history of takata whenua links back to the time of creation. Creation myths are particularly relevant to landscapes in the Dunedin area. One relates to the diligent efforts of Tuterakiwhānoa, an Atua, who laboured at making the broken wreck of Te Waka o Aoraki a more suitable environment for people to colonise and thrive in. He enlisted the help of Rokonui a tau and Kahukura who made Moeraki peninsula, Huriawa peninsula and Muaupoko (Otago Peninsula). Kahukura devoted further attention to the south coast and saw to it that the coast from Ka Tokata (the Nuggets) to Otara was covered in bush.

The Arai te Uru waka, its history and crew members, are immortalised into the landscape by name to remember their deeds. The waka originated from Taitewhenua, and its journey was an ancient event. The waka travelled along the east coast of the South Island. It carried many people, and food such as kumara. The canoe was wrecked at Matakaea (Shag Point) and the food baskets it contained washed ashore and became the Moeraki Boulders. The giant waves that caused the waka to founder are represented by the mountain ranges in Central Otago, having turned to stone as they were washed inland.

Yet another tradition relates to Matamata, said to be the guardian spirit of the Kāti Mamoe chief Te Rakitauneke. The tradition relates the story of Matamata searching for his master. It roamed around the countryside trying to find him. It slithered down Whakaehu (Silverstream) and rested, creating a hollow near Mosgiel, known as Te Kokika o te Matamata. It then wriggled down the Taieri, creating the meanders in the lower river. The remains of Matamata are represented by the two peaks of Saddle Hill. This story is highly significant for Manawhenua and has helped shape their relationship with the landscape.

The entire Dunedin city area is a wāhi tūpuna, as it was used and valued by Manawhenua. The sites listed below have been identified by Te Rūnanga o Ōtākou and Kāti Huirapa Rūnaka ki Puketeraki as the most important sites to the rūnaka. They include settlements (kāika), battle sites, burial places (urupā), wāhi tapu and wāhi taoka sites, mahika kai, trails, significant landscape features such as peaks and ridgelines, and views.

The values and threats identified may not be an exhaustive list, but should be treated as a guideline for consultation for activities that may impact on these sites.

## **A4.1 Matainaka**

### A4.1.1 Description of area

The south face of Cornish Head, including the Waikouaiti golf course. This was the site of an ancient fortified Waitaha settlement and urupā.

The site has linkages to Matainaka lagoon.

### A4.1.2 Values to be protected

1. Urupā
2. Kāika
3. Archaeological remains

### A4.1.3 Principal threats to values

1. Earthworks

## **A4.2 Matainaka/Hawksbury Lagoon**

### A4.2.1 Description of area

A mahika kai associated with the settlement at Matainaka. The lagoon was originally considerably larger. It is now degraded when compared to its historical size and can be eutrophic at times. However, it is still an available and accessible mahika kai and remains a wāhi taoka because of its traditional importance.

This site has linkages to Matainaka, the south face of Cornish Head.

### A4.2.2 Values to be protected

1. Mahika kai
2. Taumanu
3. Wāhi taoka

### A4.2.3 Principal threats to values

1. Activities affecting water quality, including earthworks within or adjacent to site
2. Activities that affect access to the lagoon, including buildings, structures and public amenities close to the water body
3. Natural hazard mitigation activities

## **A4.3 Fishing Reserve in Matainaka**

### A4.3.1 Description of area

There is a fishing reserve adjacent to the lagoon which provides a legal access to the lagoon. Set aside as a Fenton reserve in 1868 by the Māori Land Court, this is a modern representation of the previous traditional use of the whole lagoon as a mahika kai.

### A4.3.2 Values to be protected

1. Mahika kai
2. Taumanu

#### A4.3.3 Principal threats to values

1. Loss of legal road access

### **A4.4 Te Tauraka Poti (Merton Tidal Arm)**

#### A4.4.1 Description of area

This site was an important mahika kai, providing food for those living in kāika and pā within the Waikouaiti (now Karitane) and Puketeraki areas. There is an ancient association between these sites. The river is still valued as a mahika kai today. The area has Statutory Acknowledgement status under the Ngāi Tahu Claims Settlement Act 1998.

The site has linkages to the Huriawa Peninsula.

#### A4.4.2 Values to be protected

1. Mahika kai
2. Wāhi taoka
3. Tauraka waka

#### A4.4.3 Principal threats to values

1. Activities affecting water quality, including earthworks within or adjacent to site
2. Activities that affect access to the water body, including buildings structures and public amenities close to it
3. Natural erosion
4. Upper catchment land development
5. Natural hazard mitigation activities

### **A4.5 Ohinepouwera**

#### A4.5.1 Description of area

Toaka's warriors camped on the Ohinepouwera sandspit for six months while they laid siege to Te Wera on the Huriawa Peninsula.

This site has linkages to Te Tauraka Poti, Māpoutahi, Pukekura and the Huriawa Peninsula.

#### A4.5.2 Values to be protected

1. Wāhi tapu
2. Kāika
3. Wāhi taoka
4. Wāhi pakanga
5. Archaeological remains

#### A4.5.3 Principal threats to values

1. Earthworks
2. Forestry, including wilding pine spread from nearby forests
3. Erosion
4. Natural hazard mitigation activities

## **A4.6 Huriawa Peninsula**

### **A4.6.1 Description of area**

There are a series of pā sites on the peninsula, the most well-known of which is the pā of Te Wera, a Kāi Tahu chief. The pā was besieged by Taoka, Te Wera's cousin, for six months. Taoka's warriors camped on the sandspit across the mouth of the Waikouaiti River. The peninsula has a spring - Te Puna Wai a Te Wera, which sustained the occupants during the siege. Pā Katata Rock, the highest point on the peninsula, is the site of a Kāti Mamoe pā. There are numerous archaeological sites and evidence of occupation.

There is a high quality deposit of maukoroa (ochre) on Huriawa, which when mixed with other ingredients is known as kokowai, a paint. It had a wide reputation as to its quality and was a valuable trade item. It was sought after as far away as Taranaki.

In the late 1830s and 1840s there was a whaling station on the peninsula. Karitāne, a name historically associated with the pā, became more used in this locality when the name Waikouaiti became associated with the town now bearing that name. Karitāne was a thriving settlement at the time of European settlement. There is Māori reserve land at and close to Karitāne. The modern settlement of Karitāne overlays other cultural values, being in part (near the beach) built on top of a battle ground.

Part of the Huriawa peninsula was vested fee simple in Te Rūnanga o Ngāi Tahu under the Ngāi Tahu Claims Settlement Act 1998. The site is managed under a protected private land agreement between Te Rūnanga and the Minister of Conservation. This agreement includes an agreed management programme between the parties in order to protect cultural values, including wāhi tapu and mahika kai, conservation values, indigenous flora and fauna and landscape values.

This site has linkages to Te Tauraka Poti, Māpoutahi, Pukekura and Ohinepouwera.

### **A4.6.2 Values to be protected**

1. Pā Tawhito
2. Kāika
3. Wāhi taoka
4. Archaeological features and remains
5. Wāhi tapu
6. Wāhi pakaka
7. Urupā

### **A4.6.3 Principal threats to values**

1. Earthworks
2. Buildings, structures, network utility structures, mining, forestry, new roads or additions and alterations to existing roads
3. Further residential or commercial development
4. Subdivision
5. Public amenities

## **A4.7 Waikouaiti Māori Foreshore Reserve / Hau Te Kapakapa**

### A4.7.1 Description of area

This was an ancient gathering area for Kāi Tahu. An urupā was established at the time of European contact.

The area is administered by Trustees on behalf of the owners. Part of this area was recently re-gazetted in the Trust arising from an ancillary claim under the Ngāi Tahu Claims Settlement Act 1998. It is the site of a European contact period kāika, tauraka waka and the site of the first Christian service in Otago by the Reverend James Watkin, a Wesleyan missionary who established a mission on the same site.

### A4.7.2 Values to be protected

1. Kāika
2. Tauraka waka
3. Wāhi tapu
4. Urupā
5. Wāhi taoka
6. Archaeological remains

### A4.7.3 Principal threats to values

1. Earthworks
2. Storm induced erosion

## **A4.8 Views of Huriawa Peninsula from Karitāne township**

### A4.8.1 Description of area

The skyline of Huriawa and of Te Pā a Te Wera is significant, particularly when viewed from the township in the vicinity of Barra Street and Coast Road.

### A4.8.2 Values to be protected

1. Wāhi taoka
2. Wāhi tapu
3. Wāhi tohu

### A4.8.3 Principal threats to values

1. Activities that affect views of the peninsula, including buildings, structures, public amenities, forestry and network utility structures

## **A4.9 Puketeraki Marae Reserve**

### A4.9.1 Description of area

The marae complex, including the reserve, church, whareniui and urupā.

### A4.9.2 Values to be protected

1. Wāhi tapu
2. Wāhi taoka
3. Urupā

#### A4.9.3 Principal threats to values

None identified

### **A4.10 View of Hikaroroa (Mt Watkin) from Puketeraki Marae**

#### A4.10.1 Description of area

The view of Hikaroroa from the marae is significant. Hikaroroa is the dominant landscape feature and is referred to in mihi. Activities that alter this landscape would be of concern. Hikaroroa was one of the paramount tīpuna ariki from the waka Arai te Uru.

#### A4.10.2 Values to be protected

1. Mauka
2. Wāhi tohu

#### A4.10.3 Principal threats to values

1. Activities between Puketeraki marae and Hikaroroa that affect views of Hikaroroa, including buildings, structures, public amenities, network utilities, forestry and shelterbelts and small woodlots.
2. Activities on the upper slopes of Hikaroroa including buildings, structures, public amenities, network utilities, forestry, earthworks, new roads or additions and alterations to existing roads.

### **A4.11 Ka Whatu a Haere**

#### A4.11.1 Description of area

These coastal rock stacks provide an important reminder of the linkage to the metaphysical world through the link to Haere (atua of rainbow fragments). Sea spray from the rocks often looks like rainbow fragments. There was a pā, Te pā Hawea, on top of the cliff above the rock stacks. There are said to be urupā in this vicinity.

#### A4.11.2 Values to be protected

1. Pā tawhito
2. Wāhi tapu
3. Wāhi taoka
4. Archaeological remains

#### A4.11.3 Principal threats to values

1. Earthworks

### **A4.12 Te Awa Koeo (Brinns Point) and Te Awa Kai Pawa (Green Point)**

#### A4.12.1 Description of area

An ancient fortified settlement site, kāika and urupā.

#### A4.12.2 Values to be protected

1. Pā tawhito
2. Kāika
3. Urupā
4. Archaeological remains

#### A4.12.3 Principal threats to values

1. Earthworks
2. Natural erosion
3. Subdivision

### **A4.13 Northern Slope of Ohineahi (Māori Peak)/Pukemaeroero**

#### A4.13.1 Description of area

The north facing slope between Ohineahi and the coast was cloaked in coastal bush traditionally interspersed with Māori bush gardens. These have been lost and this landscape is degraded. Ongoing grazing prevents the regeneration of bush. The slopes provide a cultural backdrop to Karitāne. The name Pukemaeroero tells that this was the abode of giants. Ohineahi is a prominent southward looking geographical feature with ancient associations to Ira Atua or the spiritual world.

#### A4.13.2 Values to be protected

1. Wāhi tapu
2. Wāhi taoka

#### A4.13.3 Principal threats to values

1. Activities affecting the peak and skyline, including buildings, structures, public amenities, network utilities, mining, forestry, vehicle tracks and driveways, new roads or additions and alterations to existing roads.
2. Subdivision

### **A4.14 Pūrākaunui to Hikaroroa to Huriawa**

#### A4.14.1 Description of area

The broader landscape encompassing all the above features between the Waikouaiti River, Hikaroroa and Whareakeake. Many of these sites date from a similar period and were a significant area of Māori settlement and activity up to the period of European settlement.

#### A4.14.2 Values to be protected

1. Pā Tawhito
2. Kāika
3. Urupā
4. Wāhi tohu
5. Mauka
6. Mahika kai
7. Wāhi taoka
8. Archaeological remains

#### A4.14.3 Principal threats to values

1. Activities that affect the visual integrity of the peaks and ridgelines, including buildings, structures, public amenities, network utilities, mining, forestry, earthworks, new roads or additions and alterations to existing roads.
2. Earthworks

## **A4.15 Okahau (Warrington)**

### A4.15.1 Description of area

The site of an ancient Waitaha settlement and later Māori occupation. Archaeological remains are still present. This site has linkages with Blueskin Bay.

### A4.15.2 values to be protected

1. Kāika
2. Kai moana
3. Indigenous vegetation
4. Wāhi taoka
5. Mahika kai
6. Archaeological remains

### A4.15.3 Principal threats to values

1. Earthworks
2. Subdivision
3. Natural hazard mitigation activities

## **A4.16 Blueskin Bay**

### A4.16.1 Description of area

Settlements were interspersed around Blueskin Bay. Mahika kai sites were heavily utilised and some are still important to this day. The railway line follows part of the old Māori coastal trail. Rock outcrops were utilised as quarry sites. The site has linkages with Okahau.

### A4.16.2 values to be protected

1. Kāika
2. Mahika kai
3. Wāhi mahi kohātu
4. Ara tawhito
5. Archaeological remains

### A4.16.3 Principal threats to values

1. Earthworks
2. Activities affecting water quality, including sediment discharge
3. Natural erosion
4. Activities that affect access to the water body, including buildings, structures and public amenities close to it
5. Natural hazard mitigation activities

## **A4.17 Māpoutahi and Mateawheawhe (Beach at Pūrākaunui Bay)**

### A4.17.1 Description of area

Māpoutahi is an ancient pā site and sacred area. It was the site of a massacre where the chief Taoka gained entry to the pā at night. Most of the occupants were killed in the pā or on the beach at Mateawheawhe. The battle site is

now covered in forest. This area is managed by the Pūrākaunui Incorporation.

Māpoutahi peninsula was vested fee simple in Te Rūnanga o Ngāi Tahu under the Ngāi Tahu Claims Settlement Act 1998. The site is managed under a protected private land agreement between Te Rūnanga and the Minister of Conservation. This agreement includes an agreed management programme between the parties in order to protect cultural values, including wāhi tapu and mahika kai, conservation values, indigenous flora and fauna and landscape values.

#### A4.17.2 Values to be protected

1. Wāhi tapu
2. Pā tawhito
3. Urupā
4. Wāhi pakaka
5. Mahika kai
6. Archaeological features and remains

#### A4.17.3 Principal threats to values

1. Earthworks
2. Storm induced erosion

### **A4.18 Pūrākaunui**

#### A4.18.1 Description of area

Within this area is the site of a Kāika and whaling station during the period of contact with Europeans (1840-1850s), and includes urupā. Some of the land from the original Māori Reserve is still Māori owned.

Pūrākaunui Inlet is a mahika kai, particularly for tuaki, pipi, tuna and inaka.

#### A4.18.2 Values to be protected

1. Kāika
2. Urupā
3. Mahika kai
4. Archaeological remains

#### A4.18.3 Principal threats to values

1. Earthworks
2. Activities affecting water quality
3. Activities affecting walking access to Pūrākaunui Bay, including buildings, structures and public amenities close to the water body
4. Subdivision
5. Natural hazard mitigation activities

### **A4.19 Wharauwerawera (Long Beach)**

#### A4.19.1 Description of area

There was a settlement in the swampy area behind the beach. A Māori reserve was set aside for the benefit of local

Kāi Tahu but was subsequently sold. There still exists a valuable wai repo and mahika kai.

#### A4.19.2 Values to be protected

1. Kāika
2. Mahika kai
3. Wai repo
4. Archaeological remains

#### A4.19.3 Principal threats to values

1. Earthworks
2. Activities affecting access to the wetland, including buildings, structures and public amenities close to it
3. Drainage or modification of the wetland area
4. Subdivision

## **A4.20 Whareakeake**

#### A4.20.1 Description of area

An ancient settlement and pā were sited in the bush behind the beach. This was the site of an infamous fight between the brig Sophia and local Māori, in which a number of both Māori and Europeans were killed.

It was a pounamu manufacturing site for trade with European settlers. A large number of worked pounamu items have been found.

This site has linkages to Kāritane, Ōtākou and Pūrākaunui.

#### A4.20.2 Values to be protected

1. Pā tawhito
2. Kāika
3. Urupā
4. Archaeological remains

#### A4.20.3 Principal threats to values

1. Earthworks
2. Subdivision

## **A4.21 Hill faces near/at Aramoana**

#### A4.21.1 Description of area

The site of a settlement against the hill, close to the site of present-day Aramoana. There were many burial sites in the area.

#### A4.21.2 Values to be protected

1. Ara tawhito
2. Kāika
3. Urupā
4. Wāhi taoka

5. Archaeological remains

#### A4.21.3 Principal threats to values

1. Earthworks
2. Mining

### **A4.22 Saltmarsh and spit at Aramoana**

#### A4.22.1 Description of area

A mahika kai and kohanga. There was a settlement on the spit, which was once on an island at high tide.

#### A4.22.2 Values to be protected

1. Mahika kai
2. Kāika
3. Wāhi taoka
4. Archaeological remains

#### A4.22.3 Principal threats to values

1. Earthworks
2. Activities that affect the saltmarsh and associated kai moana
3. Activities that affect access to the saltmarsh and coastal area, including buildings, structures and public amenities close to them
4. Large structures affecting views from Ōtākou
5. Natural hazard mitigation activities

### **A4.23 Ōtākou Harbour**

#### A4.23.1 Description of area

The harbour itself is significant as a mahika kai (particularly for tuaki), a means of transport and for the relationship between those living there and the water. The ability to provide highly valued food such as tuaki to visitors was, and remains, important for the mana for local Māori. The harbour is still a mahika kai resource today.

#### A4.23.2 Values to be protected

1. Mahika kai
2. Kāika
3. Wāhi taoka
4. Ara tawhito
5. Tauraka waka

#### A4.23.3 Principal threats to values

1. Reclamation, including by road widening or work on the rock walls
2. Activities affecting water quality
3. Sea-bed disturbance, including dredging
4. Sedimentation - impact on the sea bed fauna and flora

5. Changes to the harbour hydrology
6. Activities that affect access to the coastal marine area

## **A4.24 Otaheiti (Acheron Point)**

### A4.24.1 Description of area

Home of Taiaroa before he moved to Ōtākou. There is an urupā within this area.

### A4.24.2 Values to be protected

1. Kāika
2. Urupā
3. Archaeological remains
4. Pā tawhito

### A4.24.3 Principal threats to values

1. Earthworks

## **A4.25 Rakiriri (Goat Island)**

### A4.25.1 Description of area

A very significant site. According to tradition, the abode of Takaroa, the guardian of the sea. An important landmark.

### A4.25.2 Values to be protected

1. Wāhi tapu

### A4.25.3 Principal threats to values

1. Buildings and structures
2. Network utilities
3. Earthworks
4. Commercial development
5. Wilding tree spread
6. Public amenities

## **A4.26 Kamau Taurua (Quarantine Island)**

### A4.26.1 Description of area

The site of a settlement

### A4.26.2 Values to be protected

1. Kāika
2. Mahika kai
3. Tauraka waka
4. Archaeological remains

### A4.26.3 Principal threats to values

1. Earthworks

## **A4.27 Koputai (Port Chalmers)**

### A4.27.1 Description of area

The cliffs and caves together with certain rocks above Koputai were of cultural importance. A tauraka waka or canoe landing site was set aside for Kāi Tahu as a reserve.

### A4.27.2 Values to be protected

1. Wāhi taoka
2. Wāhi kohātu
3. Tauraka waka
4. Archaeological remains

### A4.27.3 Principal threats to values

1. Earthworks

## **A4.28 Peaks from Mihiwaka and Mt Kettle to Mt Cargill**

### A4.28.1 Description of area

These peaks are a dominant landscape feature and a cultural identity marker. The slopes were also a mahika kai for birds. The slopes of Mt Cargill are known as Kapukataumahaka, a place where weka were snared.

### A4.28.2 Values to be protected

1. Wāhi tohu

### A4.28.3 Principal threats to values

1. Activities that affect the peaks, upper slopes and ridgeline, including buildings, structures, public amenities, network utilities, mining, earthworks, new roads or additions and alterations to existing roads.
2. Removal of native bush
3. Wilding tree spread

## **A4.29 Pukekura (Taiaroa Head)**

### A4.29.1 Description of area

A pā site and kāika. Various Ngāi Tahu chiefs, including cousins Moki and Taoka, occupied Pukekura. There was a Ngāti Mamoe pā, Rangipipikao, nearby. The two tribes lived at times together peacefully, and at other times skirmishing with each other. This was an important pā in the context of the history of the southern part of the South Island. The site includes a water burial site.

There are linkages to Huriawa, Māpoutahi and Te Raka-hine-atea (Moeraki Peninsula).

### A4.29.2 Values to be protected

1. Pā tawhito
2. Kāika
3. Wāhi taoka
4. Urupā
5. Archaeological remains

#### A4.29.3 Principal threats to values

1. Earthworks
2. Ongoing modification of the land surface
3. Buildings, structures, network utilities, new roads or additions and alterations to existing roads, mining
4. Subdivision
5. Public amenities

### **A4.30 Wellers Rock**

#### A4.30.1 Description of area

A traditional landing site

#### A4.30.2 Values to be protected

1. Tauraka waka
2. Archaeological remains

#### A4.30.3 Principal threats to values

1. Earthworks
2. Road widening
3. Wharves
4. Further commercial development
5. Storm induced erosion
6. Natural hazard mitigation activities

### **A4.31 Ōtākou Marae Reserve**

#### A4.31.1 Description of area

The marae reserve, wharenuī, church and urupā

#### A4.31.2 Values to be protected

1. Wharenuī Tamatea
2. Whare karakia
3. Urupā
4. Ceremonial centre of hapū

#### A4.31.3 Principal threats to values

None identified

### **A4.32 Views from Ōtākou Marae around Upper Harbour**

#### A4.32.1 Description of area

The peaks visible from the marae are significant landmarks that imbue ceremonial occasions and mihi. They are a reminder of the close link of people to the environment and are a cultural identity marker.

#### A4.32.2 Values to be protected

1. Wāhi taoka
2. Mauka

#### A4.32.3 Principal threats to values

1. Activities that affect views from the marae down to the foreshore, including buildings, structures, public amenities, network utilities, forestry and shelterbelts and small woodlots.
2. Activities that affect views of peaks and ridgelines across the harbour (including Keyhole rock), including buildings, structures, public amenities, network utilities, mining, forestry, earthworks, new roads or additions and alterations to existing roads.
3. Activities affecting views of Taiehu (hill immediately east of marae), including buildings, structures, public amenities, network utilities, mining, earthworks and forestry.

### **A4.33 Okia Flats**

#### A4.33.1 Description of area

A very old, large settlement site, dating from the earliest arrivals of the Waitaha. The area contains numerous burials, middens (including moa remains), stone tool and manufacturing materials, waka finds and associated tauraka waka, and traditions associated with this part of Otago Peninsula. People would have made significant use of the inlet, the ocean fishery and the kaimoana found in the bays, ocean beaches, and along the rocky shore. The name of the site is not known. The point is named Tarahipa.

#### A4.33.2 Values to be protected

1. Kāika
2. Urupā
3. Mahika kai
4. Wāhi taoka
5. Tauraka waka
6. Archaeological remains

#### A4.33.3 Principal threats to values

1. Earthworks
2. Wilding tree spread
3. Natural hazard mitigation activities

### **A4.34 Ōtākou Native Reserve**

#### A4.34.1 Description of area

This land was reserved from the sale of the Ōtākou block in 1844 as it was the most significant land to local Māori at the time.

#### A4.34.2 Values to be protected

1. Pā tawhito
2. Tūāhu
3. Wāhi pakaka

4. Urupā
5. Kāika
6. Wāhi taoka
7. Ingoa tawhito
8. Mana
9. Archaeological remains

#### A4.34.3 Principal threats to values

1. Earthworks
2. Activities on upper slopes that affect the peaks and ridgelines, including buildings, structures, public amenities, network utilities, mining and forestry

### **A4.35 Tuhiraki and Takakitaka o Te Piro o Kapo**

#### A4.35.1 Description of area

These islands in Papanui Inlet are of cultural significance due to their association with key events in Kāi Tahu history.

#### A4.35.2 Values to be protected

1. Wāhi tapu

#### A4.35.3 Principal threats to values

1. Earthworks

### **A4.36 Poatiri (Mt Charles)**

#### A4.36.1 Description of area

A cultural marker for Otago. Its name can be interpreted as 'the fish hook' due to its appearance from the sea, or its proximity to the important fishing grounds off Papanui Beach. This site has a linkage with Papanui Beach.

#### A4.36.2 Values to be protected

1. Mauka
2. Kāika

#### A4.36.3 Principal threats to values

1. Activities that affect the peak and upper slopes, including buildings, structures, public amenities, network utilities, mining, forestry, earthworks, new roads or additions and alterations to existing roads.

### **A4.37 Papanui Beach**

#### A4.37.1 Description of area

The site of an important Kāti Mamoe settlement.

This site has a linkage with Poatiri and the eastern side of the Otago Peninsula.

#### A4.37.2 Values to be protected

1. Kāika
2. Tauraka waka

3. Archaeological remains

#### A4.37.3 Principal threats to values

1. Earthworks
2. Storm induced erosion
3. Natural hazard mitigation activities

### **A4.38 Te Pahi**

#### A4.38.1 Description of area

The site of a settlement located at the end of Allans Beach Road, close to the beach.

#### A4.38.2 Values to be protected

1. Kāika
2. Archaeological remains

#### A4.38.3 Principal threats to values

1. Earthworks

### **A4.39 Pukemata (Harbour Cone)**

#### A4.39.1 Description of area

There are many stories related to this peak and surrounding area, including that Tarewai, a Kāi Tahu chief, hid here while he recovered from wounds inflicted when he was captured by Kāti Mamoe warriors. The slopes are known as Hereweka, a site where weka could be caught.

#### A4.39.2 Values to be protected

1. Mauka
2. Wāhi taoka
3. Archaeological remains

#### A4.39.3 Principal threats to values

1. Activities that affect the peak and upper slopes, including buildings, structures, public amenities, network utilities, mining, forestry, earthworks, new roads or additions and alterations to existing roads.
2. Earthworks

### **A4.40 Pikiwhara (Sandymount) and Sandfly Bay**

#### A4.40.1 Description of area

This area is the site of a kāika and urupā, including the burial site of the chief Taikawa.

#### A4.40.2 Values to be protected

1. Kāika
2. Urupā
3. Mahika kai
4. Archaeological remains

#### A4.40.3 Principal threats to values

1. Activities that affect the upper slopes and ridgelines, including buildings, structures, public amenities, network utilities, mining, forestry, earthworks, new roads or additions and alterations to existing roads
2. Earthworks
3. Natural hazard mitigation activities

### **A4.41 Upper Slopes and Peaks of Otago Peninsula**

#### A4.41.1 Description of area

The Otago Peninsula is highly valued as it is the ancestral home of members of Te Rūnanga o Ōtākou. The peaks and ridgelines are a link to tribal identity and provide a sense of belonging.

#### A4.41.2 Values to be protected

1. Wāhi taoka

#### A4.41.3 Principal threats to values

1. Activities that affect the visual integrity of the upper slopes and ridgeline, including buildings, structures, public amenities, network utilities, mining, forestry, earthworks, new roads or additions and alterations to existing roads.

### **A4.42 Ocean Grove**

#### A4.42.1 Description of area

Site of a Māori settlement. A nohoaka in former times.

#### A4.42.2 Values to be protected

1. Kāika
2. Mahika kai
3. Ara tawhito
4. Archaeological remains

#### A4.42.3 Principal threats to values

1. Earthworks
2. Mining

### **A4.43 Caves at Andersons Bay Inlet and Rongo memorial**

#### A4.43.1 Description of area

These caves are very significant to Taranaki iwi as a site where Māori prisoners of 1869-1871 were occasionally held while working on the harbour wall. The site includes Rongo, the memorial to these events.

This site has linkages to many sites within Dunedin City where the prisoners worked.

#### A4.43.2 Values to be protected

1. Wāhi taoka
2. Wāhi tapu

#### A4.43.3 Principal threats to values

1. New roads or additions and alterations to existing roads
2. Cliff erosion

### **A4.44 Puketahi (Sunshine Hill)**

#### A4.44.1 Description of area

An iconic hill, the start of a trail south along coastal beaches from the harbour.

#### A4.44.2 Values to be protected

1. Wāhi tohu
2. Archaeological remains

#### A4.44.3 Principal threats to values

1. Earthworks

### **A4.45 Rakiatea**

#### A4.45.1 Description of area

Part of the trail along the coast. Going north, the trail ran along the south coast of the peninsula to Ōtākou. Alternatively, the narrow neck of land to the harbour could be crossed in the Bayfield area and travel continued from there by boat. The exact location of this part of the trail is not known - the mapped area shown from Bayfield to Tahuna is indicative. Numerous artefacts and taoka have been found in the dunes. An important moa hunting site is located along the St Clair esplanade.

#### A4.45.2 Values to be protected

1. Ara tawhito
2. Nohoaka
3. Tauraka waka
4. Archaeological remains

#### A4.45.3 Principal threats to values

1. Earthworks
2. Storm induced erosion
3. Natural hazard mitigation activities

### **A4.46 Te Uraka a Te Raki**

#### A4.46.1 Description of area

The burial site of Te Rakiihia, a Kāti Mamoe chief. The site allowed him to look both up and down the coast.

#### A4.46.2 Values to be protected

1. Urupā
2. Wāhi taoka
3. Archaeological remains

#### A4.46.3 Principal threats to values

1. Earthworks

### **A4.47 Te Iri-o-Te-Wharawhara-Te-Raki**

#### A4.47.1 Description of area

A site at the foot of Frederick Street where Te Wharawhara was placed after he died so that he could be seen by his people who came to mourn him. He was also buried there.

#### A4.47.2 Values to be protected

1. Urupā
2. Wāhi taoka
3. Archaeological remains

#### A4.47.3 Principal threats to values

1. Earthworks

### **A4.48 Toitū Stream**

#### A4.48.1 Description of area

The main landing place for waka from the outer harbour to trade with early European settlers in Ōtepoti (Dunedin), at the mouth of the Toitū. It was also the start of a trail south to Owhiro on the Taieri Plain. The site has been reclaimed and developed and is located close to, or on, Water Street. There remains a spiritual connection and association with this site.

#### A4.48.2 Values to be protected

1. Tauraka waka
2. Nohoaka
3. Ara tawhito
4. Archaeological remains

#### A4.48.3 Principal threats to values

1. Earthworks

### **A4.49 Whanaupaki (Flagstaff) and Whawharaupo (Swampy Summit)**

#### A4.49.1 Description of area

These are significant peaks, referred to in oratory. Part of the range is within the Silverstream catchment (see below). The range as a whole is known as Whākari. Trails ran across these peaks linking Blueskin Bay with the Taieri Plain.

This site has linkages with Whakaehu.

#### A4.49.2 Values to be protected

1. Mauka
2. Ara tawhito

#### A4.49.3 Principal threats to values

1. Activities that affect the peaks, upper slopes and ridgelines, including buildings, structures, public amenities, network utilities, mining, forestry, earthworks, new roads or additions and alterations to existing roads.
2. Wilding tree spread

### **A4.50 Whakaehu (Silverstream catchment)**

#### A4.50.1 Description of area

Silverstream is related to the myths of the taniwha Matamata whose reposed remains are represented by Saddle Hill. Matamata slithered down Whakaehu and then the lower Taieri, searching for his master chief Te Rakitauneke, and in the process creating the winding form of the Taieri River.

#### A4.50.2 Values to be protected

1. Wāhi taoka
2. Wai māori
3. Mahika kai (Silverstream river)

#### A4.50.3 Principal threats to values

1. Activities affecting water quality, including earthworks, forestry harvesting
2. Native vegetation clearance
3. Activities that affect views of the peaks and ridgelines, including buildings, structures, public amenities, network utilities, mining, forestry, earthworks, new roads or additions and alterations to existing roads.
4. Activities that affect access to Silverstream, including buildings, structures and public amenities close to the river.

### **A4.51 Kaikarae (Kaikorai Estuary)**

#### A4.51.1 Description of area

A mahika kai for adjacent coastal settlements, providing eels, waterfowl, birds and kai moana. The first known site to be named in Dunedin ('Kaikarae' - where a seabird was cooked and eaten) by Rakaihautu, a Waitaha chief who first explored the southern coast.

This site has linkages to the beach north of the Kaikorai estuary.

#### A4.51.2 Values to be protected

1. Historical mahika kai. Of less value now due to pollution.
2. Archaeological remains

#### A4.51.3 Principal threats to values

1. Earthworks
2. Mining

### **A4.52 Beach at Kaikarae (Kaikorai Estuary)**

#### A4.52.1 Description of area

The site of a settlement at the river mouth.

This site has linkages to Kaikarae.

#### A4.52.2 Values to be protected

1. Kāika
2. Archaeological remains

#### A4.52.3 Principal threats to values

1. Earthworks
2. Storm induced erosion

### **A4.53 Islands off Southern Coast**

#### A4.53.1 Description of area

Including Wharekakahu (near Cape Saunders), Pounuitehine (White Island) and Okaihae (Green Island). These are significant for their birdlife and their natural state.

#### A4.53.2 Values to be protected

1. Wāhi taoka
2. Mahika kai

#### A4.53.3 Principal threats to values

1. Visual effects resulting from activities including buildings, structures, public amenities, network utilities, mining, forestry, earthworks, tracks and roads.

### **A4.54 Pukemakamaka/Turimakamaka (Saddle Hill/Jaffrays Hill)**

#### A4.54.1 Description of area

Pukemakamaka and Turimakamaka represent the reposed remains of the taniwha Matamata, who created the Taieri River, including its meandering form.

This site has linkages to Maukaatua, Whakaehu (Silverstream) and Te Kokika o Te Matamata.

#### A4.54.2 Values to be protected

1. Mauka
2. Wāhi taoka
3. Wāhi tohu

#### A4.54.3 Principal threats to values

1. Activities that affect the peaks, upper slopes and ridgeline, including buildings, structures, public amenities, network utilities, mining, forestry, earthworks, new roads or additions and alterations to existing roads.
2. Forestry harvesting

### **A4.55 Upper Slopes and Peaks of Scroggs Hill and Saddle Hill**

#### A4.55.1 Description of area

Views of Saddle Hill and the hills immediately surrounding it are culturally important.

#### A4.55.2 Values to be protected

1. Wāhi tohu
2. Wāhi taoka

#### A4.55.3 Principal threats to values

1. Activities that affect the visual integrity of the peaks, upper slopes and ridgeline, including buildings, structures, public amenities, network utilities, mining, forestry, earthworks, new roads or additions and alterations to existing roads.

### **A4.56 Kokika o Te Matamata (Area Surrounding Mosgiel)**

#### A4.56.1 Description of area

The hollow in Taieri Plain within which Mosgiel is located. This was created by the taniwha Matamata as it slithered down Whakehu and the lower Taieri River. The Taieri Plain was a significant source of food for coastal Māori from the Peninsula and further north. It was surrounded by pā, indicating its strategic importance. It was the most significant wetland south of the Waitaki River that contained both raupo and harakeke. It was also a main thoroughfare for Māori travelling north and south.

#### A4.56.2 Values to be protected

1. Repo raupo
2. Ara tawhito

#### A4.56.3 Principal threats to values

None identified

### **A4.57 Owhiro Stream**

#### A4.57.1 Description of area

The remnant channel of the Owhiro at the confluence with the Taieri River.

#### A4.57.2 Values to be protected

1. Ara tawhito
2. Mahika kai

#### A4.57.3 Principal threats to values

1. Straightening or modification of the waterway.
2. Activities that affect access to the river, including buildings, structures and public amenities close to it.
3. Activities that affect water quality, including earthworks close to the river.

### **A4.58 Pā at Allanton**

#### A4.58.1 Description of area

Pā of Te Paritutaniwha, a chief from Wairarapa. This pā was established to gain retribution against Tu Wiri Roa, the Kāti Mamoe chief of Moturata pā (Taieri Mouth).

#### A4.58.2 Values to be protected

1. Pā tawhito
2. Archaeological remains

#### A4.58.3 Principal threats to values

1. Earthworks

### **A4.59 Coast from Taieri Mouth to Brighton**

#### A4.59.1 Description of area

The route of a trail from Taieri Mouth to Dunedin. Archaeological sites and umu have been found throughout this coastal area.

#### A4.59.2 Values to be protected

1. Aro tawhito
2. Umu
3. Mahika kai
4. Wāhi taoka
5. Archaeological remains

#### A4.59.3 Principal threats to values

1. Earthworks
2. Storm induced erosion
3. Natural hazard mitigation activities

### **A4.60 Taieri Māori Reserve**

#### A4.60.1 Description of area

There is an ongoing significant connection with this land. At both northern and southern ends are the sites of pā and kāika. Much of this land is still Māori owned.

This site has linkages to Maitapapa and Motutara Island (Taieri Mouth).

#### A4.60.2 Values to be protected

1. Pā tawhito
2. Archaeological remains

#### A4.60.3 Principal threats to values

1. Earthworks

### **A4.61 Pā site and Kāika at Omoua and Maitapapa (Henley)**

#### A4.61.1 Description of area

An ancient pā site, settlement, tauraka waka and urupā. A key link in the trail to the Taieri River.

This site has linkages to the Taieri Māori Reserve and Tatawai.

#### A4.61.2 Values to be protected

1. Pā tawhito
2. Kāika
3. Urupā

4. Mahika kai - associated with the river
5. Archaeological remains

#### A4.61.3 Principal threats to values

1. Earthworks
2. Subdivision and consequent development
3. Activities that affect access to the Taieri River, including buildings, structures and public amenities close to it
4. Activities that affect water quality, including earthworks
5. Forestry
6. Wilding tree spread

## A4.62 Taieri River

### A4.62.1 Description of area

The whole river is considered significant, as a means of transport (the river is navigable upstream to Outram), a trail to inland Otago and as a mahika kai. At the mouth of the Taieri on the south bank, is Te Rereka o Hakitekura (Māori Leap). This was the site where Haki te Kura, daughter of Tu Wiri Roa, a Kāti Mamoe chief, jumped from the cliff to join her lover in a waka below, but died in the fall.

This site has linkages to the Taieri Māori Reserve.

### A4.62.2 Values to be protected

1. Wai māori
2. Wāhi paripari
3. Wāhi taoka
4. Tauraka waka
5. Ara tawhito
6. Mahika kai

### A4.62.3 Principal threats to values

1. Activities affecting water quality, including earthworks
2. Damming
3. Activities affecting access to the river, including buildings, structures and public amenities close to it

## A4.63 Tatawai

### A4.63.1 Description of area

Tatawai was a lake which is now drained. It was a significant site for mahika kai and had tauraka waka.

This site has linkages to the pā site and kāik at Omoua and Maitapapa.

### A4.63.2 Values to be protected

1. Archaeological remains
2. Historical values (no longer present):
  - a. Wai māori

- b. Mahika kai
- c. Repo raupo
- d. Tauraka waka

#### A4.63.3 Principal threats to values

1. Earthworks

### **A4.64 Maukaatua (Maungatua)**

#### A4.64.1 Description of area

Named after Maukaatua, a tūpuna on the waka Arai te Uru, this is an important mountain, linked to creation myths. It is a landmark for travellers inland, across the Taieri Plain and from the south. A trail up Kowhai Spur led to Maukaatua. It was also a mahika kai for forest birds, and there is a tōpuni over part of the area. Views of Maukaatua are significant from many places.

#### A4.64.2 Values to be protected

1. Wāhi tohu
2. Spiritual values
3. Wāhi taoka
4. Urupā
5. Ingoa Tawhito

#### A4.64.3 Principal threats to values

1. Buildings, structures, public amenities, network utilities, mining, forestry, earthworks, new roads or additions and alterations to existing roads.
2. Tall buildings, structures and network utilities at/near Dunedin International Airport affecting views from the Taieri River and Centre Road.

### **A4.65 Nohoaka site at Middlemarch**

#### A4.65.1 Description of area

The nohoaka is on the Taieri River. It is reserved for takata whenua in order to camp and access natural resources.

#### A4.65.2 Values to be protected

1. Nohoaka
2. Mahika kai

#### A4.65.3 Principal threats to values

1. Activities affecting water quality, including earthworks
2. Activities that affect access to the river, including buildings, structures and public amenities close to it
3. Subdivision of adjacent land

### **A4.66 Patea (Mt Stoker)**

#### A4.66.1 Description of area

Mt Stoker was a reference point in the landscape for those travelling inland. Māori artefacts have been found there.

#### A4.66.2 Values to be protected

1. Wāhi tohu
2. Mauka
3. Archaeological remains

#### A4.66.3 Principal threats to values

1. Activities that affect views of the peak and upper slopes, including buildings, structures, public amenities, network utilities, mining, forestry and earthworks
2. Subdivision

### **A4.67 Patearoa (Rock and Pillar Range)**

#### A4.67.1 Description of area

A prominent landscape feature, which provided a location marker for those travelling inland. There are a number of Māori place names along the range. The site includes Paruparu a Te Kaunui (Stonehenge), a suite of basalt pillars used as a trail.

The slopes of Patearoa were bush covered and birds would have been readily available as food. Artefacts have been found on the lower slopes. Tikumu (*Celmisia*) grows on Patearoa. This was used to make a special type of korowai. Taramea (the oil of the speargrass) was gathered here. This was valued for its distinctive perfume.

#### A4.67.2 Values to be protected

1. Wāhi tohu
2. Mahika kai
3. Indigenous fauna and flora
4. Ara tawhito
5. Archaeological remains

#### A4.67.3 Principal threats to values

1. Activities that affect the peaks, upper slopes and ridgeline, including buildings, structures, public amenities, network utilities, mining, forestry, earthworks, new roads or additions and alterations to existing roads.
2. Earthworks
3. Subdivision

### **A4.68 Owheo**

#### A4.68.1 Description of area

Owheo (Leith Stream) was historically important for mahika kai. The river has been significantly modified, but retains strong associations as a connection with tūpuna. The site has strong associations with Te Iri-o-Te-wharawhara-Te-Raki.

#### A4.68.2 Values to be protected

1. Historical mahika kai site
2. Wāhi taoka

#### A4.68.3 Principal threats to values

None identified

## **A4.69 Tau Muraki**

### A4.69.1 Description of area

Tau Muraki is an area of small settlements which would have been nestled in sheltered locations close to water sources and waka landing sites. Like the Okia flat site on the opposite side of Papanui Inlet, this area was a known source of stone material used to make adzes. People at both the Okia flat site and Tau Muraki would have made significant use of the inlet, the ocean fishery and the kaimoana found in the bays, ocean beaches, and along the rocky shore. The area near the mouth of the Papanui Inlet on the south side is called 'Te Anakake' (cave of the seal). Just to the west of Tau Muraki is a place called Te Pā o Ngāti Kuri.

### A4.69.2 Values to be protected

1. Kāika
2. Mahika kai
3. Archaeological remains
4. Wāhi taoka

### A4.69.3 Principal threats to values

1. Storm induced erosion
2. Earthworks

## **A4.70 Pipikaretu**

### A4.70.1 Description of area

Pipikaretu (the point) and Onepoto (the beach) are associated with a strong settlement history in this part of Otago Peninsula, and are a place of turangawaewae for many descendants of Kai Te Pahi.

### A4.70.2 Values to be protected

1. Kāika
2. Mahika kai
3. Kai moana
4. Archaeological remains

### A4.70.3 Principal threats to values

1. Earthworks
2. Natural hazard mitigation activities

## **A5. Natural Character of the Coast Values**

### **A5.1 Outstanding Natural Coastal Character Values**

#### **A5.1.1 Highcliff - Pudneys Cliff**

##### A5.1.1.1 Description of area

The Highcliff/Pudneys Cliff area extends from Boulder Beach to Smaills Beach and is a basalt headland with coastal cliffs, offshore reefs, minor headlands and coves.

There is high geological and hydrological naturalness, but water quality may be affected by the waste water treatment plant outfall. There is high ecological naturalness with some adverse effects from erosion. There is high perceptual naturalness and high wild and scenic value.

This area is also part of the Peninsula Coast Outstanding Natural Landscape - see Appendix A3.2.3.

#### A5.1.1.2 Values

- a. Essentially natural basalt headland with coastal cliffs, offshore reefs, minor headlands and coves.
- b. Largely unmodified vegetation on very steep slopes and cliffs with a thin strip of highly modified farmland along clifftops.
- c. Extensive patches of remnant/regenerating indigenous forest.
- d. Forest and cliffs likely provide habitat for a diversity of terrestrial invertebrates, lizards, bush and seabirds.
- e. Undomesticated character provides high level of wildness. Drama of cliffs provides high scenic qualities.
- f. No buildings, structures or earthworks to detract from natural character.

#### A5.1.1.3 Threats

- a. Buildings, structures or earthworks.
- b. Vegetation clearance.

### **A5.1.2 Green Island**

#### A5.1.2.1 Description of area

Green Island is a small basalt island off the coast near the Kaikorai Stream mouth, with intertidal reefs.

A highly natural offshore island with high perceptual naturalness and wild and scenic value.

Green Island is also an outstanding natural feature - see Appendix A3.1.4. It is also identified as a wāhi tūpuna - see Appendix A4.53.

#### A5.1.2.2 Values

- a. Small offshore basalt island with intertidal reefs.
- b. Processes are predominantly erosional and relatively unmodified.
- c. Almost exclusively indigenous vegetation, dominated by *Coprosma repens* (taupata), also habitat for rare *Lepidium oleraceum*, Cook's scurvy grass. Some exotic grasses. Relatively natural.
- d. Nature reserve - fur seals haul out, seabirds roost on islet. Breeding site for yellow-eyed penguin, fairy prion and little blue penguin.
- e. No earthworks, buildings or structures.
- f. Values of significance to Manawhenua. See Appendix A4.53

#### A5.1.2.3 Threats

- a. Buildings, structures and earthworks.

### **A5.1.3 Sandymount**

#### A5.1.3.1 Description of area

The Sandymount area encompasses the summit of Sandymount along with the slopes and cliffs on its southern side. It is differentiated from the adjacent Sandfly Bay area because it is much less impacted by wind-blown sand. It is a

basalt headland with high, steep coastal cliffs, subtidal reefs, caves and stacks, minor headlands and coves. The dramatic landform features of the Chasm and Lovers Leap are within this area, which are also classed as outstanding natural features - see Appendix A3.1.18.

Geological, hydrological and ecological processes are largely intact. Indigenous vegetation is present, but modified by pasture grasses. There is high perceptual naturalness and wild and scenic value.

The area is identified as a wāhi tūpuna - see Appendix A4.40. Most of the area (excluding the outstanding natural features) is also part of the Peninsula Coast Outstanding Natural Landscape - see Appendix A3.2.3.

#### A5.1.3.2 Values

- a. Basalt headland with high steep coastal cliffs, sub-tidal reefs, caves and stacks, minor headlands and coves, which are essentially natural.
- b. Seabirds roost on headlands and offshore stacks. Sooty shearwater may be present.
- c. High degree of naturalness of macroalgal beds on subtidal reefs.
- d. Medium to high naturalness of tops which are grazed, and cliffs.
- e. Patches of remnant/generating indigenous forest on tops and cliffs, some large. Mixed rough exotic grassland and tussockland, with patches of wetland vegetation on easier slopes.
- f. Ruggedness and lack of modification provide undomesticated wildness. Highly scenic.
- g. No structures or earthworks to detract from its natural character.
- h. Values of significance to Manawhenua. See Appendix A4.40.

#### A5.1.3.3.Threats

- a. Buildings, structures and earthworks.
- b. Vegetation clearance.
- c. Has a low threat from sedimentation and farming run-off.

### **A5.1.4 White Island**

#### A5.1.4.1 Description of area

White Island is a small basalt island with subtidal reefs off the St Clair coast.

It has high geological and ecological value and is very wild, but has little scenic value.

The island is identified as a wāhi tūpuna. See Appendix A4.53.

#### A5.1.4.2 Values

- a. Small island with sub-tidal reefs. Largely natural.
- b. Sub-tidal reefs valued as rich and diverse habitat. Feeding and spawning area for a variety of finfish. Paua, rock lobster and kina habitat.
- c. Rich and diverse rocky intertidal epifauna, typical of exposed southern coasts.
- d. Devoid of vegetation.
- e. Values of significance to Manawhenua. See Appendix A4.53.

#### A5.1.4.3 Threats

- a. Buildings, structures and earthworks.
- b. Possibly some contamination from the Tahuna waste water treatment plant outfall at times.

## A5.2 High Natural Coastal Character Values

### A5.2.1 Aramoana Salt Marsh

#### A5.2.1.1 Description of area

The Aramoana salt marsh encompasses tidal flats, salt marsh and relict transgressive dunes, near the north-western head of the Otago Harbour and adjacent to the settlement of Aramoana. The salt marsh is extensive and largely intact. The area includes the second largest representation of dune slacks and associated vegetation in New Zealand. Whilst its natural character is modified to some extent on its landward edge by agricultural land use and Aramoana Road, its eastern portion is essentially unmodified.

The water quality in the wetland is generally good, reflecting the overall quality of water in the harbour. Nutrient addition associated with runoff from the farm adjacent to the wetland is unlikely to be high given the gradient and low intensity of farming.

Modified by the mole and by harbour dredging, the salt marsh nonetheless has moderately high geomorphological and hydrological integrity. It has high ecological value, with largely indigenous vegetation. The salt marsh has a high degree of perceptual naturalness and exhibits a moderately high degree of wildness, with some scenic value.

The salt marsh is identified as a wāhi tūpuna - see Appendix A4.22. It is also identified as an Outstanding Natural Feature - see Appendix A3.1.1. It is also within an Area of Significant Biodiversity Value - see Appendix A1.2.

#### A5.2.1.2 Values

- a. Tidal flats, salt marsh and relict transgressive dune forms.
- b. High indigenous vegetation cover. Salt marsh species include *Selliera*, *Samolus*, rushes and *Sarcocornia*. *Zostera* beds are present in sparse patches at lower tide levels.
- c. Provides habitat to diverse species of fauna. Feeding area for wading birds and waterfowl.
- d. A sense of wildness and lack of domestication.
- e. High naturalness values due to the minimal influence of buildings, structures and earthworks.
- f. Values of significance to Manawhenua. See Appendix A4.22.

#### A5.2.1.3 Threats

- a. The supply and redistribution of sediments is likely to be altered by Port of Otago channel works and port activities (including the wakes of large vessels).
- b. The margins of the wetlands have been drained or infilled by farming practices.
- c. In parts, the salt marsh is modified by drainage channels, vehicle tracks, roads and conversion to agricultural land.
- d. The wetlands are vulnerable to fuel spills.
- e. Buildings, structures, roading and earthworks.

### A5.2.2 Cape Saunders

#### A5.2.2.1 Description of area

The Cape Saunders area encompasses the coast at the eastern extremity of the Otago Peninsula, extending from the mouth of Papanui Inlet to Allans Beach. It includes Wharekakahu Island and Papanui Beach. It is a predominantly basalt headland with some trachyte, with landforms comprising sea cliffs, intertidal reefs, sea stacks and sandy coves, some with small dune systems. The active coastal sand-system is intact, albeit dune processes are modified by marram.

The cleared land is currently grazed. The foredunes are largely covered in marram, muehlenbeckia and lupin, with occasional indigenous shrubs at the pocket beach (Papanui Beach).

There has been some reduction of naturalness through human activity, particularly farming. The intertidal and aquatic habitats are of high quality and the area is important for wildlife habitat. The subtidal reefs are valued as rich and diverse habitat, providing a feeding and spawning area for a variety of finfish. Paua, rock lobster and kina are present. The marine community is largely intact.

One dwelling and curtilage, plus a single penguin hide and the lighthouse are the only built form to detract from the natural character of the area. Almost no earthworks are discernible, except the road to the lighthouse and some farm tracks. Together these have a very small influence on the natural character of the landscape.

There are several wāhi tūpuna identified in the area - see Appendices A4.53, A4.37 and A4.69. Wharekakahu has been identified as an Outstanding Natural Feature - see Appendix A3.1.21. Other parts of the area are also within the Peninsula Coast Outstanding Natural Landscape - see Appendix A3.2.3.

The area has high perceptual naturalness and high wild and scenic value.

#### A5.2.2.2 Values

- a. Basalt headland, including sea-cliffs, intertidal reefs, sea-stacks and sandy coves.
- b. Some indigenous vegetation on dunes.
- c. High degree of naturalness of macroalgal beds on subtidal reefs.
- d. Nesting habitat for spotted shags. Breeding area for yellow-eyed penguin and spotted shags.
- e. Wharekakahu has high habitat values for sooty shearwater, fairy prion and shag species, and as a haul out site for seals.
- f. A high degree of undomesticated wildness. Highly scenic.
- g. Values of significance to Manawhenua. See Appendices A4.53, A4.37 and A4.69.

#### A5.2.2.3 Threats

- a. Low threat from sedimentation and farming runoff.
- b. Reduction in water quality resulting from outflow from streams and non-point source sediment and nutrient inputs associated with the surrounding land use.
- c. Buildings, structures or earthworks that detract from the natural character.
- d. Vegetation clearance.

### **A5.2.3 Lower Taieri River Gorge**

#### A5.2.3.1 Description of area

The lower Taieri River Gorge area encompasses the seaward end of the Taieri River Gorge. The coastal environment boundaries are defined by the extent of the gorge landform. Only part of the area is within the Dunedin city boundaries; the bulk is in Clutha District.

The area is described as a highly natural schist gorge, with regenerating indigenous vegetation along both sides. Hydrological processes are affected by upstream activities, with a consequent reduction in the integrity of ecological processes within the river. The area is highly scenic.

The area is identified as a wāhi tūpuna - see Appendix A4.60. It has also been identified as an Outstanding Natural Feature - see Appendix A3.1.8.

#### A5.2.3.2 Values

- a. Relatively unmodified schist gorge.
- b. Habitat for various water birds. Spawning site for galaxiids.
- c. High percentage cover of indigenous vegetation upstream of the Taieri Mouth bridge.
- d. A sense of wildness (i.e. lack of domestication). High scenic qualities.
- e. Values of significance to Manawhenua. See Appendix A4.60.

#### A5.2.3.3 Threats

- a. Hydrologic processes, including flow and sediment transport, may be affected by development and land use upstream.
- b. Water quality may be adversely affected by point discharges, runoff and drainage upstream.
- c. Buildings, structures and earthworks that detract from the natural character.

### **A5.2.4 Sandfly Bay**

#### A5.2.4.1 Description of area

This area comprises a headland by-passing a transgressive (mobile) dune system with multiple phases that extends to Hoopers Inlet. The youngest dune phase remains largely mobile with low vegetation cover, Aeolian sand transport and active transverse dunes. The foredunes are marram covered, backed by muehlenbeckia, lupins, and exotic grasses. The older dune phases are stable, some with indigenous hardwood/broadleaf forest.

Sea lions haul out on the beach. Fur seals breed at eastern end of beach. The area is likely to provide valuable habitat for terrestrial invertebrates, lizards and birds. It is a breeding area for yellow-eyed penguin and little blue penguin. Sooty shearwater may breed here.

There are no discernible structures within this area. A track down to the beach is the only evidence of earthworks. This area has high to medium high natural character. Geological and ecological processes are adversely affected to a small degree by the presence of marram.

The area is identified as a wāhi tūpuna -see Appendix A4.40. It is also identified as an Outstanding Natural Feature - see Appendix A3.1.15.

#### A5.2.4.2 Values

- a. Partly mobile dune system, characterised by low vegetation cover and high sand transport.
- b. Largely unmodified indigenous broadleaf/hardwood forest at the Hoopers Inlet end, and around the active dunes of Sandfly Bay.
- c. Remnant and regenerating indigenous broadleaf/hardwood forest, continuous at the eastern end, grading to scattered at western end. Pikao survives here.
- d. Sea lion haul out and fur seal breeding area.
- e. Probable valuable habitat for terrestrial invertebrates, lizards and birds.
- f. Breeding area for yellow-eyed penguin and little blue penguin, and possibly sooty shearwater.
- g. A sense of undomesticated wildness. Moderately high scenic qualities.
- h. Values of significance to Manawhenua. See Appendix A4.40.

#### A5.2.4.3 Threats

- a. Reduction in water quality resulting from outflow from streams and non-point source sediment and nutrient inputs associated with the surrounding land use.

- b. Buildings, structures or earthworks that detract from the natural character.
- c. Vegetation clearance.

## **A5.2.5 Tunnel Beach**

### A5.2.5.1 Description of area

The Tunnel Beach area encompasses the section of sandstone cliffs between the basalt cliffs and headlands of Blackhead and St Clair. Its inland extent is a relatively distinct change in slope back from the clifftops. It is comprised of sandstone cliffs with sea stacks, an arch and coves with narrow sandy beaches.

The only notable earthworks are the track down to Tunnel Beach, and a dewatering system close to the St Clair cliffs. Dwellings at the inland boundary diminish the undomesticated wildness to a degree. There are some very small patches of regenerating indigenous vegetation. A moderately extensive salt-tolerant herb field exists on the headland.

Highly natural coast with naturalness diminishing towards the landward boundary of the area due to the almost complete replacement of the indigenous vegetation with pasture.

Tunnel Beach has been identified as an Outstanding Natural Feature - see Appendix A3.1.20.

### A5.2.5.2 Values

- a. Sandstone cliffs with sea stacks, an arch and coves with narrow sandy beaches.
- b. Small patches of regenerating indigenous vegetation. Salt-tolerant herb field on headland.
- c. Fairy prion nest on cliffs.
- d. The sandstone cliffs and their convolutions plus the surf provide a high degree of tumultuous wildness. Very high scenic quality.

### A5.2.5.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Low threat from sedimentation.

## A5.3 Natural Coastal Character Values

### A5.3.1 Aramoana Beach

#### A5.3.1.1 Description of area

This area comprises the eastern part of the beach at Aramoana, from the rock outcrops on the beach near the western end of Aramoana settlement to the mole.

The central dunes have been levelled for housing. Shore protection works (the mole) and marram have affected dune processes. Sand accumulation northwest of the mole has formed a prograded barrier (i.e. extending into the sea). Structures and earthworks have interrupted alongshore sediment transport. Deposition of spoil dredged from the Otago Harbour has also altered natural processes.

The integrity of the terrestrial ecology has been compromised but the intertidal and aquatic habitats are more natural. There is moderately low indigenous vegetation cover, with marram, muehlenbeckia, lupins, exotic trees, exotic grasses. Efforts are being made to replant with indigenous shrubs and grasses. Fur seals and sea lions are present from time to time.

The area is identified as a wāhi tūpuna. See Appendices A4.22 and A4.32.

#### A5.3.1.2 Values

- a. The active coastal sand-system.
- b. The Spit is a surf break of national significance.
- c. Indigenous vegetation cover, where present.
- d. Sea lion and fur seal habitat.
- e. Values of significance to Manawhenua. See Appendices A4.22 and A4.32.

#### A5.3.1.3 Threats

- a. Levelling of dunes for housing.
- b. Buildings, structures or earthworks that detract from the natural character.
- c. Moderately low threat from sedimentation and farming runoff.
- d. Low threat from dredge spoil dumping.

#### A5.3.1.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ol style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ol>

Threat	Key design elements
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut.</li> </ul>

## A5.3.2 Aramoana Spit

### A5.3.2.1 Description of area

A narrow, re-curved spit formed between groynes and the dredged harbour channel. It has eroded following construction of the mole, although this has been somewhat mitigated in recent years due to deposition of dredge spoil in the nearshore environment.

There is moderately low indigenous vegetation cover, including marram, muehlenbeckia, lupins, exotic trees, exotic grasses. Efforts are being made to clear exotics along the spit and replant with indigenous shrubs and grasses.

Marram grass combined with engineering efforts, both amateur and professional, have modified the natural processes of the spit and compromised its ecological integrity. The intertidal and aquatic habitats have higher integrity. While structures (including cribs located on the dunes) and road works diminish perceptual naturalness somewhat, it retains this a high degree.

The Spit is extremely exposed to the elements which ensures that it has a high degree of tumultuous wildness. The buildings reduce its undomesticated wildness. It has high scenic qualities.

The areas is identified as a wāhi tūpuna. See Appendices A4.22 and A4.32.

### A5.3.2.2 Values

- a. The sense of tumultuous wildness.
- b. The Spit is a surf break of national significance.
- c. Indigenous vegetation cover, where present.
- d. High scenic qualities.
- e. The area is identified as a wāhi tūpuna. See Appendices A4.22 and A4.32.

### A5.3.2.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Structures, dredging of the harbour channel and associated dumping of the dredge spoil affect alongshore sediment transport processes and hydrology
- c. The Spit is vulnerable to erosion and breaching.
- d. Moderately low threat from sedimentation and farming runoff.

#### A5.3.2.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. Shelterbelt planting should be avoided in this highly visible area.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>

### A5.3.3 Blueskin Bay

#### A5.3.3.1 Description of area

Blueskin Bay is a large estuary at the mouth of the Waitati River and Carey's Creek, and is protected from the open ocean of a sand spit extending from its northern shore. The bay is shallow, characterised by sand flats and channels. Orokonui Estuary is a small arm of the main estuary at its south-west corner. Alluvial fans are present at the mouths of the Waitati River and Carey's Creek but in other areas, the shoreline of the estuary is characterised by a low scarp which usefully defines the extent of the coastal environment.

Blueskin Bay is very modified by settlement and transportation infrastructure. The township of Waitati is located on flats at the mouth of the Waitati River. Scattered residential development extends from Waitati around the southern shoreline to Doctors Point.

Blueskin Bay is assessed as modified to a moderately high degree by sedimentation and water quality degradation. Nonetheless it has high value as a feeding and breeding ground for wading birds, including migratory species, and its cockle beds sustain a commercial harvest. It has moderately high perceptual naturalness and is an important scenic asset.

The area is identified as a wāhi tūpuna. See Appendices A4.14 and A4.18.

#### A5.3.3.2 Values

- a. Tidal estuary with conspicuous flood-tide sand delta and tidal flats.
- b. Isolated patches of salt marsh.
- c. Important feeding area for seabirds, wading birds, including trans-equatorial migrants.
- d. Commercial cockle harvesting and recreational amenity.

- e. Important nursery ground for flatfish, and habitat for shellfish (including cockles).
- f. The area is identified as a wāhi tūpuna, with kai moana values. See Appendix A4.14 and A4.18.

#### A5.3.3.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Water degradation due to nutrient runoff, infiltration from septic tanks and, to a lesser extent, contamination from water-fowl.
- c. Sedimentation caused by run-off.

#### A5.3.3.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. Shelterbelt planting should be avoided in this highly visible area.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>
Forestry Blocks	<ul style="list-style-type: none"> <li>a. Forestry blocks should be avoided in this highly visible area.</li> <li>b. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>

### A5.3.4 Brighton

#### A5.3.4.1 Description of area

This area includes the coastline adjacent to the urban area of Brighton, including coastal cliffs with coves, sandy beaches and intertidal reefs. The coast is characterised by small beaches divided by low rocky headlands with associated stacks and reefs. There is a small marram covered dune system at the mouth of Otokia Creek which has been modified by the development of the Brighton Surf Club building and the associated parking area. This area is being replanted in indigenous dune species. At the northern end of the area, the beaches are backed by a steep scarp covered in native and exotic coastal scrub.

Back from the immediate coastal edge is the main coastal road and the urban area of Brighton. A large area of open parkland occupies the top of the uplifted marine terrace to the south of Brighton Beach.

The geomorphology of this area is largely unmodified. There is an active coastal sand-system (nearshore-beach-foredune sand exchange) intact in dune system. Main processes elsewhere are erosional and are largely unmodified.

Ecological processes are modified by residential occupation and related developments. The marine community is largely intact. Subtidal reefs have a rich and diverse habitat. They provide a feeding and spawning area for a variety of finfish. There is paua, rock lobster and kina habitat.

The area identified as a wāhi tūpuna. See Appendix A4.59.

The area has a low perceptual naturalness but some wild and scenic value. It is very domesticated, except for the headland.

#### A5.3.4.2 Values

- a. Coastal cliffs with coves, sandy beaches and intertidal reefs.
- b. Largely natural rocky intertidal zone.
- c. Patches of regenerating indigenous vegetation.
- d. Active coastal dune system.
- e. Sub-tidal reefs with rich and diverse habitat.
- f. Moderately high scenic value.
- g. Values of significance to Manawhenua. See Appendix A4.59.

#### A5.3.4.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Sedimentation from run-off.
- c. Erosion.

#### A5.3.4.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut.</li> </ul>

Threat	Key design elements
Shelterbelts	<p>a. If practically feasible, shelterbelt planting should avoid highly visible areas, otherwise they should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</p> <p>b. See Appendix A11 for design guidelines for shelterbelts.</p>

## A5.3.5 Brighton Road Beach South

### A5.3.5.1 Description of area

This area extends from approximately 1 km south of Big Stone Road north to Bath Street, Brighton. It is characterised by a series of coastal terraces of schist geology, with outcrops of exposed schist, and sandy beaches in between. The coastal environment is defined by the top of the first terrace back from the coastal highway.

There are late Holocene-era foredune ridges, seaward of a Pleistocene coastal terrace. Several small streams bisect the dunes. These are likely to have been channelised by foredune development in association with marram. The active coastal sand-system (nearshore-beach-foredune sand exchange) is intact, albeit dune processes are modified by marram.

Vegetation along the beach margin is largely marram grass and tree lupin, with extensive indigenous shrubs along cliff tops. The landscape behind the beaches is characterised by pasture cover with exotic shelter plantings, and where gullies cut through the coastal terrace, by remnant or regenerating indigenous vegetation. This indigenous vegetation is likely to support indigenous invertebrates, lizards and bush birds. The beach and cliffs provide suitable habitat for shore birds.

The Taieri Mouth-Brighton Road forms a lineal connection running along the beach margin. Residential development is scattered along the road margins, mainly on the inland side. The road, occasional car parks and walking tracks have modified the environment.

The intertidal and subtidal reefs harbour rich and diverse flora and fauna. Finfish are common offshore.

The area has moderately high geomorphological and hydrological naturalness but its terrestrial ecology is modified by exotic vegetation. Perceptual naturalness is moderately low and it lacks wild or scenic value.

### A5.3.5.2 Values

- Schist outcrops and sandy beach with active coastal sand-system.
- Indigenous vegetation along cliff tops, providing habitat for terrestrial invertebrates, lizards and bush birds.
- Intertidal and subtidal reefs with rich and diverse flora and fauna.
- Values of significance to Manawhenua. See Appendix A4.59.

### A5.3.5.3 Threats

- Buildings, structures or earthworks that detract from the natural character.
- Possible reduction in water quality resulting from farming runoff.
- Vegetation clearance.

#### A5.3.5.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible areas, which applies to most of this area.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>
Forestry blocks	<ul style="list-style-type: none"> <li>a. Highly visible areas should be avoided for forestry planting, which applies to most of this area.</li> <li>b. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>

### A5.3.6 Island Park

#### A5.3.6.1 Description of area

This area encompasses the beach and dune system west and east of Kaikorai estuary, then extending between Waldronville and Blackhead Beach to just west of Blackhead quarry.

Whilst the geology of the surrounding hills is sedimentary, the area within the coastal environment is largely sandy marine deposits. The active coastal sand-system is intact, albeit the transgressive (mobile) dune is now stabilised and foredune processes are modified by marram. The long beach north of the estuary is backed by a large area of dunes. This is covered in marram grass near the beach but increasingly covered with scrub and forest further inland.

Sea lions haul out here occasionally, and finfish are common offshore. The intertidal and aquatic zones have some importance for wildlife.

The natural character is modified, particularly nearer the estuary mouth, by sand mining and the development of recreational facilities such as the speedway, although the extent of the dune system limits the effects of modification. There are walking tracks through the dunes and the area is occasionally visited by trail bike riders.

This area exhibits significant modifications to geological, hydrological and (terrestrial) ecological processes. It has moderately high perceptual naturalness, and medium wild and scenic value.

#### A5.3.6.2 Values

- a. The active coastal dune system.
- b. Indigenous vegetation cover where present.
- c. Wilderness values.
- d. Values of significance to Manawhenua. See Appendix A4.52

#### A5.3.6.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Sedimentation and farming runoff.
- c. Potential degradation of water quality from outflow from Kaikorai estuary, runoff, and the Green Island waste water treatment plant.

#### A5.3.6.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ol style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ol>
Roads and tracks	<ol style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ol>
Shelterbelts	<ol style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible areas, which applies to most of this area.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ol>
Mining	<ol style="list-style-type: none"> <li>a. Any mining activity should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.</li> </ol>

## A5.3.7 Karitane Beach

### A5.3.7.1 Description of area

This area extends from the Seacliff Significant Natural Landscape along the coast to Karitane township to the northern end of the beach, then to the west of the township where it links with Waikouaiti estuary.

The environment consists of a late-Pleistocene terrace fronted by a sandy beach. A scarp separates the terrace from the beach. There is no foredune development, indicating that coastline is (occasionally) erosional. South of Karitane township, the terrace is vegetated in pasture.

The Karitane township at the northern beachfront area and the presence of roads diminishes the natural character. The vegetation is largely exotic grasses and weeds, with some regeneration of indigenous species (e.g. ngaio).

The ecology of the intertidal and aquatic habitats is moderately intact. There are scattered offshore reefs with associated *Macrocystis* communities. Red-billed gulls breed on islets, and there is roosting and foraging habitat for shorebirds.

While retaining moderately high geomorphological and hydrological integrity, the integrity of the terrestrial ecology is low. The area has moderate perceptual naturalness and wild and scenic value. It is more 'natural' in its southern and eastern portions than its northernmost area.

### A5.3.7.2 Values

- a. Terrace and sandy beach, with an intact nearshore beach sand transport system.
- b. Indigenous vegetation where present.
- c. Roosting, foraging and breeding habitat for shorebirds, particularly on islets.

### A5.3.7.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Potential sedimentation from farming runoff.

### A5.3.7.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures.	<ol style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding coastal environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ol>

Threat	Key design elements
Roads and tracks.	<p>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</p> <p>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</p>
Shelterbelts	<p>a. Shelterbelt planting should avoid highly visible locations, which includes most of this area.</p> <p>b. See Appendix A11 for design guidelines for shelterbelts.</p>
Forestry blocks	<p>a. Highly visible areas should be avoided for forestry planting, which includes most of this area.</p> <p>b. See Appendix A11 for design guidelines for forestry blocks.</p>

## A5.3.8 Kuri Bush

### A5.3.8.1 Description of area

This area extends from approximately 1 km south of Big Stone road south to approximately 2km north of Taieri Mouth. It is characterised by a series of coastal terraces of schist geology, with outcrops of exposed schist, and a sandy beach. The coastal environment is defined by the top of the first terrace back from the coastal highway. A marram dominated foredune has developed. The coast is characterised by a low cliff with small pocket beaches.

There are late Holocene-era foredune ridges, seaward of a Pleistocene coastal terrace. Several small streams bisect the dunes. These are likely to have been channelised by foredune development in association with marram. The active coastal sand-system (nearshore-beach-foredune sand exchange) is intact, albeit dune processes are modified by marram.

Vegetation along the beach margin is largely marram grass and tree lupin, with extensive indigenous shrubs along cliff tops. The landscape behind the beaches is characterised by pasture cover with exotic shelter plantings, and where gullies cut through the coastal terrace, by remnant or regenerating indigenous vegetation. This indigenous vegetation is likely to support indigenous invertebrates, lizards and bush birds. The beach and cliffs provide suitable habitat for shore birds.

The Taieri Mouth-Brighton Road forms a lineal connection running along the beach margin. Residential development is scattered along the road margins, mainly on the inland side, with the exception being around Kuri Bush where cribs have been constructed between the road and the sea. The road, occasional car parks and walking tracks have modified the environment.

The intertidal and subtidal reefs harbour rich and diverse flora and fauna. Finfish are common offshore.

The area has moderately high geomorphological and hydrological naturalness but its terrestrial ecology is modified by exotic vegetation. Perceptual naturalness is moderately low and it lacks wild or scenic value.

### A5.3.8.2 Values

- Essentially natural pleistocene terrace with sandy pocket beaches, and semi-continuous intertidal and sub-tidal schistose reefs.
- Indigenous vegetation where present.
- Wildness is provided by the surf and by the rocky reefs. Moderate scenic value.
- Values of significance to Manawhenua. See Appendix A4.59.

#### A5.3.8.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Potential reduction in water quality resulting from farming runoff.

#### A5.3.8.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ol style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ol>
Roads and tracks	<ol style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ol>
Shelterbelts	<ol style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible areas, otherwise they should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the coastal environment.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ol>
Mining	<ol style="list-style-type: none"> <li>a. Any quarries and excavations should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points; visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.</li> </ol>

Threat	Key design elements
Forestry blocks	<ul style="list-style-type: none"> <li>a. Some highly visible areas should be avoided for forestry planting; for other areas there should be careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. Forestry blocks should be carefully located so that when trees have matured they visually sympathise with and emphasise underlying ridges and gullies rather than create new unnatural lines or rectangular patterns.</li> <li>c. Rather than forestry establishment following the straight edges of property boundaries, landowners should be encouraged to pay attention to the landforms and vegetation patterns that exist.</li> <li>d. Large blocks of single aged monocultures should be discouraged, replaced by smaller compartments that can be harvested over a staggered timeframe, thereby reducing the adverse environmental effects occurring at this stage of the forest growing cycle.</li> <li>e. Encourage the provision of appropriate edge planting.</li> <li>f. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>

## A5.3.9 Lawyers Head

### A5.3.9.1 Description of area

Lawyers Head area comprises the basalt headland, cliffs and associated reefs.

The landform has been modified by the construction of John Wilson Drive, the golf course and car park, and by the planting of exotic grasses, however the coastal margins remain relatively unmodified. There are extensive patches of regenerating indigenous vegetation along the cliff tops.

The seaward edges of the headland retain fairly high geological and ecological naturalness, although water quality is diminished. It retains moderately high perceptual naturalness and wild and scenic value.

Part of the area is identified as a wāhi tūpuna. See Appendix A4.45.

### A5.3.9.2 Values

- a. Basalt headland with cliffs and reefs.
- b. Indigenous vegetation where present.
- c. Values of significance to Manawhenua. See Appendix A4.45.

### A5.3.9.3 Threats

- a. Buildings, structures and earthworks that detract from the natural character.
- b. Potential effects on water quality from stormwater, outflow from Tomahawk Lagoon and the Tahuna waste water treatment plant outfall.
- c. Sedimentation from runoff.

#### A5.3.9.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Any new buildings or structures in this area would very likely be a threat by creating significant adverse effects on natural character.</li> <li>b. If required, they should be sited so that they are not visible from public viewpoints.</li> <li>c. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. Shelterbelts in this area are very likely to be a threat by creating significant adverse effects on natural character.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>

### A5.3.10 Ocean View/Westwood

#### A5.3.10.1 Description of area

This area extends along the coast from Brighton to adjacent Island Park, and comprises a sandy beach backed by dunes. Whilst the geology of the surrounding hills is sedimentary, the area within the coastal environment is largely sandy marine deposits. A coastal terrace separates inland hill slopes from recent dunes. Several small streams bisect the dunes. These are likely to have been channelised by foredune development.

The beach is backed by marram grass covered dunes with scattered native and exotic scrub. There is moderately extensive regenerating indigenous vegetation behind the foredunes, including an important area of remnant pikao. The main road to Brighton runs along the back of the dunes and housing has been developed along this in ribbon form.

This area has been modified by human habitation, including roading, walking tracks, car parks and houses at the southern end of the area. It is occasionally visited by trail bike riders.

It has moderately low perceptual naturalness and a similar level of scenic value. The dunes and the beach-surf provide some wildness.

#### A5.3.10.2 Values

- a. Sandy beach and largely natural foredunes.
- b. Indigenous vegetation where present, including an important area of remnant pikao.
- c. Wildness value. Scenic value limited.

#### A5.3.10.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Vegetation clearance.

#### A5.3.10.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible locations, which includes most of this area.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>
Mining	<ul style="list-style-type: none"> <li>a. Any mining activity should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points; visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.</li> </ul>
Forestry blocks	<ul style="list-style-type: none"> <li>a. Highly visible locations should be avoided for forestry planting, which includes most of this area.</li> <li>b. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>

### A5.3.11 Pleasant River Estuary

#### A5.3.11.1 Description of area

Pleasant River Estuary occupies a valley within low coastal hills between State Highway 1 and the coast, and is protected from the ocean by a marram grass covered sand spit extending from the northern shore (located in Waitaki District). The surrounding hill country (typically gently sloping on top, falling more steeply to the estuary) is comprised of sedimentary rock and reaches elevations of around 60 - 80m, suggesting eroded marine terraces. The hills are generally under pasture cover and devoid of trees, although patches of indigenous scrub survive in a few places.

The estuary, which has various arms and a number of tributaries, is flanked by salt marsh and characterised by sinuous river channels winding through shallower sand flats. It has a high degree of naturalness, especially in the lower reaches of the estuary, and the ecological health is good. There is a relatively high percentage of indigenous salt marsh with the remainder in sandflats. There is ribbonwood and silver tussock in places around the perimeter. Exotic grasses are evident around the perimeter and associated with reclaimed areas.

The estuary provides valuable habitat for a diversity of waterbirds, including threatened species and trans-equatorial migrants such as bar-tailed godwits. The edges provide suitable habitat for terrestrial invertebrates and lizards. It is a likely spawning area for finfish such as flounder and galaxiids.

The inland extent of the area is characterised by increased modification in the form of drainage and reclamation for improved pasture. The rural, undomesticated character of the surrounding hills is being modified by housing associated with the Tumai Coastal Sanctuary on the true right.

While some areas of the estuary have been modified by drainage and conversion to pasture, its geomorphological and hydrological integrity remains largely intact. It has a moderately high ecological value including a range of indigenous vegetation and provides valuable habitat for birds and fish. Its perceptual naturalness is compromised by drainage works and by residential development, but it has relatively high wild and scenic value.

#### A5.3.11.2 Values

- a. Extensive, relatively unmodified wetlands, salt marsh and sandflats through most of the area, in good ecological health.
- b. High degree of naturalness, especially in the lower reaches of the estuary.
- c. Indigenous vegetation.
- d. Waterbird habitat, including for threatened species and trans-equatorial migrants such as bar-tailed godwits.
- e. Habitat for terrestrial invertebrates and lizards at edges of estuary.

#### A5.3.11.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Reclamation.
- c. Runoff from farming, introduced weeds, nutrient pollution, stock grazing.
- d. Nutrient and sediment runoff affecting water quality.

#### A5.3.11.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ol style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ol>
Roads and tracks	<ol style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ol>

Threat	Key design elements
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible locations, which applies to most of this area.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>
Mining	<ul style="list-style-type: none"> <li>a. Any mining activity should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points; visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an on-going basis with appropriate planting and restorative earthworks.</li> </ul>
Forestry blocks	<ul style="list-style-type: none"> <li>a. Highly visible areas should be avoided for forestry planting, which applies to most of this area.</li> <li>b. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>

### A5.3.12 Portobello Peninsula

#### A5.3.12.1 Description of area

Portobello Peninsula, along with Goat Island/Rakiriri and Quarantine Island/Kamau Taurua, is an example of a ria coastline, with the pattern of headlands and islands formed by sea level rise and the drowning of valleys eroded by Otago Peninsula volcanic activity.

Whilst vegetation cover is largely modified and dominated by exotic grasses, the road reserve that runs along the side of the Portobello Peninsula facing the city (not beside the current road) is the only sea/land interface on the Otago Peninsula that retains original indigenous vegetation - in particular, grass trees, tree daisies and some ground orchids. There are very high terrestrial wildlife values present.

The adjacent intertidal and aquatic habitats have a moderately high degree of health.

Overall, Portobello Peninsula has moderately high wild and scenic quality.

#### A5.3.12.2 Values

- a. Ria coastline, with relatively unmodified hill slope and coastal processes.
- b. Moderate degree of tumultuous wildness through its steep topography.
- c. High scenic quality.
- d. Only sea/land interface on Otago Peninsula with original indigenous vegetation, including grass trees, tree daisies and ground orchids.
- e. Nesting site for little cormorant. Very high value for terrestrial wildlife.

#### A5.3.12.3 Threats

- a. Low threat from sedimentation and farming runoff.
- b. Factors which diminish natural character include buildings, structures (such as pylons) and earthworks (the road and farm tracks).

#### A5.3.12.4 Key design elements to be required or encouraged

Threat	Key design elements
--------	---------------------

Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>

### A5.3.13 Smalls Beach/Tomahawk

#### A5.3.13.1 Description of area

The area is defined by Lawyers Head to the west and Māori Head to the east, encompassing Tomahawk and Smalls Beaches. The suburb of Ocean Grove lies between Tomahawk Beach and Tomahawk Lagoon, which is a separate coastal character area. The geology of the hills surrounding the headlands is volcanic, and the beaches are backed by dunes.

The dunes are covered in marram grass and scattered native scrub. There is also wind shorn native scrub on the headlands.

Geological and hydrological processes are modified by human habitation and the presence of marram in the dune systems. These also modify the terrestrial and intertidal ecology, but the area is still important for wildlife. It has moderate perceptual naturalness and some sense of wildness. Smalls Beach is highly scenic, Tomahawk less so.

Part of the area is identified as a wāhi tūpuna. See Appendix A4.42.

#### A5.3.13.2 Values

- a. Active coastal sand system, although dune processes modified by exotic plant cover e.g. marram.
- b. Remnant and regenerating indigenous forest, with active replanting programme.
- c. Sealions and fur seals haul out occasionally. Pupping area for sealions. Roosting area for seabirds.
- d. Some wildness values and highly scenic at eastern (Smalls Beach) end.
- e. Values of significance to Manawhenua. See Appendix A4.42.

#### A5.3.13.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Moderately low threat from sedimentation and farming runoff.
- c. Factors which diminish natural character include residential development, playing fields, earthworks (roads) and structures (e.g. gun emplacements).

#### A5.3.13.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Mining	<ul style="list-style-type: none"> <li>a. Any mining activity, including sand mining, should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points; visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an on-going basis with appropriate planting and restorative works.</li> </ul>

### A5.3.14 Taieri Mouth North

#### A5.3.14.1 Description of area

The area encompasses a short stretch of coastline immediately north of Taieri Mouth. It is characterised by a series of coastal terraces of schist geology, with schist exposed in outcrops, and a sandy beach. The coastal environment is defined by the top of the first terrace back from the coastal highway. There is Aeolian and wave deposited sand in the lee of Moturata Island.

The landscape behind the beaches is characterised by pasture cover with exotic shelter plantings, and where gullies cut through the coastal terrace, by remnant or regenerating indigenous vegetation. The Taieri Mouth-Brighton Road forms a lineal connection running along the beach margin. Residential development is scattered along the road margins, mainly on the inland side. Vegetation along the beach margin is largely marram grass and tree lupin, with little evidence of any indigenous vegetation.

The geology of the area retains medium to high naturalness. The terrestrial ecology is modified by evidence of regenerating present indigenous vegetation. Aquatic and intertidal ecology is of medium to high health. The perceptual naturalness of the area is moderately low, but it has some wild and scenic quality.

The area is identified as a wāhi tūpuna. See Appendices A4.59 and A4.60.

#### A5.3.14.2 Values

- a. Natural landforms.
- b. Indigenous vegetation, where present, supporting terrestrial invertebrates, lizards and bush birds.

- c. Shorebird habitat.
- d. Some wildness values. Moderate scenic quality.
- e. Values of significance to Manawhenua. See Appendices A4.59 and A4.60

#### A5.3.14.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Sedimentation from farming runoff.
- c. Vegetation clearance.

#### A5.3.14.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. ## A5.3.15 Tomahawk Lagoon

### A5.3.15.1 Description of area

The Tomahawk lagoon consists of two shallow lagoons, joined by a narrow channel. The lagoon is brackish and there are small marshy areas adjacent in places. Urban development (involving reclamation) extends to the edge of the upper lagoon along its southern side. The upper margins are relatively natural.

The lagoon is a regionally significant wetland and is protected by QEII covenant. The margins are predominantly indigenous vegetation, including several threatened species.

Common planktonic algae are a feature of lagoon waters, with blooms common in warmer weather. There are nutrient inputs from farm run-off. Invertebrate communities typical of highly modified and enriched soft-bottom estuaries. There is a high diversity of indigenous water birds, including marsh and spotless crane, waders, gulls, waterfowl. The latter often present in high numbers.

While geological and hydrological values are low, the lagoon retains ecological integrity, particularly at the landward edges. While the estuarine life is modified by runoff, it is important habitat for waterfowl. The lagoon retains moderate perceptual naturalness and moderate wild and scenic value.

The area is identified as a wāhi tūpuna. See Appendix A4.42.

### A5.3.15.2 Values

- a. Relatively natural upper margins of the lagoon.
- b. Regionally Significant Wetland.
- c. Indigenous vegetation, including several threatened species.
- d. High diversity of indigenous water birds, including marsh and spotless crane, waders, gulls, and waterfowl.
- e. Values of significance to Manawhenua. See Appendix A4.42.

### A5.3.15.3 Threats

- a. Buildings, structures and earthworks that detract from the natural character. Roads, causeways, reclamation and canalisation drains are all earthworks which could negatively influence natural character.
- b. Effects on water quality from farm run-off.
- c. Vegetation clearance.

### A5.3.15.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ol style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values. Higher elevated areas are the most sensitive part in this regard.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ol>

Threat	Key design elements
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible locations, which applies to most of this area. Otherwise shelterbelts should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the area.</li> <li>b. Forestry blocks	<ul style="list-style-type: none"> <li>a. Highly visible areas should be avoided for forestry planting, which applies to most of this area.</li> <li>b. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>

## A5.3.16 Tumai

### A5.3.16.1 Description of area

The Tumai Coast runs from Pleasant River mouth south to the northern edge of Matanaka. It is comprised of low (up to approximately 100m) dissected hills, consisting of sedimentary rock which slopes toward the coast and terminates in cliffs up to approximately 40m high. The sandstone cliffs are mixed with sand/gravel beaches.

Different rock strata can be identified in the cliff faces and in places there are off-shore reefs present.

The land is under pasture and in a few places there are patches of scattered indigenous forest. There is no road access and no buildings within the identified coastal environment.

The area displays a moderately high level of naturalness in terms of geological and hydrological processes. The terrestrial ecology is significantly modified, but there is a high degree of integrity in the intertidal and subtidal zones. It has a high level of perceptual naturalness and high wild and scenic value.

### A5.3.16.2 Values

- a. Essentially natural sandstone cliffs with mixed sand/gravel beaches and intertidal reefs.
- b. Indigenous vegetation where present.
- c. Moderate to high degree of wildness in the undomesticated sense. High scenic value.
- d. Values of significance to Manawhenua. See Appendix A4.1.

### A5.3.16.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Effects on water quality from farmland runoff.
- c. Sedimentation from farming runoff.

#### A5.3.16.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values. Higher elevated areas are the most sensitive parts of this landscape in this regard.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible locations. Otherwise shelterbelts should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the landscape.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>
Mining	<ul style="list-style-type: none"> <li>a. Any mining activity should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points; visible quarry surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.</li> </ul>
Forestry blocks	<ul style="list-style-type: none"> <li>a. Highly visible locations should be avoided for forestry planting.</li> <li>b. See Appendix A11 for design guidelines for forestry blocks.</li> </ul>

### A5.3.17 Waikouaiti Beach

#### A5.3.17.1 Description of area

The crescent shaped Waikouaiti Beach runs from the Waikouaiti River mouth around towards Cornish Head. It is a low lying coastal environment comprised of gravel, sand and silt, and is flanked by raised marine terraces of similar material overlain by loess. The dunelands adjacent to the beach have been significantly modified by forestry as well as a large scale poultry farm. More natural dune forms dominate the southern end of the spit, modified by marram. Groyne have been placed at the end of the spit in an attempt to minimise erosion and maintain inlet stability.

Finfish are common offshore and occasionally targeted by commercial trawlers. A variety of species of dolphin are regular, albeit brief, visitors.

There is low indigenous vegetation cover. The presence of marram, lupin and pine, combined with structural works to create playing fields and other urban developments have compromised the geomorphic and ecological processes

within this area to a significant extent. The intertidal and aquatic habitats have some ecological integrity. The area has low perceptual naturalness but some wild and scenic value.

#### A5.3.17.2 Values

- a. Natural dune forms at the southern end of the spit.
- b. Wildness and scenic qualities highest at the eastern spit and near Matanaka.
- c. Values of significance to Manawhenua. See Appendix A4.5.

#### A5.3.17.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. The beach has both wild and scenic qualities diminished by the presence of conifers and built development.

#### A5.3.17.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ol style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ol>
Roads and tracks	<ol style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ol>
Shelterbelts	<ol style="list-style-type: none"> <li>a. See Appendix A11 for design guidelines for shelterbelts.</li> </ol>
Mining	<ol style="list-style-type: none"> <li>a. Any mining activity should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points; visible surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting and restorative earthworks.</li> </ol>
Forestry blocks	<ol style="list-style-type: none"> <li>a. Highly visible locations should be avoided for forestry planting, which applies to most of this area.</li> <li>b. See Appendix A11 for design guidelines for forestry blocks.</li> </ol>

## **A5.3.18 Waikouaiti Estuary**

### A5.3.18.1 Description of area

This is a coastal lowland landscape encompassing the Waikouaiti River Estuary and associated river flats. The estuary is much modified by drainage and reclamation, particularly in the upper reaches. The margins adjacent to Karitane have been modified with shore erosion measures (seawalls, groynes).

While this area scores reasonably highly on perceptual naturalness, it is quite highly modified by human activities. The dune structure has been modified by marram and by earthworks to facilitate residential activities, and the terrestrial ecology is significantly modified as a consequence. The aquatic environment is least modified, resulting in a moderately high presence of wildlife.

There is a moderate percentage of indigenous salt marsh, approaching 40%. The remainder is largely sandflats. The estuary provides roosting and feeding habitat for a high diversity of waterbirds, including trans-equatorial migrants. Cockles are present and it is a likely spawning area for finfish such as flounder and galaxiids.

Water quantity is somewhat reduced by water abstraction upstream. Water quality is affected by point and non point source discharges from the surrounding farm and residential land. The ecological health of the estuary is under moderate threat from erosion, reclamation, farming runoff, introduced weeds, nutrient pollution and stock grazing. Earthworks have modified the character of the estuary through canalisation, reclamation, flood banks, the railway embankment and sewerage ponds.

The area is identified as a wāhi tūpuna. The estuary is also a Statutory Acknowledgment area. See Appendices A4.4 and A4.5.

The area has relatively low scenic value.

### A5.3.18.2 Values

- a. High degree of naturalness, especially in the lower reaches of the estuary, with a moderate percentage of indigenous salt marsh.
- b. Roosting and feeding habitat for a high diversity of waterbirds, including trans-equatorial migrants.
- c. Likely spawning area for finfish such as flounder and galaxiids.
- d. Values of significance to Manawhenua. See Appendices A4.4 and A4.5.

### A5.3.18.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Effects on water quantity due to water abstraction upstream.
- c. Effects on water quality due to point and non point source discharges from the surrounding farm and residential land.
- d. Erosion, reclamation, farming runoff, introduced weeds, nutrient pollution and stock grazing affecting the ecological health of the estuary.
- e. Residential development, reclamation and drainage that domesticate the area.

#### A5.3.18.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures should be designed with the intention of preserving or enhancing the natural character values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. ### A5.3.19 Warrington and Doctors Point Sandspits

#### A5.3.19.1 Description of area

This area encompasses the sand spits at Warrington and Doctors Point (on either side of the Blueskin Bay channel entrance), and Rabbit Island within Blueskin Bay. The Warrington spit is a depositional feature separating the estuary from the open ocean. The spit is characterised by an aggrading beach on the ocean side, and marram grass covered dunes with scattered groups of exotic trees on the estuary side. A sewage treatment plant, vehicular track and surf club building have been developed on it. The dunes have been levelled at the northern end of the spit for housing. The southern portion of Warrington Spit has no buildings, structures or earthworks to detract from its character. Doctors Point sandspit has no buildings or structures but has been slightly modified by roadways and tracks. There are no buildings or structures on Rabbit Island.

Warrington spit provides roosting habitat for shore birds. It is also a pupping area for sea lions.

The area is identified as a wāhi tūpuna. See Appendices A4.15 and A4.16.

While this area scores reasonably highly on perceptual naturalness, it is quite highly modified by human activities. The dune structure has been modified by marram and by earthworks to facilitate residential and associated activities, and its terrestrial ecology is significantly modified as a consequence. The aquatic environment is least modified resulting in a moderately high presence of wildlife.

#### A5.3.19.2 Values

- a. Roosting habitat for shore birds. Popping area for sea lions.
- b. Breeding habitat on Rabbit Island and Doctors Point for red-billed gulls and white-fronted tern.
- c. Southern portion has no buildings, structures or earthworks to detract from its character. Doctors Point sandspit has no buildings or structures but has been slightly modified by roadways and tracks
- d. Values of significance to Manawhenua. See Appendix A4.15 and A4.16.

#### A5.3.19.3 Threats

- a. Buildings, structures or earthworks that detract from the natural character.
- b. Vegetation clearance.

#### A5.3.19.4 Key design elements to be required or encouraged

Threat	Key design elements
Buildings and structures	<ul style="list-style-type: none"> <li>a. Structures in this location would be very likely to have an adverse effect on natural character values. If required, they should be designed with the intention of preserving or enhancing these values.</li> <li>b. They should be located with an awareness of being viewed from prominent public viewing points and utilise materials and colours which are in sympathy with surrounding natural features.</li> <li>c. Good design should relate to the specific character and location of each site, but general principles include ensuring building elevation and overall size are not too dominant; materials and their colours should be sympathetic to the surrounding environment; and planting schemes need to be of a scale and character appropriate to the coastal environment.</li> <li>d. See Appendix A11 for design guidelines for buildings and structures.</li> </ul>
Roads and tracks	<ul style="list-style-type: none"> <li>a. If roads or tracks are required they should be carefully designed to be located in the least visually prominent areas.</li> <li>b. They should wherever possible follow contours rather than cut across them and construction activity should minimise the amount of cut and ensure this is not disposed of over downslopes in visually sensitive areas.</li> </ul>
Shelterbelts	<ul style="list-style-type: none"> <li>a. If practically feasible, shelterbelt planting should avoid highly visible locations, which applies to most of this area. Otherwise they should be located following a careful assessment of the underlying topography and existing natural features to ensure minimum impact on the visual integrity of the area.</li> <li>b. See Appendix A11 for design guidelines for shelterbelts.</li> </ul>

Threat	Key design elements
Mining	<p>a. Mining activity such as sand mining would be very likely to have a significant adverse effect on natural character values. If required, mining activity should be designed with an awareness of the visual quality of the setting. Wherever possible activities should be sited away from prominent viewing points; visible surface activity should be reduced as much as possible and the visual prominence of sites should be mitigated on an ongoing basis with appropriate planting.</p>

## A6. Hazardous Substances Quantity Limits

### A6.1 Residential Activities and Residential, Smith Street and York Place and Schools Zones

1. Tables A6.1.1 - A6.1.9 specify the hazardous substances quantity limits for residential activities in all zones, and all activities in the residential zones, the Smith Street and York Place Zone and Schools Zone, except the following are exempt from the hazardous substances quantity limits:
  - a. the storage and use of hazardous substances for domestic purposes, associated with a lawfully established residential activity, excluding home occupation. The hazardous substance(s) must form part of a consumer product intended for domestic use. The product must be stored in the container or packaging in which it was sold, and used in accordance with the manufacturer's instructions;
  - b. the storage and use of fuel and other substances that are contained in the fuel system, electrical system or control system of motor vehicles, boats, aircraft and small engines; and
  - c. the storage and use of transformer cooling oils in electricity transformers.
2. All volumes listed for quantity limits will be aggregated i.e. as a permitted activity a site may hold the maximum threshold identified of each Class 1 plus Class 2 plus Class 3 and/or Class 4.1.3A-C plus Class 4.2A plus 4.3A etc.
3. Where the volume or weight of a hazardous substance is affected by the temperature and pressure at which it is stored, the volume or weight will be considered (for the purposes of the hazardous substance quantity limits) to be that present in conditions of 20°C and 101.3kPa.
4. The permitted quantity thresholds apply per site.

**Table A6.1.1 Class 1 - Explosives**

Substance	Quantity limit
Subclass 1.1A-G, J, L: Mass explosion hazard	
1. Gunpowder and black powder	15kg
2. Display fireworks	0
3. Industrial explosives (e.g. TNT) and all other 1.1	0
Subclass 1.2B-L: Projection hazard	
4. All	No thresholds
Subclass 1.3C, F-L: Fire and minor blast hazard	
5. Smokeless ammunition reloading powder	15kg
Subclass 1.3C, F-L: Fire and minor blast hazard	
6. Retail fireworks	No thresholds - refer to Hazardous Substances (Fireworks) Regulations 2001
7. All other 1.3	No thresholds
Subclass 1.4B-G, S: No significant hazard	
8. Safety ammunition and flares	25kg

Substance		Quantity limit
9.	Retail fireworks	No thresholds - refer to Hazardous Substances (Fireworks) Regulations 2001
10.	Sodium Azide	0
11.	All other 1.4	No thresholds
Subclass 1.5D: Very insensitive, with mass explosion hazard		
12.	All	No thresholds
Subclass 1.6N: Extremely insensitive, no mass explosion hazard		
13.	All	No thresholds

**Table A6.1.2 Class 2 - Gases and aerosols**

Substance		Quantity limit
Subclass 2NH: Non Hazardous		
1.	All	10m <sup>3</sup>
Subclass 2.1.1A: High Hazard Flammable Gases		
2.	LPG (incl. propane-based refrigerant) in cylinders or multi-vessel tanks	200kg Total Outdoor Storage Quantity
3.	LPG (incl. propane-based refrigerant) in below-ground or above-ground single vessel tanks	0
4.	LPG propane-based refrigerant in commercial receivers	0
5.	Acetylene	1m <sup>3</sup>
6.	Hydrogen, methane and all other permanent gases	0
Subclass 2.1.1B: Medium hazard flammable gases		
7.	Anhydrous ammonia refrigerant	0
8.	All other 2.1.1B	No thresholds
Subclass 2.1.2A: Flammable aerosols		
9.	All	20 Litres

**Table A6.1.3 Class 3 - Flammable liquids**

Substance		Quantity limit
Subclass 3.1A Liquid: Very high hazard (flash point less than 23°C, initial boiling point less than 35°C)		
1.	Petrol (stored above-ground in containers with capacity less than 450 Litres but no storage in metal drums)	a. 10 Litres inside dwelling b. 50 Litres outside dwelling
2.	Petrol (stored above-ground in containers with capacity more than 450 Litres)	0
3.	Liquid petroleum fuels in below-ground single vessel tanks	0
4.	All other	0
Subclass 3.1B Liquid: High hazard (flash point less than 23°C, initial boiling point more than 35°C)		
5.	Liquid petroleum fuels in below-ground single vessel tanks	0
6.	Petrol plus any subclass 3.1B substance - cumulative total limit (no storage in metal drums)	a. 10 Litres inside dwelling b. 50 Litres outside dwelling
7.	All other - e.g. acetone, paint spray thinners, pure alcohol (stored above-ground in containers with capacity less than 450 Litres)	10 Litres
8.	All other - e.g. acetone, paint spray thinners, pure alcohol (stored above-ground in containers with capacity more than 450 Litres)	0
Subclass 3.1C Liquid: Medium hazard (flash point more than 23°C, but less than 35°C)		
9.	Liquid petroleum fuels in below-ground single vessel tanks	0
10.	All - kerosene, aviation kerosene (stored above-ground in containers with capacity less than 450 Litres)	a. 20 Litres inside dwelling b. 50 Litres outside dwelling
11.	All - kerosene, aviation kerosene (stored above-ground in containers with capacity more than 450 Litres)	0
Subclass 3.1D Liquid: Low hazard (flash point more than 60°C, but less than 93°C)		
12.	Liquid petroleum fuels in below-ground single vessel tanks	0
13.	All - e.g. diesel, petroleum, fuel oils (stored above-ground in containers with capacity less than 450 Litres)	a. 20 Litres inside dwelling b. 209 Litres outside dwelling
14.	All - e.g. diesel, petroleum, fuel oils (stored above-ground in containers with capacity more than 450 Litres)	a. Certified single skin tanks: 450 Litres b. Certified double skin tanks: 600 Litres c. Certified super vault tanks constructed to South Western Research Institute (SWRI) standards: 10,000 Litres
Subclass 3.2A, 3.2B, 3.2C: Liquid desensitised explosive - High, medium and low hazard		
15.	All substances	0

**Table A6.1.4 Class 4 - Flammable solids**

Substance	Quantity limit
All hazardous substances sub-classes and hazard classifications	
1. All substances	0

**Table A6.1.5 Class 5 - Oxidising substances**

Substance	Quantity limit
Subclass 5.1.1A-C: Liquids and solids	
1. All substances	10 Litres if liquid, 10kg if solid
Subclass 5.1.2A: Gases	
2. Oxygen (except as stored and used in accordance with HSNO and Hazardous Substances Regulations requirements within medical facilities)	Subclass 5.5m <sup>3</sup>
3. Nitrous oxide (except as stored and used in accordance with HSNO and Hazardous Substance Regulations requirements within medical facilities)	0
4. Chlorine	0
Subclass 5.2A-G: Organic Peroxide - Types A-G	
5. All - e.g. MEKP Polyester resin catalyst	0.5 Litres

**Table A6.1.6 Class 6 - Toxic substances**

Substance	Quantity limit
Subclass 6.1A-C: Acutely toxic	
1. Anhydrous ammonia refrigerant	0
2. Chlorine	0
3. All other substances	0
Subclass 6.1D and E	
4. Sodium chloride	5kg
5. All other substances	1kg
Subclass 6.3A and B: Skin irritant	
6. All	1kg
Subclass 6.4A: Eye irritant	
7. Cement, hydrated lime and burnt lime	400kg

Substance		Quantity limit
8.	Sodium chloride	5kg
9.	All others	1kg
Subclass 6.5A and B: Respiratory and contact sensitizers		
10.	Cement, hydrated lime and burnt lime	400kg
11.	All others	1kg

3. All substances in all locations	See base class thresholds.
Subclass 9.4A-C: Terrestrial invertebrate ecotoxics	
4. All substances in all locations	See base class thresholds.

## **A6.2 Commercial and Mixed Use, Industrial, Stadium, Moana Pool, Edgar Centre and Taieri Aerodrome Zones**

1. Tables A6.2.1 - A6.2.9 specify the hazardous substances quantity limits for the commercial and mixed use (excluding Smith Street and York Place Zone), industrial, Stadium, Moana Pool, Edgar Centre and Taieri Aerodrome zones.
2. Except:
  - a. where any site within these zones contains residential activity the quantity limits for the residential zone, as specified in Appendix A6.1, apply.
  - b. the following are exempt from the hazardous substances quantity limits:
    - i. in the industrial zones, the transit and two-hour storage maximum of tracked hazardous substances transit and 72-hour storage maximum of non-tracked hazardous substances;
    - ii. the storage and use of hazardous substances for domestic purposes, associated with a lawfully established residential activity, excluding home occupation. The hazardous substance(s) must form part of a consumer product intended for domestic use. The product must be stored in the container or packaging in which it was sold, and used in accordance with the manufacturer's instructions;
    - iii. the storage and use of fuel and other substances that are contained in the fuel system, electrical system or control system of motor vehicles, boats, aircraft and small engines; and
    - iv. the storage and use of transformer cooling oils in electricity transformers.
3. All volumes listed for quantity limits will be aggregated i.e. as a permitted activity a site may hold the maximum threshold identified of each Class 1 plus Class 2 plus Class 3 and/or Class 4.1.3A-C plus Class 4.2A plus 4.3A etc.
4. Where the volume or weight of a hazardous substance is affected by the temperature and pressure at which it is stored, the volume or weight will be considered (for the purposes of the hazardous substance quantity limits) to be that present in conditions of 20°C and 101.3kPa.
5. The permitted quantity thresholds apply per site, except for in the commercial and mixed use and industrial zones, where the permitted quantity thresholds apply per hazardous sub-facility. Each hazardous sub-facility must be separated from any other hazardous sub-facility on the same site and meet the following locational requirements:
  - a. if located external to a building, the gazetted<sup>1</sup> or regulated controls<sup>1</sup> for "protected place" and "public place" apply, and the location is such that the "controlled zone" or tabled separation distances of

each facility do not overlap; or

- b. if permitted to be located inside a building by the gazetted<sup>1</sup> or regulated controls<sup>1</sup>, or referenced standards pursuant to HSNO, then each hazardous sub-facility must be located in a separate fire cell.

*<sup>1</sup> Health and Safety at Work (Hazardous Substances) Regulations 2017 for work places and Hazardous Substances (Hazardous Property Controls) Notice 2017 for places that are not workplaces.*

**Table A6.2.1 Class 1 - Explosives**

Substance		Quantity limit
Subclass 1.1A-G, J, L: Mass explosion hazard		
1.	Gunpowder and black powder	15kg
2.	Display fireworks	0
3.	Industrial explosives (e.g. TNT) and all other Subclass 1.1	25kg
Subclass 1.2B-L: Projection hazard		
4.	All	No thresholds
Subclass 1.3C, F-L: Fire and minor blast hazard		
5.	Smokeless ammunition reloading powder	50kg
Subclass 1.3C, F-L: Fire and minor blast hazard		
6.	Retail fireworks	No thresholds - refer to Hazardous Substances (Fireworks) Regulations 2001
7.	All other Subclass 1.3	No thresholds
Subclass 1.4B-G, S: No significant hazard		
8.	Safety ammunition and flares	50kg
9.	Retail fireworks	No thresholds - refer to Hazardous Substances (Fireworks) Regulations 2001
10.	Sodium Azide	0
11.	All other Subclass 1.4	No thresholds
Subclass 1.5D: Very insensitive, with mass explosion hazard		
12.	All	No thresholds
Subclass 1.6N: Extremely insensitive, no mass explosion hazard		
13.	All	No thresholds

**Table A6.2.2 Class 2 - Gases and aerosols**

Substance		Quantity limit
Subclass 2NH: Non Hazardous		
1.	All	200m <sup>3</sup>
Subclass 2.1.1A: High Hazard Flammable Gases		
2.	LPG (incl. propane-based refrigerant) in cylinders or multi-vessel tanks.	450kg total outdoor storage quantity

Substance	Quantity limit
3. LPG (incl. propane-based refrigerant) in below-ground or above-ground single vessel tanks	0
4. LPG propane-based refrigerant in commercial receivers	50kg
5. Acetylene	2m <sup>3</sup>
6. Hydrogen, methane and all other permanent gases	0
Subclass 2.1.1B: Medium hazard flammable gases	
7. Anhydrous ammonia refrigerant	140kg
8. All other Subclass 2.1.1B	No thresholds
Subclass 2.1.2A: Flammable aerosols	
9. All	450 Litres

**Table A6.2.3 Class 3 - Flammable liquids**

Substance	Quantity limit
Subclass 3.1A Liquid: Very high hazard (flash point less than 23°C, initial boiling point less than 35°C)	
1. Petrol (stored above-ground in containers with capacity less than 450 Litres)	a. 50 Litres (any storage except metal drums) b. 250 Litres (in dangerous goods cabinet approved to AS 1940) c. 420 Litres (in approved HSNO or Hazardous Substances Regulations 'type' stores)
2. Petrol (stored above-ground in containers with capacity more than 450 Litres)	a. Certified single skin tanks: 0 b. Certified double skin tanks: 600 Litres
3. Liquid petroleum fuels in below-ground single vessel tanks	0
4. All other (stored above-ground in containers with capacity less than 450 Litres)	50 Litres
5. All other (stored above-ground in containers with capacity more than 450 Litres or stored below ground)	0
Subclass 3.1B Liquid: High hazard (flash point less than 23°C, initial boiling point more than 35°C)	
6. Liquid petroleum fuels in below-ground single vessel tanks	0
7. Petrol plus any subclass 3.1B substance - cumulative total limit (must not be stored in metal drums)	a. 10 Litres inside dwelling b. 50 Litres outside dwelling

Substance	Quantity limit
8. All other - e.g. acetone, paint spray thinners, pure alcohol (stored above-ground in containers with capacity less than 450 Litres)	<ul style="list-style-type: none"> <li>a. 10 Litres (any storage)</li> <li>b. 250 Litres (in dangerous goods cabinet approved to AS 1940)</li> <li>c. 450 Litres (in approved HSNO or Hazardous Substances Regulations 'type' stores)</li> <li>d. Retail activity 1500m<sup>2</sup> or more in gross floor area only: 1500 Litres in containers of up to 5 Litres each</li> </ul>
9. All other - e.g. acetone, paint spray thinners, pure alcohol (stored above-ground in containers with capacity more than 450 Litres)	0
Subclass 3.1A: petrol plus 3.1B	
10. Petrol plus any 3.1B substance - cumulative total limit	<ul style="list-style-type: none"> <li>a. 50 Litres (any storage except metal drums)</li> <li>b. 250 Litres (in dangerous goods cabinet approved to AS 1940)</li> <li>c. 420 Litres (in approved HSNO or Hazardous Substances Regulations 'type' stores)</li> </ul>
Subclass 3.1C Liquid: Medium hazard (flash point more than 23°C, but less than 35°C)	
11. Liquid petroleum fuels in below-ground single vessel tanks	0
12. All - kerosene, aviation kerosene (stored above-ground in containers with capacity less than 450 Litres)	<ul style="list-style-type: none"> <li>a. 10 Litres (any storage)</li> <li>b. 250 Litres (in dangerous goods cabinet approved to AS 1940)</li> <li>c. 450 Litres (in approved HSNO or Hazardous Substances Regulations 'type' stores)</li> <li>d. Retail activity 1500m<sup>2</sup> or more in gross floor area only: 1500 Litres in containers of up to 5 Litres each</li> </ul>
13. All - kerosene, aviation kerosene (stored above-ground in containers with capacity more than 450 Litres)	<ul style="list-style-type: none"> <li>a. Certified single skin tanks: 450 Litres</li> <li>b. Certified double skin tanks: 2000 Litres</li> </ul>
Subclass 3.1D Liquid: Low hazard (flash point more than 60°C, but less than 93°C)	
14. Liquid petroleum fuels in below-ground single vessel tanks	0
15. All - e.g. diesel, petroleum, fuel oils (stored above-ground in containers with capacity less than 450 Litres)	<ul style="list-style-type: none"> <li>a. 20 Litres inside dwelling</li> <li>b. 209 Litres outside dwelling</li> </ul>
16. All - e.g. diesel, petroleum, fuel oils (stored above-ground in containers with capacity more than 450 Litres)	<ul style="list-style-type: none"> <li>a. Certified single skin tanks: 450 Litres</li> <li>b. Certified double skin tanks: 2000 Litres</li> <li>c. Certified super vault tanks constructed to South Western Research Institute (SWRI) standards: 10,000 Litres</li> </ul>

Substance	Quantity limit
Subclass 3.2A, 3.2B, 3.2C: Liquid desensitised explosive - High, medium and low hazard	
17. All substances	0

**Table A6.2.4 Class 4 - Flammable solids**

Substance	Quantity limit
Subclass 4.1.1A: Readily combustible solids and solids that may cause fire through friction (medium hazard)	
1. All	50kg
Subclass 4.1.1B Readily combustible solids and solids that may cause fire through friction (low hazard)	
2. All	500kg
Subclass 4.1.2A-B: Self reactive - Types A and B	
3. All	50kg
Subclass 4.1.2C-G: Self reactive - Types C-G	
4. All	500kg
Subclass 4.1.3A-C: Solid desensitized explosives	
5. All	0
Subclass 4.2A-B: Spontaneously combustible - Pyrophoric substances (high hazard and self heating substances: medium hazard)	
6. All	50kg
Subclass 4.2C: Spontaneously combustible (self heating substances: low hazard)	
7. All	500kg
Subclass 4.3A-B: Solids that emit flammable gas when wet (high and medium hazard)	
8. All	50kg
Subclass 4.3C: Solids that emit flammable gas when wet (low hazard)	
9. All	500kg

**Table A6.2.5 Class 5 - Oxidising substances**

Substance	Quantity limit
Subclass 5.1.1A-C: Liquids and solids	
1. All substances	200 Litres if liquid, 200kg if solid
Subclass 5.1.2A: Gases	

Substance	Quantity limit
2. Oxygen (except as stored and used in accordance with HSNO and Hazardous Substances Regulations requirements within medical facilities)	1000m <sup>3</sup>
3. Nitrous oxide (except as stored and used in accordance with HSNO and Hazardous Substances Regulations requirements within medical facilities)	30 times 8-gram nitrous oxide cartridges for catering purposes only
4. Chlorine	0
Subclass 5.2A-G: Organic Peroxide - Types A-G	
5. All - e.g. MEKP Polyester resin catalyst	16 Litres

**Table A6.2.6 Class 6 - Toxic substances**

Substance		Quantity limit
Subclass 6.1A-C: Acutely toxic		
1.	Anhydrous ammonia refrigerant	140kg
2.	Chlorine	0
3.	All other substances	20 Litres if liquid, 20kg if solid
Subclass 6.1D and E		
4.	Sodium chloride	200kg
5.	All other substances	200kg
Subclass 6.3A and B: Skin irritant		
6	All	2000kg
Subclass 6.4A: Eye irritant		
7.	Cement, hydrated lime and burnt lime	50 Tonne
8.	Sodium chloride	200kg
9.	All others	2000kg
Subclass 6.5A and B: Respiratory and contact sensitizers		
10.	Cement, hydrated lime and burnt lime	50 Tonne
11.	All others	2000kg
Subclass 6.6A and B: Human mutagens		
12.	All	2000kg
Subclass 6.7A and B: Carcinogens		
13.	All	200kg
Subclass 6.8A-C: Human reproductive or developmental toxicants		
14.	All	0
Subclass 6.9A and B: Substances affecting human target organs or systems		
15.	All	0

**Table A6.2.7 Class 7 - Radioactive materials**

Substances	Quantity limit
------------	----------------

1. All substances	Up to 100 times the quantities specified in the Type A transport package limit, as identified in the International Atomic Energy Agency (IAEA) Regulations for the Safe Transport of Radioactive Material. Examples include domestic smoke detectors, demonstration radioactive sources in school laboratories.
-------------------	---

**Note A6.2.7A - General advice**

1. These substances are controlled through the Radiation Protection Act 1965 rather than HSNO and Hazardous Substances Regulations.

**Table A6.2.8 Class 8 - Corrosives**

Substance	Quantity limit
Subclass 8.1A: Substances corrosive to metals	
1. All	1000 Litres
Subclass 8.2A-C: Substances corrosive to skin	
2. Cement, hydrated lime and burnt lime	50 Tonne
3. All	1000 Litres
Subclass 8.3A: Substances corrosive to the eye	
4. Cement, hydrated lime and burnt lime	50 Tonne
5. All	1000 Litres

**Table A6.2.9 Class 9 - Ecotoxics**

Substance	Quantity limit
Subclass 9.1A-D: Aquatic ecotoxics and 9.2A-D: Soil ecotoxics	
1. All substances in below ground tank storage	See base class thresholds.
2. All substances in all other locations	0
Subclass 9.3A-C: Terrestrial vertebrate ecotoxics	
3. All substances in all locations	See base class thresholds.
Subclass 9.4A-C: Terrestrial invertebrate ecotoxics	
4. All substances in all locations	See base class thresholds.

## **A6.3 Dunedin Hospital, Campus, Otago Museum and Invermay and Hercus Zones**

1. Tables A6.3.1 - A6.3.9 specify the hazardous substances quantity limits for the Dunedin Hospital, Campus, Otago Museum and Invermay and Hercus zones.
2. Except:
  - a. where any site within these zones contains residential activity the quantity limits for the residential zone, as specified in Appendix A6.1, apply.
  - b. the following are exempt from the hazardous substances quantity limits:
    - i. in the industrial zones, the transit and two-hour storage maximum of tracked hazardous substances transit and 72-hour storage maximum of non-tracked hazardous substances;
    - ii. the storage and use of hazardous substances for domestic purposes, associated with a lawfully established residential activity, excluding home occupation. The hazardous substance(s) must form part of a consumer product intended for domestic use. The product must be stored in the container or packaging in which it was sold, and used in accordance with the manufacturer's instructions;
    - iii. the storage and use of fuel and other substances that are contained in the fuel system, electrical system or control system of motor vehicles, boats, aircraft and small engines; and
    - iv. the storage and use of transformer cooling oils in electricity transformers.
3. All volumes listed for quantity limits will be aggregated i.e. as a permitted activity a site may hold the maximum threshold identified of each Class 1 plus Class 2 plus Class 3 and/or Class 4.1.3A-C plus Class 4.2A plus 4.3A etc.
4. Where the volume or weight of a hazardous substance is affected by the temperature and pressure at which it is stored, the volume or weight will be considered (for the purposes of the hazardous substance quantity limits) to be that present in conditions of 20°C and 101.3kPa.
5. The permitted quantity thresholds apply per site, except for in the Campus Zone, where the permitted quantity thresholds apply per hazardous sub-facility. Each hazardous sub-facility must be separated from any other hazardous sub-facility on the same site and meet the following locational requirements:
  - a. if located external to a building, the gazetted<sup>1</sup> or regulated controls<sup>1</sup> for "protected place" and "public place" apply, and the location is such that the "controlled zone" or tabled separation distances of each facility do not overlap; or
  - b. if permitted to be located inside a building by the gazetted<sup>1</sup> or regulated controls<sup>1</sup>, or referenced standards pursuant to HSNO, then each hazardous sub-facility must be located in a separate fire cell.

<sup>1</sup> *Health and Safety at Work (Hazardous Substances) Regulations 2017 for work places and Hazardous Substances (Hazardous Property Controls) Notice 2017 for places that are not workplaces.*

**Table A6.3.1 Class 1 - Explosives**

Substance		Quantity limit
Subclass 1.1A-G, J, L: Mass explosion hazard		
1.	Gunpowder and black powder	0
2.	Display fireworks	0
3.	Industrial explosives (e.g. TNT) and all other Subclass 1.1	0
Subclass 1.2B-L: Projection hazard		
4.	All	No thresholds
Subclass 1.3C, F-L: Fire and minor blast hazard		
5.	Smokeless ammunition reloading powder	0
Subclass 1.3C, F-L: Fire and minor blast hazard		
6.	Retail fireworks	No thresholds - refer to Hazardous Substances (Fireworks) Regulations 2001
7.	All other Subclass 1.3	No thresholds
Subclass 1.4B-G, S: No significant hazard		
8.	Safety ammunition and flares	5kg
9.	Retail fireworks	No thresholds - refer to Hazardous Substances (Fireworks) Regulations 2001
10.	Sodium Azide	0
11.	All other Subclass 1.4	No thresholds
Subclass 1.5D: Very insensitive, with mass explosion hazard		
12.	All	No thresholds
Subclass 1.6N: Extremely insensitive, no mass explosion hazard		
13.	All	No thresholds

**Table A6.3.2 Class 2 - Gases and aerosols**

Substance		Quantity limit
Subclass 2NH: Non Hazardous		
1.	All	a. 200m <sup>3</sup> b. 500 Litres of non-flammable, non-toxic cryogenic liquids stored in accordance with AS1894:1997
Subclass 2.1.1A: High Hazard Flammable Gases		

Substance		Quantity limit
2.	LPG (incl. propane-based refrigerant) in cylinders or multi-vessel tanks	450kg total outdoor storage quantity
3.	LPG (incl. propane-based refrigerant) in below-ground or above-ground single vessel tanks	0
4.	LPG propane-based refrigerant in commercial receivers	50kg
5.	Acetylene	30m <sup>3</sup>
6.	Hydrogen, methane and all other permanent gases	30m <sup>3</sup>
Subclass 2.1.1B: Medium hazard flammable gases		
7.	Anhydrous ammonia refrigerant	0
8.	All other 2.1.1B	No thresholds
Subclass 2.1.2A: Flammable aerosols		
9.	All	450 Litres

**Table A6.3.3 Class 3 - Flammable liquids**

Substance		Quantity limit
Subclass 3.1A Liquid: Very high hazard (flash point less than 23°C, initial boiling point less than 35°C)		
1.	Petrol (stored above-ground in containers with capacity less than 450 Litres)	a. 2000 Litres
2.	Petrol (stored above-ground in containers with capacity more than 450 Litres)	a. Certified single skin tanks: 0 b. Certified double skin tanks: 600 Litres
3.	Liquid petroleum fuels in below-ground single vessel tanks	0
4.	All other (stored above-ground in containers with capacity less than 450 Litres)	50 Litres
5.	All other (stored above-ground in containers with capacity more than 450 Litres or stored below ground)	0
Subclass 3.1B Liquid: High hazard (flash point less than 23°C, initial boiling point more than 35°C)		
6.	Liquid petroleum fuels in below-ground single vessel tanks	0
7.	All other - e.g. acetone, paint spray thinners, pure alcohol (stored above-ground in containers with capacity less than 450 Litres)	a. 10 Litres (any storage) b. 250 Litres (in dangerous goods cabinet approved to AS 1940) c. 450 Litres (in approved HSNO or Hazardous Substances Regulations 'type' stores) d. Retail activity 1500m <sup>2</sup> or more in gross floor area only: 1500 Litres in containers of up to 5 Litres each

Substance		Quantity limit
8.	All other - e.g. acetone, paint spray thinners, pure alcohol (stored above-ground in containers with capacity more than 450 Litres)	0
Subclass 3.1A: Petrol plus Subclass 3.1B		
9.	Petrol plus any Subclass 3.1B substance - cumulative total limit	a. 2000 Litres
Subclass 3.1C Liquid: Medium hazard (flash point more than 23°C, but less than 35°C)		
10.	Liquid petroleum fuels in below-ground single vessel tanks	0
11.	All - kerosene, aviation kerosene (stored above-ground in containers with capacity less than 450 Litres)	a. 10 Litres (any storage) b. 250 Litres (in dangerous goods cabinet approved to AS 1940) c. 450 Litres (in approved HSNO or Hazardous Substances Regulations 'type' stores) d. Retail activity 1500m <sup>2</sup> or more in gross floor area only: 1500 Litres in containers of up to 5 Litres each
12.	All - kerosene, aviation kerosene (stored above-ground in containers with capacity more than 450 Litres)	a. Certified single skin tanks: 450 Litres b. Certified double skin tanks: 2000 Litres
Subclass 3.1D Liquid: Low hazard (flash point more than 60°C, but less than 93°C)		
13.	Liquid petroleum fuels in below-ground single vessel tanks	0
14.	All - e.g. diesel, petroleum, fuel oils (stored above-ground in containers with capacity less than 450 Litres)	450 Litres
15.	All - e.g. diesel, petroleum, fuel oils (stored above-ground in containers with capacity more than 450 Litres)	a. Certified single skin tanks: 450 Litres b. Certified double skin tanks: 2000 Litres c. Certified super vault tanks constructed to south western research institute (SWRI) standards: 10,000 Litres
Subclass 3.2A, Subclass 3.2B, Subclass 3.2C: Liquid desensitised explosive - High, medium and low hazard		
16.	All substances	0

**Table A6.3.4 Class 4 - Flammable solids**

Substance		Quantity limit
Subclass 4.1.1A: Readily combustible solids and solids that may cause fire through friction (medium hazard)		
1.	All	50kg
Subclass 4.1.1B Readily combustible solids and solids that may cause fire through friction (low hazard)		
2.	All	500kg

Substance		Quantity limit
Subclass 4.1.2A-B: Self reactive - Types A and B		
3.	All	50kg
Subclass 4.1.2C-G: Self reactive - Types C-G		
4.	All	500kg

Substance	Quantity limit
Subclass 8.1A: Substances corrosive to metals	
1. All	1000 Litres
Subclass 8.2A-C: Substances corrosive to skin	
2. Cement, hydrated lime and burnt lime	1000kg
3. All	1000 Litres
Subclass 8.3A: Substances corrosive to the eye	
4. Cement, hydrated lime and burnt lime	1000kg
5. All	1000 Litres

**Table A6.3.9 Class 9 - Ecotoxics**

Substance	Quantity limit
Subclass 9.1A-D: Aquatic ecotoxics and Subclass 9.2A-D: Soil ecotoxics	
1. All substances in below ground tank storage	See base class thresholds.
2. All substances in all other locations	0
Subclass 9.3A-C: Terrestrial vertebrate ecotoxics	
3. All substances in all locations	See base class thresholds.
Subclass 9.4A-C: Terrestrial invertebrate ecotoxics	
4. All substances in all locations	See base class thresholds.

## **A6.4 Recreation, Rural and Rural Residential and Dunedin Botanic Garden Zones**

1. Tables A6.4.1 - A6.4.9 specify the hazardous substances quantity limits for the recreation, rural, rural residential and Dunedin Botanic Garden zones.
2. Except:
  - a. where any site within the recreation and Dunedin Botanic Garden zones contains residential activity the quantity limits for the residential zone, as specified in Appendix A6.1, apply.
  - b. where any site within the rural and rural residential zones contain residential activity, the quantity limits for the residential zone apply to the residential dwelling and curtilage only.
  - c. the following are exempt from the hazardous substances quantity limits:
    - i. in the rural and rural residential zones:
      1. the storage and use of agrichemicals in accordance with NZS8409:2004;
      2. the storage and use of class 3 fuels in accordance with the Environmental Protection Agency's Approved Practice Guide for Above-Ground Fuel Storage on Farms, September 2010; and
      3. the storage and use of fertiliser in accordance with the following:
        1. Fertiliser (Corrosive) Group Standard HSR002569;
        2. Fertiliser (Oxidising) Group Standard HSR002570;
        3. Fertiliser (Subsidiary Hazard) Group Standard HSR002571;
        4. Fertiliser (Toxic) Group Standard HSR002572; and
        5. Fert Research's Code of Practice for Nutrient Management 2007.
    - ii. the storage and use of hazardous substances for domestic purposes, associated with a lawfully established residential activity, excluding home occupation. The hazardous substance(s) must form part of a consumer product intended for domestic use. The product must be stored in the container or packaging in which it was sold, and used in accordance with the manufacturer's instructions;
    - iii. the storage and use of fuel and other substances that are contained in the fuel system, electrical system or control system of motor vehicles, boats, aircraft and small engines; and
    - iv. the storage and use of transformer cooling oils in electricity transformers.
3. All volumes listed for quantity limits will be aggregated i.e. as a permitted activity a site may hold the maximum threshold identified of each Class 1 plus Class 2 plus Class 3 and/or Class 4.1.3A-C plus Class 4.2A plus 4.3A etc.
4. Where the volume or weight of a hazardous substance is affected by the temperature and pressure at which it is stored, the volume or weight will be considered (for the purposes of the hazardous substance quantity limits) to be that present in conditions of 20°C and 101.3kPa.
5. The permitted quantity thresholds apply per site, except for forestry and timber treatment in the rural and rural residential zones, where the permitted quantity thresholds apply per hazardous sub-facility. Each hazardous sub-facility must be separated from any other hazardous sub-facility on the same site and meet the following locational requirements:
  - a. if located external to a building, the gazetted<sup>1</sup> or regulated controls<sup>1</sup> for "protected place" and "public place" apply, and the location is such that the "controlled zone" or tabled separation distances of each facility do not overlap; or
  - b. if permitted to be located inside a building by the gazetted<sup>1</sup> or regulated controls<sup>1</sup>, or referenced

standards pursuant to HSNO, then each hazardous sub-facility must be located in a separate fire cell.

<sup>1</sup> *Health and Safety at Work (Hazardous Substances) Regulations 2017 for work places and Hazardous Substances (Hazardous Property Controls) Notice 2017 for places that are not workplaces.*

**Table A6.4.1 Class 1 - Explosives**

Substance	Quantity limit
Subclass 1.1A-G, J, L: Mass explosion hazard	
1. Gunpowder and black powder (excluding forestry and timber treatment)	15kg (except forestry and timber treatment)
2. Gunpowder and black powder (forestry and timber treatment only)	0
3. Display fireworks	0
4. Industrial explosives (e.g. TNT) and all other Subclass 1.1	25kg
Subclass 1.2B-L: Projection hazard	
5. All	No thresholds
Subclass 1.3C, F-L: Fire and minor blast hazard	
6. Smokeless ammunition reloading powder	15kg
Subclass 1.3C, F-L: Fire and minor blast hazard	
7. Retail fireworks	No thresholds - refer to Hazardous Substances (Fireworks) Regulations 2001
8. All other Subclass 1.3	No thresholds
Subclass 1.4B-G, S: No significant hazard	
9. Safety ammunition and flares (excluding forestry and timber treatment)	25kg
10. Safety ammunition and flares (forestry and timber treatment only)	15kg
11. Retail fireworks	No thresholds - refer to Hazardous Substances (Fireworks) Regulations 2001
12. Sodium Azide	0
13. All other Subclass 1.4	No thresholds
Subclass 1.5D: Very insensitive, with mass explosion hazard	
14. All	No thresholds
Subclass 1.6N: Extremely insensitive, no mass explosion hazard	
15. All	No thresholds

**Table A6.4.2 Class 2 - Gases and aerosols**

Substance		Quantity limit
Subclass 2NH: Non Hazardous		
1.	All	200m <sup>3</sup>
Subclass 2.1.1A: High Hazard Flammable Gases		
2.	LPG (incl. propane-based refrigerant) in cylinders or multi-vessel tanks.	450kg Total Outdoor Storage Quantity
3.	LPG (incl. propane-based refrigerant) in below-ground or above-ground single vessel tanks	0
4.	LPG propane-based refrigerant in commercial receivers	50kg
5.	Acetylene	2m <sup>3</sup>
6.	Hydrogen, methane and all other permanent gases (excluding forestry and timber treatment)	100m <sup>3</sup>
7.	Hydrogen, methane and all other permanent gases (forestry and timber treatment only)	30m <sup>3</sup>
Subclass 2.1.1B: Medium hazard flammable gases		
8.	Anhydrous ammonia refrigerant	0
9.	All other 2.1.1B	No thresholds
Subclass 2.1.2A: Flammable aerosols		
10.	All	450 Litres

**Table A6.4.3 Class 3 - Flammable liquids**

Substance		Quantity limit
Subclass 3.1A Liquid: Very high hazard (flash point less than 23°C, initial boiling point less than 35°C)		
1.	Petrol (stored above-ground in containers with capacity less than 450 Litres for forestry and rural industry) (timber treatment activity only)	a. 50 Litres (any storage except metal drums) b. 250 Litres (in dangerous goods cabinet approved to AS 1940) c. 420 Litres (in approved HSNO or Hazardous Substances Regulations 'type' stores)
2.	Petrol (stored above-ground in containers with capacity less than 450 Litres for all other activities)	2000 Litres
3.	Petrol (stored above-ground in containers with capacity more than 450 Litres for forestry and rural industry) (timber treatment activity only)	a. Certified single skin tanks: 0 b. Certified double skin tanks: 600 Litres
4.	Petrol (stored above-ground in containers with capacity more than 450 Litres for all other activities)	a. Certified single skin tanks: 0 b. Certified double skin tanks: 2000 Litres

Substance		Quantity limit
5.	Liquid petroleum fuels in below-ground single vessel tanks	0
6.	All other (stored above-ground in containers with capacity less than 450 Litres)	50 Litres
7.	All other (stored above-ground in containers with capacity more than 450 Litres or stored below ground)	0
Subclass 3.1B Liquid: High hazard (flash point less than 23°C, initial boiling point more than 35°C)		
8.	Liquid petroleum fuels in below-ground single vessel tanks	0
9.	All other - e.g. acetone, paint spray thinners, pure alcohol (stored above-ground in containers with capacity less than 450 Litres)	<ul style="list-style-type: none"> <li>a. 10 Litres (any storage)</li> <li>b. 250 Litres (in dangerous goods cabinet approved to AS 1940)</li> <li>c. 450 Litres (in approved HSNO or Hazardous Substances Regulations 'type' stores)</li> <li>d. Retail activity 1500m<sup>2</sup> or more in gross floor area only: 1500 Litres in containers of up to 5 Litres each</li> </ul>
10.	All other - e.g. acetone, paint spray thinners, pure alcohol (stored above-ground in containers with capacity more than 450 Litres)	0
Subclass 3.1A: petrol plus 3.1B		
11.	Petrol plus any 3.1B substance - cumulative total limit (forestry and timber treatment only)	<ul style="list-style-type: none"> <li>a. 50 Litres (any storage except metal drums)</li> <li>b. 250 Litres (in dangerous goods cabinet approved to AS 1940)</li> <li>c. 420 Litres (in approved HSNO or Hazardous Substances Regulations 'type' stores)</li> </ul>
12.	Petrol plus any 3.1B substance - cumulative total limit (all other activities)	2000L
Subclass 3.1C Liquid: Medium hazard (flash point more than 23°C, but less than 35°C)		
13.	Liquid petroleum fuels in below-ground single vessel tanks	0
14.	All - kerosene, aviation kerosene (stored above-ground in containers with capacity less than 450 Litres)	<ul style="list-style-type: none"> <li>a. 10 Litres (any storage)</li> <li>b. 250 Litres (in dangerous goods cabinet approved to AS 1940)</li> <li>c. 450 Litres (in approved HSNO or Hazardous Substances Regulations 'type' stores)</li> <li>d. Retail activity 1500m<sup>2</sup> or more in gross floor area only: 1500 Litres in containers of up to 5 Litres each</li> </ul>
15.	All - kerosene, aviation kerosene (stored above-ground in containers with capacity more than 450 Litres)	<ul style="list-style-type: none"> <li>a. Certified single skin tanks: 450 Litres</li> <li>b. Certified double skin tanks: 2000 Litres</li> </ul>

Substance	Quantity limit
Subclass 3.1D Liquid: Low hazard (flash point more than 60°C, but less than 93°C)	
16. Liquid petroleum fuels in below-ground single vessel tanks	0
17. All - e.g. diesel, petroleum, fuel oils (stored above-ground in containers with capacity less than 450 Litres)	a. 450 Litres
18. All - e.g. diesel, petroleum, fuel oils (stored above-ground in containers with capacity more than 450 Litres)	a. Certified single skin tanks: 450 Litres b. Certified double skin tanks: 2000 Litres c. Certified super vault tanks constructed to South Western Research Institute (SWRI) standards: 10,000 Litres
Subclass 3.2A, 3.2B, 3.2C: Liquid desensitised explosive - High, medium and low hazard	
19. All substances	0

**Table A6.4.4 Class 4 - Flammable solids**

Substance	Quantity limit
Subclass 4.1.1A: Readily combustible solids and solids that may cause fire through friction (medium hazard)	
1. All	50kg
Subclass 4.1.1B Readily combustible solids and solids that may cause fire through friction (low hazard)	
2. All	500kg
Subclass 4.1.2A-B: Self reactive - Types A and B	
3. All	50kg
Subclass 4.1.2C-G: Self reactive - Types C-G	
4. All	500kg
Subclass 4.1.3A-C: Solid desensitized explosives	
5. All	0
Subclass 4.2A-B: Spontaneously combustible - Pyrophoric substances (high hazard and self heating substances: medium hazard)	
6. All	50kg
Subclass 4.2C: Spontaneously combustible (self heating substances: low hazard)	
7. All	500kg
Subclass 4.3A-B: Solids that emit flammable gas when wet (high and medium hazard)	
8. All	50kg
Subclass 4.3C: Solids that emit flammable gas when wet (low hazard)	

Substance		Quantity limit
9.	All	500kg

**Table A6.4.5 Class 5 - Oxidising substances**

Substance	Quantity limit
Subclass 5.1.1A-C: Liquids and solids	
1. All substances (excluding forestry and timber treatment)	No threshold
2. All substances (forestry and timber treatment only)	200 Litres if liquid, 200kg if solid
Subclass 5.1.2A: Gases	
3. Oxygen (except as stored and used in accordance with HSNO and Hazardous Substances Regulations requirements within medical facilities)	200m <sup>3</sup>
4. Nitrous oxide (except as stored and used in accordance with HSNO and Hazardous Substances Regulations requirements within medical facilities)	0
5. Chlorine	0
Subclass 5.2A-G: Organic Peroxide - Types A-G	
6. All - e.g. MEKP Polyester resin catalyst	0.5 Litres

**Table A6.4.6 Class 6 - Toxic substances**

Substance	Quantity limit
Subclass 6.1A-C: Acutely toxic	
1. Anhydrous ammonia refrigerant	0
2. Chlorine	0
3. All other substances	20 Litres if liquid, 20kg if solid
Subclass 6.1D and E	
4. Sodium chloride	1000kg
5. All other substances (excluding forestry and timber treatment)	200kg
6. All other substances (forestry and timber treatment only)	1000kg
Subclass 6.3A and B: Skin irritant	
7. All (excluding forestry and timber treatment)	2000kg
8. All (forestry and timber treatment only)	1000kg
Subclass 6.4A: Eye irritant	
9. Cement, hydrated lime and burnt lime	30 tonne
10. Sodium chloride	1000kg
11. All others	1000kg

Substance	Quantity limit
Subclass 6.5A and B: Respiratory and contact sensitizers	
12. Cement, hydrated lime and burnt lime	30 tonne
13. All others (excluding forestry and timber treatment)	2000kg
14. All others (forestry and timber treatment only)	1000kg
Subclass 6.6A and B: Human mutagens	
15. All (excluding forestry and timber treatment)	2000kg
16. All (forestry and timber treatment only)	1000kg
Subclass 6.7A and B: Carcinogens	
17. All	200kg
18. All (forestry and timber treatment only)	1000kg
Subclass 6.8A-C: Human reproductive or developmental toxicants	
19. All	0
Subclass 6.9A and B: Substances affecting human target organs or systems	
20. All	0

**Table A6.4.7 Class 7 - Radioactive materials**

Substances	Quantity limit
1. All substances	Up to 100 times the quantities specified in the Type A transport package limit, as identified in the International Atomic Energy Agency (IAEA) Regulations for the Safe Transport of Radioactive Material. Examples include domestic smoke detectors, demonstration radioactive sources in school laboratories.

**Note A6.4.7A - General advice**

- These substances are controlled through the Radiation Protection Act 1965 rather than HSNO and Hazardous Substances Regulations.

**Table A6.4.8 Class 8 - Corrosives**

Substance	Quantity limit
Subclass 8.1A: Substances corrosive to metals	
1. All (excluding forestry and timber treatment)	1000 Litres
2. All (forestry and timber treatment only)	5000 Litres

Substance	Quantity limit
Subclass 8.2A-C: Substances corrosive to skin	
3. Cement, hydrated lime and burnt lime	50 Tonne
4. All (excluding forestry and timber treatment)	1000 Litres
5. All (forestry and timber treatment only)	5000 Litres
Subclass 8.3A: Substances corrosive to the eye	
6. Cement, hydrated lime and burnt lime	50 Tonne
7. All (excluding forestry and timber treatment)	1000 Litres
8. All (forestry and timber treatment only)	5000 Litres

**Table A6.4.9 Class 9 - Ecotoxics**

Substance	Quantity limit
Subclass 9.1A-D: Aquatic ecotoxics and 9.2A-D: Soil ecotoxics	
1. All substances in below ground tank storage	See base class thresholds.
2. All substances in all other locations	0
Subclass 9.3A-C: Terrestrial vertebrate ecotoxics	
3. All substances in all locations	See base class thresholds.
Subclass 9.4A-C: Terrestrial invertebrate ecotoxics	
4. All substances in all locations	See base class thresholds.

## A6.5 Dunedin International Airport Zone

1. Tables A6.5.1 - A6.5.9 specify the hazardous substances quantity limits for the Dunedin International Airport Zone.
2. Except:
  - a. where any site within the zone contains residential activity the quantity limits for the residential zone, as specified in Appendix A6.1, apply.
  - b. the following are exempt from the hazardous substances quantity limits:
    - i. the storage and use of hazardous substances for domestic purposes, associated with a lawfully established residential activity, excluding home occupation. The hazardous substance(s) must form part of a consumer product intended for domestic use. The product must be stored in the container or packaging in which it was sold, and used in accordance with the manufacturer's instructions;
    - ii. the storage and use of fuel and other substances that are contained in the fuel system, electrical system or control system of motor vehicles, boats, aircraft and small engines; and
    - iii. the storage and use of transformer cooling oils in electricity transformers.
3. All volumes listed for quantity limits will be aggregated i.e. as a permitted activity a site may hold the maximum threshold identified of each Class 1 plus Class 2 plus Class 3 and/or Class 4.1.3A-C plus Class 4.2A plus 4.3A etc.
4. Where the volume or weight of a hazardous substance is affected by the temperature and pressure at which it is stored, the volume or weight will be considered (for the purposes of the hazardous substance quantity limits) to be that present in conditions of 20°C and 101.3kPa.
5. The permitted quantity thresholds apply per hazardous sub-facility. Each hazardous sub-facility must be separated from any other hazardous sub-facility on the same site and meet the following locational requirements:
  - a. if located external to a building, the gazetted<sup>1</sup> or regulated controls<sup>1</sup> for "protected place" and "public place" apply, and the location is such that the "controlled zone" or tabled separation distances of each facility do not overlap; or
  - b. if permitted to be located inside a building by the gazetted<sup>1</sup> or regulated controls<sup>1</sup>, or referenced standards pursuant to HSNO, then each hazardous sub-facility must be located in a separate fire cell.

<sup>1</sup> *Health and Safety at Work (Hazardous Substances) Regulations 2017 for work places and Hazardous Substances (Hazardous Property Controls) Notice 2017 for places that are not workplaces.*

**Table A6.5.1 Class 1 - Explosives**

Substance		Quantity limit
Subclass 1.1A-G, J, L: Mass explosion hazard		
1.	Gunpowder and black powder	0
2.	Display fireworks	0
3.	Industrial explosives (e.g. TNT) and all other Subclass 1.1	0
Subclass 1.2B-L: Projection hazard		
4.	All	No thresholds
Subclass 1.3C, F-L: Fire and minor blast hazard		
5.	Smokeless ammunition reloading powder	15kg
Subclass 1.3C, F-L: Fire and minor blast hazard		
6.	Retail fireworks	No thresholds - refer to Hazardous Substances (Fireworks) Regulations 2001
7.	All other Subclass 1.3	No thresholds
Subclass 1.4B-G, S: No significant hazard		
8.	Safety ammunition and flares	No threshold
9.	Retail fireworks	No thresholds - refer to Hazardous Substances (Fireworks) Regulations 2001
10.	Sodium Azide	0
11.	All other Subclass 1.4	No thresholds
Subclass 1.5D: Very insensitive, with mass explosion hazard		
12.	All	No thresholds
Subclass 1.6N: Extremely insensitive, no mass explosion hazard		
13.	All	No thresholds

**Table A6.5.2 Class 2 - Gases and aerosols**

Substance		Quantity limit
Subclass 2NH: Non Hazardous		
1.	All	200m <sup>3</sup>
Subclass 2.1.1A: High Hazard Flammable Gases		
2.	LPG (incl. propane-based refrigerant) in cylinders or multi-vessel tanks	450kg total outdoor storage quantity

Substance	Quantity limit
3. LPG (incl. propane-based refrigerant) in below-ground or above-ground single vessel tanks	0
4. LPG propane-based refrigerant in commercial receivers	50kg
5. Acetylene	30m <sup>3</sup>
6. Hydrogen, methane and all other permanent gases	30m <sup>3</sup>
Subclass 2.1.1B: Medium hazard flammable gases	
7. Anhydrous ammonia refrigerant	140kg
8. All other Subclass 2.1.1B	No thresholds
Subclass 2.1.2A: Flammable aerosols	
9. All	450 Litres

**Table A6.5.3 Class 3 - Flammable liquids**

Substance	Quantity limit
Subclass 3.1A Liquid: Very high hazard (flash point less than 23°C, initial boiling point less than 35°C)	
1. Petrol (stored above-ground in containers with capacity less than 450 Litres but no storage in metal drums)	a. 50 Litres (any storage except metal drums) b. 250 Litres (in dangerous goods cabinet approved to AS 1940) c. 420 Litres (in approved HSNO or Hazardous Substances Regulations 'type' stores)
2. Petrol (stored above-ground in containers with capacity more than 450 Litres)	a. Certified single skin tanks: 0 b. Certified double skin tanks: 600 Litres
3. Liquid petroleum fuels in below-ground single vessel tanks	0
4. All other (stored above-ground in containers with capacity less than 450 Litres)	50 Litres
5. All other (stored above-ground in containers with capacity more than 450 Litres or stored below ground)	0
Subclass 3.1B Liquid: High hazard (flash point less than 23°C, initial boiling point more than 35°C)	
6. Liquid petroleum fuels in below-ground single vessel tanks	0

Substance	Quantity limit
7. All other - e.g. acetone, paint spray thinners, pure alcohol (stored above-ground in containers with capacity less than 450 Litres)	<ul style="list-style-type: none"> <li>a. 10 Litres (any storage)</li> <li>b. 250 Litres (in dangerous goods cabinet approved to AS 1940)</li> <li>c. 450L (in approved HSNO or Hazardous Substances Regulations 'type' stores)</li> <li>d. Retail activity 1500m<sup>2</sup> or more in gross floor area only: 1500 Litres in containers of up to 5 Litres each</li> </ul>
8. All other - e.g. acetone, paint spray thinners, pure alcohol (stored above-ground in containers with capacity more than 450 Litres)	<ul style="list-style-type: none"> <li>a. Certified single skin tanks: 0</li> <li>b. Certified double skin tanks: 600 Litres</li> </ul>

14. All	0
Subclass 6.9A and B: Substances affecting human target organs or systems	
15. All	0

### Table A6.5.7 Class 7 - Radioactive materials

Substances	Quantity limit
1. All substances	Up to 100 times the quantities specified in the Type A transport package limit, as identified in the International Atomic Energy Agency (IAEA) Regulations for the Safe Transport of Radioactive Material. Examples include domestic smoke detectors, demonstration radioactive sources in school laboratories.

#### Note A6.5.7A - General advice

1. These substances are controlled through the Radiation Protection Act 1965 rather than HSNO and Hazardous Substances Regulations.

**Table A6.5.8 Class 8 - Corrosives**

Substance	Quantity limit
Subclass 8.1A: Substances corrosive to metals	
1. All	1000 Litres
Subclass 8.2A-C: Substances corrosive to skin	
2. Cement, hydrated lime and burnt lime	1000kg
3. All	1000 Litres
Subclass 8.3A: Substances corrosive to the eye	
4. Cement, hydrated lime and burnt lime	1000kg
5. All	1000 Litres

**Table A6.5.9 Class 9 - Ecotoxics**

Substance	Quantity limits
Subclass 9.1A-D: Aquatic ecotoxics and Subclass 9.2A-D: Soil ecotoxics	
1. All substances in below ground tank storage	See base class thresholds.
2. All substances in all other locations	0
Subclass 9.3A-C: Terrestrial vertebrate ecotoxics	
3. All substances in all locations	See base class thresholds.
Subclass 9.4A-C: Terrestrial invertebrate ecotoxics	
4. All substances in all locations	See base class thresholds.

## A6.6 Ashburn Clinic, Mercy Hospital and Wakari Hospital Zones

1. Tables A6.6.1 - A6.6.9 specify the hazardous substances quantity limits for the Ashburn Clinic, Mercy Hospital and Wakari Hospital zones.
2. Except:
  - a. where any site within these zones contains residential activity the quantity limits for the residential zone, as specified in Appendix A6.1, apply.
  - b. the following are exempt from the hazardous substances quantity limits:
    - i. the storage and use of hazardous substances for domestic purposes, associated with a lawfully established residential activity, excluding home occupation. The hazardous substance(s) must form part of a consumer product intended for domestic use. The product must be stored in the container or packaging in which it was sold, and used in accordance with the manufacturer's instructions;
    - ii. the storage and use of fuel and other substances that are contained in the fuel system, electrical system or control system of motor vehicles, boats, aircraft and small engines; and
    - iii. the storage and use of transformer cooling oils in electricity transformers.
3. All volumes listed for quantity limits will be aggregated i.e. as a permitted activity a site may hold the maximum threshold identified of each Class 1 plus Class 2 plus Class 3 and/or Class 4.1.3A-C plus Class 4.2A plus 4.3A etc.
4. Where the volume or weight of a hazardous substance is affected by the temperature and pressure at which it is stored, the volume or weight will be considered (for the purposes of the hazardous substance quantity limits) to be that present in conditions of 20°C and 101.3kPa.
5. The permitted quantity thresholds apply per site.

**Table A6.6.1 Class 1 - Explosives**

Substance	Quantity limit
Subclass 1.1A-G, J, L: Mass explosion hazard	
1. Gunpowder and black powder	0
2. Display fireworks	0
3. Industrial explosives (e.g. TNT) and all other Subclass 1.1	0
Subclass 1.2B-L: Projection hazard	
4. All	No thresholds
Subclass 1.3C, F-L: Fire and minor blast hazard	
5. Smokeless ammunition reloading powder	15kg
Subclass 1.3C, F-L: Fire and minor blast hazard	
6. Retail fireworks	No thresholds - refer to Hazardous Substances (Fireworks) Regulations 2001
7. All other Subclass 1.3	No thresholds
Subclass 1.4B-G, S: No significant hazard	

Substance		Quantity limit
8.	Safety ammunition and flares	25kg
9.	Retail fireworks	No thresholds - refer to Hazardous Substances (Fireworks) Regulations 2001
10.	Sodium Azide	0
11.	All other Subclass 1.4	No thresholds
Subclass 1.5D: Very insensitive, with mass explosion hazard		
12.	All	No thresholds
Subclass 1.6N: Extremely insensitive, no mass explosion hazard		
13.	All	No thresholds

**Table A6.6.2 Class 2 - Gases and aerosols**

Substance		Quantity limit
Subclass 2NH: Non Hazardous		
1.	All	10m <sup>3</sup>
Subclass 2.1.1A: High Hazard Flammable Gases		
2.	LPG (incl. propane-based refrigerant) in cylinders or multi-vessel tanks	200kg total outdoor storage quantity
3.	LPG (incl. propane-based refrigerant) in below-ground or above-ground single vessel tanks	
4.	LPG propane-based refrigerant in commercial receivers	0
5.	Acetylene	1.45m <sup>3</sup>
6.	Hydrogen, methane and all other permanent gases	0
Subclass 2.1.1B: Medium hazard flammable gases		
7.	Anhydrous ammonia refrigerant	0
8.	All other Subclass 2.1.1B	No thresholds
Subclass 2.1.2A: Flammable aerosols		
9.	All	20 Litres

**Table A6.6.3 Class 3 - Flammable liquids**

Substance		Quantity limit
Subclass 3.1A Liquid: Very high hazard (flash point less than 23°C, initial boiling point less than 35°C)		
1.	Petrol (stored above-ground in containers with capacity less than 450 Litres)	a. 10 Litres inside dwelling b. 50 Litres outside dwelling
2.	Petrol (stored above-ground in containers with capacity more than 450 Litres)	0
3.	Liquid petroleum fuels in below-ground single vessel tanks	0
4.	All other	0
Subclass 3.1B Liquid: High hazard (flash point less than 23°C, initial boiling point more than 35°C)		
5.	Liquid petroleum fuels in below-ground single vessel tanks	0
6.	All other - e.g. acetone, paint spray thinners, pure alcohol (stored above-ground in containers with capacity less than 450 Litres)	100 Litres in accordance with HSNO requirements or Hazardous Substances Regulations
7.	All other - e.g. acetone, paint spray thinners, pure alcohol (stored above-ground in containers with capacity more than 450 Litres)	0
Subclass 3.1A: Petrol plus Subclass 3.1B		
8.	Petrol plus any Subclass 3.1B substance - cumulative total limit	a. 10 Litres inside dwelling b. 50 Litres outside dwelling
Subclass 3.1C Liquid: Medium hazard (flash point more than 23°C, but less than 35°C)		
9.	Liquid petroleum fuels in below-ground single vessel tanks	0
10.	All - kerosene, aviation kerosene (stored above-ground in containers with capacity less than 450 Litres)	a. 20 Litres inside dwelling b. 50 Litres outside dwelling
11.	All - kerosene, aviation kerosene (stored above-ground in containers with capacity more than 450 Litres)	0
Subclass 3.1D Liquid: Low hazard (flash point more than 60°C, but less than 93°C)		
12.	Liquid petroleum fuels in below-ground single vessel tanks	0
13.	All - e.g. diesel, petroleum, fuel oils (stored above-ground in containers with capacity less than 450 Litres)	a. 20 Litres inside dwelling b. 209 Litres outside dwelling
14.	All - e.g. diesel, petroleum, fuel oils (stored above-ground in containers with capacity more than 450 Litres)	Certified double skin tanks: 5200 Litres
Subclass 3.2A, Subclass 3.2B, Subclass 3.2C: Liquid desensitised explosive - High, medium and low hazard		
15.	All substances	0

**Table A6.6.4 Class 4 - Flammable solids**

Substance		Quantity limit
Subclass 4.1.1A: Readily combustible solids and solids that may cause fire through friction (medium hazard)		
1.	All	0
Subclass 4.1.1B: Readily combustible solids and solids that may cause fire through friction (low hazard)		
2.	All	0
Subclass 4.1.2A-B: Self reactive - Types A and B		
3.	All	0
Subclass 4.1.2C-G: Self reactive - Types C-G		
4.	All	0
Subclass 4.1.3A-C: Solid desensitized explosives		
5.	All	0
Subclass 4.2A-B: Spontaneously combustible - Pyrophoric substances (high hazard and self heating substances: medium hazard)		
6.	All	0
Subclass 4.2C: Spontaneously combustible (self heating substances: low hazard)		
7.	All	0
Subclass 4.3A-B: Solids that emit flammable gas when wet (high and medium hazard)		
8.	All	0
Subclass 4.3C: Solids that emit flammable gas when wet (low hazard)		
9.	All	0

**Table A6.6.5 Class 5 - Oxidising substances**

Substance		Quantity limit
Subclass 5.1.1A-C: Liquids and solids		
1.	All substances	10 Litres if liquid, 10kg if solid
Subclass 5.1.2A: Gases		
2.	Oxygen (except as stored and used in accordance with HSNO and Hazardous Substances Regulations requirements within medical facilities)	No limit if stored and used in accordance with HSNO and Hazardous Substances Regulations requirements within medical facilities
3.	Nitrous oxide (except as stored and used in accordance with HSNO and Hazardous Substances Regulations requirements within medical facilities)	No limit if stored and used in accordance with HSNO and Hazardous Substances Regulations requirements within medical facilities
4.	Chlorine	0

Substance	Quantity limit
Subclass 5.2A-G: Organic Peroxide - Types A-G	
5. All - e.g. MEKP Polyester resin catalyst	0.5 Litres in addition to Steris 20 Concentrate: 70kg

**Table A6.6.6 Class 6 - Toxic substances**

Substance	Quantity limit
Subclass 6.1A-C: Acutely toxic	
1. Anhydrous ammonia refrigerant	0
2. Chlorine	0
3. All other substances	0
Subclass 6.1D and E	
4. Sodium chloride	5kg
5. All other substances	1kg
Subclass 6.3A and B: Skin irritant	
6. All	1kg
Subclass 6.4A: Eye irritant	
7. Cement, hydrated lime and burnt lime	400kg
8. Sodium chloride	5kg
9. All others	1kg
Subclass 6.5A and B: Respiratory and contact sensitizers	
10. Cement, hydrated lime and burnt lime	400kg
11. All others	1kg
Subclass 6.6A and B: Human mutagens	
12. All	1kg
Subclass 6.7A and B: Carcinogens	
13. All	1kg
Subclass 6.8A-C: Human reproductive or developmental toxicants	
14. All	0
Subclass 6.9A and B: Substances affecting human target organs or systems	
15. All	0

**Table A6.6.7 Class 7 - Radioactive materials**

Substances	Quantity limit
1. All substances	Up to 100 times the quantities specified in the Type A transport package limit, as identified in the International Atomic Energy Agency (IAEA) Regulations for the Safe Transport of Radioactive Material. Examples include domestic smoke detectors, demonstration radioactive sources in school laboratories.

**Note A6.6.7A - General advice**

- These substances are controlled through the Radiation Protection Act 1965 rather than HSNO and Hazardous Substances Regulations.

**Table A6.6.8 Class 8 - Corrosives**

Substance	Quantity limit
Subclass 8.1A: Substances corrosive to metals	
1. All	5 Litres
Subclass 8.2A-C: Substances corrosive to skin	
2. Cement, hydrated lime and burnt lime	400kg
3. All	5 Litres
Subclass 8.3A: Substances corrosive to the eye	
4. Cement, hydrated lime and burnt lime	400kg
5. All	5 Litres

**Table A6.6.9 Class 9 - Ecotoxics**

Substance	Quantity limit
Subclass 9.1A-D: Aquatic ecotoxics and Subclass 9.2A-D: Soil ecotoxics	
1. All substances in below ground tank storage	See base class thresholds.
2. All substances in all other locations	0
Subclass 9.3A-C: Terrestrial vertebrate ecotoxics	
3. All substances in all locations	See base class thresholds.
Subclass 9.4A-C: Terrestrial invertebrate ecotoxics	
4. All substances in all locations	See base class thresholds.

## A7. Rural Character Values

### A7.1 High Country Rural Zone

#### Description

The High Country Rural Zone extends along the north-west boundary of Dunedin City, incorporating the high country Rock and Pillar and Lammermoor Range ridgelines rising above the Strath Taieri Plain. These have a north-east/south-west orientation typical of Central Otago ridgelines further to the west. It continues onto the elevated land of the Taieri Ridge to the east of the Middlemarch Basin Rural Zone. The zone extends to the south of the Taieri Ridge where it merges with the Hill Country Zone close to Bald Hill and the Moonlight Road.

Parts of this zone comprise highly significant and visible high country areas containing distinctive and rugged ridges encircling the Strath Taieri Plain. It is characterised by a strongly defined landform and minimal influence of human elements. The scale is large and expansive. Although much of the area is grazed and managed under an extensive pastoral regime, the vegetative cover, in the main, retains its natural patterns and character.

The landscape is highly coherent with rock outcrops creating particular interest. The skyline in many places is dramatic on account of these. The rugged character of the landform and the large scale of this landscape combine to create an effect which is reminiscent of Central Otago. The landscape is modified over a small area by the Macraes Gold Project, which is largely within the Waitaki District but now also extends into Dunedin City.

#### Values

1. Large scale, open, expansive character. Highly coherent natural landform under an apparently largely unmodified grassland vegetative cover. The zone covers a high country area distinctive for Dunedin.
2. Unique landforms, reminiscent of Central Otago. These include the Rock and Pillar Range (Patearoa), the Lammerlaw Range, the Lammermoor Range and elevated sections of the Taieri Ridge. Rock outcrops and tors are distinctive features.
3. Predominantly pastoral land use including intact scrub and snow tussock vegetation sequences progressing to sub-alpine herbfields, as well as some modified grasslands.
4. Manawhenua values. Historic Māori trail across Taieri Ridge.
5. Limited visual impact of human imposed elements such as tracks, buildings and exotic tree plantings. The relative visual dominance of the natural landscape elements is a fundamental characteristic.
6. Human made elements which emphasise local character and contribute to visual quality, e.g. stone buildings, rock fence posts.

## **A7.2 Middlemarch Basin Rural Zone**

### **Description**

Situated in the north-west of Dunedin district, the Middlemarch Basin Rural Zone is an outwash plain of the Taieri River. Relatively flat, this landform is surrounded by the high country ranges which rise steeply from either edge. Open and wide in the south but narrowing towards the north, the plain forms a scenic access route carrying the majority of transport travelling from inner Dunedin into neighbouring Central Otago via State Highway 87 which runs north to south along with the Taieri River and the railway.

The beginning of a trend to intensify land use in the foothills of the Rock and Pillars may have a future impact on the amount of water that is available in the Middlemarch Basin, by drawing water from the tributaries and therefore reducing the available water that reaches the basin itself.

Middlemarch is the main settlement and at the core of the roads which criss-cross across the plain. The roads, tracks, fences and shelterbelts form a typical rural patchwork on the land which speaks of the long tradition of farming in this area. Historic farm dwellings and settlements are located on the periphery of the plain, often nestled into the foothills of both the Rock and Pillars to the west, and the Taieri Ridge to the east. The flourishing Central Otago Rail Trail has provided a burgeoning tourist industry for Middlemarch township.

Though open and expansive, the landscape is highly modified. The initial establishment of flood embankments enabled the drainage of marshland, allowing farming, and preventing future flooding of arable land. Pastoral farming of beef, sheep and deer are the main and ongoing land use. In recent decades, farm practice on the plains has changed to a system encouraging intensification whilst still operating within the bounds of a dryland environment.

### **Values**

1. An open, expansive rural character.
2. The presence of highly productive land, including high class soils, which are sometimes subject to drought.
3. A long tradition of pastoral farming, now predominantly beef, sheep and deer. Roads, tracks, fences and shelterbelts form a typical rural patchwork on the land which echoes this tradition.
4. Human made elements which emphasise local character and contribute to visual quality. Heritage buildings, drystone walls and post features are cultural characteristics of this rural landscape.
5. Tourist industry centred around the Central Otago Rail Trail.

## A7.3 Taieri Plain Rural Zone

### Description

The Taieri Plain Rural Zone encompasses the Taieri Plain, a modified and managed landscape located west of Dunedin. Bordered by the Maungatua ranges in the west and hills to the north and east, it is a natural alluvial plain which is now predominantly rural farmland. Dunedin City's main south access runs through this area as well as it being the location of the Dunedin International Airport. These significant transport routes through the southern hinterland of the district make the area a scenic and strategic gateway into Dunedin City, linked with a sense of identity for locals and a first impression for visitors.

Originally this area was wetland, being the outwash plains of the Taieri River. However, early settlers colonised and modified the area, beginning at the better drained north eastern corner. This beginning is reflected today in the eastern end being the most established area of the plain, hosting the township of Mosgiel. It was a logical choice, given that the south west area is close to sea level, with some areas actually below it. The transformation of the plain into pasture affected a significant mahika kai gathering area used by local Māori, who hunted eels, birds and other food from the wetland. Draining the plain, as well as protecting it from frequent flood events, was challenging. Today the area is criss-crossed with extensive open drain networks, mechanical pumps and flood embankments. The very south-western end of the plain has maintained some wetlands which feed into the remaining lakes: Lake Waiholā and Lake Waipori (both are located just outside of Dunedin City boundaries). These lakes are two of what once were several located across the plain.

### Values

1. Soil quality: significant areas of Dunedin's high class soils are located on the Taieri Plain, with particular value for the production of food.
2. The role of waterways: large parts of the Taieri Plain are intensively farmed and surface water flows are mostly directed through artificial drains that dissect the landscape. The plain is crossed by three main water bodies; the Taieri, Silverstream and Waipori rivers. The Taieri River is also of significance to Manawhenua.
3. Productive capacity: while in early times farms in this area ran mixed stock and often crops of wheat or barley/oats, or operated as market gardens, there are now significant areas of the northern Taieri Plain that are rural lifestyle blocks. These blocks are seldom intensively used for food or crop production, though some horticultural production continues in the area.
4. Rural character: moving west on the Taieri Plain, a change in land use occurs from rural lifestyle, to more traditional sheep and beef farming, and then into intensive dairy farming. With this change in land use comes a change in rural character. The urban settlements of the northern Taieri are replaced by a working rural environment.
5. Traditional development patterns: the typical pattern of development on the Taieri Plain conforms to a grid-like layout, where fence lines, shelterbelts and consequent land use activity have a distinguishing rectangular regularity.
6. Typical building forms: building forms in the north east of the Taieri Plain, which was developed earlier than other more westerly sections, are typically of larger, more distinctly heritage forms.

## A7.4 Hill Country Rural Zone

### Description

The Hill Country Rural Zone is the largest rural zone in Dunedin, forming a significant south west/north east swathe of largely open, rolling, pastoral downland, extending from the high country Lammermoor and Rock and Pillar Ranges, to the Taieri and Waikouaiti Valleys. It includes Lee Downs to the south west, Strath Taieri Hills further north to where this extends into the Taieri Ridge, and the Peat Moss Hills and Waikouaiti Valley further east.

There is considerable topographical and character variety over this extensive area, but typically the landscape is expansive, open and large scale, with a predominantly horizontal character and few vertical elements, whether natural or human made.

The gently rolling pastures of Lee Downs are increasingly being modified where farming machinery can gain access to the open hill slopes and ridges. Numerous gullies remain with riparian vegetation and small streams feeding into the larger waterways, including Lee Stream and Deep Stream, both of which are important contributors to the Taieri River, a significant river for Kāi Tahu.

Further north within the Strath Taieri Hills the rural character is still predominantly pastoral, characterised by frequent rocky outcrops of schist boulders and tors. This part of the Hill Country Rural Zone is extremely dry, but despite this several waterways cut through the area providing moisture for trees and woody vegetation in the gullies. The Strath Taieri area was likely to have been used for seasonal food gathering by the Waitaha iwi, as well as a transport corridor for Māori traveling between Central Otago and the east coast. Māori needing to avoid the wetlands of the Middlemarch basin would have used the dry hill tops to traverse this land. Numerous relics have been found, along with evidence that the area was once prolific in both moa, and moa-hunters.

Bordering the Strath Taieri Hills to the west, the Waikouaiti Valley to the east, and Silverpeaks to the south, the Peat Moss Hills form another distinctive part of the Hill Country Rural Zone. This is remote interior land that is very sparsely inhabited. It is a harsh and exposed environment that has minimal settlement, few roads and is seldom visited.

The eastern extent of the Hill Country Rural Zone is the Waikouaiti Valley area which has been shaped by a long history of human habitation. The nearby Waikouaiti township became one of the early economic centres of colonial New Zealand. Established in 1830, expansion into the rural area began in earnest in the 1860s. Given its significant history of successive human interventions this interior landscape has managed to maintain a moderate level of ecological health. This has occurred largely as a result of the steep sided valley systems localising the potential for intensification of pastoral production.

### Values

1. Typically a remote, open, expansive, horizontally focused character, dominated by extensive pastoral holdings, with some conservation estate at higher elevations.
2. A significant predominance of natural features over human made features. The zone has a relatively low density of built structures and associated services.
3. Distinctive rural settlement character: human settlement is sparse and consists of isolated farm houses and farm buildings, mixed in age and character, often surrounded by mature exotic vegetation typical of long established rural dwellings.
4. Intact connected waterways with associated riparian links. These provide ecological corridors through the landscape and need to be preserved and enhanced. Given that the zone is primarily an agricultural landscape, protection of the waterways is often necessary through fencing and protecting appropriate vegetation growth along the riparian margins.
5. Appropriate, sustainable land use practices. With increasing intensification of farming practices and

replacement of tussock with introduced grasses there is potential for increases in wind erosion in exposed more upland areas, particularly in prolonged dry periods.

6. Pockets of important and varied biodiversity. There are significant areas of indigenous vegetation and habitats for indigenous fauna.

## **A7.5 Hill Slopes Rural Zone**

### **Description**

The Hill Slopes Rural Zone lies in close proximity to urban Dunedin, predominantly occupying the more elevated land to the north of the city. Here it includes three prominent landmarks - Flagstaff, Mt Cargill and Swampy Summit. These are joined by ridges creating a distinct rolling and hilly backdrop to the city, generating an enclosed and contained quality for the urban area.

The Hill Slopes Rural Zone also encompasses areas above the residential zones on both sides of the harbour (including slopes near Port Chalmers on the west side, and Harbour Cone on the east side); and the more elevated land to the north and east of the Taieri Plain (including Ferny Hill, Whare Flat and Chain Hills).

### **Values**

1. **Backdrop/Enclosure:** to a significant extent the Hill Slopes Rural Zone establishes the character and setting for the main urban parts of Dunedin, providing a predominantly unbuilt natural backdrop to the central city, harbour and Mosgiel.
2. **Distinctive hill features:** specifically, the elevated areas surrounding Dunedin provide one of the main components of its recognised distinctive character. The main features include Harbour Cone, Signal Hill, Mt Cargill, Flagstaff and Swampy Summit.
3. **Recreation:** sparsely inhabited, the Hill Slopes Rural Zone is close to the main urban parts of the city and therefore frequently used for recreation activities.
4. **A predominance of natural features over human made features.** The zone has a relatively low density of built structures and associated services. There is variability of settlement patterns, with more lifestyle block development on the Taieri slopes and closer to existing Dunedin urban areas. However, natural character is still largely dominant. With a diversity of land management, there is a potential for exotics such as gorse and broom to encroach on both pasture and native bush.
5. **Pockets of important and varied biodiversity:** there are significant areas of indigenous vegetation and habitats for indigenous fauna. Scattered indigenous vegetation dominated by kanuka is present in some marginal sites on the Taieri slopes. Further towards Flagstaff and Mt Cargill the zone is dominated by the naturalness of forest cover which contrasts with the urban area it borders. As well as its importance for biodiversity, the forest cover serves an important role in protecting key water supplies for the city, including the Leith and Cedar Farm catchments.

## **A7.6 Coastal Rural Zone**

### **Description**

The Coastal Rural Zone is in two distinct sections north and south of the main urban area of Dunedin.

The southern section extends from close to Taieri Mouth along the coast to the built up urban area around Green Island and Corstorphine, and goes inland as far as Henley Hill and north to Chain Hills to include the dissected hill country between the Taieri Plain and the coast. Saddle Hill is located within this part of the Coastal Rural Zone.

The south coast part of this zone consists of the low hill range that follows the southern coast, bound by the coast on the eastern side and the edge of the Taieri Plain on the western side. It is unified by its landform, topography and soils, and the subsequent limitations of land use.

The northern section of the zone stretches from the inner harbour area of Deborah Bay and continues north to Aramoana, along the coast to include Heyward Point, Long Beach, Potato Point, Warrington, Seacliff and Kāritane. It extends inland incorporating a considerable part of the coastal slopes above Whareakeake, areas south of Blueskin Bay, Porteus Hill, Round Hill and land adjacent to Waikouaiti towards the northern boundary of Dunedin city.

The north (Waikouaiti) coast is rich in Māori and European history and exudes a strong sense of place, reflecting an environment that has always been important for human habitation. The area is drained by two major river systems. On the north side of the Kilmog the twin branches of the Waikouaiti River join to flow as one through the Waikouaiti-Kāritane estuary system and south of the Kilmog, the Waitati River and Carey's Creek flow into Blueskin Bay. The smaller Pūrākaunui estuary is the other outlet of significance.

Both of the distinct north and south sections are highly significant areas for Kāi Tahu, and contain many cultural sites (Wāhi tupuna, see Appendix A4).

### **Values**

1. The general visual dominance of natural elements such as natural landforms, streams and remnant indigenous vegetation over human landscape elements e.g. buildings or shelter plantings.
2. The generally limited visual influence of any large scale structures or exotic plantings to diminish the impact of the natural landscape forms and features.
3. The extent and quality of the dramatic coastal landforms and views, with visual interest focused on the coastal edge.
4. The remote wilderness character of the beach landscapes and the visual separation of these areas from adjacent developed areas by dunes or other landforms.
5. The human-made features which are relics of the past, e.g. remnant shelter plantings and drystone walls.
6. Transient wildlife of interest, e.g. seals.
7. Areas which have significant habitat value, e.g. Aramoana salt marsh and Pūrākaunui Estuary.
8. The landscape and cultural values of the historically and culturally significant Quarantine Island/ Kamau-taurua and Goat Island/ Rakiriri, pā sites at Huriawa (Kāritāne) and Māpoutahi (Pūrākaunui Bay) and site of early European settlement at Matainaka (Matanaka).

## A7.7 Peninsula Coast Rural Zone

### Description

The area covered by the Peninsula Coast Rural Zone is very similar to that for the Peninsula Coast Outstanding Natural Landscape. It extends between Taiaroa Head and Andersons Bay and includes the land with a south facing aspect from the most elevated parts of the Peninsula down to the coast. It encompasses rural land north of Portobello, including Quarantine Point, but excludes most of the rural land below Highcliff Road towards the inner harbour above Macandrew Bay and Broad Bay (this is part of Hill Slopes Rural Zone). The Peninsula is highly valued for Te Rūnanga o Ōtākou.

A dramatic coastal profile of prominent headlands and offshore stacks incised by broad tidal inlets, flats and sandy bays is reflected in the pronounced volcanic topography of the Peninsula landform. The sheltered Hooper and Papanui inlets bring the tidal waters of the Southern Ocean in close proximity to the Otago Harbour south of Portobello. At Sandymount and Cape Saunders, sheer cliffs have been sculpted by natural southerly forces, whilst shifting dunefields occupy the adjacent sandy bays. These extremes of coastal habitats support a range of unique wildlife associations that favour the remoteness of the immediate coastline. The steep seaward slopes of the Otago Peninsula coast are traditionally farmed in spite of limited access and inclement weather – windshorn vegetation is indicative of the harsh prevailing climate. Native vegetation persists patchily within the deep gullies and hillside slopes, but the interior landscape has been largely stripped of its natural cover to reveal the conical profiles of volcanic landmarks such as Mt Charles/Poatiri and Harbour Cone. Original farming settlement and farm buildings are sporadically located within the seaward slopes and often surrounded by shelterbelts and amenity plantings. Traditional stone walls, along with macrocarpa shelterbelts are frequent boundary features of this heritage working landscape.

### Values

1. The general visual dominance of the natural landscape elements such as natural landform, streams and remnant indigenous vegetation over human landscape elements (e.g. buildings or shelter plantings)
2. The predominant pastoral land use is a key feature of the remote, isolated rural character.
3. Dramatic coastal landforms and views.
4. The minimal influence of any large scale structures or exotic plantings to diminish the impact of the natural forms and features.
5. The presence and quality of human made features which are relics of the past, e.g. old lime kilns and stone walls.
6. The extent and quality of areas of remnant forest, e.g. Taiaroa bush.
7. The significance of places which are special to Māori, e.g. Pukekura (Taiaroa Head). Some settlements such as Ōtākou date back to pre-European times.
8. Tourism provides substantially to the local economy, particularly wildlife tourism.

## **A8. Heritage New Zealand Pouhere Taonga Accidental Discovery Protocol**

Under the Heritage New Zealand Pouhere Taonga Act (2014) an archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. For pre-contact Māori sites this evidence may in the form of bones, shells, charcoal, stones etc. In later sites of European/Chinese origin, artefacts such as bottle glass, crockery etc may be found, or evidence of old foundations, wells, drains or similar structures. Pre-1900 buildings are also considered archaeological sites. Burials/kōiwi tākata may be found from any historic period.

In the event that an unidentified archaeological site is located during works, the following applies:

1. Work must cease immediately at that place and within 20m around the site.
2. The contractor must shut down all machinery, secure the area, and advise the site manager.
3. The site manager must secure the site and notify the Heritage New Zealand Regional Archaeologist. Further assessment by an archaeologist may be required.
4. If the site is of Māori origin, the site manager must notify the Heritage New Zealand Regional Archaeologist and the appropriate iwi groups or kaitiaki representative of the discovery and ensure site access to enable appropriate cultural procedures and tikanga to be undertaken, as long as all statutory requirements under legislation are met (New Zealand Pouhere Taonga Act 2014, Projected Objects Act 1975).
5. If human remains (kōiwi tākata) are uncovered the site manager must advise the Heritage New Zealand Regional Archaeologist, NZ Police and the appropriate iwi groups or kaitiaki representative and the above process under 4 must apply. Remains are not to be moved until such time as iwi and Heritage New Zealand have responded.
6. Works affecting the archaeological site and any human remains (kōiwi tākata) must not resume until Heritage New Zealand gives written approval for work to continue. Further assessment by an archaeologist may be required.
7. Where iwi so request, any information recorded as the result of the find such as description of location and content, is to be provided for their records.
8. Heritage New Zealand will determine if an archaeological authority under the Heritage New Zealand Pouhere Taonga Act 2014 is required for works to continue.

It is an offence under Section 87 of the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site without an authority from Heritage New Zealand irrespective of whether the works are permitted or a consent has been issued under the Resource Management Act 1991.

Mercy Hospital (land within the <b>urban biodiversity mapped area</b> )	Recreation

## A10. Urban Biodiversity Mapped Area Values

The **urban biodiversity mapped areas** (UBMAs) are mainly derived from the Urban Landscape Conservation Areas of the first generation Dunedin City District Plan, and include those with the highest conservation values. The boundaries of the UBMA's have been refined from the Urban Landscape Conservation Area boundaries to exclude areas considered low in biodiversity value (e.g. playing fields in some instances). The UBMA's form an extensive network of biodiversity areas over the Dunedin city environs. For each UBMA description the Threatened Environment Classification is provided.

### A10.1 Town Belt

#### A10.1.1 Description of the area

The Dunedin Town Belt is an important asset to the city and fulfils an important amenity role within Dunedin. It is a significant landscape feature, provides areas for recreation, and is an important ecological resource. As a high profile public reserve, its management and maintenance is important to the Dunedin community and the area is subject to the 'Town Belt Management Plan'. The Town Belt has an important network of vegetation across the city, creating potential corridors for indigenous animals, and habitat for indigenous plant and animal species. While several sections of the Town Belt may be of relatively low indigenous biodiversity value (i.e. playing fields), they still warrant inclusion in the UBMA as their associated shelter belts and amenity plantings provide habitat and food resources for indigenous flora and fauna, and help to maintain the overall connectivity of the Town Belt.

#### A10.1.2 Biodiversity values to be protected

1. **Vegetation/Habitat types:**
  - a. An extensive survey of vegetation and associated biodiversity was undertaken as part of the development of the Town Belt Management Plan. The predominant vegetation types of the Town Belt are kanuka forest, moist broadleaved forest, exotic coniferous-deciduous forest, and mown grassland. Alluvial forest, dry broadleaved forest, swamp forest, cliff vegetation, rough grassland, and heathland vegetation occur locally throughout. Stuart Street marks a major change in the overall composition and structure of the Town Belt, with native-dominant forest the predominant cover north of Stuart Street, and exotic-dominated forest and mown grassland the main vegetation south of Stuart Street. This change is also reflected in understory composition with several native trees, shrubs, lianes, and monocot herbs being more common in the north of the Town Belt, while native dicot herbs are more common in the southern areas of the Town Belt.
2. **Rare and notable species, habitats or communities:**
  - a. The Town Belt Management Plan reports extensively on the biodiversity values of the Town Belt. Three plant species recorded within the UBMA are classified as nationally threatened, uncommon, or data deficient, nationally. The tree *Raukaua edgerleyi* is notable and has been recorded at two sites within the UBMA; only three individuals are known, all mature trees. Another small tree, fierce lancewood (*Pseudopanax ferox*), which is classified as 'At Risk-Naturally Uncommon', has also been recorded at the UBMA. A single sub adult tree is known here. The sedge *Carex raoulii*, which was previously classified as 'Data Deficient' has been recorded on steep slopes of the UBMA, where at least 20 plants are present. Fifty six native plant species present in the Town Belt, occur naturally at six or fewer sites. Seventeen of these have been recorded from only one site.
  - b. Most of the vegetation in the Town Belt is "At Risk" based on the Threatened Environment Classification having between 20-30 percent of the original vegetation cover remaining nationally, and a high degree of habitat fragmentation. *Peripatus* occurs in Woodhaugh Gardens: this area has always been in lowland native forest and the surviving invertebrates persisting there are important locally and nationally.
3. **Species diversity and Naturalness:**
  - a. Much detail on both plant and animals species diversity, is provided in the Town Belt Management Plan.

#### A10.1.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	<ol style="list-style-type: none"> <li>a. Wilding seedlings of woody tree species such as sycamore may spread within reserves either from a seed source within the reserve or from adjacent properties. Sycamore spread in some reserves has the potential to result in this species replacing the native canopy.</li> <li>b. Native plant species that do not naturally occur in Dunedin city, such as <i>Coprosma grandifolia</i>, <i>C. robusta</i> and <i>Brachyglottis repanda</i> may smother other significant native plant species.</li> </ol>

2. Fragmentation/loss of continuity/edge effects	a. To ensure the long-term viability of the UBMA, a vegetation buffer is desirable to guard against adverse effects of fragmentation and edge.
--	--

#### A10.1.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	a. Prevent sycamore spread into new areas where sycamores have not yet established. b. Where weedy species may restrict the growth of local native species, therefore compromising the viability of the UBMA, control and removal of these species is appropriate (see the Town Belt Management Plan).
2. Fragmentation/loss of continuity/edge effects	a. Consideration could be given to extending the Town Belt UBMA to include the southeast facing bush slopes above Logan Park High School, and the bush-clad gully running North West and parallel to Warden Street. The forested gully has a relatively intact canopy of mixed native and exotic species, and a diverse understory of ferns. The creek within is often flowing, and is habitat for southern koura ( <i>Paranephrops zealandicus</i> ). These two areas represent important buffer zones which would help to reduce external impacts on the UBMA by minimising edge and improving connectivity.

## A10.2 Port Chalmers Town Belt

### A10.2.1 Description of the area

The forest of this UBMA contains many large trees, with patches of both native and exotic species. Due to its largely undisturbed canopy, coupled with large amounts of decaying woody material and dense understory, the forested area is likely to be important habitat for indigenous plant and animal species. The Port Chalmers Town Belt represents an important part of an urban green corridor network.

#### A10.2.1.1 Description of urban environment allotments

The following properties, which are located either entirely or partly within this UBMA, may contain land which qualifies as an urban environment allotment as defined in s76(4C) of the Resource Management Act 1991:

- 5 and 7 Macandrew Road Careys Bay; 1 William Street Careys Bay.

### A10.2.2 Biodiversity values to be protected

1. *Vegetation/Habitat types:*
  - a. The native canopy is primarily composed of tree fuchsia, whiteywood and broadleaf, and to a lesser extent, kanuka. The main exotic canopy species are sycamore and hawthorn, with an understory of rangiora. A large component of the more peripheral shorter scrubby vegetation is exotic - mainly gorse and Scottish broom. While the biodiversity values of this exotic-dominated vegetation type are relatively low, it does act as a buffer which can protect the values of the more intact adjacent indigenous-dominated vegetation.
2. *Rare and notable species, habitats or communities:*
  - a. The Port Chalmers Town Belt is ecologically significant in that it represents one of the few remaining areas of remnant coastal ngaio/totara forest within the Dunedin city area, and is relatively large in size (c.7.0ha). This coastal forest is a lowland vegetation type classified as "Acutely Threatened" in the Threatened Environment Classification scheme, having less than 10 percent of the original vegetation cover remaining nationally.

3. *Species diversity and Naturalness:*

- a. It is estimated that 69 percent of plant species over the UBMA are indigenous.

A10.2.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	<p>a. Invasive plant pests pose the greatest threat to the conservation values of this UBMA, but threats from animal pests such as possum, rats/mice and stoats are also likely. The most significant plant pests are sycamore, rangiora and hawthorn.</p> <p>b. Other weedy exotic species that could be problematic in the future include Darwin's barberry, cotoneaster, ivy and buddleja (buddleia).</p>
2. Fragmentation/loss of continuity/edge effects	<p>a. To ensure the long-term viability of the UBMA, a vegetation buffer is desirable to guard against adverse effects of fragmentation and edge.</p>

A10.2.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	<p>a. Many large sycamore trees are present within the Port Chalmers Town Belt, and seedlings and suckers are sprouting vigorously along the bush margins, including road verges and train tracks. This species is out-competing the native species that would have historically dominated the UBMA. Control of the weedy exotic species, particularly sycamore, to preserve indigenous biodiversity values, is desirable.</p> <p>b. Amenity plantings around the lookout are native species that are inappropriate for coastal Otago; these include purple akeake, Chatham Island tree daisy and Chatham Island astelia. Replacing these species with more appropriate species would help with weed-management of the wider area, and improve the usefulness of these plantings as a vegetation buffer.</p>
2. Fragmentation/loss of continuity/edge effects	<p>a. To help protect the long-term viability of this UBMA, a boundary extension to include the adjacent gully system and vegetation contiguous with the UBMA (areas likely to support similar and complimentary species), would provide buffering from future disturbance and minimise edge effects.</p>

## A10.3 Back Beach, Port Chalmers

### A10.3.1 Description of the area

The Back Beach reserve is a mixture of vegetation types along a predominantly steep and unstable coastal margin. The western and eastern sides of the reserve are comprised largely of exotic plant species, while most of the native biodiversity is concentrated around the southern point of the reserve.

### A10.3.2 Biodiversity values to be protected

1. **Vegetation/Habitat types:**
  - a. The west side of the reserve is dominated by large Monterey pines, and indigenous biodiversity values along this stretch of the UBMA are low. The southernmost point retains the greatest proportion of indigenous vegetation cover - notably ngaio, broadleaf, whiteywood, *Helichrysum lanceolatum*, *Hebe elliptica* and lowland flax. *Eucalyptus* species occurs in patches along the eastern side of the reserve, interspersed with occasional ngaio and whiteywood. Exotic, *Eucalyptus* species can provide good forage for native bird species. The eastern side of the reserve is weedy with *Muehlenbeckia australis*, ivy and banana passion fruit growing over woody vegetation such as Scottish broom, rangiora, elderberry, and sycamore.
2. **Rare and notable species, habitats or communities:**
  - a. The elongated shape of the UBMA makes it vulnerable to disturbance and pest weeds, and this feature reduces its overall value as habitat. Nevertheless, the coastal vegetation that persists at the site is "At Risk" based on the Threatened Environment Classification (having between 20-30 percent of the original vegetation cover remaining nationally and a high degree of habitat fragmentation). A small beetle, *Microspha litorea*, Family Staphylinidae, subfamily Microsilphinae, occurs at low tide level on the beach at Port Chalmers and is possibly not widely distributed elsewhere in Dunedin city.
3. **Species diversity and Naturalness:**
  - a. It is estimated that 61 percent of plant species over the UBMA are indigenous.

### A10.3.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	<ol style="list-style-type: none"> <li>a. Exotic plant pests include sycamore, hawthorn, gorse, Scottish broom, banana passion fruit, boxthorn and crack willow.</li> <li>b. Animal pests have not been fully assessed; no animal sign was noted at the UBMA during a field survey.</li> </ol>
2. Fragmentation/loss of continuity/edge effects	<ol style="list-style-type: none"> <li>a. To ensure the long-term viability of the UBMA, a vegetation buffer is desirable to guard against adverse effects of fragmentation and edge.</li> </ol>

#### A10.3.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	<p>a. The indigenous biodiversity values of the Back Beach UBMA could be greatly enhanced by pest weed control, particularly at the southern point where the highest proportions of native plants occur. On the north side of the road several mature hawthorns could be removed in order to reduce their spread, while potential pest plants along the harbour side of the road include gorse and <i>Echium pininana</i>.</p> <p>b. Sycamore and alder form extensive stands over 10m tall around the marina and boat sheds, and the control of these plants could help ensure the long-term viability of the UBMA.</p> <p>c. At the eastern most edge of the reserve there is a well-established population of boxthorn. This is a particularly noxious pest which could be removed and replaced with more appropriate native plantings.</p>
2. Fragmentation/loss of continuity/edge effects	<p>a. The current UBMA could be extended to include the coastal margin of Watson Park, to provide a corridor of protected habitat which could be further improved with native plantings. In recognition of areas of important habitat, and to recognise potential habitat connections, consideration could be given to including the adjacent Rakiriri (Goat) and Kamau Taurua (Quarantine) Islands into this UBMA.</p>

## A10.4 Kaikorai Estuary

### A10.4.1 Description of the area

This UBMA is composed of a mixture of riparian margin and wetland/estuarine habitat, some of which has been drained, that extends across the Southern Motorway. To the north of the motorway, the UBMA comprises a generous riparian strip alongside Abbott's Creek, and to the south, there is a wetland area that takes in Kaikorai Stream and continues to the east of Brighton Road.

### A10.4.2 Biodiversity values to be protected

1. **Vegetation/Habitat types:**
  - a. Abbott's Creek itself has no indigenous riparian vegetation and is choked with weedy exotic grasses. The UBMA also contains a small part of drained wetland on the true right of Abbott's Creek which contains some patches of indigenous wetland vegetation, including several patches of sedges, rushes and flax. To the south of the motorway the UBMA comprises a contiguous strip of estuary on the true right of Kaikorai Stream extending to the east as far as Brighton road; this area has estuarine vegetation and rank grass with flax and toetoe on the higher points along the road edge. Some *Pittosporum tenuifolium* have been planted along the bund created by straightening the mouth of Abbott's Creek. The indigenous estuary vegetation is largely saltmarsh ribbonwood, *Carex secta* and jointed wire rush. Much of the indigenous vegetation has been replaced by weedy exotic species, particularly cocksfoot, gorse and crack willow, which is now the dominant cover along this stretch of Kaikorai Stream. The riparian strip along a bend of Kaikorai Stream on the east side Brighton Road is a mown area with some landscape plantings of natives.
2. **Rare and notable species, habitats or communities:**
  - a. On the northern side of the motorway the indigenous vegetation has been mostly lost, apart from a few scattered patches within the drained wetland on the true right of Abbott's Creek. On the immediate southern side of the motorway, significant indigenous vegetation remains, although in a degraded state.

The habitat supports indigenous fauna; for example spotted shag (*Phalacrocorax punctatus*). The wetland vegetation that persists at the site is "At Risk" based on the Threatened Environment Classification having between 20-30 percent of the original vegetation cover remaining nationally, and a high degree of habitat fragmentation; no field assessment of the wetland has been conducted.

3. *Species diversity and Naturalness:*

- a. Vegetation of the wetland and riparian margins is estimated at having between 25-55 percent indigenous plant species.

A10.4.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	a. Pest plant species are predominantly crack willow, gorse and blackberry.
2. Fragmentation/loss of continuity/edge effects	a. The northern portion of the mapped area provides an important freshwater corridor and associated biodiversity linkages. To ensure the long-term viability of the UBMA, a vegetation buffer is desirable to guard against adverse effects of fragmentation and edge effects in both terrestrial and freshwater/estuarine systems.

A10.4.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	a. Not assessed.
2. Fragmentation/loss of continuity/edge effects	<ol style="list-style-type: none"> <li>a. Indigenous vegetation, primarily lowland flax, has persisted along the highway margin and biodiversity gains could be made here and along both Abbott's Creek and the adjacent wetland, through road-side, riparian and wetland indigenous plantings.</li> <li>b. Consideration could be given to extending the mapped UBMA, as opportunities arise, to the south of the motorway to include the estuary and the littoral areas. The Kaikorai Estuary is important habitat for indigenous animals. The UBMA could conceivably extend from the motorway and connect the estuary to the Island Park reserve, which contains indigenous terrestrial and wetland biodiversity values.</li> </ol>

## A10.5 Frasers Gully

A10.5.1 Description of the area

Frasers Gully UBMA falls entirely within the Frasers Gully Recreation Reserve and is subject to the "Hills Reserves Management Plan". Frasers Gully Recreation Reserve is an important area of vegetation in the suburbs surrounding Dunedin city, providing a tree-dominated landscape in an otherwise urban setting. The UBMA encompasses steep gully slopes and ridges surrounding the upper reaches of the Kaikorai Stream and tributaries. Vegetation is a mix of mature secondary native forest, regenerating forest and planted exotic species.

A10.5.1.1 Description of urban environment allotments

The following properties, which are located either entirely or partly within this UBMA, may contain land which qualifies as an urban environment allotment as defined in s76(4C) of the Resource Management Act 1991:

- 62 and 78 Frasers Road; 8 Helensburgh Road.

A10.5.2 Biodiversity values to be protected

1. *Vegetation/Habitat types:*

- a. The UBMA contains six vegetation and habitat types, and 'The Hills Reserves Management Plan' contains much information on the vegetation of the area. The UBMA has a remnant podocarp/broadleaved forest at the top of a planted slope, at the head of a gully; this area is composed of largely intact indigenous podocarp forest. There is a grassed picnic area and playing fields in Ellis Park, which are comprised of a managed playing turf with native and exotic specimen trees. The south-west facing slopes of the UBMA are steep and have small pockets of remnant indigenous cover (i.e. tree fuchsia and whiteywood with a semi-intact understory) largely overtopped by sycamores and *Muehlenbeckia australis*, with other weedy species also present, including Darwin's barberry. There is a c. 300m<sup>2</sup> patch of this habitat which has been cleared, and is now composed almost entirely of Scottish broom.
- A 50-60m<sup>2</sup> patch of silver beech has been planted on the lower slopes over the last 20 years. The lower reaches of Fraser's Creek have a fairly complete canopy cover, including some large remnant patches of tall (>8m) kanuka, complemented with a range of c. 10-20 year old native plantings. The native trees are interspersed with occasional large sycamore, alder, willow and laurel. The south-east facing slope (exforestry) has a c. 3ha area of 2 -3 year old re-vegetation plantings; these plantings grow amongst stumps of cleared exotic forestry. This area extends to the foot of the slope and along the flats. Many of the plants are well established but are competing with the densely regenerating Himalayan honeysuckle and Scottish broom. The UBMA also has patches of unimproved pasture, which covers most of the true right of Fraser's Creek.

2. *Rare and notable species, habitats or communities:*

- a. The podocarp/broadleaved forests in the upper parts of the gully are classified as "Chronically Threatened" under the Threatened Environments Classification. They represent a highly fragmented habitat type with only 10-20 percent of indigenous cover left, nationally. The native dwarf mistletoe *Korthalsella salicornioides* (classified as 'At Risk-Naturally Uncommon') is known from the site. The most significant threats to further losses of biodiversity in these habitats are further fragmentation, and invasive plant and animal species.

3. *Species diversity and Naturalness:*

- a. The vegetation of Frasers Gully is estimated to be between 41-86 percent indigenous.

A10.5.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	a. Pest plant species include sycamore, elderberry, gorse, Scottish broom, blackberry, crack willow, convolvulus, buddleja (buddleia) and hawthorn. Animal pests have not been assessed but no feral animal sign was noted at the site during a field inspection.
2. Fragmentation/loss of continuity/edge effects	a. To ensure the long-term viability of the UBMA, a vegetation buffer is desirable to guard against adverse effects of fragmentation and edge.

A10.5.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	a. The major threats to biodiversity in this UBMA are the sycamores, elderberry and hawthorn. These species are all relatively shade tolerant, and are all establishing under the canopy of the native bush. The sycamores are a particular issue in the lower reaches of the stream where they are clearly outcompeting natives and could be removed. The elderberries and hawthorns could be removed to improve the long-term viability of the UBMA.

<p>2. Fragmentation/loss of continuity/edge effects</p>	<p>a. The entire area contained within Frasers Gully UBMA has very high biodiversity and habitat values, and constitutes an important ecological corridor between urban and rural areas. Consideration could be made to extending the boundaries to cover the private land and gullies to the north of the current mapped UBMA, and to the west, to include the vegetated area around the nearby water reservoir. These areas represent important buffer zones which can reduce external impacts by minimising edge effects.</p>
---	--

## A10.6 Wakari Reserve and Transmission line easement

### A10.6.1 Description of the area

This UBMA contains a significant area of bush adjacent to the Halfway Bush substation, which comprises a remnant podocarp/broadleaved forest on southeast facing banks. The designated dog walking area to the north has areas of well-established mixed amenity plantings of several exotic and native species. Well established 10-20 year old exotic trees create a parkland landscape in the northern part of the UBMA. Some of these planted species are inappropriate in that they are not found naturally in the area; e.g. *Sophora longicarinata*.

#### A10.6.1.1 Description of urban environment allotments

The following properties, which are located either entirely or partly within this UBMA, may contain land which qualifies as an urban environment allotment as defined in s76(4C) of the Resource Management Act 1991:

- 4, 5 and 6 Kereru Close; 48 Wakari Road.

### A10.6.2 Biodiversity values to be protected

#### 1. *Vegetation/Habitat types:*

- The UBMA is composed of three spatially distinct habitat/vegetation types: a remnant podocarp/broadleaved forest on the southeast facing banks adjacent to the substation; a well-established mixed amenity planting of several exotic and native species around the designated dog walking area to the north; and native plantings in and around the drainage channel along the southwest boundary near Taieri Road. The remnant vegetation is dominated by tree fuchsia and whiteywood, with occasional totara and other woody trees and shrubs. The understory is disturbed, with large areas of exposed soil. Plants in the understory include occasional hen and chicken fern, *Blechnum chambersii* and some epiphytic *Asplenium flaccidum*. Scattered patches of prickly shield fern have survived outside of the bush cover, and extend under the exotic tree plantings. Well established 10-20 year old exotic trees create a parkland landscape in the northern part of the area, primarily composed of silver birch, fir, oak, and cypress. The native plantings around the drainage gully are well established and provide some cohesive vegetation cover, and protect the banks from erosion.

#### 2. *Rare and notable species, habitats or communities:*

- The podocarp/broadleaved forest on the steep southeast facing banks is classified as "At Risk" under the Threatened Environments Classification. It represents a habitat type with only 20-30 percent of indigenous cover left nationally. The most significant threats to further losses of biodiversity in these habitats are further fragmentation and invasive plant and animal species.

#### 3. *Species diversity and Naturalness:*

- The vegetation of the UBMA is estimated to be 64 percent indigenous.

### A10.6.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	<p>a. Pest plant species include sycamore, elderberry, gorse, Scottish broom, blackberry and ragwort.</p> <p>b. Animal pests have not been assessed but no feral animal sign was noted at the site during a field inspection.</p>
2. Fragmentation/loss of continuity/edge effects	<p>a. Minimal buffer to guard against adverse effects of fragmentation and edge effects.</p>

### A10.6.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	<p>a. The major threats to biodiversity in this UBMA are the sycamores, Scottish broom and blackberry. The shade tolerant sycamores are establishing under the canopy of the native bush, and threaten to out-compete them. Removal of sycamores is therefore a priority for this UBMA.</p>
2. Fragmentation/loss of continuity/edge effects	<p>a. Consideration could be given to an extending the UBMA to include the adjacent steep vegetated slopes to the east. Although the increase in total biodiversity resulting from these inclusions is likely to be small, it has the advantage of creating a green corridor between Wakari and the Balmacewen Golf Course. These areas represent important buffer zones which could reduce external impacts by minimising edge effects.</p>

## A10.7 Brockville slopes, Kaikorai Stream

### A10.7.1 Description of the area

The UBMA is composed of two spatially disjunct areas: the vegetated southern slopes of Brockville and the grassed open spaces adjacent to Kaikorai Stream, including Kaikorai Valley High School playing fields.

#### A10.7.1.1 Description of urban environment allotments

The following properties, which are located either entirely or partly within this UBMA, may contain land which qualifies as an urban environment allotment as defined in s76(4C) of the Resource Management Act 1991:

- 133 Brockville Road; 34 Etrick Street.

### A10.7.2 Biodiversity values to be protected

#### 1. *Vegetation/Habitat types:*

- The remnant vegetation on the southern slopes of Brockville is highly diverse, with a canopy dominated by kanuka and whiteywood, with emergent totara and rimu. The understory is largely intact, with many species of small trees and shrubs, sedges and ferns throughout. Exotic species are uncommon under the intact canopy, and where they are present, they occur mostly in the lower and upper bush margins. The area around Kaikorai Stream and Kaikorai Valley High School has not been assessed (this land is managed by the Ministry of Education) but aerial photographs indicate very little indigenous vegetation remains here. Vegetation on the true right of the stream, within the boundary of the UBMA, appears to be plantation forestry some of which has been cleared.

#### 2. *Rare and notable species, habitats or communities:*

- The podocarp/broadleaved forest on the steep south facing slopes of Brockville is classified as

"Acutely Threatened" under the Threatened Environments Classification. It represents a habitat type that has less than 10 percent of indigenous cover left, nationally.

3. *Species diversity and Naturalness:*
  - a. The vegetation of the UBMA is estimated to be 80 percent indigenous.

#### A10.7.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	a. Pest plant species within the Brockville slopes include sycamore, elderberry, Chilean flame creeper, gorse, Scottish broom, blackberry, holly, cotoneaster and cherry laurel. Animal pests have not been assessed but no feral animal sign was noted at the site during a field inspection.
2. Fragmentation/loss of continuity/edge effects	a. To ensure the long-term viability of the UBMA, a vegetation buffer is desirable to guard against adverse effects of fragmentation and edge.

#### A10.7.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	<ol style="list-style-type: none"> <li>a. The major threats to biodiversity in this reserve are the sycamores and cherry laurel, which are growing prolifically along the roadside, and encroaching on the native bush; these could be removed as a priority.</li> <li>b. Several shade tolerant species are present under the intact indigenous forest canopy, predominantly elderberry and hawthorn. These species could be actively managed to prevent future weed problems.</li> <li>c. Cotoneaster, holly, and Chilean flame creeper are all currently at low density, but have the potential to become serious plant pests.</li> </ol>
2. Fragmentation/loss of continuity/edge effects	<ol style="list-style-type: none"> <li>a. The Brockville slopes retain high indigenous biodiversity values and consideration could be made to extend the boundary of the mapped UBMA to include the adjacent and contiguous bush. This boundary extension would result in the inclusion of several hundred square meters of intact indigenous vegetation, including several mature podocarp trees. Bush habitat adjacent to the UBMA represents an important buffer zone which could help to reduce external impacts by minimising edge effects and improving connectivity.</li> <li>b. Apart from some relatively recent plantings (c. 5 years old) on the banks of Kaikorai Stream, the area within the mapped UBMA, but outside of the Brockville slopes, contains little terrestrial biodiversity value. The stream itself, however, and the values associated with the riparian habitat are important in forming linkages. The area needs substantive assessment, along with the indigenous biodiversity values of the exotic plantation on the true right of the stream, to determine the appropriate management of any threats present.</li> </ol>

## A10.8 Caversham Valley

### A10.8.1 Description of the area

This UBMA is composed of the south facing slopes of Caversham valley, including the following Reserves: Caversham, Lookout Point, Elgin, Caversham Valley Forest, Caversham Station, Forfar Street and Sidey Park. A high voltage transmission line runs through the UBMA parallel with the valley. Vegetation clearance along this

easement has created a corridor of disturbed vegetation that is highly weedy.

#### A10.8.1.1 Description of urban environment allotments

The following properties, which are located either entirely or partly within this UBMA, may contain land which qualifies as an urban environment allotment as defined in s76(4C) of the Resource Management Act 1991:

- 9 and 11 Robinson Street; 123 Mornington Road; 146 Caversham Valley Road; 15, 18, 21, 22 and 26 Lancefield Street; 179 and 183 Mornington Road; 20 and 32 Thomson Street; 22 and 24 Wills Street; 27 Bridge Street; 43, 49 and 51 Lindsay Road; 49 Forfar Street; 8 McCracken Street; 84 Barnes Drive.

#### A10.8.2 Biodiversity values to be protected

1. **Vegetation/Habitat types:**
  - a. The dominant vegetation cover of the south facing slopes of the Caversham valley is sycamore, with scattered patches of larger trees such as *Eucalyptus*, particularly on the steeper slopes, and pine. Under the exotic canopy, secondary growth whiteywood and remnant tree fuchsia are thriving. The vegetation of the high voltage transmission line is dominated by *Muehlenbeckia australis* and exotic woody weeds such as gorse and Scottish broom.
2. **Rare and notable species, habitats or communities:**
  - a. The vegetation that persists on the lower slopes of the UBMA is "Acutely Threatened" based on the Threatened Environment Classification, having less than 10 percent of the original vegetation cover remaining nationally, and a high degree of habitat fragmentation. The upper slopes are "At Risk" having between 20-30 percent of the original vegetation cover remaining nationally. Caversham Valley Forest Reserve has been identified as an area with important conservation values due to its population of the endemic velvet worm (*Peripatus species*).
3. **Species diversity and Naturalness:**
  - a. The vegetation of the UBMA is estimated to be 39-41 percent indigenous.

#### A10.8.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	<ol style="list-style-type: none"> <li>a. The most serious plant pest in the UBMA is sycamore; it forms extensive stands covering most of the area. Other pest trees include holly, hawthorn, cherry laurel and elderberry. Other woody weeds include gorse, Scottish broom and Darwin's barberry. Herbaceous weeds include aluminium weed, blackberry and Himalayan honeysuckle.</li> <li>b. Animal pests have not been assessed but no feral animal sign was noted at the site during a field inspection.</li> </ol>
2. Fragmentation/loss of continuity/edge effects	<ol style="list-style-type: none"> <li>a. To ensure the long-term viability of the UBMA, a vegetation buffer is desirable to guard against adverse effects of fragmentation and edge.</li> </ol>

#### A10.8.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	<ol style="list-style-type: none"> <li>a. The highest biodiversity values of the UBMA are contained within the Caversham Bush Reserve, and management within this reserve could include control of sycamore and hawthorn within the bush remnant. Control of gorse, Himalayan honeysuckle and other plant pests that are competing with native plantings, is also desirable.</li> </ol>

<p>2. Fragmentation/loss of continuity/edge effects</p>	<p>a. Reserves to the east of Caversham Bush Reserve all have relatively low biodiversity values, with canopies largely dominated by exotic species, and a large proportion of exotic pest plants in the understory. These areas do, however, perform an important buffering function and provide a green corridor for indigenous fauna between Caversham Bush Reserve and the Town Belt UBMA.</p> <p>b. The entire UBMA is likely to provide habitat for <i>Peripatus</i> species.</p>
---	---

## A10.9 Ross Creek/Balmacewen

### A10.9.1 Description of the area

This UBMA is composed of two disconnected parts; to the north is Balmacewen Golf Course (both sides of Balmacewen Road) with Ross Creek and its generous riparian margins forming the northern boundary. The UBMA then extends in a south west direction, skipping over the 706 playing fields of Nairn Street Reserve, Bishopscourt and Balmacewen Intermediate, to continue along the Kaikorai Common.

#### A10.9.1.1 Description of urban environment allotments

The following properties, which are located either entirely or partly within this UBMA, may contain land which qualifies as an urban environment allotment as defined in s76(4C) of the Resource Management Act 1991:

- 10, 12 and 14 Polwarth Road; 125 Balmacewen Road; 36 Shetland Street.

### A10.9.2 Biodiversity values to be protected

#### 1. *Vegetation/Habitat types:*

- a. The Kaikorai Common contains a re-vegetated riparian strip and a constructed wetland. The constructed wetland may provide some habitat for indigenous fauna, and may possibly be performing some ecological services in terms of improving water quality (based on a cursory field assessment). The Balmacewen Golf Course has two parts - a mown area of exotic grass interspersed with native and exotic shelter belt (based on aerial photos) and an extensive patch of remnant podocarp/broadleaved forest adjacent to Ross Creek itself. Further information on the vegetation of Ross Creek is contained within the 'Hills Reserves Management Plan'.

#### 2. *Rare and notable species, habitats or communities:*

- a. Kaikorai Commons Reserve and the adjacent planted area around Shetland Street Organic Garden contain low level indigenous biodiversity values, and those that are there have resulted from community planting efforts. Two species listed on the protected indigenous species list are present here - wind grass (*Anemanthele lessoniana*) and narrow-leaved tree daisy (*Olearia lineata*), but both species have been planted (i.e. are not remnants of the original vegetation cover). As a large, intact green space, the Balmacewen Golf Course is likely to be an important habitat for indigenous fauna; the extent of the contribution, however, has not been fully assessed. Ross Creek Reserve and the adjoining Craigieburn Reserve have areas of remnant podocarp/broadleaved forest and regenerating kanuka scrub, with some exotics.

The vegetation within the UBMA is "At Risk" based on the Threatened Environment Classification having between 20-30 percent of the original vegetation cover remaining nationally, and a high degree of habitat fragmentation. The northern parts of the UBMA are likely to provide habitat for *Peripatus* species, and *Peripatus* are known to occur at Ross Creek under the native forest canopy.

#### 3. *Species diversity and Naturalness:*

- a. The vegetation of the UBMA is estimated to be 49-60 percent indigenous.

### A10.9.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	<p>a. No pest species of any significance have been found in the UBMA, based on a single cursory field survey. There is likely to be some plant pests, however, in the Balmacewen Golf Course - especially in the forest area on the northern boundary adjacent to Ross Creek.</p> <p>b. Pest species in the Ross Creek Reserve include sycamore, elderberry, Chilean flame creeper, gorse, Scottish broom, blackberry, holly, cotoneaster and cherry laurel.</p> <p>c. Animal pests have not been assessed but no feral animal sign was noted at the site during a field inspection.</p>
2. Fragmentation/loss of continuity/edge effects	<p>a. Minimal buffer to guard against adverse effects of fragmentation and edge in both terrestrial and freshwater/estuarine systems.</p>

#### A10.9.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	<p>a. Although there are no pest species known that could pose a significant threat to indigenous biodiversity, management of sycamore is the highest priority within the Ross Creek Reserve.</p>
2. Fragmentation/loss of continuity/edge effects	<p>a. Kaikorai Commons could be removed from the UBMA without significantly compromising the overall biodiversity values of the area. The biodiversity values associated with the planted area in Kaikorai Commons are small, despite plantings of locally threatened species. Biodiversity values of this area are probably sufficiently protected by interests of the community groups responsible for the plantings.</p> <p>b. The biodiversity values of parts of the Balmacewen golf course are likely to be small, but a more detailed field assessment is required to confirm this view.</p> <p>c. Consideration could be given to extending the UBMA boundary to include the entire Ross Creek Reserve and Craigieburn Reserves. These areas contain significant indigenous vegetation and are important habitat for indigenous fauna, including <i>Peripatus</i>. The addition of these areas to the UBMA would help to secure the connections between this UBMA and the Leith Valley.</p>

## A10.10 Ocean Grove

### A10.10.1 Description of the area

This UBMA is composed of a coastal strip of varying width from St Clair beach to the gun emplacements at the north end of Tomahawk beach, and extends inland to Victoria Road including several playing fields, the Chisholm Links Golf Course and Andersons Bay Cemetery. The majority of the vegetation in the UBMA is grassed playing fields, with occasional amenity plantings and windbreaks.

### A10.10.2 Biodiversity values to be protected

1. **Vegetation/Habitat types:**
  - a. The coastal vegetation on the fore dune is almost entirely exotic (i.e. marram, lupins). The back dune and cliff vegetation is largely composed of native species not found naturally in Dunedin city (i.e. *Coprosma repens*, *Olearia traversiorum*). Weedy *C. repens* forms large areas of intact scrub, particularly around John Wilson Drive and the old Lawyers Head Car Park, and further along the coast

around to the Tomahawk gun emplacements. Aerial photography indicates that there are no areas of intact indigenous vegetation remaining within the golf course or cemetery. The notable exception, to this pattern of weedy vegetation cover, is the turf communities; the steep areas of the cliff are covered with patches of *Hebe elliptica* with a ground cover of *Leptinella dioica*, *Samolus repens*, *Selliera radicans*, *Juncus antarcticus* and other turf species. There are also patches of glasswort and native ice plant throughout the UBMA. Sporadic patches of ngaio and *Hebe elliptica* also occur along the entire span of the UBMA.

2. *Rare and notable species, habitats or communities:*

- a. The turf communities on Lawyers Head may provide habitat for the "At Risk-Declining" species *Lepidium tenuicaule*, and although there is little indigenous vegetation present along this stretch of coastline, there is significant habitat for indigenous fauna, particularly gulls, oystercatchers and penguins. Lawyers Head is also habitat for the spotted shag (*Strictocarbo punctatus*), while the variable oystercatcher (*Haematopus unicolor*) and red-billed gulls (*Larus novaehollandia*) are present in the grassed playing fields.

The vegetation within the UBMA is mostly "At Risk" based on the Threatened Environment Classification having between 20-30 percent of the original vegetation cover remaining nationally, and a high degree of habitat fragmentation. The vegetation towards the eastern half of the site is "Acutely Threatened" based on the Threatened Environment Classification, having less than 10 percent of the original vegetation cover remaining nationally, and a high degree of habitat fragmentation.

3. *Species diversity and Naturalness:*

- a. The vegetation of the UBMA is estimated to be 63 percent indigenous.

A10.10.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	a. Animal pests have not been assessed; hare sign was found along the cliff tops at Lawyer's Head during a field survey.
2. Fragmentation/loss of continuity/edge effects	a. Minimal buffer to guard against adverse effects of fragmentation and edge effects.

A10.10.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	<p>a. While the majority of the vegetation in the UBMA is not indigenous, there are very few pest plants present, and those that are present appear to be adequately controlled by the current management regime.</p> <p>b. A small, stunted population of the exotic ngaio <i>Myoporum insulare</i> is used as a dune stabilisation species on the coastal side of Kettle Park. This is a Tasmanian species which hybridises freely with the native ngaio <i>M. laetum</i>. Ideally these few plants could be replaced over time with another species.</p>

<p>2. Fragmentation/loss of continuity/edge effects</p>	<p>a. Consideration could be given to extending the boundary of the UBMA to take in adjacent areas of coastal vegetation towards Smails Beach. At Smails beach there is a viable population of a stiletto fly <i>Anabarhynchus fuscofemoratus</i> (Diptera, family Therevidae); this species occurs on sand from the fore dune to the back dunes. The habitat for this fly is exposed sand surrounded by low native grasses and vegetation. This is the only place in the world that this insect is currently known to occur, and therefore the habitat warrants protection. Vehicles driving on dunes pose a risk to this species.</p> <p>b. Many exotic-vegetation dominated areas of the UBMA, including playing fields, the golf course and cemetery, are likely to contain important habitat for coastal bird species. In terms of increasing habitat connectivity, consideration could be given to including Tomahawk Lagoon into this UBMA. This area represents an important buffer zone which could help reduce external impacts by minimising edge effects.</p>
---	---

## A10.11 Chingford Park

### A10.11.1 Description of the area

The boundaries of this UBMA are aligned with the Chingford Park Recreation Reserve. The vegetation cover of the reserve/UBMA is made up of a wide range of exotic species, planted in dense belts around playing fields. The area forms part of a biodiversity corridor along with an area of adjacent kanuka scrub, which links the residential areas of north east valley with indigenous habitat further along the valley towards Bethune's Gully. A tributary of Lindsay Creek running through a gully in the forested area is largely surrounded by native ferns and shrubs, and this gully extends uphill beyond the boundary of the UBMA into a contiguous area of native bush, with primarily kanuka and tree fuchsia as canopy species. This gully has not been the subject of a field assessment, but is important in the context of contributing to a corridor of habitat joining northeast valley with Bethune's Gully.

### A10.11.2 Biodiversity values to be protected

1. *Vegetation/Habitat types:*
  - a. Two major habitats exist: European beech forest with indigenous understory, and kanuka scrub. The south facing slopes at the northern boundary of the reserve have a large area of c.50 year old European beech trees. The beech canopy has provided cover for a range of native species, particularly ferns, which are establishing a relatively diverse understory. This forested area contains a gully with a running claybottomed creek, a small tributary of Lindsay Creek. The gully to the east appears to contain similar kanuka scrub, as does the large area of vegetation on the privately owned south facing slopes further up Norwood Street. The native understory and riparian communities developing beneath the beech forest are of relatively high indigenous diversity.
2. *Rare and notable species, habitats or communities:*
  - a. The native understory and riparian communities developing beneath the European beech are of relatively high indigenous diversity with a low prevalence of weedy exotic species. The kanuka scrub is notable in that it is fairly large and contiguous with Chingford Park. It has a relatively intact canopy, provides good protection of the creek, and has low numbers of weedy species. This UBMA is "At Risk" based on the Threatened Environment Classification having between 20-30 percent of the original vegetation cover remaining nationally.
3. *Species diversity and Naturalness:*
  - a. The vegetation of the UBMA is estimated to be 81-84 percent indigenous.

### A10.11.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	<p>a. In Chingford Park sporadic incidences of Darwin's barberry, holly and cotoneaster have been reported. Towards the western boundary of the park, c.10-20 year old sycamores are becoming increasingly prolific.</p> <p>b. In the kanuka scrub there are a few large trees of holly and hawthorn growing on the margins.</p> <p>c. Animal pests have not been assessed but no animal sign was seen during a field assessment.</p>
2. Fragmentation/loss of continuity/edge effects	<p>a. Minimal buffer to guard against adverse effects of fragmentation and edge effects.</p>

#### A10.11.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	<p>a. Consideration could be given to gradually and progressively removing sycamores that are growing within the western area of Chingford Park; this will help to slow down the invasion of sycamore seedlings into the bush margin. The tree weeds around the margin of the kanuka scrub to the north of the reserve could be removed fairly easily and in doing so would remove these as potential seed sources.</p>
2. Fragmentation/loss of continuity/edge effects	<p>a. The long-term viability of the Chingford Park UBMA could be improved if the boundary were extended to include the adjacent kanuka scrub. The structure of the intact mature European beech canopy of Chingford Park is complementary to the regenerating kanuka scrub, and both areas are relatively free of noxious plant pests. These areas, together, form a biodiversity corridor which links the residential areas of North East Valley with indigenous habitat further up the valley. They could together, also form parts of a future corridor linking Chingford Park to Bethune's Gully via Campbells Road.</p> <p>b. The neighbouring gully and faces, adjacent to the mapped Chingford Park UBMA, contain some high quality kanuka scrub. These areas represent important buffer zones which can help reduce external impacts by minimising edge effects.</p>

## A10.12 Buccleugh Street, North East Valley

### A10.12.1 Description of the area

This UBMA is composed of two components: a large gully area including Buccleugh Street Reserve and adjacent private property, and a smaller area including Dalmore Street Reserve and the adjacent private property.

#### A10.12.1.1 Description of urban environment allotments

The following properties, which are located either entirely or partly within this UBMA, may contain land which qualifies as an urban environment allotment as defined in s76(4C) of the Resource Management Act 1991:

- 1 – 73, 38, 42, 46, 48, 110 and 114 Buccleugh Street; 19 and 36 Barclay Street.

### A10.12.2 Biodiversity values to be protected

1. *Vegetation/Habitat types:*

- a. The large gully area including Buccleugh Street Reserve and adjacent private property has a south facing gully of tall vegetation dominated by exotic species, primarily wilding sycamore with peripheral plantings of *Eucalyptus* species and crack willow. There is also an area of kanuka scrub in the centre the reserve. The vegetation is mostly between 5-10m tall, and forms a fairly complete cover, aided in places by a sprawling cover of *Muehlenbeckia australis*. The understory has a large native component, primarily ferns, but also *Astelia*, *Coprosma* species and red mapou. Light levels in the understory are likely to be too low for sycamore seed to germinate. Larger trees of regenerating whiteywood and remnant tree fuchsia are present throughout. A clay-bottomed creek runs the length of the UBMA, and there is a fairly continuous native riparian margin along its length. At the northern end, some forestry species have been recently felled. The small area of the UBMA that includes Dalmore Street Reserve and adjacent private property is surrounded by a south-facing patch of sycamore, with patches of kanuka spread throughout. The bush margin is dominated by weedy species.
2. *Rare and notable species, habitats or communities:*
    - a. The vegetation within the UBMA is mostly "At Risk" based on the Threatened Environment Classification having between 20-30 percent of the original vegetation cover remaining nationally, and a high degree of habitat fragmentation.
  3. *Species diversity and Naturalness:*
    - a. The vegetation of the UBMA is estimated to be 62-74 percent indigenous.

#### A10.12.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	<ol style="list-style-type: none"> <li>a. The major plant pest found in both areas of the UBMA is sycamore; this species comprises most of the biomass of the UBMA. Weeds are present in the understory where there are gaps in the canopy; notably ivy, male fern and rangiora.</li> <li>b. Other major pests include hawthorn, Himalayan honeysuckle and old man's beard. Lesser pests are blackberry, gorse and crack willow.</li> <li>c. Animal pests have not been assessed; possum sign was found in the Buccleugh Street reserve during a field survey.</li> </ol>
2. Fragmentation/loss of continuity/edge effects	<ol style="list-style-type: none"> <li>a. Not assessed.</li> </ol>

#### A10.12.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	<p>a. There are no immediate threats to indigenous biodiversity at this UBMA from plant or animal pests - the limited indigenous biodiversity values that do exist are improved by the habitat created by the exotic plants, particularly the sycamore canopy.</p> <p>b. Any disturbance of the canopy would likely cause a proliferation of weedy species. There is, however, little evidence of succession of woody species in these areas, possibly because of predation and/or grazing of seeds and young plants by exotic animals, and possibly compounded by the lack of habitat in the canopy for native avifauna.</p> <p>c. Unless future management includes under-planting with shade tolerant native tree species, succession to a native canopy is likely to be a very long-term prospect within this UBMA.</p>
2. Fragmentation/loss of continuity/edge effects	a. Not assessed.

### A10.13 Somerville Street

#### A10.13.1 Description of the area

This UBMA is made up of three areas: steep vegetated faces above Marne Street and following Larnach Road as far as the roundabout; the Southeast facing slopes from Dunrobin Street to Andersons Bay Inlet running parallel to Somerville Street; and the continuation of the same southeast facing slopes from above Dunrobin Street to Highcliff Road.

#### A10.13.1.1 Description of urban environment allotments

The following properties, which are located either entirely or partly within this UBMA, may contain land which qualifies as an urban environment allotment as defined in s76(4C) of the Resource Management Act 1991:

- 1 Larnach Road; 11 Belford Street; 11 Glendevon Place; 114, 116, 118, 120, 121 and 122 Dunrobin Street; 47, 55, 57, 59, 65, 69, 73, 75, 79, 81, 83, 87, 89, 95, 129, 131, 133, 135, 159, 195, 197, 197A, 199, and 201 Somerville Street; 14 and 16 Tower Avenue; 7, 9, 15, 17, 19, 21, 23, 39, 41, 43, 45, 47, 49, 51 and 57 Glendevon Place; 16 Murano Street; 24A, 24B, 24C, 24D, 24E, 24F, 24G, 24H, 24I, 24J and 24K Archibald Street; 3, 5, 7 and 9 Belford Street; 8 Marne Street.

#### A10.13.2 Biodiversity values to be protected

##### 1. *Vegetation/Habitat types:*

- a. The almost sheer faces above Marne Street contain patches of relatively diverse and intact vegetation, with patches of broadleaf, tree fuchsia, whiteywood, *Coprosma* species, kowhai, and totara. Several fern species are growing at the base of the cliffs, as well as perching in rock crevices above. On areas above Larnach Road there is a more typical mix of secondary growth whiteywood and tree fuchsia, interspersed with weeds, and largely smothered by *Muehlenbeckia australis*. The slopes above Somerville Street are composed of exotic tree species and weedy vegetation (assessed from aerial photographs). The area above the Dunrobin Street/Somerville Street intersection may also contain a sparse patch of kanuka (assessed from aerial photographs). The vegetation in the southern part of this UBMA has also been assessed by aerial photography and comprises second growth indigenous vegetation. The northern part of the UBMA, opposite Portland Place, has c.10 year old planted natives with further 2-3 year old planting in the gorse area above it. The older plantings are fairly well

established in places, but overall the area supports poor diversity and no natural regeneration is occurring.

2. *Rare and notable species, habitats or communities:*
  - a. The indigenous vegetation that persists in this UBMA is "Acutely Threatened" based on the Threatened Environment Classification having less than 10 percent of the original vegetation cover remaining nationally, and a high degree of habitat fragmentation. Of all the areas contained in this UBMA, the steep faces above Marne Street have the most indigenous diversity and the fewest weeds.
3. *Species diversity and Naturalness:*
  - a. The vegetation of the UBMA is estimated to be 71 percent indigenous.

#### A10.13.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	a. Several plant pests are present throughout the UBMA, notably banana passion fruit, gorse, Scottish broom, hawthorn, and Darwin's barberry.
2. Fragmentation/loss of continuity/edge effects	a. Minimal buffer to guard against adverse effects of fragmentation and edge effects in both terrestrial and freshwater/estuarine systems.

#### A10.13.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	a. Some weed control would benefit the conservation values of this UBMA - particularly the control of Darwin's barberry which is in the initial stages of colonisation. While the contiguous area of vegetation on Larnach Road has relatively low biodiversity value, there is a large buddleja (buddleia) population on Larnach Road which could be removed to prevent spread of seeds into the nearby UBMA.
2. Fragmentation/loss of continuity/edge effects	<p>a. Consideration could be made to extending the UBMA to include the steep faces above Portobello Road. The area below Dunrobin Road is of lesser value as no obvious indigenous vegetation remains in this area; however a more thorough assessment is required to substantiate this. The area above Dunrobin Road has some indigenous vegetation which is also contained within the "Acutely Threatened" land environment classification, and the kanuka scrub further up Dunrobin Road could be added as an extension of the UBMA. There is an area of vegetation on private land on Every Street which could be assessed for biodiversity values, and for inclusion into the UBMA.</p> <p>b. Including these areas into the UBMA could provide buffering from disturbance and minimise edge effects.</p>

## A10.14 Upper St Clair

### A10.14.1 Description of the area

This UBMA has two distinct habitat types: the coastal vegetation landward of the Beaches, and the cliff vegetation. The UBMA takes in a popular walking track. There has been significant residential development within this UBMA, and this may have had cumulative negative impacts on the biodiversity values.

#### A10.14.1.1 Description of urban environment allotments

The following properties, which are located either entirely or partly within this UBMA, may contain land which qualifies as an urban environment allotment as defined in s76(4C) of the Resource Management Act 1991:

- 77, 101, 101A, 109, 111, 111A, 111B, 111C, 111D and 111G, Cliffs Road; 5, 7, 9, 11, 13, 15, 17, 19, 19A, 19B, 19C, 19D, 21, 25, 27, 29, 31, 43 and 45 Highgrove; 2E, 2F, 2G, 2H, 2J, 2K, 2L, 3 – 2, 4 – 2, 5 – 2; 6 – 2 Clayton Street.

#### A10.14.2 Biodiversity values to be protected

##### 1. *Vegetation/Habitat types:*

- a. The coastal vegetation around Second Beach is a mixture of remnant indigenous and naturalised exotic species. The vegetation on the coastal side of the walking track is largely made up of *Hebe elliptica*, while the hillside vegetation is a mixture of *H. elliptica*, ngaio and *Coprosma repens*, other exotics and a relatively diverse understory of coastal fern species in places. The vegetation on the cliff top areas is similar to that of Lawyer's Head, but on a larger scale. Low *H. elliptica* occurs here, with patches of turf plants, native ice plant and glasswort interspersed with exotic grasses. Fairly large patches of ngaio are visible, particularly higher on the cliffs and in the gullies.

##### 2. *Rare and notable species, habitats or communities:*

- a. The remaining indigenous vegetation that persists in these areas is "Acutely Threatened" based on the Threatened Environment Classification having less than 10 percent of the original vegetation cover remaining nationally, and a high degree of habitat fragmentation. This coastal habitat, being less frequently used by humans, is probably more valuable habitat for indigenous animals than the adjacent sandy beach of St Clair. During a brief field assessment, New Zealand fur seals (*Arctocephalus forsteri*), a white-faced heron (*Egretta novaehollandiae*) and a "Threatened-Nationally Critical" black-billed gull (*Larus bulleri*) were observed. The cliff vegetation is also potential habitat for rare and threatened plant species, such as *Lepidium tenuicaule* "At Risk-Declining".

##### 3. *Species diversity and Naturalness:*

- a. The vegetation of the UBMA is estimated to be 61 percent indigenous.

#### A10.14.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	<ol style="list-style-type: none"> <li>a. There are several plant pests present at the UBMA, including gorse, convolvulus, <i>Coprosma repens</i>, ivy and blackberry.</li> <li>b. Animal pests have not been assessed; no animal sign was noted at the site during a field visit.</li> </ol>
2. Fragmentation/loss of continuity/edge effects	<ol style="list-style-type: none"> <li>a. Minimal buffer to guard against adverse effects of fragmentation and edge effects in both terrestrial and freshwater/estuarine systems.</li> </ol>

#### A10.14.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	<ol style="list-style-type: none"> <li>a. None of the pest plants found at the site pose a specific risk to indigenous biodiversity values. <i>Echium pininana</i>, which is present at the site, has the potential to become a more widespread pest plant as it has elsewhere in the city and its removal is desirable. Future re-vegetation projects at the site may consider removing the <i>Coprosma repens</i> and replacing it with more suitable species i.e. indigenous ngaio.</li> </ol>

2. Fragmentation/loss of continuity/edge effects	a. The indigenous vegetation remaining in this UBMA is "Acutely Threatened", and retains some relatively high quality vegetation. There are areas of vegetation adjacent to the current mapped UBMA that could be included. These areas represent important buffer zones which could reduce external impacts by minimising edge effects.
--	--

## A10.15 Leith Valley

### A10.15.1 Description of the area

Leith Valley is an important green corridor connecting the urban environment and town belt to the rural environment. The majority of the land within the mapped area is privately owned, and consists of the slopes of the Leith Valley which contain several patches of high quality indigenous vegetation, including a large stand of rimu and kahikatea, and several patches of South Island kowhai. Most of the area is made up of secondary growth vegetation – primarily mahoe, tree fuchsia and kanuka. As the majority of the land within the Leith Valley UBMA is on private land, this assessment has been made primarily on the basis of aerial photographs.

#### A10.15.1.1 Description of urban environment allotments

The following properties, which are located either entirely or partly within this UBMA, may contain land which qualifies as an urban environment allotment as defined in s76(4C) of the Resource Management Act 1991:

- 1 and 5 Clarewood Avenue; 1, 7, 9, 10, 11, 11A, 15, 17, 19 and 21 Fred Hollows Way; 1, PT SEC 2, 11, 15, 17A, 154, 156, 227, 279, 285, 289, 295, 299, 305, 321A, 321B, 367, 381A, 383 and 387 Malvern Street; 10, 14 and 33 Leithton Close; 15 and 17 Dunedin-Waitati Road; 2 Glenholm Street; 5A, 22, 24, 25, 27 and 37 Rockside Road; 9, 24 and 70 Tanner Road; 36 Braeview Crescent; 39, 41, 43, 53, 57 and 59 Garden Place; PT SEC 1, 4 and 6 Harden Street; 5 and 7 Fulton Road; 5 Patmos Avenue.

### A10.15.2 Biodiversity values to be protected

1. *Vegetation/Habitat types:*
  - a. The vegetation of the UBMA is highly variable; there are several patches of high quality indigenous vegetation, including a large stand of rimu and kahikatea, and several patches of kowhai. Most of the UBMA is made up of secondary growth vegetation - primarily whiteywood, tree fuchsia and kanuka. The balance is made up of various exotic species, particularly sycamore and willow.
2. *Rare and notable species, habitats or communities:*
  - a. The Land Environments contained within the Leith Valley UBMA are a combination of "Acutely Threatened", having less than 10 percent indigenous vegetation remaining, and "At Risk" having between 20-30 percent indigenous vegetation remaining (based in the Threatened Environments Classification). *Peripatus* species occurs on the sides of the track down into the Leith Valley.
3. *Species diversity and Naturalness:*
  - a. Not assessed.

### A10.15.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	a. Not assessed.
2. Fragmentation/loss of continuity/edge effects	a. Minimal buffer to guard against adverse effects of fragmentation and edge.

### A10.15.4 Key management actions to be required or encouraged

Threat	Key management actions
1. Plant and animal pests	a. Not assessed.
2. Fragmentation/loss of continuity/edge effects	a. Consideration could be given to extending the boundary of this UBMA to include adjacent vegetated areas. Some of the adjacent vegetated areas have variable biodiversity values in themselves, but represent important buffer zones which could reduce external impacts by minimising edge effects.

## A10.X The Cove

### A10.X.1 Description of the area

This UBMA is a small area (0.45ha) of regenerating indigenous coastal broadleaved forest located on private property.

#### A10.X.1.1 Description of urban environment allotments

The following properties, which are located either entirely or partly within this UBMA, may contain land which qualifies as an urban environment allotment as defined in s76(4C) of the Resource Management Act 1991:

- 25A Irvine Road.

### A10.X.2 Biodiversity values to be protected

1. Vegetation/habitat types:
  - a. The site supports regenerating and planted native coastal broadleaved forest dominated by ngaio. Other native tree and shrub species present include kohuhu, cabbage tree, Hall's totara, kowhai, pepper tree/horopito, mahoe, koromiko, lemonwood, kanuka, five-finger, marbleleaf, lancewood and broadleaf. Ground cover present includes hound's tongue fern and hen and chickens fern.
2. Rare and notable species, habitats or communities:
  - a. These include ngaio, Hall's totara and South Island kowhai which are listed in Appendix 10A.3 Important native tree list. Indigenous vegetation in this UBMA is classified as "at risk" based on the Threatened Environment Classification having between 20-30 percent of the original vegetation cover remaining nationally. Coastal podocarp-broadleaved forest would have been the main forest type on Otago Peninsula, which now has only 5% of indigenous forest remaining.
3. Species diversity and naturalness:
  - a. The vegetation is dominated by indigenous species but is modified in places by invasive weeds and planted non-local native species.

### A10.X.3 Principal threats to biodiversity values

Threat	Description
1. Plant and animal pests	<ol style="list-style-type: none"> <li>a. The area contains several invasive weed species such as the climbers banana passionfruit and bomarea; along with hawthorn, gorse and broom.</li> <li>b. Some non-local native trees such as akeake have been planted.</li> <li>c. Invasive plant pests pose the greatest threat to the conservation values of this UBMA, but threats from animal pests such as possums, rats and mustelids are also present.</li> </ol>
2. Fragmentation/loss of continuity/edge effects	<ol style="list-style-type: none"> <li>a. The area is vulnerable to edge effects because of its size and nearby sources of invasive weeds.</li> </ol>

### A10.X.4 Key management actions to be required or encouraged

Threat	Key management actions
--------	------------------------

1. Plant and animal pests	<p>a. The highest priority is the removal and continued control of banana passionfruit, bomarea and hawthorn.</p> <p>b. Gorse, broom and non-local native species should also be removed.</p> <p>c. Animal pest control would improve the habitat for native fauna, and possum control would also improve the ecological condition of the forest.</p>
2. Fragmentation/loss of continuity/edge effects	a. Encourage and support control of banana passionfruit, bomarea and hawthorn on neighbouring properties.

## A10.Y Chelivode Street

### A10.Y.1 Description of the area

The UBMA is a small area (0.5 ha) of regenerating kanuka-broadleaved forest located on private property.

#### A10.Y.1.1 Description of urban environment allotments

The following properties, which are located either entirely or partly within this UBMA, may contain land which qualifies as an urban allotment as defined in s76(4C) of the Resource Management Act 1991:

- 128D Doctors Point Road

### A10.Y.2 Biodiversity values to be protected

1. Vegetation/habitat types
  - a. The site supports native forest dominated by regenerating kanuka-broadleaved forest. Common canopy species include kanuka, tree fuchsia, mahoe, red mapou, kohuhu and seven-finger/pate. Other tree or shrub species present include lancewood, mingimingi, round-leaved coprosma, thin-leaved coprosma, lemonwood and three-finger. Native ground cover is well-established and commonly includes bush flax, hen and chickens fern, hookgrass, crown fern, shield fern and hound's tongue fern. Climbers present include bush lawyer, native jasmine and pohuehue.
  - b. The area has previously had an arboretum of native tree species planted. While many species are ecologically valuable, many species planted are North Island species or otherwise non-local native species such as tawa, rewarewa and red beech.
2. Rare and notable species, habitats or communities:
  - a. Includes established plantings of canopy podocarp species native in the area such as rimu, totara, kahikatea, matai and miro which are listed in Appendix 10A.3 Important native tree list.
  - b. Indigenous vegetation in this UBMA is classified as " acutely threatened " based on the Threatened Environment Classification having less than 10% of the original vegetation cover remaining nationally.
3. Species diversity and naturalness
  - a. The vegetation is dominated by indigenous species but is modified in places by invasive weeds and planted non-local native species.

### A10.Y.3 Principal threats to biodiversity values

Threat	Description
--------	-------------

1. Plant and animal pests	<ul style="list-style-type: none"> <li>a. The invasive weed cotoneaster is present throughout the area and is sometimes common.</li> <li>b. Some mature sycamore are present at the northern end of the area.</li> <li>c. The area is surrounded by pine trees on the eastern and southern sides.</li> <li>d. Some planted North Island species or otherwise non-local native species are present.</li> <li>e. Invasive plant pests pose the greatest threat to the conservation values of this UBMA, but threats from animal pests such as possums, rats and mustelids are also present.</li> </ul>
2. Fragmentation/loss of continuity/edge effects	<ul style="list-style-type: none"> <li>a. The area is vulnerable to edge effects because of its size and nearby sources of invasive weeds.</li> </ul>

#### A10.Y.4 Key management actions to be required or encouraged

Threats	Key management actions
1. Plant and animal pests	<ul style="list-style-type: none"> <li>a. The highest priority is the removal and continued control of sycamore and cotoneaster.</li> <li>b. Non-local native species should also be removed.</li> <li>c. Animal pest control would improve the habitat for native fauna, and regular possum control would also improve the ecological condition of the forest.</li> </ul>
2. Fragmentation/loss of continuity/edge effects	<ul style="list-style-type: none"> <li>a. Ensuring appropriate invasive species control on margins of adjacent plantation forestry.</li> <li>b. Ensure harvest of plantation forest trees does not damage UBMA values.</li> </ul>

## A11. Design Guidelines

### A11.1 Introduction

The design guidelines relate to buildings and structures, and associated earthworks, forestry, and shelterbelts and small woodlots. They are intended to provide guidance on a range of methods that may be used in the siting and/or design of these activities, to reduce or mitigate potential effects on landscape values and natural character values.

Guidelines can only be of a general nature. Because every site is different, it is not possible to offer specific advice. It is important that each individual site is assessed to determine an appropriate design solution based on site character and the specific development requirements. However, the following principles should be taken into account.

### A11.2 Buildings and structures, and associated earthworks

1. Where possible, locate a new building or structure in association with a stronger natural feature e.g. a group of trees. Ensure that it has a backdrop of land or vegetation rather than sky as seen from main viewpoints. Seek to avoid prominent ridgelines, spurs and hilltops.
2. Consider planting vegetation to integrate buildings and structures with their landscape or coastal setting.

3. In siting, take care to minimise the need for any earthworks and align the buildings with the direction of the landform. Blend any cut and fill required with the surrounding natural contours.
4. Locate at a distance from adjacent roads where appropriate to retain the spaciousness of the rural landscape. Take care not to block or detract from any significant views.
5. Where other buildings already exist, locate the new buildings or structures to visually relate to the group rather than be seen as an isolated element.
6. Aim to relate the building or structure to the land by keeping it as low as possible. The proportions should be wider rather than higher. Relate floor levels to the ground level and avoid high foundations.
7. Traditional, simple, non-fussy designs are likely to integrate most readily into the rural setting. Where practicable, relate roof shapes to the lie of the land and break up large wall and roof planes. Provide for eaves and the shadow line they create which helps to tie the building or structure visually with the land.
8. Use materials which occur naturally in the area e.g. local stone or timber, or materials that have traditionally been used in rural buildings e.g. appropriately coloured corrugated iron. Materials with a rough, coarse texture will help to minimise reflectivity of light. Do not use a great variety of different materials. Keep the effect simple.
9. Minimise the visual impact of buildings by using colours which blend with, or provide subtle contrast with, the background landscape. Avoid sharp colour contrasts. Generally, roofs should be darker than walls to help visually relate the buildings and structures to the land.
10. Glazing should be designed (placement and glazing type) to minimise the potential for glare effects.
11. Lighting should be kept to a minimum and designed to minimise effects on landscape and natural character values, including impacts on indigenous fauna.

### **A11.3 Forestry blocks**

1. Wherever possible, the edges between forestry and adjacent land uses should be located to reflect the natural landform rather than human-imposed boundaries, e.g. a fence line. Planting which recognises variations in topography will reinforce natural landscape character and is more likely to maximise productivity through being responsive to variations in soil and microclimate. It is usually desirable to avoid planting on prominent skylines as this will minimise the negative impacts on the landscape during the harvesting phase. Highly visible forest edges adjacent to roads require extra care. Provide generous edges and plant a long term species to provide screening during the harvesting phase. Irregular natural looking edges responsive to any landform features will help to integrate the forest more than straight lines. Avoid planting where the plantation will block or detract from significant views or shade roads and contribute to problems with ice in winter.
2. Where areas of native bush and shrubland remain, these should be retained as far as possible.
3. When planting adjacent to watercourse or streams (riparian areas) leave an unplanted margin and allow native vegetation to establish. This helps to protect water quality during harvesting, provides a richer habitat for wildlife, and helps to emphasise the stream or gully as a natural feature. The boundary between the gully and the riparian species should be located to reflect the landform.
4. Use contour planting rather than rows running up and down the slope for a more natural appearance. If possible, use a mixture of species rather than just one, to reflect changes in landform, soil or microclimate and to create a more diverse landscape, and richer wildlife habitat. This may also help to reduce the severity of landscape change during harvesting.
5. Keep access tracks off conspicuous faces, or as low in the landscape as possible. Avoid firebreaks which do not follow the landform. Live firebreaks of native species in damp gullies are much preferable to artificial-looking cleared swathes.
6. Avoid using species which are likely to create wilding tree spread problems e.g. species listed in Rule 10.3.4.

## **A11.4 Shelterbelts and small woodlots**

1. If practically feasible, avoid highly visible areas, otherwise a careful assessment of the underlying topography and existing natural features should be undertaken to ensure minimum impact on the visual integrity of the landscape.
2. Reinforce the natural character of the landscape by siting shelter plantings to relate to natural features such as a change in slope or a water course. Avoid shelter plantings which cut across the natural features and patterns of the landscape, and which will block significant views.
3. Traditional lineal shelter-belts may not always be the best solution. Group plantings can provide effective shelter and can lessen risks associated with increasing wind turbulence on the downwind side and cold air ponding. Where rows are desirable, their integration with the landscape can be enhanced by linking them with other planting where possible, and by minimising regularity by widening out in places.
4. Where appropriate, link shelter planting with existing areas of trees. Small disjointed lines of planting should be avoided in favour of unified entities.
5. The dark colours and strong forms of exotic coniferous species such as Pine and Macrocarpa make them very visually dominant. The use of other species with rounded forms and softer colours will make shelter plantings easier to integrate with the landscape.
6. The use of local native trees helps to promote distinctive local landscape character and has advantages for indigenous wildlife habitat. Avoid adding ornamental trees or shrubs to enhance amenity as these typically look fussy and inappropriate in the scale of the rural landscape.
7. Use species which will reach an appropriate height at maturity so that they will not have to be trimmed or hedged. The use of a range of species can help to reduce the visual impact of shelter plantings. Species should be mixed naturally and informally. Avoid use of variegated or golden varieties as these attract too much attention and give an unnatural appearance.
8. Avoid using species which are likely to create wilding tree spread problems e.g. species listed in Rule 10.3.4.

## **A12. Structure Plan Mapped Area Values**

### **A12.X Signal Hill Road**

#### A12.X.1 Description of area

The **Signal Hill Road structure plan mapped area** covers an area of just over 56 hectares on the south-eastern slopes of North East Valley between the suburbs of Normanby, Mt Mera and North East Valley, and the peak of Signal Hill.

The area is sloping and steep in places and extends between approximately 130m and 390m above sea level. It forms part of a sequence of folded gullies and spurs uphill from the northern end of North East Valley, and the upper reaches of the area contain a gently rounded ridgetop that adjoins Signal Hill. The peak of Signal Hill is located immediately to the southeast.

This mapped area contains several areas of indigenous vegetation, which together are scheduled as an Area of Significant Biodiversity Value. See Appendix A1.2 (site C1ZZ). The majority of the area is also overlain by the Flagstaff-Signal Hill Significant Natural Landscape Overlay Zone. See Appendix A3.3.2.

The location of the area creates an opportunity to extend and enhance the existing network of public walking tracks in the vicinity of Signal Hill, connecting them into Northeast Valley, which in turn will connect walking access to Mt Cargill.

#### A12.X.2 Values to be maintained or enhanced

Land use, development and subdivision in the **structure plan mapped area** must maintain or enhance the following values:

1. The biodiversity values of the mapped area, which include the values of the scheduled Area of Significant Biodiversity Value (ASBV), which are set out in Appendix A1.2.
  - a. Conditions on subdivision consent will:
    - i. require a detailed survey to be undertaken of any area of indigenous vegetation to be cleared, to identify whether any species in Appendix 10A Protected Indigenous Species are present (note that removal of these species will require land use consent, and as a condition of this consent, Council would require appropriate revegetation to be undertaken within the mapped area);
    - ii. ensure that subdivision layout results in the area shown as “Proposed Vegetation Protection Area” in Figure 17.Y.XA being retained within as few separate resultant sites as practicable, taking into account the area of land per site needed to self-service for wastewater;
    - iii. ensure that subdivision layout results in the two areas of scheduled ASBV that are located outside the “Proposed Vegetation Protection Area” being retained within up to three resultant sites;
    - iv. require protection on an ongoing basis of the area of vegetation marked as “proposed vegetation protection area” on Figure 17.Y.XA; and
    - v. require establishment of a stock proof fence around this area.
2. The landscape values of the mapped area, which include the relevant values of the Significant Natural Landscape (SNL) set out in Appendix A3.3.2.

#### A12.X.3 Other design outcomes to be achieved

Land use, development and subdivision in the **structure plan mapped area** must:

1. ensure that safe pedestrian access is provided from North Road to Thirlstane Street; and
2. provide for a public walking track that will connect North Road to the existing tracks on Signal Hill.

## A12.Y Patmos Avenue (Rural Residential)

### A12.Y.1 Description of area

The **Patmos Avenue (rural residential) structure plan mapped area** is located on the eastern side of Leith Valley, within a semi-rural setting, against the backdrop of the Dunedin Northern Motorway and the foot slopes of Mount Cargill to the north, and the suburb of Pine Hill to the east. The site is dominated by regenerating indigenous forest with high indigenous biodiversity values and there is a scheduled Area of Significant Biodiversity Value over much of the site on the lower and mid slopes (see A1.2 C1YY). On the upper slopes in Area B (as shown in Figure 17.Y.YA), indigenous biodiversity values are generally more modified, with a less developed understorey and patches of invasive weeds such as gorse, broom and hawthorn present in previously cleared areas. Indigenous biodiversity values in Area A are also modified, primarily by planted exotic trees associated with the current building.

### A12.Y.2 Values to be maintained or enhanced

Land use, development and subdivision in the **structure plan mapped area** must maintain or enhance:

1. The biodiversity values of the mapped area, which include areas of indigenous vegetation including important mature native tree specimens and remnant canopy podocarps including rimu and totara; and the aesthetic coherence of the indigenous forest setting. Both the biodiversity values and the aesthetic values have been protected through the application of an ASBV and restrictions on building platforms, density of residential development and the footprints of residential buildings.

## A12.Z Double Hill Road

### A12.Z.1 Description of area

The **Double Hill Road structure plan mapped area** covers an area of approximately 92.2ha in the Blueskin Bay area, north of Dunedin. The **structure plan mapped area** is located west of Waitati, inland from State Highway 1. The area is hilly, with multiple sub-catchments that flow into the Waitati River outside the **structure plan mapped area**. Most of the area is covered in pasture, but there are also patches of regenerating and mature indigenous vegetation, and small patches of exotic-dominated shrubland and scrub. The mapped area contains six individual stands of indigenous vegetation, ranging in size from 0.65 – 4.16ha, which are scheduled as an Area of Significant Biodiversity Value (ASBV) (see A1.2 C1AAA).

#### A12.Z.2 Values to be maintained or enhanced

Land use, development and subdivision in the **Double Hill Road structure plan mapped area** must maintain or enhance the following values:

1. The biodiversity values of the mapped area, which include the values of the scheduled Area of Significant Biodiversity Value (ASBV), which are set out in Appendix A1.2.

#### A12.Z.3 Other design outcomes to be achieved

Land use, development and subdivision in the **Double Hill Road structure plan mapped area** must:

1. provide for a safe public walking track that connects Kilpatrick Road with Waikouaiti-Waitati Road (State Highway 1) in the general vicinity of the intersection with Harvey Street, to allow access to Waitati township;
2. ensure that safe and effective on-site wastewater management that does not create adverse effects on the amenity or health and safety of neighbours, or adverse environmental effects on water bodies, is achieved for all sites to be used for residential activity; and
3. be appropriately located and managed to ensure the risk from natural hazards is no more than low.

## A12.AA Ōtākou Golf Course Road

#### A12.AA.1 Description of area

The **Ōtākou Golf Course Road structure plan mapped area** covers an area of approximately 60ha on the harbour side of the Otago Peninsula at Harington Point. The **structure plan mapped area** lies between township and settlement zoned residential sites on the coastal edge and Harington Point Road. The Ōtākou golf course occupies the northern part of the mapped area. The site lies largely within the Ōtākou Native Reserve **wāhi tūpuna mapped area** (see Appendix A4.34) and is adjacent to the Ōtākou Harbour **wāhi tūpuna mapped area** (see Appendix A4.23). The western corner of the mapped area forms part of an archaeological site (Occupation site, Harwood - A008) in the Schedule of Protected Heritage Items and Sites (Appendix A1.1). The wider area is also subject to an **archaeological alert layer mapped area**, meaning that there is a strong likelihood of it containing archaeological remains.

The area is low-lying and includes stable duneland and naturally uncommon dune slack wetland ecosystems, which provide habitat for water birds. The mapped area contains 10 individual areas of significant indigenous wetland vegetation, ranging in size from 0.11-2.46ha, which are scheduled as an Area of Significant Biodiversity Value (ASBV), see Appendix A1.2 (C1AAB).

#### A12.AA.2 Values to be maintained or enhanced

Earthworks, land use, development and subdivision in the **Ōtākou Golf Course Road structure plan mapped area** must maintain or enhance the following values:

1. The biodiversity values of the mapped area, which include the values of the scheduled Area of Significant Biodiversity Value (ASBV), which are set out in Appendix A1.2.
  - a. Conditions of consent will:
    - i. require the implementation of an approved biodiversity restoration plan, referred to at Rule 17.Y.YY.9.c above; and

- ii. require protection in perpetuity of the significant indigenous vegetation and significant habitats of indigenous fauna in the land overlain by scheduled ASBV, and the areas of planting identified in the biodiversity restoration plan.
2. The natural character of the coastal environment associated with the existing duneland ecosystems, and the character and amenity of the semi-rural setting.
3. The relationship between Manawhenua and wāhi tūpuna and the cultural values associated with wāhi tūpuna, which are set out in appendices A4.34 and A4.23.

#### A12.AA.3 Other design outcomes to be achieved

Land use, development and subdivision in the **Ōtākou Golf Course Road structure plan mapped area** must:

1. provide for a safe public walking track that connects Harington Point Road to Harwood Street and the shoreline of Otago Harbour; and
2. ensure safe and effective on-site wastewater management that does not create adverse effects on the amenity or health and safety of neighbours, or adverse environmental effects on the coastal environment or water bodies.
