

# A. Plan Overview and Strategic Directions

## 1. Plan Overview and Introduction

### 1.1 Introduction to the District Plan

#### 1.1.1 What is a District Plan?

The Resource Management Act 1991 (RMA) requires the Dunedin City Council (Council) to prepare a district plan (section 73). The purpose of the district plan is to assist the Council in carrying out its functions under the RMA. The Dunedin City Council is considered a territorial authority and its functions are described in section 31 of the RMA.

*The District Plan must reflect those functions and the purpose of the RMA, which is to promote sustainable management. The RMA defines sustainable management as: managing the use, development, and protection of natural and physical resources in a way, or at a rate, which enables people and communities to provide for their social, economic, and cultural well-being and for their health and safety while—*

*(a) sustaining the potential of natural and physical resources (excluding minerals) to meet the reasonably foreseeable needs of future generations; and*

*(b) safeguarding the life-supporting capacity of air, water, soil, and ecosystems; and*

*(c) avoiding, remedying, or mitigating any adverse effects of activities on the environment*

The District Plan is part of a hierarchy of plans. District plans must give effect to national policy statements and regional policy statements and must not be inconsistent with regional plans and any applicable water conservation orders (section 75 RMA). Section 74 of the RMA sets out a number of other statutory instruments that the DCC must have regard to in preparing a district plan.

District plans cover issues related to the functions of territorial authorities (section 31 RMA). These include:

- integrated management of the effects of the use, development, or protection of land and associated natural and physical resources of the district
- ensuring that there is sufficient development capacity in respect of housing and business land to meet the expected demands of the district
- the control of any actual or potential effects of the use, development, or protection of land, including for the purpose of:
  - the avoidance or mitigation of natural hazards
  - the prevention or mitigation of any adverse effects of the development, subdivision, or use of contaminated land
  - the maintenance of indigenous biological diversity
  - the control of the emission of noise and the mitigation of the effects of noise
  - the control of any actual or potential effects of activities in relation to the surface of water in rivers and lakes
  - any other functions specified in this Act

District plans contain:

- objectives
- policies to implement objectives
- rules (or other methods) to implement policies.

District plans manage the use of land such that:

- a. no person may use land in a manner which contravenes a rule in a district plan, unless it is expressly allowed by a resource consent
- b. no person may subdivide land unless it does not contravene a rule in a district plan or it is expressly allowed by a resource consent.

This District Plan applies to land above the line of mean high water springs (MHWS) and the surface of rivers and lakes within the territorial boundaries of Dunedin City.

In addition to the District Plan, some rules that relate to the matters covered by district plans are set by national environmental standards (NESs). Where there is a NES the rules in that NES take precedence over the rules of the Plan, unless the NES expressly allows the district plan to have rules that are different, which is usually only in limited circumstances.

### **1.1.2 Content of District Plan**

Information on the structure, format and how to use the Plan can be found in the *2GP User Guide April 2019 - incorporating changes made through 2GP decisions*. Information on the drafting protocol used in the Plan is provided in the *2GP Style Guide April 2019 - incorporating changes made through 2GP decision*. Both documents are available on the DCC website: [www.https://www.dunedin.govt.nz/council/district-plan/2nd-generation-district-plan](https://www.dunedin.govt.nz/council/district-plan/2nd-generation-district-plan) on the 2GP 'Read the Plan' page.

## **1.2 Kāi Tahu and the District Plan**

### **1.2.1 Te Tiriti o Waitangi/The Treaty of Waitangi**

Te Tiriti o Waitangi / the Treaty of Waitangi is a founding legal document for New Zealand. The Crown is the primary Treaty partner responsible for the Treaty relationship. However, in delegating responsibilities to local authorities, Parliament acknowledges the need to ensure local authorities give appropriate consideration to the principles of the Treaty as part of their statutory obligations. Kāi Tahu is the Crown's Treaty partner in the Otago region. The Resource Management Act 1991 (RMA) and Local Government Act (LGA) provide a clear direction on the Dunedin City Council's responsibilities in terms of te Tiriti o Waitangi / the Treaty of Waitangi.

The overriding approach is one of active recognition of the principles of te Tiriti o Waitangi / the Treaty of Waitangi in the exercise of Council's functions and duties under the RMA. The Treaty implies a partnership exercised in the utmost good faith. The principles of the Treaty, as articulated by the Waitangi Tribunal and the Courts, include the following:

- The principle of the government's right to govern.
- The principle of tribal rakatirataka/management over resources.
- The principle of partnership: that both Treaty partners will act reasonably and in the utmost good faith.
- The principle of active protection of Māori in the use and management of their resources.
- The principle of the right of development. This Treaty right is not confined to customary uses or the state of knowledge as at 1840, but includes an active duty to assist Māori in the development of their properties and taoka.
- The principle of consultation. Acting reasonably and with the utmost good faith to one another requires fully fledged discussion with every attempt to find an agreed position that is in accord with Treaty principles.

The Dunedin City Council is committed to meeting its responsibilities under te Tiriti o Waitangi / the Treaty of Waitangi and statutory obligations under the RMA. The Dunedin City Council recognises the mana whenua and tino rakatirataka of Kāi Tahu Manawhenua over their resources and taoka and the Dunedin City Council's commitment to its Treaty responsibilities is reflected throughout this Plan. This Plan has been developed in consultation with Kāi Tahu Manawhenua and identifies the matters that have the potential to affect cultural values and well-being, along with enabling Manawhenua to actively participate in resource management processes. Council will work to ensure that its policies and actions recognise and protect Manawhenua rights and interests within Dunedin.

The objectives and policies in this Plan recognise the protection given by the Treaty to tino rakatirataka held by Kāi Tahu Manawhenua over their own resources. At the same time, the policies recognise the right of Council to exercise its duties and functions in promoting the sustainable management of resources.

### **1.2.2 Implementation of Kāi Tahu values through the District Plan**

The resource management issues of interest to Kāi Tahu are addressed through this Plan in a number of ways.

Particular areas of interest to Kāi Tahu include:

- Identification and protection of natural and physical resources of importance, including the coast, waterways, wetlands and indigenous flora and fauna;
- Protection of mahika kai areas from uses or development which threaten the values of these areas and, where necessary, restoration of access to mahika kai;
- Protection of wāhi tūpuna and urupā; and
- Papakāika housing.

These are primarily managed through:

- management of identified threats, such as buildings, earthworks and vegetation clearance, within wāhi tūpuna (ancestral landscapes);
- requirements for setbacks from water bodies and the coastline;
- provision for papakāika housing; and
- consideration of Manawhenua as an affected person in relation to consent applications for particular activities.

#### 1.2.2.1 Statutory acknowledgements

Statutory acknowledgements are an acknowledgement by the Crown of Kāi Tahu cultural, spiritual, historical, and traditional associations with specified areas. The Ngāi Tahu Settlement Act 1998 requires Council to send summaries of consent applications that may affect a Statutory Acknowledgement to Kāi Tahu, and to have regard to Statutory Acknowledgements when forming an opinion as to whether Kāi Tahu is an affected party for a consent application.

There are two areas covered by Statutory Acknowledgements within the Dunedin city area: Te Tai o Arai Te Uru (the Otago coastal marine area) and Te Tauraka Poti (Merton Tidal Arm). The Otago coastal marine area is under the jurisdiction of the Otago Regional Council. Te Tauraka Poti is included within the plan as a **wāhi tūpuna mapped area** (see Appendix A4).

#### 1.2.2.2 East Otago Taiapure

The Fisheries Act 1996 contains provisions allowing a Taiapure-local fishery management committee to recommend to the Minister of Fisheries the making of regulations for the conservation and management of fish, aquatic life, or seaweed in the Taiapure-local fishery. The East Otago Taiapure includes the marine and estuarine waters enclosed by a line from Cornish Head to Brinns Point to Warrington Spit to Potato Point. The East Otago Taiapure Management Committee is able to provide advice and recommendations to the Minister of Fisheries for regulations to manage the fisheries in the area. The regulations may relate to the species and quantities of fish taken, and set restrictions on dates, size limits, methods and areas of fishing.

#### 1.2.2.3 Consultation with Aukaha

Aukaha is a consultancy established by the local rūnaka to help streamline the resource consent process for applications requiring consultation with Kāi Tahu in Otago.

The plan identifies where Manawhenua may be affected by a proposal. If this is the case, applicants for resource consent are encouraged to contact Aukaha prior to lodging their application. Aukaha can then advise whether consultation with rūnaka is required.

Where consultation is required, work is done on a cost-recovery basis and applicants may be charged a fee. Aukaha sends a summary and recommendation for each resource consent application to the rūnaka that are kaitiaki of the area the application is located in. As there are many areas of shared interest, details of the application may be sent to more than one rūnaka. A letter detailing the rūnaka position on the application (oppose, support, neither oppose nor support) is sent to the applicant.

For large applications with extensive cultural effects, a Cultural Impact Assessment (CIA) may be required as part of the Assessment of Environmental Effects.

Contact details for Aukaha are in Appendix A8.

#### 1.2.2.4 Outcomes sought by Kāi Tahu

The following table sets out the natural resource and environmental management issues and desired outcomes of significance to Kāi Tahu. It is not an exhaustive list. Some of the issues and outcomes are addressed through other DCC processes and strategies, and some by other organisations, such as the ORC. The District Plan includes

policies that address issues within its statutory context. Methods are outlined throughout the Plan to provide for Kāi Tahu's relationship with natural and physical resources in Dunedin.

Issues	Outcomes desired by Kāi Tahu
a. Kaitiakitaka	
<p>Historically, recognition of kaitiakitaka in resource management processes and decision making has been limited</p>	<p>Kāi Tahu's role as kaitiaki is recognised. Kāi Tahu is engaged in resource management decision making processes in the spirit and intent of the Treaty and RMA. This includes, but is not limited to:</p> <ul style="list-style-type: none"> <li>• Engagement with Kāi Tahu, at operational and political levels, is regular and effective.</li> <li>• The Kāi Tahu ki Otago Natural Resource Management Plan 2005 and Resource Consent Protocol are implemented appropriately.</li> <li>• Cultural Impact Assessments are used to assess effects of land use change and development on cultural values, where Kāi Tahu considers this is appropriate.</li> <li>• Kāi Tahu is actively involved in a range of decision making fora including as hearings commissioners and on planning committees.</li> <li>• The wider Dunedin community is aware of, and understands Kāi Tahu's kaitiakitaka role.</li> <li>• Kāi Tahu is actively involved when the DCC plans and undertakes research in areas of mutual interest.</li> </ul>
b. Built environment	
<ul style="list-style-type: none"> <li>• The cumulative effects of land use change and development on wāhi tūpuna, wāhi taoka sites, mahika kai and indigenous biodiversity.</li> <li>• Loss of cultural associations with wāhi tūpuna.</li> <li>• Deteriorating water quality from stormwater and wastewater discharges.</li> <li>• Kāi Tahu presence in the urban environment and in urban design is very limited.</li> </ul>	<ul style="list-style-type: none"> <li>• Development is holistic in approach and:               <ul style="list-style-type: none"> <li>• Protects Kāi Tahu cultural values.</li> <li>• Protects wāhi tūpuna from inappropriate development.</li> <li>• Maintains and enhances water quality.</li> </ul> </li> <li>• Treatment and disposal of wastewater and stormwater accords with Kāi Tahu values (land based treatment is preferred).</li> <li>• Consent conditions are monitored effectively.</li> <li>• Water quality is safeguarded through the 3 Waters Strategy.</li> <li>• Kāi Tahu culture and presence is visible in the built environment – through public art, information and urban design</li> </ul>
c. Climate change	

Issues	Outcomes desired by Kāi Tahu
<p>The Kāi Tahu communities of Puketeraki (Karitāne) and Ōtākou are at risk from natural hazards. Coastal erosion and rising sea levels could impact Kāi Tahu's relationship with land, the use of Māori land, and cultural values and uses of these areas.</p>	<ul style="list-style-type: none"> <li>• The special nature of Māori land with its multiple owners and ancestral connections is recognised when climate change adaptation measures and hazards controls are proposed. Cultural preferences are taken into account with regard to hazard mitigation and the maintenance of relationships with the land is facilitated.</li> <li>• The DCC recognises the constraints on Māori land when considering climate change measures.</li> </ul>
<b>d. Coast</b>	
<ul style="list-style-type: none"> <li>• Management of the land-sea interface is integrated and holistic.</li> <li>• Inappropriate land use and development affects wāhi taoka sites, wāhi tūpuna, mahika kai and kaimoana, and the relationship that Kāi Tahu has with these landscapes and resources.</li> <li>• Discharges from the urban environment impact on inlet and estuary health, on the coastal environment, and on kaimoana and taoka species.</li> <li>• Land development in upper catchments impacts on inlets, estuaries and the coast, including the effects of sedimentation on kaimoana and taoka species.</li> <li>• Loss of natural habitat affects indigenous marine species</li> <li>• Loss of access to wāhi taoka sites, and to mahika kai and kaimoana resources.</li> </ul>	<ul style="list-style-type: none"> <li>• The spiritual and cultural significance of the marine and coastal area to Kāi Tahu is provided for in the management of the coastal environment.</li> <li>• Adverse effects on Kāi Tahu values in the coastal environment caused by inappropriate coastal land use, subdivision and development are avoided.</li> <li>• Cross-jurisdictional integrated management occurs.</li> <li>• The cultural integrity of coastal landscapes and seascapes (wāhi tūpuna) is protected.</li> <li>• Te Tai o Arai Te Uru (the Otago coast) supports the full range of healthy ecosystems and species.</li> <li>• Access to culturally healthy mahika kai, taoka species, and sites of significance is maintained or enhanced.</li> <li>• The discharge of contaminants, including human waste to coastal waters, is reduced and ultimately ceases.</li> <li>• Kāi Tahu can safely access, gather and eat mahika kai and kaimoana</li> <li>• Estuaries support Kāi Tahu customs.</li> </ul>
<b>e. Ecosystems and indigenous biodiversity</b>	
<ul style="list-style-type: none"> <li>• Loss of indigenous biodiversity and habitat.</li> <li>• Sediment discharged to water affects water quality, and in turn mahika kai. The ability of Kāi Tahu to safely access, gather and eat mahika kai and kaimoana is compromised by poor water quality.</li> <li>• The ability to pass on mahika kai traditions to future generations is compromised.</li> </ul>	<ul style="list-style-type: none"> <li>• Indigenous plant and animal communities and the ecological processes that ensure their survival are recognised and protected to restore and improve indigenous biodiversity.</li> <li>• Habitats and the wider needs of mahika kai and kaimoana taoka species and other species of importance to Kāi Tahu are protected.</li> <li>• Mahika kai and kaimoana resources are healthy and abundant in Otago.</li> </ul>
<b>f. Energy</b>	

Issues	Outcomes desired by Kāi Tahu
<ul style="list-style-type: none"> <li>The placement of infrastructure for producing and distributing energy can affect the relationship of Kāi Tahu with waterways and wāhi tūpuna.</li> <li>Extractive uses and power generation affect natural seasonal flow regimes which can cause bank erosion, sedimentation and damage to wāhi taoka sites.</li> </ul>	<ul style="list-style-type: none"> <li>The relationship between Kāi Tahu natural water bodies and water and the effects of energy generation on this relationship are taken into account in decisions on energy generation.</li> <li>Efficient energy and water use is encouraged as part of new developments.</li> <li>Wāhi tūpuna are protected from inappropriate placement of energy generation and distribution infrastructure.</li> <li>The capacity of existing infrastructure is maximised before developments occur in new catchments.</li> </ul>
g. Hazardous substances	
Discharges of hazardous substances affect land and water quality.	<ul style="list-style-type: none"> <li>Contaminants being discharged directly to water are reduced.</li> <li>The management / disposal of hazardous waste is undertaken in accordance with Kāi Tahu values.</li> </ul>
h. Infrastructure	
<ul style="list-style-type: none"> <li>Poorly planned and located infrastructure impacts on fresh and coastal water quality, wāhi tapu, wāhi tūpuna and indigenous biodiversity.</li> <li>Inappropriately located telecommunications and energy infrastructure affects wāhi tūpuna, views from marae, and other significant landscapes and landforms.</li> </ul>	<ul style="list-style-type: none"> <li>Contaminants being discharged directly or indirectly to water are reduced.</li> <li>The range of landscape features of importance to Kāi Tahu, including wāhi tūpuna and view shafts, are protected from inappropriate development.</li> </ul>
i. Land use	
<ul style="list-style-type: none"> <li>Papakāika housing planning provisions have been restrictive.</li> <li>The utilisation of Māori land is constrained by policy that does not take into account the multi-ownership nature of the land.</li> <li>Sea level rise and coastal erosion could affect the marae communities at Ōtākou and Karitāne.</li> </ul>	<ul style="list-style-type: none"> <li>The use of Māori land by beneficial owners according to cultural preferences is supported and the maintenance of relationships with the land facilitated.</li> <li>The relationship of Kāi Tahu with their ancestral land is recognised through the provision for Papakāika housing on general title land within the original native reserves.</li> <li>The constraints on Māori land held under Te Ture Whenua Māori Act 1993 are recognised.</li> </ul>
j. Minerals	

Issues	Outcomes desired by Kāi Tahu
<ul style="list-style-type: none"> <li>• Historic and continuing loss of wāhi tapu sites and landscapes of significance from quarrying and earthworks.</li> <li>• The quarrying of Pukemakamaka and Turimakamaka (Saddle Hill), and Blackhead.</li> <li>• Loss of historical associations with Puke Makamaka and Turi Makamaka (Saddle Hill). Landscapes such as Saddle Hill no longer reflect the creation stories related to the taniwha traditions.</li> </ul>	<ul style="list-style-type: none"> <li>• Protection of wāhi tūpuna.</li> </ul>
k. Natural hazards	
<ul style="list-style-type: none"> <li>• Natural hazards and natural hazard mitigation activities can impact on values of importance to Kāi Tahu.</li> <li>• Erosion and deposition rates affects Kāi Tahu values in the coast, bays, hāpua (estuaries) and harbours.</li> </ul>	<ul style="list-style-type: none"> <li>• Kāi Tahu values are considered in natural hazard management and planning.</li> <li>• The waters of the Dunedin district are healthy and support Kāi Tahu customs.</li> </ul>
l. Soil	
<ul style="list-style-type: none"> <li>• Subdivision and development can cause sedimentation and erosion.</li> <li>• The importance of soil and its life-supporting capacity is often low priority in decision making.</li> </ul>	<ul style="list-style-type: none"> <li>• Human-induced soil erosion is avoided.</li> <li>• Life supporting capacity of soils is safeguarded.</li> </ul>
m. Transportation	
<ul style="list-style-type: none"> <li>• Limited public transport in rural areas affects rural Kāi Tahu communities and marae.</li> <li>• Stormwater discharges from urban roads can contain contaminants (hydrocarbons, heavy metals and wastewater from cross-connections).</li> </ul>	<ul style="list-style-type: none"> <li>• Access to transport (all modes) is equitable.</li> <li>• The fresh and coastal waters of the Dunedin district are healthy and support Kāi Tahu customs.</li> <li>• Contaminants being discharged directly or indirectly to water are reduced.</li> </ul>
n. Wāhi Tāpu and Wāhi Taoka	

Issues	Outcomes desired by Kāi Tahu
<ul style="list-style-type: none"> <li>• Archaeological sites are increasingly vulnerable to coastal erosion and sea level rise.</li> <li>• Wāhi tapu and wāhi taoka are modified or damaged by the direct and indirect effects of development, such as quarrying and earthworks.</li> <li>• Access to sites of cultural significance is impeded.</li> <li>• The general public lacks understanding of the statutory and non-statutory tools and processes for managing discoveries of taoka, accidental or otherwise.</li> <li>• The management of wāhi tapu and wāhi taoka lacks co-ordination and collaboration.</li> </ul>	<ul style="list-style-type: none"> <li>• Wāhi tapu and wāhi taoka are protected in a culturally appropriate manner.</li> <li>• Adverse effects on wāhi tapu and other sites of cultural heritage value as a result of inappropriate land-use, subdivision and development are avoided.</li> <li>• Wāhi tapu and wāhi taoka are given appropriate value in decision-making processes.</li> <li>• All sites of significance, including those not registered as Heritage New Zealand or New Zealand Archaeological Association sites are protected.</li> <li>• Kāi Tahu can access sites of cultural significance.</li> <li>• The general public has better access to information about statutory and non-statutory tools and processes for managing discoveries of taoka, accidental or otherwise.</li> </ul>

### 1.2.3 Kāi Tahu ki Otago Natural Resource Management Plan

The Kāi Tahu ki Otago Natural Resource Management Plan 2005 is the principal resource management planning document for Kāi Tahu ki Otago, and recognises and provides for Kāi Tahu values. The kaupapa of the plan is 'Ki Uta ki Tai' (from the mountains to the sea), which reflects the holistic Kāi Tahu philosophy of integrated resource management.

## 1.3 Activities managed by this Plan (Nested Tables)

### Introduction

The activities managed in this Plan reflect the responsibilities that Dunedin City Council holds as a territorial authority as provided under Section 31 of the RMA.

The 'nested tables' below group activities into a hierarchy of categories, sub-categories, activities, and sub-activities. The nested tables should be referred to alongside the relevant activity status table when determining the activity status of an activity.

The nested tables in Section 1.3 are intended to be a complete list of activities. The activities within the tables are all defined. However, in some cases defined activities identify aspects of those activities that are not managed by this Plan either because they are managed through other statutory instruments or because they were considered to be highly unlikely to create effects that warranted management. These activities include:

- commercial advertising located within a building that is not visible from a public space outside the building;
- earthworks associated with the maintenance of sports fields, landscaping or gardens, existing farm tracks, private roads, private ways, dams, farmyards, drains, farm service areas, silage pits, and fences;
- filming associated with news coverage or any filming activity that does not have any associated development activity and involves no more than five people involved in the activity;
- irrigation races and open drains and stormwater detention basins; however, earthworks associated with these activities are subject to earthworks provisions;
- public display boards with a maximum area of all display faces of 2m<sup>2</sup> or less, and used exclusively by individuals, community groups or public bodies for advertising local activities, such as: sale of second hand goods by individuals, working from home activities, local community events, community notices, or public notices; and
- freedom camping.

A proposal may include more than one type of activity. For example, building a house will generally include:

- a new standard residential activity (a land use activity);
- a new building (in the development activities category and buildings and structures sub-category);
- earthworks (a city-wide activity in the earthworks activity category);
- a new parking area for the dwelling (in the development activities category and site development activities sub-category); and
- construction (a city-wide activity in the temporary activities category).

Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).

In the case of city-wide activities, any building or structure that forms part of those activities is provided for via the relevant city-wide activity definition. For example, any building or structure that forms part of network utility structures - small scale or passenger transportation hubs is provided for via those definitions. Therefore, the provisions for buildings and structures activities, located in the management zone sections, do not apply to city-wide activities.

However, provisions for site development activities such as vegetation clearance do apply to city-wide activities, where relevant. For example, where vegetation clearance is required prior to establishing network utility activities, any relevant vegetation clearance rules, set out in the management zone sections, will apply. Provisions for construction and earthworks also apply to city-wide activities. The construction required for any city-wide activity,

and any earthworks required for a city-wide activity, are subject to the relevant provisions set out in Section 4 Temporary Activities and Section 8A Earthworks.

### 1.3.1 City-wide activities

#### Public Amenities Category

Activities	Sub-activities
Public amenities	Public toilets
	Public artworks - small scale
	Public artworks - large scale
	Public display boards

#### Temporary Activities Category

Activities	Sub-activities
Construction	
Filming	Filming - small scale
	Filming - large scale
Mobile trading	
Military exercises	
Temporary disaster management accommodation	
Temporary events	Temporary events - small scale
	Temporary events - large scale
Temporary signs	Election signs
	Event promotion signs
	Temporary public notices
	Construction signs
	Real estate signs
Helicopter movements	

#### Network Utility Activities Category

Activity	Sub-activities
Operation, repair, minor upgrading and maintenance of existing network utilities	
Underground or internal network utilities	

Activity	Sub-activities
Standby or temporary energy generators	
Substations	
Network utility structures - small scale	Network utility poles and masts - small scale
	Hydro generators - small scale
	Solar panels - small scale
	Wind generators - small scale
Network utility structures - large scale	Hydro generators - large scale
	Wind generators - large scale
	Solar panels - large scale

### Transportation Activities Category

Activities	Sub-activities
Operation, repair and maintenance of the roading network	
Operation, repair and maintenance of the rail network	
New roads or additions or alterations to existing roads	
Passenger transportation hubs	
Heliports	

### Scheduled Trees Activities Category

Activity
Removal of a scheduled tree that is: dead, in terminal decline or with extreme failure, or subject to a court order for removal
Modification of a scheduled tree
Removal and any other work on a scheduled tree that will lead to the death or terminal decline of a scheduled tree

### Natural Hazard Mitigation Activities Category

Activity
Natural hazard mitigation earthworks
Natural hazard mitigation structures
Repair and maintenance of natural hazard mitigation earthworks features or natural hazard mitigation structures
Emergency natural hazard mitigation

### Earthworks Activities Category

Activity	Sub Activities
Earthworks	Earthworks - small scale
	Earthworks - large scale

### 1.3.2 Land Use activities

#### Commercial Activities Category

Activities	Sub-activities
Ancillary licensed premises	
Commercial advertising	Tourism advertising
Conference, meeting and function	
Entertainment and exhibition	
Office	Registered health practitioners
	Training and education
	Veterinary services
	Campus-affiliated office
Restaurants	
Restaurant - drive through	
Retail	Bulky goods retail
	Dairies
	Food and beverage retail
	General retail (note that this activity is managed in the Warehouse Precinct Zone as two sub-components - general retail - retail services and general retail - sale or hire of goods)
	Trade related retail
	Yard based retail
Service stations	Self-service fuel stations
Stand-alone car parking	
Visitor accommodation	Campgrounds

#### Residential Activities Category

Activities	Sub-activities
------------	----------------

Supported living facilities	Rest homes
	Retirement villages
	Student hostels
Standard residential	Papakāika
	Social housing
Working from home	

### Community Activities Category

Activities	Sub-activities
Community and leisure	Community and leisure - small scale
	Community and leisure - large scale
Conservation	
Early childhood education	Early childhood education - small scale
	Early childhood education - large scale
Sport and recreation	Sport and recreation that involves motor vehicles

### Industrial Activities Category

Activities	Sub-activities
Industry	Industrial ancillary tourism
	Rural industry
	Rural contractor and transport depots (note that this activity is managed at two scales: rural contractor and transport depots - large scale and rural contractor and transport depots - small scale)

### Rural Activities Category

Activities	Sub-activities
Domestic animal boarding and breeding	
Intensive farming	
Farming	
Forestry	
Grazing	
Landfills	
Mineral exploration	
Mineral prospecting	

Activities	Sub-activities
Mining	Scheduled mining activity
	Expansion of scheduled mining activity
Rural ancillary retail	
Rural tourism	Rural tourism - small scale
	Rural tourism - large scale
Rural research	Rural research - small scale
	Rural research - large scale

### Major Facility Activities Category

Activities	Sub-activities
Airport	
Campus	
Cemeteries	
Crematoriums	
Dunedin Botanic Garden	
Emergency services	
Hospital	
Invermay/Hercus	
Major recreation facility	
New Zealand Marine Studies Centre	
Port	
Prisons or detention centres	
Schools	
Taieri Aerodrome	

### 1.3.3 Development activities

#### Development Activities Category

Sub-categories	Activities	Sub-activities
Buildings and structures activities	Additions and alterations	Earthquake strengthening
		Restoration
		Signs attached to buildings and structures
	Demolition	
	New buildings	
	Removal for relocation	
	Repairs and maintenance	
	New structures	Fences
Retaining walls (for the purposes of rules that apply in heritage precincts only)		
Freestanding signs		
Site development activities	Outdoor storage	Service areas
	Parking, loading and access	Parking areas
	Storage and use of hazardous substances	
	Shelterbelts and small woodlots	
	Vegetation clearance	Indigenous vegetation clearance (note that this activity is managed at two scales; indigenous vegetation clearance - large scale and indigenous vegetation clearance - small scale)

### 1.3.4 Subdivision activities

#### Subdivision Activities Category

Activities	Sub-activities
Cross lease, company lease and unit title subdivision	
General subdivision	

## **1.4 Definitions**

### **1.4.1 Definitions**

#### **A**

##### **Accessway**

Any driveway, walkway or other means of access (sealed or unsealed) to and/or from any part of a road.

##### **Accidental Discovery Protocol**

A process to be followed if archaeological material is discovered during earthworks. See Appendix A8.

##### **Adaptive Re-use**

The upgrade, redevelopment or refurbishment of a building to allow for a complementary change in use, where the original purpose for which the building was constructed is no longer viable and the new use is sympathetic to the heritage values of the building.

##### **Additions and Alterations**

Changes to the external envelope (i.e. size) of a building or structure and signs attached to buildings and structures.

For the purposes of rules that apply to protected parts of scheduled heritage buildings, scheduled heritage structures and character-contributing buildings, additions and alterations also include:

- changes to the fabric, or characteristics of a building or structure, including the removal or replacement of building components that do not meet the definition of repairs and maintenance; and
- the attachment or construction of additional components, including building utilities, but not including network utility activities.

For the purposes of the reflectivity performance standard that applies in landscape and coastal character overlay zones, this definition also includes any change to the light reflectance value (LRV) of exterior surfaces, including roofs.

This definition excludes:

- activities defined as demolition.

The following activities are managed as sub-activities of additions and alterations:

- earthquake strengthening
- restoration
- signs attached to buildings and structures

Additions and alterations that are related to work required to comply with section 112 (Alterations) or section 115 (Change of use) of the Building Act 2004 are also treated differently in the policies and the assessment rules.

Additions and alterations are an activity in the buildings and structures sub-category, which is the development activities category.

##### **Airport**

The use of land and buildings for any of the following:

- aircraft operations and aircraft servicing
- fuel storage
- customs and quarantine facilities
- temporary accommodation for air crews, training and airport related personnel
- training activities and facilities associated with the aeronautical industry
- any activities necessary for, or closely related to, the operation or maintenance of the airport and airport land, for example offices and facilities for contractors and companies providing services such as freight and logistics, aviation products and services; and
- business lounges, meeting rooms and hot-desk facilities that can be used by air travellers (and their guests) on a short term hire basis.

Airport is an activity in the major facility activities category.

## **Allotment**

1. An allotment is:
  - a. any parcel of land under the Land Transfer Act 1952/2017 that is a continuous area and whose boundaries are shown separately on a survey plan, whether or not:
    - i. the subdivision shown on the survey plan has been allowed, or subdivision approval has been granted, under another Act; or
    - ii. a subdivision consent for the subdivision shown on the survey plan has been granted under this Act; or
  - b. any parcel of land or building or part of a building that is shown or identified separately:
    - i. on a survey plan; or
    - ii. on a licence within the meaning of Part 7A of the Land Transfer Act 1952/2017; or
  - c. any unit on a unit plan; or
  - d. any parcel of land not subject to the Land Transfer Act 1952/2017.
2. An allotment that is:
  - a. subject to the Land Transfer Act 1952/2017 and is comprised in one certificate of title or for which one certificate of title could be issued under that Act; or
  - b. not subject to that Act and was acquired by its owner under one instrument of conveyance

shall be deemed to be a continuous area of land notwithstanding that part of it is physically separated from any other part by a road or in any other manner whatsoever, unless the division of the allotment into such parts has been allowed by a subdivision consent granted under this Act or by subdivision approval under any former enactment relating to the subdivision of land.

3. The balance of any land from which allotment is being or has been subdivided is deemed to be an allotment.

## **Alluvial Fan**

A build-up of river or stream sediments which form a sloping landform where rivers or streams exit a valley, shaped like an open fan or a segment of a cone.

## **Amateur Radio Configurations**

Antennas, and any associated support structures that are owned and operated by licensed amateur radio operators.

## **Ancillary**

For the purposes of this Plan, an activity being "ancillary" means it is subordinate to and part of the operation of the primary activity identified. It is not a stand-alone activity that is operated outside of or distinctly apart from the operation of the primary activity.

## **Ancillary Licensed Premises**

Activities that sell alcohol.

For the purposes of this Plan, licensed premises are not a stand-alone activity and are always treated as secondary to another activity. Examples are:

- bottle shops fall under the definition of food and beverage retail
- bars fall under the definition of restaurant
- breweries that sell alcohol on-site fall under the definition of retail ancillary to industry
- home-based internet alcohol sales may fall under the definition of working from home or general retail depending on the nature of the activity; and
- restaurants, dairies, visitor accommodation, sport and recreation activities are also common activities that may also be licensed premises.

Both the activity status and other rules for the underlying activity and for the ancillary licensed premises apply for an activity that involves alcohol sales.

Ancillary licensed premises are an activity in the commercial activities category.

## **Ancillary Residential Units**

A secondary residential unit that is no greater than 80m<sup>2</sup> in gross floor area and is ancillary to a primary residential activity on the same site.

This definition excludes sleep outs.

## **Ancillary Signs**

Signs relating to any permitted or lawfully established land use activity taking place on the site on which the sign is located that provides information about any of the following:

- the name of a business or activity operating on-site
- the street address
- information about the nature or operation of the business including: opening hours and contact details
- any temporary events held on the site; and
- information on types of goods sold or services provided, including current special promotions or events.

Information on types of goods sold does not include generic product advertising signs that have a display face greater than 1m<sup>2</sup> in the Recreation Zone or 2m<sup>2</sup> in all other locations (Note: this size may not be able to be achieved in all circumstances as performance standards for ancillary signs may prescribe a smaller maximum sign area).

For the sake of clarity, signs that advertise goods or services that do not meet the definition of ancillary signs or temporary signs are managed as a separate land use activity - commercial advertising.

## **Animal Feedlot**

A covered or uncovered standing area for the primary purpose of intensive feeding of livestock on food other than pasture grasses.

## **Antenna**

A device that receives or transmits radiocommunication or telecommunication signals.

For the sake of clarity, this includes:

- any mount to attach the device to network utility poles and masts, buildings or structures; and
- any shroud and any incidental equipment such as: lightning protection; mast-head amplifiers; and remote radio units.

This definition excludes activities otherwise defined as network utility poles and masts.

## **Approved Containers**

Containers approved to Environmental Risk Management Authority (ERMA) specifications.

## **Ara Tawhito**

Ancient trails.

## **Archaeological Site**

Any place in New Zealand, including any building or structure (or part of a building or structure), that:

- was associated with human activity that occurred before 1900 or is the site of the wreck of any vessel where the wreck occurred before 1900; and
- provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand.

This definition includes a site for which a declaration is made under section 43(1) of the Heritage New Zealand Pouhere Taonga Act 2014.

## **Architectural Features and Details**

Decorative and defining elements of a building. Examples are:

- columns
- brackets
- windows and doors
- relief detailing
- verandahs and posts
- entranceway features
- construction materials; and
- motifs and friezes.

## **Area of Significant Biodiversity Value**

Any area listed in Appendix A1.2 Schedule of Areas of Significant Biodiversity Value.

## **Arterial Road**

A road classified as arterial road within the **road classification hierarchy mapped area** shown on the Planning

Map.

## **B**

### **Best Arboricultural Practice**

Work undertaken by a suitably qualified arborist in accordance with the Best Practice Guidelines by the New Zealand Arboricultural Association Incorporated.

### **Biodiversity**

The variability among living organisms, and the ecological complexes of which they are a part, including diversity within species, between species, and of ecosystems.

### **Biodiversity Offset**

A method that involves measuring biodiversity values and compensating for residual loss in biodiversity values on-site with an equivalent or greater gain ('no net loss') in biodiversity values elsewhere.

### **Biodiversity Values**

The intrinsic values, and value to the community, of indigenous biota and indigenous or mixed habitats and ecosystems that support indigenous biota.

For the sake of clarity, effects on biodiversity values include effects on the health of the indigenous or mixed habitats and ecosystems that support indigenous biota, as well as effects on the indigenous biota themselves.

### **Boarding House**

A residential activity where individual sleeping quarters are rented to boarders or lodgers, and facilities are provided for communal use by tenants. In some cases, services may be provided in the form of meals, cleaning or laundry services.

This definition excludes any activities defined as supported living facilities.

### **Building**

A structure that includes a roof that is, or could be, fully or partially enclosed with walls. The definition of building includes the parts of buildings defined as building utilities and rooftop structures. For the sake of clarity, water or other storage tanks, other than as captured in the definition of building utilities, are a structure not a building.

### **Building Site Coverage**

The part of a site covered by buildings.

### **Building Utilities**

Utility structures attached to buildings that form part of heating, cooling, electricity generation, cooking, hot or cold water, wastewater, telecommunication, or radio-communication reception systems for the building. Examples are:

- heat pumps, air conditioning, and ventilation units
- solar panels mounted to the building including those that supply excess electricity to the network
- roof-mounted water (pressure) tanks
- gas bottles
- antennas, and satellite dishes; and
- pipes.

Building utilities do not include the following structures, which are provided for as network utility activities:

- amateur radio configurations
- roof-mounted wind turbines
- underground and internal utilities; and
- network utility connections.

Building utilities are considered to be part of a building, and are therefore managed as part of new buildings and additions and alterations to buildings.

## **Buildings**

The development activity which includes a building that is permanently fixed to the land and over 10m<sup>2</sup>.

This definition only applies to "buildings" as an activity in the development category. It does not cover any other use of the word "building", which should rely on the broader definition for "building" (singular).

For the sake of clarity, this definition consists of newly constructed buildings and buildings relocated to, or within, a site.

Buildings are an activity in the buildings and structures sub-category, which is in the development activities category.

## **Buildings and Structures Activities**

The sub-category of activities that consists of:

- (new) buildings
- structures
- additions and alterations
- removal for relocation
- demolition; and
- repairs and maintenance.

Buildings and structures activities are a sub-category in the development activities category.

## **Bulk Fuel Storage Facilities**

Facilities used for the bulk storage of natural or manufactured gas and petroleum (including biofuel) that store:

- over 15 tonnes of gas; or
- over 1 million litres of petroleum.

For the sake of clarity, this definition includes:

- the loading and unloading of fuel; and
- any ancillary activities necessary for the functioning of the facility, including but not limited to staff offices and facilities.

Bulk fuel storage facilities are included in the definition of Industry.

## **Bulk Fuel Storage Facilities Sensitive Activities**

For the purposes of provisions applying within the **hazard facility mapped area**, activities where people are at greater risk from hazards associated with bulk fuel storage facilities. These consist of:

- community and leisure
- early childhood education
- entertainment and exhibition
- office
- major facility activities (other than major recreation facility in the Stadium Zone and port activity in industrial zones)

- residential; and
- visitor accommodation.

## **Bulky Goods Retail**

Retail where the predominant items sold or hired are bulky goods. Bulky goods are limited to furniture, whiteware, and large electronic goods.

This definition excludes retail activity in the form of department stores, which are defined as general retail.

Bulky goods retail is a sub-activity of retail.

## **C**

### **Campgrounds**

The use of land and buildings for the purpose of:

X. providing visitor accommodation primarily in the form of tent, caravan, or campervan sites, but may also include visitor accommodation units; or

Y. providing for accommodation in transportable homes in the form of caravans, house buses/trucks or 'tiny houses' provided these meet the meaning of "motor vehicle" in the Land Transport Act 1998, are road legal (warranted and registered), and are movable.

This definition excludes freedom camping which is managed through a DCC by-law.

Campgrounds are a sub-activity of visitor accommodation.

### **Campus**

The use of land and buildings by the University of Otago or the Otago Polytechnic, in the Campus Zone and in the **Campus mapped area**, for the provision of teaching, training, learning, and research. For the sake of clarity, this includes:

- ancillary staff and student facilities and support services, including student and staff support services (examples are student health, well-being, legal, cultural, religious, job-seeking and budgeting services), student union offices, student and staff clubs and organisations (provided by the University of Otago, the Otago Polytechnic or other parties)
- activities shared with the Dunedin Hospital
- administration activities
- amenities for staff and students that would otherwise meet the definition of public amenities
- temporary activities; and
- sales of any learning materials associated with, or necessary for, any courses offered by the University of Otago or Otago Polytechnic.

Campus is an activity in the major facility activities category.

### **Campus-affiliated Office**

Office activity based on or supporting the research, development or innovation activities of the University of Otago, Otago Polytechnic, Dunedin Hospital or Otago Museum staff or students.

Campus-affiliated office is a sub-activity of office.

### **Carriageway**

The formed section of road between kerb and channel on sealed roads, or between the outer edge-line of unsealed shoulders on unsealed roads, constructed principally for the carriage of vehicles and/or cycles.

## **Cemeteries**

The use of land and buildings for the burial of the dead.

Cemeteries are an activity in the major facility activities category.

## **Centres**

Principal, Suburban, Rural, Neighbourhood, Neighbourhood Convenience and Neighbourhood Destination centres zones

## **Character-contributing Building**

A building identified as a character-contributing building in Appendix A1.1

## **Cliff**

A slope with an average angle of over 63° (1:2 horizontal to vertical ratio, or 200% grade) and a minimum height of 9m.

## **Closely Similar**

In relation to repairs and maintenance and restoration of heritage items, very similar, but not identical to.

Examples are:

- the use of long run roofing iron in place of short run iron roofing
- small changes in size or scale due to the use of metric measurements rather than imperial measurements that are not visually obvious
- the use of imported or renewable timber where native timber cannot be sourced; and
- the use of lightweight concrete in place of masonry.

## **Cluster**

A group of adjoining sites of a similar size.

## **Collector Road**

A road classified as collector road within the **road classification hierarchy mapped area** shown on the Planning Map.

## **Commercial Activities**

The category of land use activities that consists of:

- ancillary licensed premises
- commercial advertising
- conference, meeting and function
- entertainment and exhibition
- office
- restaurants

- restaurant - drive through
- retail
- service stations
- stand-alone car parking; and
- visitor accommodation.

For the sake of clarity, definitions in the commercial activities category include all normal parts of that activity, for example warehousing, staff offices and facilities, even when those activities might on their own meet another activity definition.

## **Commercial Advertising**

The use of land, buildings or structures for the advertising of goods and services that are not sold or provided on the site on which the sign is located, or other advertising of products and/or services that does not meet the definition of an ancillary sign. For the sake of clarity, this includes mobile signs displayed on a vehicle or trailer parked with the primary purpose of displaying the sign rather than for transport. This definition excludes:

- commercial advertising located within a building that is not visible from a public space outside the building, which is not managed by this Plan; and
- signs that are managed as temporary signs.

Tourism advertising is managed as a sub-activity of commercial advertising.

Commercial advertising is an activity in the commercial activities category.

## **Commercial Centre Street**

A road classified as commercial centre street within the **road classification hierarchy mapped area** shown on the Planning Map.

## **Commercial Sponsorship Signs**

Any sign erected by a business or organisation that is sponsoring an event or a team, which is located within a sports ground or facility.

## **Common Wall**

A wall, including a party wall or two abutting walls, that forms the dividing partition between two adjoining buildings.

## **Communal Outdoor Gathering Area**

Outdoor area provided in a supported living facility, visitor accommodation or sport and recreation facility, for the purposes of social gathering and communal events for residents, visitors or patrons.

## **Community Activities**

The category of land use activities that consists of:

- community and leisure
- conservation
- early childhood education; and
- sport and recreation.

## **Community and Leisure**

The use of land and buildings for the purpose of social gathering, worship, community support, non-competitive informal recreation, or leisure activities. These activities are generally not-for-profit and/or may make use of space in an existing building.

Examples are:

- churches
- community halls
- after school care and holiday programmes
- Plunket
- playgroups
- Scouts, Girl Guides, Brownies
- community gardens
- game and hobby clubs
- libraries
- marae-related activities; and
- funeral service providers.

This definition excludes activities otherwise defined as office, schools, early childhood education, and sport and recreation.

The following activities are managed as sub-activities of community and leisure:

- community and leisure - large scale; and
- community and leisure - small scale.

Community and leisure is an activity in the community activities category.

### **Community and Leisure - Large Scale**

Community and leisure that exceeds the attendance rate of Community and Leisure - small scale.

Community and leisure - large scale is a sub-activity of community and leisure.

### **Community and Leisure - Small Scale**

Community and leisure that does not exceed an attendance rate of 50 people at any one time, except for a maximum of 10 days per calendar year, where the attendance rate does not exceed 100 people at any one time.

Community and leisure - small scale is a sub-activity of community and leisure.

### **Community Garden**

An area of land cultivated collectively by a group of people for personal use, and not for commercial gain.

### **Community Notices**

A notice displayed by an individual member of the public or a community group in relation to events or items for sale that are not part of, or related to commercial activities.

### **Conference, Meeting and Function**

The use of land and buildings for the purposes of holding organised conferences, seminars and meetings, or as a venue that is hired for weddings or other functions.

This definition excludes activities otherwise defined as entertainment and exhibition, community and leisure (which includes churches and community halls), and sport and recreation.

Conference, meeting and function is an activity in the commercial activities category.

## **Conservation**

The use of land for the establishment, maintenance or enhancement of indigenous vegetation and/or habitat for indigenous fauna.

Examples of component activities of conservation are:

- restoration planting
- pest and weed control
- track construction and maintenance; and
- fencing.

Conservation is an activity in the community activities category.

## **Construction**

The use of plant, tools, gear or materials as part of the erection, installation, repair, maintenance, alteration, dismantling or demolition of any building or structure; or site development. This definition includes all work from site preparation to site restoration.

This definition does not include any resultant buildings, structures or site development activities (including demolition or removal for relocation), which are separately defined under development activities or city-wide activities.

Construction is an activity in the temporary activities category.

## **Construction Signs**

A sign erected on a construction site to provide information to the public about the construction project. For the sake of clarity, this includes companies involved with providing services or products for the project, or safety warnings or notices.

This definition excludes real estate signs.

Construction signs are a sub-activity of temporary signs.

## **Crematoriums**

The use of land and buildings for the reduction to ashes of dead bodies by burning.

The definition of crematorium excludes the provision of funeral services which are defined as community and leisure.

Crematoriums are an activity in the major facility activities category.

## **Critical Electricity Distribution Infrastructure**

Consists of the following infrastructure as shown on the Planning Map:

### Electricity Sub-transmission Infrastructure

- Port Chalmers/North East Valley (PC/NV1) - 33kv
- Port Chalmers/North East Valley (PC/NV2) - 33kv
- Green Island - 33 (1) - 33kv
- Green Island - 33 (2) - 33kv
- Halfway Bush - Waipori (A Line) - 33kv
- Halfway Bush - Berwick (B Line) - 33kv
- Halfway Bush - Berwick (C Line) - 33kv
- Wairongoa Road - Mosgiel Substation LAT1 - 33kv
- Wairongoa Road - Mosgiel Substation LAT2 - 33kv
- Wairongoa Road - Mosgiel Substation LAT3 - 33kv

### Significant Electricity Distribution Infrastructure

- East Taieri 3 - 11kv line
- Dunedin Airport - 11kv line
- Port of Otago - 11kv line
- 11kv pylon line crossing Otago Harbour
- 11kv submarine cable crossing Otago Harbour

### Zone Substations

- Berwick Zone Substation (Designation 234)
- Outram Zone Substation (Designation 245)
- Mosgiel Zone Substation (Designation 242)

## **Critical Electricity Distribution Infrastructure Corridor Mapped Area**

The area shown as **Critical Electricity Distribution Infrastructure Corridor mapped area** on the Planning Map.

Note that this area is measured either side of the centreline of above ground Critical Electricity Distribution Infrastructure (except in the case of designated zone substations where the measurement is taken from the designation boundary), as follows:

- a. 5m from the centreline of a 11kV line;

- b. 8.5m from the centreline of a 33kV line;
- c. 8.5m from the boundary of the designated zone substations; and
- d. 9.5m from the centreline of a 66kV or a 110kV line.

## **Cross Lease, Company Lease and Unit Title Subdivision**

The division of a site by way of a:

- cross lease - lease of a building or part of a building, granted by any owner of the land, and held by any person who has an estate or interest in an undivided share of the land
- company lease - lease of a building or part of a building, granted by a company owning or having a registered interest to the land, and held by a person having virtue of being a shareholder in the company. This included a license within the meaning of section 121A of the Land Transfer Act 1952; and
- unit title - land consisting of a space of any shape situated below, on or above the surface of the land, all the dimensions of which are limited, and that is designed for separate ownership.

Cross lease, company lease and unit title subdivision is an activity in the subdivision activities category.

## **Customary**

For the purposes of the Manawhenua provisions, customary means in accordance with custom or usual habitual practice. Customs, or customary uses, may include those involving uninterrupted use and occupation.

## **Customer-facing**

Activities designed so customers can 'walk-in' to purchase goods and/or services, including entertainment and exhibition activities that are open to the public.

Examples are:

- shops (retail)
- restaurants
- museums; and
- galleries.

## **Cycleway**

A special road, route, or path intended for use by cyclists from which vehicles and pedestrians are generally excluded.

## **D**

## **Dairies**

A shop serving a local neighbourhood, which primarily sells milk, bread, beverages and other day-to-day convenience food; but which may also include the sales of lottery tickets and household consumables.

Dairies are a sub-activity of retail.

## **Default Zone**

The zone to which a major facility zone may transition in accordance with plan rules. Default zones are listed in Appendix A9.

## **Demolition**

The complete or partial destruction of a building or structure.

Demolition is an activity in the building and structures sub-category, which is in the development activities category.

### **Descendant of an Original Grantee**

Descendant of an original grantee means a blood or adopted descendant of one of the original individuals in whom the particular reserve in which the papakāika is proposed, was vested.

Note: original ownership lists can be obtained from the Māori Land Court.

### **Designated Rail Corridor**

Land that is designated for railway purposes.

### **Development Activities**

The category of activities that includes the sub-categories of:

- buildings and structures activities; and
- site development activities.

### **Directional signs**

Signs that identify the location of routes, entrances, or direction and/or distance to destinations.

### **Dispensing Facility**

A single petrol pump or a group of petrol pumps that are grouped on a single 'island'.

### **Display Face**

The entire area within a notional perimeter enclosing the extreme limits of lettering, framework, emblem or logo, together with any material or colour forming an integral part of the sign or used to differentiate such a sign from the background against which it is placed.

### **Domestic Animal Boarding and Breeding**

The use of land and buildings for the boarding and/or commercial breeding of cats and/or dogs. For the sake of clarity, commercial breeding refers to more than one breeding pair of dogs or cats domiciled at the site. One breeding pair of dogs and/or cats is a working from home activity.

Domestic animal boarding and breeding is an activity in the rural activities category.

### **Drain**

Artificial channel or subsurface conduit (e.g. mole drain, tile drain or drainage tunnel) constructed to either lower the water table or divert water, excluding a water race.

### **Dripline**

The area under a tree canopy defined by the outer circumference of the tree's branches, where water drips from the tree branches onto the ground (refer to Figure 7.5.2A).

### **Driveway**

A constructed accessway that provides vehicular access, other than as meets the definition of vehicle tracks. For the sake of clarity, this includes access legs, private ways, and service lanes.

## **Dunedin Botanic Garden**

The use of land and buildings at the Dunedin Botanic Garden for the purpose of establishment, care and maintenance of amenity and conservation plantings and aviary facilities.

For the sake of clarity, this includes any ancillary activities directly associated with the functioning of the activity, such as administration facilities.

Dunedin Botanic Garden is an activity in the major facility activities category.

## **Duplex**

A residential building that contains two residential units (only) where those units:

- share a common wall along a continuous length of at least six metres; or
- are located one above the other.

For the sake of clarity, a duplex may be a purpose-built new building, or may be created through the partitioning or modification of an existing single-unit residential building into two residential units.

## **E**

### **Early Childhood Education**

A place or premises used for the care, education and welfare of children of pre-school age where children can be left in the care of others. Examples are:

- crèche
- Kōhanga Reo
- day care
- kindergarten; and
- play centre.

This definition excludes:

- home-based early childhood education and childcare for five or fewer children which is provided for under the definition of working from home; and
- Plunket and play groups, which are provided for under the definition of a community and leisure activity.

The following activities are managed as sub-activities of early childhood education:

- early childhood education - large scale; and
- early childhood education - small scale.

Early childhood education is an activity in the community activities category.

### **Early Childhood Education - Large Scale**

Early childhood education that has a licence for more than 35 children.

Early childhood education - large scale is a sub-activity of early childhood education.

### **Early Childhood Education - Small Scale**

Early childhood education that has a licence for no more than 35 children.

Early childhood education - small scale is a sub-activity of early childhood education.

## **Earthquake Strengthening**

Work undertaken to improve the seismic performance of a building or structure, including strengthening or replacing elevated features on a façade or roof.

Earthquake strengthening is a sub-activity of additions and alterations.

## **Earthworks**

The disturbance and alteration of land surfaces by the re-contouring of land and/or the excavation or deposition of materials including clean fill, soil, or rock.

This definition excludes:

- earthworks associated with cultivation, harvesting and tilling, which are included as part of the definition of farming;
- earthworks associated with quarrying or mining, which are included as part of the definition of mining;
- vegetation clearance that is associated with earthworks, which is included as part of the definition of vegetation clearance;
- earthworks associated with the maintenance of: sports fields, landscaping or gardens, farm tracks, private roads, private ways, dams, farmyards, drains, farm service areas, silage pits, and fences; which are not managed by the Plan; and
- earthworks that meet the definition of natural hazard mitigation earthworks.

The following activities are managed as sub-activities of earthworks:

- earthworks - large scale; and
- earthworks - small scale.

Earthworks are an activity in the earthworks activities category.

## **Earthworks Activities**

The category of activities that consists of earthworks (including earthworks - large scale and earthworks - small scale, which are sub-activities of earthworks).

### **Earthworks - Large Scale**

Earthworks that do not meet the earthworks - small scale thresholds performance standard.

Earthworks - large scale are a sub-activity of earthworks.

### **Earthworks - Small Scale**

Earthworks that meet the earthworks - small scale thresholds performance standard.

Earthworks - small scale are a sub-activity of earthworks.

## **Election Signs**

A sign erected for a local body election by a candidate or group of candidates, or for parliamentary elections by any registered political party, independent or non-party affiliated candidate contesting a general election, by-election, or referendum.

Election signs are a sub-activity of temporary signs.

## **Electrical Distribution Structures**

Cabinets or other structures containing equipment for the control and/or transformation of electricity, which have a maximum nominal operating voltage and energy transfer of 22kV and 3MVA respectively.

## **Elevated Feature**

Architectural elements of a building that project above the roofline independent of the main structure of the building. Examples are: parapets, chimneys and finials.

## **Emergency Natural Hazard Mitigation**

Temporary emergency defences against an imminent risk from a natural hazard that is a threat to safety or property undertaken during a natural hazard event. Examples are:

- sand bagging; and
- beach sand replenishment.

Emergency natural hazard mitigation is an activity in the natural hazard mitigation activities category.

## **Emergency Services**

The use of land and buildings by those authorities responsible for the safety and welfare of people and property in the community.

Examples are:

- fire stations
- ambulance stations
- police stations
- civil defence; and
- search and rescue.

Emergency services are an activity in the major facility activities category.

## **Energy Resource Investigation Devices**

A device required to investigate the extent of an energy resource and/or to assess the suitability of a site for the generation of electricity from an energy resource.

## **Entertainment and Exhibition**

The use of land and buildings for the primary purpose of cultural, entertainment, or exhibition activities. For the sake of clarity, this includes ancillary office facilities, ticket sales, retail, and restaurants.

Examples are:

- museums
- theatres
- public art galleries
- casinos
- cinemas
- music venues; and

- interpretation centres that are not otherwise defined as rural tourism, including garden-based tourism.

This definition excludes:

- rural tourism
- industrial ancillary tourism
- sport and recreation
- conference, meeting and function; and
- temporary events.

Entertainment and exhibition is an activity in the commercial activities category.

### **Esplanade Reserve**

A reserve within the meaning of the Reserves Act 1977 which is vested in a territorial authority under section 239, and is either:

- a local purpose reserve within the meaning of section 23 of that Act, if vested in the territorial authority under section 239; or
- a reserve vested in the Crown or a regional council under section 237D.

### **Esplanade Strip**

A strip of land created by the registration of an instrument in accordance with section 229 of the Resource Management Act 1991 for a purpose or purposes set in section 229 of the Resource Management Act 1991.

### **Event Promotion Signs**

A sign advertising a temporary event or an event of a temporary nature at an entertainment and exhibition, conference, meeting and function, major recreation facility, or sports and recreation venue.

This definition excludes promotion of events associated with a retail activity and movies, which is provided for under the definition of commercial advertising.

Event promotion signs are a sub-activity of temporary signs.

### **Extremely Unlikely**

For the purpose of the natural hazards provisions, extremely unlikely means an event that has a chance of, at most, one in 2,500 of occurring in any given year. This can be expressed as an average return period of more than 2,500 years, or as an Annual Exceedance Probability of 0.0004 (0.04%) or less.

## **F**

### **Fabric**

The physical material of any building, structure or site, including subsurface material, structures, interior and exterior surfaces, fixtures and fittings.

### **Façade**

The part of a building facing onto any public place.

### **Family Flats**

A secondary residential unit that is ancillary to a primary residential activity on the same site.

This definition excludes sleep outs.

## **Farm Landfill**

A landfill situated on a farm in which only the disposal of waste generated from the farming activity on that property takes place.

## **Farming**

The use of land and buildings for the purpose of the commercial production of vegetative matter or livestock.

For the sake of clarity, this includes:

- on-farm extraction and processing of aggregate for the sole purpose of constructing and maintaining access within the property
- earthworks associated with cultivation, harvesting and tilling
- the processing of animals or plants, or the produce of animals or plants, that are grown on the property
- farm landfills, offal pits, silage pits and silage stacks (note these are still subject to earthworks - small scale thresholds); and
- the take-off or landing of fixed-wing aircraft undertaking operations as part of farming on rural airstrips and landing areas.

This definition excludes activities which otherwise meet the definition of intensive farming, domestic animal boarding and breeding, rural ancillary retail, forestry, helicopter movements or earthworks.

Farming is an activity in the rural activities category.

## **Fences**

A barrier, railing, or other upright structure, typically of wood or wire, normally used for controlling access to an area of ground or to mark a boundary. For the sake of clarity, this includes gates that are part of or incidental to a fence.

Fences are a sub-activity of structures.

## **Filming**

The temporary use of land or buildings for the purposes of commercial filming or photography. For the sake of clarity, this includes temporary buildings, structures, or site development activities associated with the filming.

This definition excludes filming associated with news coverage or any filming activity that does not have any associated development activity and involves no more than five people involved in the activity, which are not managed under this District Plan.

The following activities are managed as sub-activities of filming:

- filming - large scale; and
- filming - small scale.

Filming is an activity in the temporary activities category.

## **Filming - Large Scale**

Filming that exceeds the scale thresholds for filming - small scale.

Filming - large scale is a sub-activity of filming.

### **Filming - Small Scale**

Filming that does not exceed either of the following thresholds:

- a maximum duration (including site preparation and site clean-up and restoration) of 30 days within a 12 month period; or
- an average of 50 vehicle movements per day and no more than 100 vehicle movements generated per day.

Filming - small scale is a sub-activity of filming.

## **Finished Ground Level**

The level of the ground after all works are completed, including the level of the ground adjoining any structure or building that is set into the ground e.g. a utility pole.

## **Fixed (Stationary) Noise Sources**

For the purpose of military exercises, means noises from:

- power generation
- heating
- ventilation or air condition systems; and
- water or wastewater pumping/treatment systems.

This definition excludes firing of weapons and use of explosives.

## **Flash Point**

In relation to any substance, means the lowest temperature at which the substance, when tested in a prescribed type of apparatus, liberates vapour at a rate sufficient to produce an explosive mixture with the air that is in immediate contact with the substance.

## **Food and Beverage Retail**

The use of land and buildings primarily for the sale of food products, including meat, fish, fruits and vegetables, processed foods, and baked goods but which may also include: sales of household consumables and lottery tickets, on-site bakeries and other food preparation facilities, and the sale of pre-prepared meals from a deli counter (but excludes on-site cafés or other restaurant facilities).

Examples are:

- supermarkets
- butchers; and
- greengrocers.

Food and beverage retail is a sub-activity of retail.

## **Footprint**

The area of ground covered by a building or structure, measured from the external side of walls or external surfaces and excluding any eaves or spouting.

## **Forestry**

The use of land and buildings for the purpose of growing trees for commercial timber, wood pulp, wood products, or for use as a carbon sink.

For the sake of clarity, this includes all of the following:

- preparation of land for planting of trees
- planting of trees
- tending of trees
- harvesting of trees

- the use of portable sawmills
- the sale of firewood produced from the property
- replanting of trees
- earthworks for the construction, maintenance and upgrade of forestry roads, forestry tracks, landings and river crossing, and cut and fill operations
- necessary infrastructure including roads and forestry landings (i.e. skid sites); and
- on-site extraction and processing of aggregate for the sole purpose of constructing and maintaining access within the property.

This definition excludes:

- the milling and processing of trees, other than with the use of portable sawmills (which are provided for under the definition of rural industry); and
- activities that otherwise meet the definition of shelterbelts and small woodlots.

Forestry is an activity in the rural activities category.

Note that Forestry activity is also subject to any rules related to component development activities, including vegetation clearance rules.

## **Freestanding Flagpoles**

Flagpoles not attached to a building.

This definition excludes structures otherwise defined as freestanding signs.

## **Freestanding Signs**

Signs that are standing on their own independent of any building for their support or a structure that is primarily designed to support one or more signs. Freestanding signs include:

- permanently fixed freestanding signs; and
- portable freestanding signs that are displayed on a regular and on-going basis and, thereby, do not meet the definition of a temporary sign (even if they do not otherwise meet the definition of "structures").

Freestanding signs are a sub-activity of structures.

## **Frequent Public Transport Services**

Public transport routes that provide services at intervals of no greater than 30 minutes from 8.00am - 6.00pm Monday to Friday.

## **Functional Need**

The need for a proposal or activity to traverse, locate or operate in a particular environment because the activity can only occur in that environment.

## **G**

### **Garages and Carports**

A building principally used for housing motor vehicles.

### **General Retail**

Any retail activity that is not otherwise defined as:

- food and beverage retail
- dairies
- service stations
- bulky goods retail
- yard based retail; or
- trade related retail.

General retail is a sub-activity of retail.

General retail - retail services is the component of general retail that is captured under the definition of retail services.

General retail - sale or hire of goods is the component of general retail that is sale or hire of goods.

## **General Subdivision**

The division of a site including:

- the creation of fee simple allotments with new certificates of title; and
- the lease of land or buildings, for 35 years or longer by way of application to the Registrar-General of land.

General subdivision is an activity in the subdivision activities category.

## **Grazing**

The use of land for the keeping of livestock, where not part of farming.

This definition only applies to rules for “grazing” as a land use activity in the rural activities category. It does not cover any other use of the word, which should rely on the broader dictionary definition.

Grazing is an activity in the rural activities category.

## **Gross Floor Area**

The total internal floor area used for the stated activity. This includes all normal parts of the activity, for example storage, attached garages and carports, warehousing, office and staff facilities.

## **Gross Public Floor Area**

The area open to the general public excluding the following:

- lift and stair wells
- toilets, bathrooms and staff facilities
- storage and loading areas; and
- parking and manoeuvring areas.

## **Ground Floor Area**

The footprint area of a building, excluding any decks, patios, or other features that do not form part of the internal usable space of the building where they do not impede the free flow of water.

## **Ground Level**

The natural surface of the ground prior to any earthworks on the site; or if the land has been subdivided and earthworks assessed, the level of the ground existing when assessed earthworks associated with the prior subdivision of the land were completed (but before filling or excavation for new buildings on the land has commenced).

## **H**

### **Habitable Room**

Any room in a residential unit, family flat, ancillary residential unit, sleep out or visitor accommodation unit that is designed to be, or could be, used as a bedroom. The calculation of a habitable room will exclude only one principal living area per residential unit (including family flats). Any additional rooms in a residential unit, family flat, ancillary residential unit or sleep out that could be used as a bedroom but are labelled for another use, such as a second living area, gym or study, will be counted as a habitable room.

In the case of dormitory-style accommodation containing multiple beds, such as is used in some backpacker accommodation, every four beds or part thereof will be treated as one habitable room. For the sake of clarity, a standard 'bunk bed' is counted as 2 beds.

### **Hapū**

Subtribe or extended whānau.

### **Hard Surface**

A compacted surface that does not contain loose material that can be picked up in vehicle tyres or washed onto the road by rainfall or become muddy when wet. Hard surfaces may be permeable or impermeable. Examples of hard surfaces are:

- asphalt
- concrete
- paving and paving stones, and
- chip seal.

### **Hazardous Sub-facility**

A location within a site where multiple quantities of hazardous substances may be stored.

### **Head Arrays**

An array of antennas attached to a mast. For the sake of clarity, this includes any mounting support structures.

### **Helicopter Movements**

The use of land for the occasional loading and unloading, and take-off and landing of helicopters.

Helicopter movements are an activity in the temporary activities category.

### **Heliports**

The use of land or buildings for the take-off and landing of helicopters.

Heliports are an activity in the transportation activities category.

## **Heritage Conservation**

Safeguarding the cultural heritage value of a building or place, while retaining authenticity and integrity.

## **Highly Productive Land**

Land that has the ability to sustain the production of a wide variety of plants including horticultural crops, through a combination of land, soil and climate attributes.

## **High Trip Generators**

The group of activities which includes:

- new or additions to parking areas that result in 50 or more new parking spaces; and
- any activities that generate 250 or more vehicle movements per day.

## **Hospital**

The use of land or buildings for the purpose of providing health care services for the community. For the sake of clarity, this includes:

- medical assessment, diagnosis, treatment and rehabilitation services
- temporary accommodation for family/support people
- supported accommodation for patients, including transitioning from hospital to community care
- dispensaries
- in-patient care
- outpatient departments and clinics
- medical or health training; education or research, including public education
- physiotherapy facilities; and
- any activities ancillary to, or an integral part of, the functioning of the facility, including: chapel activities, administration services, laundries, kitchens, temporary staff accommodation, staff facilities, cafeterias, gift shops, storage facilities, workshops, laboratories, mortuaries, and at Dunedin Public Hospital only, a heliport.

This definition excludes activities otherwise defined as rest homes and registered health practitioners.

Hospital is an activity in the major facility activities category.

## **Hui**

Meeting or assembly.

## **Hydro Generators**

Renewable energy generators that generate energy using the energy of falling water.

### **Hydro Generators - Large Scale**

Hydro generators that exceed the scale thresholds for hydro generators - small scale as set out in Rule 5.5.3.

Hydro generators - large scale are a sub-activity of network utility structures - large scale.

### **Hydro Generators - Small Scale**

Hydro generators that meet the scale thresholds for hydro generators - small scale as set out in Rule 5.5.3.

Hydro generators - small scale are a sub-activity of network utility structures - small scale.

## **Hydrologically Connected**

For the purposes of stormwater management in a **new development mapped area**, the parts of an NDMA from which stormwater runoff leaves the NDMA in the same area.

### **I**

## **Impermeable Surface**

A surface through which water cannot pass and that sheds water.

Examples are:

- paved areas including driveways and sealed/compacted metal parking areas
- sealed and compacted metal roads; and
- layers engineered to be impervious such as compacted clay.

## **Improved Pasture**

An area of land where exotic pasture species have been deliberately sown or maintained for the purpose of pasture production, and species composition and growth has been modified and is being managed for livestock grazing.

## **Indigenous Vegetation**

A plant or lichen community in which species indigenous to that part of New Zealand are dominant, where dominance is measured as either:

- indigenous species comprising at least 30% coverage by area or 30% of the total number of specimens present; or
- indigenous species comprising at least 20% coverage, in plant or lichen communities where indigenous species make up the tallest stratum or are visually conspicuous.

## **Indigenous Vegetation Clearance**

Vegetation clearance of indigenous vegetation.

Indigenous vegetation clearance is a sub-activity of vegetation clearance.

### **Indigenous Vegetation Clearance - Large Scale**

Indigenous vegetation clearance that does not meet the indigenous vegetation clearance - small scale thresholds performance standard.

Indigenous vegetation clearance - large scale is a sub-activity of vegetation clearance.

### **Indigenous Vegetation Clearance - Small Scale**

Indigenous vegetation clearance that meets the indigenous vegetation clearance - small scale thresholds performance standard.

Indigenous vegetation clearance - small scale is a sub-activity of vegetation clearance.

## **Industrial Activities**

The category of land use activities that consists of industry including industrial ancillary tourism, rural industry and

rural contractor and transport depots, which are sub-activities of Industry.

## **Industrial Ancillary Tourism**

The use of land and buildings for the ancillary purpose of interpretation and demonstration of an industry activity on the site.

For the sake of clarity, this includes associated restaurant or retail activity where ancillary to the industrial ancillary tourism activity.

Industrial ancillary tourism is a sub-activity of industry.

## **Industrial Road**

A road classified as industrial road within the **road classification hierarchy mapped area** shown on the Planning Map.

## **Industry**

The use of land and buildings for any of the following:

- manufacturing, assembly, processing, storage, repair, maintenance, and packing of goods and materials, including machinery or vehicles
- transport facilities including distribution centres, collection points, courier depots and bus depots (except where passengers are picked up or dropped off)
- depots for the storage and dispatch of vehicles, equipment, and/or materials, and the administration and dispatch of workers using these in the field
- bulk fuel storage facilities
- laboratory or factory-based research
- waste management facilities including refuse transfer and recycling stations
- property and equipment maintenance services
- vehicle repair and testing stations; and
- wholesale.

For the sake of clarity, this definition includes:

- any ancillary offices and staff facilities
- the use of rail sidings as part of industry; and
- the generation of energy from the combustion of biomass waste that is the by-product of industry.

This definition excludes:

- bakeries ancillary to food and beverage retail; and laboratories ancillary to any major facility activities or office activity, which are included as part of those definitions, respectively
- activities otherwise defined as working from home
- direct 'customer facing' retail sales, which is provided for under the definition of retail and included in 19.3.3 activity status table as 'retail ancillary to industry'; and
- activities otherwise defined as operation, repair and maintenance of the rail network.

The following activities are managed as sub-activities of industry:

- industrial ancillary tourism
- rural contractor and transport depots; and
- rural industry.

Industry is an activity in the industrial activities category.

### **Intensive Farming**

The use of land and/or buildings for the production of livestock or fungi at a commercial scale, where the regular feed source is substantially provided other than from the property concerned.

Examples are:

- intensive pig and poultry farming
- animal feedlots; and
- mushroom farming.

This definition excludes the temporary use of buildings for the housing of stock (including for wintering of stock and calf-rearing which are considered to be part of farming).

Intensive farming is an activity in the rural activities category.

### **Invermay/Hercus**

The use of land and buildings at the Invermay Research Centre and Hercus Taieri Resource Unit for:

- agricultural, forestry, animal, food and biomedical related research, training and education activities, including field days
- industrial or commercial activities deriving directly from research or education activities undertaken within the zone; and
- any ancillary activities necessary for the functioning of the facility, including but not limited to laboratories, conference and meeting facilities, staff offices and facilities, administration services, laundries, kitchens and temporary staff accommodation.

Invermay/Hercus is an activity in the major facility activities category.

### **Iwi**

Tribe

### **J**

### **K**

### **Kai Moana**

Food obtained from the sea

### **Kāi Tahu**

Descendants of Tahu, the tribe

### **Kāika**

Settlement or occupation site

## **Kāika Nohoaka**

A network of seasonal settlements

## **Kaitiaki**

Guardians

## **Kaitiakitaka**

The exercise of customary custodianship, in a manner that incorporates spiritual matters, by takata whenua who hold Manawhenua status, for a particular area or resource.

## **Kōiwi Takata**

Human skeletal remains

## **L**

### **L<sub>Aeq</sub> (15 minutes) (L<sub>Aeq</sub> (15 min))**

The A-frequency-weighted time-average noise level over 15 minutes, in decibels (dB).

### **L<sub>AFMax</sub> (L<sub>AFMax</sub>)**

The maximum A-frequency-weighted fast-time-weighted noise level, in decibels (dB), recorded in a given measuring period.

## **Landfills**

The use of land and buildings for the primary purpose of providing a disposal facility for the controlled deposit of solid wastes, household wastes and green waste onto or into land.

For the sake of clarity, this definition includes:

- the generation of energy from these wastes, for example from landfill gas
- rehabilitation activities after landfills are closed; and
- related waste management facilities such as recycling stations.

This definition excludes farm landfills, offal pits, silage pits and silage stacks, which are provided for under the definition of farming.

Landfills are an activity in the rural activities category.

## **Landscape Building Platform**

For the purposes of rules in this Plan, a landscape building platform is an approved building site that is:

X. registered on the title by way of a consent notice as part of an approved subdivision resource consent process; or  
Y. referred to in a **landscaping building platform mapped area** performance standard.

## **Landscaping**

Any part of a site which is planted in trees, shrubs or grasses and retains a permeable surface, and is not used for parking, manoeuvring or loading of motor vehicles.

## **L<sub>dn</sub> (L<sub>dn</sub>)**

The day/night level, which is the A-frequency-weighted time average noise level, in decibels (dB), over a 24-hour period obtained after the addition of 10 decibels to the noise levels measured during the night (2200 to 0700 hours).

## **Legibility**

An urban design term that means the characteristic of a place being easy to navigate or understand how to find one's way around.

## **Level Crossing**

Any place where a railway line crosses a road, driveway or vehicle track on the same level.

## **Licence to Hunt**

A parking permit system that enables permit holders to park in a parking space in an allocated area, provided that one is available. The licence does not reserve or guarantee any particular parking space.

## **Lines**

Wires, cables or other conductors used for:

- telecommunication
- the generation, transmission and distribution of electricity; or
- the transmission or reception of signs, signals, impulses, writing, images, sounds, or intelligence of any nature by means of any electromagnetic system.

For the sake of clarity, this definition includes any: receiver, insulator, casing, minor fixture, tunnel, or other equipment or material used, or intended to be used for: supporting, enclosing, surrounding, or protecting any such wire or conductor.

This definition excludes any freestanding pole or mast used to support the line, which are provided for under the definition of network utility poles and masts.

## **Loading Areas**

An area used for the loading and un-loading of vehicles, including drop-off and pick-up.

## **Local Road**

All roads that do not have an alternative classification within the **road classification hierarchy mapped area** shown on the Planning Map.

## **Low Risk**

For the purpose of the natural hazards provisions, low risk means:

- minor consequences that are likely, possible, or rare
- moderate consequences that are possible or rare; and
- major consequences that are rare.

The level of risk is determined by the potential for risk based on location as well as any mitigation measures to reduce the level of risk.

## **M**

### **Mahika Kai**

The customary gathering of food or natural materials and the places where those resources are gathered.

### **Major Consequences**

For the purposes of the natural hazards provisions, major consequences means having at least 2 of the following outcomes as a result of a natural hazard event:

- significant property or asset damage or loss, including structural damage that is extensive and so severe that it may lead to a property being abandoned or an asset requiring complete replacement
- a likely potential for long term displacement, deaths or serious injuries
- potential for significant effects to be felt over a wider area, including public health issues
- potential for economic impact to be felt at a regional scale; and
- significant civil defence assistance being required, including temporary shelter or evacuation.

## **Major Facilities**

Facilities that are zoned as major facility zones.

## **Major Facility Activities**

The category of land use activities that consists of:

- airport
- campus
- cemeteries
- crematoriums
- Dunedin Botanic Garden
- emergency services
- hospital
- Invermay/Hercus
- major recreation facility
- port
- New Zealand Marine Studies Centre
- prisons or detention centres
- schools; and
- Taieri Aerodrome.

## **Major Recreation Facility**

The use of land and buildings at the Forsyth Barr Stadium, Edgar Centre and Moana Pool for:

- sport and recreation activity and events
- cultural, entertainment and exhibition activities
- trade fairs, market days and displays
- conference, meeting and function
- sports-related education
- after school / holiday programmes
- physiotherapy and massage; and
- any ancillary activities necessary for the functioning of the facility, including ancillary office activity and ticket

sales.

Major recreation facility is an activity in the major facility activities category.

## **Mana**

Authority, influence or prestige.

## **Manawhenua**

An iwi or hapū who exercise customary authority or rakatirataka in an identified area.

## **Māori Land**

Any land given the status of Māori freehold land pursuant to Te Ture Whenua Māori Act 1993 or subsequent legislation.

## **Marae**

The marae atea and the buildings around it, including the whareniui, wharekai, church and urupā.

## **Marae Atea**

Courtyard or meeting place in front of the whareniui.

## **Marae-related Activities**

Māori cultural activities and provision of services primarily aimed at the health and well-being of the Māori population, undertaken on a marae that has the agreement of Manawhenua. Examples are:

- hui
- wānaka
- tangi
- overnight accommodation for visitors
- events and gatherings
- health services; and
- cultural tourism.

Marae-related activities are included in the definition of community and leisure.

## **Mātaitai**

Area of traditional importance to Māori for seafood harvesting.

## **Mauka**

Mountains

## **Mauri**

Essential life force or principle; a metaphysical quality inherent in all things both animate and inanimate.

## **Maximum Development Potential**

For the purposes of density rules, the total number of habitable rooms that may be provided per site, including habitable rooms in family flats, ancillary residential units and sleep outs.

## **Mean High Water Springs**

The average height of the high waters of spring tides. Land Information New Zealand recommends for cadastral surveying purposes predicted tidal levels for Mean High Water Springs at Port Dunedin and Port Chalmers as 2.18m and 2.14m above sea level respectively.

## **Meteorological or Air Quality Monitoring**

Any facility or device that measures, collects and/or distributes meteorological information or that monitors air quality.

## **Military Exercises**

The temporary use of land and buildings for military training activities carried out pursuant to the Defence Act 1990.

Military exercises are an activity in the temporary activities category.

## **Mineral Exploration**

Any activity undertaken for the purpose of identifying mineral deposits or occurrences and evaluating the feasibility of mining particular deposits or occurrences of one or more minerals. For the sake of clarity, this definition includes any drilling, dredging, or excavations, whether surface or sub-surface, that are reasonably necessary to determine the nature and size of a mineral deposit or occurrence.

Mineral exploration is an activity in the rural activities category.

## **Mineral Prospecting**

Any activity undertaken for the purpose of identifying land likely to contain mineral deposits or occurrences. For the sake of clarity, this definition includes geological, geochemical and geophysical surveys, the taking of samples by hand or hand-held equipment and aerial surveys.

Mineral prospecting is an activity in the rural activities category.

## **Mining**

The use of land and buildings for the primary purpose of the extraction, winning, quarrying, excavation and associated processing of minerals, sand or aggregates.

This definition excludes:

- mineral exploration
- mineral prospecting; and
- on-site extraction of aggregate for the sole purpose of constructing and maintaining access within a farm or forestry property, which is included as part of a farming or forestry activity.

The following activities are managed as sub-activities of mining:

- scheduled mining activity; and
- expansion of scheduled mining activity.

Mining is an activity in the rural activities category.

## **Minor Consequences**

For the purposes of the natural hazards provisions, minor consequences as a result of a natural hazard event include:

- limited property damage that may be repairable without access to insurance, such as cracks in walls or wet foundations
- minor, non-life threatening injuries
- localised (rather than district-wide) economic impact; and
- restricted site access to a site for no more than 2 days due to flood waters, but where safe access is still possible on foot.

## **Mixed Use**

In the context of zoning, refers to zones that provide for more than one predominant category of activities.

Examples are:

- commercial and residential mixed use zones; or
- light industry and residential mixed use zones.

## **Mobile Noise Sources**

For the purpose of military exercises, means noise from sources such as:

- personnel
- light and heavy vehicles
- self-propelled equipment; and
- earthmoving equipment.

This definition excludes firing of weapons and use of explosives.

## **Mobile Trading**

The sale of goods, services, food, or beverages from a vehicle or trailer.

Examples are:

- ice cream trucks
- coffee vendors
- food vendors; and
- general retail vendors.

Mobile trading is an activity in the temporary activities category.

## **Mob-stocking**

Grazing of land by means of confining livestock in high densities in a restricted area resulting in the removal of all or most available vegetation.

## **Moderate Consequences**

For the purposes of the natural hazards provisions, moderate consequences means having at least 2 of the following outcomes as a result of a natural hazard event:

- serious structural damage to property which is costly, but still repairable, where access to insurance is almost always necessary to fix damage
- a potential for significant injury

- physical isolation on-site for more than 2 days at a time
- potential for economic impact that may be felt at a district-wide scale; and
- some reliance on civil defence.

## **Moderately Likely**

For the purpose of the natural hazards provisions, moderately likely means an event that has a chance of between one in 50 and one in 200 of occurring in any given year. This is sometimes expressed as an average return period of between 50 and 200 years, or as an Annual Exceedance Probability of between 0.02 (or 2%) and 0.005 (0.5%).

## **Modulation**

The use of vertical and horizontal changes in the form and scale of a building and between adjoining buildings to create clearly defined buildings or building elements, including changes in roof height, building projections or recesses.

## **Monuments and Memorials**

A statue, plaque, or structure, erected in memory of, or to commemorate a person, place, building, structure, or event.

For the sake of clarity, this definition includes structures marking an area, territory, place or event of cultural significance to Manawhenua, including but not limited to pou whenua, waharoa and interpretation signage.

## **Motorway**

A road classified as motorway within the **road classification hierarchy mapped area** shown on the Planning Map.

## **Multi-unit Development**

The construction of a single building or multiple buildings that contain three or more residential units on a site within a two year period.

## **N**

## **National Grid**

The assets used or owned by Transpower New Zealand Limited which is the network that conveys electricity throughout New Zealand.

## **National Grid Sensitive Activities**

The group of activities that are considered to be sensitive for the purposes of the National Grid provisions, and that consist of:

- early childhood education
- hospitals
- marae-related activities
- prisons or detention centres
- registered health practitioners
- residential activities (excluding new working from home activities in existing dwellings)
- schools; and
- visitor accommodation.

## National Grid Subdivision Corridor Mapped Area

The area shown as **National Grid Subdivision Corridor mapped area** on the Planning Map.

Note that this area is measured either side of the centreline of above ground National Grid transmission lines as follows:

- 16m from the centreline of a 110kV National Grid transmission line on pi poles;
- 32m from the centreline of a 110kV National Grid transmission line on towers or mono-poles; and
- 37m from the centreline of a 220kV National Grid transmission line on towers.

## National Grid Support Structure

A support structure that is part of the National Grid.

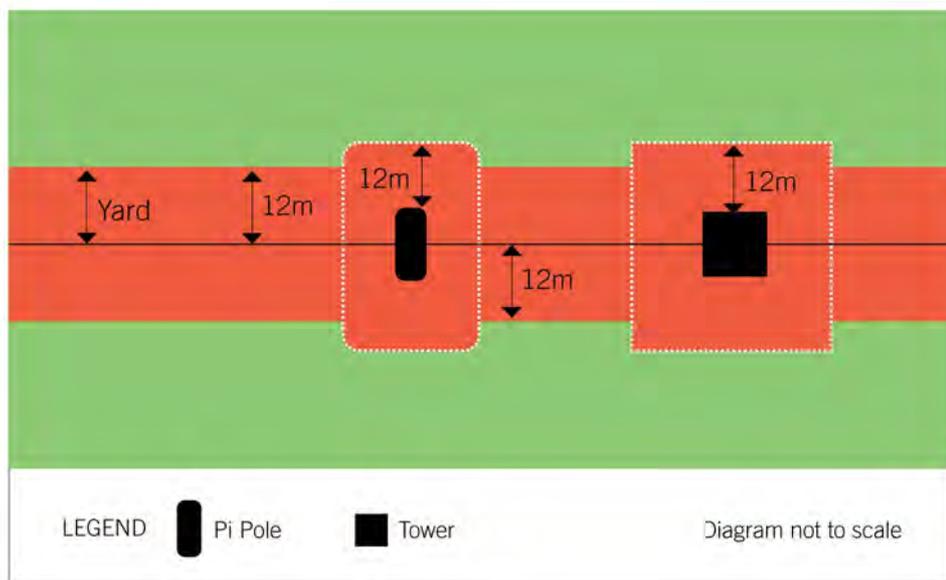

## National Grid Yard

The area located:

- 12m from the outside edge of a National Grid support structure foundation;
- 12m from the boundary of a National Grid substation; and
- 12m from the centreline of an overhead National Grid transmission line.

The National Grid Yard is the area shown in red in Figure 1.4.1.X below.

Figure 1.4.1X: National Grid Yard

## Natural Hazard Mitigation Activities

The category of activities that consists of:

- natural hazard mitigation earthworks
- natural hazard mitigation structures
- repair and maintenance of natural hazard mitigation earthworks features or natural hazard mitigation structures; and

- emergency natural hazard mitigation activities.

Note: Tree planting for natural hazard mitigation is managed as a forestry or shelterbelts and small woodlots activity depending on the scale.

## **Natural Hazard Mitigation Earthworks**

Earthworks for the purpose, or effect, of natural hazard mitigation. Examples are:

- earth stop-banks
- drainage channels
- ponds
- earth dams; and
- general land contour changes, including sand dune re-contouring and beach sand replenishment.

Natural hazard mitigation earthworks are an activity in the natural hazard mitigation activities category.

## **Natural Hazard Mitigation Structures**

Structures that have the purpose, or effect, of protection from, or reducing the risk from natural hazards. Examples are:

- walls
- flood gates
- concrete dams; and
- geotextile sandbags/tubes.

Natural hazard mitigation structures are an activity in the natural hazard mitigation activities category.

## **Natural Hazards Least Sensitive Activities**

The category of activities that are considered to be a "natural hazards least sensitive activity" for the purposes of the natural hazards provisions is all other activities not specifically listed in the definition of sensitive activities or potentially sensitive activities.

### **Natural Hazards Least Sensitive Activity**

For the purposes of the natural hazards provisions, a natural hazards least sensitive activity is a land use activity:

- where there is a minimal presence of people and buildings; and
- which will not create a public health issue in a natural hazard event.

### **Natural Hazards Potentially Sensitive Activities**

The category of activities that are considered to be a "natural hazards potentially sensitive activity" for the purposes of the natural hazards provisions. These consist of:

- airport
- campus
- community and leisure (excluding marae-related activities)
- commercial activities (excluding visitor accommodation, registered health practitioners, and commercial advertising)

- intensive farming
- industrial activities
- Invermay/Hercus
- major recreation facility
- mining
- New Zealand Marine Studies Centre
- port
- rural tourism - large scale
- rural research - large scale
- sport and recreation; and
- Taieri Aerodrome.

### **Natural Hazards Potentially Sensitive Activity**

For the purposes of the natural hazards provisions, a natural hazards potentially sensitive activity means an activity:

- where people are regularly present and buildings are routinely required to carry out the activity but people are not usually in a vulnerable state; and
- which are unlikely to create a significant public health issue in a natural hazard event

### **Natural Hazards Sensitive Activities**

The category of activities that are considered to be a "natural hazards sensitive activity" for the purposes of the natural hazards provisions. These consist of:

- cemeteries
- crematoriums
- registered health practitioners
- early childhood education
- hospital
- landfills
- marae-related activities
- prisons or detention centres
- residential activities (excluding working from home that do not involve additional people on-site)
- schools; and
- visitor accommodation.

### **Natural Hazards Sensitive Activity**

For the purposes of the natural hazards provisions, a natural hazards sensitive activity is a land use activity:

- where people are regularly present and often in a vulnerable state because they sleep there, require medical treatment, or require extra assistance to evacuate; and/or
- which may create a significant public health issue if damaged as a result of a natural hazard event.

### **Navigational Aids**

Any permanent or temporary structure constructed and operated for the purpose of facilitating navigation by aircraft or shipping.

## **Network Utilities**

Any systems, services and networks associated with:

- the investigation and generation of electricity, and of other forms of energy such as heat
- the transmission and distribution of electricity, and of other forms of energy such as hot water or steam
- municipal and domestic water, wastewater and stormwater supply, treatment and drainage
- the transmission and distribution of natural or manufactured gas, petroleum or biofuel (excluding where part of bulk fuel storage facilities or service stations)
- telecommunications and radiocommunication
- navigational aids
- meteorological facilities
- air quality monitoring facilities; and
- river flow recording facilities.

In order to be considered a network utility under the provisions of this Plan, it is not necessary for a network utility to be operated by a 'network utility operator' as defined in the RMA.

## **Network Utility Activities**

The category of activities that consists of:

- operation, repair, minor upgrading and maintenance of existing network utilities
- underground or internal network utilities
- standby or temporary energy generators
- substations
- network utility structures - small scale; and
- network utility structures - large scale.

## **Network Utility Poles and Masts**

Any poles, masts, or similar structures, and any associated cross arms used to support other network utility structures, such as: lines, antennas, head arrays or dish antenna.

Examples are:

- structures supporting electricity or telecommunication lines, including electricity transmission towers
- telecommunication masts; and
- wind monitoring masts.

This definition excludes structures otherwise defined as amateur radio configurations.

## **Network Utility Poles and Masts - Small Scale**

Network utility poles and masts that meet the scale thresholds as set out in Rule 5.5.3.

Network utility poles and masts - small scale are a sub-activity of network utility structures - small scale.

## Network Utility Structures

Any structure that forms part of a network utility. Examples are:

- structures necessary for the treatment, supply or distribution of water and the drainage and treatment of stormwater or wastewater, such as pipes, pumping stations, water distribution booster pumps, flow regulative valves, water supply bores, switchboards and generators, backflow prevention devices, and the associated casing around any of these structures
- structures for the generation of electricity and of other forms of energy (e.g. heat), such as generators and energy resource investigation devices
- structures necessary for the transmission and distribution of: electricity; natural or manufactured gas, petroleum, biofuel, or geothermal energy; and other forms of energy such as hot water or steam: such as lines, pipes, support structures, transformers, switching stations, kiosks, electrical distribution structures, electric vehicle charging stations, gas pressure regulating stations, and underground fuel storage systems
- structures necessary for telecommunications and radiocommunication, such as lines, support structures, masts, head arrays, antennas, cabinets, telephone booths and amateur radio configurations; and
- structures necessary for meteorological or air quality monitoring, river flow recording, or navigation.

Network utility structures exclude structures otherwise defined as:

- operation, repair, minor upgrading and maintenance of existing network utilities
- standby or temporary energy generators
- substations
- building utilities; and
- rural industry, industry or landfills (in the case of energy generation structures that use the by-products of these activities as fuel).

Note irrigation races and open drains and stormwater detention basins are not managed in this Plan as network utility structures. However, earthworks associated with these activities are subject to earthworks provisions.

## Network Utility Structures - Large Scale

Network utility structures and network utility poles and masts that exceed the scale thresholds in Rule 5.5.3.

Network utility structures - large scale exclude structures otherwise defined as underground or internal network utilities.

The following activities are managed as sub-activities of network utility structures - large scale:

- hydro generators - large scale
- solar panels - large scale; and
- wind generators - large scale.

Network utility structures - large scale is an activity in the network utility activities category.

## Network Utility Structures - Small Scale

Network utility structures - small scale consists of:

- lines; and
- network utility structures that do not exceed the scale thresholds in Rule 5.5.3.

Network utility structures - small scale exclude structures otherwise defined as underground or internal network utilities.

The following activities are managed as sub-activities of network utility structures - small scale:

- hydro generators - small scale
- network utility poles and masts - small scale
- solar panels - small scale; and
- wind generators - small scale.

Network utility structures - small scale is an activity in the network utility activities category.

### **New Roads or Additions or Alterations to Existing Roads**

The construction of a new road, whether within or outside the legal road reserve, and the widening or realignment of an existing road outside of the existing road reserve.

New roads or additions or alterations to existing roads are an activity in the transportation activities category.

### **New Zealand Marine Studies Centre**

The use of land and buildings at the Portobello Marine Laboratory and New Zealand Marine Studies Centre for:

- marine research, education, training, learning, and teaching activities
- commercial activities deriving directly from, and ancillary to, research or education activities; and
- any ancillary activities necessary for the functioning of the facility, including but not limited to laboratories, conference and meeting facilities, staff offices and facilities, administration services, staff accommodation, and staff facilities.

New Zealand Marine Studies Centre is an activity in the major facility activities category.

### **Noise Affected Property**

Any noise sensitive activity within the **port noise control mapped area** and shown on the Port Noise Contour Map as receiving levels of port noise above 55dBA  $L_{dn}$ . This definition excludes properties:

- that have received acoustic treatment in accordance with Rule 30.5.4 and Appendix 30B; or
- that are receiving port noise at or below the certified level of port noise.

### **Noise Sensitive Activities**

Activities where people are more likely to be sensitive to a high level of noise because they are sleeping, studying, seeking medical treatment, or engaged in religious activity.

These consist of:

- residential activities
- hospital
- campus
- schools
- early childhood education
- registered health practitioners

- visitor accommodation; and
- the following community and leisure activities: libraries, marae-related activities, activities that involve the provision of care for babies and pre-school children and places of worship.

### **No Net Loss**

No net reduction in indigenous biodiversity values, as measured by type, amount and condition.

### **Non Character-contributing Building**

Any building within a heritage precinct that is not a scheduled heritage building or character-contributing building.

### **Notional Boundary**

A line 20m from any side of a residential building, or the site boundary where this is closer to the residential building.

### **O**

#### **Offal Pit**

A disposal hole excavated for the purpose of disposing of waste comprised of dead animal matter.

#### **Office**

The use of land and buildings for any of the following:

- administrative offices where the administration of any entity, whether trading or not, and whether incorporated or not, is conducted; or
- professional offices, such as offices of accountants, registered health practitioners, veterinary services, training and education, solicitors, architects, surveyors and engineers.

The following activities are managed as sub-activities of office:

- campus-affiliated office
- registered health practitioners
- training and education; and
- veterinary services.

Office is an activity in the commercial activities category.

#### **Official Signs**

All signs required or provided for under any statute or regulation, or are otherwise related to aspects of public safety.

#### **Operation, Repair and Maintenance of the Rail Network**

The use of the railway for the operation of trains and the maintenance and minor upgrade of rail undertaken within land designated for railway purposes.

For the sake of clarity, this includes:

- re-sleepering, re-railing, re-ballasting
- grouting or repairs to the tunnel linings or rock faces
- laying of new communications cables, power cables, installing signalling equipment or associated upgrades
- routine maintenance of the track and rail structure, including in tunnels such as rail grinding, tamping, aligning the track and ballast cleaning

- replacement of existing equipment such as signal boxes
- installation of safety related signage and signals; and
- installation of bells and lights and/or half arm barriers at level crossings.

## **Operation, Repair and Maintenance of the Roding Network**

The use of the road for transport-related activity by all travel modes and the maintenance and minor upgrade of roads. For the sake of clarity, this includes:

- road widening or realignment within an existing formed road corridor or legal road reserve
- installation and replacement of road signs, street lighting, landscaping, parking meters and other ancillary structures or features
- on-road bus stops where up to four bus stops are co-located; and
- temporary traffic management.

This definition excludes activities otherwise defined as:

- public amenities
- commercial advertising
- mobile trading
- passenger transportation hubs; and
- network utilities.

Operation, repair and maintenance of the roading network is an activity in the transportation activities category.

## **Operation, Repair, Minor Upgrading and Maintenance of Existing Network Utilities**

Activities associated with the operation, repair, maintenance and minor upgrading of any existing network utility structures, systems or services. For the sake of clarity, this includes trimming and pruning of vegetation necessary to protected electricity lines (required to meet the Electricity (Hazards from Trees) Regulations 2003).

For the purposes of this definition, minor upgrading consists of the following activities:

1. Addition of new poles and masts:
  - a. a single new pole, where this is required to provide a customer connection to an existing above ground network
  - b. new mid-span poles and masts, where these are required in existing networks to meet the safety clearance requirements of the New Zealand Electrical Code of Practice for Electrical Distances (NZECP34); and
  - c. new poles or masts required to support existing lines, including existing lines to which new wires or other conductors have been added.
2. Replacement of existing poles and masts:
  - a. replacement poles and masts up to the greatest of:
    - i. 2.5m higher than the existing pole or mast;
    - ii. 30% higher than the existing pole or mast;
    - iii. as required to meet the safety clearance requirements of NZECP 34:2001.

- b. replacement poles or masts up to 50% wider than the existing pole or mast.
  - c. except that, in the case of poles and masts that are transmission line support structures as defined in the Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009 (NESETA), existing transmission line support structures (i.e. poles or towers) may be replaced with new support structures provided:
    - i. the maximum height is no more than 15% higher than the existing support structure;
    - ii. height restrictions for airport purposes, or any public view shafts, specified in a rule are complied with;
    - iii. the replacement support structure is not within 12m of any occupied building (measured horizontally at ground level), or where the existing support structure is already within 12m of an occupied building, no closer to that building than the existing support structure;
    - iv. each side of the replacement tower's footprint is no longer than the total of: the length of that side of the existing tower's footprint; plus 25% of the existing tower's width;
    - v. a tower at ground level does not fall outside the tower's 'envelope for permitted activities' (as defined in NESETA);
    - vi. a pole is not be replaced with a tower; and
    - vii. a pole is not be more than 5m from the existing pole's base position (measured horizontally).
3. Alterations to existing poles and masts and attached structures:
  - a. alterations that are required because of the mechanical loading requirements of the re-conductoring or the reconfiguration of equipment, such as stay wires, or anchor blocks, on overhead electricity and telecommunication lines;
  - b. addition of earth wires, earthpeaks and lightning rods;
  - c. addition of electrical or telecommunication fittings (excluding antennas)
  - d. increase in diameter of existing head arrays by up to 30% in industrial zones, and in CMU zones other than the CBD Zone and Centres;
  - e. increase in pole or mast height to meet the safety clearance requirements of NZECP34;
  - f. addition of insulators; and
  - g. addition of mast fittings, e.g. light fittings, lightning protection devices and antenna mountings.
4. Addition of or alterations to cross-arms:
  - a. replacement of existing cross arms, including with cross arms of alternative design;
  - b. additional cross arms up to 3m in length; and
  - c. except that, in the case of cross-arms that are part of transmission line support structures as defined in NESETA, cross-arms of any length may be installed where they form part of replacement support structures that comply with the standards set out at 2(c) above.
5. Increasing the voltage of electricity lines:
  - a. increase in the power carrying or operating capacity, efficiency or security of existing electricity lines.
6. Alterations to existing above-ground pipes:
  - a. increase in the diameter of the pipe of up to 300mm.
7. Realignment, reconfiguration or relocation of existing above-ground pipes and network utility poles and masts that occurs within 5m of the existing location or alignment.
8. Addition of new lines:
  - a. addition of new National Grid overhead conductors and overhead circuits, as defined in NESETA,

provided:

- i. new conductors are configured so that there are no more than two conductors in the same phase (duplex configuration);
  - ii. the diameter of a new conductor, or part of a new conductor, does not exceed 50mm;
  - iii. the diameter of a replacement conductor, or a replacement part of a conductor, does not exceed the greater of: 50mm; or the diameter of the existing conductor or part; and
  - iv. in the case of new circuits, the transmission line support structures of the transmission line have been designed and built to carry the additional circuit, and the conductors that make up the circuit comply with the conditions set out at points i. and ii. above; and
- b. addition of any other new lines to existing network utility poles and masts or existing buildings or structures.

Operation, repair, minor upgrading and maintenance of existing network utilities is an activity in the network utility activities category.

## **Operational Need**

The need for a proposal or activity to traverse, locate or operate in a particular environment because of technical, logistical or operational characteristics or constraints.

## **Original Grantee**

Original grantee means one of the original individuals in whom the reserve was vested. Original ownership lists can be obtained from the Māori Land Court.

## **Original Native Reserve**

A property or site that was granted as a reserve for Māori occupation or use, and is shown as an original native reserve on the Planning Map.

## **Outdoor Living Space**

An area of open space that can be used for leisure, recreation, or food production to be provided for the use of the occupants of the residential unit/s to which the space is allocated. Outdoor living space excludes any area used for parking and/or driveway.

## **Outdoor Storage**

Any goods, materials, or waste stored outdoors.

Service areas are managed as a sub-activity of outdoor storage.

Outdoor storage is an activity in the site development activities sub-category, which is in the development activities category.

## **P**

### **Pā**

Village or fortified village.

### **Pā Tawhito**

Ancient pā sites.

## **Papakāika**

Residential activity within the boundaries of an **original native reserves mapped area** where:

1. the land is fully or partly owned by one or more of the following:
  - a. a descendant of an original grantee of an original native reserve, or their trustee
  - b. a management structure governed by the Te Ture Whenua Māori Act 1993 or subsequent legislation over the land concerned, for the benefit of such persons in (a)
  - c. a Rūnaka with authority/mana over the area in which the original native reserve is located
  - d. a spouse/civil union/de facto partner of a descendant of an original grantee who has inherited the land from the descendant; and
2. the dwelling is primarily occupied by at least one of the following:
  - a. a descendant of an original grantee of the reserve
  - b. a spouse/civil union/de facto partner of a descendant of an original grantee who has inherited the land from the descendant; or
  - c. a whāngai of a descendant of an original grantee.

Papakāika is a sub-activity of standard residential.

## **Parking Areas**

The part of a site used for vehicle parking and manoeuvring. This definition does not include garages and carports.

Parking areas are a sub-activity of parking, loading and access.

## **Parking, Loading and Access**

New or additions and alterations to vehicle tracks, driveways, parking areas, manoeuvring areas, and loading areas. Note that vehicle tracks and driveways include vehicle crossings and vehicle accesses.

Parking areas are managed as a sub-activity of parking, loading and access.

Parking, loading and access is an activity in the site development activities sub-category, which is in the development activities category.

## **Parking Spaces**

A marked space for car, motorbike or other vehicle parking.

## **Passenger Transportation Hubs**

Facilities providing for passenger access to public transport services, including:

- train stations
- bus stations/exchanges
- tram stations; and
- ferry terminals.

This definition excludes:

- on-road bus stops where fewer than five bus stops are co-located, (which are included under the definition of

operation, repair and maintenance of the roading network); and

- train, bus, ferry or tram terminals or depots that do not include passenger services, which are included under the definition of industry.

Passenger transportation hubs are an activity in the transportation activities category.

## **Pedestrian Street Frontages**

These consist of the areas shown as:

- **Primary Pedestrian Street Frontage mapped area**
- **Secondary Pedestrian Street Frontage mapped area**

## **Permanently Fixed Freestanding Signs**

A freestanding sign that is permanently fixed on or into the ground.

## **Place Name Signs**

A sign indicating the name of, or welcoming people to, a town, settlement, or a suburb.

This definition excludes road signs and ancillary signs.

## **Port**

The use of land and buildings for the operation of a port. This includes, but is not limited to:

- mooring, berthing, departure, manoeuvring, refuelling, storage, maintenance and repair of vessels
- embarking and disembarking of passengers
- loading, unloading and storage of cargo; and
- any ancillary activities associated with the operation of the facility, including offices, storage and staff facilities.

Port is an activity in the major facility activities category.

## **Port Noise**

Noise generated within the Port Zone and the adjacent coastal marine area associated with port activities, excluding:

- noise from ships not at berth
- noise from construction of permanent port facilities (see definition of construction noise); and
- noise from an emergency situation.

## **Portable Freestanding Signs**

A freestanding sign that can be readily moved. Examples are sandwich boards and flag signs.

## **Pou Whenua**

Carved land post.

## **Premise**

Any separately occupied land, building, or part of the same.

## **Principal Living Area**

The room in a residential building that contains the main lounge/living area, whether separated from, or part of, an

open plan space that also contains the dining and/or kitchen areas.

## **Prisons or Detention Centres**

Prisons or detention centres are an activity in the major facility activities category.

## **Property**

Land held by one person, associated persons, company, or trust in one or more Certificates of Title, and managed as one entity.

## **Protected Part**

The part or parts of a scheduled heritage building or scheduled heritage structure detailed in Appendix A1.1 - Schedule of Protected Heritage Items and Sites under the heading 'protection required'.

## **Public Amenities**

Any structure or facility established for the convenience, enjoyment, or amenity of the public. For the sake of clarity, this includes signs containing information directly relevant to the purpose of the public amenity.

Examples are:

- public seating
- public picnic tables
- information or interpretation kiosks or panels (e.g. track/area or historical information and notice boards)
- public barbeques
- public shelters
- bus stop shelters and seating, including signs that display information related to public transport products, services, and service changes
- monuments and memorials
- rubbish and recycling bins
- bicycle stands
- public display boards
- public play equipment
- drinking fountains
- public artworks
- public lights
- freestanding flagpoles
- permanent public notices
- place name signs
- public toilets; and
- structures marking an area, territory, place or event of cultural significance to Manawhenua, including but not limited to pou whenua, waharoa and interpretation signage.

This definition excludes activities otherwise defined as commercial advertising, sport and recreation, or temporary activities (including temporary structures and buildings associated with temporary activities) and campus.

The following activities are managed as sub-activities of public amenities:

- public artworks - large scale
- public artworks - small scale
- public display boards; and
- public toilets.

Public amenities are an activity in the public amenities category.

## **Public Artworks**

Artistic works located in a public place or located and designed to be viewed from a public place, for public enjoyment. This includes works of a permanent or temporary nature.

Examples are:

- sculptures
- sound art
- light art
- moving image
- digital and media art
- street art; and
- murals.

This definition excludes:

- activities otherwise defined as ancillary signs, commercial advertising signs or temporary signs; and
- artworks on private property that may be visible from a public place but are for the enjoyment of residents, occupants, or visitors to that property, and are unlikely to attract significant public attention.

## **Public Artworks - Large Scale**

Public artworks that exceed the scale thresholds for public artworks - small scale.

Public artworks - large scale are a sub-activity of public amenities.

## **Public Artworks - Small Scale**

Public artworks that do not exceed the following thresholds:

- for murals or artwork painted on a building or structure, a maximum area of 10m<sup>2</sup> and a maximum height of 4m above ground level; and
- for all other artworks, the maximum total volume of a 3 dimensional artwork must be capable of being contained with an envelope with a footprint of 5m<sup>2</sup> and a height of 3m above ground level.

Where an artwork installation comprises multiple pieces of artwork they must collectively fit within the dimensions of the envelope specified above.

Public artworks - small scale is a sub-activity of public amenities.

## **Public Display Boards**

A bollard or display board, visible from a public place, which provides a location for the temporary display of:

- event promotion signs
- community notices; and
- public notices.

This definition excludes public display boards with a maximum area of all display faces of 2m<sup>2</sup> or less, and used exclusively by individuals, community groups or public bodies for advertising local activities, such as sale of second hand goods by individuals, and working from home activities, local community events, community notices, or public notices. These are not managed by the District Plan.

Public display boards are a sub-activity of public amenities.

## **Public Infrastructure**

Public infrastructure consists of:

- the public reticulated systems of pipes and associated accessory structures, and in the case of stormwater infrastructure includes flood management schemes, land drainage schemes and open channels owned and managed by DCC or Otago Regional Council, that enable the management and distribution of stormwater, wastewater or water supply. This excludes any private stormwater, wastewater or water supply systems or structures; and
- public roading networks (including DCC and NZTA managed roads).

## **Public Notices**

A notice related to protecting health or safety, including to do with potential hazards, issued by a central or local government body or agency or landowner or any other notice issued by a central or local government body or agency in accordance with any official statute, rule or regulation.

## **Public Place**

Publicly accessible roads, reserves and footpaths/tracks.

## **Public Play Equipment**

Play or exercise equipment in a public place, or generally available for public use (such as at a school).

Examples are:

- swings
- slides
- modular play systems
- safety surfacing
- skate equipment/structures; and
- exercise equipment or structures.

## **Public Toilets**

A stand-alone building with toilet facilities, including those with changing room facilities, established for the convenience and amenity of the public.

Public toilets are a sub-activity of public amenities.

## Q

### **Queuing Spaces**

An area provided for vehicles to queue for access to: vehicle accesses or internal access points such as ramps or other pinch points; pumps in the case of service stations; or kiosks or windows in the case of drive-through restaurants.

## **R**

### **Rakatirataka**

Chieftainship or authority, decision making rights.

### **Real Estate Signs**

A sign advertising a property or building for sale or lease.

Real estate signs are a sub-activity of temporary signs.

### **Registered Health Practitioners**

The use of land or buildings for the provision of primary health care services by doctors, nurses, dentists, physiotherapists, or other health professionals who operate under the Health Practitioners Competence Assurance Act (2003), including any administrative support staff.

This definition excludes activities otherwise defined as hospital.

Registered health practitioners are a sub-activity of office.

### **Regulatory Signs**

Signs that give information about required or prohibited actions (for example parking signs).

### **Relocatable**

For the purposes of the natural hazards provisions, relocatable means a building that is designed and constructed to be able to be either:

- portable (designed to fit in one piece on a truck) or has wheels and can be towed; or
- safely deconstructed into parts (if required), lifted, and transported off site, by crane and truck. This includes buildings that can be transported either in one piece, or a limited number of pieces.

### **Removal for Relocation**

Moving a building from its current location to a new location either on the same or a different site.

Removal for relocation is an activity in the buildings and structures sub-category, which is in the development activities category.

### **Repairs and Maintenance**

Work required to make good decayed or damaged fabric of a building or structure, or to prevent deterioration of the fabric, including replacement of building components such as cladding, doors, windows, gates, roofs and interior fittings, decoration, trim, surfaces, materials and structures.

For a scheduled heritage site, this includes all normal work required to maintain the garden or landscape features or structures.

For the purpose of the rules that apply to protected parts of scheduled heritage buildings, scheduled heritage structures, or any part of a character-contributing building or non-protected part of a scheduled heritage building within a heritage precinct that is visible from an adjoining public place, this definition only applies where the materials used and the design of any replacement building components are the same or closely similar to those being repaired or replaced, or those that were in place originally; except that

- concrete, metal or stone chip roofing tiles on character-contributing buildings may be replaced with any material; and
- wooden windows (except stained glass and multi-light windows) may be retrofitted with double glazed units into the existing timber joinery.

For the sake of clarity, being 'the same or closely similar' includes painting or rendering only where the building or structure was previously painted or rendered.

Repairs and maintenance is an activity in the buildings and structures sub-category, which is in the development activities category.

## **Repair and Maintenance of Natural Hazard Mitigation Earthworks Features or Natural Hazard Mitigation Structures**

Activities required to be undertaken to ensure the structure or earthworks feature is structurally sound and can operate as originally intended, but which does not result in a permanent change to the scale, nature, function or location of the structure or earthworks feature.

Repair and maintenance of natural hazard mitigation earthworks features or natural hazard mitigation structures is an activity in the natural hazard mitigation activities category.

## **Repo Raupo**

Wetland or swamp.

## **Reserve**

Land owned by Council or government for public open space, or classified as a reserve under the Reserves Act 1977.

## **Residential Activities**

The category of land use activities that consists of:

- supported living facilities (including rest homes, retirement villages, and student hostels)
- standard residential (including papakāika); and
- working from home.

## **Residential Building**

A building that is, or will be, used entirely or in part, for residential activity and contains one or more residential units or, for the purposes of hazards or National Grid related rules, any sleeping accommodation.

## **Residential Unit**

For the purposes of determining density, a residential unit is any building, or part of a building, that is capable of being used as a self-contained residence with sleeping, cooking, bathing, and toilet facilities.

## **Rest Homes**

Supported living facilities licensed as a rest home or hospice that provide full time care of the elderly or infirm.

This definition excludes activities defined as hospital or retirement villages.

Rest homes are a sub-activity of supported living facilities.

## **Restaurant - Drive Through**

The use of land and buildings for the sale of on-demand meals prepared on the premises and offered to the motoring public primarily in a manner where the customer can remain in their vehicle.

Restaurant - drive through is an activity in the commercial activities category.

## **Restoration**

To accurately return the fabric of a building or structure to a known earlier form by reassembling and reinstating components using new or original materials. For the sake of clarity, restoration includes the removal of later components or additions, except where they are specifically protected in Appendix A1.1.

For any protected part of a scheduled heritage building or scheduled heritage structure, or any part of a character-contributing building or non-protected part of a scheduled heritage building within a heritage precinct that is visible from an adjoining public place, this definition only applies where the materials used and the design of any replacement building components are the same or closely similar to those that were in place originally.

For the sake of clarity, being 'the same or closely similar' includes painting or rendering only where the building or structure was previously painted or rendered.

Restoration is a sub-activity of additions and alterations.

## **Restaurants**

The use of land and buildings for the purposes of selling prepared food and/or beverages for consumption on the premises or as cooked food for immediate 'take-away' consumption.

Examples are:

- restaurants
- cafes
- bars/taverns
- tearooms; and
- takeaways.

This definition excludes activities defined as restaurant - drive through.

Note: activities that sell alcohol are also managed as ancillary licensed premises.

Restaurants are an activity in the commercial activities category.

## **Resultant Site**

All of the land intended to be held in a separate certificate of title after completion of a subdivision process. For the sake of clarity, this includes both new certificates of title and existing certificates of titles after land is either amalgamated into, transferred out, or both.

## **Retail**

The use of land and buildings for:

- the sale or hire of goods; or
- retail services, which are the provision of services including personal, household, financial, property or other services, where a front counter customer service is provided.

Examples of retail services are: banks, health and beauty salons, visitor information centres, travel agents and TAB venues.

The following activities are managed as sub-activities of retail:

- bulky goods retail
- dairies
- food and beverage retail
- general retail
- trade related retail; and
- yard based retail.

Retail is an activity in the commercial activities category.

## **Retail Services**

The use of land and buildings where the primary activity is not the sale of goods but instead is the provision of services (including personal, household, financial, property or other services), where a front counter customer service is provided. Activities that are primarily retail services but include ancillary sales of goods (for example hair salons that sell hair products) are considered to be retail services as long as the percentage of the gross floor area of the activity that is used for sale of goods is no more than 30%.

Examples of retail services are banks, health and beauty salons, visitor information centres, travel agents and TAB venues.

For the sake of clarity, this definition excludes the following activities, which are considered to be sale or hire of goods:

- pharmacies
- telecommunication/mobile phone shops; and
- retail services where 30% or more of the gross floor area is used for the sale of goods.

Retail services are managed as a separate component of general retail ('general retail – retail services') in the Warehouse Precinct Zone only.

## **Retaining Walls**

A structure designed and constructed to hold soil in place and support an earthworks cut and/or fill. Where a retaining wall structure extends above ground level (e.g. is not used to support soil), the part of the wall that extends above ground level is considered to be a fence.

Retaining walls are managed both as part of earthworks (Rule 8A.5.4) for the purposes of managing effects on the stability of land and buildings, and as structures in heritage precincts only, for the purposes of managing effects on heritage streetscape character.

## **Retirement Villages**

Supported living facilities that provides supported living in individual residential units and may also provide rest home care.

Retirement villages are a sub-activity of supported living facilities.

## **Reverse Sensitivity**

When lawful activities that create effects (such as noise, odour, traffic movements, electromagnetic interference or risk) are affected by uses that may be sensitive to these effects establishing or intensifying nearby and thereby curtail or constrain the activities. Lawful activities in the context of this definition refers to: existing lawfully established activities, permitted activities, designations and consented activities that are likely to establish. The most common example is new residential activities establishing next to farming or industrial operations, or airports, which can lead to the new residents complaining about noise, odour or other nuisance effects from those established activities.

## **Right of Way**

An easement for vehicular access as defined in the Property Law Act 2007.

## **Risk**

For the purpose of the natural hazards provisions, risk means the likelihood of a natural hazard event occurring, in combination with the potential adverse consequences of that event.

## **Road**

Any public road or street (formed or unformed) as defined by the provisions in section 315 of the Local Government Act 1974. For the sake of clarity, this includes any vehicle lane, cycleway, footpath, shared path, track, and any parking or loading areas that are located within the road reserve.

## **Road Boundary**

Where a site adjoins the road.

## **Road Reserve**

An area of land held by the Dunedin City Council or the Crown for roading or access purposes.

## **Road Signs**

Regulatory, warning or directional signs designed and installed by the Dunedin City Council, the NZ Transport Agency (NZTA) or other public roading body, or relevant roading contractor on a carriageway, cycle path or footpath. For the sake of clarity, these include signs related to public transportation services.

Road signs are included in the definition of operation, repair and maintenance of the roading network.

## **Roadside Produce Stall**

A structure used for rural ancillary retail that is up to 10m<sup>2</sup> in footprint and located inside the required setback from the road boundary (boundary setback performance standard).

## **Rooftop Structures**

Structures attached to roofs that do not form a part of the internal usable space of the building. Examples are:

- decorative architectural or elevated features including spires and finials; living roofs; chimneys; flues; lighting; skylights; building utilities; and flag poles (including those mounted to the sides of buildings); and
- for large commercial and industrial buildings and major facilities: they may also include cooling towers; smoke and exhaust stacks; machinery rooms; guy wires; chain link and other visually permeable fences, and lightning rods.

This definition excludes structures otherwise defined as network utility structures.

Rooftop structures are considered to be part of a building, and are therefore managed as part of new buildings and

additions and alterations to buildings.

## **Rūnaka**

Local representative group; community system of representation of the Manawhenua.

## **Rural Activities**

The category of land use activities that consists of:

- domestic animal boarding and breeding
- intensive farming
- farming
- forestry
- grazing
- landfills
- mineral exploration
- mineral prospecting
- mining
- rural ancillary retail
- rural tourism; and
- rural research.

## **Rural Ancillary Retail**

The use of land and buildings for the direct sale to the public of:

- produce from the property on which it was grown; or
- other goods produced on the same property as part of a working from home activity.

Rural ancillary retail is an activity in the rural activities category.

## **Rural Contractor and Transport Depots**

The use of land and buildings as a depot for rural contractor and transport services. Examples of rural contractor and transport services are:

- fencing
- crop harvesting
- rural drainage; and
- stock transport services.

For the sake of clarity, this includes the storage, maintenance, repair and refuelling of the vehicles, machinery and other materials associated with these activities as well as the administration and dispatch of workers.

This definition excludes any retailing of farm equipment or other heavy machinery, which is defined as yard based retail.

Rural contractor and transport depots are managed at two different scales - small scale and large scale.

Rural contractor and transport depots are a sub-activity of industry.

## **Rural Contractor and Transport Depots - Large Scale**

Rural contractor and transport depots that exceed the people operating on site of Rural contractor and transport depots - small scale.

## **Rural Contractor and Transport Depots - Small Scale**

Rural contractor and transport depots that do not exceed more than two persons operating from the site (relying on equipment or vehicles stored on the site or making regular visits to the site) per day, other than persons living on the site as their principal place of residence; except up to 5 people can operate from the site per day for no more than 20 days in one calendar year.

## **Rural Industry**

A type of industry that processes the raw materials of farming, intensive farming, forestry or mining activities.

Examples are:

- sawmills
- timber treatment plants
- firewood operations, which process timber grown on a separate property
- stock sale yards
- offal rendering plants
- primary processing and packaging of farm produce; and
- the processing of minerals and quarry products where not part of a mining activity on the same site.

This definition includes:

- any ancillary retail carried out on the site, and
- generation of energy from the combustion of biomass waste that is the by-product of rural industry.

This definition excludes:

- activities otherwise defined as rural contractor and transport depots; and
- activities that otherwise meet the definition of farming.

Rural industry is a sub-activity of industry.

## **Rural Research**

The use of land and buildings for research linked to rural activities occurring on the site (such as farming) or linked to the natural environment on or surrounding the site. For the sake of clarity, this definition includes any educational, training or teaching activities ancillary to the research activity.

Examples are research linked to:

- agricultural production
- rural land management
- forestry
- marine activities; and

- geological features.

The following activities are managed as sub-activities of rural research:

- rural research - large scale; and
- rural research - small scale.

Rural research is an activity in the rural activities category.

### **Rural Research - Large Scale**

Rural research that employs more than 20 full time equivalent staff on-site.

Rural research - large scale is a sub-activity of rural research.

### **Rural Research - Small Scale**

Rural research that employs 20 or fewer full time equivalent staff on-site.

Rural research - small scale is a sub-activity of rural research.

### **Rural Tourism**

The ancillary use of land or buildings for the interpretation and demonstration of a rural or conservation activity and/or viewing and interpretation of the natural environment (including coastal environment), scheduled heritage item or archaeological site, where the tourism activity is ancillary to a rural or conservation activity on the site.

For the sake of clarity, rural tourism includes associated restaurant, retail, and conference, meeting and function activities, where ancillary to the rural tourism activity.

This definition excludes activities otherwise defined as entertainment and exhibition, or conference, meeting and function.

The following activities are managed as sub-activities of rural tourism:

- rural tourism - large scale; and
- rural tourism - small scale.

Rural tourism is an activity in the rural activities category.

### **Rural Tourism - Large Scale**

Rural tourism that exceeds the attendance rate thresholds for rural tourism - small scale.

Rural tourism - large scale is a sub-activity of rural tourism.

### **Rural Tourism - Small Scale**

Rural tourism that does not exceed the following attendance rate thresholds:

- An attendance rate of 25 or fewer people per day, except for a maximum of 10 days per calendar year an attendance rate of 26 to 50 people per day.

Rural tourism - small scale is a sub-activity of rural tourism.

**S**

### **Scheduled Heritage Building**

A heritage building listed in Appendix A1.1 - Schedule of Protected Heritage Items and Sites.

### **Scheduled Heritage Buildings**

A heritage building listed in Appendix A1.1 - Schedule of Protected Heritage Items and Sites.

### **Scheduled Heritage Item**

A scheduled heritage building, scheduled heritage structure, or scheduled heritage site.

### **Scheduled Heritage Site**

A heritage site listed in Appendix A1.1 - Schedule of Protected Heritage Items and Sites.

### **Scheduled Heritage Sites**

A heritage site listed in Appendix A1.1 - Schedule of Protected Heritage Items and Sites.

### **Scheduled Heritage Structure**

A heritage structure listed in Appendix A1.1 - Schedule of Protected Heritage Items and Sites.

### **Scheduled Heritage Structures**

A heritage structure listed in Appendix A1.1 - Schedule of Protected Heritage Items and Sites.

### **Scheduled Mining Activity**

A mining activity listed in Appendix A1.5 - Scheduled Mining Activities.

A scheduled mining activity is a sub-activity of mining.

### **Scheduled Tree**

A tree or group of trees listed in Appendix A1.3 - Schedule of Trees.

### **Scheduled Trees Activities**

The category of activities that consists of:

- removal of a scheduled tree that is: dead, in terminal decline or with extreme failure, or subject to a court order for removal
- modification of a scheduled tree; and
- removal and any other work on a scheduled tree that will lead to the death or terminal decline of a scheduled tree.

### **Scheduled Wetland**

Any wetland on the ASBV Appendix A1.2 - Schedule of Areas of Significant Biodiversity Value.

## **Schools**

The use of land or buildings for any of the following:

- provision of primary, intermediate or secondary education
- closely associated support activities such as cultural, sport, health and retail activities, including after school care and holiday programmes
- community services provided from schools
- community use of school facilities, including for sporting and cultural purposes; and
- any ancillary activities necessary for the functioning of the school including administration services, kitchens, staff accommodation and staff facilities.

This definition excludes activities otherwise defined as campus, training and education, early childhood education, and community and leisure.

Schools are an activity in the major facility activities category.

## **Self-service Fuel Stations**

The use of land or buildings for the self-service sale of motor vehicle fuels or other vehicle power sources. This excludes all of the ancillary activities (sales of tyres, convenience food etc) that are provided for in the definition of service stations.

Self-service fuel stations are a sub-activity of service stations.

## **Service Areas**

An outdoor area provided to store rubbish and recycling.

Service areas are a sub-activity of outdoor storage.

## **Service Stations**

The use of land and buildings where the primary activity is the sale of motor vehicle fuels or other vehicle power sources, but which may also include any of the following ancillary activities:

- sale of tyres, batteries, kerosene and other accessories normally associated with motor vehicles
- sale of packaged convenience food and beverage (including cafe-style takeaways)
- the mechanical repair and servicing of motor vehicles, including boats
- hire of trailers; and
- car wash facilities.

This definition excludes any restaurants that may also be provided on-site.

Self-service fuel stations are managed as a sub-activity of service stations.

Service stations are an activity in the commercial activities category.

## **Shared Path**

A special road, route, or path intended for use by cyclists and pedestrians (including wheeled pedestrians) from which vehicles are excluded.

## **Shelterbelts and Small Woodlots**

The planting of tree species as a shelter belt or small woodlot for the purpose of shelter, screening, stability or erosion control, or as a carbon sink, where this planting is not greater than 1 hectare in size or for timber use on the same property as which it is grown.

This definition excludes activities defined as forestry or conservation.

Shelterbelts and small woodlots are an activity in the site development activities sub-category, which is in the development activities category.

## **Short Term House Rentals**

The short term rental of a residential unit, where the residential unit is primarily occupied by the owner(s) and let for no more than a total of 28 nights per calendar year.

This definition excludes activities otherwise identified as visitor accommodation.

## **Signs**

Lettering or symbols used to identify a place of business, advertise a product or service, or communicate a direction or command.

Note: signs are managed as follows:

The following signs are managed as development activities:

- freestanding signs are managed as a sub-activity of structures; and
- signs attached to buildings and structures are managed as a sub-activity of additions and alterations.

The following signs are managed as city-wide activities:

- Road signs are managed as part of the definition of the operation, repair and maintenance of the roading network (transportation activities category)
- Temporary signs are managed as an activity in the temporary activities category; and
- Public display boards are managed as a sub-activity of public amenities.

The advertising of goods or services that does not meet the definition of ancillary signs or temporary signs is managed as a separate land use activity - commercial advertising.

## **Signs Attached to Buildings and Structures**

Signs attached to buildings and structures or incorporated within the design of any building or structure, including by painting.

Signs attached to buildings and structures are a sub-activity of additions and alterations.

## **Site**

An area of land which is either:

- one allotment in one certificate of title, or two or more contiguous allotments held together in one certificate of title, in such a way that the allotments cannot be dealt with separately without the prior consent of the DCC
- contained in a single allotment on an approved survey plan of subdivision for which a separate certificate of title could be issued without further consent from the DCC

- two or more contiguous allotments held in two or more certificates of titles, and where the titles are subject to a condition imposed under section 77 of the Building Act 2004 or section 643 of the Local Government Act 1974, or held together in such a way that they cannot be dealt with separately without the prior consent of the DCC
- partly made of land which complies with clauses a, b, or c above, and partly made up of an interest in airspace above or subsoil below a road, where both areas of land are adjacent and held together in such a way that they cannot be dealt with separately without the prior approval of DCC
- for land subdivided under the cross lease system, a building or buildings for residential or business purposes, together with any other building(s) and/or land that is exclusively restricted to the users of that/those building(s), together with the lawful share of any building(s) and/or land of which the user of the exclusive building or buildings enjoys a degree of non-exclusive use
- for land subdivided under the Unit Titles Act 2010, an area of land containing a principal unit or proposed unit on a unit plan, together with its accessory units, together also with the lawful share of any unit(s) and/or common property of which the user of the principal unit or proposed unit enjoys a degree of non-exclusive use
- for land in a strata title, the underlying certificate of title of the entire land containing the strata titles immediately prior to subdivision; or
- for land not subject to the Land Transfer Act 1952, is the whole parcel of land acquired under one instrument of conveyance.

In addition to the above:

- a site includes the airspace above the land
- if any site is crossed by a zone boundary under this Plan, with the exception of a boundary between two rural zones, the site is deemed to be divided into two or more sites by that zone boundary
- where a site is situated partly within Dunedin City and partly within an adjoining territorial authority, then the part situated within Dunedin City is deemed to be one site; and
- the area of a 'site' is all of the area associated with any exclusive ownership portion(s) plus the lawful share of any non-exclusive ownership portion(s).

## **Site Development Activities**

The sub-category of activities that consists of:

- outdoor storage
- parking, loading and access
- storage and use of hazardous substances
- shelterbelts and small woodlots; and
- vegetation clearance.

Site development activities are a sub-category in the development activities category.

## **Sleep Out**

A building that contains one or more habitable rooms but is not a self-contained residential unit.

## **Social Housing**

Residential activity where premises are let by or on behalf of the DCC, Kāinga Ora-Homes and Communities, or a registered community housing provider, where in accordance with the Public and Community Housing Management Act 1992.

Social housing is a sub-activity of standard residential.

## **Solar Panels**

Renewable energy generators that generate energy from solar resources.

### **Solar Panels - Large Scale**

Solar panels that exceed the scale thresholds for solar panels - small scale as set out in Rule 5.5.3.

Solar panels exclude structures otherwise defined as building utilities.

Solar panels - large scale are a sub-activity of network utility structures - large scale.

### **Solar Panels - Small Scale**

Solar panels that meet the scale thresholds for solar panels - small scale as set out in Rule 5.5.3.

Solar panels exclude structures otherwise defined as building utilities.

Solar panels - small scale are a sub-activity of network utility structures - small scale.

## **Sport and Recreation**

The use of land and buildings for organised indoor and outdoor sport and recreation activity, ancillary events, sports education, and club meetings, presentations, and functions. For the sake of clarity, this definition includes ancillary office activity and ticket sales activities.

Examples are facilities managed by clubs, Dunedin City Council, schools or private entities including:

- sports fields
- basketball/tennis/netball/squash courts
- swimming pools
- athletics tracks
- bowling greens
- gyms
- golf courses
- shooting ranges, and
- outdoor recreational facilities, including walking and cycling facilities.

Sport and recreation that involves motor vehicles is managed as a sub-category of sport and recreation.

Sport and recreation is an activity in the community activities category.

### **Sport and Recreation that Involves Motor Vehicles**

Sport and recreation activity that involves the use of motorbikes, cars, trucks, boats, trains, remote controlled vehicles, go-carts, miniature vehicles, or other similar motorised vehicles.

Sport and recreation that involves motor vehicles is a sub-activity of sport and recreation.

## **Stadium Noise Events**

Events within the Stadium Zone that exceed the relevant zone noise limits in rules 9.3.6.1 - 9.3.6.6 at any point at, or

beyond, the **stadium noise mapped area** boundary.

This definition excludes:

- sound checks associated with a stadium noise event; and
- noise generated by activities listed in rules 9.3.6.7.e to 9.3.6.7.k.

## **Stand-alone**

Self-contained and able to operate independently.

### **Stand-alone Car Parking**

The use of land or buildings for the short or long term lease or hire of car parks that are not provided as parking ancillary to another activity on-site. Examples are:

- free public car parking
- sites used entirely for car parking as the primary activity on the site; and
- letting of more than 2 excess car parks on a site that are not required by the activity on the site.

Stand-alone car parking is an activity in the commercial activities category.

Note: Stand-alone parking that involves a new development activity is also managed as follows:

- the construction of surface level parking is managed as a parking, loading and access activity.
- the erection of a parking building is managed as a new building.

## **Standard Residential**

The use of land and buildings for residential activity at a domestic scale.

For the sake of clarity, this definition includes:

- short-term house rentals
- boarding houses
- supported living accommodation (with 10 or fewer residents); and
- emergency and refuge accommodation.

This definition excludes supported living facilities.

Papakāiika and social housing are managed as sub-activities of standard residential.

Standard residential is an activity in the residential activities category.

## **Standby or Temporary Energy Generators**

Energy generators for temporary, emergency or backup use. Examples are diesel, petrol or gas generators.

Standby or temporary energy generators are an activity in the network utility activities category.

## **Storage and Use of Hazardous Substances**

The storage and use of any substance, or waste generated by the use of hazardous substances, with one or more of the following intrinsic properties that meets the Hazardous Substances (Minimum Degrees of Hazard) Regulations:

- explosiveness
- flammability
- a capability to oxidise
- corrosiveness
- toxicity (including chronic toxicity)
- ecotoxicity, with or without bio-accumulation; or
- any substance, which on contact with air or water (other than air or water where the temperature or pressure has been artificially increased or decreased) generates a substance or waste with any one or more of the properties above.

Storage and use of hazardous substances is an activity in the site development activities sub-category, which is in the development activities category.

## **Storey**

Part of a building measured from:

- the upper surface of any floor to the upper surface of the floor above; and
- the topmost floor surface to the upper surface of the ceiling joists above or the upper surface of the roof cladding, whichever is the lower.

This definition excludes basements with floor surfaces below ground level.

## **Stormwater**

Rainfall run-off from land and any impermeable or semi-permeable surface on land. Examples of impermeable or semi-impermeable surfaces are:

- roads
- car parks
- pavements
- porous paving; and
- roofs.

## **Stormwater Open Watercourse**

A natural or artificial open channel where stormwater collects and flows and is part of the stormwater network. It may be privately or publicly owned.

## **Strategic Road**

A road classified as strategic road within the **road classification hierarchy mapped area** shown on the Planning Map.

## **Structure**

Any equipment, device, or fabrication.

## **Structures**

The development activity that includes a structure, other than as provided for under the definition of "buildings", and is:

- fixed permanently to the land; or
- if movable, greater than 10m<sup>2</sup> or 2m in height and stored or placed undisturbed on a site for more than 12 months.

This definition only applies in relation to structures as an activity in the development activities category. It does not cover any other use of the word "structures", such as in relation to "utility structures", which should rely on the broader definition for structure (singular).

Shipping containers or other movable structures that do not meet this definition are included as part of outdoor storage activity.

The following activities are managed as sub-activities of structures:

- fences
- freestanding signs; and
- retaining walls (for the purposes of rules that apply in heritage precincts only).

Structures is an activity in the buildings and structures sub-category, which is in the development activities category.

## **Student Hostels**

Supported living facilities for school or tertiary students. Examples are halls of residence, university colleges, school boarding houses and hostels.

For the sake of clarity, this definition includes use of those facilities outside of the time of occupancy by students for the accommodation of visitors to the educational facility or events hosted by the educational facility on or off-site (e.g. sporting events).

Student hostels are a sub-activity of supported living facilities.

## **Subdivision**

The division of a site by any of the following:

- the creation of fee simple allotments with new certificate of title
- the lease of land or buildings, or both, for 35 years or longer; or
- the creation of a unit title, company lease or cross lease, by way of application to the Registrar General of Land.

(Defined in Section 218 of the Resource Management Act 1991).

## **Subdivision Activities**

The category of activities that consists of:

- general subdivision; and
- cross lease, company lease and unit title subdivision.

## **Substations**

A facility for the control and/or transformation of electricity at a high or significant capacity. For the sake of clarity, this includes any associated communication masts and antennas. Examples are:

- zone substations

- sub-transmission switching stations
- National Grid exit points; and
- switching stations.

This definition excludes activities otherwise defined as electrical distribution structures.

Substations are an activity in the network utility activities category.

### **Suitably Qualified Arborist**

A person accredited with an Advanced National Certificate in Horticulture (Arboriculture) (Level 4) or overseas accreditation, and a minimum of four years experience, post qualification, working as an arborist.

### **Supported Living Accommodation**

Residential accommodation and care in a supervised environment. Supervision may be required for social, intellectual, or physical disabilities or needs. Supervision may include additional accommodation for a live-in carer, and laundry, meal, and/or cleaning services.

### **Supported Living Facilities**

The use of land or buildings for the purposes of providing supported living accommodation for more than ten residents that includes full-time management, care and supervision, and may include laundry, meal, and cleaning services. For the sake of clarity, this definition includes any ancillary activities directly associated with the functioning of the facility, including medical treatment, recreational facilities, and other facilities necessary to service the needs of the residents or their visitors.

This definition excludes activities otherwise defined as standard residential.

The following activities are sub-activities of supported living facilities:

- rest homes
- retirement villages; and
- student hostels.

Supported living facilities are an activity in the residential activities category.

### **Surplus Dwelling Subdivision**

The subdivision of land containing an existing surplus dwelling from a rural property where the subdivision will not result in any additional residential development potential.

### **Swale**

Low tracts of land, often in the form of a depression or channel (as a result of an old river flow path), where water flows or ponds intermittently.

## **T**

### **Taieri Aerodrome**

The use of land and buildings at the Taieri Aerodrome for any of the following:

- aircraft operations and aircraft servicing
- fuel storage

- training activities and facilities associated with the aeronautical industry
- non-commercial sports sky-diving
- helicopter rescue services; and
- ancillary activities directly associated with, and necessary for, the functioning of an aerodrome, including offices.

Taieri Aerodrome is an activity in the major facility activities category.

### **Takata whenua**

The iwi or hapū, that holds Manawhenua in a particular area.

### **Takiwā**

Area of customary interest and authority.

### **Tangi**

Bereavement ceremony.

### **Taoka**

Treasure; applied to anything considered to be of value to Māori.

### **Taumanu**

Fishing sites.

### **Tauraka waka**

Canoe mooring site.

### **Telecommunication Masts**

Any mast, pole, tower or similar structure designed to carry antennas or other devices that facilitate telecommunication.

Examples are:

- cell phone towers
- television masts; and
- radio masts.

The definition excludes support structures and lines.

### **Temporary Activities**

The category of land use activities that consists of:

- construction
- filming
- military exercises
- mobile trading
- temporary disaster management accommodation

- helicopter movements
- temporary events; and
- temporary signs.

This definition excludes activities otherwise defined as campus.

## **Temporary Disaster Management Accommodation**

The erection and use of tents or buildings in response to a disaster event, such as an earthquake, for the purpose of temporary accommodation, shelter or facilities for:

- people required to work as part of the immediate disaster relief efforts or post disaster development team
- people displaced by the disaster event; and
- disaster event management.

Temporary disaster management accommodation is an activity in the temporary activities category.

## **Temporary Events**

An event of limited duration occurring on a site where it is not part of the day-to-day purpose and function of the site.

For the sake of clarity, this definition includes temporary buildings and structures associated with the temporary event, including any ancillary mobile trading.

Examples are:

- galas, carnivals, market days, fairs
- concerts, entertainment events
- trade fairs or displays
- pyrotechnics
- fundraisers
- promotional, community, recreation, or ceremonial events
- A & P shows, rodeos; and
- emergency response organisation training.

This definition excludes activities otherwise defined as military exercises, sport and recreation, conference, meeting and function, and entertainment and exhibition.

The following activities are managed as sub-activities of temporary events:

- temporary events - large scale; and
- temporary events - small scale.

Temporary events are an activity in the temporary activities category.

## **Temporary Events - Large Scale**

Temporary events with a daily maximum attendance of more than 1500 people.

Temporary events - large scale are a sub-activity of temporary events.

## **Temporary Events - Small Scale**

Temporary events with a maximum daily attendance of no more than 1500 people.

Temporary events - small scale are a sub-activity of temporary events.

## **Temporary Public Notices**

A public notice that is displayed for no more than 3 months.

Examples are:

- public health and safety notices; and
- resource consent notices.

Temporary public notices are a sub-activity of temporary signs.

## **Temporary Signs**

A sign that is displayed for a period of time and is then removed.

For the sake of clarity, this includes mobile signs displayed on a vehicle or trailer parked with the primary purpose of displaying the sign rather than for transport.

The following activities are managed as sub-activities of temporary signs:

- construction signs
- election signs
- event promotion signs
- real estate signs; and
- temporary public notices.

Temporary signs are an activity in the temporary activities category.

## **Tohu**

Symbol.

## **Tourism Advertising**

A sign that advertises a tourism facility, activity or event.

Tourism advertising is a sub-activity of commercial advertising.

## **Trade Related Retail**

Retail where the predominant goods or services sold are:

- goods and materials used for the construction, repair, alteration and renovation of buildings (including building materials, painting, lighting, electrical and plumbing supplies)
- motorised-vehicle repairs
- plants, trees and shrubs, and landscaping and garden supplies and ornaments
- marine equipment
- motorised vehicles; and

- farm equipment or supplies.

This definition excludes trade related retail where 70% or more of the areas devoted to the sales or display of goods is an open or semi-covered yard, as distinct from a secure and weatherproof building, which is defined as yard based retail.

Trade related retail is a sub-activity of retail.

## **Training and Education**

The use of land or buildings for the purpose of teaching and/or learning a vocation, skill, or subject of interest. This definition includes tertiary education carried out by the University of Otago or Otago Polytechnic outside of the Campus Zone and ancillary sales of any learning material associated with or necessary for the teaching or training offered.

Examples are:

- language schools
- 'after school' tuition
- hairdressing schools
- other vocational training centres; and
- study centres.

This definition excludes activities defined as schools, early childhood education and campus.

Training and education is a sub-activity of office.

## **Transportation Activities**

The category of activities that consists of:

- operation, repair and maintenance of the roading network
- operation, repair and maintenance of the rail network
- new roads or additions or alterations to existing roads
- passenger transportation hubs; and
- heliports.

## **Travel Modes**

Travel modes include but are not limited to the following:

- walking
- cycling
- private motor vehicles (e.g. cars, motorcycles)
- rail
- public transport services (e.g. buses)
- helicopters
- freight moving (e.g. trucks); and
- horse-riding.

## **Trenchless Methods**

Methods such as tunnelling, microtunnelling, horizontal directional drilling also known as directional boring, pipe ramming, pipe jacking, moling, horizontal auger boring and other methods for the installation of pipelines and cables below the ground with minimal excavation including for the repair of the existing cables/network, pilot-holes or similar works.

## **Tūāhu**

Places of importance to Māori identity.

## **U**

## **Umu**

Earth ovens.

## **Underground or Internal Network Utilities**

Network utility structures that are located:

- a. underground; or
- b. entirely within a building except that the following structures may be external:
  - i. pipes transitioning to an internal utility; and
  - ii. minor external protrusions, such as vents and chimneys, associated with an internal utility.

Underground or internal network utilities are an activity in the network utility activities category.

## **Unfunded Public Infrastructure Upgrades**

Upgrades of public infrastructure involving capital spending that is not included either in the DCC's Long Term Plan or the NZTA's Regional Land Transport Strategy.

## **Unlikely**

For the purpose of the natural hazards provisions, unlikely means an event that has a chance of between one in 200 and one in 500 of occurring in any given year. This is sometimes expressed as an average return period of between 200 and 500 years, or as an Annual Exceedance Probability of between 0.005 (or 0.5%) and 0.002 (0.2%).

## **Urban High Density Corridor**

A road classified as urban high density corridor within the **road classification hierarchy mapped area** shown on the Planning map.

## **Urupā**

Human burial site.

## **V**

## **Vegetation Clearance**

Any activity that destroys, removes or damages vegetation including by any of the following:

- cutting, crushing or burning
- drainage, irrigation or other activities that result in changes to hydrology or soils or landforms
- cultivation, over-planting, application of seed of exotic pasture or mob-stocking; or

- application of chemicals.

This definition excludes: the grazing of improved pasture other than by mob-stocking; the maintenance of amenity or landscape plantings, gardens and lawns; the maintenance and harvesting of shelterbelts and small woodlots; and the maintenance and harvesting of plantation trees as part of forestry.

Indigenous vegetation clearance is managed as a sub-activity of vegetation clearance.

Vegetation clearance is an activity in the site development activities sub-category, which is in the development activities category.

### **Vehicle Access**

The portion of a driveway or vehicle track between the formed road and the property boundary.

### **Vehicle Accesses**

The portion of a driveway or vehicle track between the formed road and the property boundary.

### **Vehicle Crossing**

The portion of a vehicle access where the vehicle access meets the formed road.

### **Vehicle Movement**

A single journey to or from a particular site by a person or persons in a motor vehicle.

### **Vehicle Track**

A constructed accessway that provides access for vehicles to rural activities within the rural and rural residential zones, and which:

- is not used for frequent vehicle movements, or vehicle movements associated with residential activity.

### **Very Likely**

For the purpose of the natural hazards provisions, very likely means an event that has a chance of at least one in 50 of occurring in any given year. This is sometimes expressed as an average return period of up to 50 years or as an Annual Exceedance Probability of 0.02 (or 2%) or more.

### **Very Unlikely**

For the purpose of the natural hazards provisions, very unlikely means an event that has a chance of between one in 500 and one in 2500 of occurring in any given year. This can be expressed as an average return period of between 500 and 2500 years, or as an Annual Exceedance Probability of between 0.002 (or 0.2%) and 0.0004 (0.04%).

### **Veterinary Services**

The use of land and buildings for the treatment and prevention of diseases and injuries in animals by registered veterinary practitioners and persons in their employment.

Veterinary services are a sub-activity of office.

### **Visible**

For the purposes of the heritage provisions and Rule 15.6.1 Building Length, 'visible' in the context of 'visible from an adjoining public place', or 'visible from a public place within the heritage site', means visible in the medium to long term (20 to 50 years). Not visible, therefore, should be interpreted as meaning obscured by permanent buildings, as

opposed to being obscured by vegetation, or any other buildings or structures, where there is not reasonable confidence that they will remain in place for the medium to long term.

## **Visitor Accommodation**

The use of land and buildings for temporary accommodation on a commercial fee paying basis.

For the sake of clarity, this definition includes the provision of facilities for resident guests (e.g. playgrounds, spa pools, swimming pools, gyms).

Examples are:

- motels
- hotels
- homestays or bed and breakfasts
- serviced apartments; and
- backpackers and hostels.

This definition excludes accommodation activities that meet the definitions of working from home or standard residential. Freedom camping is not managed by this Plan and is managed through a DCC by-law.

Campgrounds are managed as a sub-activity of visitor accommodation.

Visitor accommodation is an activity in the commercial activities category.

## **Visitor Accommodation Unit**

An individual room or a single or multi-bedroom, self-contained unit with kitchen/lounge facilities, which is offered for rent as part of a visitor accommodation activity.

## **Visual Permeability**

The ability to 'see-through'. Fences constructed using materials such as trellis, lattice, wrought iron, or spaced palings (palings maximum width 150mm, spacing minimum width 25mm) or other materials that provide gaps that can be seen through meet this requirement.

## **W**

### **Waharoa**

Carved entranceway.

### **Wāhi kohātu**

Rock outcrops.

### **Wāhi mahi kohātu**

Traditional quarry sites.

### **Wāhi pakaka**

Battle sites.

### **Wāhi paripari**

Cliff areas.

## **Wāhi taoka**

Resources, places and sites treasured by Manawhenua.

## **Wāhi tapu**

Places sacred to the takata whenua.

## **Wāhi tohu**

Features used as location markers within the landscape.

## **Wāhi tūpuna**

Landscapes and sites that embody the ancestral, spiritual and religious traditions of all the generations prior to European settlement.

For the purposes of the Plan, wāhi tūpuna have been mapped as a **wāhi tūpuna mapped area**.

## **Wai māori**

Freshwater areas important to Māori.

## **Wai repo**

Wetland or swamp.

## **Walking Track**

A formed track or trail on public or private land, over which the public has right of access for pedestrian or cycling use.

## **Wānaka**

Customary learning method.

## **Warning signs**

Signs that provide information about hazards or other health and safety matters.

## **Wastewater**

Liquid waste, including liquids containing solids, originating from domestic, industrial and commercial activities. Examples are:

- toilet wastes
- trade wastes; and
- grey water.

## **Wastewater Serviced Area**

Any area within the residential, commercial and mixed use, industrial or major facility zones, except:

- Dunedin International Airport Zone
- Invermay and Hercus Zone
- Lee Stream Primary School
- Outram Primary School
- Pūrākaunui Primary School
- Taieri Aerodrome
- Waitati School; or
- where a **no DCC reticulated wastewater mapped area** applies.

## **Water Body**

Fresh water or geothermal water in a river, lake, stream, pond, wetland, or aquifer, or any part thereof, which is not located within the coastal marine area.

## **Wetland**

Permanently or intermittently wet areas, shallow water, and land water margins that support a natural ecosystem of plants and animals that are adapted to wet conditions. Vegetation is typically dominated by plants such as sedges (Cyperaceae), rushes (Juncaceae), restionads (Restionaceae), raupo (*Typha orientalis*), flax (*Phormium tenax*), Sphagnum moss species or other wetland herbs, which emerge from permanent standing water or occupy permanently saturated soil: including riparian and littoral vegetation.

For the purpose of this definition, wetland does not include the following:

- constructed reservoirs
- farm drains and irrigation canals
- land drainage canals
- constructed farm dams and detention dams
- constructed wetlands used for wastewater or stormwater treatment; and
- oxidation ponds.

## **Whakapapa**

Genealogy or family tree.

## **Whānau**

Family.

## **Whāngai**

A person adopted in accordance with tikaka Māori.

## **Wharekai**

The dining hall of a marae complex.

## **Wharenui**

The main building of a marae complex, used for hui and where guests are accommodated.

## **Wholesale**

The use of land and buildings for the distribution and sale of goods to businesses and institutional customers (rather than to the general public).

Examples are businesses that supply goods to:

- shops, which on-sell them to the public; and
- institutional customers, such as schools, hospitals, and visitor accommodation.

Wholesale is included in the definition of industry.

## **Wind Generators**

Renewable energy generators which generate energy using wind resources.

### **Wind Generators - Large Scale**

Wind generators that exceed the scale thresholds for wind generators - small scale as set out in Rule 5.5.3.

Wind generators - large scale are a sub-activity of network utility structures - large scale.

### **Wind Generators - Small Scale**

Wind generators that meet the scale thresholds for wind generators - small scale as set out in Rule 5.5.3.

Wind generators - small scale are a sub-activity of network utility structures - small scale.

## **Working from Home**

The use of land and buildings as a place of work, as part of an occupation, craft, profession, or service, ancillary to their use as a principal place of residence. For the sake of clarity, this means that the activity:

- can only be carried out by a person or persons living on the site as their principal place of residence; and
- cannot employ any other person on-site, including by way of operating from the site (relying on equipment or vehicles stored on the site or making regular visits to the site).

Working from home may include retail services but not direct retail sales except for goods produced on-site.

For the sake of clarity, this definition includes:

- hosted visitor accommodation, in the form of homestays, bed and breakfast, or similar, for no more than five guests, provided the accommodation is contained within the same residential unit that is being used as the principal place of residence;
- early childhood education for five or fewer children; and
- animal breeding involving one breeding pair of dogs and/or cats.

Working from home is an activity in the residential activities category.

**X**

**Y**

## **Yard Based Retail**

Trade related retail, where 70% or more of the area devoted to sales or display of goods is an open or semi-covered external yard, as distinct from a secure and weatherproof building.

Examples are:

- caravan or motorised vehicle sales yards
- farm equipment or other heavy machinery sales yards
- landscaping materials/plant sales yards; and
- timber, firewood or coal sales yards.

Yard based retail is a sub-activity of retail.

**Z**

## 1.4.2 Abbreviations

### A

#### **ASBV**

Area of Significant Biodiversity Value (see Appendix A1.2).

#### **ANIC**

Airport noise inner control mapped area

### B

### C

#### **CBD**

Central Business District Zone

#### **CEC**

CBD Edge Commercial zones

#### **CEC - North**

CBD Edge Commercial North Zone

#### **CEC - South**

CBD Edge Commercial South Zone

#### **CMU**

Commercial and Mixed Use zones

#### **CPTED**

Crime prevention through environmental design

### D

#### **dB**

Decibel

#### **dB(A)**

A-frequency-weighted decibels

#### **DCC**

Dunedin City Council

#### **DIA**

Dunedin International Airport Zone

#### **DnT, w + Ctr**

Weighted Standardised Level Difference with Spectrum Adaption Term Ctr

**E**

**F**

**G**

**GPMA**

Groundwater protection mapped area

**GR1**

General Residential 1 Zone

**GR2**

General Residential 2 Zone

**H**

**Haz1**

Hazard 1 Overlay Zones

**Haz1A**

Hazard 1A (flood) Overlay Zone

**Haz2**

Hazard 2 Overlay Zones

**Haz3**

Hazard 3 Overlay Zones

**HCS**

High class soils mapped area

**HE**

Harbourside Edge Zone

**HETZ**

Harbourside Edge Transition Overlay Zone

**HNCC**

High Natural Coastal Character Overlay Zone

**HP**

Heritage precincts

**HSNO**

Hazardous Substances and New Organisms Act 1996

**I**

**ICR**

Inner City Residential Zone

**Ind**

Industrial Zone

**IndPort**

Industrial Port Zone

**IndTZ**

Industrial Transition Overlay Zone

**J**

**K**

**L**

**L10**

10% centile level (fast response) noise pressure level

**LAEq (15 minutes)**

Time average A-frequency-weighted noise pressure level in a 15 minute time interval

**LAm<sub>ax</sub>**

Maximum A-frequency-weighted noise pressure level

**L<sub>dn</sub>**

Day/night average noise level

**LDR**

Low Density Residential Zone

**LGA**

Local Government Act 2002

**LLR**

Large Lot Residential Zone

**LLR<sub>1</sub>**

Large Lot Residential 1 Zone

**LLR<sub>2</sub>**

Large Lot Residential 2 Zone

**M**

**MHWS**

Mean high water springs

**N**

**NCC**

Natural Coastal Character Overlay Zone

**NDMA**

New development mapped area

**NEC**

Neighbourhood Centre Zone

**NECC**

Neighbourhood Convenience Centre Zone

**NEDC**

Neighbourhood Destination Centre Zone

**NESETA**

Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009

**NESTF**

Resource Management (National Environmental Standards for Telecommunication Facilities) Regulations 2016

**NESPF**

Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017

**NZS**

New Zealand Standard

**O**

**ONCC**

Outstanding Natural Coastal Character Overlay Zone

**ONF**

Outstanding Natural Feature Overlay Zone

**ONL**

Outstanding Natural Landscape Overlay Zone

**P**

**PC**

Principal Centre Zone

**PPF**

Primary pedestrian street frontage mapped area

**PPH**

Princes, Parry and Harrow Street Zone

**Q**

**R**

**RC**

Rural Centre Zone

**Rec**

Recreation Zone

**RMA**

Resource Management Act 1991

**RR**

Rural Residential zones

**RTZ**

Residential Transition Overlay Zone

**RU**

Rural zones

**S**

**SC**

Suburban Centre Zone

**SDLF**

South Dunedin Large Format Zone

**SHS**

Scheduled heritage site

**SNL**

Significant Natural Landscape Overlay Zone

**SPF**

Secondary pedestrian street frontage mapped area

**SSYP**

Smith Street and York Place Zone

**STEM**

Standard tree evaluation method

**STP**

Standard temperature pressure (gases are measured at 15° Celsius at 1atm)

**T**

**TR**

Trade Related Zone

**TS**

Township and Settlement Zone

**U**

**UBMA**

Urban biodiversity mapped area

**V**

**W**

**WP**

Warehouse Precinct Zone

**X**

**Y**

**Z**

## **2. Strategic Directions**

### **2.1 Introduction**

The strategic directions section focuses on key issues for the city and establishes the overall management approach for the Plan, including zoning and other methods used in the Plan. These strategic directions reflect the strategic directions of the Spatial Plan for Dunedin adopted in September 2012, key goals for Dunedin identified by the community in the development of the Plan, and the purpose and principles of the Resource Management Act 1991.

There are six overall strategic directions. Each strategic direction includes objectives and policies which outline key methods. The strategic directions include the spatial distribution policies necessary to achieve strategic city-wide objectives.

The objectives and policies in the strategic directions section are generally incorporated into the objectives, policies and methods of the rest of the Plan, but they may also be relevant to the assessment of resource consent applications, notices of requirement for designations, and in directing future changes to the Plan.

The strategic directions, and the objectives and policies within them, are not ordered in any particular way.

### **2.2 Dunedin is Environmentally Sustainable and Resilient**

#### **Objective 2.2.1 Risk from Natural Hazards**

The risk to people, communities, and property from natural hazards, and from the potential effects of climate change on natural hazards, is no more than low.

##### **Policy 2.2.1.1**

Manage land use, development and subdivision based on:

- a. the sensitivity of activities, by identifying them as: a natural hazards sensitive activity, a natural hazards potentially sensitive activity, or a natural hazards least sensitive activity; and
- b. the risk from natural hazards to people, communities and property, considering both the likelihood and consequences of natural hazards, as shown in Table 11.1.2A in Section 11.

##### **Policy 2.2.1.2**

In calculating the likelihood and consequences of natural hazards consider:

- a. risks from a single natural hazard event or from repetitive natural hazard events;
- b. risks from a combination of different natural hazards, including any potential interplay between natural hazards;
- c. risks that may arise in the next 100 years; and
- d. risks that may increase in frequency or consequence as a result of climate change.

##### **Policy 2.2.1.3**

Identify areas with risk from terrestrial flooding, and include these as follows:

- a. in the Hazard 1A (flood) Overlay Zone, include areas that are part of a flood protection scheme which have a crucial role in the conveyance or storage of floodwater where there may be a high risk to people and property and of transference or exacerbation of risk elsewhere;
- b. in the Hazard 1 (flood) Overlay Zone, include areas that have a crucial role in the conveyance or storage of floodwater where there may be a high risk to people and property and of transference or exacerbation of risk elsewhere, but where prohibited activity status is not seen as appropriate;
- c. in the Hazard 2 (flood) Overlay Zone, include areas in a flood plain where there may be a moderate risk to

- people and property, and of transference or exacerbation of risk elsewhere;
- d. in the Hazard 3 (flood) Overlay Zone, include areas that are vulnerable to short term surface flooding but where there may be a low risk to people and property;
  - e. in the Hazard 3 (alluvial fan) Overlay Zone, include areas that could be subject to flooding, including sediment-laden flows, but where there may be a low risk to people and property and of transference or exacerbation of risk elsewhere; and
  - f. in the **swale mapped area**, include areas that are low tracts of land where water flows or ponds intermittently or that are necessary to ensure the efficient and effective operation of a flood protection or drainage scheme.

#### **Policy 2.2.1.4**

Identify areas at risk from coastal hazards, and include these as follows:

- a. in the **dune system mapped area**, include undeveloped dune systems that may be vulnerable to, or buffer adjacent areas from, coastal processes including erosion, inundation from the sea and sea level rise.
- b. in the Hazard 3 (coastal) Overlay Zone, include areas where there may be ponding of water, including where it is from poor drainage caused by connectivity of groundwater with the sea and inundation from the sea. In these areas there is a low risk to property and to the safe and efficient operation of on-site wastewater disposal. This includes areas where the risk from these hazards will worsen over time due to the effects of climate change, taking into account a 1.05m sea level rise.

#### **Policy 2.2.1.5**

Identify areas that may contain land at risk from land instability and include these in the hazard (land instability) overlay zone as follows:

- a. in the Hazard 1 (land instability) Overlay Zone, areas identified as active landslides with a high sensitivity to either environmental or human induced modifications; that have experienced activity within the last 50 years; and where there is a high risk to people or property; and
- b. in the Hazard 2 (land instability) Overlay Zone:
  - i. areas identified as definitely or likely to be a landslide, which have a moderate to high sensitivity to environmental or human-induced modifications; and
  - ii. areas identified as mine shafts.

#### **Policy 2.2.1.6**

Manage the risk posed by natural hazards, so that it is no more than low, including through rules that:

- a. change the activity status of activities based on the sensitivity of the activity and the level of risk associated with an identified hazard overlay zone;
- b. use performance standards on permitted and restricted discretionary activities, wherever appropriate;
- c. provide for natural hazard mitigation activities where appropriate; and
- d. manage subdivision in a way that considers future land use and development.

#### **Policy 2.2.1.8**

Where there is incomplete or uncertain information about natural hazards take a precautionary approach and require applicants to demonstrate that risk will be no more than low.

#### **Policy 2.2.1.9**

Support and encourage earthquake strengthening of heritage buildings that are earthquake-prone through more lenient rules on:

- a. earthquake strengthening affecting the scheduled parts of heritage buildings; and
- b. replacement of elevated features where there is a risk to safety.

#### **Policy 2.2.1.10**

In areas identified as having a moderate to high likelihood of liquefaction-susceptible materials present, only allow plan changes to change zoning from rural to rural residential or residential where the risks from liquefaction are no more than low, or can be mitigated so that they will be no more than low.

#### **Policy 2.2.1.11**

Enable lifeline utilities and emergency services activities where these will have positive effects on the ability of communities to be resilient to natural hazards.

### **Objective 2.2.2 Environmental Performance and Energy Resilience**

Dunedin reduces its environmental costs and reliance on nonrenewable energy sources as much as practicable, including energy consumption, water use, and the quality and quantity of stormwater discharge, and is well equipped to manage and adapt to changing or disrupted energy supply by having:

- a. increased local renewable energy generation;
- b. reduced reliance on private motor cars for transportation;
- c. increased capacity for local food production; and
- d. housing that is energy efficient.

#### **Policy 2.2.2.1**

Identify areas important for food production and protect them from activities or subdivision (such as conversion to residential use) that may diminish food production capacity through:

- a. use of zoning and rules that limit subdivision and residential activity, based on the nature and scale of productive rural activities in different parts of the rural environment;
- b. consideration of rural productive values, including the location of highly productive land, in identifying appropriate areas for urban expansion; and
- c. identification of areas where high class soils are present (**high class soils mapped area**) and use rules that require these soils to be retained on site.

#### **Policy 2.2.2.2**

Enable opportunities for urban food production through rules that:

- a. enable community gardens;
- b. require adequate areas of outdoor living space in residential areas; and
- c. require outdoor living spaces to get adequate access to sunlight.

#### **Policy 2.2.2.3**

Enable renewable energy generation, including its connection to the National Grid, in recognition of its benefits including those set out in the National Policy Statement for Renewable Electricity Generation 2011, through policies and rules that:

- a. provide for the development of appropriate scales of generation;
- b. acknowledge the practical constraints of renewable energy generation, including those arising from the need to locate where resources are available;
- c. acknowledge the benefits, in terms of the efficient use of energy, of locating renewable energy generation close to end use and to electricity transmission or distribution infrastructure; and
- d. acknowledge the benefits of having a distributed network for greater energy resilience.

#### **Policy 2.2.2.4**

Support transport mode choices and reduced car dependency through policies and rules that:

- a. restrict the location of activities that attract high numbers of users, and to which access by a range of travel modes is practicable, to where there are several convenient travel mode options, including private vehicles, public transport, cycling and walking;
  - b. encourage new community facilities to locate where there are several convenient travel mode options, including private vehicles, public transport, cycling and walking, unless there are specific operational requirements that make this impracticable;
  - c. allow the highest development densities in the most accessible locations, being in the central city and suburban centre zones;
  - d. use existing access to public transport, or the ability to be serviced by public transport in the future, as a criterion for determining appropriate locations for new residential and medium density zones;
  - e. provide for dairies and registered health practitioners in residential zones to meet day to day needs, in a way that does not undermine Objective 2.3.2; and
- X. require subdivision to be designed (subdivision layout and standard of roading) to support good connectivity and legibility for all modes, including good accessibility by active modes to:
- i. existing or planned centres, public open spaces, schools, cycleways, walkways, public transport stops, and community facilities; and
  - ii. neighbouring existing or potential future urban land.

### **Policy 2.2.2.X**

Encourage improvements to the environmental performance of new housing by:

- a. use of policies and assessment rules for subdivision, including in **new development mapped areas**, that encourage subdivisions to be designed to maximise the potential for passive solar design in housing;
- b. encouraging new medium density housing in parts of the city that have old housing stock that is not protected for its heritage values;
- c. rules that require outdoor living space to be on the sunny side of buildings, and requiring principal living areas to connect to the outdoor living space; and
- d. rules that restrict height in relation to boundary to facilitate access to sunlight in outdoor areas.

### **Policy 2.2.2.Y**

Enable and encourage low impact design stormwater management through policies and assessment rules that require stormwater management.

## **Objective 2.2.3 Indigenous Biodiversity**

Dunedin's significant indigenous biodiversity is protected or enhanced, and restored; and other indigenous biodiversity is maintained or enhanced, and restored; with all indigenous biodiversity having improved connections and improved resilience.

### **Policy 2.2.3.1**

Protect areas of significant indigenous vegetation and/or significant habitats of indigenous fauna, including by:

- a. identifying these areas for protection in a schedule as Areas of Significant Biodiversity Value (ASBVs) where they meet the criteria in Policy 2.2.3.2;
- X. promoting the additional legal protection of these areas through QEII covenants, and/or other legal covenants;  
and
- b. assessment rules which require the consideration of significance as part of the assessment of effects on biodiversity values.

### **Policy 2.2.3.2**

Identify as areas of significant indigenous vegetation and/or as significant habitats of indigenous fauna areas which meet one or more of the following criteria:

- a. Protected areas: existing protected areas set aside by statute or covenant or listed in an operative Otago Regional Council Regional Plan as having significant indigenous biodiversity value;
- b. Rarity: areas that support:
  - i. habitat for indigenous species that are threatened, at risk, or uncommon, nationally or within an ecological district;
  - ii. indigenous vegetation or habitat of indigenous fauna that has been reduced to less than 20% of its former extent nationally, regionally or within a relevant land environment, ecological district or freshwater environment including wetlands; or
  - iii. indigenous vegetation and habitats within originally rare ecosystems;
- c. Representativeness: areas that are examples of an indigenous vegetation type or habitat that is typical or characteristic of the natural diversity of the relevant ecological district, which may include degraded examples of their type or represent all that remains of indigenous vegetation and habitats of indigenous fauna in some areas;
- d. Distinctiveness: areas that support or provide habitat for:
  - i. indigenous species at their distributional limit within Dunedin or nationally;
  - ii. indigenous species that are endemic to the Otago region; or
  - iii. indigenous vegetation or an association of indigenous species that is distinctive, of restricted occurrence, or has developed as a result of an unusual environmental factor or combinations of factors;
- e. Ecological Context: areas important for their ecological context, including areas that:
  - i. have important connectivity value allowing dispersal of indigenous vegetation and fauna between different areas;
  - ii. perform an important buffering function that helps to protect the values of an adjacent area or feature; or
  - iii. are important for indigenous fauna, on a regular or temporary basis, for breeding, refuge, feeding or resting;
- f. Diversity: areas that support a high diversity of indigenous ecosystem types, indigenous taxa or have changes in species composition reflecting the existence of diverse natural features or gradients; or
- g. Size: areas that are of a size to make them significant.

### **Policy 2.2.3.3**

Maintain or enhance indigenous biodiversity in the rural environment through:

- X. rules that:
- i. require indigenous vegetation clearance to be set back from the coast, wetlands and water bodies, and that restrict indigenous vegetation clearance in the coastal environment and in wetlands;
  - ii. protect significant indigenous vegetation and/or significant habitats of indigenous fauna in Areas of Significant Biodiversity Value (ASBVs);
  - iii. protect threatened species and mature examples of important native trees, and otherwise limit the clearance of indigenous vegetation;
  - iv. manage the location and scale of development adjacent to the coast and water bodies; and

- v. require esplanade reserves or esplanade strips when land is subdivided adjacent to the coast and identified water bodies; and
- Y. policies and assessment rules that:
- i. require the assessment of effects on biodiversity values for discretionary and non-complying land use, development and city-wide activities;
  - ii. require the assessment of positive effects on biodiversity values for restricted discretionary, discretionary or non-complying land use, development and city-wide activities; and
  - iii. create a pathway for residential activities to be established on sites in the rural zones that contravene the minimum site area for residential activity (density standard) where the activity is associated with a significant contribution to the enhancement or protection of biodiversity values.

#### **Policy 2.2.3.4**

Encourage conservation activity in all zones through:

- a. rules that enable conservation activity; and
- b. assessment rules that encourage the consideration of the positive effects of conservation (protection, restoration or enhancement of indigenous biodiversity) as part of consent applications.

#### **Policy 2.2.3.5**

Maintain or enhance biodiversity values in the urban environment through:

- a. identification of an **urban biodiversity mapped area** and rules that restrict vegetation clearance in these areas;
- b. rules that restrict vegetation clearance along water bodies;
- c. requiring esplanade reserves or esplanade strips when land is subdivided adjacent to the coast and identified water bodies; and
- d. rules that require buildings, structures and earthworks to be set back from the coast and water bodies.

#### **Policy 2.2.3.6**

Only consider a biodiversity offset, as a positive effect to be balanced against the adverse effects of an activity, where the offset:

- a. is proposed to address residual adverse effects after taking steps to first:
  - i. avoid adverse effects; then
  - ii. minimise adverse effects as far as practicable; by
    - 1. mitigating effects and then remedying effects that cannot be mitigated; and
    - 2. ensuring that any on-site rehabilitation or restoration measures will occur as soon as practicable;
- b. is close to the donor site, unless a more distant site will result in a significantly better ecological outcome;
- c. will result in no net loss and preferably a net gain in biodiversity value; where:
  - i. the biodiversity values gained will be the same or similar to those being lost;
  - ii. any gains in biodiversity values are demonstrably additional to those that may have occurred if the proposed activity had not gone ahead; and
  - iii. the positive effects of the offset last at least as long as the adverse effects of the proposed activity, and preferably in perpetuity;
- d. will not be used to offset irreplaceable and vulnerable biodiversity and is not contrary to Policy 11 of the New Zealand Coastal Policy Statement; and

- e. does not include forfeiting rights to permitted or consented land use or development activities.

### **Policy 2.2.3.7**

Only consider environmental compensation, as a positive effect to be balanced against the adverse effects of an activity, where:

- a. the compensation is proposed to address the residual adverse effects after taking steps to first:
  - i. avoid adverse effects; then
  - ii. minimise adverse effects as far as practicable; by
    - 1. mitigating effects and then remedying effects that cannot be mitigated; and
    - 2. ensuring that any on-site rehabilitation or restoration measures will occur as soon as practicable; then
  - iii. offset adverse effects in accordance with Policy 2.2.3.6;
- b. the environmental compensation is as close as possible to meeting the criteria for a biodiversity offset as set out in Policy 2.2.3.6.

## **Objective 2.2.4 Compact and Accessible City**

Dunedin stays a compact and accessible city with resilient townships based on sustainably managed urban expansion. Urban expansion only occurs if required and in the most appropriate form and locations.

### **Policy 2.2.4.1**

Prioritise the efficient use of existing urban land over urban expansion by:

- a. identifying existing areas of urban land in a range of locations that could be used more efficiently to provide for medium density housing in accordance with Policy 2.6.2.3; and
- b. ensuring that land is used efficiently and zoned at a standard or medium density (General Residential 1, General Residential 2, Inner City Residential, Low Density, or Township and Settlement), except if: hazards; slope; the need for on-site stormwater storage; the need to protect important biodiversity, water bodies, landscape or natural character values; or other factors make a standard density of residential development inappropriate; in which case, a large lot zoning or a **structure plan mapped area** should be used as appropriate.

### **Policy 2.2.4.2**

Encourage new residential housing development in the central city and larger centres, through rules that:

- a. provide for residential development in the central city and centres; and
- b. enable adaptive re-use of heritage buildings for apartments, including by exempting scheduled heritage buildings from minimum mobility parking requirements.

### **Policy 2.2.4.3**

Ensure expansion of urban areas occurs in the most appropriate locations and only when required by:

- a. use of transition overlay zones to identify areas to provide for future residential, commercial and industrial needs; and appropriate criteria for the release of land based on:
  - i. public infrastructure provision; and
  - ii. for commercial and mixed use zoned land, a shortage of capacity.
- b. encouraging applications for any subdivision that fundamentally changes rural land to residential land to be processed as a plan change; and
- c. requiring any alternative development areas suggested via a plan change process to demonstrate that the proposed zoning is the most appropriate in terms of the objectives and policies contained within these

strategic directions, and including that for residential zoning, the proposal is appropriate in terms of the criteria contained in Policy 2.6.2.1.

#### **Policy 2.2.4.4**

Avoid subdivision that provides for residential activity of a fundamentally different type than provided for in the various zones, through:

- a. rules that prevent rural residential or urban-scale residential living in rural zones;
- b. rules that prevent urban-scale residential living in a rural residential zone; and
- c. rules in urban environments that require the density of residential activity to reflect the existing or intended future character of the residential area.
- d. NA

### **Objective 2.2.6 Public Health and Safety**

The risk to people's health and safety from contaminated sites, hazardous substances, and high levels of noise or emissions is minimised.

#### **Policy 2.2.6.1**

Protect people from noise, light or offensive emissions that may create adverse effects on health or well-being through rules that:

- a. encourage heavier industrial activities into industrial zones, which have lenient noise limits and do not allow residential or other noise sensitive activities in these zones;
- b. require adequate separation distances between noise sensitive activities and activities that may generate excessive noise in the rural zones;
- c. require acoustic insulation of buildings containing noise sensitive activities in mixed use environments and near to railway lines, state highways and airports;
- d. allow for lighter industrial activities in mixed use zones, provided any parts of the activity that may generate excessive noise or odour are in a part of the building without doors and windows opening onto a **pedestrian street frontage mapped area**;
- e. restrict the level of noise and light spill from activities and development to safe levels depending on the nature of the receiving environment (zone); and
- f. restrict activities that generate high levels of noise from locating in residential zones.

#### **Policy 2.2.6.2**

Manage the risk posed by the storage and use of hazardous substances to an acceptable level through rules that:

- a. **limit the quantity of different hazardous substances that may be used in different environments (zones); and**
- b. restrict bulk fuel storage facilities sensitive activities from locating or expanding within a **hazard facility mapped area**.

#### **Policy 2.2.6.X**

Give effect to the Resource Management (National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health) Regulations 2011 by including a policy to support the implementation of regulations provided by that national environmental standard.

## **2.3 Dunedin is Economically and Socially Prosperous**

### **Objective 2.3.1 Land and Facilities Important for Economic Productivity and Social**

## Well-being

Land, facilities and infrastructure that are important for economic productivity and social well-being, which include industrial areas, major facilities, key transportation routes, network utilities, and productive rural land:

- a. are protected from less productive competing uses or incompatible uses, including activities that may give rise to reverse sensitivity; and
- b. in the case of facilities and infrastructure, are able to be operated, maintained, upgraded and, where appropriate, developed efficiently and effectively.

### Policy 2.3.1.1

Identify important gateways (including Dunedin International Airport, Dunedin Port and Port of Otago at Port Chalmers) and zone these as major facilities or industrial port and use rules to:

- a. enable them to continue to operate efficiently and effectively, while minimising as far as practicable any adverse effects on surrounding areas; and
- b. protect them from activities that may lead to reverse sensitivity.

### Policy 2.3.1.2

Maintain or enhance the productivity of farming and other activities that support the rural economy through:

- a. rules that enable productive rural activities;
- b. rules that provide for rural industry and other activities that support the rural economy;
- c. zoning and rules that limit subdivision, residential activity and other land use activities based on:
  - i. the nature and scale of productive rural activities in different parts of the rural environment;
  - ii. the location of highly productive land;
  - iii. potential conflict with rural water resource requirements; and
  - X. in the case of residential activity:
    1. recognition of the existing pattern of subdivision in different parts of the rural environment; and
    2. provisions for papakāika;
- d. N/A
- e. rules that require boundary setbacks and separation distances for residential buildings and cemeteries in order to minimise the potential for reverse sensitivity;
- f. rules that restrict subdivision that may lead to land fragmentation and create pressure for residential-oriented development;
- g. rules that prevent the loss of high class soils; and
- h. rules that restrict commercial and community activities in the rural zones to those activities that need a rural location or support rural activities.

### Policy 2.3.1.3

In order to avoid cumulative effects on rural productivity and rural character values set and strictly enforce a minimum site size standard for subdivision in the rural zones. Determine the minimum site size standard considering:

- a. the median size land holding associated with and necessary to support farming activity in each rural zone;
- b. the existing pattern of settlement and land use in each rural zone; and
- c. the character and amenity values that exist in each rural zone.

### Policy 2.3.1.4

Identify land strategically important for industrial activities, including near the Harbour and key transport routes, and

use industrial zoning and rules to protect industrial activities from incompatible or competing land uses in these areas, in particular retail (other than yard-based retail) and residential activities.

### **Policy 2.3.1.5**

Identify key transportation routes, and protect the safety and efficiency of these routes from inappropriate subdivision or development through:

- a. rules that control the location and design of access points; and
- b. rules that require minimum on-site loading requirements.
  
- X. rules that require a minimum setback for forestry, shelterbelts and small woodlots from higher order roads and the designated rail corridor;
- Y. rules that require acoustic insulation for noise sensitive activities in identified areas;
- Z. rules that require minimum separation distance of vehicle crossings from level crossings;
- AA. rules that require a minimum setback for buildings and structures from the designated rail corridor; and
- AB. rules that manage access to temporary events via uncontrolled level crossings.

### **Policy 2.3.1.6**

Identify facilities that contribute significantly to the economic productivity and social wellbeing of the city, including the University of Otago and Otago Polytechnic campuses, hospitals, schools and Invermay, zone these as major facilities and use rules to:

- a. enable them to continue to operate efficiently and effectively, while minimising as far as practicable any adverse effects on surrounding areas; and
- b. protect them from activities that may lead to reverse sensitivity.

### **Policy 2.3.1.7**

Enable network utilities through:

- a. identifying National Grid and Critical Electricity Distribution Infrastructure on the Planning Map and protecting the safe and efficient establishment, operation, maintenance and upgrading of this infrastructure from inappropriate development;
- b. provisions that provide for network utilities to be established, operated, maintained and upgraded efficiently and effectively, while managing any adverse effects on the environment in accordance with other provisions in this Plan;
  
- X. provisions that require the consideration of the functional needs and operational needs of network utilities, in assessing the degree to which an option is practicable;
- Y. provisions that require the consideration of the benefits of network utilities, including but not limited to benefits to economic, social and cultural well-being, and public health and safety, in assessing the effects of a proposed activity; and
- c. provisions that manage earthworks near all network utilities and activities near to Radio New Zealand infrastructure.

### **Policy 2.3.1.8**

Recognise the economic and social importance of access to mineral resources through:

- a. using scheduled activities rules for quarries and sand mines that are reliant on these rules from the Dunedin City District Plan (2006) or, as appropriate, for quarries that might otherwise need to establish or rely on existing use rights, with appropriate controls including, but not limited to, maximum annual extraction limits based on existing operations; and
  
- X. rules that provide for mineral prospecting, mineral exploration and new or expanded mining activities in rural zones while managing adverse effects on the environment; and
- Y. policies and assessment rules that encourage the consideration of the functional and operational needs of

mining activities, including the need for mining to locate where resources are available, and that encourage consideration of the transport benefit of locating mining close to where the product of mining is required.

### **Policy 2.3.1.9**

Provide for landfills in the rural zones by considering as part of resource consent applications for new or expanded landfills:

- a. the need for landfills to locate where the environmental performance of the landfill is supported, and
- b. the transport benefit of locating landfills close to the sources of waste destined for the landfill.

### **Policy 2.3.1.10**

Identify areas of high class soils and promote the protection of these through a **high class soils mapped area**.

Identify areas which have all of the following criteria:

- a. slope at most rolling (15° or less);
- b. at most, moderate erosion susceptibility;
- c. water available;
- d. mean annual temperature greater than 8°C;
- e. not subject to severe winds;
- f. not very gravelly horizon at surface;
- g. not peaty or fragmental;
- h. drainage adequate or readily improved;
- i. pans, if present, capable of amelioration;
- j. 25mm or more readily available water to 60cm depth;
- k. 100mm or more total available water to 1m depth; and
- l. pH greater than 4.8 and less than 7.5.

### **Policy 2.3.1.X**

Enable the safe and efficient operation of bulk fuel storage facilities through rules that restrict activities that are sensitive to the risk from these facilities (bulk fuel storage facilities sensitive activities) from locating or expanding within a **hazard facility mapped area**.

## **Objective 2.3.2 Centres Hierarchy**

Dunedin has a hierarchy of vibrant centres anchored around one Central Business District Zone (CBD), which provides a focus for economic and employment growth, driven by:

- a. attraction of businesses to these areas based on the high level of amenity and density of activity in the area;
- b. opportunities for social interaction, exchange of ideas and business cooperation;
- c. public investment in public amenities and other infrastructure in the CBD; and
- d. opportunities for agglomeration benefits from the co-location of activities.

### **Policy 2.3.2.1**

Identify and protect the existing hierarchy of centres in Dunedin, which includes:

- a. the CBD, which comprises the commercial core of the city centred around George Street, the Octagon, Princes Street to the Exchange and connecting down to the Railway Station;
- b. principal centres, many of which were the former town centres of the various historic boroughs that make up Dunedin (South Dunedin, Mosgiel, Green Island, Port Chalmers). These centres provide a full range of commercial services to these communities and are important to their individual identity and for community-

- building;
- c. suburban centres, which provide a full range of commercial services to suburban catchments;
  - d. rural centres, which like principal centres serve as community centres but generally provide for a smaller range of activities based on smaller population catchments; and
  - e. neighbourhood centres, which are generally small clusters of shops that provide for a range of day-to-day needs for local areas as well as, in neighbourhood destination centres, to visitors, and in neighbourhood convenience centres, to passing motorists.

### **Policy 2.3.2.2**

Maintain or enhance the density and productivity of economic activity in the CBD and centres through rules that restrict retail and office activities outside these areas unless:

- a. they are unlikely to contribute to, or may detract from, the vibrancy of centres; or
- b. as provided for under Policy 18.2.1.3 or 15.2.1.5.

### **Policy 2.3.2.3**

Manage the mixed use areas around the edge of the CBD through zones and rules that provide for a compatible mix of activities that support rather than detract from the vibrancy and vitality of the CBD and centres (Warehouse Precinct Zone, Princes, Parry and Harrow Street Zone, Smith Street and York Place Zone and Harbourside Edge Zone), and that:

- a. for the Warehouse Precinct Zone, support the retention of scheduled heritage buildings and heritage precinct values; and
- b. for the Harbourside Edge Zone, allow for a transition toward a mixed use environment, with enhanced public connection to and along the coast, focused on residential, visitor accommodation, restaurant, and entertainment and exhibition and limited office activities alongside any existing port-related and industrial activities.

### **Policy 2.3.2.4**

Manage the other existing low-amenity mixed commercial/industrial areas around Andersons Bay Road, Hillside Road and the outer edges of the central city through zones that only provide for commercial activities that are likely to be incompatible with the amenity expectations of the CBD and centres, or require larger sites than are available in the CBD and centres, including:

- a. for the Trade Related Zone providing for trade related retail mixed with yard-based retail and industrial activities, and large supermarkets; and
- b. for the CBD Edge Commercial Zones and South Dunedin Large Format Zone, provide for large format and bulky goods retail along with yard-based retail and industrial activities.

### **Policy 2.3.2.X**

- a. Ensure any proposals to create new areas of commercial mixed use zoning do not detract from Objective 2.3.2 through an oversupply of commercial land or changes in agglomeration or co-location benefits in the CBD or existing centres.
- b. For proposals that create new suburban or neighbourhood centres, achieving (a) generally means:
  - i. the centre will primarily provide for commercial activities focused on serving the day-to-day needs of residents in the intended catchment, such as dairies, food and beverage retail, pharmacies, restaurants, registered health practitioners, beauty salons and community activities;
  - ii. the centre, including where focused around a single food and beverage anchor activity, will provide for a diversity of independently run activities of the above types; and
  - iii. the centre not providing for retail types with an intended city-wide customer catchment such as large

department stores and 'big box' general, bulky goods or trade related retail.

### **Objective 2.3.3 Facilities and Spaces that Support Social and Cultural Well-being**

Dunedin has a range of accessible recreational, sporting, social and cultural facilities and spaces, which provide for high levels of physical, social, and cultural well-being across the community.

#### **Policy 2.3.3.1**

Support community and leisure activity, sport and recreation, and essential community facilities in Dunedin through:

- a. rules that provide for community and leisure activity across all zones, subject to relevant performance standards;
- b. rules that enable restaurant and retail activities within sport and recreation facilities where they are designed and operated to be ancillary to that activity and will not conflict with Objective 2.3.2;
- c. rules that require subdivision and development to maintain or enhance public access to the coast and waterways and policies and assessment rules for subdivision that encourage connection and expansion of the recreational track networks where appropriate;
- d. applying a recreation zone to important recreational and open space areas, to enable the community activities that occur there and protect important reserve values;
- e. rules that provide for cemeteries and crematoriums in appropriate zones, subject to relevant performance standards;
- f. rules that enable temporary activities, subject to relevant performance standards; and

X. policies and assessment rules for subdivision in a **new development mapped area** that require consideration of the need for formal and/or informal space for recreation, sporting, social and cultural activities, and community facilities.

#### **Policy 2.3.3.2**

Identify important recreational and community facilities that are of a scale or type that is significantly different to activities provided for in the surrounding management zones, including the Forsyth Barr Stadium, Edgar Centre, Moana Pool, Dunedin Botanic Garden, Otago Museum and Taieri Aerodrome, and zone these as major facilities and use rules to:

- a. enable them to continue to operate efficiently and effectively, while managing any adverse effects on surrounding areas; and
- b. protect them from activities that may lead to reverse sensitivity.

## **2.4 Dunedin is a Memorable City with a Distinctive Built and Natural Character**

### **Objective 2.4.1 Form and Structure of the Environment**

The elements of the environment that contribute to residents' and visitors' aesthetic appreciation for and enjoyment of the city are protected and enhanced. These include:

- a. important green and other open spaces, including green breaks between coastal settlements;
- b. trees that make a significant contribution to the visual landscape and history of neighbourhoods;
- c. built heritage, including nationally recognised built heritage;
- d. important visual landscapes and vistas;
- e. the amenity and aesthetic coherence of different environments; and
- f. the compact and accessible form of Dunedin.

#### **Policy 2.4.1.1**

Identify and protect important green and open spaces, such as the Town Belt, through including them in the Recreation Zone, with rules that protect and enhance the values associated with these areas.

#### **Policy 2.4.1.2**

Identify in a schedule (see Appendix A1.3) trees that make a significant contribution to the visual and historical landscape and amenity of neighbourhoods and other places, and use rules to restrict removal or modification of these trees. Identify significant trees based on the following criteria:

- a. health and condition of the tree, including:
  - i. vigour and vitality; and
  - ii. age; and
- b. contribution to the amenity of an area, including:
  - i. occurrence of the species and historic and scientific values;
  - ii. function (usefulness), for example biodiversity supporting or fruit bearing;
  - iii. stature;
  - iv. visibility;
  - v. proximity of other trees;
  - vi. role in the setting;
  - vii. climatic influence; and
- c. any potential adverse effects, including:
  - i. risk to safety; and
  - ii. risk of potential damage to existing infrastructure, buildings or structures.

#### **Policy 2.4.1.3**

Identify in a schedule of character-contributing buildings (see Appendix A1.1), buildings that contribute to the heritage streetscape character of heritage precincts as a result of their design being broadly consistent with the predominant values and characteristics of the heritage precinct, and use rules to manage additions, alterations and demolition of these buildings. Design aspects that may be relevant in determining whether a building is 'character-contributing' include:

- a. building age;
- b. architectural style;
- c. materials;
- d. height;
- e. bulk and location; and
- f. quality.

#### **Policy 2.4.1.4**

Identify and protect key aspects of the visual relationship between the city and its natural environment or heritage buildings and landmarks through rules that:

- a. restrict the height of buildings along the harbourside to maintain views from the central city and Dunedin's inner hill suburbs across the upper harbour toward the Otago Peninsula; and
- b. manage the height of buildings in the CBD to maintain a primarily low-rise heritage cityscape.

#### **Policy 2.4.1.5**

Maintain or enhance the attractiveness of streetscapes, public open spaces and residential amenity by using rules that manage building bulk and location, site development and overall development density.

#### **Policy 2.4.1.6**

Across the whole city, avoid visual clutter from signage through rules that:

- a. restrict the size, number and design of signs ancillary to activities;
- b. restrict the size, number, location and design of temporary signs; and
- c. do not allow new commercial advertising (hoarding) sites.

#### **Policy 2.4.1.7**

Maintain a compact city with a high degree of legibility based on clear centres, edges and connections through objectives and policies that:

- a. manage the design and location of urban expansion.
- b. NA

#### **Policy 2.4.1.8**

Require subdivision to be designed to ensure any future land use or development is able to meet the performance standards in the zone, or where in a **structure plan mapped area**, reflects the requirements of the **structure plan mapped area** performance standards, unless:

- a. a resource consent is approved for a development that does not meet the performance standard and the subdivision is intended for and capable of providing for that approved development; or
- b. the resultant site is required for:
  - i. a Scheduled ASBV; or
  - ii. a QEII covenant; or
  - iii. a reserve; or
  - iv. an access; or
  - v. a utility; or
  - vi. a road.

### **Objective 2.4.2 Heritage**

Dunedin's heritage is central to its identity and is protected and celebrated as a core value of the city, through the heritage conservation and retention of important heritage items, and the maintenance and active use of built heritage.

#### **Policy 2.4.2.1**

- a. Identify in a schedule (Appendix A1.1) buildings and structures that have significant heritage values and use rules to:
  - i. manage additions and alterations to, or removal for relocation of these buildings, in a way that maintains important heritage values;
  - ii. restrict demolition of these buildings except in limited circumstances;
  - iii. support adaptive re-use, heritage conservation and restoration; and
  - iv. prioritise protection of heritage values over compliance with other performance standards where there is a conflict.
- b. Identify heritage buildings and structures based on the following criteria:
  - i. historic and social significance;
  - ii. spiritual/cultural significance, including significance to Māori;

- iii. design significance; and
- iv. technological/scientific significance.

### **Policy 2.4.2.2**

Identify in a schedule (Appendix A1.1) important heritage sites that have significant heritage values and use rules to manage development on these sites in a way that maintains important heritage values. Identify these sites based on the following factors:

- a. importance as part of the relationship between two or more heritage buildings and adding value to the overall heritage value of the group; or
- b. importance in providing a foreground to, and views of, key heritage buildings or groups of buildings; or
- c. significant heritage values in their own right in terms of the criteria outlined in Policy 2.4.2.1.

### **Policy 2.4.2.3**

Encourage adaptive re-use of heritage buildings through rules that:

- a. enable a wider range of activities to be undertaken in scheduled heritage buildings in the Warehouse Precinct and the Smith Street and York Place zones;
- b. exempt scheduled heritage buildings from minimum mobility parking standards;
- c. enable earthquake strengthening; and
- d. enable work required to comply with sections 112 and 115 of the Building Act 2004.

## **Objective 2.4.3 Vibrant CBD and Centres**

Dunedin's Central Business District is a strong, vibrant, attractive and enjoyable space that is renowned nationally and internationally for providing the highest level of pedestrian experience that attracts visitors, residents and businesses to Dunedin. It is supported by a hierarchy of attractive urban and rural centres.

### **Policy 2.4.3.1**

Identify key pedestrian routes and include these in a mapped **primary pedestrian street frontage mapped area** or **secondary pedestrian street frontage mapped area**. In these areas use rules to control development and land use at street level to ensure a public-private interface that supports a high level of pedestrian amenity and accessibility in centres.

### **Policy 2.4.3.2**

Protect the heritage streetscape character and high amenity of the CBD by identifying important heritage precincts and zoning these as heritage precincts and using rules to:

- a. manage the design and materials used in additions and alterations to character-contributing buildings and scheduled heritage buildings, and major additions and alterations to non character-contributing buildings within heritage precincts; and
- b. manage the design of new buildings to ensure they are sympathetic to the heritage streetscape character and contribute to the amenity of the CBD.

### **Policy 2.4.3.3**

Manage the number and design of signs to avoid visual clutter, protect pedestrian safety, and maintain the attractiveness and architectural features of buildings.

### **Policy 2.4.3.4**

Maintain or enhance the vibrancy and density of activity in the CBD and centres through rules that restrict the distribution of retail and office activity.

### **Policy 2.4.3.X**

Ensure that all areas proposed to be rezoned as CBD or a centre zone achieve high amenity values both within the zone and on zone boundaries, and provide a safe, attractive and enjoyable space for people through an appropriate rule framework. For new centres, this is preferably outlined in a structure plan, that identifies rules that:

- a. manage the form and location of buildings and car parking to ensure convenient and safe passage for pedestrians and people arriving by public transport and active modes, with particular attention to the principles of Crime Prevention Through Environmental Design (CPTED);
- b. ensure appropriate areas for outdoor seating and passive recreation;
- c. ensure good amenity within open spaces;
- d. manage amenity values on the boundaries with zones where there is an expectation of higher amenity, such as residential and schools zones; and
- e. manage development to ensure a high amenity, active, pedestrian street frontage, for example through appropriate application of **pedestrian street frontage mapped areas**.

## **Objective 2.4.4 Natural Landscapes and Natural Features**

Dunedin's outstanding and significant natural landscapes and natural features are protected.

### **Policy 2.4.4.1**

Identify and assess natural features and natural landscapes based on the following values:

- a. natural science factors;
- b. aesthetic values and memorability;
- c. expressiveness and legibility;
- d. transient values;
- e. whether values are shared and recognised;
- f. value to takata whenua; and
- g. historical associations.

### **Policy 2.4.4.2**

Classify and map natural features and natural landscapes as:

- a. Outstanding Natural Feature (ONF) and Outstanding Natural Landscape (ONL) overlay zones where features and landscapes have exceptional values; and
- b. Significant Natural Landscape (SNL) Overlay Zone where landscapes have values of high significance.

### **Policy 2.4.4.3**

Protect the values in identified Outstanding Natural Feature (ONF), Outstanding Natural Landscape (ONL) and Significant Natural Landscape (SNL) overlay zones by listing these values in Appendix A3 and using rules that:

- a. prohibit certain activities in ONFs;
- b. require resource consent for activities in ONFs, ONLs and SNLs, where they may be incompatible with the values of the area; and
- c. restrict the scale of development in ONFs, ONLs and SNLs and ensure the design of development is appropriate.

## **Objective 2.4.5 Natural Character of the Coastal Environment**

The natural character of the coastal environment is preserved or enhanced.

### **Policy 2.4.5.1**

Identify and assess areas that contribute to the natural character of the coastal environment based on the following criteria:

- a. natural elements, processes and patterns;
- b. biophysical, ecological, geological and geomorphological aspects;
- c. natural landforms such as headlands, peninsulas, cliffs, dunes, wetlands, estuaries, reefs, freshwater springs and surf breaks;
- d. the natural movement of water and sediment;
- e. the natural darkness of the night sky;
- f. places or areas that are wild or scenic;
- g. a range of natural character from pristine to modified; and
- h. experiential attributes, including the sounds and smell of the sea; and their context or setting.

### **Policy 2.4.5.2**

Classify and map coastal areas as:

- a. Outstanding Natural Coastal Character (ONCC) Overlay Zone where the natural character of these areas is exceptional;
- b. High Natural Coastal Character (HNCC) Overlay Zone where the natural character of these areas is of high significance; and
- c. Natural Coastal Character (NCC) Overlay Zone where natural character is of less than high significance but restoration or enhancement of natural character will be promoted.

### **Policy 2.4.5.3**

Protect and enhance the natural character values in Outstanding Natural Coastal Character (ONCC), High Natural Coastal Character (HNCC) and Natural Coastal Character (NCC) overlay zones through listing natural character values in Appendix A5 and using rules that:

- a. prohibit certain activities in ONCCs and HNCCs;
- b. require resource consent for activities in ONCCs, HNCCs and NCCs, where they may be incompatible with the values of the area;
- c. restrict the scale of development in ONCCs, HNCCs and NCCs and ensure the design of development is appropriate; and
- d. promote restoration of natural character.

## **Objective 2.4.6 Character of Rural Environment**

The character and visual amenity of Dunedin's rural environment is maintained or enhanced.

### **Policy 2.4.6.1**

Identify the important character and visual amenity values of different rural environments that should be maintained, and use these as part of the determination of rural zones that require different management approaches. Identify and list these values in Appendix A7 based on the following:

- a. landform and naturalness;
- b. open space characteristics;
- c. nature, scale and design of buildings;
- d. density of development;
- e. nature, scale and types of productive uses; and

- f. presence of indigenous vegetation and habitats for indigenous fauna.

#### **Policy 2.4.6.2**

Maintain the identified values within different rural environments through mapping rural zones and using:

- a. rules that limit the density of residential activities;
- b. rules that manage the bulk and location of buildings;
- c. policies and assessment rules that require or encourage the consideration of effects on rural character and visual amenity associated with land use and development activities; and
- d. rules that manage the pattern, scale and design of subdivision.

## **2.5 Dunedin is a City that Gives Effect to the Principles of the Treaty of Waitangi, Protects Kāi Tahu Values, Culture and Traditions, and Enables Kāi Tahu to Express Kaitiakitaka**

### **Objective 2.5.1 Kaitiakitaka**

Kāi Tahu can exercise kaitiakitaka over resources within their takiwā.

#### **Policy 2.5.1.1**

Give sufficient weight in decision making to Kāi Tahu values and associations through identifying these values, and issues of significance to Manawhenua in the Plan.

#### **Policy 2.5.1.2**

Provide for effective and meaningful engagement with Manawhenua at appropriate stages of the resource management process through:

- a. encouraging early consultation by applicants;
- b. requiring that the effects on values of significance to Manawhenua are considered for culturally sensitive activities and activities that may adversely affect wāhi tūpuna and mahika kai;
- c. recognising and providing for matauraka Māori and tikaka during the consent and hearing process; and
- d. advising rūnaka of applications for activities affecting sites and values of significance to them.

### **Objective 2.5.2 Occupation of Original Native Reserve Land**

Kāi Tahu can occupy, develop and use land in areas originally set aside for that purpose, in accordance with their culture and traditions and economic, social and cultural aspirations.

#### **Policy 2.5.2.1**

Enable occupation of original native reserve land, through rules that provide for papakāika in these locations.

#### **Policy 2.5.2.2**

Enable marae-related activities at existing marae, and any new marae established with the agreement of Manawhenua.

### **Objective 2.5.3 Wāhi Tūpuna**

Wāhi tūpuna (including wāhi tapu and wāhi taoka) and their relationship with Kāi Tahu is acknowledged and protected.

#### **Policy 2.5.3.1**

Identify wāhi tūpuna and protect them from identified threats through rules that manage:

- a. buildings, structures, forestry, network utility structures, roading, mining and earthworks on the upper slopes

- and peaks of hills and mauka;
- b. earthworks in areas where there is high likelihood of archaeological remains; and
- c. natural hazard mitigation activities and subdivision.

### **Objective 2.5.4 Mahika Kai**

Mahika kai is protected from the adverse effects of land use and development so that it is maintained or enhanced in order to support customary use.

#### **Policy 2.5.4.1**

Identify wāhi tūpuna that have mahika kai areas and manage activities that have the potential to adversely affect those values, or adversely affect access to them, including:

- a. buildings, structures, earthworks, natural hazard mitigation activities, and development activities adjacent to waterways and the coastal environment; and
- b. vegetation clearance.

## **2.6 Dunedin has Quality Housing Choices and Adequate Urban Land Supply**

### **Objective 2.6.1 Housing Choices**

There is a range of housing choices in Dunedin that provides for the community's needs and supports social well-being.

#### **Policy 2.6.1.1**

Provide for housing development necessary to meet the future housing needs of Dunedin, through zones and rules that provide for an appropriate mix of development opportunities, including: infill development, redevelopment, and greenfield development; and that support Objective 2.2.4. Identify housing needs based on population projections and analysis of housing types required.

#### **Policy 2.6.1.2**

Encourage more residential housing suitable for our ageing population and growing number of one and two person households, through:

- a. zoning of areas that provide for medium density housing to enable transition to lower maintenance housing in existing neighbourhoods ('ageing in place');
- b. rules that enable family flats and ancillary residential units, other than in General Residential 2 and Inner City Residential zones; and

X. rules that enable two residential units in the form of a duplex in the General Residential 1 and Township and Settlement zones except within a **no DCC reticulated wastewater mapped area**.

#### **Policy 2.6.1.4**

Provide for lifestyle blocks or hobby farming through the application of rural residential zoning as follows:

- a. the proposed zoning meets the criteria outlined in Policy 2.6.1.5; and
- b. considering, based on the predicted market availability of rural residential zoned land for the next 5 years, whether the amount of land proposed to be rezoned rural residential appropriately balances providing some land for lifestyle or hobby farming with the overall strategic spatial planning objectives outlined in objectives 2.2.4, 2.7.1 and 2.7.2; and

X. in the first instance, only applying rural residential zoning to land in separate tenure as follows:

- i. where the site or sites are part of a cluster of sites at an average site size of greater than 2ha and less than 4ha, Rural Residential 1 zoning is appropriate; and
- ii. where the cluster comprises sites each under 15ha with an average site size of between 4ha and 10ha, Rural Residential 2 zoning is generally appropriate, but Rural Residential 1 zoning may be appropriate if it can achieve a similar outcome in terms of the criteria in Policy 2.6.1.5; and

Y. only after those options in X.i and X.ii are assessed as inappropriate, unfeasible or unavailable, considering the rezoning of other rural sites of low productive capacity to rural residential zoning.

### **Policy 2.6.1.5**

Use the following criteria to assess the appropriateness of rural residential zoning when considering any proposal for rezoning under Policy 2.6.1.4:

- a. the land is unlikely to be suitable for future residential zoning in line with Policy 2.6.2.1;
- b. rezoning is unlikely to lead to pressure for unfunded public infrastructure upgrades including road sealing, unless an agreement between the infrastructure provider and the developer on the method, timing, and funding of any necessary public infrastructure provision is in place; and
- c. considering the rules and potential level of development provided for, the proposed rural residential zoning is the most appropriate to achieve the objectives of the Plan, in particular:
  - i. Objective 2.4.6;
  - ii. Objective 2.3.1. Achieving this includes generally avoiding areas that are highly productive land or may create conflict with rural water resource requirements;
  - iii. Objective 2.4.4. Achieving this includes:
    - X. avoiding the application of new rural residential zoning in the ONF Overlay Zone; and
    - Y. in the ONL Overlay Zone, avoiding the application of Rural Residential 1 zoning; and avoiding the application of Rural Residential 2 zoning, unless rules (such as rules that restrict the scale and location of development activities) can ensure that Objective 2.4.4 will be achieved; and
    - Z. avoiding the application of new rural residential zoning in the SNL Overlay Zone, unless rules (such as rules that restrict the scale and location of development activities) can ensure that Objective 2.4.4 will be achieved;
  - iv. Objective 2.4.5. Achieving this includes:
    - X. avoiding the application of new rural residential zoning in the ONCC and HNCC overlay zones; and
    - Y. avoiding the application of new rural residential zoning in the NCC Overlay Zone, unless rules (such as rules that restrict the scale and location of development activities) can ensure that Objective 2.4.5 will be achieved;
  - v. Objective 2.2.3. Achieving this includes avoiding the application of new rural residential zoning in ASBV and UBMA, unless rules (such as rules that restrict the scale and location of development activities) can ensure that Objective 2.2.3 will be achieved;
  - vi. Objective 10.2.2;
  - vii. Objective 10.2.4;
  - X. Objective 14.2.1;
  - Y. Objective 2.4.1; and
  - viii. N/A
  - ix. Objective 11.2.1.

### **Policy 2.6.1.X**

Encourage the provision of new social housing through rules that provide a more enabling activity status for social housing that exceeds the density standard than for other types of standard residential activity in the General Residential 1 and Township and Settlement zones, except in a **no DCC reticulated wastewater mapped area**.

### **Objective 2.6.2 Adequate Urban Land Supply**

Dunedin provides sufficient, feasible, development capacity (as intensification opportunities and zoned urban land) in the most appropriate locations to at least meet demand over the medium term (up to 10 years), while sustainably managing urban expansion in a way that maintains a compact city with resilient townships as outlined in Objective 2.2.4 and policies 2.2.4.1 to 2.2.4.3.

#### **Policy 2.6.2.1**

Identify areas for new residential zoning based on the following criteria:

- a. rezoning is necessary to ensure provision of at least sufficient housing capacity to meet expected demand over the short and medium term; and
- b. rezoning is unlikely to lead to pressure for unfunded public infrastructure upgrades, unless either an agreement between the infrastructure provider and the developer on the method, timing, and funding of any necessary public infrastructure provision is in place, or a Residential Transition overlay zone is applied and a future agreement is considered feasible; and
- c. the area is suitable for residential development by having all or a majority of the following characteristics:
  - i. a topography that is not too steep;
  - ii. being close to the main urban area or townships that have a shortage of capacity;
  - iii. currently serviced, or likely to be easily serviced, by frequent public transport services;
  - iv. close to centres; and
  - v. close to other existing community facilities such as schools, public green space and recreational facilities, health services, and libraries or other community centres;
- d. considering the zoning, rules, and potential level of development provided for, the zoning is the most appropriate in terms of the objectives of the Plan, in particular:
  - i. the character and visual amenity of Dunedin's rural environment is maintained or enhanced (Objective 2.4.6);
  - ii. land, facilities and infrastructure that are important for economic productivity and social well-being, which include industrial areas, major facilities, key transportation routes, network utilities and productive rural land:
    1. are protected from less productive competing uses or incompatible uses, including activities that may give rise to reverse sensitivity; and
    2. in the case of facilities and infrastructure, are able to be operated, maintained, upgraded and, where appropriate, developed efficiently and effectively (Objective 2.3.1).

Achieving this includes generally avoiding areas that are highly productive land or may create conflict with rural water resource requirements;

- iii. Dunedin's significant indigenous biodiversity is protected or enhanced, and restored; and other indigenous biodiversity is maintained or enhanced, and restored; with all indigenous biodiversity having improved connections and improved resilience (Objective 2.2.3). Achieving this includes generally avoiding the application of new residential zoning in ASBV and UBMA;
- iv. Dunedin's outstanding and significant natural landscapes and natural features are protected (Objective 2.4.4). Achieving this includes generally avoiding the application of new residential zoning in ONF, ONL and SNL overlay zones;

- v. the natural character of the coastal environment is, preserved or enhanced (Objective 2.4.5). Achieving this includes generally avoiding the application of new residential zoning in ONCC, HNCC and NCC overlay zones;
- vi. subdivision and development activities maintain and enhance access to coastlines, water bodies and other parts of the natural environment, including for the purposes of gathering of food and mahika kai (Objective 10.2.4);
- vii. the elements of the environment that contribute to residents' and visitors' aesthetic appreciation for and enjoyment of the city are protected or enhanced. These include:
  - 1. important green and other open spaces, including green breaks between coastal settlements;
  - 2. trees that make a significant contribution to the visual landscape and history of neighbourhoods;
  - 3. built heritage, including nationally recognised built heritage;
  - 4. important visual landscapes and vistas;
  - 5. the amenity and aesthetic coherence of different environments; and
  - 6. the compact and accessible form of Dunedin (Objective 2.4.1);
- viii. the potential risk from natural hazards, and from the potential effects of climate change on natural hazards, is no more than low, in the short to long term (Objective 11.2.1);
- ix. public infrastructure networks operate efficiently and effectively and have the least possible long term cost burden on the public (Objective 2.7.1);
- x. the multi-modal land transport network, including connections between land air and sea transport networks, operates safely and efficiently (Objective 2.7.2); and
- xi. Dunedin stays a compact and accessible city with resilient townships based on sustainably managed urban expansion. Urban expansion only occurs if required and in the most appropriate form and locations (Objective 2.2.4).

### **Policy 2.6.2.2**

Manage subdivision and land use activities in transition overlay zones to ensure that these activities do not restrict the future use of the land for urban development.

### **Policy 2.6.2.3**

Identify areas for new medium density zoning based on the following criteria:

- a. alignment with Policy 2.6.2.1; and
- b. rezoning is unlikely to lead to pressure for unfunded public infrastructure upgrades, unless either an agreement between the infrastructure provider and the developer on the method, timing, and funding of any necessary public infrastructure provision is in place, or a **wastewater constraint mapped area** is applied; and
- c. considering the zoning, rules, and potential level of development provided for, the zoning is the most appropriate in terms of the objectives of the Plan, in particular:
  - i. there is a range of housing choices in Dunedin that provides for the community's needs and supports social well-being (Objective 2.6.1);
  - ii. Dunedin reduces its environmental costs and reliance on non-renewable energy sources as much as practicable, including energy consumption, water use, and the quality and quantity of stormwater discharge, and is well equipped to manage and adapt to changing or disrupted energy supply by having reduced reliance on private motor cars for transportation (Objective 2.2.2), including through one or more of the following:
    - 1. being currently serviced, or likely to be easily serviced, by frequent public transport services; and

2. being close (good walking access) to existing centres, community facilities such as schools, public green spaces recreational facilities, health services, and libraries or other community centres; and
- iii. the elements of the environment that contribute to residents' and visitors' aesthetic appreciation for and enjoyment of the city are protected or enhanced. These include:
  1. important green and other open spaces, including green breaks between coastal settlements;
  2. trees that make a significant contribution to the visual landscape and history of neighbourhoods;
  3. built heritage, including nationally recognised built heritage;
  4. important visual landscapes and vistas;
  5. the amenity and aesthetic coherence of different environments;
  6. the compact and accessible form of Dunedin (Objective 2.4.1); and
- iv. the potential risk from natural hazards, and from the potential effects of climate change on natural hazards, is no more than low, in the short to long term (Objective 11.2.1); and
- d. the area is suitable for medium density housing by having all or a majority of the following characteristics:
  - i. lower quality housing stock more likely to be able to be redeveloped;
  - ii. locations with a topography that is not too steep;
  - iii. locations that will receive reasonable levels of sunlight; and
  - iv. market desirability, particularly for one and two person households.

#### **Policy 2.6.2.Y**

Ensure sufficient, plan-enabled business land development capacity is provided by regularly monitoring capacity and demand for the various types of commercial and industrial land necessary to meet the medium-term demand projections for commercial and industrial activities, and initiating or supporting a plan change (rezoning proposal) to add new commercial and mixed use zoning where necessary.

#### **Policy 2.6.2.5**

Encourage any proposal for the creation or expansion of a centre to be considered through a plan change process unless it represents a minor extension to a centre in accordance with Policy 15.2.1.5

#### **Policy 2.6.2.X**

Apply new commercial and mixed use zoning only where the change to the plan is appropriate to achieve the objectives of the plan, particularly because it achieves:

- a. Objective 2.3.2 and is consistent with Policy 2.3.2.X;
- b. Objective 2.4.3 and is consistent with Policy 2.4.3.X;
- c. Objective 2.3.1 and does not conflict with ensuring there is sufficient industrial land to meet projected demand of the intended catchment and provide choice, and by not increasing the potential for reverse sensitivity effects;
- d. Objective 2.7.1;
- e. Objective 2.7.2 by maintaining the safety and efficiency of the transport network for all road users and ensuring accessibility by a range of modes, including walking, cycling and public transport; and
- f. Objective 2.2.4 by supporting the maintenance of a compact and accessible city.

#### **Policy 2.6.2.Z**

Encourage the use of structure plans for large urban growth areas where mixed-use zoning, or provisions for

commercial or community activities, are necessary to achieve the strategic objectives of this Plan.

### **Policy 2.6.2.AA**

Ensure that any plan change that proposes a new residential zoning area (in accordance with Policy 2.6.2.1) or a new rural residential zoning area (in accordance with policies 2.6.1.4 to 2.6.1.5) best achieves the objectives of this Plan by application of any necessary overlay zones or mapped areas (including **structure plan mapped areas** and/or **new development mapped areas**) and related provisions as part of the plan change, including where necessary to:

- a. manage risks or effects (for example relating to natural hazards or network utilities);
- b. manage constraints within or beyond the area (for example relating to reverse sensitivity); or
- c. protect values (for example relating to coastal character, landscape, or biodiversity).

## **2.7 Dunedin has Affordable and Efficient Public Infrastructure**

### **Objective 2.7.1 Efficient Public Infrastructure**

Public infrastructure networks operate efficiently and effectively and have the least possible long term cost burden on the public.

#### **Policy 2.7.1.1**

Manage the location of new housing to ensure efficient use and provision of public infrastructure through:

- a. rules that restrict development density in line with current or planned public infrastructure capacity;
- b. consideration of public infrastructure capacity as part of zoning and rules that enable intensification of housing;
- c. consideration of public infrastructure capacity as part of the identification of transition overlay zones, assessment of changes to zoning, or assessment of any greenfield subdivision proposals;
- d. assessment rules that require consideration of whether any discretionary or non-complying activities would consume public infrastructure capacity provided for another activity intended in the zone and prevent it from occurring; and
- e. rules that control the area of impermeable surfaces in urban areas to enable stormwater to be absorbed on-site, and reduce the quantity of stormwater run-off.

#### **Policy 2.7.1.2**

Ensure areas of new urban development provide for public infrastructure networks that represent the least possible long term cost to the public through:

- a. rules for **structure plan mapped areas** that specify requirements for public infrastructure networks, where necessary;
- X. policies and assessment rules that require stormwater management in the **new development mapped area**;
- Y. policies and assessment rules that require wastewater detention for specified sites in the **new development mapped area** to allow urban expansion while ensuring any impacts on the wastewater public infrastructure network are no more than minor;
- b. NA
- c. consideration of, as part of a proposal to rezone new urban land, the long-term costs to the DCC of any new infrastructure, including up-front capital costs to the DCC; the extent of debt required to be taken on by the DCC including the costs of the debt; and the on-going maintenance and renewals costs of new public infrastructure;
- Z. policies and assessment rules for **new development mapped areas** that encourage efficient use of land as a way to maximise the cost effectiveness of public infrastructure delivery; and

- d. assessment rules that require consideration of additional public infrastructure capacity to provide for future urban development on adjoining or nearby sites.

### **Policy 2.7.1.3**

Avoid future pressure for unplanned expansion of public infrastructure through rules that restrict the density of activity outside of areas reticulated for wastewater, water supply, or stormwater to ensure these are able to be self-sufficient where public infrastructure is not provided.

### **Objective 2.7.2 Efficient Transportation**

The multi-modal land transport network, including connections between land , air and sea transport networks operates safely and efficiently.

#### **Policy 2.7.2.1**

Support the safe and efficient operation of the multi-modal land transport network through rules that:

- a. provide for transportation activities;
  - b. manage the location, scale and design of high trip generators;
  - c. manage the location, number and design of vehicle accesses;
  - d. require on-site vehicle loading where vehicle loading on-street could compromise the safety and efficiency of the transport network;
  - e. require on-site mobility car parking where necessary to enable adequate accessibility and to avoid or adequately mitigate adverse effects on the safety and efficiency of the transport network;
  - f. manage the design of parking, loading and access areas; and
  - g. require minimum separation distance of vehicle crossings from level crossings.
- X. require a minimum setback for forestry, shelterbelts and small woodlots from higher order roads and the designated rail corridor;
- Y. require clear sightlines where roads, driveways and vehicle tracks cross an operational rail network via a level crossing;
- Z. require a minimum setback for buildings and structures from the designated rail corridor; and
- AA. manage access to temporary events via uncontrolled level crossings.

#### **Policy 2.7.2.2**

Encourage cycling by:

- a. considering the need for and design of on-site cycle parking as part of consent applications where accessibility is a relevant consideration; and
- b. considering the safety of cyclists entering and exiting sites where effects on the safe and efficient operation of the transport network is a relevant consideration.
- c. NA.
- d. NA.

## **3. Public Amenities**

### **3.1 Introduction**

Public amenities are structures and facilities established for the convenience, enjoyment, or amenity of the public, such as seating, barbeques, play equipment, and toilets. Public amenities also encompass other features that contribute to our experience or understanding of the environment or events in the area, such as artworks, monuments, memorials, and interpretation panels. They provide for community needs and contribute positively to streetscape amenity and public places, enhancing the use and attractiveness of these areas.

Public amenities have the potential to adversely affect amenity if they are of an inappropriate scale, and in some cases may be slightly controversial by their very nature.

In response to these issues, this Plan imposes limits on scale or requires consent in order to enable public amenities to occur while managing effects on the amenity of surrounding sites and other users of public places.

## 3.2 Objectives and Policies

<b>Objective 3.2.1</b>	
Public amenities contribute positively to community well-being and streetscape amenity, while:	
a. avoiding or, if avoidance is not practicable, adequately mitigating any adverse effects on the amenity of surrounding sites; and	
b. meeting the relevant objectives and policies for any overlay zone, scheduled site, or mapped area in which they are located.	
Policy 3.2.1.1	Provide for public amenities throughout the city.
Policy 3.2.1.2	Require public amenities to be designed and located to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the amenity of surrounding sites and streetscape amenity.
Policy 3.2.1.3	Only allow public toilets and public display boards where adverse effects on surrounding sites will be avoided or, if avoidance is not practicable, adequately mitigated.
Policy 3.2.1.4	Only allow public artworks - large scale if: <ul style="list-style-type: none"> <li>a. it has positive effects on streetscape amenity; and</li> <li>b. adverse effects on surrounding sites will be avoided or, if avoidance is not practicable, adequately mitigated.</li> </ul>

## Rules

### Rule 3.3 Activity Status

#### 3.3.1 Activity Status Introduction

1. The activity status table in Rule 3.3.2 shows the activity status of public amenities activities across all zones, provided any performance standards shown in the far right column are met. The activities in the public amenities category are listed in the nested table in Section 1.3.
2. Performance standards apply to permitted, and restricted discretionary activities.
3. If a permitted activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
4. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.
5. Any site development activities associated with an activity provided for in the activity status table in Rule 3.3.2 are subject to the provisions of the relevant management zone section.
6. Any earthworks associated with an activity provided for in the activity status table in Rule 3.3.2 are subject to the provisions in Section 8A.
7. Any construction associated with an activity provided for in the activity status table in Rule 3.3.2 is subject to the provisions in Section 4.
8. Any network utilities associated with an activity provided for in the activity status table in Rule 3.3.2 is subject to the provisions in Section 5.
9. Any modifications to a scheduled heritage building or scheduled heritage structure is managed through the rules for additions and alterations in the relevant management or major facility zone.

#### Legend

Acronym	Meaning
+	Additional provisions apply (assessment criteria for activities in the overlay need to be viewed)
P	Permitted Activity
RD	Restricted Discretionary Activity
Res	Residential Zones

### 3.3.2 Activity Status Table - Public Amenities Activities

1.	Performance standards that apply to all public amenities activities				<ul style="list-style-type: none"> <li>a. Public amenities and signs located on or above the footpath</li> <li>b. Height</li> <li>c. Light spill</li> <li>d. Setback from scheduled tree</li> <li>e. Noise</li> <li>f. Natural hazards performance standards</li> <li>X. Setback from National Grid</li> <li>Y. Setback from Critical Electricity Distribution Infrastructure</li> </ul>
Activity	Activity status			Performance standards	
	a. Res	b. All other zones	c. In a heritage precinct or on a scheduled heritage site		
2.	Public artworks - small scale painted on network utility structures or bus shelters	P	P	P	
3.	All other public artworks - small scale	RD	P	RD+ (in residential heritage precincts)	
4.	Public artworks - large scale	RD	RD	RD+	
5.	Public display boards	RD	RD	RD+	i. Maximum dimensions
6.	Public toilets	RD	RD	RD+	i. Maximum height
7.	All other activities in the public amenities category	P	P	P	<ul style="list-style-type: none"> <li>i. Maximum height</li> <li>ii. NA</li> <li>iii. Maximum dimensions</li> </ul>

### **Note 3.3.2A - Other requirements outside of the District Plan**

1. Permission must be obtained for any public amenities on Dunedin City Council (DCC) land including reserves and roads, please contact 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.
2. Permission must be obtained from the NZ Transport Agency for the erection of any public amenities within the state highway road reserve.
3. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan or a resource or building consent has been granted.
4. The Heritage New Zealand Pouhere Taonga Accidental Discovery Protocol (Appendix A8) manages archaeological sites that may be discovered as a result of earthworks. The protocol applies to any area, not just scheduled archaeological sites.
5. Scheduled archaeological sites are identified on the Planning Map. Archaeological sites may also be found outside these areas, but are more likely to be found within the archaeological alert layer.

## **Rule 3.4 Notification**

1. Activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 3.5 Performance Standards**

### **3.5.1 Public Amenities and Signs Located on or Above the Footpath**

Public amenities must comply with Rule 6.7.2.

### **3.5.2 Height**

#### **3.5.2.1 Height in relation to boundary**

- a. Public amenities that meet the definition of a building must comply with the performance standard for height in relation to boundary of the zone in which they are located.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### **3.5.2.2 Maximum height**

- a. The maximum height of public amenities must not exceed the following above ground level:

<b>Public amenity</b>		<b>Maximum height</b>
i.	Public play equipment	9m
ii.	Freestanding flagpoles	9m
iii.	Public display boards	2m
iv.	Monuments and memorials, and pou whenua	5m
v.	All other public amenities	3m

- b. Activities that contravene this performance standard are restricted discretionary activities.

### **3.5.3 Light Spill**

Public amenities must comply with Rule 9.3.5.

### **3.5.4 Maximum Dimensions**

1. For flat public display boards, the maximum area of all display faces is 3m<sup>2</sup>, with no single display face exceeding 1.5m<sup>2</sup> in area.
2. The maximum diameter for bollards is 1m.
3. For place name signs, the maximum area of the display face is 2m<sup>2</sup>.
4. Activities that contravene this performance standard are restricted discretionary activities.

### **3.5.5 Setback from National Grid**

Public amenities must comply with Rule 5.6.1.1.

### **3.5.6 Setback from Scheduled Tree**

Public amenities must comply with Rule 7.5.2.

### **3.5.X Setback from Critical Electricity Distribution Infrastructure**

Public amenities must comply with Rule 5.6.X.1.

### **3.5.7 Noise**

Public amenities must comply with Rule 9.3.6.

### **3.5.8 Natural Hazards Performance Standards**

#### **3.5.8.1 Hazard exclusion areas (swale mapped area)**

Public amenities must comply with Rule 11.3.1.1.

## Rule 3.6 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### 3.6.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 3.6.2 and 3.6.3:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

### 3.6.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards, site specific factors including topography, make meeting the standard impracticable.</li> <li>c. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>d. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> </ol>

### 3.6.3 Assessment of public amenities performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Public amenities located on or above the footpath	a. Effects on the safety and efficiency of the transport network	See Rule 6.10.
		b. Effects on health and safety	See Rule 9.5.
2.	<ul style="list-style-type: none"> <li>• Height in relation to boundary</li> <li>• Maximum dimensions</li> <li>• Maximum height</li> </ul>	a. Effects on amenity	<i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>Objective 3.2.1.</li> <li>Public amenities are designed and located to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the amenity of the surrounding sites and streetscape amenity (Policy 3.2.1.2).</li> </ol>
3.	Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6.

### 3.6.X Assessment of restricted discretionary performance standard contraventions in a mapped area

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area:</b> <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (buildings, structures and city-wide activities)</li> </ul>	a. Effects on health and safety	See Rule 5.7.
		b. Effects on efficient and effective operation of network utilities	

## **Rule 3.7 Assessment of Restricted Discretionary Activities**

### **3.7.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 3.7.2 and 3.7.3:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**;
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard;
    - iii. the performance standard contravention will be assessed as indicated in Section 3.6; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**;
    - ii. the performance standard contravention will be assessed; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**;
    - ii. the performance standard contravention will be assessed as indicated in Section 3.8; and
    - iii. the assessment guidance in this section will also be considered.

### 3.7.2 Assessment of all public amenities activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Public artworks - large scale</li> <li>• Public artworks - small scale in residential zones (except public artworks - small scale printed on network utility structures or bus shelters)</li> </ul>	a. Effects on amenity, and use and enjoyment of public spaces	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 3.2.1.</li> <li>ii. Public artworks have positive effects for streetscape amenity (Policy 3.2.1.4.a).</li> <li>iii. Adverse effects of public artworks on surrounding sites are avoided or, if avoidance is not practicable, adequately mitigated (Policy 3.2.1.4.b).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iv. In assessing the effects on amenity, Council will consider the appropriateness of the location and design, and in particular consider the following matters:               <ol style="list-style-type: none"> <li>1. Artworks should not overly dominate a public space.</li> <li>2. Artworks must use colours that are appropriate to the location and purpose of the artwork, with consideration of the context of the artwork.</li> <li>3. The artworks must be made of robust materials and constructed to meet environmental conditions so they will maintain their physical integrity for the life of the artwork.</li> <li>4. The artwork must be designed and located to not impede pedestrian movement or create concealment places, or significantly obstruct clear sightlines though public spaces.</li> <li>5. Artworks must be culturally and socially sensitive so as to be inclusive of the wider community, and not present material that would be offensive or inappropriate.</li> <li>6. Artworks must be located to avoid creating clutter in public spaces.</li> <li>7. Illuminated artworks must not distract drivers or create nuisance effects for surrounding sites or other activities on the same site by having appropriate direction, movement, and intensity of light.</li> <li>8. Artworks must not create sound that would be a nuisance to users of a public space, surrounding sites, or other activities on the same site.</li> <li>9. Kinetic artworks must not distract drivers or be a nuisance to users of a public space, to surrounding sites, or other activities on the same site, as a result of movement or sound.</li> </ol> </li> </ul>
2. Public display boards	a. Effects on amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 3.2.1.</li> <li>ii. Adverse effects of public display boards on surrounding sites are avoided or, if avoidance is not practicable, adequately mitigated (Policy 3.2.1.3).</li> </ul>

### 3.7.2 Assessment of all public amenities activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
3. Public toilets	a. Effects on amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 3.2.1.</li> <li>ii. Adverse effects of public toilets on surrounding sites are avoided or, if avoidance is not practicable, adequately mitigated (Policy 3.2.1.3).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Toilets are set back from side and rear boundaries with residential properties by an adequate distance to avoid effects on surrounding sites.</li> </ul>

### 3.7.3 Assessment of restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In the <b>ONF, ONL or SNL overlay zones:</b> <ul style="list-style-type: none"> <li>• Public artworks - large scale</li> </ul>	a. Effects on landscape values	See Rule 10.6.
2. In the <b>ONCC, HNCC or NCC overlay zones:</b> <ul style="list-style-type: none"> <li>• Public artworks - large scale</li> </ul>	a. Effects on natural character of the coast	See Rule 10.6.
3. In a <b>heritage precinct</b> or on a <b>scheduled heritage site:</b> <ul style="list-style-type: none"> <li>• Public artworks - large scale</li> <li>• Public display boards</li> <li>• Public toilets</li> <li>• Public artworks - small scale in a residential heritage precinct (except public artworks - small scale painted on network utility structures or bus shelters)</li> </ul>	a. Effects on heritage streetscape character	See Rule 13.6.
4. In a <b>wāhi tūpuna mapped area</b> where the activity is identified as a threat in Appendix A4: <ul style="list-style-type: none"> <li>• Public artworks - large scale</li> <li>• Public display boards</li> <li>• Public toilets</li> </ul>	a. Effects on cultural values of Manawhenua	See Rule 14.4.

## Rule 3.8 Assessment of Discretionary Activities

### 3.8.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 3.8.2 provides guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.

3.8.2 Assessment of discretionary performance standards	
Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by 25% or less</li> <li>• Noise - where the noise limit is exceeded by less than 5dB LAeq (15 min)</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ol>

## Rule 3.9 Assessment of Non-complying Activities

### 3.9.1 Introduction

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 3.9.2 provides guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.

3.9.2 Assessment of non-complying performance standards	
Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ol>
2. Setback from National Grid	<i>Relevant guidance from other sections:</i> <ol style="list-style-type: none"> <li>a. See Section 5.10 for guidance on the assessment of resource consents in relation to Objective 5.2.X and effects related to the operation, maintenance, upgrading and development of the National Grid.</li> </ol>
3. Hazard exclusion areas ( <b>swale mapped area</b> ) (Rule 11.3.1.1)	<i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>a. See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to risk from natural hazards.</li> </ol>

## **4. Temporary Activities**

### **4.1 Introduction**

Temporary events, and uses such as concerts, festivals, parades, and market days, occur on a regular basis throughout the city, and primarily in public places. The Plan needs to provide for such activities and recognise the contribution that they make to the social and cultural well-being of communities and to the vitality of the city.

In addition to community focused events, military training exercises, filming, construction, temporary helicopter landings, mobile trading, temporary signage, and temporary disaster management accommodation are also provided for within the Plan with a clear set of parameters to ensure any adverse effects arising from the activities are avoided, remedied or mitigated. Temporary activities incorporate both the activities and structures to facilitate the activities.

Temporary activities can also generate adverse effects on surrounding environments, particularly in the form of noise, increased traffic movements and parking requirements. The temporary nature of such activities generally minimises these adverse effects and consequently many events of short duration are tolerated by parts of the community, while other members enjoy what the event has to offer.

## 4.2 Objectives and Policies

<b>Objective 4.2.1</b>	
Temporary activities are enabled while:	
<ul style="list-style-type: none"> <li>a. minimising, as far as practicable, any adverse effects on the amenity and character of the zone; and</li> <li>b. ensuring any adverse effects on people's health and safety are minimised as far as practicable.</li> </ul>	
Policy 4.2.1.1	Require temporary activities to be designed and operated to minimise, as far as practicable, adverse effects on: <ul style="list-style-type: none"> <li>a. the amenity of surrounding properties;</li> <li>b. people's health and safety; and</li> <li>X. the safety and efficiency of the transport network.</li> </ul>
Policy 4.2.1.2	Require temporary signs to be located and designed to minimise, as far as practicable, adverse effects on: <ul style="list-style-type: none"> <li>a. streetscape amenity; and</li> <li>b. the safety and efficiency of the transport network.</li> </ul>
Policy 4.2.1.3	Only allow temporary events - large scale, and filming - large scale where they are located and operated to ensure adverse effects on amenity and the transport network will be avoided or, if avoidance is not practicable, adequately mitigated.

## Rules

### Rule 4.3 Activity Status

#### 4.3.1 Activity status introduction

1. The activity status table in Rule 4.3.2 shows the activity status of temporary activities across all zones, provided any performance standards shown in the far right column are met. The activities in the temporary activities category are listed in the nested table in Section 1.3.
2. Performance standards apply to permitted and restricted discretionary activities.
3. If a permitted activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
4. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.
5. Any site development activities associated with an activity provided for in the activity status table in Rule 4.3.2 are subject to the provisions of the relevant management zone section.
6. Any earthworks associated with an activity provided for in the activity status table in Rule 4.3.2 are subject to the provisions in Section 8A.

#### Legend

Acronym	Meaning
P	Permitted Activity
RD	Restricted Discretionary Activity

#### 4.3.2 Activity Status Table - Temporary Activities

1.	Performance standards that apply to all temporary activities		<ol style="list-style-type: none"> <li>a. Development standards</li> <li>b. Light spill</li> </ol>
	Activity	Activity status	Performance standards
2.	Construction	P	<ol style="list-style-type: none"> <li>a. Noise</li> </ol>
3.	Filming - small scale	P	<ol style="list-style-type: none"> <li>a. Maximum duration, frequency, and site restoration</li> <li>b. Hours of operation</li> <li>c. Noise</li> </ol>
4.	Filming - large scale	RD	<ol style="list-style-type: none"> <li>a. Maximum duration, frequency, and site restoration</li> <li>b. Hours of operation</li> <li>c. Noise</li> </ol>
5.	Helicopter movements	P	<ol style="list-style-type: none"> <li>a. Maximum duration, frequency, and site restoration</li> <li>b. Noise</li> </ol>

6.	Military exercises	P	a. Notice to DCC (military exercises) b. Setbacks (military exercises) c. Noise
7.	Mobile trading of readily consumable foods in a public place	P	a. Maximum duration, frequency, and site restoration
8.	Temporary disaster management accommodation	P	
9.	Temporary events - small scale	P	a. Maximum duration, frequency, and site restoration b. Hours of operation c. Noise X. Access
10.	Temporary events - large scale	RD	a. Maximum duration, frequency, and site restoration b. Hours of operation c. Noise X. Access
11.	Temporary signs	P	a. Number, location and design of temporary signs

#### **Note 4.3.2A - Other requirements outside of the District Plan**

1. Permission from the Dunedin City Council (DCC) must be obtained for all temporary activities on DCC land including reserves and roads. Please contact the DCC's Transportation Group or Parks and Recreation Department on 03 477 4000 and ensure all appropriate permissions are received including for:
  - a. temporary road closures; and
  - b. use of reserves or open space.
2. If food will be sold at an event, it is the responsibility of the event organiser to ensure all food operators have approval from the DCC's Environmental Health Department. Please contact Environmental Health Department on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.
3. Activities that involve the sale or provision of alcohol may require a licence. Please contact the DCC's Alcohol Licensing Department on 03 477 4000 for more information.
4. Building consent may be required for some temporary structures. These must be obtained from DCC. Please contact Council's Building Services Department on 03 477 4000 for more information.
5. A licence is required under the Mobile Trading and Temporary Stall Bylaw 2014 to carry out mobile trading. Permission from the DCC must be obtained for all mobile trading activities on DCC land including reserves and roads. Please contact the DCC's Environmental Health Department on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.
6. In addition to the noise limits specified in this section, noise emissions from temporary events will be subject to complaint based Excessive Noise provisions (sections 326-328) of the Resource Management Act 1991. The DCC's Environmental Health Department or their contractors will be responsible for responding to any noise complaints received by the DCC in relation to an event. To ensure there are no surprises on the day of the event it is recommended you liaise with the Environmental Health Department prior to the event, provide contact details for key personnel and agree on a protocol for responding to noise complaints should they arise. For more information, please contact the DCC on 03 477 4000 or visit the DCC website at [www.dunedin.govt.nz](http://www.dunedin.govt.nz).
7. Permission must be obtained from the NZ Transport Agency for all temporary activities on state highway road reserve.

#### **Note 4.3.2B - Other relevant District Plan provisions**

1. Mobile trading, other than as provided for in Rule 4.3.2.7 is managed as if it were not operating from mobile premises (i.e. the activity status and land use performance standards of the zone in which it is occurring apply).

#### **Rule 4.4 Notification**

- X. With respect to resource consent applications for the following activities, KiwiRail (or relevant authority) will be considered an affected person in accordance with section 95E of the RMA where its written approval is not provided:
1. contravention of the access performance standard (Rule 4.5.X).
1. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## Rule 4.5 Performance Standards

### 4.5.1 Development Standards

1. Any temporary building or structure, or earthworks or site development activity associated with temporary activities must meet the maximum height, height in relation to boundaries, setbacks, hazard exclusion areas, vegetation clearance standards, and earthworks performance standards of the zone in which they are located, except:
  - a. temporary signs (see Rule 4.5.7);
  - b. setbacks from coast and water bodies, provided the building or structure is set back from the coast or water bodies a minimum of 5m;
  - c. any temporary building or structure associated with construction are exempt from meeting performance standards for maximum height, height in relation to boundary, and boundary setbacks provided they are erected for no more than 90 days; and
  - X. any structure associated with mobile trading or military exercises is exempt from meeting the performance standard for setback from designated rail corridor.
2. Any temporary building or structure associated with temporary activities may be located on parking areas required to meet the performance standard for minimum mobility car parking for up to 90 days.
3. Activities that contravene this performance standard are restricted discretionary activities.

### 4.5.2 Hours of Operation

1. Temporary events and filming must not exceed the following hours of operation:

Activity		i. Hours of operation within residential zones or within 100m of a residential zone	ii. Hours of operation within all other zones
a.	Temporary events that do not involve amplified noise	All days: 8.00am - 9.00pm	Sunday - Thursday: 6.00am - 10.00pm Friday and Saturday: 6.00am - 11.00pm (or 11.30pm in the CBD Zone)
b.	Temporary events that involve the operation of amplified sound equipment	Sunday - Thursday: 10.00am - 7.00pm Friday and Saturday: 10.00am - 9.00pm	Sunday - Thursday: 10.00am - 9.00pm Friday and Saturday: 10.00am - 10.00pm (or 11.30pm in the CBD Zone)
c.	Filming	All days: 8.00am - 7.00pm	All days: 7.00am - 9.00pm (or 12.00am midnight in an industrial zone)

- d. Except in all zones the hours of operation for New Years Eve celebrations, including those that involve the operation of amplified sound equipment, is extended until 1.00am the following morning.
2. Activities that contravene this performance standard are restricted discretionary activities.

### 4.5.3 Maximum Duration, Frequency, and Site Restoration

#### 4.5.3.1 Temporary events and filming

- a. Temporary events must not exceed the following maximum durations:

Location		Maximum duration of event
i.	The Oval (Town Belt (The Oval) Town of Dunedin SO 14526)	10 consecutive days
ii.	The Octagon (Sec 1 Reserve No 2 SO 12279 Town of Dunedin) and Museum Reserve (363 and 381 Great King Street)	5 consecutive days
iii.	All other locations	3 consecutive days

- iv. Except, site preparation, which must not occur more than two days before an event; and site clean-up and restoration, which must be completed within two days of the completion of the event.
- b. No more than five temporary events may occur on a site within any calendar year, except temporary events in public places, churches, and community halls.
- c. Filming and temporary events must return sites to their original condition after filming or the temporary event is finished.
- d. Activities that contravene this performance standard are restricted discretionary activities.

#### 4.5.3.2 Mobile trading

- a. Mobile trading must not operate in any location for a cumulative period exceeding four hours in any 24 hour period, except:
- if the activity would otherwise be permitted in the zone;
  - if the mobile trading is associated with a temporary event; or
  - if the mobile trading is associated with an event occurring as part of a sport and recreation activity or an event occurring in the Recreation Zone or at major facilities, in which case the maximum duration is for a period starting two hours before the start of the event until two hours after the completion of the event.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 4.5.3.3 Helicopter movements

- a. Helicopter movements must not exceed 20 flight movements (a take-off or landing) per calendar month per site.
- b. Helicopter movements for emergency services or that support farming activity are exempt from this standard.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 4.5.3.3A - Copyright information**

- The limits on helicopter movements in Rule 4.5.3.3 are from NZS6807:1994 Noise Management and Land Use Planning for Helicopter Landing Areas.

#### 4.5.4 Noise

##### 4.5.4.1 Construction

- a. Construction must not exceed the following limits and will be measured and assessed in accordance with NZS6803:1999 Acoustics Construction Noise:

- i. **Construction noise received in residential zones and dwellings in rural and rural residential zones, and buildings housing any noise sensitive activities in any other zone**

Time of week	Time period	Duration of work					
		1. Typical duration (dBA)		2. Short-term duration (dBA)		3. Long-term duration (dBA)	
		LAeq	Lmax	LAeq	Lmax	LAeq	Lmax
Weekdays	1. 6.30am - 7.30am	60	75	65	75	55	75
	2. 7.30am - 6.00pm	75	90	80	95	70	85
	3. 6.00pm - 8.00pm	70	85	75	90	65	80
	4. 8.00pm - 6.30am	45	75	45	75	45	75
Saturdays	5. 7.30am - 6.00pm	75	90	80	95	70	85
	6. 6.00pm - 7.30am	45	75	45	75	45	75
Sundays and Public Holidays	7. 7.30am - 6.00pm	55	85	55	85	55	85
	8. 6.00pm - 7.30am	45	75	45	75	45	75

- ii. **Construction noise received in industrial, Port and commercial and mixed use zones for all days of the year**

Time period	Duration of work		
	1. Typical duration	2. Short-term duration	3. Long-term duration
	LAeq (dBA)	LAeq (dBA)	LAeq (dBA)
1. 7.30am - 6.00pm	75	80	70
2. 6.00pm - 7.30am	80	85	75

- b. Vibration from construction must not exceed a maximum particle velocity measured on any foundation of an adjacent building on another site, or the same site if different ownership, of 25mm/second for commercial buildings or 10mm/second for buildings housing noise sensitive activities.
- c. Activities that contravene this performance standard by less than 5dB LAeq (15 min) are discretionary

activities.

- d. Activities that contravene this performance standard by 5dB LAeq (15 min) or more are non-complying activities.
- e. For the purposes of Rule 4.5.4.1 "short-term duration" means construction work at any one location for up to 14 calendar days per project; "typical duration" means construction work at any one location for more than 14 calendar days but less than 20 weeks per project; and "long-term duration" means construction work at any one location with a duration exceeding 20 weeks per project.

**Note 4.5.4.1A - Copyright information**

- 1. The provisions in Rule 4.5.4.1 are from NSZ 6803:1999 Acoustics Construction Noise by permission of Standards New Zealand under licence 001161.

**4.5.4.2 Temporary events**

- a. Temporary events must comply with the performance standard for noise of the zone in which they are located (see Rule 9.3.6).
- b. Temporary events in the CBD Zone must comply with the following noise limits:

Time period		Noise limit
i.	Sunday - Thursday: 10.00am - 10.00pm	1. 60dB LAeq (15 min) 2. 75dB LAmx
ii.	Friday and Saturday: 10.00am - 11:30pm	1. 75dB LAeq (15 min) 2. 85dB LAmx

- c. Pyrotechnics and firing of a ceremonial cannon are exempt from the performance standards for noise.
- d. Noise will be measured in accordance with NZS 6801:2008 Acoustics - Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics - Environmental Noise.
- e. Activities that contravene this performance standard by less than 5dB LAeq (15 min) are discretionary activities.
- f. Activities that contravene this performance standard by 5dB LAeq (15 min) or more are non-complying activities.

**4.5.4.3 Filming (small and large scale)**

Filming must comply with the performance standard for noise of the zone in which they are located (see Rule 9.3.6).

**4.5.4.4 Military exercises**

- a. Noise from military exercises must not exceed the following limits:
  - i. For mobile noise sources, the noise limits for construction set out in Rule 4.5.4.1 apply.
  - ii. For fixed (stationary) noise sources, the following limits as measured at the notional boundary of a building housing any noise sensitive activities apply:

Time (Monday - Sunday)		Noise level at the notional boundary of a building housing any noise sensitive activities
1.	7.00am - 7.00pm	55dB LAeq (15 min)
2.	7.00pm - 10.00pm	50dB LAeq (15 min)
3.	10.00pm - 7.00am	45dB LAeq (15 min) and 75dB LAFmax

- b. Noise will be measured in accordance with NZS 6801:2008 Acoustics - Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics - Environmental Noise.
- c. The live firing of weapons and explosive events and the firing of blank ammunition are exempt from this performance standard (see Rule 4.5.6).
- d. Military exercises that contravene this performance standard are a controlled activity.

#### 4.5.4.5 Helicopter movements

- a. Helicopter movements must not result in a maximum sound level (LAFMax) exceeding 70dB at night time (10.00pm - 7.00am) or 90dB during daytime (7.00am - 10.00pm) within any site in a residential zone or within the notional boundary to any noise sensitive activity in rural zones, rural residential zones or the Ashburn Clinic Zone.
- b. Helicopter noise will be measured and assessed in accordance with NZS6807:1994 Noise Management & Land Use Planning For Helicopter Landing Areas.
- c. Helicopter movements for emergency services are exempt from this standard.
- d. Activities that contravene this performance standard by less than 5dB LAeq (15 min) are discretionary activities.
- e. Activities that contravene this performance standard by 5dB LAeq (15 min) or more are non-complying activities.

#### 4.5.5 Notice to DCC (Military Exercises)

1. A noise management plan must be provided to the DCC's Environmental Health Department at least 48 hours prior to the commencement of a military exercise involving weapons firing and/or the use of explosives, detailing:
  - a. whether the activity involves live firing and/or the use of explosives, or the firing of blank ammunition;
  - b. the location of the activity and the boundaries within which the activity will take place;
  - c. the timing and duration of the activity; and
  - d. distances to buildings housing noise sensitive activities, the potential effect on these activities, and where there is a potential effect, how property occupants will be notified of the military exercise (e.g. leaflet drop, letters, notice in newspaper).
2. Military exercises that contravene this performance standard are a controlled activity.

#### 4.5.6 Setbacks (Military Exercises)

1. Military exercises involving weapons firing and/or the use of explosives must be set back from the notional boundary of any building housing noise sensitive activities as follows:

Activity type		i. Time (Monday - Sunday)	ii. Minimum setback distance
a.	Live firing of weapons or explosives	7.00am - 7.00pm	1500m
b.	Live firing of weapons or explosives	7.00pm - 7.00am	4500m
c.	Firing of blank ammunition	7.00am - 7.00pm	750m
d.	Firing of blank ammunition	7.00pm - 7.00am	2250m

- e. Except where:
  - i. peak sound pressure level is below 120dBC between the hours of 7.00 am - 7.00pm; and

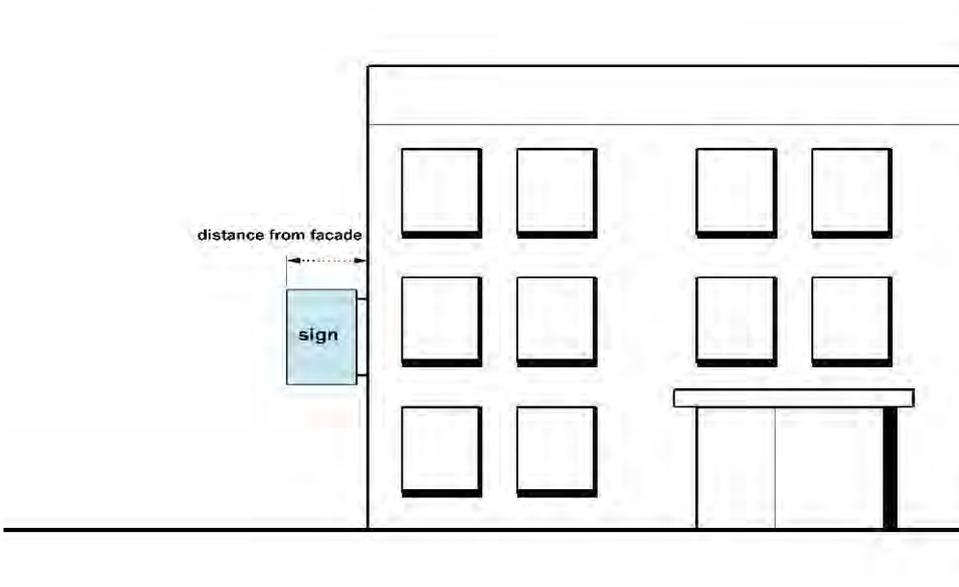

- ii. peak sound pressure level is below 90dBC between the hours of 7.00pm - 7.00am.
- f. Activities that contravene this performance standard are controlled activities.

#### **4.5.7 Number, Location and Design of Temporary Signs**

##### 4.5.7.1 General

- a. Temporary signs visible from a public place must meet all of the following performance standards;
- b. Temporary signs must not be illuminated (internally or externally), digital, or projected, except in:
  - i. CBD, centres, PPH and SSYP zones outside **pedestrian street frontage mapped areas** and heritage precincts;
  - ii. CBD Edge Commercial, South Dunedin Large Format and Trade Related zones;
  - iii. industrial zones; and
  - iv. the Dunedin Hospital, Dunedin International Airport, Edgar Centre, Mercy Hospital, Moana Pool and Stadium major facility zones.
- c. Temporary signs attached to buildings must:
  - i. not be attached to a roof;
  - ii. not exceed the height of the lowest point of a roof, except where mounted against a parapet or gable end, where they must not exceed the height of the parapet or gable end;
  - iii. if attached at an angle to the façade (including on a deck or verandah), must not protrude from the façade more than 1m, except for the following zones where signs must not protrude from the façade more than 1.5m (see Figure 4.5.7.1A):
    - 1. CBD, centres, PPH and SSYP zones outside **pedestrian street frontage mapped areas** and heritage precincts;
    - 2. CBD Edge Commercial, South Dunedin Large Format and Trade Related zones;
    - 3. industrial zones, Dunedin International Airport, Port, Stadium and Campus major facility zones.
- d. Temporary signs must also comply with:
  - i. Rule 6.7.2, where located on or above public footpaths; and
  - ii. Rule 6.7.3, where visible from the road.
- e. Signs that contravene the performance standard for number, location and design of temporary signs are restricted discretionary activities.

Figure 4.5.7.1A: Signs attached at an angle to the façade

#### 4.5.7.2 Election signs

- a. Signs must not be erected more than two months prior to election or polling day and must be removed by midnight prior to election or polling day.
- b. Signs on a site must not exceed a maximum number of:
  - i. one per candidate or group of candidates for local elections and referenda; and
  - ii. one per registered political party, independent or non-party affiliated candidate, for general elections.
- c. Signs must not exceed a maximum area per display face of 3m<sup>2</sup> (see Figure 4.5.7.2A) and a combined maximum area of 6m<sup>2</sup> for all display faces.
- d. Signs where attached to a fence, retaining wall, trailer or vehicle in all zones must not exceed 2m height above ground level.
- e. Freestanding signs (see Figure 4.5.7.2A) must not exceed 4m maximum height above ground level, except:

Freestanding signs		
Maximum height above ground level		Location
i.	2m	1. Residential zones
		2. Rural and rural residential zones within an ONF, ONL, SNL, ONCC, HNCC or NCC overlay zone
ii.	3m	1. Moana Pool Zone
iii.	6m	1. CBD, centres, PPH and SSYP zones outside <b>pedestrian street frontage mapped areas</b> and heritage precincts
		2. Dunedin Hospital Zone
		3. Otago Museum Zone

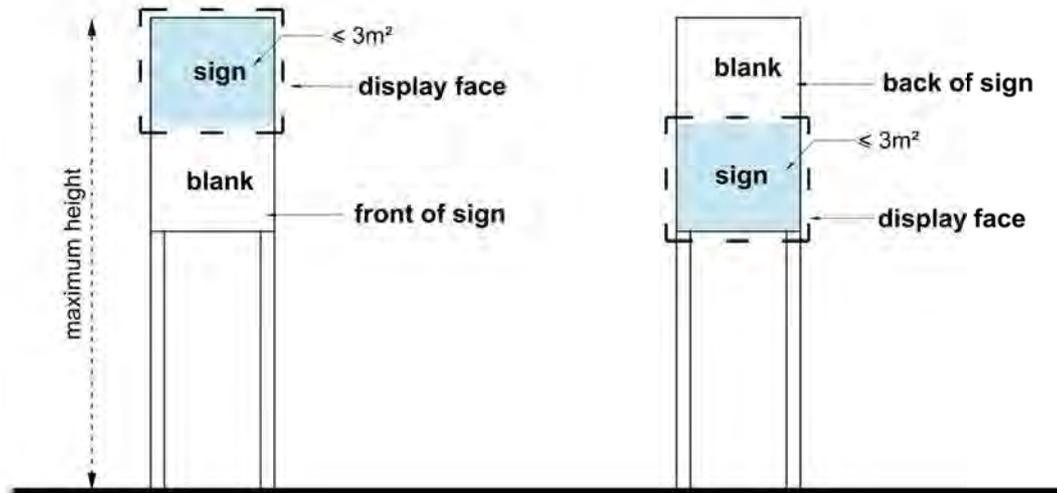

Freestanding signs		
Maximum height above ground level		Location
iv.	8m	1. Trade Related Zone
		2. Industrial zones
		3. Dunedin International Airport Zone
		4. Port Zone
		5. Stadium Zone
		X. South Dunedin Large Format Zone

f. Signs attached to buildings must not exceed 4m maximum height above ground level, except:

Signs attached to buildings		
Maximum height above ground level		Location
i.	2m	1. Rural and rural residential zones within an ONF, ONL, SNL, ONCC, HNCC or NCC overlay zone
ii.	6m	1. Signs ancillary to a dairy in residential zones
iii.	8m	1. CBD, centres, PPH and SSYP zones outside <b>pedestrian street frontage mapped areas</b> and heritage precincts
		2. CBD Edge Commercial Zone
		3. Trade Related Zone
		4. Industrial zones
		5. Dunedin Hospital Zone
		6. Dunedin International Airport Zone
		7. Edgar Centre Zone
		8. Otago Museum Zone
		9. Port Zone
		X. South Dunedin Large Format Zone

g. For the purpose of Rule 4.5.7.2, 'local elections' refers to elections for City or Regional Council, District Health Board or community board; and 'general elections' refers to elections for the New Zealand Government.

Figure 4.5.7.2A: Election signs

#### 4.5.7.3 Event promotion signs

- a. Signs must not be erected more than 21 days before an event and must be removed within 3 days of the completion of the event.
- b. Signs must be designed such that any names of sponsoring businesses are no more than 50% of the size of the font used for advertising the event.
- c. Signs must not exceed:
  - i. a maximum height of 2m above ground level;
  - ii. a maximum area of:
    1.  $3\text{m}^2$  on DCC or NZ Transport Agency land within the road reserve; or
    2.  $1\text{m}^2$  on all other sites; and
  - iii. for signs outside the road reserve:
    1. only one sign is allowed to be displayed on a site at a time; and
    2. the total display time of all signs must not exceed 30 days in any calendar year.
- d. Event promotion signs on lawfully established public display boards are exempt from these standards.

#### 4.5.7.4 Real estate signs

- a. Signs must not exceed:
  - i. a maximum of one sign per site;
  - ii. on sites with a street frontage greater than 500m, a maximum of one sign for every 500m of frontage; and
  - iii. in the CBD, real estate signs in windows and below verandas (including in windows), a maximum of one sign per real estate agent/company.
- b. Open home signs and auction signs are exempt from the maximum number of signs.

- c. The maximum display time for real estate signs is:
  - i. open home signs must only be displayed for the duration of the open home;
  - ii. auction signs must be displayed for no more than 14 days before the auction and 3 days after the auction; or
  - iii. all real estate signs must be removed within three days after the sale of the property.
- d. The maximum size and location of signs is:
  - i. auction signs must not exceed 2m<sup>2</sup> per display face;
  - ii. all other signs must not exceed a maximum area of 1m<sup>2</sup> per display face and a maximum of two display faces.
- e. All real estate signs must be located on, or adjacent to, the site to which they relate.

#### 4.5.7.5 Construction signs

- 1. Construction signs:
  - a. must not exceed a total area for all signs of 4m<sup>2</sup> per site;
  - b. must not be displayed for more than 10 days before commencement of construction and must be removed within three days after the completion of construction; and
  - c. must be located on the site where the construction activity is occurring.

#### **Note 4.5.7A - Other requirements outside of the District Plan**

- 1. Permission must be obtained from the Dunedin City Council (DCC) for the erection of temporary signs (except real estate signs) on DCC land, including reserves and roads, please contact 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.
- 2. Permission must be obtained from the NZ Transport Agency for erection of temporary signs within state highway road reserve.
- 3. Approved election sign sites where the DCC give approval for the erection of signs are published on the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz).
- 4. Under clause 13.3.2 of the Traffic and Parking Bylaw 2010, written approval from DCC is required to park a vehicle or trailer displaying advertising or sales material on any road or part of a road, or any piece of land owned or controlled by the Council.

#### **4.5.8 Light Spill**

Temporary activities must comply with Rule 9.3.5.

#### 4.5.X Access

1. Temporary events that generate more than 100 vehicle movements per day must not rely solely on an uncontrolled level crossing for access.
2. Activities that contravene this performance standard are restricted discretionary activities.

### Rule 4.6 Assessment of Controlled Activities (Performance standard contraventions)

#### 4.6.1 Introduction

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 4.6.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.

4.6.2 Assessment of controlled performance standard contraventions		
Performance standard	Matters of control	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Noise (military exercises)</li> <li>• Notice to DCC (military exercises)</li> <li>• Setbacks (military exercises)</li> </ul>	<ol style="list-style-type: none"> <li>a. Effects on amenity of surrounding sites</li> <li>b. Effects on health and safety</li> </ol>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>i. Objective 4.2.1.</li> <li>ii. Temporary activities are designed and operated in a way that minimises as far as practicable, adverse effects on:               <ol style="list-style-type: none"> <li>1. the amenity of surrounding properties; and</li> <li>2. people's health and safety (Policy 4.2.1.1.a and b).</li> </ol> </li> </ol> <p><i>Conditions that may be imposed to ensure these outcomes include, but are not limited to:</i></p> <ol style="list-style-type: none"> <li>iii. Higher noise levels may be restricted to short durations during daytime hours, or hours agreed with affected neighbours.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>iv. The assessment of an application for military exercises that contravenes the noise (military exercises) performance standard Rule 4.5.4.4 will consider the findings of a noise management plan (see Special Information Requirements - Rule 4.11.1).</li> </ol>

## Rule 4.7 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### 4.7.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 4.7.2:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

4.7.2 Assessment of all performance standard contraventions		
Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. All performance standard contraventions		<p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>i. The degree of non-compliance with the performance standard is minor.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>ii. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> <li>iii. In assessing performance standard contraventions, consideration will be given to all relevant assessment guidance in the underlying zone.</li> </ol>
2. Development standards	See relevant zone for assessment of restricted discretionary activities (performance standard contraventions).	

#### 4.7.2 Assessment of all performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
3. Hours of operation	<p>a. Effects on amenity of surrounding sites</p> <p>b. Effects on health and safety</p>	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 4.2.1</p> <p>ii. Temporary activities are designed and operated in a way that minimises, as far as practicable, effects on:</p> <ol style="list-style-type: none"> <li>1. the amenity of surrounding properties; and</li> <li>2. people's health and safety (Policy 4.2.1.1.a &amp; b).</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>iii. The extension of hours will not result in unreasonable disturbance from vehicle headlights, vehicle movements, or noise.</p>
4. Maximum duration, frequency, and site restoration	<p>a. Effects on amenity of surrounding sites</p> <p>b. Effects on health and safety</p>	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 4.2.1</p> <p>ii. Temporary activities are designed and operated in a way that minimises, as far as practicable, effects on:</p> <ol style="list-style-type: none"> <li>1. the amenity of surrounding properties; and</li> <li>2. people's health and safety (Policy 4.2.1.1.a &amp; b).</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>iii. The extension of duration or frequency will not result in unreasonable disturbance from extended periods of noise or vehicle movements.</p> <p><i>General assessment guidance:</i></p> <p>iv. Council will assess the noise effects of helicopter movements in accordance with the standards set out in NZS6807:1994 <i>Noise Management and Land Use Planning for Helicopter Landing Areas</i>.</p>

#### 4.7.2 Assessment of all performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
5.	Number, location and design of temporary signs	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 4.2.1</li> <li>ii. Temporary signs are located and designed to minimise as far as practicable adverse effects on streetscape amenity (Policy 4.2.1.2.a).</li> </ul>
		b. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 4.2.1</li> <li>ii. Temporary signs are located and designed to minimise as far as practicable adverse effects on the safety and efficiency of the transport network (Policy 4.2.1.2.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The location of the sign will not obscure sightlines, pedestrians, and cyclists or vehicle access.</li> <li>iv. The relevant road controlling authority has provided approval for the proposed design and location of the sign.</li> </ul>
X.	Access	a. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 4.2.1</li> <li>ii. Temporary activities are designed and operated to minimise, as far as practicable, adverse effects on the safety and efficiency of the transport network (Policy 4.2.1.1.c).</li> </ul>

## **Rule 4.8 Assessment of Restricted Discretionary Activities**

### **4.8.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 4.8.2:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**;
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard;
    - iii. the performance standard contravention will be assessed as indicated in Section 4.7; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**;
    - ii. the performance standard contravention will be assessed as indicated in Section 4.9; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**;
    - ii. the performance standard contravention will be assessed as indicated in Section 4.10; and
    - iii. the assessment guidance in this section will also be considered.

#### 4.8.2 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Filming - large scale</li> <li>• Temporary events - large scale</li> </ul>	a. Effects on amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 4.2.1.</li> <li>ii. Temporary events - large scale, and filming - large scale are located and operated to ensure adverse effects on amenity will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 4.2.1.3).</li> </ul>
	b. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 4.2.1.</li> <li>ii. Temporary events - large scale, and filming - large scale are located and operated to ensure adverse effects on the transport network will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 4.2.1.3).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. A traffic management plan has been approved by the DCC (or NZ Transport Agency where relevant).</li> </ul>

## Rule 4.9 Assessment of Discretionary Activities

### 4.9.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 4.9.2 provides guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.

4.9.2 Assessment of all discretionary performance standard contraventions	
Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Noise - where the noise limit is exceeded by less than 5dB LAeq (15 min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ol>

## Rule 4.10 Assessment of Non-complying Activities

### 4.10.1 Introduction

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 4.10.2 provides guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.

4.10.2 Assessment of non-complying performance standard contraventions	
Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Noise - limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Light spill - where the limit is exceeded by greater than 25%</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and the effects related to public health and safety.</li> </ol>

## **Rule 4.11 Special Information Requirements**

### **4.11.1 Noise management plan**

All resource consent applications for military exercises which do not comply with Rule 4.5.6 must be accompanied by a noise management plan prepared by a suitably qualified expert. The noise management plan must contain:

1. a description of the site and activity including times, dates, nature and location of the proposed training activities;
2. a map showing potentially affected noise sensitive activities and predicted LCpeak sound pressure levels for each of these receiver locations and a programme for notification and communication with the occupiers of those sites prior to the activities commencing, including updates during the event;
3. methods to minimise the noise disturbance at sites housing noise sensitive activities; and
4. the method for following up any complaints received during or after the event, and any proposed debriefing meetings with the DCC.

## 5. Network Utilities

### 5.1 Introduction

Activities generally managed as network utilities in this Plan include: electricity generators and other energy generators; structures associated with the investigation of energy resources; National Grid electricity transmission infrastructure and other energy distribution infrastructure; water, waste water and stormwater infrastructure; telecommunication and radiocommunication infrastructure; navigational aids; meteorological facilities; and river flow recording facilities.

The exception to this is that “building utilities”, which are structures attached to buildings that form part of the utility systems of that building (for example, roof-top solar panels and satellite dishes), are treated as part of the building or structure to which they are attached. This means that building utilities are managed by the rules for buildings and structures in the management zone sections, and are not subject to the network utilities provisions.

Certain types of infrastructure that are included in the definition of “network utility operation” in the Resource Management Act 1991 (section 166) are not managed as network utilities in this Plan. These include: irrigation infrastructure, which is managed via provisions for structures in the management zones sections; roads, which are managed as transportation activities in Section 6; railways, which are managed via designations; the airport and air traffic control services, which are managed via the Dunedin International Airport Zone section; and the Taieri Aerodrome, which operates as a secondary airport in the event of emergency, and is managed via the Taieri Aerodrome Zone section.

Network utilities support the efficient functioning of the city and contribute directly to the social, economic and cultural well-being, and the health and safety, of people living in Dunedin, including during civil defence operations.

The benefits of renewable electricity generation have been recognised in the National Policy Statement for Renewable Electricity Generation 2011 (NPSREG). The benefits of renewable electricity generation include: maintaining or increasing generation capacity while avoiding, reducing or displacing greenhouse gas emissions; benefits to the security of electricity supply from diversification of the type and/or location of generation; using renewable natural resources rather than finite resources; the reversibility of the adverse effects on the environment of some renewable electricity generation technologies; and avoiding reliance on imported fuels for the purposes of generating electricity.

The National Grid, which is owned and operated by Transpower New Zealand Limited (Transpower), is nationally significant infrastructure. Providing for its ongoing operation, maintenance, upgrade and development will assist in maintaining and enhancing the security of energy supply to Dunedin, the Otago Region and the country. The importance of this infrastructure has been recognised in the development of the National Policy Statement on Electricity Transmission 2008 (NPSET) and the Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009 (NESETA).

The NPSET requires decision-makers to recognise and provide for the national, regional and local benefits of sustainable, secure and efficient electricity transmission. These benefits include: security of electricity supply; efficient transfer of energy through a reduction of transmission losses; facilitation of the use and development of new electricity generation, including renewable generation; and enhanced supply of electricity through the removal of points of congestion.

The District Plan must give effect to the provisions of the NPSREG and the NPSET.

An effective National Grid is also supported by an efficient and effective electricity distribution network, particularly resilient Critical Electricity Distribution Infrastructure.

While network utilities have social, economic, cultural and environmental benefits, they can also have adverse effects on landscape, natural character, biodiversity, Manawhenua and heritage values, on public health and safety, and on

the amenity and character of residential and other areas.

Land use activities, development and subdivision can also have adverse effects on the efficient operation of network utilities. In relation to the National Grid, the NPSET requires that councils manage activities to avoid reverse sensitivity effects on the electricity transmission network and to ensure that operation, maintenance, upgrading, and development of the electricity transmission network is not compromised. In relation to Critical Electricity Distribution Infrastructure, the Regional Policy Statement for Otago requires identification of this infrastructure and management of activities adjacent to it to address potential reverse sensitivity issues. In doing so, this Plan will provide for the functional needs and operational needs of this infrastructure.

In response to these issues, this Plan puts in place provisions that enable the establishment, operation, maintenance and upgrading of network utilities while managing the adverse environmental effects that can occur as a result of these activities. The degree of restriction is determined by the sensitivity of the environment in which the particular structures are located and by the functional needs and operational needs of the activity.

In addition, the Plan restricts sensitive activities and other incompatible development in the vicinity of both National Grid infrastructure, and Radio New Zealand's facilities on the Otago Peninsula, in order to manage potential adverse effects on these utilities.

The controls in the Plan are intended to facilitate efficient and effective infrastructure networks in Dunedin, and provide for the increased development of electricity from renewable resources.

## 5.2 Objectives and Policies

Objective 5.2.1	
<p>The benefits of network utility activities, including renewable energy generation activities, are recognised by enabling them to establish, operate and upgrade efficiently and effectively, while:</p> <p>X. achieving the amenity and character objectives for the zone, to the degree practicable; and</p> <p>Y. achieving the relevant objectives and policies for any applicable overlay zone, scheduled site, or mapped area, for those areas.</p>	
Policy 5.2.1.1	Encourage the use and development of renewable energy generation.
Policy 5.2.1.2	<p>Provide for network utility activities throughout the city where:</p> <p>X. this will have positive effects on economic, social and cultural well-being, public health and safety, or resilience of communities; and</p> <p>Y. recognising their functional needs and operational needs, effects can be adequately managed in line with policies 5.2.1.3, 5.2.1.4, 5.2.1.5, 5.2.1.6, 5.2.X.4, 5.2.X.5, 5.2.2.X and the objectives and policies of any relevant overlay zone, scheduled site or mapped area.</p>
Policy 5.2.1.3	Require underground or internal network utilities and network utility structures - small scale to be designed and located to enable the provision of network utilities while avoiding or, where avoidance is not practicable, adequately mitigating adverse effects on the amenity and character of the zone.
Policy 5.2.1.4	Require substations, underground or internal network utilities and network utility structures - small scale to be located, designed, and operated to ensure any risk to health and safety is avoided or minimised as far as practicable.
Policy 5.2.1.5	<p>Only allow network utility structures - large scale (in all zones), network utility poles and masts - small scale (in residential and recreation zones), and substations (other than in industrial zones) where the activity is designed and located to avoid or, if avoidance is not practicable, adequately mitigate:</p> <p>a. adverse effects on visual amenity and the character of the zone in which the activity is located; and</p> <p>b. adverse effects on the amenity of any surrounding residential activities.</p>
Policy 5.2.1.6	Only allow new network utilities or additions to existing network utilities in transition overlay zones where network utilities are located to support a logical and efficient future pattern of development.

Objective 5.2.2	
<p>The operational efficiency and effectiveness of network utilities is not compromised by development locating near these activities.</p>	
Policy 5.2.2.1	<p>Require earthworks to be set back from network utilities an adequate distance to avoid:</p> <p>a. damage to existing network utilities;</p> <p>b. obstruction of access to existing underground network utilities; and</p> <p>c. adverse effects on the health and safety of people.</p>
Policy 5.2.2.5	Only allow subdivision and sensitive activities, where these are not otherwise permitted, in the <b>radio transmitters mapped area</b> where the potential for reverse sensitivity is avoided or minimised as far as practicable.

### Objective 5.2.2

The operational efficiency and effectiveness of network utilities is not compromised by development locating near these activities.

Policy 5.2.2.X	<p>Only allow buildings, structures, additions and alterations, public amenities, network utility activities, and earthworks within the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> where:</p> <ol style="list-style-type: none"> <li>any risk to health and safety is avoided or minimised as far as practicable; and</li> <li>adverse effects on the operation, maintenance, upgrading and development of the Critical Electricity Distribution Infrastructure are avoided or, if avoidance is not practicable, insignificant.</li> </ol>
Policy 5.2.2.Y	<p>Only allow subdivision activities in the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> where the subdivision is designed to ensure that any associated future land use and development will:</p> <ol style="list-style-type: none"> <li>avoid, or minimise as far as practicable, any risk to health and safety;</li> <li>avoid or, where avoidance is not practicable, have no more than insignificant effects on the operation, maintenance, upgrading and development of Critical Electricity Distribution Infrastructure; and</li> <li>avoid or minimise, as far as practicable, the potential for reverse sensitivity.</li> </ol>
Policy 5.2.2.Z	<p>Only allow forestry within the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> where the risk of safety hazards caused by trees falling onto Critical Electricity Distribution Infrastructure can be avoided or minimised as far as practicable.</p>

### Objective 5.2.X

The national significance and benefits of the National Grid are recognised and provided for; National Grid infrastructure is able to be established, operated, maintained and upgraded efficiently and effectively; and the operation, maintenance, upgrading and development of the National Grid is not compromised by other activities.

Policy 5.2.X.1	<ul style="list-style-type: none"> <li>a. Enable the operation, repair, minor upgrading and maintenance of the National Grid, and any ancillary activities including earthworks and vegetation clearance, while managing the adverse effects of these activities.</li> <li>b. Where there is a conflict, this Policy prevails over other policies in Section 5, and all policies in Section 10 and Section 13.</li> </ul>
Policy 5.2.X.2	<ul style="list-style-type: none"> <li>a. Provide for the development of, major upgrades to, and new National Grid infrastructure, and any ancillary activities including earthworks and vegetation clearance, while managing the adverse effects of these activities by all of the following: <ul style="list-style-type: none"> <li>i. recognising there may be some areas in the coastal environment where avoidance of adverse effects is required to protect the identified special values of those areas;</li> <li>ii. seeking to avoid adverse effects on the values of the following: <ul style="list-style-type: none"> <li>1. areas of significant indigenous vegetation and significant habitats of indigenous fauna (including but not limited to scheduled Areas of Significant Biodiversity Value);</li> <li>2. outstanding natural features and outstanding natural landscape overlay zones;</li> <li>3. outstanding natural coastal character overlay zones; and</li> <li>4. scheduled heritage items and heritage precincts;</li> </ul> </li> <li>iii. where it is not practicable to avoid adverse effects on the values of the areas listed in ii. above because of the functional needs and operational needs of the National Grid, remedy or mitigate adverse effects on those values;</li> <li>iv. avoiding, remedying or mitigating other adverse effects, including effects on the values of areas not covered in clause ii above; and</li> <li>v. consider offsetting for residual adverse effects on indigenous biological diversity.</li> </ul> </li> <li>b. Where there is a conflict, this Policy prevails over other policies in Section 5, and all policies in Section 10 and Section 13.</li> </ul>
Policy 5.2.X.3	<p>In implementing Policy 5.2.X.2, have regard to:</p> <ul style="list-style-type: none"> <li>a. the extent to which adverse effects have been addressed through site, route or method selection; and</li> <li>b. for major upgrades, opportunities to reduce existing adverse effects.</li> </ul>
Policy 5.2.X.4	<p>Provide for network utility activities, earthworks, fences, farming and horticultural buildings and structures that are small scale or not intensively used (e.g. artificial crop protection and crop support structures), and small buildings in residential zones, within the National Grid Yard, where these activities will not compromise the operation, maintenance, upgrading or development of the National Grid.</p>
Policy 5.2.X.5	<p>Avoid activities within the National Grid Yard, including but not limited to National Grid sensitive activities, where these will:</p> <ul style="list-style-type: none"> <li>a. compromise the operation, maintenance, upgrading and development of the National Grid; or</li> <li>b. result in reverse sensitivity effects on the National Grid.</li> </ul>

### Objective 5.2.X

The national significance and benefits of the National Grid are recognised and provided for; National Grid infrastructure is able to be established, operated, maintained and upgraded efficiently and effectively; and the operation, maintenance, upgrading and development of the National Grid is not compromised by other activities.

Policy 5.2.X.6	Only allow subdivision activities within the <b>National Grid Subdivision Corridor mapped area</b> where the subdivision is designed to ensure that any future land use and development will: <ul style="list-style-type: none"> <li>a. avoid or minimise as far as practicable the risk to the safety of people and property;</li> <li>b. avoid reverse sensitivity effects on the National Grid; and</li> <li>c. not compromise the operation, maintenance, upgrading and development of the National Grid, or access to it.</li> </ul>
----------------	---

## Rules

### Rule 5.3 Activity Status

#### 5.3.1 Activity status introduction

1. The activity status table in Rule 5.3.2 shows the activity status of network utility activities across all zones, provided any performance standards shown in the far right column are met. The activities in the network utility activities category are listed in the Nested Table in Section 1.3.
2. Performance standards apply to permitted, controlled, and restricted discretionary activities.
3. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
4. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.
5. The following activities are managed through the Resource Management (National Environmental Standards for Telecommunication Facilities) Regulations 2016 (NESTF), although rules in the District Plan still apply in certain circumstances, as set out in the NESTF:
  - a. telecommunication facilities that emit radio-frequency fields;
  - b. telecommunication equipment cabinets;
  - c. noise from these cabinets, only when located in the road reserve;
  - d. new poles and attached antennas, in the road reserve and in rural and rural residential zones only (note that masts are called poles under the NESTF);
  - e. new antennas on existing poles, and new antennas on buildings;
  - f. small-cell units on existing structures; and
  - g. telecommunications lines.
6. The operation, maintenance, upgrading, relocation or removal of existing transmission lines which are part of the National Grid are managed through the Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009 (NESETA), unless otherwise stated by a NESETA rule.
7. Any utilities included in the definitions of building utilities or rooftop structures are managed by zone rules and are not considered to be network utility activities.
8. The activity status of network utilities in the major facility zones is determined by the default zone of the major facility as listed in Appendix A9, except for the Port, Dunedin International Airport and Campus zones which are included in the 'all other zones' category in Rule 5.3.2.
9. For all transition overlay zones, the provisions of the proposed (transition) zone apply.

10. Any site development activities associated with an activity provided for in the activity status table in Rule 5.3.2 are subject to the provisions of the relevant management zone section.
11. Any earthworks associated with an activity provided for in the activity status table in Rule 5.3.2 are subject to the provisions in Section 8A.
12. Any construction associated with an activity provided for in the activity status table in Rule 5.3.2 is subject to the provisions in Section 4.

## Legend

Acronym	Meaning
+	Additional provisions apply (assessment criteria for activities in the overlay need to be viewed)
N/A	Not Applicable
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
RU	Rural Zones
RR	Rural Residential Zones
CMU	Commercial and Mixed Use Zones
WP	Warehouse Precinct Zone
PPH	Princes, Parry and Harrow Street Zone
SSYP	Smith Street and York Place Zone
HE	Harbourside Edge Zone
Ind	Industrial Zones
ONL	Outstanding Natural Landscape Overlay Zone
ONF	Outstanding Natural Feature Overlay Zones
SNL	Significant Natural Landscape Overlay Zone
NCC	Natural Coastal Character Overlay Zone
HNCC	High Natural Coastal Character Overlay Zone
ONCC	Outstanding Natural Coastal Character Overlay Zone
HP	Heritage Precinct
SHS	Scheduled Heritage Site
PPF	<b>Primary Pedestrian Street Frontage mapped area</b>
SPF	<b>Secondary Pedestrian Street Frontage mapped area</b>
ASBV	Areas of Significant Biodiversity Value
GPMA	<b>Groundwater Protection mapped area</b>
MHWS	Mean High Water Springs
Haz1	Hazard 1 Overlay Zones
Haz2	Hazard 2 Overlay Zones

Acronym	Meaning
NESETA	Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009
NESTF	Resource Management (National Environmental Standards for Telecommunication Facilities) Regulations 2016

### 5.3.2 Activity status table – Network utility activities

1.	Performance standards that apply to all network utility activities	<ul style="list-style-type: none"> <li>a. Noise</li> <li>b. Setback from coast and water bodies</li> <li>c. Setback from National Grid</li> <li>d. Setback from scheduled tree</li> </ul>				
New, or additions and alterations to existing, network utility activities		Activity status				Performance standards
		a. Res and Rec	b. All other zones	c. ONF, HNCC, ONCC	d. SNL, NCC, ONL, ASBV, SHS, HP	
2.	Operation, repair, minor upgrading and maintenance of existing network utilities	P	P	P	P	i. Light spill
3.	Underground or internal network utilities	P	P	P	P	<ul style="list-style-type: none"> <li>i. Technical standards (gas pressure regulating stations and water or energy pipes only)</li> <li>ii. Maximum height</li> </ul>
4.	Standby or temporary energy generators	P	P	P	P	
5.	Substations	RD	RD (P in Ind)	NC	D	i. Technical standards
Network utility structures - small scale		a. Res and Rec	b. All other zones	c. ONF, HNCC, ONCC	d. SNL, NCC, ONL, ASBV, SHS, HP	Performance standards
6.	Network utility poles and masts - small scale	RD	P	RD	RD	i. Scale thresholds
7.	Wind generators - small scale	P	P	RD	RD	<ul style="list-style-type: none"> <li>i. Scale thresholds</li> <li>ii. Design standards for wind generators</li> <li>iii. Setbacks for wind generators</li> </ul>
8.	Hydro generators - small scale	P	P	RD	RD	<ul style="list-style-type: none"> <li>i. Scale thresholds</li> <li>ii. Location</li> </ul>
9.	Solar panels - small scale	P	P	RD	RD	<ul style="list-style-type: none"> <li>i. Scale thresholds</li> <li>ii. Site coverage</li> </ul>

10.	All other network utility structures - small scale	P	P	RD	P	<ul style="list-style-type: none"> <li>i. Location</li> <li>ii. Scale thresholds</li> <li>iii. Maximum volume in PPF, SPF, HP and SHS</li> <li>iv. Technical standards</li> <li>v. Clearance from navigable water body</li> </ul>
Network utility structures - large scale		a. Res and Rec	b. All other zones	c. ONF, HNCC, ONCC	d. SNL, NCC, ONL, ASBV, SHS, HP	Performance standards
11.	Solar panels - large scale with an area between 200m <sup>2</sup> and 500m <sup>2</sup> in a rural or industrial zone	N/A	RD	NC	D	
12.	All other solar panels - large scale	D	D	NC	D+	
13.	Wind generators - large scale	D	D	NC	D+	
14.	Hydro generators - large scale	D	D	NC	D+	
15.	Network utility structures - large scale (amateur radio configurations only)	RD	RD	RD+	RD	
16.	All other network utility structures - large scale	D	D	NC	D+	

### **Note 5.3.2A - Other requirements outside of the District Plan**

1. For telecommunication facilities, also refer to the Resource Management (National Environmental Standards for Telecommunication Facilities) Regulations 2016 (NESTF).
2. For activities on existing high voltage National Grid transmission lines also refer to the Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009 (NESETA). The NESETA outlines the activity status, conditions and resource consent requirements for electricity transmission activities undertaken as part of the operation of high voltage National Grid transmission lines.
3. For the trimming and pruning of vegetation necessary to protect electricity lines also refer to the Electricity (Hazards from Trees) Regulations 2003.
4. For works within the road reserve a corridor access request may be required by the DCC, see <http://www.dunedin.govt.nz/services/roads-and-footpaths/corridor-access-request> for further information. For works within a state highway road corridor, an agreement to work on the road corridor will be required from the NZ Transport Agency.
5. Works within the dripline of trees in the road reserve may require approval from the DCC's Parks, Recreation and Aquatics Group Department. For more information, please contact the DCC on 03 477 4000 or visit the DCC website at [www.dunedin.govt.nz](http://www.dunedin.govt.nz).
6. The New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001) contains restrictions on the location of structures and activities in relation to electricity transmission and distribution lines. Compliance with this code is mandatory. Compliance with this Plan does not ensure compliance with NZECP 34:2001.
7. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan or a resource or building consent has been granted.
8. The Heritage New Zealand Pouhere Taonga Accidental Discovery Protocol (Appendix A8) manages archaeological sites that may be discovered as a result of earthworks. The protocol applies to any area, not just scheduled archaeological sites.
9. Scheduled archaeological sites are identified on the Planning Map. Archaeological sites may also be found outside these areas, but are more likely to be found within the archaeological alert layer.

### **Note 5.3.2B - General advice**

1. Network utility activities are not subject to the natural hazards rules, with the exception of Rule 10.3.3 Setback from the Coast and Water Bodies, which implements Natural Hazards Policy 11.2.1.19. However, the establishment of new network utilities and the operation, minor upgrading, repair and maintenance of existing network utilities should take into account risks associated with natural hazards.

## Rule 5.4 Notification

1. With respect to resource consent applications for the following activities, Heritage New Zealand will be considered an affected person in accordance with section 95E of the RMA where its written approval is not provided:
  1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand.
2. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95E of the RMA where their written approval is not provided:
  1. all restricted discretionary activities that list 'effects on cultural values of Manawhenua' as a matter for discretion; and
  2. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat to the **wāhi tūpuna mapped area** in Appendix A4.
3. With respect to resource consent applications for the following activities, Transpower NZ Limited will be considered an affected person in accordance with section 95E of the RMA where its written approval is not provided:
  1. activities that contravene performance standard 5.6 'Setback from National Grid'.
4. Applications for resource consent for the following activities will be considered without the need to obtain the written approval of affected persons and will not be notified in accordance with section 95A or 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:
  1. freestanding network utility structures, in a **primary** or **secondary pedestrian street frontage mapped area**, heritage precincts and scheduled heritage sites, that exceed 0.5m<sup>3</sup> in volume (where visible from an adjoining public place) but that do not exceed 4m in height or 5m<sup>2</sup> in area of footprint.
5. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 5.5 Network Utility Activities Performance Standards**

### **5.5.1 Light Spill**

The operation, repair, minor upgrading and maintenance of existing network utilities must comply with Rule 9.3.5.

### **5.5.2 Location**

1. Network utility structures - small scale must co-locate against<sup>1</sup> a building or be attached to a network utility pole or mast if:
  - a. within an area of road reserve that adjoins a **primary pedestrian street frontage mapped area**;
  - b. within a heritage precinct and visible from an adjoining public place; or
  - c. over 0.5m<sup>2</sup> in area or 500mm in height, located in a Natural Coastal Character Overlay Zone (NCC), visible from an adjoining public place, and located on the seaward side of a coastal road.
2. Pipes (excluding those defined as building utilities) and lines must be located underground, except:
  - a. lines in the rural or rural residential zones;
  - b. lines attached to existing network utility poles and masts, or to existing buildings or structures;
  - c. activities undertaken as part of the operation, repair, minor upgrading and maintenance of existing network utilities (including extensions of overhead lines to serve a single customer); and
  - d. pipes or lines provided for under NESETA or NESTF.
3. In a heritage precinct, hydro generators - small scale must be located so that they are not visible from any adjoining public place.
4. Network utility structures - small scale located on outstanding natural features must co-locate against<sup>1</sup> a building or with existing network utility structures, or be attached to network utility poles and masts.
5. Activities that contravene Rule 5.5.2.4 are non-complying activities.
6. Activities that otherwise contravene this performance standard are restricted discretionary activities.

<sup>1</sup> For the purposes of rules 5.5.2.1 and 5.5.2.4, "against" means "as close as practicable to the structure specified in the rule, subject to the requirements of the Building Code".

#### **Note 5.5.2A - Other requirements outside of the District Plan**

1. Under the Resource Management (National Environmental Standards for Telecommunication Facilities) Regulations 2016 (NESTF), activities provided for under the NESTF are exempt from Rule 5.5.2.1 in relation to **primary pedestrian street frontage mapped areas**.

### 5.5.3 Scale Thresholds

1. The following network utility structures are always considered network utility structures - small scale:
  - a. Lines.
2. All other network utility structures must not exceed the scale thresholds set out in Rules 5.5.3.3 to 5.5.3.8 to be considered small scale. Network utility structures that exceed these thresholds are treated as large scale.

#### Rule 5.5.3.3 Hydro generators - small scale thresholds

Threshold		i. Rural and industrial zones	ii. All other zones
a.	Maximum surface area of stored water	200m <sup>2</sup>	100m <sup>2</sup>
b.	Maximum height of weir or dam	2m	1m
c.	Maximum installed capacity	4MW	500kW

- d. Hydro generators that exceed these thresholds are treated as hydro generators - large scale.

#### Rule 5.5.3.4 Solar panels - small scale thresholds

- a. The maximum area of solar panels - small scale is 200m<sup>2</sup>.
- b. Solar panels that exceed this scale threshold are treated as solar panels - large scale.

#### Note 5.5.3.4A - Other relevant District Plan provisions

1. Roof-top solar panels that meet the definition of building utilities are covered by provisions for buildings in the management zone sections, and are not subject to provisions for network utility activities.

#### Rule 5.5.3.5 Wind generators - small scale thresholds

- a. The maximum number of wind generators per site is:

i.	Rural zones	2
ii.	All other zones	1

- b. The maximum height of wind generators (to blade tip) is:

i.	Rural and rural residential zones	20m
ii.	Freestanding wind generators in all other zones	2m above the maximum height for buildings and structures in the zone in which the wind generator is located
iii.	Rooftop wind generators in all other zones	<ol style="list-style-type: none"> <li>i. 2m above the part of the building the generator is attached to (in residential zones, Recreation Zone, CBD and centres zones, and WP, PPH, SSYP and HE zones)</li> <li>ii. The greater of: 2m above the maximum height for buildings and structures in the zone in which the wind generator is located; or 2m above the part of the building the generator is attached to (in all other zones).</li> </ol>

- c. The maximum rotor diameter of wind generators is:

i.	Rural and rural residential zones	6m
----	-----------------------------------	----

ii.	Industrial zones, Trade Related Zone, South Dunedin Large Format Zone and CBD Edge Commercial zones	No limit on rotor diameter
iii.	All other zones	1.5m

d. Wind generators that exceed these thresholds are treated as wind generators - large scale.

#### Rule 5.5.3.6 Network utility poles and masts - small scale thresholds

Dimension		Scale threshold		
		i. Res, Rec	ii. All other zones	iii. ONF, HNCC, ONCC, NCC, SNL, ONL
a.	Diameter of head arrays	0.8m	1m - CBD and centres 6m - rural, rural residential and industrial zones 4m - all other zones	0.8m
b.	Diameter of dish antenna	1.2m	1.8m	1.2m
c.	Maximum area of largest antenna face (excluding dish antennas)	1.5m <sup>2</sup>		
d.	Maximum height	The greater of 1. 25m in the rural, rural residential and industrial zones; or 5m over the maximum height for buildings and structures in the zone in which the activity is located in all other zones (see Figure 5.5.3.6A); or 2. the height required to meet the safety clearance requirements of the New Zealand Electrical Code of Practice for Electrical Distances (NZECP34).		
e.	Height in relation to boundary	In commercial and mixed use and major facility zones, network utility poles and masts on sites adjacent to residential zones must comply with any height in relation to boundary rule that applies to buildings and structures on the same site.		
f.	Maximum cross sectional area of lattice masts	1. 4m <sup>2</sup> to the point that is half the maximum height of the zone in which the activity is located, and 2. 2.5m <sup>2</sup> from the point that is half the maximum height of the zone in which the activity is located to the top of the mast (see Figure 5.5.3.6B).		
g.	Cross sectional area of all other poles and masts (excluding any associated cross arms)	2m <sup>2</sup>		

h. Except:

- i. any lightning rods attached to network utility poles and masts or attached network utility structures are exempt from these thresholds;
- ii. dish antennas in the Dunedin International Airport Zone, industrial zones, and Port Zone are exempt from these thresholds;

- iii. network utility poles and masts in the Dunedin International Airport Zone and Port Zone have no maximum height; and
  - iv. wind monitoring masts that are installed for no more than 24 months are exempt from these thresholds.
- i. Network utility poles and masts that exceed these thresholds are treated as network utility structures - large scale.

**Note 5.5.3.6A - Other requirements outside of the District Plan**

1. Under the Resource Management (National Environmental Standards for Telecommunication Facilities) Regulations 2016 (NESTF), activities provided for under the NESTF are exempt from any scale thresholds in Rule 5.5.3.6 that are more restrictive than the NESTF, except in ONF, HNCC, ONCC, NCC, SNL and ONL overlay zones, in heritage precincts and on scheduled heritage sites.

Figure 5.5.3.6A: Maximum height of new poles or masts in all zones except the rural, rural residential and industrial zones

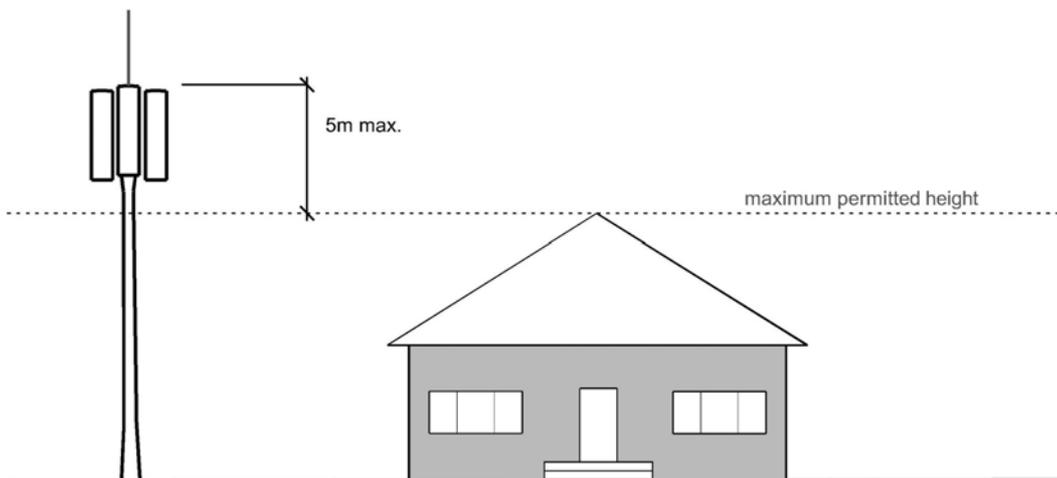

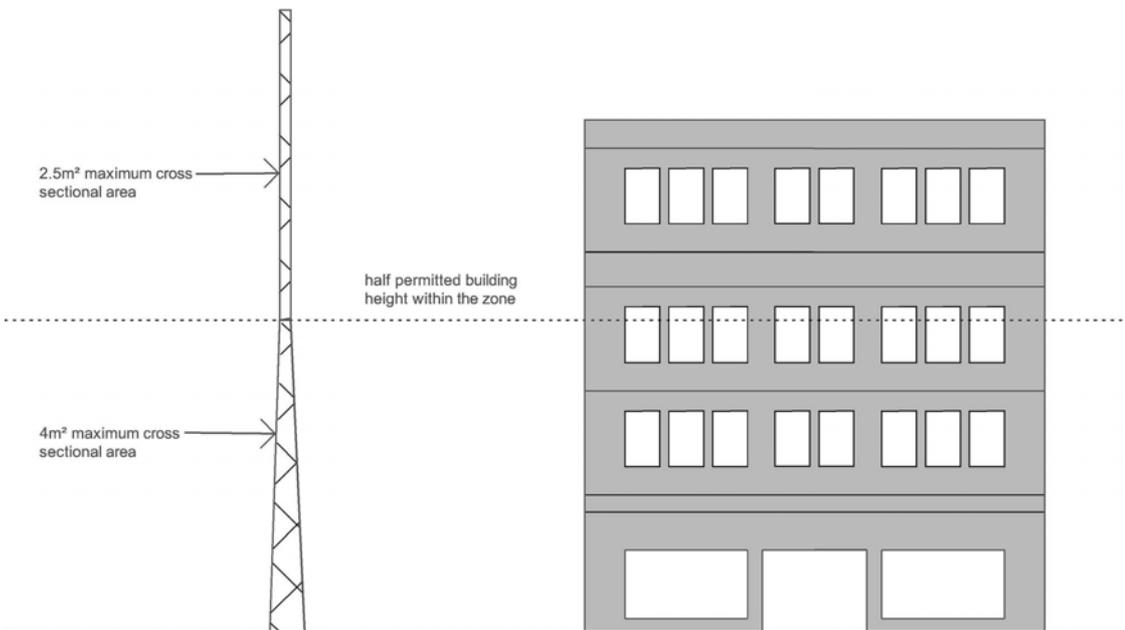

Figure 5.5.3.6B: Cross-sectional area of lattice mast

**Rule 5.5.3.7 Amateur radio configurations - small scale thresholds**

- a. Amateur radio configurations must not exceed the following scale thresholds to be considered network utility structures - small scale.
- b. The maximum diameter of amateur radio configurations is:

Part of amateur radio configuration		Maximum diameter
i.	Antenna elements	80mm
ii.	Wire antennas	15mm
iii.	Dish antennas	2m
iv.	Panel antennas	2m, unless less than 2m² in area
v.	Guy wires	12mm

- c. The maximum length of horizontal high frequency Yagi antennas is:

Part of antenna		Maximum length
i.	Elements	14.9m
ii.	Booms	13m

- d. The maximum height of antennas is 5m above the maximum height of the zone in which the activity is located, except that one vertical antenna is permitted to a maximum height of 20m.
- e. One pedestal mounted antenna is allowed per site where all of the following are met:
  - i. the antenna is pivoted at a maximum of 4m above the ground;
  - ii. the maximum diameter of the antenna is 5m; and
  - iii. the pedestal and antenna comply with the boundary setbacks and height in relation to boundary performance standards of the zone in which the activity is located.

- f. There must be no more than six support structures for wire antennas.
- g. Only one support structure may be a lattice mast.
- h. The maximum height of poles and support structures is the maximum height for buildings and structures in the zone in which the activity is located, except:
  - i. in the commercial and mixed use, rural, and rural residential zones, one support structure (including attached antennas) may have a maximum height of 20m; and
  - ii. in all other zones:
    - 1. one non-retractable support structure (including attached antennas) may have a maximum height of 5m above the maximum height for buildings and structures in the zone where the activity is located; and
    - 2. one retractable support structure (including attached antennas) up to 20m in height may be used from sunset to sunrise.
- i. Amateur radio configurations that exceed these thresholds are treated as network utility structures - large scale.

**Rule 5.5.3.8 All other network utility structures - small scale thresholds**

a. Network utility structures – *freestanding*

Dimension		Scale threshold - all zones
i.	Height	4m
ii.	Area of footprint	5m <sup>2</sup>

b. Network utility structures – *attached to buildings, or attached to existing poles or masts*

Dimension		Scale threshold		
		Res, Rec	RTZ, ONF, HNCC, ONCC, NCC, SNL, ONL	All other zones
i.	Height when attached to buildings (including necessary support structures) (see Figure 5.5.3.8A)	2m above the section of the building to which the structure is attached	2m above the section of the building to which the structure is attached	5m above the section of the building to which the structure is attached
ii.	Height when attached to existing poles and masts	5m above the height of the existing pole or mast, or 25m, whichever is the lesser (see Figure 5.5.3.8B)		
iii.	Diameter of head arrays	The relevant threshold stated in Rule 5.5.3.6.a above applies.		
iv.	Diameter of dish antenna	The relevant threshold stated in Rule 5.5.3.6.b above applies.		
v.	Maximum area of largest antenna face (excluding dish antennas)	The relevant threshold stated in Rule 5.5.3.6.c above applies.		

c. Except:

- i. any lightning rods attached to network utility structures are exempt from these thresholds;
- ii. dish antennas in the Dunedin International Airport Zone, industrial zones, and Port Zone are exempt from these thresholds;
- iii. network utility structures in the Dunedin International Airport Zone and Port Zone have no maximum

height; and

- iv. wind monitoring masts that are installed for no more than 24 months are exempt from these thresholds.
- d. Network utility structures that exceed these thresholds are treated as network utility structures - large scale.

**Note 5.5.3.8A - Other requirements outside of the District Plan**

1. Under the Resource Management (National Environmental Standards for Telecommunication Facilities) Regulations 2016 (NESTF), activities provided for under the NESTF are exempt from any scale thresholds in Rule 5.5.3.8 that are more restrictive than the NESTF, except in ONF, HNCC, ONCC, NCC, SNL and ONL overlay zones, in heritage precincts and on scheduled heritage sites.
2. Under Regulations 26, 27, 30, 31, 32 and 33 of the NESTF 2016, once an antenna is established on a new pole, it may be upgraded to a larger structure as a permitted activity. These regulations set out the permitted scale (height, pole width and headframe width) of upgrades in different environments.

Figure 5.5.3.8A: Height of utilities attached to buildings

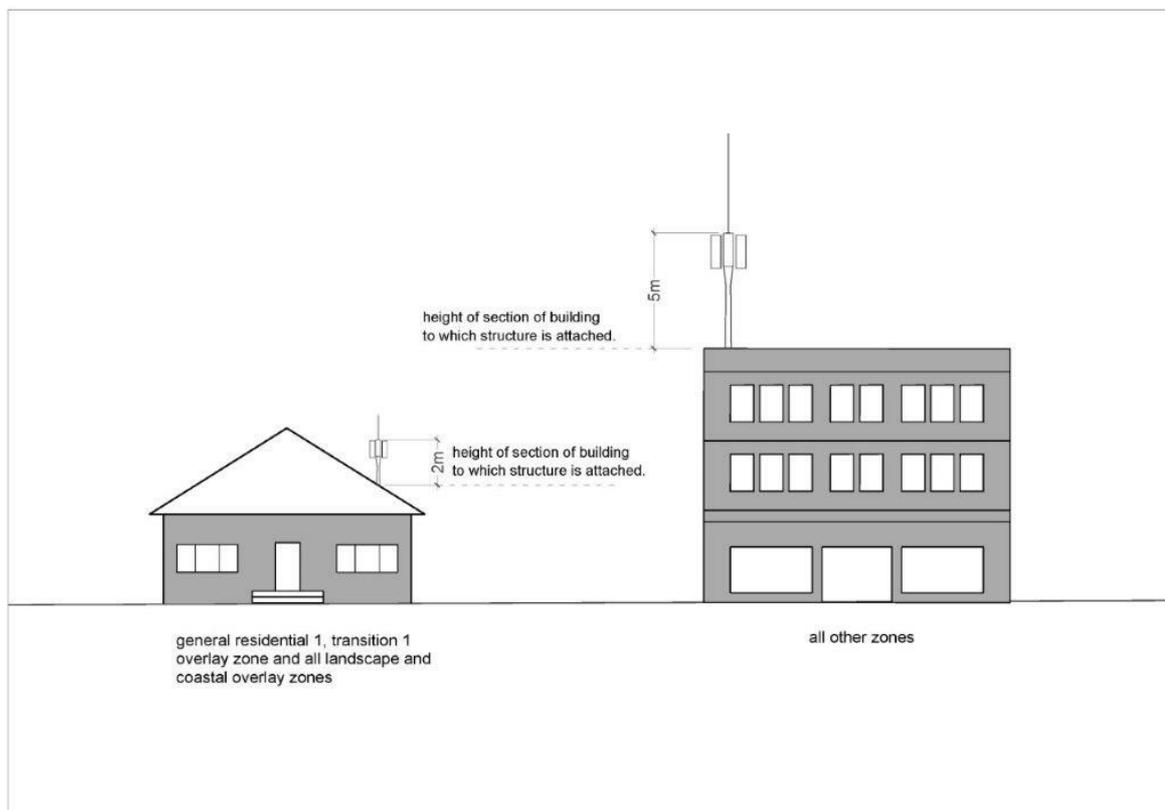

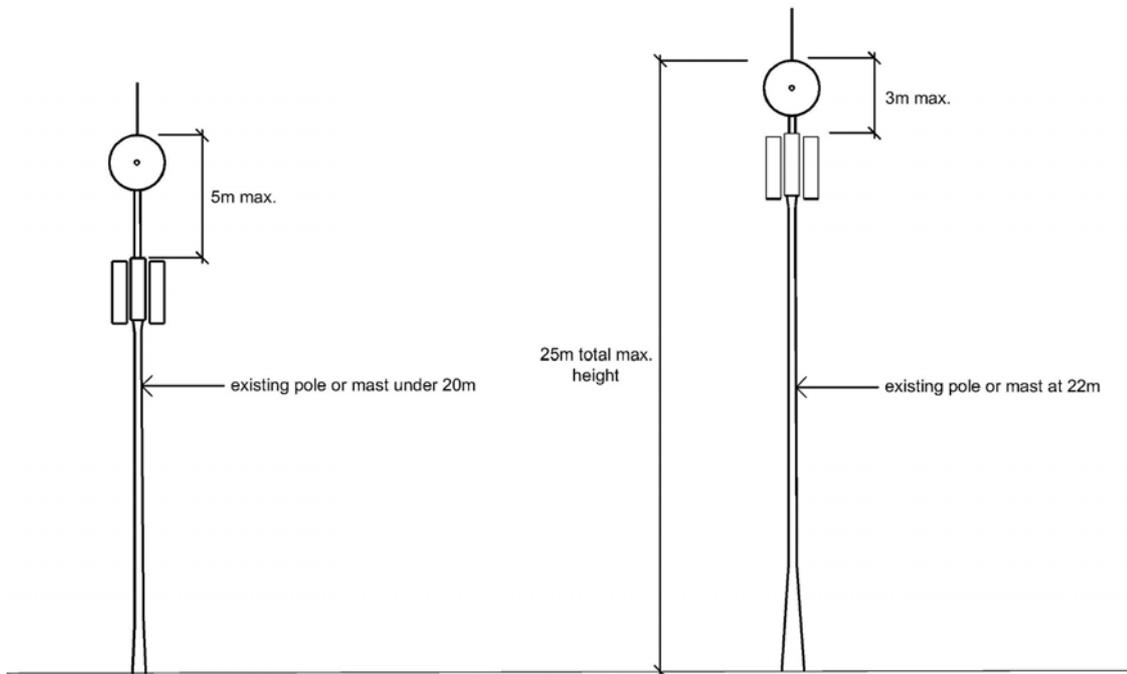

Figure 5.5.3.8B: Height of utilities attached to existing poles or masts

### 5.5.4 Maximum Volume in Pedestrian Street Frontage mapped areas, Heritage Precincts and Scheduled Heritage Sites

1. In **primary** and **secondary pedestrian street frontage mapped areas**, heritage precincts and scheduled heritage sites, the maximum volume of freestanding network utility structures - small scale that are visible from an adjoining public place is 0.5m<sup>3</sup>.
2. Network utility structures - small scale that contravene this performance standard are restricted discretionary activities.

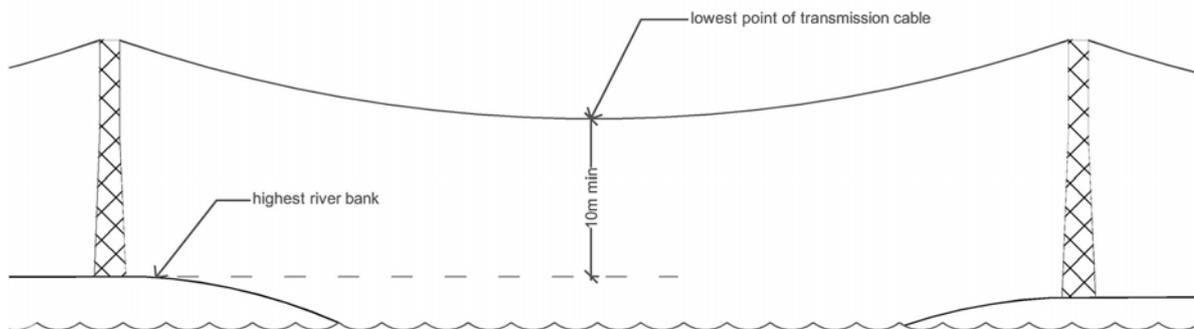

#### Note 5.5.4A - Other requirements outside of the District Plan

1. Under the Resource Management (National Environmental Standards for Telecommunication Facilities) Regulations 2016 (NESTF), activities provided for under the NESTF are exempt from Rule 5.5.4 in **primary** and **secondary pedestrian street frontage mapped areas**.

### 5.5.5 Clearance from Navigable Water Body

- a. Network utility structures - small scale that cross navigable water bodies must maintain a minimum clearance of 10m between the lowest point of any lines and the highest point of either river bank (see Figure 5.5.5A), except:
  - i. this standard does not apply in the case of lines attached to any existing bridge or structure crossing a navigable water body, where the existing freeboard height above the waterway is not reduced.
- b. Network utility structures - small scale that contravene this performance standard are non-complying activities.

Figure 5.5.5A: Height above navigable water body

### 5.5.6 Noise

All network utility activities must comply with Rule 9.3.6.

### 5.5.7 Design Standards for Wind Generators

1. Wind generators - small scale must not use lattice towers.
2. In the CBD Zone, centres zones, WP, PPH, SSYP and HE zones, residential zones and the Recreation Zone, wind generators - small scale must be attached to rooftops.
3. For freestanding wind generators - small scale, the maximum diameter of the mast is 600mm.
4. All exterior surfaces of wind generators - small scale must have a light reflectance value (LRV) of 30% or less.
5. Rooftop wind generators must comply with the height in relation to boundary rule that applies to buildings and structures in the zone in which the wind generator is located, except in the Rural, Rural Residential and Industrial zones.
6. Wind generators - small scale that contravene these standards are restricted discretionary activities.

### 5.5.8 Site Coverage

1. Solar panels - small scale that are ground mounted must comply with any site coverage standards for the zone in which they are located.
2. Solar panels - small scale that contravene this standard are restricted discretionary activities.

### 5.5.9 Setbacks

#### 5.5.9.1 Setbacks for wind generators

##### a. Setbacks in industrial zones

Activity	1. Minimum setback from boundaries of any Residential, Recreation or CMU Zone (excluding the Trade Related Zone, South Dunedin Large Format Zone and the CBD Edge Commercial zones)	2. Minimum setback from road and site boundaries
i. Wind generators - small scale with a rotor diameter less than or equal to 1.5m	N/A	A distance equal to the height of the structure
ii. Wind generators - small scale with a rotor diameter exceeding 1.5m	100m	A distance equal to the height of the structure

##### b. Setbacks in rural and rural residential zones

- i. Wind generators - small scale with a rotor diameter less than or equal to 4m, and with a height less than or equal to 15m, must be set back at least 50m from any road or property boundary; and
- ii. Wind generators - small scale with a rotor diameter exceeding 4m, and/or with a height exceeding 15m, must be set back at least 100m from any road or property boundary.

##### c. Setbacks in commercial and mixed use and major facility zones

Freestanding wind generators - small scale in the Trade Related Zone, South Dunedin Large Format Zone, the CBD Edge Commercial zones and all major facility zones must have a minimum setback as follows:

Location	Setback distance
i. From site boundaries	Equal to the height of the structure above ground level

ii. From any residential building on a separate site	Equal to three times the height of the structure above ground level
--	---

- d. Wind generators - small scale that contravene this performance standard are restricted discretionary activities.

#### 5.5.9.2 Setback from coast and water bodies

Network utility activities must comply with Rule 10.3.3.

#### 5.5.9.3 Setback from scheduled tree

Network utility activities must comply with Rule 7.5.2.

### 5.5.10 Technical Standards

1. The maximum voltage of overground electricity lines and any associated network utilities is 110kV, or the voltage of existing lines on existing support structures, whichever is greater.
2. The maximum gauge pressure of network utilities for energy transformation, transmission or distribution, including pipes and new underground gas pressure regulating stations is 2000 kilopascals.
3. Activities that contravene the performance standard for maximum gauge pressure are non-complying activities.

### 5.5.11 Maximum Height

1. Any external protrusions, such as vents and chimneys, associated with underground or internal network utilities are subject to the maximum height performance standard for the zone in which the utility is located, and for the purposes of that standard are considered rooftop structures.
2. Activities that contravene this performance standard are restricted discretionary activities.

## **Rule 5.6 Setbacks from National Grid, Critical Electricity Distribution Infrastructure and Network Utilities**

### **5.6.1 Setback from National Grid**

5.6.1.1 Setback from National Grid (new buildings and structures, city-wide activities and National Grid sensitive activities)

- a. New buildings and structures, additions and alterations, public amenities, underground or internal network utilities (except where located within an existing building or structure), network utility structures - small scale, network utility structures - large scale, standby or temporary energy generators and National Grid sensitive activities must be set back at least:
  - i. 12m from the outside edge of a National Grid support structure foundation or from the boundary of a National Grid substation; and
  - ii. 12m from the centre line of any point of a National Grid transmission line.
  
- b. The following activities are exempt from this standard, provided either that they meet the requirements of NZECP 34:2001, or that there is a minimum vertical clearance of 10m between the lowest point of the National Grid conductor and the highest point of any structure:
  - i. network utility operation as defined in section 166 of the RMA (excluding the reticulation and storage of water for irrigation purposes);
  - ii. fences not more than 2.5m in height and located at least 5m from a National Grid support structure;
  - iii. artificial crop protection and crop support structures not more than 2.5m in height and located at least 8m from a National Grid pole support structure (but not a tower), provided that such structures:
    1. are removable or temporary to allow a clear working space of 12m from the pole for maintenance and repair purposes; and
    2. allow all weather access to the pole and a sufficient area for maintenance equipment, including a crane;
  - iv. farming or horticultural buildings of any type other than the following are exempt from Rule 5.6.1.1.a.ii only:
    - X. buildings used for intensive farming;
    - Y. milking/dairy sheds;
    - Z. produce packing facilities;
    - AA. commercial greenhouses; or
    - AB. residential buildings;
  - X. stockyards, and ancillary platforms for milking/dairy sheds are exempt from Rule 5.6.1.1.a.ii only;
  - v. irrigation equipment used for agricultural or horticultural purposes that is not for the distribution of water for commercial supply and does not permanently obstruct existing vehicular access to a National Grid support structure (exempt from Rule 5.6.1.1.a.ii only);
  - vi. in residential zones, buildings that are not a residential building and that are less than 10m<sup>2</sup> in area and under 2.5m in height, are exempt from Rule 5.6.1.1.a.ii only; and
  - Y. official signs.
  
- c. Activities that contravene this performance standard are non-complying activities.

5.6.1.2 Setback from National Grid (earthworks)

- a. Earthworks within the National Grid Yard must not exceed the following depths within the following distances of National Grid infrastructure:

1. Distance from National Grid infrastructure		2. Maximum depth of earthworks
X.	Less than 2.2m from a National Grid support structure pi-pole or the stay wire of an overhead transmission line	300mm
Y.	Between 2.2m and 5m from a National Grid support structure pi-pole or the stay wire of an overhead transmission line	750mm
Z.	Less than 6m from the outer edge of the foundation of a National Grid tower or mono-pole support structure	300mm
AA.	Between 6m and 12m from the outer edge of the foundation of a National Grid tower or mono-pole support structure	3m

X. Earthworks within the National Grid Yard must not compromise the stability of any National Grid support structure.

Y. Earthworks within the National Grid Yard must not contravene the ground to conductor clearance distances required by Table 4 of the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001).

Z. The following earthworks are exempt from the maximum depth requirements in Rule 5.6.1.2.a:

- i. earthworks ancillary to the operation, repair and maintenance of the roading network;
- ii. earthworks for the repair, sealing or resealing of a driveway or vehicle track;
- iii. earthworks that result in vertical holes less than 500mm in diameter, provided that the earthworks are located more than 1.5m from the outer edge of a National Grid pole or stay wire (this exemption does not apply to earthworks within 12m of the outer edge of National Grid towers);
- iv. earthworks associated with post holes for the erection of farm fences or horticulture structures, provided that the earthworks are located at least 5m from the outer edge of a National Grid support structure;
- v. earthworks ancillary to a network utility operation as defined in section 166 of the RMA (excluding the reticulation and storage of water for irrigation purposes) and associated access tracks, provided that the activity is undertaken in accordance with NZECP 34:2001; and
- vi. earthworks that are part of cultivation.

b. Activities that contravene this performance standard are non-complying activities.

#### 5.6.1.X Setback from National Grid (subdivision activities)

- a. Each resultant site created by a subdivision activity within the **National Grid Subdivision Corridor mapped area** must be of a size and shape that is large enough to locate a building platform outside the National Grid Yard for the following buildings:
  - i. all buildings that are intended to be used for National Grid sensitive activities; and
  - ii. any other principal buildings for the activity proposed for the resultant site, except where these are for a network utility operation as defined by section 166 of the RMA provided they can meet the requirements of NZECP34:2001.
- b. Layout of the subdivision within the **National Grid Subdivision Corridor mapped area** is designed so that vehicular access to National Grid support structures is maintained.
- c. Subdivision activities that contravene this performance standard are non-complying activities.

#### Note 5.6.1A – Other requirements outside of the District Plan

1. The New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001) contains restrictions on the location of structures and activities in relation to transmission lines. Compliance with this code is mandatory.

Compliance with this plan does not ensure compliance with NZECP 34:2001.

2. Vegetation to be planted near National Grid infrastructure should be selected and/or managed to ensure that it will not result in that vegetation breaching the Electricity (Hazards from Trees) Regulations 2003.

### **5.6.2 Setback from Network Utilities**

1. Earthworks must be set back at least 2.5m from any water mains and at least 1.5m from all other network utility structures, except:
  - a. earthworks within 12m of a National Grid support structure, which are managed through Rule 5.6.1;
  - Y. earthworks within 12m of Critical Electricity Distribution Infrastructure which are managed through Rule 5.6.X.2;
  - b. earthworks ancillary to network utility activities including earthworks associated with roading/accessways leading to and from network utility activities;
  - X. earthworks ancillary to the maintenance or replacement of underground fuel storage systems; and
  - c. earthworks ancillary to the operation, repair and maintenance of the roading network.
2. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 5.6.2A – Other requirements outside of the District Plan**

1. The New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001) contains restrictions on the location of earthworks in relation to electricity transmission and distribution lines. Compliance with this code is mandatory. Compliance with this Plan does not ensure compliance with NZECP 34:2001.

## 5.6.X Setback from Critical Electricity Distribution Infrastructure

### 5.6.X.1 Setback from Critical Electricity Distribution Infrastructure (buildings, structures and city-wide activities)

- a. New buildings, new structures, additions and alterations, public amenities, network utility activities (other than those necessary for the transmission and distribution of electricity) must not be located within the **Critical Electricity Distribution Infrastructure Corridor mapped area**.
- b. Activities are exempt from this standard if they meet the requirements of New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001).
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### Note 5.6.X.1A General advice

- a. The **Critical Electrical Distribution Infrastructure Corridor mapped area** is measured either side of the centreline of above ground Critical Electricity Distribution Infrastructure (except in the case of designated zone substations where the measurement is taken from the designation boundary), as follows:
  - i. 5m from the centreline if a 11kV line;
  - ii. 8.5m from the centreline of a 33kV line;
  - iii. 8.5m from the boundary of the designated zone substations; and
  - iv. 9.5m from the centreline of a 66kV or a 110kV line.

### 5.6.X.2 Setback from Critical Electricity Distribution Infrastructure (earthworks)

- a. Earthworks within the **Critical Electricity Distribution Infrastructure Corridor mapped area** must not exceed the following maximum depths within the following distances of Critical Electricity Distribution Infrastructure:

1. Distance from Critical Electricity Distribution Infrastructure		2. Maximum depth of earthworks
i.	Less than 2.2m from a support structure or stay wire of an overhead line	300mm
ii.	Between 2.2m and 5m from a support structure or stay wire of an overhead line	750mm
iii.	Less than 6m from the outer edge of the foundation of a support structure	300mm
iv.	Between 6m and 12m from the outer edge of the foundation of a support structure	3m

- b. Earthworks within 12m of Critical Electricity Distribution Infrastructure must not contravene the ground to conductor clearance distances required by Table 4 of the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001).
- c. Except that the following earthworks are exempt from the maximum depth requirements in Rule 5.6.X.2.a:
  - i. earthworks ancillary to the operation, repair, and maintenance of the roading network;
  - ii. earthworks for the repair, sealing or resealing of a driveway or vehicle track;
  - iii. earthworks that result in vertical holes less than 500mm in diameter, provided that the earthworks are located more than 1.5m from any Critical Electricity Infrastructure Distribution support structure or stay wire;
  - iv. earthworks associated with post holes for the erection of farm fences or horticulture structures, provided that the earthworks are located at least 5m from the outer edge of a Critical Electricity Infrastructure Distribution support structure; and

- v. earthworks ancillary to a network utility operation as defined in section 166 of the RMA and associated access tracks.
- d. Activities that contravene this performance standard are restricted discretionary activities.

**Note 5.6.X.2A – Other requirements outside of the District Plan**

1. The New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001) contains restrictions on the location of structures, buildings and activities near to overhead lines and underground cables. Compliance with this code is mandatory. Compliance with this Plan does not ensure compliance with NZECP 34:2001.
2. Work near Aurora Energy's overhead lines and power poles requires Close Approach consent. For more information contact Aurora Energy.
3. Vegetation to be planted near Critical Electricity Distribution Infrastructure should be selected and/or managed to ensure that it will not result in that vegetation breaching the Electricity (Hazards from Trees) Regulations 2003.

**Rule 5.7 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

**Rule 5.7.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 5.7.2 - 5.7.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 5.7.2 and 5.7.3 apply to network utility activities performance standards generally; Rule 5.7.4 applies to performance standards for setbacks from network utilities. Rule 5.7.5 contains additional provisions that apply to network utility activities performance standards in overlay zones and mapped areas and on scheduled items.

**5.7.2 Assessment of all performance standard contraventions**

Performance standard	Guidance on the assessment of resource consents
----------------------	---

<p>1. All performance standard contraventions</p>	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards, or site specific factors including topography, make meeting the standard impracticable.</li> <li>c. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a performance standard would improve the design of network utilities in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ul>
---	--

**5.7.3 Assessment of performance standard contraventions (network utility activities)**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
----------------------	-----------------------	---

<p>X. All performance standard contraventions by any network utility activity that forms part of the National Grid, and any ancillary activities including earthworks and vegetation clearance</p>	<p>a. Benefits of network utility activities</p> <p>b. Functional needs and operational needs of network utility activities</p> <p>c. Effects on character and amenity of the zone</p> <p>d. Effects on health and safety</p> <p>e. Effects on efficient and effective operation of network utilities</p>	<p>i. The objectives and policies referenced below apply, in addition to the objectives and policies referenced elsewhere in rules 5.7.3 and 5.7.4.</p> <p>ii. Objective 5.2.X.</p> <p>iii. The operation, repair, minor upgrading and maintenance of the National Grid, and any ancillary activities including earthworks and vegetation clearance, are enabled, while managing the adverse effects of these activities (Policy 5.2.X.1.a).</p> <p>iv. Where there is a conflict, Policy 5.2.X.1 prevails over other policies in Section 5, and all policies in Section 10 and Section 13 (Policy 5.2.X.1.b).</p> <p>v. The development of, major upgrades to, and new National Grid infrastructure, and any ancillary activities including earthworks and vegetation clearance are provided for, while managing adverse effects of these activities by all of the following:</p> <ol style="list-style-type: none"> <li>1. recognising there may be some areas in the coastal environment where avoidance of adverse effects is required to protect the identified special values of those areas;</li> <li>2. seeking to avoid adverse effects on the values of the following:             <ol style="list-style-type: none"> <li>1. areas of significant indigenous vegetation and significant habitats of indigenous fauna (including but not limited to scheduled Areas of Significant Biodiversity Value);</li> <li>2. outstanding natural features and outstanding natural landscape overlay zones;</li> <li>3. outstanding natural coastal character overlay zones; and</li> <li>4. scheduled heritage items and heritage precincts.</li> </ol> </li> <li>3. where it is not practical to avoid adverse effects on the values of the areas listed in ii. above because of the functional needs and operational needs of the National Grid, remedy or mitigate adverse effects on those values;</li> <li>4. avoiding, remedying or mitigating other adverse effects, including effects on the values of areas not covered in clause ii above; and</li> <li>5. consider offsetting for residual adverse effects on indigenous biological diversity (Policy 5.2.X.2.a).</li> </ol> <p>vi. Where there is a conflict, Policy 5.2.X.2 prevails over other policies in Section 5, and all policies in Section 10 and Section 13 (Policy 5.2.X.2.b).</p> <p>vii. In implementing Policy 5.2.X.2, have regard to:</p> <ol style="list-style-type: none"> <li>1. the extent to which adverse effects have been addressed through site, route or method selection; and</li> <li>2. for major upgrades, opportunities to reduce existing adverse effects (Policy 5.2.X.3).</li> </ol>
--	---	--

### 5.7.3 Assessment of performance standard contraventions (network utility activities)

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>1. All performance standard contraventions</p>	<p>a. Benefits of network utility activities</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 2.2.2, 2.3.1, 5.2.1</li> <li>ii. Policies 2.3.1.7, 2.2.2.3</li> <li>iii. Network utility activities are provided for throughout the city where: <ul style="list-style-type: none"> <li>X. this will have positive effects on economic, social and cultural well-being, public health and safety or resilience of communities; and</li> <li>Y. recognising their functional needs and operational needs, effects can be managed in line with policies 5.2.1.3, 5.2.1.4, 5.2.1.5, 5.2.1.6, 5.2.X.4, 5.2.X.5, 5.2.2.X and the objectives and policies of any relevant overlay zones, scheduled sites or mapped areas (Policy 5.2.1.2).</li> </ul> </li> <li>iv. The use and development of renewable energy generation is encouraged (Policy 5.2.1.1).</li> </ul> <p><i>General assessment guidance:</i></p> <p>In assessing the effects of the proposed activity, Council will consider:</p> <ul style="list-style-type: none"> <li>v. The potential social, economic, cultural and environmental benefits of the proposed activity, including but not limited to: <ul style="list-style-type: none"> <li>X. benefits of lifeline utilities to public health and safety, including resilience to natural hazards;</li> <li>Y. benefits of all network utilities to economic, social and cultural well-being; and</li> <li>Z. in the case of energy generation: <ul style="list-style-type: none"> <li>1. contributions to national energy objectives or renewable energy generation targets;</li> <li>2. the benefits, in terms of the efficient use of energy, of locating renewable energy generation close to end use and to electricity transmission or distribution infrastructure; and</li> <li>3. the benefits of having a distributed network for greater energy resilience.</li> </ul> </li> </ul> </li> </ul> <p><i>Potential circumstances which may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>vi. The proposed activity is essential to establish or maintain a network utility service.</li> </ul>

### 5.7.3 Assessment of performance standard contraventions (network utility activities)

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
	<p>b. Functional needs and operational needs of network utility activities</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 2.2.2, 2.3.1, 5.2.1</li> <li>ii. Policies 2.3.1.7, 2.2.2.3</li> <li>iii. Network utility activities are provided for throughout the city where: <ul style="list-style-type: none"> <li>X.this will have positive effects on economic, social and cultural well-being, public health and safety or resilience of communities; and</li> <li>Y. recognising their functional needs and operational needs, effects can be managed in line with policies 5.2.1.3, 5.2.1.4, 5.2.1.5, 5.2.1.6, 5.2.X.4, 5.2.X.5, 5.2.2.X and the objectives and policies of any relevant overlay zones, scheduled sites or mapped areas (Policy 5.2.1.2).</li> </ul> </li> <li>iv. The use and development of renewable energy generation is encouraged (Policy 5.2.1.1).</li> </ul> <p><i>General assessment guidance:</i></p> <p>In assessing the effects of the proposed activity, Council will consider:</p> <ul style="list-style-type: none"> <li>v. The constraints imposed on size, design and location by the functional needs and operational needs of the network utility. <ul style="list-style-type: none"> <li>AA. In accordance with Policy 2.3.1.7.X, in assessing the degree to which it is practicable to avoid or minimise adverse effects, Council will consider the functional needs and operational needs of network utilities.</li> </ul> </li> </ul>
2. Location	<p>a. Effects on character and amenity of the zone</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.1</li> <li>ii. Network utility structures are designed and located to enable the provision of network utilities while avoiding or, where avoidance is not practicable, adequately mitigating adverse effects on the amenity and character of the zone (Policy 5.2.1.3).</li> </ul> <p><i>Potential circumstances which may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Alternative sites, which would have lesser effects on character and amenity, have been considered but are impracticable for operational reasons.</li> <li>iv. Ground conditions, topography, or other site constraints make placing pipes underground impracticable.</li> </ul>

### 5.7.3 Assessment of performance standard contraventions (network utility activities)

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
3. Setback from coast and water bodies	a. Effects on biodiversity values and natural character of riparian margins and the coast	See Rule 10.5
	b. Effects on public access	
	c. Risk from natural hazards	See Rule 11.4
4. Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6
5. Technical standards	a. Effects on health and safety	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.1.</li> <li>ii. Network utility activities are located, designed and operated to ensure any risk to health and safety is avoided or minimised as far as practicable (Policy 5.2.1.4).</li> </ul> <p><i>Potential circumstances which may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Contravention of the performance standard does not result in a safety risk.</li> </ul>
6. <ul style="list-style-type: none"> <li>• Design standards for wind generators</li> <li>• Setbacks for wind generators</li> </ul>	a. Effects on character and amenity of zone	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.1</li> <li>ii. Network utility structures are designed and located to enable the provision of network utilities while avoiding or, where avoidance is not practicable, adequately mitigating adverse effects on the amenity and character of the zone (Policy 5.2.1.3).</li> </ul> <p><i>Potential circumstances which may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The visibility of wind generators outside the site is limited by their location within the site, or by vegetation, existing buildings and structures, natural landforms or topography.</li> <li>iv. The scale or design is consistent or compatible with surrounding buildings or structures.</li> </ul>
7. Site coverage	a. Effects on character and amenity of zone	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.1</li> <li>ii. Network utility structures are designed and located to enable the provision of network utilities while avoiding or, where avoidance is not practicable, adequately mitigating adverse effects on the amenity and character of the zone (Policy 5.2.1.3).</li> </ul>

### 5.7.3 Assessment of performance standard contraventions (network utility activities)

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
8.	Maximum height (underground or internal network utilities)	a. Effects on character and amenity of zone	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.1</li> <li>ii. Network utility structures are designed and located to enable the provision of network utilities while avoiding or, where avoidance is not practicable, adequately mitigating adverse effects on the amenity and character of the zone (Policy 5.2.1.3).</li> </ul>

#### 5.7.4 Assessment of performance standard contraventions (setbacks from network utilities)

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Setback from network utilities (earthworks)	a. Effects on health and safety	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.2</li> <li>ii. Earthworks are set back an adequate distance from network utilities to avoid adverse effects on the health and safety of people (Policy 5.2.2.1.c).</li> </ul>
	b. Effects on efficient and effective operation of network utilities	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.2</li> <li>ii. Earthworks are set back an adequate distance from network utilities to avoid:               <ul style="list-style-type: none"> <li>1. damage to existing network utilities (Policy 5.2.2.1.a); and</li> <li>2. obstruction of access to existing underground network utilities (Policy 5.2.2.1.b).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The network utility owner or operator has provided written approval for the proposed earthworks.</li> <li>iv. Earthworks comply with the NZ Electrical Code of Practice for Electrical Safe Distances 34:2001.</li> </ul>

#### 5.7.5 Assessment of restricted discretionary performance standard contraventions in an overlay zone or mapped area, or affecting a scheduled item

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In a <b>primary</b> or <b>secondary pedestrian street frontage mapped area</b> : <ul style="list-style-type: none"> <li>• Location (Rule 5.5.2.1.a)</li> <li>• Maximum volume in <b>pedestrian street frontage mapped areas</b>, heritage precincts and scheduled heritage sites</li> </ul>	a. Effects on pedestrian amenity	See Rule 18.9
2. In a heritage precinct: <ul style="list-style-type: none"> <li>• Location (Rule 5.5.2.1.b, Rule 5.5.2.3)</li> <li>• Maximum volume in <b>pedestrian street frontage mapped areas</b>, heritage precincts and scheduled heritage sites</li> </ul>	a. Effects on heritage streetscape character	See Rule 13.5
3. On a scheduled heritage site: <ul style="list-style-type: none"> <li>• Maximum volume in <b>pedestrian street frontage mapped areas</b>, heritage precincts and scheduled heritage sites</li> </ul>	a. Effects on heritage values	See Rule 13.5

**5.7.5 Assessment of restricted discretionary performance standard contraventions in an overlay zone or mapped area, or affecting a scheduled item**

Activity		Matters of discretion	Guidance on the assessment of resource consents
4.	In the NCC Overlay Zone: <ul style="list-style-type: none"> <li>Location (Rule 5.5.2.1.c)</li> </ul>	a. Effects on natural character of the coast	See Rule 10.5
X.	In a <b>wāhi tūpuna mapped area</b> : <ul style="list-style-type: none"> <li>Setback from coast and water bodies</li> </ul>	a. Effects on cultural values of Manawhenua	See Rule 14.3.
Y.	In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> : <ul style="list-style-type: none"> <li>Setback from Critical Electricity Distribution Infrastructure (buildings, structures and city-wide activities)</li> <li>Setback from Critical Electricity Distribution Infrastructure (earthworks)</li> </ul>	a. Effects on health and safety	<i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>Objective 5.2.2.</li> <li>Any risk to health and safety is avoided or minimised as far as practicable (Policy 5.2.2.X.a).</li> </ol>

**5.7.5 Assessment of restricted discretionary performance standard contraventions in an overlay zone or mapped area, or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>b. Effects on efficient and effective operation of network utilities</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.2.</li> <li>ii. Adverse effects on the operation, maintenance, upgrading and development of the Critical Electricity Distribution Infrastructure are avoided or, if avoidance is not practicable, insignificant (Policy 5.2.2.X.b).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. Council will generally refuse consent if earthworks do not comply with Section 2 of the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001).</li> <li>iv. In assessing effects on health and safety, Council will consider whether the activity creates a risk of electrical hazard that affects public or individual safety or property.</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>v. Earthworks do not compromise the structural integrity of the Critical Electricity Distribution Infrastructure, or the ability to gain access to infrastructure for maintenance.</li> <li>vi. Written approval is obtained from the owner and/or operator of the Critical Electricity Distribution Infrastructure.</li> </ul>

**5.7.5 Assessment of restricted discretionary performance standard contraventions in an overlay zone or mapped area, or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>Z. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (forestry)</li> </ul>	<p>a. Effects on health and safety</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>Objective 5.2.2.</li> <li>The risk of safety hazards caused by trees falling onto Critical Electricity Distribution Infrastructure is avoided or minimised as far as practicable (Policy 5.2.2.Z).</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>Written approval is obtained from the owner and/or operator of the Critical Electricity Distribution Infrastructure.</li> <li>The proposal complies with the Electricity (Hazards from Trees) Regulations 2003.</li> </ol>

## **Rule 5.8 Assessment of Restricted Discretionary Activities**

### **Rule 5.8.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 5.8.2 - 5.8.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rule 5.8.2 applies to network utility activities generally; Rule 5.8.3 contains additional provisions that apply to network utility activities in overlay zones, mapped areas, heritage precincts, and on scheduled items; Rule 5.8.4 contains additional provisions that apply to subdivision activities in the **radio transmitters mapped area**; Rule 5.8.5 contains additional provisions that apply to subdivision activities in the **National Grid Subdivision Corridor mapped area**. Rule 5.8.X.1 contains additional provisions that apply to subdivision activities in the **Critical Electricity Distribution Infrastructure Corridor mapped area**.
4. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 5.7; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 5.9; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 5.10; and
    - iii. the assessment guidance in this section will also be considered.

**5.8.2 Assessment of restricted discretionary network utility activities**

Activity	Matters of discretion	Guidance on the assessment of resource consents
----------	-----------------------	---

<p>X. Any restricted discretionary network utility activity that forms part of the National Grid, and any ancillary activities including earthworks and vegetation clearance</p>	<p>a. Benefits of network utility activities</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. The objectives and policies referenced below apply, in addition to the objectives and policies referenced elsewhere in Rule 5.8.2.</li> <li>ii. Objective 5.2.X.</li> <li>iii. The operation, repair, minor upgrading and maintenance of the National Grid, and any ancillary activities including earthworks and vegetation clearance, are enabled, while managing the adverse effects of these activities (Policy 5.2.X.1.a).</li> <li>iv. Where there is a conflict, Policy 5.2.X.1 prevails over other policies in Section 5, and all policies in Section 10 and Section 13 (Policy 5.2.X.1.b)</li> <li>v. The development of, major upgrades to, and new National Grid infrastructure, and any ancillary activities including earthworks and vegetation clearance are provided for, while managing adverse effects of these activities by all of the following:               <ul style="list-style-type: none"> <li>1. recognising there may be some areas in the coastal environment where avoidance of adverse effects is required to protect the identified special values of those areas;</li> <li>2. seeking to avoid adverse effects on the values of the following:                   <ul style="list-style-type: none"> <li>1. areas of significant indigenous vegetation and significant habitats of indigenous fauna (including but not limited to scheduled Areas of Significant Biodiversity Value);</li> <li>2. outstanding natural features and outstanding natural landscape overlay zones;</li> <li>3. outstanding natural coastal character overlay zones; and</li> <li>4. scheduled heritage items and heritage precincts;</li> </ul> </li> <li>3. where it is not practicable to avoid adverse effects on the values of the areas listed in ii. above because of the functional needs and operational needs of the National Grid, remedy or mitigate adverse effects on those values;</li> <li>4. avoiding, remedying or mitigating other adverse effects, including effects on the values of areas not covered in clause ii above; and</li> <li>5. consider offsetting for residual adverse effects on indigenous biological diversity (Policy 5.2.X.2.a).</li> </ul> </li> <li>vi. Where there is a conflict, Policy 5.2.X.2 prevails over other policies in Section 5, and all policies in Section 10 and 13 (Policy 5.2.X.2.b).</li> <li>vii. In implementing Policy 5.2.X.2, have regard to:               <ul style="list-style-type: none"> <li>1. the extent to which adverse effects have been addressed through site, route or method selection; and</li> <li>2. for major upgrades, opportunities to reduce existing adverse effects (Policy 5.2.X.3).</li> </ul> </li> </ul>
	<p>b. Functional needs and operational needs of network utility activities</p>	
	<p>c. Effects on character and amenity of the zone</p>	
	<p>d. Effects on surrounding sites' residential amenity</p>	

### 5.8.2 Assessment of restricted discretionary network utility activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>1. All restricted discretionary network utility activities</p>	<p>a. Benefits of network utility activities</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 2.2.2, 2.3.1, 5.2.1</li> <li>ii. Policies 2.3.1.7, 2.2.2.3, 2.2.1.11</li> <li>iii. Network utility activities are provided for throughout the city where: <ul style="list-style-type: none"> <li>X. this will have positive effects on economic, social and cultural well-being, public health and safety or resilience of communities; and</li> <li>Y. recognising their functional needs and operational needs, effects can be managed in line with policies 5.2.1.3, 5.2.1.4, 5.2.1.5, 5.2.1.6, 5.2.X.4, 5.2.X.5, 5.2.2.X and the objectives and policies of any relevant overlay zone, scheduled site or mapped area (Policy 5.2.1.2).</li> </ul> </li> <li>iv. The use and development of renewable energy generation is encouraged (Policy 5.2.1.1).</li> </ul> <p><i>General assessment guidance:</i></p> <p>In assessing the effects of the proposed activity, Council will consider:</p> <ul style="list-style-type: none"> <li>v. The potential social, economic, cultural and environmental benefits of the proposed activity, including, but not limited to: <ul style="list-style-type: none"> <li>X. benefits of lifeline utilities to public health and safety, including resilience to natural hazards;</li> <li>Y. benefits of all network utilities to economic, social and cultural well-being; and</li> <li>Z. in the case of energy generation; <ul style="list-style-type: none"> <li>1. contributions to national energy objectives or renewable energy generation targets;</li> <li>2. the benefits, in terms of the efficient use of energy, of locating renewable energy generation close to end use and to electricity transmission or distribution infrastructure; and</li> <li>3. the benefits of having a distributed network for greater energy resilience.</li> </ul> </li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>vi. The proposed activity is necessary to establish or maintain a network utility service.</li> </ul>

### 5.8.2 Assessment of restricted discretionary network utility activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>b. Functional needs and operational needs of network utility activities</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 2.2.2, 2.3.1, 5.2.1</li> <li>ii. Policies 2.3.1.7, 2.2.2.3</li> <li>iii. Network utility activities are provided for throughout the city where: <ul style="list-style-type: none"> <li>X. this will have positive effects on economic, social and cultural well-being, public health and safety or resilience of communities; and</li> <li>Y. recognising their functional needs and operational needs, effects can be managed in line with policies 5.2.1.3, 5.2.1.4, 5.2.1.5, 5.2.1.6, 5.2.X.4, 5.2.X.5, 5.2.2.X and the objectives and policies of any relevant overlay zone, scheduled site or mapped area (Policy 5.2.1.2).</li> </ul> </li> <li>iv. The use and development of renewable energy generation is encouraged (Policy 5.2.1.1).</li> </ul> <p><i>General assessment guidance:</i></p> <p>In assessing the effects of the proposed activity, Council will consider:</p> <ul style="list-style-type: none"> <li>v. The constraints imposed on size, design and location by the functional needs and operational needs of the network utility.</li> <li>X. In accordance with Policy 2.3.1.7.X, in assessing the degree to which it is practicable to avoid or minimise adverse effects, Council will consider the functional needs and operational needs of network utilities.</li> </ul>

### 5.8.2 Assessment of restricted discretionary network utility activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>c. Effects on character and amenity of zone</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.1</li> <li>ii. Network utilities are designed and located to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on visual amenity and the character of the zone in which the activity is located (Policy 5.2.1.5.a).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Where practicable, the network utility is designed, located or screened to be unobtrusive.</li> <li>iv. The same network utility poles or masts are to be used to support multiple network utilities.</li> <li>v. The scale or design is consistent or compatible with surrounding buildings or structures.</li> <li>vi. The visibility of the network utility is limited by vegetation, existing buildings or structures and/or natural landforms or topography.</li> <li>vii. Alternative sites, which would have lesser effects on character and amenity, have been considered but are impracticable for operational reasons.</li> <li>viii. Sunlight admission to the footpath and street is maintained.</li> <li>ix. The structure is not situated on visually prominent rural zoned land.</li> <li>x. Landscaping is used to screen the structure from public viewpoints.</li> </ul>
	<p>d. Effects on surrounding sites' residential amenity</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.1</li> <li>ii. Network utilities are designed and located to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the amenity of any surrounding residential activities (Policy 5.2.1.5.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Alternative sites, which would have lesser effects on the amenity of surrounding residential activities, have been considered but are impracticable for operational reasons.</li> </ul>

**5.8.3 Assessment of restricted discretionary network utility activities in an overlay zone, mapped area, heritage precinct, or scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>1. In the <b>ONF Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Network utility structures - large scale (amateur radio configurations only)</li> <li>• Network utility poles and masts - small scale</li> <li>• Wind generators - small scale</li> <li>• Hydro generators - small scale</li> <li>• Solar panels - small scale</li> <li>• All other network utility structures - small scale</li> </ul>	<p>a. Effects on landscape values</p>	<p>See Rule 10.6.</p>
<p>2. In the <b>HNCC or ONCC overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• Network utility structures - large scale (amateur radio configurations only)</li> <li>• Network utility poles and masts - small scale</li> <li>• Wind generators - small scale</li> <li>• Hydro generators - small scale</li> <li>• Solar panels - small scale</li> <li>• All other network utility structures - small scale</li> </ul>	<p>a. Effects on natural character of the coast</p>	<p>See Rule 10.6.</p>
<p>3. In an <b>ASBV</b>:</p> <ul style="list-style-type: none"> <li>• Network utility poles and masts - small scale</li> <li>• Wind generators - small scale</li> <li>• Hydro generators - small scale</li> <li>• Solar panels - small scale</li> </ul>	<p>a. Effects on biodiversity values</p>	<p>See Rule 10.6.</p>

**5.8.3 Assessment of restricted discretionary network utility activities in an overlay zone, mapped area, heritage precinct, or scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>4. In a <b>wāhi tūpuna mapped area</b> where network utility activities are identified as a threat in Appendix A4:</p> <ul style="list-style-type: none"> <li>• Network utility structures - large scale (amateur radio configurations only)</li> <li>• Network utility poles and masts - small scale</li> <li>• Wind generators - small scale</li> <li>• Hydro generators - small scale</li> <li>• Solar panels - small scale</li> <li>• All other network utility structures - small scale</li> </ul>	<p>a. Effects on cultural values of Manawhenua</p>	<p>See Rule 14.4.</p>
<p>5. In the <b>SNL or ONL overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• Network utility poles and masts - small scale</li> <li>• Wind generators - small scale</li> <li>• Hydro generators - small scale</li> <li>• Solar panels - small scale</li> </ul>	<p>a. Effects on landscape values</p>	<p>See Rule 10.6.</p>
<p>6. In the <b>NCC Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Network utility poles and masts - small scale</li> <li>• Wind generators - small scale</li> <li>• Hydro generators - small scale</li> <li>• Solar panels - small scale</li> </ul>	<p>a. Effects on natural character of the coast</p>	<p>See Rule 10.6.</p>
<p>7. All restricted discretionary activities due to affecting <b>scheduled heritage sites</b></p> <ul style="list-style-type: none"> <li>• Network utility poles and masts - small scale</li> <li>• Wind generators - small scale</li> <li>• Hydro generators - small scale</li> <li>• Solar panels - small scale</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.6.</p>

### 5.8.3 Assessment of restricted discretionary network utility activities in an overlay zone, mapped area, heritage precinct, or scheduled item

Activity	Matters of discretion	Guidance on the assessment of resource consents
8. All restricted discretionary activities due to being in a <b>heritage precinct</b> <ul style="list-style-type: none"> <li>• Network utility poles and masts - small scale</li> <li>• Wind generators - small scale</li> <li>• Hydro generators - small scale</li> <li>• Solar panels - small scale</li> </ul>	a. Effects on heritage streetscape character	See Rule 13.6.

### 5.8.4 Assessment of subdivision activities within the radio transmitters mapped area

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. General subdivision	a. Reverse sensitivity effects	<i>Relevant objectives and policies (priority considerations):</i> <ol style="list-style-type: none"> <li>Objective 5.2.2</li> <li>The potential for reverse sensitivity is avoided or minimised as far as practicable (Policy 5.2.2.5).</li> </ol>

### 5.8.5 Assessment of subdivision activities in the National Grid Corridor mapped area

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In the <b>National Grid Subdivision Corridor mapped area</b> : <ul style="list-style-type: none"> <li>• All subdivision activities</li> </ul>	a. Risk to the safety of people and property	<i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>Objective 5.2.X.</li> <li>Subdivision in the <b>National Grid Subdivision Corridor mapped area</b> is designed to ensure that any future land use and development will avoid or minimise as far as practicable the risk to the safety of people and property (Policy 5.2.X.6.a).</li> </ol> <p><i>General assessment guidance:</i></p> <p>In assessing risk to the safety of people and property, Council will consider:</p> <p>X. the extent to which the subdivision allows for earthworks, buildings and structures to comply with the safe separation distance requirements in the New Zealand Code of Practice for Safe Electrical Distances (NZECP 34:2001);</p> <p>Y. the extent to which the design and construction of the subdivision allows for activities to be setback from the National Grid to ensure adverse effects on public safety and property are appropriately managed; and</p> <p>Z. the outcome of any consultation with Transpower New Zealand Limited (being the owner and operator of the National Grid).</p>

### 5.8.5 Assessment of subdivision activities in the National Grid Corridor mapped area

Activity	Matters of discretion	Guidance on the assessment of resource consents
	b. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.X.</li> <li>ii. Subdivision in the <b>National Grid Subdivision Corridor mapped area</b> is designed to ensure that any future land use and development will avoid reverse sensitivity effects on the National Grid (Policy 5.2.X.6.b).</li> </ul> <p><i>General assessment guidance:</i></p> <p>In assessing reverse sensitivity effects, Council will consider:</p> <ul style="list-style-type: none"> <li>X. the extent to which the subdivision is designed to ensure that any associated future land use and development will avoid reverse sensitivity effects on the National Grid, including through the location of building platforms;</li> <li>Y. the extent to which the design and construction of the subdivision allows for activities to be setback from the National Grid to ensure adverse effects on, and from, the National Grid are appropriately managed; and</li> <li>Z. the outcome of any consultation with Transpower New Zealand Limited (being the owner and operator of the National Grid).</li> </ul>
	c. Effects on efficient and effective operation of the National Grid and access to it	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.X.</li> <li>ii. Subdivision in the <b>National Grid Subdivision Corridor mapped area</b> is designed to ensure that any future land use and development will not compromise the operation, maintenance, upgrading and development of the National Grid, or access to it (Policy 5.2.X.6.c).</li> </ul> <p><i>General assessment guidance:</i></p> <p>In assessing effects on the efficient and effective operation of the National Grid and access to it, Council will consider:</p> <ul style="list-style-type: none"> <li>X. the extent to which the subdivision allows for earthworks, buildings and structures to comply with the safe separation distance requirements in the New Zealand Code of Practice for Safe Electrical Distances (NZECP 34:2001);</li> <li>Y. the provision for the on-going efficient operation, maintenance, development and upgrade of the National Grid, including the ability for continued reasonable access to existing transmission lines for maintenance, inspections and upgrading;</li> <li>Z. the nature and location of any proposed vegetation to be planted in the vicinity of the National Grid; and</li> <li>AA. the outcome of any consultation with Transpower New Zealand Limited (being the owner and operator of the National Grid).</li> </ul>

### 5.8.X Assessment of subdivision activities in the Critical Electricity Distribution Infrastructure Corridor mapped area

Activity	Matters of discretion	Guidance on the assessment of resource consents

<p>1. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b>:</p> <ul style="list-style-type: none"> <li>All subdivision activities</li> </ul>	<p>a. Effects on health and safety</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>Objective 5.2.2.</li> <li>Subdivision in the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> is designed to ensure that any associated future land use and development will avoid effects on the health and safety of people (Policy 5.2.2.Y.a).</li> </ul> <p><i>Design considerations that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>The design and layout of the subdivision allows for earthworks, buildings and structures to comply with the safe separation distance requirements in the New Zealand Code of Practice for Safe Electrical Distances (NZECP 34:2001).</li> <li>In assessing effects on health and safety, Council will consider whether the activity creates a risk of electrical hazard that affects public or individual safety or property.</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>Written approval is obtained from the owner and/or operator of the electricity infrastructure.</li> </ul>
	<p>b. Reverse sensitivity effects</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>Objective 5.2.2.</li> <li>Subdivision in the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> is designed to ensure that any associated future land use and development will avoid or minimise the potential for reverse sensitivity (Policy 5.2.2.Y.c).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>Written approval is obtained from the owner and/or operator of the Critical Electricity Distribution Infrastructure.</li> </ul>

**5.8.X Assessment of subdivision activities in the Critical Electricity Distribution Infrastructure Corridor mapped area**

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>c. Effects on efficient and effective operation of network utilities</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 5.2.2.</li> <li>ii. Subdivision in the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> is designed to ensure that any associated future land use and development will avoid or, where avoidance is not practicable, have not more than insignificant effects on the operation, maintenance, upgrading and development of the electricity infrastructure (Policy 5.2.2.Y.b).</li> </ul> <p><i>Design considerations that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The design and layout of the subdivision clearly identifies the Critical Electricity Distribution Infrastructure and:               <ul style="list-style-type: none"> <li>1. ensures continued access to existing lines for maintenance, inspections and upgrading;</li> <li>2. provides for the on-going efficient operation, maintenance, development and upgrade of the Critical Electricity Distribution Infrastructure;</li> <li>3. enables roads and reserves to be located near to or under lines and building platforms away from lines; and</li> <li>4. allows buildings and structures to be located and orientated and vegetation positioned in a way that meets the policy test in Policy 5.2.2.Y.b.</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Written approval is obtained from the owner and/or operator of the Critical Electricity Distribution Infrastructure.</li> </ul>

## Rule 5.9 Assessment of Discretionary Activities

### Rule 5.9.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 5.9.2 - 5.9.4 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.

5.9.2 Assessment of discretionary network utility activities	
Activity	Guidance on the assessment of resource consents
1. All discretionary activities, including but not limited to the activities listed below	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objectives 5.2.1, 5.2.X, 2.2.2, 2.3.1, 10.2.1, 2.2.2.3</p> <p>X. The operation, repair, minor upgrading and maintenance of the National Grid, and any ancillary activities including earthworks and vegetation clearance, are enabled, while managing the adverse effects of these activities (Policy 5.2.X.1.a).</p> <p>Y. Where there is a conflict, Policy 5.2.X.1 prevails over other policies in Section 5, and all policies in Section 10 and Section 13. (Policy 5.2.X.1.b).</p> <p>Z. The development of, major upgrades to, and new National Grid infrastructure, and any ancillary activities including earthworks and vegetation clearance are provided for, while managing adverse effects of these activities by all of the following:</p> <ol style="list-style-type: none"> <li>i. recognising there may be some areas in the coastal environment where avoidance of adverse effects is required to protect the identified special values of those areas;</li> <li>ii. seeking to avoid adverse effects on the values of the following:           <ol style="list-style-type: none"> <li>1. areas of significant indigenous vegetation and significant habitats of indigenous fauna (including but not limited to scheduled Areas of Significant Biodiversity Value);</li> <li>2. outstanding natural features and outstanding natural landscape overlay zones;</li> <li>3. outstanding natural coastal character overlay zones;</li> <li>4. scheduled heritage items and heritage precincts</li> </ol> </li> <li>iii. where it is not practicable to avoid adverse effects on the values of the areas listed in ii. above because of the functional needs and operational needs of the National Grid, remedy or mitigate adverse effects on those values;</li> <li>iv. avoiding, remedying or mitigating other adverse effects, including effects on the values of areas not covered in clause ii above;</li> </ol> <p>and</p>

### 5.9.2 Assessment of discretionary network utility activities

Activity	Guidance on the assessment of resource consents
	<p>v. consider offsetting for residual adverse effects on indigenous biological diversity (Policy 5.2.X.2.a).</p> <p>aa. Where there is a conflict, Policy 5.2.X.2 prevails over other policies in Section 5, and all policies in Section 10 and Section 13 (Policy 5.2.X.2.b).</p> <p>bb. In implementing Policy 5.2.X.2, have regard to:</p> <ul style="list-style-type: none"> <li>i. the extent to which adverse effects have been addressed through site, route or method selection; and</li> <li>ii. for major upgrades, opportunities to reduce existing adverse effects (Policy 5.2.X.3).</li> </ul> <p>b. Network utility activities are provided for throughout the city where:</p> <ul style="list-style-type: none"> <li>X. this will have positive effects on economic, social and cultural well-being, public health and safety or resilience of communities; and</li> <li>Y. recognising their functional needs and operational needs, effects can be managed in line with policies 5.2.1.3, 5.2.1.4, 5.2.1.5, 5.2.1.6, 5.2.X.4, 5.2.X.5, 5.2.2.X and the objectives and policies of any relevant overlay zone, scheduled site or mapped area (Policy 5.2.1.2).</li> </ul> <p>c. The use and development of renewable energy generation is encouraged (Policy 5.2.1.1).</p> <p>d. Network utilities are designed and located to avoid or, if avoidance is not practicable, adequately mitigate:</p> <ul style="list-style-type: none"> <li>i. adverse effects on visual amenity and the character of the zone in which the activity is located; and</li> <li>ii. adverse effects on the amenity of any surrounding residential activities (Policy 5.2.1.5).</li> </ul> <p><i>General assessment guidance:</i></p> <p>e. In assessing the effects of the activity, Council will consider:</p> <ul style="list-style-type: none"> <li>i. the potential social, economic, cultural and environmental benefits of the proposed activity, including, but not limited to: <ul style="list-style-type: none"> <li>X. benefits of lifeline utilities to public health and safety, including resilience to natural hazards;</li> <li>Y. benefits of all network utilities to economic, social and cultural well-being; and</li> <li>Z. in the case of energy generation; <ol style="list-style-type: none"> <li>1. contributions to national energy objectives and renewable energy generation targets;</li> <li>2. the benefits, in terms of the efficient use of energy, of locating renewable energy generation close to end use and to electricity transmission or distribution infrastructure; and</li> <li>3. the benefits of having a distributed network for greater energy resilience; and</li> </ol> </li> </ul> </li> <li>ii. the constraints imposed on size, design and location by the functional needs and operational needs of the network utility or energy generation activity.</li> </ul> <p>cc. In accordance with Policy 2.3.1.7.X, in assessing the degree to which it is practicable to avoid or minimise adverse effects, the Council</p>

### 5.9.2 Assessment of discretionary network utility activities

Activity	Guidance on the assessment of resource consents
	<p>will consider the functional needs and operational needs of network utilities.</p> <p>f. In assessing activities that are discretionary due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>g. The proposed activity is essential for the effective operation of a network utility.</p> <p>h. The proposed activity is to be undertaken in accordance with relevant industry standards.</p> <p>i. The utility is not located on visually prominent land.</p> <p>j. The visibility of the utility is limited by vegetation, existing building/structures, and/or natural forms or topography.</p> <p>k. Landscaping is used to screen the utility from public viewpoints.</p> <p>l. Wind generators - large scale are located a sufficient distance from dwellings to adequately mitigate adverse effects on amenity, taking into account factors such as: the number, scale and geographical spread of turbines; and the degree to which landform or vegetation reduces visual and noise effects from turbines on nearby dwellings.</p> <p>m. Alternative sites, which would have lesser effects on character or amenity, have been considered but are impracticable for operational reasons.</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>n. For activities that may have effects on biodiversity values, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1.</p> <p>o. For activities adjacent to water bodies and the coast, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.2.</p> <p>p. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</p>
<p>2. In the <b>SNL or ONL overlay zones:</b></p> <ul style="list-style-type: none"> <li>• Network utility structures - large scale other than amateur radio configurations</li> <li>• Solar panels - large scale</li> <li>• Hydro generators - large scale</li> <li>• Wind generators - large scale</li> <li>• Substations</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.5 and effects related to landscape values.</p>

### 5.9.2 Assessment of discretionary network utility activities

Activity	Guidance on the assessment of resource consents
<p>3. In an <b>ASBV</b>:</p> <ul style="list-style-type: none"> <li>• Network utility structures - large scale other than amateur radio configurations</li> <li>• Solar panels - large scale</li> <li>• Hydro generators - large scale</li> <li>• Wind generators - large scale</li> <li>• Substations</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and effects related to biodiversity values.</p>
<p>4. In the <b>NCC Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Network utility structures - large scale other than amateur radio configurations</li> <li>• Solar panels - large scale</li> <li>• Hydro generators - large scale</li> <li>• Wind generators - large scale</li> <li>• Substations</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.3 and effects related to the natural character of the coast.</p>
<p>5. On a <b>scheduled heritage site</b>:</p> <ul style="list-style-type: none"> <li>• Network utility structures - large scale other than amateur radio configurations</li> <li>• Solar panels - large scale</li> <li>• Hydro generators - large scale</li> <li>• Wind generators - large scale</li> <li>• Substations</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Rule 13.7 for guidance on the assessment of resource consents in relation to Objective 13.2.2 and effects on heritage values.</p>
<p>6. In a <b>heritage precinct</b>:</p> <ul style="list-style-type: none"> <li>• Network utility structures - large scale other than amateur radio configurations</li> <li>• Solar panels - large scale</li> <li>• Hydro generators - large scale</li> <li>• Wind generators - large scale</li> <li>• Substations</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Rule 13.7 for guidance on the assessment of resource consents in relation to Objective 13.2.3 and effects on heritage values.</p>
<p>7. All discretionary activities identified as a threat in a <b>wāhi tūpuna mapped area</b> in Appendix A4</p>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</p>

### 5.9.3 Assessment of discretionary performance standard contraventions

Performance standard		Guidance on the assessment of resource consents
1.	Noise - where the limit is exceeded by less than 5dB LAeq (15min)	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.
2.	Light spill - where the limit is exceeded by 25% or less	

### 5.9.4 Assessment of discretionary activities within the radio transmitters mapped area

Activity		Guidance on the assessment of resource consents
1.	All discretionary activities	<i>Relevant objectives and policies (priority considerations):</i> i. Objective 5.2.2 ii. The potential for reverse sensitivity is avoided or minimised as far as practicable (Policy 5.2.2.5).

## **Rule 5.10 Assessment of Non-complying Activities**

### **Rule 5.10.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 5.10.2 - 5.10.5 provide guidance on how a consent application for the listed non-complying activities will be assessed, but do not limit that assessment.

### 5.10.2 Assessment of all non-complying network utility activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying activities listed below</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.2.2, 2.7.1, 2.3.1, 5.2.1, 5.2.X.</li> <li>b. Policies 2.2.2.3, 2.3.1.7, 5.2.1.1, 5.2.1.2, 5.2.X.1, 5.2.X.2, 5.2.X.3.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. In assessing the significance of effects, consideration will be given to: <ul style="list-style-type: none"> <li>i. short and long term effects, including effects in combination with other activities;</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent; and</li> <li>iii. any effects otherwise managed through performance standards and consistent with all relevant objectives and policies for the zone.</li> </ul> </li> <li>d. In assessing the effects of the activity, the Council will consider: <ul style="list-style-type: none"> <li>i. the potential social, economic, cultural and environmental benefits of the proposed activity, including, but not limited to: <ul style="list-style-type: none"> <li>X. benefits of lifeline utilities to public health and safety, including resilience to natural hazards;</li> <li>Y. benefits of all network utilities to economic, social and cultural well-being; and</li> <li>Z. in the case of energy generation: <ul style="list-style-type: none"> <li>1. contributions to national energy objectives or renewable energy generation targets;</li> <li>2. the benefits in terms of the efficient use of energy of locating renewable energy generation close to end use and to electricity transmission or distribution infrastructure; and</li> <li>3. the benefits of having a distributed network for greater energy resilience;</li> </ul> </li> </ul> </li> <li>ii. the constraints imposed on size, design and location by the functional needs and operational needs of the network utility or energy generation activity; and</li> <li>iii. whether relevant industry standards are being complied with.</li> </ul> </li> <li>e. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered. <ul style="list-style-type: none"> <li>X. In accordance with Policy 2.3.1.7.X, in assessing the degree to which an option is practicable, the Council will consider the functional needs and operational needs of network utilities.</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>f. NA.</li> </ul> <p><i>Relevant guidance from other sections:</i></p>

### 5.10.2 Assessment of all non-complying network utility activities

Activity	Guidance on the assessment of resource consents
	<p>g. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</p> <p>h. For activities that may have effects on biodiversity values, see Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1.</p> <p>i. For activities adjacent to water bodies and the coast see Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.2.</p>

### 5.10.3 Assessment of non-complying network utility activities

Activity	Guidance on the assessment of resource consents
<p>1. In the <b>HNCC or ONCC Overlay Zones</b>:</p> <ul style="list-style-type: none"> <li>• Hydro generators - large scale</li> <li>• Solar panels - large scale</li> <li>• Wind generators - large scale</li> <li>• Network utility structures - large scale other than amateur radio configurations</li> <li>• Substations</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.3 and effects related to the natural character of the coast.</p>
<p>2. In the <b>ONF Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Hydro generators - large scale</li> <li>• Solar panels - large scale</li> <li>• Wind generators - large scale</li> <li>• Network utility structures - large scale other than amateur radio configurations</li> <li>• Substations</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.5 and effects related to landscape values.</p>
<p>3. All non-complying activities identified as a threat in a <b>wāhi tūpuna mapped area</b> in Appendix A4</p>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</p>

### 5.10.4 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1. • Clearance from navigable water body (Rule 5.5.5)</p> <p>• Technical standards - Maximum gauge pressure (Rule 5.5.10.2)</p>	<p><i>Relevant objectives and policies:</i></p> <p>a. Objective 5.2.1.</p> <p>b. Policy 5.2.1.4.</p>
<p>2. Light spill - where the limit is exceeded by greater than 25%</p>	<p><i>Relevant guidance from other sections:</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</p>
<p>3. Network utility structures - small scale - location within an ONF (Rule 5.5.2.4)</p>	<p><i>Relevant guidance from other sections:</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.5 and effects related to landscape values.</p>

#### 5.10.4 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
4. Noise - where the limit is exceeded by 5bD LAeq (15 min) or more	<p><i>Relevant guidance from other sections:</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>
5. <ul style="list-style-type: none"> <li>• Setback from National Grid (buildings, structures, city-wide activities and National Grid sensitive activities (Rule 5.6.1.1))</li> <li>• Setback from National Grid (earthworks) (Rule 5.6.1.2)</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2) - Setback from National Grid</li> <li>• Setback from National Grid (subdivision activities) (Rule 5.6.1.X and rules 15.7.X, 16.7.X, 17.7.X, 18.7.X, 19.7.X, 20.7.X)</li> </ul>	<p><i>Relevant objectives and policies:</i></p> <p>a. Objective 5.2.X.</p> <p>X. Activities within the National Grid Yard, including but not limited to National Grid sensitive activities, are avoided where these will:</p> <ol style="list-style-type: none"> <li>i. compromise the operation, maintenance, upgrade and development of the National Grid; or</li> <li>ii. result in reverse sensitivity effects on the National Grid (Policy 5.2.X.5).</li> </ol> <p>Y. Subdivision activities are only allowed within the <b>National Grid Subdivision Corridor mapped area</b> where the subdivision is designed to ensure that any future land use and development will:</p> <ol style="list-style-type: none"> <li>i. avoid or minimise as far as practicable the risk to the safety of people and property;</li> <li>ii. avoid the reverse sensitivity effects on the National Grid; and</li> <li>iii. not compromise the operation, maintenance, upgrade and development of the National Grid, or access to it (Policy 5.2.X.6).</li> </ol>

#### 5.10.5 Assessment of non-complying activities within the radio transmitters mapped area

Activity	Guidance on the assessment of resource consents
1. All non-complying activities	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>i. Objective 5.2.2</li> <li>ii. The potential for reverse sensitivity is avoided or minimised as far as practicable (Policy 5.2.2.5).</li> </ol>

## 6.1 Introduction

The transport network provides for the movement of people and goods, and is essential to the accessibility and functioning of the city. The establishment and use of an integrated transport network connects the city with other centres and countries, and within the city provides for the safe and efficient movement of all travel modes. The network includes: the Dunedin International Airport, the Port at Port Chalmers and the Port at Dunedin; railways; state highways and local roads; cycleways, footpaths and shared paths; and public transport routes and stops.

Responsible land use planning encourages development patterns that support a variety of travel modes, including walking, cycling, and public transport, for example by enabling dense residential development in close proximity to local services and/or the city centre.

The establishment, maintenance and use of transportation infrastructure can cause adverse effects on the surrounding environment including by reducing amenity where the use of land for vehicle parking has become dominant or by conflicting with the retention of heritage values or the promotion of good quality urban design. Such adverse effects need to be balanced with the practical transportation needs of the city.

In response to these issues, this Plan establishes a range of objectives, policies, and rules with the aim of achieving an integrated transport network that supports sustainable development and growth.

The Dunedin International Airport and the Port at Port Chalmers are managed as major facility zones: Sections 24 and 30 of this Plan contain provisions for these zones. The Port at Dunedin is managed as the Industrial Port Zone, under provisions in Section 19.

This section of the Plan manages other key elements of the transport network, including the operation and development of roads, and the establishment of passenger transportation hubs and heliports.

This section also manages the effects of activities on the functioning of the transport network. Provisions are intended to encourage the accessibility of land use activities by a range of travel modes (including car, walking, cycling, rail and public transport), and to ensure that activities are located and designed in a way that facilitates the safe and efficient operation of the transport network. These provisions are linked to performance standards located in management and major facility zone sections, including minimum mobility car parking and minimum vehicle loading requirements, and design standards for parking and loading areas and vehicle access.

Rail forms an integral part of Dunedin's transport network. Rail infrastructure including lines is provided for and managed through designations as well as various provisions within the Plan that enable the operation, repair and maintenance of the rail network. The Plan also uses performance standards to ensure that activities adjacent to the railway corridor are designed, located and maintained in such a way as to avoid adverse effects on the safe and efficient operation of the rail network. These standards include requirements for forestry and shelterbelts as well as buildings and structures to be set back from the rail network to ensure the safe and efficient operation of the railway and maintain people's health and safety and a requirement for acoustic insulation for noise sensitive activities near to the railway line to protect people from noise from the railway.

A road classification system is used to group roads into categories, thereby enabling provisions to be tailored to different categories of road, where appropriate. The classification reflects not only the transportation function of a road but also its role in creating a 'sense of place' and its contribution to the surrounding environment; taking into account the surrounding land use and the role the road plays in contributing to the amenity values, identity, and quality of the public space of the adjoining area.

The Plan contains additional provisions where activities are high trip generators. High trip generators are defined as new or additions to parking areas that result in 50 or more new parking spaces; and any activities that generate 250 or more vehicle movements per day. The additional provisions include:

- Special information requirements - High trip generators are generally required to provide an Integrated

Transport Assessment, in order to ensure that effects on accessibility, and on the safety and efficiency of the transport network, can be appropriately managed.

- Additional policies and assessment guidance.

These additional provisions apply to development activities that create 50+ car parks and any other RD/D/NC land use activities that are assessed as being likely to generate 250 or more vehicle movements per day.

## 6.2 Objectives and Policies

Objective 6.2.1	
<p>Transportation infrastructure is designed and located to ensure the safety and efficiency of the transport network for all travel modes while:</p> <ul style="list-style-type: none"> <li>a. minimising, as far as practicable, any adverse effects on the amenity and character of the zone; and</li> <li>b. meeting the relevant objectives and policies for any overlay zone, scheduled site, or mapped area in which it is located.</li> </ul>	
Policy 6.2.1.1	Enable the operation, repair and maintenance of the roading network and the operation, repair and maintenance of the rail network.
Policy 6.2.1.2	Require road signs to be designed and located to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the transport network for all travel modes.
Policy 6.2.1.3	<p>Only allow new roads or additions or alterations to existing roads where:</p> <ul style="list-style-type: none"> <li>a. the road is designed to provide for the needs of all users and to integrate with surrounding land uses as appropriate for the surrounding environment and <b>road classification hierarchy mapped area</b>; and</li> <li>b. the location and design of the road: <ul style="list-style-type: none"> <li>i. minimises, as far as practicable, adverse effects on surrounding residential or other sensitive activities, including severance effects, changes to drainage patterns, and vibration, noise, glare and fumes from vehicle movements; and</li> <li>ii. maintains or enhances the safety and efficiency of the overall transport network.</li> </ul> </li> </ul>
Policy 6.2.1.4	<p>Only allow passenger transportation hubs where they are located and designed to:</p> <ul style="list-style-type: none"> <li>a. allow for convenient connections with other travel modes;</li> <li>b. ensure the safety of users;</li> <li>c. maintain or enhance the safety and efficiency of the overall transport network; and</li> <li>d. maintain or enhance the amenity of the surrounding environment.</li> </ul>
Policy 6.2.1.5	<p>Only allow heliports where they are located and designed to:</p> <ul style="list-style-type: none"> <li>a. ensure the safety of users;</li> <li>b. maintain the amenity of the surrounding environment; and</li> <li>c. maintain or enhance the safety and efficiency of the overall transport network.</li> </ul>

### Objective 6.2.2

Land use activities are accessible by a range of travel modes.

Policy 6.2.2.1	Require land use activities whose mobility parking demand either cannot be met by the public parking supply, or would significantly affect the availability of that supply for surrounding activities, to provide mobility parking either on or near the site at an amount that is adequate to: <ul style="list-style-type: none"> <li>a. avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the availability of publicly available mobility parking in the vicinity of the site (including on-street parking and off-street facilities); and</li> <li>b. ensure accessibility for residents, visitors, customers, staff and students (as relevant) who have limited mobility, including disabled people, the elderly and people travelling with young children.</li> </ul>
Policy 6.2.2.2	Enable the sharing of parking areas by different land use activities, where adequate accessibility for all users is maintained.
Policy 6.2.2.3	Only allow visitor accommodation and supported living facilities to locate on sites where customers and residents will have convenient walking access to centres, or frequent public transport services; access to other appropriate transport services; and/or an appropriate range of on-site services or facilities.
Policy 6.2.2.4	Only allow activities that are likely to generate a significant number of trips by walking, cycling or public transport where: <ul style="list-style-type: none"> <li>a. for activities likely to generate trips by cycling, there will be safe access for cyclists into and through the site and sufficient secure cycle parking;</li> <li>b. for activities likely to generate trips by walking, there will be safe access for pedestrians into and through the site; and</li> <li>c. for activities likely to generate trips by public transportation, the activity will be located a reasonable walking distance from a frequent public transportation route with safe access for pedestrians from a bus stop to the site.</li> </ul>
Policy 6.2.2.X	Only allow medium density social housing in the General Residential 1 or Township and Settlement zones (except in a <b>no DCC reticulated wastewater mapped area</b> ) where it is located where there is convenient walking access to public transport services.

### Objective 6.2.3

Land use, development and subdivision activities maintain the safety and efficiency of the transport network for all travel modes and its affordability to the public.

Policy 6.2.3.1	Require ancillary signs to be located and designed to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the transport network.
Policy 6.2.3.2	Require shelterbelts and small woodlots and forestry to be set back a sufficient distance from: <ul style="list-style-type: none"> <li>a. roads to avoid or minimise, as far as practicable, road safety hazards caused by shading leading to ice formation; and</li> <li>b. railway lines to avoid or minimise, as far as practicable, the risk of trees falling across railway lines.</li> </ul>
Policy 6.2.3.3	Require land use activities to provide adequate vehicle loading and manoeuvring space to support their operations and to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the transport network.

### Objective 6.2.3

Land use, development and subdivision activities maintain the safety and efficiency of the transport network for all travel modes and its affordability to the public.

Policy 6.2.3.4	Require land use activities to ensure that any overspill parking effects that could adversely affect the safety and efficiency of the transport network are avoided or, if avoidance is not practicable, adequately mitigated.
Policy 6.2.3.5	Only allow domestic animal boarding and breeding, rural ancillary retail and rural tourism to be accessed directly from a state highway with a speed limit of 80kmh or over where any adverse effects on the safety and efficiency of the state highway will be avoided or, if avoidance is not practicable, adequately mitigated.
Policy 6.2.3.6	Only allow early childhood education and dairies where adequate short-term parking and dropping off and picking up facilities are available, either on-site or on-street, to: <ul style="list-style-type: none"> <li>a. allow for people to safely enter or exit vehicles; and</li> <li>b. maintain the safety and efficiency of the frontage road.</li> </ul>
Policy 6.2.3.7	Only allow emergency services where the operational needs of the activity can be met in a way that will maintain the safety and efficiency of the transport network.
Policy 6.2.3.8	Only allow high trip generators where they are designed and located to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the transport network.
Policy 6.2.3.9	Only allow land use and development activities or subdivision activities that may lead to land use or development activities, where: <ul style="list-style-type: none"> <li>a. adverse effects on the safety and efficiency of the transport network will be avoided or, if avoidance is not practicable, adequately mitigated; and</li> <li>b. any associated changes to the transportation network will be affordable to the public in the long term.</li> </ul>
Policy 6.2.3.10	Require garages and carports to be set back an adequate distance from the road boundary to allow pedestrians and cyclists to see vehicles exiting before they cross the footpath, and to minimise, as far as practicable, the risk to pedestrians and cyclists from garage doors opening over the footpath.
Policy 6.2.3.11	Require public amenities and signs located on or above the footpath to provide for the safe movement of vehicles, pedestrians and cyclists.

### Objective 6.2.3

Land use, development and subdivision activities maintain the safety and efficiency of the transport network for all travel modes and its affordability to the public.

Policy 6.2.3.12	<p>Only allow subdivision activities where roads, private ways and pedestrian and cycling connections are appropriate to the scale and location of the subdivision and are designed to:</p> <ol style="list-style-type: none"> <li>a. provide for the safe and efficient movement of vehicles, pedestrians and cyclists within the subdivision;</li> <li>b. provide connections to surrounding areas and the wider transport network, particularly for buses, pedestrians, and cyclists, in a way that maximises opportunities for active mode and public transport connections to existing or planned:             <ol style="list-style-type: none"> <li>i. centres, public open spaces, schools, cycleways, walkways, public transport stops, and community facilities in the surrounding environment; and</li> <li>ii. neighbouring urban land, including by providing appropriate connections to undeveloped land, whether zoned for future urban use or not, unless that land is inappropriate for urban development, based on the presence of overlay zones or mapped areas protecting significant values or indicating significant site constraints such as natural hazards; and</li> </ol> </li> <li>c. use materials that provide good urban design outcomes and, where infrastructure is to be vested in Council, provide good value with respect to on-going costs to ratepayers for maintenance.</li> </ol>
Policy 6.2.3.13	<p>Require service stations to be designed to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the transport network and its affordability to the public.</p>
Policy 6.2.3.X	<p>Require new buildings, new structures, and additions and alterations to be set back an adequate distance from the designated rail corridor to minimise, as far as practicable, the risk of objects or people crossing over or onto the rail corridor as a result of use or maintenance of the building or structure.</p>
Policy 6.2.3.Y	<p>Require subdivision activities to provide for new roads where:</p> <ol style="list-style-type: none"> <li>a. any proposed vehicle accessway will service more than 12 residential sites, or a development with an equivalent amount of vehicle trip demand, unless the location or design of the subdivision makes this inappropriate;</li> <li>b. it is necessary to provide connectivity to potential future urban growth areas in the surrounding environment; or</li> <li>c. it is otherwise necessary to support the safe and efficient operation of the transport network.</li> </ol>
Policy 6.2.3.Z	<p>Only allow multi-unit development and subdivision activities where the activity is designed to ensure:</p> <ol style="list-style-type: none"> <li>a. the safe and efficient operation of waste collection vehicles; and</li> <li>b. any on-street solid waste collection will not obstruct footpaths, private accessways or roads.</li> </ol>

### Objective 6.2.4

Parking areas, loading areas and vehicle accesses are designed and located to:

- a. provide for the safe and efficient operation of both the parking or loading area and the transport network; and
- b. facilitate the safe and efficient functioning of the transport network and connectivity for all travel modes.

Policy 6.2.4.1	<p>Require parking and loading areas, including associated manoeuvring and queuing areas, to be designed to ensure:</p> <ol style="list-style-type: none"> <li>the safety of pedestrians travelling on footpaths and travelling through parking areas;</li> <li>that vehicle parking and loading will be carried out safely and efficiently;</li> <li>that any adverse effects on the safe and efficient functioning of the transport network are avoided or, if avoidance is not practicable, will be no more than minor;</li> <li>the safe and convenient access to and from parking and loading areas for vehicles, emergency vehicles, pedestrians and cyclists; and</li> <li>that mud, stone, gravel or other materials are unlikely to be carried onto hard surface public roads or footpaths.</li> </ol>
Policy 6.2.4.2	<p>Require driveways to be designed to ensure that:</p> <ol style="list-style-type: none"> <li>the surfacing and gradient of the driveway allows it to be used safely and efficiently;</li> <li>mud, stone, gravel or other materials are unlikely to be carried onto hard surface public roads or footpaths;</li> <li>the width of the driveway is sufficient to allow the type and number of vehicles (including emergency vehicles), likely to be using it to do so safely and efficiently; and</li> <li>sufficient distance is provided between shared driveways and dwellings.</li> </ol>
Policy 6.2.4.3	<p>Avoid new loading areas that require access over a <b>primary pedestrian street frontage mapped area</b>, unless any adverse effects on pedestrian safety and ease of movement would be insignificant.</p>
Policy 6.2.4.4	<p>Require vehicle accesses to be limited in number and width, in order to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on:</p> <ol style="list-style-type: none"> <li>pedestrian and cyclist safety and ease of movement; and</li> <li>the safety and efficiency of the multi-modal transport network.</li> </ol>
Policy 6.2.4.5	<p>Require new vehicle accesses to be located a sufficient distance from intersections and level crossings to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on safety and efficiency due to:</p> <ol style="list-style-type: none"> <li>vehicles queuing to enter the crossing hindering the efficient functioning of the intersection or level crossing; and</li> <li>confusion over whether indicating vehicles are seeking to turn at the crossing or the intersection.</li> </ol>
Policy 6.2.4.6	<p>Require sufficient visibility to be available:</p> <ol style="list-style-type: none"> <li>at vehicle crossings, to minimise, as far as practicable, the likelihood of unsafe vehicle manoeuvres; and</li> <li>where a road, driveway or vehicle track crosses an operational rail network via a level crossing, to maintain the safety of the road and rail users.</li> </ol>
Policy 6.2.4.7	<p>Require vehicle accesses onto state highways in the rural and rural residential zones to be designed to:</p> <ol style="list-style-type: none"> <li>safely accommodate the type and number of vehicles likely to be using the access; and</li> <li>avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the frontage road.</li> </ol>

## Rules

### Rule 6.3 Activity Status

#### 6.3.1 Activity status introduction

1. The activity status table in Rule 6.3.2 shows the activity status of transportation activities across all zones, provided any performance standards shown in the far right column are met. The activities in the transportation activities category are listed in the Nested Table in Section 1.3.
2. Performance standards apply to permitted, controlled, and restricted discretionary activities.
3. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
4. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.
5. Any site development activities associated with an activity provided for in the activity status table in Rule 6.3.2 are subject to the provisions of the relevant management zone section.
6. Any earthworks associated with an activity provided for in the activity status table in Rule 6.3.2 are subject to the provisions in Section 8A.
7. Any construction associated with an activity provided for in the activity status table in Rule 6.3.2 is subject to the provisions in Section 4.

#### Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity

#### 6.3.2 Activity status of transportation activities

Transportation activity	Activity status	Performance standards
1. Operation, repair and maintenance of the roading network	P	a. Design and location - road signs
X. Operation, repair and maintenance of the rail network	P	a. Noise b. Light spill
2. New roads or additions or alterations to existing roads	D	
3. New roads or additions or alterations to existing roads where part of an approved subdivision consent	RD	a. Design and location - road signs b. Setback from scheduled tree
4. Passenger transportation hubs	D	

Transportation activity	Activity status	Performance standards
5. Heliports	D	

### Note 6.3.2A - Other requirements outside of the District Plan

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan or a resource or building consent has been granted.
2. The Heritage New Zealand Pouhere Taonga Accidental Discovery Protocol (Appendix A8) manages archaeological sites that may be discovered as a result of earthworks. The protocol applies to any area, not just scheduled archaeological sites.
3. Scheduled archaeological sites are identified on the Planning Map. Archaeological sites may also be found outside these areas, but are more likely to be found within the archaeological alert layer.

## **Rule 6.4 Notification**

1. The NZ Transport Agency will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided with respect to the following applications for resource consent:
  1. high trip generators on state highways;
  2. any new vehicle accesses onto state highways; and
  3. a subdivision that proposes to have access onto a state highway.
  
- X. The relevant requiring authority for rail will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided with respect to the following applications for resource consent:
  1. contravention of the setback from the designated rail corridor performance standard (Rule 6.7.X).
2. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with s95B of the RMA where their written approval is not provided:
  1. all restricted discretionary activities that list 'effect on cultural values of Manawhenua' as a matter for discretion; and
  2. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat to the **wāhi tūpuna mapped area** in Appendix A4.
3. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 6.5 Transportation Activities Performance Standards**

### **6.5.1 Design and Location - Road Signs**

1. Any road sign overhanging the footpath must, at its lowest point, be at least 2.6m above the footpath directly beneath the sign.
2. Road signs must not obstruct the carriageway.
3. The maximum area of road signs providing directional information is 0.25m<sup>2</sup>. For road signs providing regulatory or warning information, there is no maximum area.
4. Road signs providing directional information must not be of a design or form that resembles signs providing regulatory or warning information.
5. Road signs providing directional information must not limit the visibility of road signs providing regulatory or warning information.
6. Road signs must not replicate the colours or shapes used for traffic control devices.
7. Activities that contravene this performance standard are restricted discretionary activities.

### **6.5.2 Setback from Scheduled Tree**

New roads or additions or alterations to existing roads where part of an approved subdivision must comply with Rule 7.5.2.

## Rule 6.6 Parking, Loading and Access Standards

### 6.6.1 Car Parking Design

#### 6.6.1.1 Minimum parking space dimensions

- a. Parking spaces provided for residential activities must have the following minimum dimensions, to allow for 85th percentile design motor vehicles (See Appendix 6B, figures 6B.1, 6B.2 and 6B.8):

1. Parking angle		2. Stall width	3. Aisle width	4. Stall depth
i.	90°	2.5m	5.8m	5m
ii.	60°	2.5m	4.9m	5.3m
iii.	45°	2.5m	3.9m	4.9m
iv.	30°	2.5m	3.1m	4.2m
v.	0° (parallel) - on one side	2.3m	3.3m (one-way aisle width) 6.3m (two-way aisle width)	6m
vi.	0° (parallel) - on both sides	2.3m	6.6m	6m

- b. Parking spaces provided for all other activities must have the following minimum dimensions, to allow for 99th percentile design motor vehicles (See Appendix 6B, figures 6B.1, 6B.3 and 6B.6):

1. Parking angle		2. Stall width	3. Aisle width	4. Stall depth
i.	90°	2.5m	6.2m	5.2m
ii.	60°	2.5m	5.1m	5.5m
iii.	45°	2.5m	4.2m	5.1m
iv.	30°	2.5m	3.45m	4.3m
v.	0° (parallel) - on one side	2.3m	3.3m (one-way aisle width) 6.3m (two-way aisle width)	6m
vi.	0° (parallel) - on both sides	2.3m	6.6m	6m

- c. Except:

- i. For angle parking at 30°, 45° and 60° on one side, with parallel parking on the other, the minimum aisle width is 6.3m.
- ii. Where parking spaces are bounded by permanent obstructions higher than 150mm (such as walls, fences or columns):
  1. The minimum stall widths must be increased by 300mm where there is a permanent obstruction on one side of the parking space and by 600mm where there is a permanent obstruction on both sides of the parking space, in the case of angled parking spaces.
  2. The minimum stall depth must be increased by 300mm if one end of the parking space is obstructed or by 600mm if both ends are obstructed and the parallel parking spaces must be located at least 300mm clear of permanent obstructions, in the case of parallel parking spaces.
- iii. For aisles bounded on one side by a permanent obstruction, the minimum aisle width must be increased by at least 300mm.
- iv. At blind aisles (i.e. parking aisles that are closed at one end), the aisle must be extended at least 1m beyond the last parking space and the last parking space must be widened by at least 300mm if it is

bounded by a wall or fence.

- d. Blind aisles must be designed so that it is possible for cars to turn around at the closed end of the aisle and drive out forwards.
- e. Parking aisles used in off-street parking must be designed as follows.
  - i. Parking aisles for 90° parking must be designed for two-way movement even though one-way movement may need to be imposed in some instances.
  - ii. Parking aisles for 30°, 45° and 60° parking must be one-way, except where parallel parking is allowed on one side.
  - iii. Mobility parking spaces must be provided at a parking angle of 90° and must provide a stall width of 3.6m.
- f. Activities that contravene this performance standard are restricted discretionary activities.

**Note 6.6.1.1A - Copyright information**

- 1. Dimensions for all parking spaces in Rules 6.6.1.1.a and 6.6.1.1.b have been derived from Clause 2.4 of AS/NZS 2890.1:2004 with the permission of Standards New Zealand under Copyright Licence 000753.
- 2. The clarifications and additions set out in Rules 6.6.1.1.c-e to the minimum parking space dimensions set out in rules 6.6.1.1.a and 6.6.1.1.b have been reproduced from AS/NZS 2890.1:2004 with the permission of Standards New Zealand under Copyright Licence 000753. Some modifications have been applied.

**6.6.1.2 Minimum manoeuvring space dimensions for parking areas**

- a. Parking areas must provide manoeuvring space that ensures a motor vehicle is not required to reverse onto or off the site in any of the following circumstances:
  - i. the site is directly accessed from a motorway, strategic road, arterial road, urban high density corridor, commercial centre street or collector road;
  - ii. the parking area provides for five or more non-residential activities;
  - iii. the parking area provides for five or more parking spaces that share a common access; or
  - iv. the activity is on a rear site.
- b. The manoeuvring space required under Rule 6.6.1.2.a must be designed to accommodate the following vehicle sizes:
  - i. for non-residential activities: 99th percentile design motor vehicle (See Appendix 6B, Figure 6B.7); or
  - ii. for residential activities: 85th percentile design motor vehicle (See Appendix 6B, Figure 6B.9).
- c. The manoeuvring space required under Rule 6.6.1.2.a must be of an adequate size to avoid the need for:
  - i. a turntable;
  - ii. the vehicle specified in Rule 6.6.1.2.b.i to undertake more than one reverse manoeuvre when manoeuvring into or out of any required parking space; and
  - iii. the vehicle specified in Rule 6.6.1.2.b.ii to undertake more than two reverse manoeuvres when manoeuvring into or out of any required parking space.
- d. The manoeuvring space required under Rule 6.6.1.2.a may include any right of way that the site on which the manoeuvring is taking place is legally entitled to use.
- e. Activities that contravene this performance standard are restricted discretionary activities.

### 6.6.1.3 Minimum queuing space for parking areas

- a. The minimum on-site queuing space for vehicles entering or exiting parking areas is:

Number of parking spaces		Minimum queuing space length
i.	5-20	6m
ii.	21-50	12m
iii.	51-100	18m
iv.	101+	24m

- v. Where the parking area has more than one access, the required queuing space may be divided proportionally between the accesses, in accordance with the proportion of traffic volume (number of vehicle movements per access per day) to be served by each access.
- vi. Queuing space length is measured from the road boundary to the nearest vehicle control point or point where conflict with vehicles already on the site may arise.
- b. Activities that contravene this performance standard are restricted discretionary activities.

### 6.6.1.4 Gradient of parking areas

- The gradient of parking areas provided for any activity other than standard residential must not exceed 1 in 20 in any one direction.
- Activities that contravene this performance standard are restricted discretionary activities.

### 6.6.1.5 Surfacing and marking of parking areas

- a. Parking areas (including associated access and manoeuvring areas) provided for any activity other than standard residential, must:
- be designed to ensure that water will not pool on the surface of the parking area, and will enter an appropriate stormwater drain effectively;
  - be hard surfaced;
  - have individual parking spaces permanently marked; and
  - where there are five or more parking spaces in total provided in the parking area, mobility parking spaces must be permanently marked to reserve them for the use of people with mobility parking permits.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### Note 6.6.1.5A - General advice

- Areas that are hard surfaced to meet Rule 6.6.1.5 must still meet the performance standards for maximum building site coverage and impermeable surfaces. Products that meet the requirements of hard surfacing and that are also permeable include:
  - road metal used with a geogrid material, matting, or similar product, installed to manufacturer specifications, that stabilises loose material preventing it from migrating
  - GobiBlock®
  - GrassPaver™
  - PorousPave®
  - Hydropavers™
  - PavePro™

#### 6.6.1.6 Lighting of parking areas

- a. Parking areas must be illuminated to a minimum maintained level of 2 lux, with high uniformity, during the hours of operation, if all of the following circumstances apply:
  - i. the parking area is provided for any activity other than standard residential;
  - ii. the parking area is designed to accommodate 4 or more vehicles; and
  - iii. the parking area will be used at night.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 6.6.1.7 Access to parking areas

- a. Required parking spaces must be designed to allow vehicles using the spaces to enter and exit the site without the need to move a vehicle occupying any other parking or vehicle loading space on the site.
- b. Parking areas must be accessed from a clearly defined vehicle crossing and the remainder of the parking area must be designed to be physically separated from, and inaccessible from, the road.
- c. Except, Rule 6.6.1.7.a does not apply to cases in which no more than two parking spaces are required for single residential unit.
- d. Activities that contravene this performance standard are restricted discretionary activities.

### 6.6.2 Vehicle Loading Design

#### 6.6.2.1 Minimum manoeuvring space dimensions for loading areas

- a. Sufficient manoeuvring space must be provided to ensure that no vehicle accessing a vehicle loading area is required to reverse either onto or off a motorway, strategic road, arterial road, urban high density corridor, commercial centre street or collector road.
- b. In the Industrial Port Zone and the Port Zone loading areas must be designed and located to avoid the need for vehicles to reverse either onto or off any road. Refer turning circles 8m Rigid Truck (See Appendix 6B, Figure 6B.10); B-train (See Appendix 6B, Figure 6B.11); Coach (See Appendix 6B, Figure 6B.12).
- c. Vehicles must not be required to undertake more than one reverse manoeuvre when manoeuvring out of any required loading space. Refer turning circles 8m Rigid Truck (See Appendix 6B, Figure 6B.10); B-train (See Appendix 6B, Figure 6B.11); Coach (See Appendix 6B, Figure 6B.12).
- d. Parking spaces and loading spaces may be serviced in whole or in part by a common manoeuvring area.
- e. Activities that contravene this performance standard are restricted discretionary activities.

#### 6.6.2.2 Gradient of loading areas

- a. The gradient of loading areas must not exceed 1 in 20 in any one direction.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 6.6.2.3 Surfacing and marking of loading areas

- a. Loading areas, including associated access and manoeuvring areas, must:
  - i. be hard surfaced;
  - ii. be designed to ensure that, if impermeable surfacing is used, water will not pool on the surface of the loading area and will enter an appropriate stormwater drain effectively; and
  - iii. be permanently marked.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 6.6.2.4 Lighting of loading areas

- a. Loading areas, including associated access and manoeuvring areas, that are used at night must be illuminated to a minimum maintained level of 2 lux, with high uniformity, during the hours of operation.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 6.6.2.5 Access to loading areas

- a. Required vehicle loading spaces must be designed to allow vehicles using the spaces to enter and exit the site without the need to move a vehicle occupying any other parking or vehicle loading space on the site.
- b. New vehicle loading areas must not be accessed across a **primary pedestrian street frontage mapped area**.
- c. Loading areas that contravene Rule 6.6.2.5.a are restricted discretionary activities.
- d. Loading areas that contravene Rule 6.6.2.5.b are non-complying activities.

### 6.6.3 Vehicle Access Design and Location

#### 6.6.3.1 Maximum number of vehicle crossings

- a. The maximum number of vehicle crossings permitted on each road frontage of any site is:

Frontage length		1. Local road and Industrial road	2. Collector road	3. Arterial road (less than 100kmh) and Urban High Density Corridor	4. Strategic road
i.	0m - 18m	1	1	1	1
ii.	>18m - 60m	2	1	1	1
iii.	>60m - 100m	3	2	1	1
iv.	>100m - 200m	3	3	2	1
v.	>200m	3	3	2	2

- b. No new vehicle crossings are permitted onto a commercial centre street except for fire stations.
- c. For fire stations, the maximum number of vehicle crossings on each road frontage is two for all sites, except where three vehicle crossings are otherwise permitted.
- d. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 6.6.3.1A - Other relevant District Plan provisions**

1. New vehicle crossings are not allowed across **primary pedestrian street frontage mapped areas** (see Rule 18.6.14.2).

### 6.6.3.2 Minimum sight distance from a vehicle access

- a. The minimum sight distance from a new vehicle access onto any state highway:

Speed (km/h)		Sight distance (m)
i.	50	113
ii.	60	140
iii.	70	170
iv.	80	203
v.	90	240
vi.	100	282

- b. The minimum sight distance from a new vehicle access onto any road other than a state highway:

Speed (km/h)		Sight distance (m)
i.	50	69
ii.	60	83
iii.	70	97
iv.	80	111
v.	90	125
vi.	100	139

- c. Except, where a site is unable to conform with the minimum sight distances in rules 6.6.3.2.a and 6.6.3.2.b, one vehicle crossing per site is allowed in the position which most nearly complies with rules 6.6.3.4.a or 6.6.3.4.b (minimum distances of new vehicle crossing from intersections).
- d. Sight distances are measured from the points shown on Appendix 6B, Figure 6B.13.
- e. In the rural and rural residential zones, clear sight triangles must be provided, as shown in Appendix 6B, Figure 6B.13. The clear sight triangle must be on the road side of any gate and visibility must not be obstructed by fences, structures, vegetation or any barrier above a height of 800mm.
- f. Activities that contravene this performance standard are restricted discretionary activities.

#### Note 6.6.3.2A - General advice

1. Minimum sight distances from new vehicle accesses in Rule 6.6.3.2 are calculated in accordance with Austroads Approach Sight Distance (ASD) values.

### 6.6.3.3 Maximum width for a vehicle access

- a. The maximum width for a vehicle access:

All zones		Maximum vehicle access width (m)
i.	Residential activities	6
ii.	All other activities	9

- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 6.6.3.4 Minimum distances of new vehicle crossing from intersections and level crossings

- a. The minimum distance of a new vehicle crossing from intersections on roads where the speed limit is less than 70km/h is as follows:

Frontage road		Intersecting road type		
		1. Motorway, strategic road, arterial road, urban high density corridor, commercial centre street and industrial road	2. Collector road	3. Local road
i.	Motorway, strategic road, arterial road, urban high density corridor, commercial centre street, and industrial road	30m	30m	30m
ii.	Collector road	20m	20m	10m
iii.	Local road	20m	15m	10m

- b. The minimum distance of a new vehicle crossing from intersections on roads where the speed limit is 70 - 90 km/h is as follows:

Frontage road		Intersecting road type		
		1. Motorway, strategic road, arterial road, urban high density corridor, commercial centre street and industrial road	2. Collector road	3. Local road
i.	Motorway, strategic road, arterial road, urban high density corridor, commercial centre street and industrial road	100m	100m	100m
ii.	Collector road and local road	45m	45m	45m

- c. Except, one vehicle crossing only may be constructed to provide for access to the site, in the position that most nearly complies with rules 6.6.3.4.a or 6.6.3.4.b.
- d. The minimum distance of a new vehicle crossing from intersections on roads where the speed limit is greater than 90 km/h is as follows:

Frontage road		Intersecting road type		
		1. Motorway, strategic road, arterial road, urban high density corridor, commercial centre street and industrial road	2. Collector road	3. Local road
i.	Motorway, strategic road, arterial road, urban high density corridor, commercial centre street and industrial road	200m	200m	200m

Frontage road	Intersecting road type		
	1. Motorway, strategic road, arterial road, urban high density corridor, commercial centre street and industrial road	2. Collector road	3. Local road
ii. Collector road and local road	60m	60m	60m

- e. The minimum distance of a new vehicle crossing from intersections on state highways is as follows:

Posted speed of state highway	Vehicle access onto a state highway	Vehicle access onto a road other than a state highway
i. Less than 70km	30m	20m
ii. 70 - 89 km	100m	45m
iii. Greater than 90 km	200m	60m

- f. Distances will be measured as shown in Appendix 6B, Figure 6B.17.  
g. The minimum distance between a new vehicle crossing and a level crossing on the same road is 30m.  
h. Activities that contravene this performance standard are restricted discretionary activities.

#### 6.6.3.5 Standard of vehicle accesses onto state highways

- a. Vehicle accesses onto state highways in the rural and rural residential zones must comply with the following:

	1. Volume of traffic using vehicle access (ecm per day)	2. Volume of traffic using state highway (volume per day)	Vehicle access design and sealing	
			3. less than or equal to 1 movement per day of a vehicle weighing over 3.5 tonnes	4. more than 1 movement per day of a vehicle weighing over 3.5 tonnes
i.	1 - 30	less than 10,000	(See Appendix 6B, Figure 6B.14)	(See Appendix 6B, Figure 6B.15)
ii.		10,000 or more	(See Appendix 6B, Figure 6B.15)	(See Appendix 6B, Figure 6B.15)
iii.	31 - 100	less than 10,000	(See Appendix 6B, Figure 6B.15)	(See Appendix 6B, Figure 6B.16)
iv.		10,000 or more	(See Appendix 6B, Figure 6B.16)	(See Appendix 6B, Figure 6B.16)

- b. Equivalent car movement (ecm) is calculated as follows:  
i. one car moving to and from a property equals 2 ecm;  
ii. one truck moving to and from a property equals 6 ecm; and  
iii. one truck and trailer moving to and from a property equals 10 ecm.  
c. Activities that contravene this performance standard are restricted discretionary activities.

#### 6.6.3.6 Surfacing of driveways

- a. Driveways that adjoin a legal road that is hard surfaced, must be constructed with a hard surface for a minimum distance of 5m from the edge of the road (See Appendix 6B, Figure 6B.19).
- b. In all zones other than the rural and rural residential zones, the full length of any driveway that serves 2 or more residential properties must be hard surfaced.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 6.6.3.6A - General advice**

1. Driveways that are hard surfaced to meet Rule 6.6.3.6 must still meet the performance standards for maximum building site coverage and impermeable surfaces. Products that meet the requirements of hard surfacing and that are also permeable include:
  - a. road metal used with a geogrid material, matting, or similar product, installed to manufacturer specifications, that stabilises loose material preventing it from migrating
  - b. GobiBlock®
  - c. GrassPaver™
  - d. PorousPave®
  - e. Hydropavers™
  - f. PavePro™

#### 6.6.3.7 Gradient of driveways

- a. The maximum change in gradient without transition for driveways is 1 in 8 for summit grade changes or 1 in 6.7 for sag grade changes.
- b. The gradient of the first 5m measured from the road boundary into the site must be no greater than 1 in 8.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### 6.6.3.8 Minimum distance between driveways and dwelling

- a. Where a driveway serves more than one residential building, the formed section of the driveway must be set back a minimum of 1m from any residential building (See Appendix 6B, figures 6B.4 and 6B.5).
- b. Activities that contravene this performance standard are restricted discretionary activities.

### 6.6.3.9 Width of driveways

- a. The minimum widths of driveways are as follows:

All zones except rural and rural residential zones		1. Number of residential units served	2. Minimum legal width	3. Minimum formed width
i.	Residential activities	1 - 6	3.5m	3m
ii.		7+	6m	5m
iii.	All other activities	All	6m	5m
Rural and rural residential zones				
iv.	Residential activities	1 - 3	4m	3.5m
v.		4+	6m	5m
vi.	All other activities	All	6m	5m

- b. Activities that contravene this performance standard are restricted discretionary activities.

### 6.6.3.10 Sightlines to level crossings

- a. Driveways, vehicle tracks and roads that cross an operational rail network via a level crossing must maintain clear sightlines within the sight line triangles shown in Appendix 6B, Figure 6B.18.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### Note 6.6.3A - General advice

1. Approval for any work in a road, including the establishment of access to properties, must be obtained from the relevant road controlling authority. Under section 317 of the Local Government Act 1974, the Dunedin City Council is the road controlling authority for all in roads in the city, with the following exceptions:
  - a. state highways are under the control of the NZ Transport Agency (NZTA), unless the NZTA has delegated control to the Dunedin City Council.
  - b. government roads are under the control of the Minister of Transport.
2. Under section 51 (2) of the Government Roading Powers Act 1989, the written permission of the NZTA must be obtained prior to the commencement of any work on any state highway. Early consultation with the NZTA should be undertaken for subdivision or development proposals adjacent to, or seeking access to, state highways.
3. Where the state highway has been declared a limited access road, approval from the NZTA is required for new accesses or changes to existing accesses. The objective of this control is to protect the operation of state highway from uncontrolled property access that can affect the safety, efficiency, functionality and level of service of the state highway. Limited access roads are most commonly in areas with a heightened development pressure. The NZTA should be consulted initially with respect to development along limited access roads.
4. Driveways must comply with the fire safety requirements of the New Zealand Building Code. See Acceptable Solution C/AS1 Part 6: Fire Service Vehicular Access (1 July 2014), which sets out driveway dimensions and design to allow for firefighting. Under this acceptable solution, buildings must be provided with access that allows Fire Service vehicles to reach a position that makes it convenient for firefighters to get into the building and to any Fire Service inlets. For example vehicular access with a minimum width of 4 metres is required to be provided to a hard standing within 20 metres of any inlets. There are additional requirements for buildings containing 'SC and SD purpose groups' as defined in the compliance document. Examples of such buildings include hospitals, care institutions and prisons.
5. Maximum grade changes without transition set out in Rule 6.6.3.7 are reproduced from AS/NZS 2890.1:2004 Parking facilities - Off-street car parking under Copyright Licence 000753.

X. The driveway width requirements set out in Rule 6.6.3 do not apply to roads. Road design requirements are determined on a case by case basis, guided by the DCC Code of Subdivision and Development 2010. Council will assess whether a road (rather than a driveway) will be required when considering subdivision applications in accordance with Policy 6.2.3.Y and assessment rules 6.11.2.7 and 6.11.2.8.

6. Under Section 73 of the Railways Act 2005, permission must be obtained from KiwiRail Holdings Limited (or relevant authority) to allow access across the rail network. All level crossings, new and existing, require a current and valid Deed of Grant to be in place to allow access across the rail corridor. Early consultation with KiwiRail should be undertaken for any subdivision or development proposals seeking access across a railway.

## **Rule 6.7 General Performance Standards**

### **6.7.1 Service Station Standards**

1. Each dispensing facility must be located at least:
  - a. 6m from the road boundary; and
  - b. 12m from the midpoint of any vehicle crossing.
2. Service stations must provide:
  - a. 3 on-site queuing spaces per dispensing facility where there is insufficient manoeuvring space to enable a vehicle to access a pump that is unoccupied without having to wait behind another vehicle using a pump from the same dispensing facility;
  - b. 2 on-site queuing spaces per dispensing facility where there is sufficient manoeuvring space to enable a vehicle to access a pump that is unoccupied without having to wait behind another vehicle using a pump from the same dispensing facility;
  - c. 3 queuing spaces per car wash; and
  - d. queuing spaces must not obstruct any manoeuvring areas or vehicle egress.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **6.7.2 Public Amenities and Signs Located on or Above the Public Footpath**

1. Public amenities, temporary signs and portable freestanding signs, located on public footpaths must provide a minimum width of unobstructed area for pedestrian movement as follows:
  - a. 3m in the Central Business District (CBD) Zone; and
  - b. 1.5m in all other zones.
2. Public amenities, temporary signs and portable freestanding signs located on public footpaths must:
  - a. be located in line with any other permanent or temporary obstruction present on the public footpath at that location, otherwise at the kerb edge of the public footpath;
  - b. not be located within 2m of an intersection or pedestrian crossing location;
  - c. not be located at the kerb directly adjacent to a bus top, taxi stand, mobility parking or an Authorised Vehicles Only parking space; and
  - d. not be painted, drawn, chalked or otherwise created on the surface of any public footpath.
3. Signs that overhang a public footpath must:
  - a. be 2.5m above the public footpath at their lowest point;
  - b. hang perpendicular to the public footpath;
  - c. not extend past the edge of any verandah; and
  - d. be a minimum of at least 500mm from the road's edge.

4. Signs, temporary signs, and public amenities, must not:
  - a. obstruct the visibility of any traffic control device; or
  - b. compromise sightlines from road intersections and vehicle crossings.
5. Signs that contravene this performance standard are restricted discretionary activities.

### **6.7.3 Signs Visible from Roads**

1. The minimum letter height of signs (except for lettering which authorises an election sign) designed to be read by passing motorists must be:
  - a. 120mm where the speed limit is less than 70km per hour; and
  - b. 160mm where the speed limit is greater than 70km per hour.
2. Signs must not be of a design or form that resembles or conflicts with traffic signs.
3. Illuminated and digital signs must:
  - a. have the sign's light source shielded so that its glare does not extend beyond the sign;
  - b. have all floodlights or concealed lighting directed solely on the sign;
  - c. not use images that are flashing or animated;
  - d. have a minimum display time of 10 seconds per image; and
  - e. have a maximum luminance (cd/m<sup>2</sup>) of:
    - i. 2000 where the sign has an illuminated area less than or equal to 0.5m<sup>2</sup>;
    - ii. 1600 where the sign has an illuminated area greater than 0.5m<sup>2</sup>, but less than or equal to 2m<sup>2</sup>;
    - iii. 1200 where the sign has an illuminated area greater than 2m<sup>2</sup>, but less than or equal to 5m<sup>2</sup>;
    - iv. 1000 where the sign has an illuminated area greater than 5m<sup>2</sup>, but less than or equal to 10m<sup>2</sup>; and
    - v. 800 where the sign has an illuminated area greater than 10m<sup>2</sup>.
4. Activities that contravene this performance standard are restricted discretionary activities.

#### **6.7.4 Setback from Designated Rail Corridor**

1. In the residential, commercial and mixed use, industrial and recreation zones, new buildings, new structures and additions and alterations must be set back a minimum of 4m from the boundary of the designated rail corridor, unless the railway track is underground.
2. This standard does not apply to:
  - a. buildings or structures that are less than 10m<sup>2</sup> in area and under 2m in height;
  - b. fences;
  - c. network utility operation as defined in section 166 of the RMA;
  - d. signs attached flat to the facade of buildings and structures;
  - e. decks that are 1m or less above ground level; or
  - f. activities within 4m of the boundary of the designated rail corridor in the following locations:
    - i. the eastern boundary of the site at 382 South Road (Sec 2 SO 23278), Dunedin;
    - ii. the north-western boundary of the site at 378 South Road (Part Lot 6 Deeds 67), Dunedin;
    - iii. the eastern boundary of the site at 5 Strathallan Street (Crown Land Block LXXIII SO 14451), Dunedin;
    - iv. the western boundary of the site at 1 Paterson Road (Lot 1 DP 403630), and the eastern boundary of the site at 2 Paterson Road (Part Lot 2 Deeds 319), Wingatui;
    - v. the eastern boundary of the site at 266 Gladstone Road North (Lot 1 DP 24334), and the western boundary of the site at 270 Gladstone Road North (Sec 106 Block SO 19326 East Taieri SD), Mosgiel;
    - vi. the western boundary of the site at 714 Kaikorai Valley Road (Lot 1 DP 24411), Burnside;
    - vii. the northern boundaries of the sites at 11 and 12 Catherine Street (Lot 3 DP 2963 and Lot 2 DP 1408), Caversham;
    - viii. the western boundary of the site at 7 Samuel Street (Part Lot 10 Block VI Deeds 128), and the western and south-eastern boundaries of the site at 6 Neville Street (Lot 1 DP 21976), South Dunedin;
    - ix. the north-eastern boundaries of the sites at 2, 4 and 6 Gill Street (Sec 7 Block IX SO 14312, Sec 8 Block IX SO 14312 and Sec 9 Block IX SO 14312), Waikouaiti; and
    - x. any boundary of the Hillside Depot designation (D423).
3. Activities that contravene this performance standard are restricted discretionary activities.

### **Rule 6.8 Subdivision Performance Standards**

#### **6.8.1 Access**

1. Every resultant site must have a legal accessway, and where on-site car parking is provided, this must be in the form of a driveway except if the resultant site is:
  - a. an esplanade reserve;
  - b. a reserve, other than an esplanade reserve, which adjoins a site in the same ownership that has a legal accessway; or
  - c. the result of a road stopping process which adjoins a site in the same ownership that has a legal accessway.
2. Activities that contravene this performance standard are restricted discretionary activities.

**Note 6.8.1A - Other relevant District Plan provisions**

1. Rule 6.6.3 includes the standards for driveways.

**Note 6.8.1B - Other requirements outside of the District Plan**

1. For subdivisions that access a state highway, approval from the NZ Transport Agency is required.

## Rule 6.9 Assessment of Controlled Activities

6.9.1 Assessment of controlled activities			
Activity		Matters of control	Guidance on the assessment of resource consents
1.	Student Hostels (Campus)	a. Effects on accessibility	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.2</li> <li>ii. For activities that are likely to generate a significant number of trips by walking, cycling or public transport:</li> <li>iii.               <ul style="list-style-type: none"> <li>1. activities likely to generate trips by cycling have safe access for cyclists into and through the site and secure cycle parking;</li> <li>2. activities likely to generate trips by walking have safe access for pedestrians into and through the site; and</li> <li>3. activities likely to generate trips by public transportation are located a reasonable walking distance from a frequent public transportation route with safe access for pedestrians from a bus stop to the site (Policy 6.2.2.4).</li> </ul> </li> </ul>
		b. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3</li> <li>ii. The activity ensures that any overspill parking effects that could adversely affect the safety and efficiency of the transport network are avoided or, if avoidance is not practicable, adequately mitigated (Policy 6.2.3.4).</li> </ul> <p><i>Possible circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. NA.</li> <li>iv. Where the activity results in the need for the parking of vehicles on-street, this is unlikely to result in adverse effects on the safety and/or efficiency of the transport network.</li> </ul>
X.	Scheduled mining activities (SMA008)	a. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3</li> <li>ii. Adverse effects on the safety and efficiency of the transport network will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 6.2.3.9.a).</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iii. Requirement that a traffic management plan is prepared by a suitably qualified traffic engineer.</li> </ul>

## Rule 6.10 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### Rule 6.10.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 6.10.2 - 6.10.6:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rule 6.10.3 applies to performance standards located in the management and major facility zones; Rule 6.10.4 applies to performance standards for transportation activities; Rule 6.10.5 applies to performance standards for parking, loading and access standards; Rule 6.10.6 applies to general performance standards.

6.10.2 Assessment of all performance standard contraventions	
Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards, site specific factors including topography, make meeting the standard impracticable.</li> <li>c. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>d. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> </ol>

### 6.10.3 Assessment of performance standard contraventions (performance standards located in zones)

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Access (subdivision)	a. Effects on accessibility	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.2</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>ii. NA.</li> </ul>
2.	Boundary setbacks - (Rule 15.6.13.1.a.viii.3) garages and carports setback from road boundary	a. Effects on health and safety	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3</li> <li>ii. Garages and carports are set back from the road boundary an adequate distance to allow pedestrians and cyclists to see vehicles exiting before they cross the footpath, and to minimise as far as practicable the risk to pedestrians and cyclists from garage doors opening over the footpath (Policy 6.2.3.10).</li> </ul>
3.	Density (Rule 15.5.2.7.a) - Papakāika in residential zones	a. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3</li> <li>ii. Adverse effects on the safety and efficiency of the transport network will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 6.2.3.9.a).</li> <li>iii. Any associated changes to the transportation network will be affordable to the public in the long term (Policy 6.2.3.9.b).</li> </ul>
4.	Forestry and shelterbelts and small woodlots setbacks	a. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3</li> <li>ii. Shelterbelts and small woodlots and forestry are set back a sufficient distance from: <ul style="list-style-type: none"> <li>1. roads to avoid road safety hazards caused by shading leading to ice formation; and</li> <li>2. railway lines to avoid or minimise, as far as practicable, the risk of trees falling across railway lines (Policy 6.2.3.2).</li> </ul> </li> </ul>
5.	Location	a. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3</li> <li>ii. Any adverse effects on the safety and efficiency of the state highway will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 6.2.3.5).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. There are relatively low traffic volumes and/or vehicle speeds on the stretch of the state highway that the site is accessed from.</li> </ul>
6.	Minimum mobility car parking	a. Effects on accessibility	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.2</li> <li>ii. Land use activities whose mobility parking demand cannot be met by the public mobility parking supply, or would significantly affect the availability of that supply for surrounding activities,</li> </ul>

### 6.10.3 Assessment of performance standard contraventions (performance standards located in zones)

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
		<p>provide mobility parking on or near the site at an amount that is adequate to:</p> <ol style="list-style-type: none"> <li>1. avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the availability of publicly available mobility parking for existing or permitted activities; and</li> <li>2. ensure accessibility for residents, visitors, customers, staff and students (as relevant) who have limited mobility, including disabled people, the elderly and people travelling with young children (Policy 6.2.2.1).</li> </ol> <p><i>General assessment guidance:</i></p> <p>iii. In balancing consideration of accessibility (Objective 6.2.2) with consideration of significant adverse effects on other values, Council will generally prefer to avoid significant adverse effects on land instability, heritage, streetscape amenity and the safety and efficiency of the transport network, in accordance with objectives 6.2.3 (safety, efficiency of the transport network and its affordability to the public), 11.2.1 (natural hazards), 13.2.1 to 13.2.3 (scheduled heritage items), 7.2.1 (significant trees), 15.2.3 (heritage streetscape character) and 15.2.4 (streetscape amenity).</p> <p>iv. Council will consider any mobility parking demand information, where required (see Special Information Requirements - Rule 6.14.1).</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>v. The establishment of required mobility car parking would result in a net loss in the availability of on-street mobility parking in the vicinity of the site.</p> <p>vi. The applicant proposes to use the same space on-site to fulfil both minimum mobility car parking and minimum vehicle loading requirements, and can demonstrate that this space will be managed so that both the mobility parking and loading demands of the land use activity will be met.</p> <p>vii. The proposed activity is taking place on an existing site that does not have a vehicle access and one or more of the following circumstances apply:</p> <ol style="list-style-type: none"> <li>1. it is not practicable to create a vehicle access that would comply with Rule 6.6.3.4 because the site is located on or near an intersection;</li> <li>2. it is not practicable to create a vehicle access that would comply with Rule 6.6.3.7 because the site is located on or near a steep slope or cliff; or</li> <li>3. it is not practicable to create a vehicle access that would comply with Rule 6.6.3.1 because the site has no frontage to a legal road, and any existing access way is not wide</li> </ol>

### 6.10.3 Assessment of performance standard contraventions (performance standards located in zones)

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
		<p>enough to meet Rule 6.6.3.9.</p> <ul style="list-style-type: none"> <li>viii. NA.</li> <li>ix. NA.</li> <li>x. If mobility parking spaces shared with other land use activities are not exclusively available to the activity during its hours of operation, the applicant is able to demonstrate that the shared mobility parking spaces will meet the parking demand generated by users of the activity.</li> <li>xi. The establishment of required mobility car parking would require significant earthworks that would cause land instability or result in costs that were disproportionate to the total value of the development.</li> <li>xii. The establishment of required mobility car parking would unavoidably result in significant adverse effects on:               <ol style="list-style-type: none"> <li>1. the safety or efficiency of the transport network;</li> <li>2. streetscape amenity; or</li> <li>3. heritage values.</li> </ol> </li> <li>xiii. NA.</li> </ul>
	<p>b. Effects on the safety and efficiency of the transport network</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3</li> <li>ii. The activity ensures that any overspill parking effects that could adversely affect the safety and efficiency of the transport network are avoided or, if avoidance is not practicable, adequate mitigation is provided (Policy 6.2.3.4).</li> <li>iii. NA.</li> <li>iv. Where the activity results in the need for the parking of vehicles on-street, this is unlikely to result in adverse effects on the safety and/or efficiency of the transport network.</li> <li>v. NA.</li> </ul>

### 6.10.3 Assessment of performance standard contraventions (performance standards located in zones)

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
7.	Minimum vehicle loading	a. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3</li> <li>ii. The activity provides adequate vehicle loading space to support operations and to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the transport network (Policy 6.2.3.3).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Adequate additional loading space is available on an adjacent or nearby site via binding long-term agreement.</li> <li>iv. Although the activity may result in the need for the loading of vehicles on-street, this is unlikely to result in adverse effects on the safety and/or efficiency of the transport network.</li> <li>v. The applicant proposes to use the same space on-site to fulfil both minimum mobility car parking and minimum vehicle loading requirements, and can demonstrate that this space will be managed so that both the parking and loading demands of the land use activity will be met.</li> </ul>
8.	Number, location and design of ancillary signs	a. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3</li> <li>ii. Ancillary signs are located and designed to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the transport network (Policy 6.2.3.1).</li> </ul> <p><i>Potential circumstances that may support consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The location of the sign will not obstruct or obscure sightlines, pedestrian and cycling or vehicle access.</li> </ul>
X.	Density: <ul style="list-style-type: none"> <li>• social housing in the GR1 Zone or T&amp;S Zone (except in a <b>no DCC reticulated wastewater mapped area</b>) (Rule 15.5.2.4.Y)</li> </ul>	a. Effects on accessibility	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.2.</li> <li>ii. Medium density social housing in the General Residential 1 or Township and Settlement zones (except in a <b>no DCC reticulated wastewater mapped area</b>) is located where there is convenient walking access to public transport services (Policy 6.2.2.X).</li> </ul>

#### 6.10.4 Assessment of transportation activities performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Design and location - road signs	a. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.1</li> <li>ii. Road signs are designed and located to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the transport network for all travel modes (Policy 6.2.1.2).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The relevant road controlling authority has provided approval for the proposed design and location of the sign.</li> <li>iv. Overhanging signs positioned less than 2.6m above the footpath are considered unlikely to adversely affect pedestrian safety or connectivity, due for example to low volumes of pedestrians on the footpath or the presence of existing structures that limit pedestrian movement in the vicinity of the proposed sign.</li> </ul>
2.	Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6

### 6.10.5 Assessment of parking, loading and access standards performance standards contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>1. Car parking design</p> <ul style="list-style-type: none"> <li>• Minimum parking space dimensions (Rule 6.6.1.1)</li> <li>• Minimum manoeuvring space dimensions for parking areas (Rule 6.6.1.2)</li> <li>• Minimum queuing space for parking areas (Rule 6.6.1.3)</li> <li>• Gradient of parking areas (Rule 6.6.1.4)</li> <li>• Surfacing and marking of parking areas (Rule 6.6.1.5)</li> <li>• Lighting of parking areas (Rule 6.6.1.6)</li> <li>• Access to parking areas (Rule 6.6.1.7)</li> </ul> <p>Vehicle loading design</p> <ul style="list-style-type: none"> <li>• Minimum manoeuvring space dimensions for loading areas (Rule 6.6.2.1)</li> <li>• Gradient of loading areas (Rule 6.6.2.2)</li> <li>• Surfacing and marking of loading areas (Rule 6.6.2.3)</li> </ul>	<p>a. Effects on the safety and efficiency of the transport network</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>i. Objective 6.2.4</li> <li>ii. Parking and loading areas, including associated manoeuvring and queuing areas, are designed to ensure: <ol style="list-style-type: none"> <li>1. the safety of pedestrians travelling on footpaths and travelling through parking areas;</li> <li>2. that vehicle parking and loading will be carried out safely and efficiently;</li> <li>3. that any adverse effects on the safe and efficient functioning of the transport network are avoided or, if avoidance is not practicable, are no more than minor;</li> <li>4. the safe and convenient access to and from parking and loading areas for vehicles, emergency vehicles, pedestrians and cyclists; and</li> <li>5. that mud, stone, gravel or other materials are unlikely to be carried onto hard surface public roads or footpaths (Policy 6.2.4.1).</li> </ol> </li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>iii. For non-compliance with minimum manoeuvring space dimensions for parking areas, minimum queuing space for parking areas, access to parking areas or access to loading areas standards: <ol style="list-style-type: none"> <li>1. volumes of pedestrian, cycle and vehicle traffic using the frontage road are low and likely to remain low; and/or</li> <li>2. the peak hours of use of the parking area or loading area will not coincide with peak flows or vehicle queues on the frontage road.</li> </ol> </li> <li>iv. For non-compliance with the minimum queuing space for parking areas standard: the proposed queuing space is adequate for the numbers of vehicles considered likely to be using the parking area on a regular basis.</li> <li>v. For non-compliance with gradient, and surfacing and marking, of parking areas standards: there is little likelihood of mud, stone gravel or other material being carried onto public roads of footpaths due to the topography of the site or materials used.</li> <li>vi. For non-compliance with the minimum parking space dimensions standard: the proposed parking spaces are of a sufficient size to accommodate the vehicles likely to be using them.</li> <li>vii. For non-compliance with minimum manoeuvring space dimensions for parking areas: the proposed manoeuvring area will accommodate the vehicles likely to be using it.</li> </ol>

### 6.10.5 Assessment of parking, loading and access standards performance standards contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<ul style="list-style-type: none"> <li>• Lighting of loading areas (Rule 6.6.2.4)</li> <li>• Access to loading areas (Rule 6.6.2.5.a)</li> </ul>		<ul style="list-style-type: none"> <li>viii. For non-compliance with minimum manoeuvring space dimensions for parking areas or minimum queuing space for parking areas: the parking area is unlikely to be used by heavy vehicles.</li> <li>ix. For non-compliance with minimum manoeuvring space dimensions for parking areas, access to parking areas or access to loading areas:               <ol style="list-style-type: none"> <li>1. drivers of reversing vehicles can both see, and be seen by, pedestrians, cyclists and drivers of other vehicles; and/or</li> <li>2. visibility of, and/or visibility from, reversing vehicles will be increased by altering vegetation, fencing and/or other structures.</li> </ol> </li> <li>x. For non-compliance with lighting of parking areas or lighting of loading areas standards:               <ol style="list-style-type: none"> <li>1. the parking or loading area will not be used frequently during the hours of darkness; and/or</li> <li>2. other light sources in the area give adequate light to provide security and/or visibility for users of the parking or loading area and its surrounds.</li> </ol> </li> </ul>

### 6.10.5 Assessment of parking, loading and access standards performance standards contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>2. Vehicle access design and location</p> <ul style="list-style-type: none"> <li>• Maximum number of vehicle crossings (Rule 6.6.3.1)</li> <li>• Maximum width for a vehicle access (Rule 6.6.3.3)</li> </ul>	<p>a. Effects on the safety and efficiency of the transport network</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>Objective 6.2.4</li> <li>Vehicle accesses are limited in number and width, in order to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on: <ol style="list-style-type: none"> <li>pedestrian and cyclist safety and ease of movement; and</li> <li>the safety and efficiency of the multi-modal transport network (Policy 6.2.4.4).</li> </ol> </li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>In assessing effects on pedestrian safety with ease of movement, Council will take into account potential changes in levels of pedestrian traffic on the frontage road. Estimates of future pedestrian traffic will take into account the location of the road in relation to the strategic pedestrian network, local centres and schools, and existing and permitted activities in the surrounding area that have the potential to increase pedestrian numbers with priority given to provisions for pedestrian safety and connectivity.</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>Volumes of pedestrian, cycle and vehicle traffic using the frontage road are low and likely to remain low.</li> <li>Potential adverse effects from the additional vehicle crossing(s) are minimal due to the physical form of the road, for example the presence of a solid median to prevent right hand turns.</li> </ol>

The public amenity must be designed or located to not impede pedestrian movement, distract drivers, or obstruct sightlines.</li> </ul>
		b. Effects on health and safety	See Rule 9.4.3
2.	Service station standards	a. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3</li> <li>ii. Service stations are designed to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the transport network and its affordability to the public (Policy 6.2.3.13).</li> </ul>
3.	Signs visible from roads	a. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3</li> <li>ii. Ancillary signs are located and designed to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the transport network (Policy 6.2.3.1).</li> <li>iii. Public amenities and signs located on or above the footpath provide for the safe movement of vehicles, pedestrians and cyclists (Policy 6.2.3.11).</li> </ul>
X.	Setback from designated rail corridor	a. Effects on the safety and efficiency of the transport network	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3</li> <li>ii. New buildings, new structures and additions and alterations are set back an adequate distance from the designated rail corridor to minimise, as far as practicable, the risk of objects or people crossing over or onto the rail corridor as a result of use or maintenance of the building or structure (Policy 6.2.3.X).</li> </ul>

## **Rule 6.11 Assessment of Restricted Discretionary Activities**

### **Rule 6.11.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 6.11.2:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 6.10; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 6.12; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 6.13; and
    - iii. the assessment guidance in this section will also be considered.

#### **Note 6.11.1A - General advice**

1. The DCC requires those persons undertaking development to pay a fair, equitable, and proportionate portion of the costs of capital expenditure to service growth.
2. The DCC's contribution to any off-site upgrades or delivery of higher specification for infrastructure will be based on an assessment of the public vs private benefit of the upgrade. This means that in principle the landowner(s) of the structure plan mapped area and/or new development mapped area will only be required to pay that portion of the costs of the upgrades that is necessary to address the effects of or needs of their proposed development area. Network infrastructure growth costs will generally be funded through development contribution charges as set out in the DCC's Development Contributions Policy (10-year Plan 2021-2031), which details the charges on a per equivalent household unit by area of benefit basis.

3. Where the results of an Integrated Transport Assessment required by Rule 6.14.2 demonstrate the need for either:
  - a. Infrastructure upgrades outside of the site, or
  - b. Infrastructure built to a higher specification because of the need to provide for new growth areas or improve level of service for existing areas,the responsibility and funding for these upgrades will be negotiated between all landowners and the DCC. Where necessary, the DCC will appoint an independent facilitator or mediator to assist in these negotiations.
4. It is further noted that the completion of these upgrades prior to s224 certification or at a certain point in time agreed to in a condition of consent may be required.

### 6.11.2 Assessment of restricted discretionary activities (activities located in zones)

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>1. All RD activities that are linked to Section 6.11 and that have “effects on the safety and efficiency of the transport network” as a matter of discretion, including but not limited to the activities listed below</p>	<p>a. Effects on the safety and efficiency of the transport network</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3.</li> <li>ii. Adverse effects on the safety and efficiency of the transport network will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 6.2.3.9.a).</li> <li>iii. Any associated changes to the transportation network will be affordable to the public in the long term (Policy 6.2.3.9.b).</li> <li>iv. NA: <ul style="list-style-type: none"> <li>1. The activity ensures that any overspill parking effects that could adversely affect the safety or efficiency of the transport network are avoided or, if avoidance is not practicable, adequately mitigated (Policy 6.2.3.4).</li> </ul> </li> <li>v. For activities where no minimum vehicle loading performance standard is specified: <ul style="list-style-type: none"> <li>1. the activity provides adequate vehicle loading and manoeuvring space to support its operations and to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the transport network (Policy 6.2.3.3).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>vi. For activities that are likely to generate trips by bicycle, Council will consider whether the site and vehicle access design provides for the safety of cyclists entering and exiting the road network.</li> <li>vii. For subdivision activities on sites adjoining unsealed rural roads, Council will consider the effectiveness of any proposed mitigation measures to reduce the risk of complaints of dust from the road.</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>viii. Where the activity results in the need for the parking of vehicles on-street, this is unlikely to result in adverse effects on the safety and/or efficiency of the transport network.</li> <li>ix. For subdivision activities adjoining roads that are unsealed, any necessary conditions to reduce the risk of complaints of dust from unsealed roads, for example conditions on the location of building platforms, screening of the road frontage or sealing of roads.</li> </ul>

### 6.11.2 Assessment of restricted discretionary activities (activities located in zones)

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>2. All high trip generators which include:</p> <ul style="list-style-type: none"> <li>• New or additions to parking areas, that result in 50 or more new parking spaces (all zones)</li> <li>• Any activities that generate 250 or more vehicle movements per day</li> </ul>	<p>a. Effects on the safety and efficiency of the transport network</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3.</li> <li>ii. High trip generators are designed and located to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the safety and efficiency of the transport network (Policy 6.2.3.8).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. The assessment will consider the findings of an Integrated Transport Assessment (see Special Information Requirements - Rule 6.14.2).</li> <li>iv. For activities that are likely to generate trips by bicycle, Council will consider whether the site and vehicle access design provides for the safety of cyclists entering and exiting the road network.</li> <li>v. In assessing the effects on the safety and efficiency of the transport network, Council will consider: <ul style="list-style-type: none"> <li>1. the effects of the physical works on safety on the frontage road.</li> <li>2. the effects of the physical works on congestion on the frontage road.</li> <li>3. the effects of the physical works on pedestrian and cycle connectivity and safety.</li> <li>4. the capital and maintenance costs of the physical work.</li> </ul> </li> <li>vi. Council will generally only consider new transportation infrastructure (e.g. traffic signals, roundabouts etc.) as acceptable when there are no other practicable design solutions.</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>vii. Traffic entering and exiting the site does not cause adverse safety or congestion effects on any frontage road.</li> <li>viii. The vehicle movements generated by the activity do not result in overall traffic volume on any frontage road exceeding the capacity of that road.</li> <li>ix. The frontage road has adequate on-road queuing space.</li> <li>x. The activity is located on a frontage road with capacity to absorb the additional vehicle movements associated with the activity.</li> <li>xi. Travel planning interventions are proposed to reduce the number of vehicle movements generated by the activity.</li> <li>xii. Physical works will be used where appropriate (including left in, left out vehicle access; turning bays; traffic signals and roundabouts).</li> </ul>

### 6.11.2 Assessment of restricted discretionary activities (activities located in zones)

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>b. Effects on accessibility</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.2.</li> <li>ii. For activities that are likely to generate a significant number of trips by walking, cycling or public transport: <ul style="list-style-type: none"> <li>1. activities likely to generate trips by cycling have safe access for cyclists into and through the site and secure cycle parking;</li> <li>2. activities likely to generate trips by walking have safe access for pedestrians into and through the site; and</li> <li>3. activities likely to generate trips by public transportation are located a reasonable walking distance from a frequent public transportation route with safe access for pedestrians from a bus stop to the site (Policy 6.2.2.4).</li> </ul> </li> <li>iii. The assessment of high trip generators will consider the findings of an Integrated Transport Assessment (see Special Information Requirements - Rule 6.14.2), including the likely parking demand of the land use activity and the availability of public parking in the vicinity of the site.</li> <li>iv. If the activity contravenes a minimum mobility car parking performance standard or is not subject to a minimum mobility car parking performance standard, Council will also assess the activity against Policy 6.2.2.1, via Rule 6.10.3.6 or Rule 6.11.2.3.</li> <li>v. In assessing the appropriateness of the location, Council will consider the road classification of roads where vehicle access is proposed (see Appendix 6A) and, in general, according to that classification, a local road is not an appropriate location for high trip generators.</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>vi. There is safe and convenient access to and within the site for pedestrians.</li> <li>vii. Provision of facilities for people accessing the site by a variety of travel modes (for example dedicated carpool parking, changing rooms, secure bike storage).</li> <li>viii. There are frequent public transport services within 200m of the site.</li> <li>ix. Customer or visitor car parking is designed to ensure that vehicles travel at safe speeds within it (for example by using speed bumps and advisory signage).</li> </ul>

### 6.11.2 Assessment of restricted discretionary activities (activities located in zones)

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>3. All RD activities that are linked to Section 6.11, that have "effects on accessibility" as a matter of discretion and/or where no minimum mobility parking performance standards is specified including but not limited to the activities listed below</p>	<p>a. Effects on accessibility</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.2.</li> <li>ii. Where mobility parking demand either cannot be met by the public parking supply, or would significantly affect the availability of that supply for surrounding activities, the activity will provide mobility parking either on or near the site at an amount that is adequate to: <ul style="list-style-type: none"> <li>1. avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the availability of publicly available mobility parking in the vicinity of the site (including on-street parking and off-street facilities); and</li> <li>2. ensure accessibility for residents, visitors, customers, staff and students (as relevant) who have limited mobility, including disabled people, the elderly and people travelling with young children (Policy 6.2.2.1).</li> </ul> </li> <li>iii. Enable the sharing of car parking areas by different land use activities, where adequate accessibility for all users is maintained (Policy 6.2.2.2).</li> <li>iv. For activities that are likely to generate a significant number of trips by walking, cycling or public transport: <ul style="list-style-type: none"> <li>1. activities likely to generate trips by cycling have safe access for cyclists into and through the site and secure cycle parking;</li> <li>2. activities likely to generate trips by walking have safe access for pedestrians into and through the site; and</li> <li>3. activities likely to generate trips by public transportation are located a reasonable walking distance from a frequent public transportation route with safe access for pedestrians from a bus stop to the site (Policy 6.2.2.4).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>v. The mobility parking demand likely to be generated by the activity means the proposed number of mobility parking spaces will be sufficient.</li> </ul>

### 6.11.2 Assessment of restricted discretionary activities (activities located in zones)

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>4.</p> <ul style="list-style-type: none"> <li>• Visitor accommodation, including ancillary activities (residential zones, Campus Zone and NEC, NECC)</li> <li>• Supported living facilities (residential zones)</li> </ul>	<p>a. Effects on accessibility</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.2.</li> <li>ii. Visitor accommodation and supported living facilities are located on sites where customers and residents will have convenient walking access to centres, frequent public transport services, other appropriate transport services, and/or an appropriate range of on-site services or facilities (Policy 6.2.2.3).</li> <li>iii. For activities that are likely to generate a significant number of trips by walking, cycling or public transport:               <ul style="list-style-type: none"> <li>1. activities likely to generate trips by cycling have safe access for cyclists into and through the site and secure cycle parking;</li> <li>2. activities likely to generate trips by walking have safe access for pedestrians into and through the site; and</li> <li>3. activities likely to generate trips by public transportation are located a reasonable walking distance from a frequent public transportation route with safe access for pedestrians from a bus stop to the site (Policy 6.2.2.4).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iv. Convenient walking access is to be determined taking into account the anticipated mobility levels of the intended customers or residents of the activity.</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>v. Examples of services and facilities required where supported living facilities are not within walking distance of a centre or frequent public transport services are medical services, personal services such as hairdressers, retail services such as dairies or cafés, and sport and leisure activities.</li> </ul>
	<p>b. Effects on the safety and efficiency of the transport network</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3.</li> <li>ii. Land use activities ensure that any overspill parking effects that could adversely affect the safety and efficiency of the transport network are avoided or, if avoidance is not practicable, adequately mitigated (Policy 6.2.3.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The mobility parking demand likely to be generated by the activity means the proposed number of mobility parking spaces will be sufficient.</li> <li>iv. Where the activity results in the need for the parking of vehicles on-street, this is unlikely to result in adverse effects on the safety and/or efficiency of the transport network.</li> </ul>

### 6.11.2 Assessment of restricted discretionary activities (activities located in zones)

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>5.</p> <ul style="list-style-type: none"> <li>• Early childhood education - small scale (Rec, Res, Campus, commercial and mixed use zones)</li> <li>• Early childhood education - large scale (Dunedin Hospital, Moana Pool, Otago Museum, Schools, Campus, Wakari Hospital, commercial and mixed use zones)</li> <li>• Dairies (Residential zone)</li> </ul>	<p>a. Effects on the safety and efficiency of the transport network</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3.</li> <li>ii. Adequate short-term parking and dropping off and picking up facilities are available, either on-site or on-street, to:               <ol style="list-style-type: none"> <li>1. allow for people to safely enter or exit vehicles; and</li> <li>2. maintain the safety and efficiency of the frontage road (Policy 6.2.3.6).</li> </ol> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the safety of short-term parking and dropping off and picking up facilities, Council will consider the speed and volume of traffic and width of the road; and for early childhood education, particular regard will be given to whether children can enter and exit vehicles safely.</li> </ul>
<p>6.</p> <p>Emergency services (residential zones and Taieri Aerodrome)</p>	<p>a. Effects on the safety and efficiency of the transport network</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3.</li> <li>ii. The operational needs of the activity can be met in a way that will maintain the safety and efficiency of the transport network (Policy 6.2.3.7).</li> </ul>
<p>7.</p> <p>All subdivision activities (all zones)</p>	<p>a. Effects on the safety and efficiency of the transport network</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3.</li> <li>ii. Adverse effects on the safety and efficiency of the transport network are avoided or, if avoidance is not practicable, adequately mitigated (Policy 6.2.3.9.a).</li> <li>iii. Any associated changes to the transportation network will be affordable to the public in the long term (Policy 6.2.3.9.b).</li> </ul> <p>X. Subdivision activities provide for new roads where:</p> <ol style="list-style-type: none"> <li>1. any proposed vehicle accessway will service more than 12 residential sites, or a development with an equivalent amount of vehicle trip demand, unless the location or design of the subdivision makes this inappropriate;</li> <li>2. it is necessary to provide connectivity to potential future urban growth areas in the surrounding environment; or</li> <li>3. it is otherwise necessary to support the safe and efficient</li> </ol>

### 6.11.2 Assessment of restricted discretionary activities (activities located in zones)

Activity	Matters of discretion	Guidance on the assessment of resource consents
		<p>operation of the transport network (Policy 6.2.3.Y).</p> <p>AC. Roads, private ways, and pedestrian and cycling connections are appropriate to the scale and location of the subdivision and are designed to:</p> <ol style="list-style-type: none"> <li>1. provide for the safe and efficient movement of vehicles, pedestrians and cyclists within the subdivision; and</li> <li>2. provide connections to surrounding areas and the wider transport network, particularly for buses, pedestrians, and cyclists, in a way that maximises opportunities for active mode and public transport connections to existing or planned <ol style="list-style-type: none"> <li>1. centres, public open spaces, schools, cycleways, walkways, public transport stops, and community facilities in the surrounding environment, and</li> <li>2. neighbouring urban land, including by providing appropriate connections to undeveloped land, whether zoned for future urban use or not, unless that land is inappropriate for urban development, based on the presence of overlay zones or mapped areas protecting significant values or indicating significant site constraints such as natural hazards; and</li> </ol> </li> <li>3. use materials that provide good urban design outcomes and, where infrastructure is to be vested in Council, provide good value with respect to ongoing costs to ratepayers for maintenance (Policy 6.2.3.12).</li> </ol> <p><i>General assessment guidance:</i></p> <p>Y. Council will generally require any vehicle accessway that serves more than 12 sites to be vested in the DCC as a road but may also require vehicle accessways that serve 12 or fewer sites to be designed as a road and be vested with the DCC, including where required to enable connectivity to potential future urban growth areas.</p> <p>AD. In determining whether the location or design of a subdivision makes it inappropriate to require a road, Council will consider all relevant matters, including, but not limited to, whether:</p> <ol style="list-style-type: none"> <li>1. factors such as slope and site dimensions do not enable minimum road design requirements to be met;</li> <li>2. access can only be achieved by right-of-way over other property;</li> <li>3. the proposal is related to a multi-unit development or is for a unit title subdivision and ongoing management of accessways over common property is provided for through a body corporate; or</li> <li>4. legal constraints which the applicant does not have the authority to cancel exist within the site and prevent the vesting of road.</li> </ol>

**6.11.2 Assessment of restricted discretionary activities (activities located in zones)**

Activity	Matters of discretion	Guidance on the assessment of resource consents
		<p>AE. Council will generally require roads to be designed and constructed in accordance with the Dunedin Code of Subdivision and Development 2010 and/or the most recent NZS 4404. Council will only consider proposals designed to a lesser standard when they are submitted with engineering information that demonstrates why the standards are unachievable.</p> <p>Z. Council will consider the effects of subdivision and subsequent development on the safety and efficiency of the state highway network, and may require written approval from Waka Kotahi NZ Transport Agency.</p> <p>AF. In assessing whether a development creates “an equivalent amount of vehicle trip demand” Council will generally assume that 12 residential sites would normally create 98 vehicle movements per day (or 8.2 per site) based on these sites being developed with 1 residential unit per site. Where Council determines that a subdivision is designed to enable or encourage a significant number of the sites to be developed with duplexes or multiple units, Council may require a road to service 12 or fewer sites.</p> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iv. Easements for pedestrian and/or vehicle access either on or off the site.</li> </ul> <p>AA. A requirement to vest a road or roads with the DCC.</p> <p>AB. Council will generally require roads to be designed and constructed in accordance with the Dunedin Code of Subdivision and Development 2010 and/or the most recent NZS 4404.</p> <p><i>Design considerations that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>v. Shared driveways are low speed environments, and where appropriate provide for the storage of rubbish and recycling bins, as well as turning facilities for refuse collection vehicles where necessary.</li> <li>vi. In the commercial and mixed use zones and the industrial zones, connections are proposed to link parking areas and provide vehicle access behind buildings to minimise the need for new vehicle accesses.</li> <li>vii. The location and gradient of any new intersection or access ensures the safety and efficiency of the transport network.</li> <li>viii. The design of any driveways is appropriate with respect to the length and potential number of private units to be served.</li> </ul>
<p>8. Subdivision activities that include a new road (all zones)</p>	<p>a. Effects on the safety and efficiency of the transport network</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3.</li> <li>ii. NA</li> <li>iii. NA</li> </ul> <p>X. Roads are appropriate to the scale and location of the</p>

**6.11.2 Assessment of restricted discretionary activities (activities located in zones)**

Activity	Matters of discretion	Guidance on the assessment of resource consents
		<p>subdivision and are designed to:</p> <ol style="list-style-type: none"> <li>1. provide for the safe and efficient movement of vehicles, pedestrians and cyclists within the subdivision; and</li> <li>2. provide connections to surrounding areas and the wider transport network, particularly for buses, pedestrians, and cyclists, in a way that maximises opportunities for active mode and public transport connections to existing or planned:               <ol style="list-style-type: none"> <li>1. centres, public open spaces, schools, cycleways, walkways, public transport stops, and community facilities in the surrounding environment, and</li> <li>2. neighbouring urban land, including by providing appropriate connections to undeveloped land, whether zoned for future urban use or not, unless that land is inappropriate for urban development, based on the presence of overlay zones or mapped areas protecting significant values or indicating significant site constraints such as natural hazards; and</li> <li>3. use materials that provide good urban design outcomes and, where infrastructure is to be vested in Council, provide good value with respect to ongoing costs to ratepayers for maintenance (Policy 6.2.3.12).</li> </ol> </li> </ol> <p><i>General assessment guidance:</i></p> <p>iv. In assessing the transport network design, Council will make reference to the Dunedin City Council Code of Subdivision and Development 2010 and/or the most recent NZS 4404.</p> <p>v. In assessing the effects on the safety and efficiency of the transport network, Council will consider any changes to traffic volumes on other parts of the network as a result of the subdivision.</p> <p>Y. In assessing whether adequate connections to surrounding areas have been provided, Council will consider whether the road layout makes adequate allowance for connections to potential future areas of urban expansion (even where these areas are not yet identified in the Planning Map).</p> <p><i>Conditions that may be imposed include:</i></p> <p>vi. Easements for pedestrian and/or vehicle access either on or off the site.</p> <p>vii. The standard of pedestrian and/or cycle paths required.</p> <p>viii. The standard of street lighting or private access lighting required.</p> <p>Z. A requirement for roads to be designed and constructed in accordance with the Dunedin Code of Subdivision and Development 2010 and/or the most recent NZS 4404.</p> <p>AA. The location of roading connections to potential future growth areas.</p>

### 6.11.2 Assessment of restricted discretionary activities (activities located in zones)

Activity	Matters of discretion	Guidance on the assessment of resource consents
		<p>AB. A requirement to vest the road or roads with the DCC.</p> <p><i>Design considerations that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>ix. Road networks use a permeable 'grid' network design that connects to surrounding streets and/or enables future connections to un-developed areas, except where this is not possible because of natural features or the surrounding patterns of development. Where cul-de-sacs must be provided, pedestrian and cycling links to surrounding roads are provided, if physically possible.</li> <li>x. The design provides for all parking, loading and access standards to be met.</li> <li>xi. Appropriate construction standards, materials, design palettes, and products are employed with consideration of both the on-going maintenance costs to ratepayers and appropriate character and amenity standards.</li> <li>xii. The design provides safe and convenient access for pedestrians and cyclists or other active modes to any public places, including the coast, water bodies or reserves.</li> </ul>

### 6.11.2 Assessment of restricted discretionary activities (activities located in zones)

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>X. In the General Residential 1 Zone or Township and Settlement Zone (except within a <b>no DCC reticulated wastewater mapped area</b>) or in the <b>Variation 2 mapped area</b>:</p> <ul style="list-style-type: none"> <li>• All subdivision activities</li> <li>• New buildings or additions and alterations to buildings that result in a multi-unit development</li> </ul>	<p>a. Effects on the safety and efficiency of the transport network.</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 6.2.3.</li> <li>ii. The activity is designed to ensure: <ul style="list-style-type: none"> <li>1. the safe and efficient operation of waste collection vehicles; and</li> <li>2. any on-street solid waste collection will not obstruct footpaths, private accessways or roads (Policy 6.2.3.Z).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the design of subdivisions and multi-unit development, Council will consider whether: <ul style="list-style-type: none"> <li>1. bins can be moved easily between the on-street collection point and appropriate on-site storage to discourage bins from being left on the street outside collection times; and</li> <li>2. the number of bins that the units will be supplied with can fit along the street frontage without blocking the footpath.</li> </ul> </li> <li>iv. For proposals that do not enable safe and efficient collection of solid waste by Dunedin City Council standard services, Council will consider the contents of a Waste Management Plan which demonstrates how private solid waste collection services will be provided to ensure Policy 6.2.3.Z is achieved.</li> </ul> <p><i>Conditions that may be imposed:</i></p> <ul style="list-style-type: none"> <li>v. For larger multi-unit complexes, the requirement for on-site waste collection in a location that provides for safe site ingress and egress for solid waste collection vehicles.</li> <li>vi. Upgrades to the footpath or other parts of the road to allow on-street collection in a way that enables safe pedestrian movement.</li> <li>vii. For subdivisions accessed via private ways, requirement for an easement granting Right of Way to Dunedin City Council for the purpose of solid waste collection.</li> <li>viii. For subdivisions accessed via private ways, requirements for the design and dimensions of the private way to provide safe ingress and turning areas for solid waste collection vehicles and suitable areas for bins to be placed for collection.</li> </ul>

#### Note 6.11.2A - General advice

1. For guidance on best practice for cycle facility design see the Auckland Transport's *Transport Design Manual*.

## Rule 6.12 Assessment of Discretionary Activities

### Rule 6.12.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning

Council may grant or refuse the application, and, if granted, may impose conditions.

2. Rules 6.12.2 and 6.12.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### **6.12.2 Assessment of discretionary activities in management and major facility zones**

Activity	Guidance on the assessment of resource consents
----------	---

<p>1. All discretionary activities that are linked to Section 6.12, including but not limited to the activities listed below</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 6.2.2 and 6.2.3</li> <li>ii. Adverse effects on the safety and efficiency of the transport network will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 6.2.3.9.a).</li> <li>iii. Any associated changes to the transportation network will be affordable to the public in the long term (Policy 6.2.3.9.b).</li> <li>iv. Where mobility parking demand either cannot be met by the public parking supply, or would significantly affect the availability of that supply for surrounding activities, the activity will provide mobility parking either on or near the site at an amount that is adequate to: <ul style="list-style-type: none"> <li>1. avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the availability of publicly available mobility parking in the vicinity of the site (including on-street parking and off-street facilities); and</li> <li>2. ensure accessibility for residents, visitors, customers, staff and students (as relevant) who have limited mobility, including disabled people, the elderly and people travelling with young children (Policy 6.2.2.1).</li> </ul> </li> <li>v. For activities that are likely to generate a significant number of trips by walking, cycling or public transport: <ul style="list-style-type: none"> <li>1. activities likely to generate trips by cycling have safe access for cyclists into and through the site and secure cycle parking;</li> <li>2. activities likely to generate trips by walking have safe access for pedestrians into and through the site; and</li> <li>3. activities likely to generate trips by public transportation are located a reasonable walking distance from a frequent public transportation route with safe access for pedestrians from a bus stop to the site (Policy 6.2.2.4).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>vi. Service stations that include the ancillary sale of food or household consumables provide adequate cycle parking and marked pedestrian access to provide for customers who access the site by walking or cycling.</li> </ul>
<p>2. All high trip generators, which include:</p> <ul style="list-style-type: none"> <li>• any activities that generate 250 or more vehicle movements per day</li> </ul>	<p>Same as for Rule 6.11.2.2</p>

### 6.12.3 Assessment of discretionary transportation activities

Activity	Guidance on the assessment of resource consents
----------	---

1. All discretionary transportation activities

*Relevant objectives and policies (priority considerations):*

- a. See Section 9.7 for guidance on the assessment of discretionary resource consents in relation to Objective 9.2.2 and effects related to public health and safety.
- b. Where in a **ONCC, HNCC or NCC overlay zone**, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.3 and effects related to the natural character of the coast.
- c. Where in a **ONF, ONL or SNL overlay zone**, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.5 and effects related to landscape values.
- d. For activities that may have effects on biodiversity values, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1.
- e. For activities adjacent to water bodies and the coast, see section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.2.
- f. Where on a **heritage site** see Section 13.7 for guidance on the assessment of resource consents in relation to Objective 13.2.2 and effects on heritage values.
- g. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.

### 6.12.3 Assessment of discretionary transportation activities

Activity	Guidance on the assessment of resource consents
<p>2. New roads or additions or alterations to existing roads</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 6.2.1 and 6.2.4</li> <li>b. Policy 2.2.1.11</li> <li>c. The road is designed to provide for the needs of all users, and to integrate with surrounding land uses as appropriate for the surrounding environment and <b>road classification hierarchy mapped area</b> (Policy 6.2.1.3.a).</li> <li>d. The location and design of the road:               <ul style="list-style-type: none"> <li>i. minimises as far as practicable adverse effects on surrounding residential or other sensitive activities, including severance effects, changes to drainage patterns, and vibration, noise, glare and fumes from vehicle movements; and</li> <li>ii. maintains or enhances the safety and efficiency of the overall transport network (Policy 6.2.1.3.b).</li> </ul> </li> <li>e. Sufficient visibility is available where a driveway, vehicle track or road crosses an operational rail network via a level crossing, to maintain the safety of the road and rail users (Policy 6.2.4.6.b).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>f. Council will assess whether new roads or additions or alterations to roads provide for the safe and efficient movement of cyclists using the road, considering the road space allocation and design, and based on the anticipated role of the road in any cycle networks.</li> <li>g. In considering the appropriateness of the road design, Council will consider the function of the road, including but not limited to the elements described in Appendix 6A.</li> <li>h. Council will require new roads, driveways or vehicle tracks that cross an operational rail network via a level crossing to maintain clear sightlines within the sight line triangles shown in Figure 6B.18 Railway Level Crossing Sight Line Requirements.</li> </ul>

### 6.12.3 Assessment of discretionary transportation activities

Activity	Guidance on the assessment of resource consents
<p>3. Passenger transportation hubs</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 6.2.1</li> <li>b. Passenger transportation hubs are located and designed to:               <ul style="list-style-type: none"> <li>i. allow for convenient connections with other travel modes;</li> <li>ii. ensure the safety of users;</li> <li>iii. maintain or enhance the safety and efficiency of the overall transport network; and</li> <li>iv. maintain or enhance the amenity of the surrounding environment (Policy 6.2.1.4).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. For off-street passenger transportation hubs, Council will consider whether the site and vehicle access design provide for the safety of cyclists entering and exiting the road network.</li> <li>d. Council will generally require passenger transportation hubs to provide safe and secure cycle parking facilities.</li> </ul>
<p>4. Heliports</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 6.2.1</li> <li>b. Heliports are located and designed to:               <ul style="list-style-type: none"> <li>i. ensure the safety of users;</li> <li>ii. maintain the amenity of the surrounding environment; and</li> <li>iii. maintain or enhance the safety and efficiency of the overall transport network (Policy 6.2.1.5).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. Council will assess the noise effects of helicopter movements in accordance with the standards set out in NZS6807:1994 <i>Noise Management and Land Use Planning for Helicopter Landing Areas</i>.</li> </ul>

#### Note 6.12A - General advice

1. For guidance on best practice for cycle facility design see the Auckland Transport's *Transport Design Manual*.

## Rule 6.13 Assessment of Non-complying Activities

### Rule 6.13.1 Introduction

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 6.13.2 - 6.13.3 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.

### 6.13.2 Assessment of non-complying activities located in management zone or major facility zone sections

Activity	Guidance on the assessment of resource consents
1. All non-complying activities that are linked to Section 6.13, including but not limited to the activities listed below	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objectives 6.2.2, 6.2.3 and 6.2.4</p> <p><i>General assessment guidance:</i></p> <p>b. In assessing the significance of effects, consideration will be given to:</p> <ol style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of precedent being set by the granting of a resource consent.</li> </ol>
2. All high trip generators, which include: <ul style="list-style-type: none"> <li>• any activities that generate 250 or more vehicle movements per day</li> </ul>	Same as for Rule 6.11.2.2

### 6.13.3 Assessment of non-complying performance standard contraventions

Activity	Guidance on the assessment of resource consents
1. In a <b>primary pedestrian street frontage mapped area:</b> <ul style="list-style-type: none"> <li>• Access to loading areas (Rule 6.6.2.5.b)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 6.2.4</p> <p>b. Adverse effects on pedestrian safety and ease of movement would be insignificant (Policy 6.2.4.3).</p>

## Rule 6.14 Special Information Requirements

### 6.14.1 Parking demand information

When land use activities do not meet performance standards for minimum mobility car parking, Council may require the following information, to demonstrate the likely mobility parking demand of the activity and potential effects of that demand on publicly available mobility parking near the site:

- a. Current usage rates (% usage) of all publicly available on- and off-street mobility parking spaces within 250m of the site.
- b. The accessibility of the site by public transport, and for mobility impaired cyclists and pedestrians.
- c. The predicted transport behaviour of users of the activity, including the numbers of mobility impaired people predicted to access the activity by private vehicle, carpool, public transport, cycle or foot.
- d. Details of any travel plan provided by the applicant, setting out targets for increased proportions of mobility impaired users accessing the activity by carpool, public transport, cycle or foot, and a detailed implementation plan for actions to achieve those targets.

### 6.14.2 Integrated transport assessment

Council will generally require an Integrated Transport Assessment (ITA) for applications for high trip generators. The information requirements for an ITA are set out in the table below. The level of detail and analysis provided in each section of the ITA should reflect the scale and complexity of the proposed activity and the context of the site and its surrounding environment.

Item	Details to be included
Description of baseline conditions	Description of the site's existing characteristics, any existing land use(s), the trip generation of existing land use(s), the existing transport environment including transport networks, safety, vehicle parking, accessibility by public transport, cycle and foot.
Description of the proposal	Description of the proposed land use, proposed vehicle and pedestrian access arrangements, proposed vehicle parking, proposed vehicle loading, proposed cycle parking, any other facilities proposed to improve access by any transport mode.
Travel characteristics	Estimated trip generation for all modes.
Planned transportation infrastructure changes	Description of any planned upgrades to the transport network near the site that may be relevant to the activity.
Accessibility of the activity	<p>Explanation of how accessible the activity will be for each mode, including the following information:</p> <ul style="list-style-type: none"> <li>• How will the predicted demand for vehicle parking, vehicle loading, pedestrians and cycle parking be met? What facilities will there be on or near the site for users of each mode?</li> <li>• How safe will it be for each mode to access the site?</li> <li>• What facilities will be provided on-site for pedestrians to safely walk within the site?</li> <li>• Details of the demand predicted to be placed on public vehicle and cycle parking facilities (on- and off-street), and an assessment of the capacity of public facilities to absorb that demand.</li> </ul>

<p>Assessment of effects on accessibility and on the safety and efficiency of the transport network</p>	<p>Explanation of how the activity will support Objective 6.2.2 and relevant associated policies, in relation to the accessibility of the land use activity by a range of travel modes.</p> <p>Explanation of how the activity will support Objective 6.2.3 and Policy 6.2.3.8, in relation to effects on the safety and efficiency of the transport network for all modes.</p>
<p>Mitigation and options to influence travel choice</p>	<p>Description of measures that are proposed to mitigate effects on accessibility, safety and effects on the transport network.</p>
<p>Summary</p>	<p>Summary of the main aspects of the transport assessment.</p>

## Appendix 6A. Road Classification Hierarchy

### 6A.1 Description of the Road Classification Hierarchy

The road classification hierarchy is used to distinguish roads into categories, as some of the rules in the District Plan only apply to some of the roads in a particular category.

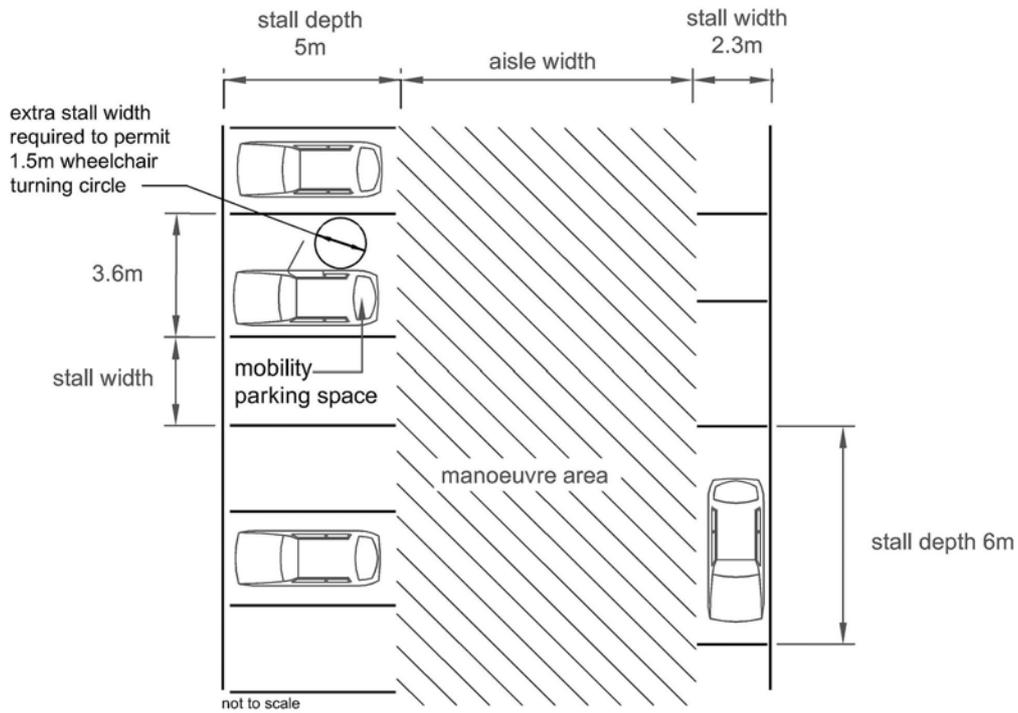

The classification reflects not only the transport function of a road but also the place function or its contribution to the surrounding environment, taking into account the surrounding land use, and the role the road plays in contributing to the amenity values, identity and public space of the adjoining area.

### 6A.2 Road Classification

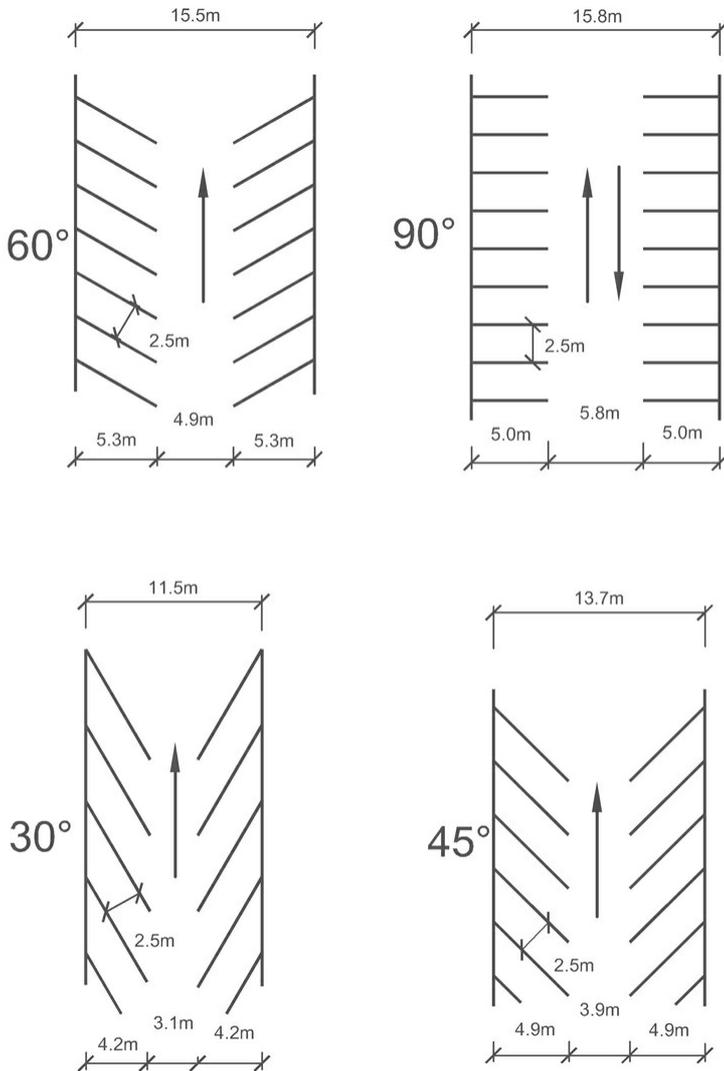

Classification	Description
Motorway	Any NZ Transport Agency classified motorway. High speed routes where movement of motorised vehicles is the sole purpose. Pedestrians and cyclists are generally prohibited and property access is limited and controlled.
Strategic road	High capacity roads (including state highways) that form part of the national and/or regional network. A strategic road provides through movement for freight, tourists and vehicular traffic; and connect main centres, outlying settlements and goods to markets. A strategic road is constructed and managed to a high standard to ensure it operates safely and efficiently. In urban areas, these roads also support local transport, various modes of transport and a mixed land use environment. Provision is made for pedestrians in urban areas, and where provided, cycle facilities should be physically separated from traffic. Public transport operates on these roads but stops are limited.
Arterial road	Roads (including an urban high density corridor) that connect, distribute and collect within and between residential, rural, commercial and industrial areas; as well as providing access to properties. In urban areas, these roads support a range of travel modes including frequent public transport services and considerable pedestrian and cycle activity. On an arterial road, it may be appropriate to prioritise road space allocation/road design to support safe cycling and/or public transportation. This can result in less space for on-street parking. In rural areas, an arterial road carries moderate volumes of general traffic, including a higher percentage of heavy vehicles serving key sites of primary industry. Although it may also support some residential development, an arterial road in a rural area is not expected to meet the same standards that apply in urban areas such as kerb and channel gutters and street lighting.
Urban High Density Corridor	A high use arterial road in a densely developed environment. These corridors typically support a combination of moderate to high traffic volumes, moderate to high pedestrian volumes, frequent bus services, cycling, freight movements, medium density residential land use, and commercial or tertiary education activity. Through traffic should be catered for, however it is expected that the form and speed of the corridor will evolve to support the integration of the transport corridor function with adjacent land use. On-street parking is generally provided where space allows, but priority is given to public transport and to cycle and pedestrian infrastructure over parking, where space is limited.

Classification	Description
Commercial Centre Streets	Roads located within the Central Business District and centres zones, the CBD edge mixed use zones and other commercial zones. It is expected that the form of these streets will evolve to support a complementary integration of the transport corridor function with adjacent land use. The design elements of these streets should be conducive to a high level of pedestrian activity; and to supporting active frontages and high-quality public spaces. The highest level of safety, connectivity, accessibility and amenity for pedestrians, cyclists and public transport users should be provided on these streets. Where parking is provided in urban areas, it should increasingly be provided off-street rather than on-street, and toward the periphery of the centre or zone.
Collector road	Roads in local neighbourhoods that collect and distribute local traffic. A collector road provides a local through movement function as well as access to properties. In urban areas, a collector road supports some public transport services, with frequent stopping points. Considerable pedestrian and cycle activity is expected, so the road layout should be designed to discourage speed.
Local road	Roads that are not intended to act as main through routes for motorised vehicle traffic but primarily provide for access to properties. These roads can be different in nature depending on the land use environments they serve. In residential environments, layout and design discourages speed as the intention is to provide an environment that supports safe and balanced access for cars, pedestrians and cyclists. A local road may support bus routes.
Industrial road	Roads that have a primary role of providing access to industrial sites. Sufficient width needs to be maintained for the manoeuvring of larger and heavier vehicles. Footpaths and on-street parking are generally provided, but where necessary, space should be prioritised for the manoeuvring needs of heavy vehicles. Speeds are managed to a level consistent with safe on-street manoeuvring, and high levels of access to properties for heavy vehicles should be provided. Parking should generally be controlled to serve the primary purpose of industrial access. An industrial road may support alternative cycle routes.

## **7. Scheduled Trees**

### **7.1 Introduction**

As well as enhancing the landscape, trees also help to reduce noise, provide shelter and habitats for birds and other animals; assist with the avoidance of natural hazards such as landslips and erosion; and provide 'natural' impact and contrast with the built elements of the environment. Trees are living, dynamic organisms that provide an identity and presence. Certain trees may also have value as botanical specimens or have historical or other cultural significance.

Trees are of particular importance in urban areas where they are the largest, most significant natural elements in the landscape at the level of the street environment and they provide a sense of scale and setting. The most visually attractive urban areas of the city are those where trees make a substantial visual impact. However, in populated urban areas, trees are often also perceived to have negative impacts, usually by those living adjacent to such trees who are concerned about shading and safety.

The importance of trees is not restricted to urban areas and it is recognised that trees also play an important role in rural areas in terms of protecting rural amenity through improving soil and slope stability.

Without protection important trees could be damaged or removed without an opportunity for the effects of the modification or removal being evaluated or alternative options explored.

## 7.2 Objectives and Policies

<b>Objective 7.2.1</b>	
The contribution made by significant trees to the visual landscape and history of neighbourhoods is maintained.	
Policy 7.2.1.1	Enable the removal of a scheduled tree where they are certified as being dead or in terminal decline by a suitably qualified arborist or where subject to an order for removal in terms of section 333 of the Property Law Act 2007.
Policy 7.2.1.2	Avoid the removal of a scheduled tree (except as provided for in Policy 7.2.1.1) unless: <ul style="list-style-type: none"> <li>a. there is a significant risk to personal/public safety or a risk to personal safety that is required to be managed under health and safety legislation;</li> <li>b. the tree poses a substantial risk to a scheduled heritage building or scheduled heritage structure;</li> <li>c. there is a moderate to significant risk to buildings;</li> <li>d. the removal of the tree is necessary to avoid significant adverse effects on existing infrastructure and network utilities;</li> <li>e. removal of the tree will result in significant positive effects in respect of the efficient use of land; or <ul style="list-style-type: none"> <li>X. removal of the tree is required to allow for significant public benefit that could not otherwise be achieved, and the public benefit outweighs the adverse effects of loss of the tree.</li> </ul> </li> </ul>
Policy 7.2.1.3	Only allow the modification of a scheduled tree where: <ul style="list-style-type: none"> <li>a. the work is undertaken in accordance with best arboricultural practice by a suitably qualified arborist and will maintain or improve the health of the tree;</li> <li>b. any adverse effects from the modification of the tree on amenity values are avoided or, if avoidance is not practicable, no more than minor; and</li> <li>c. the modification is necessary to improve the health of the tree or to mitigate adverse effects of the tree on safety, sunlight access, or damage to property or infrastructure.</li> </ul>
Policy 7.2.1.4	Require earthworks, public amenities, network utility activities, new roads and additions and alterations to roads, buildings, structures, additions and alterations and site development activities that involve the laying of an impermeable surface, to be set back from a scheduled tree an adequate distance, or, where appropriate, to use trenchless methods, to avoid: <ul style="list-style-type: none"> <li>a. damage to the scheduled tree; and</li> <li>b. potential future adverse effects caused by the tree on amenity values, structural integrity of buildings or infrastructure, or safety that may lead to future demand to remove the tree.</li> </ul>

## Rules

### Rule 7.3 Activity Status

#### 7.3.1 Activity Status Introduction

1. The activity status table in Rule 7.3.2 shows the activity status of scheduled trees activities across all zones, provided any performance standards shown in the far right column are met. The activities in the scheduled trees activities category are listed in the Nested Tables in Section 1.3.
2. Performance standards apply to permitted, controlled, and restricted discretionary activities.
3. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
4. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.
5. Any site development activities associated with an activity provided for in the activity status table in Rule 7.3.2 is subject to the provisions of the relevant management zone section.
6. Any earthworks associated with an activity provided for in the activity status table in Rule 7.3.2 are subject to the provisions in Section 8A.
7. Any construction associated with an activity provided for in the activity status table in Rule 7.3.2 is subject to the provisions in Section 4.

#### Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity

#### 7.3.2 Activity status table - scheduled trees

Activity	Activity status	Performance standards
1. Removal of a scheduled tree that is: dead, in terminal decline or with extreme failure, or subject to a court order for removal	RD	
2. Modification of a scheduled tree	RD	a. Best arboricultural practice
3. Removal and any other work on a scheduled tree that will lead to the death or terminal decline of a scheduled tree	NC	

## **Rule 7.4 Notification**

1. Applications for resource consent for the following activities will be publicly notified in accordance with section 95A of the RMA:
  1. Removal and any other work on a scheduled tree that will lead to the death or terminal decline of a scheduled tree, except where:
    - a. NA
    - b. the tree is dead or in terminal decline and the application is accompanied by written documentation by a suitably qualified arborist to this effect; or
  - X. the scheduled tree is within the Campus Zone.
2. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 7.5 Performance Standards**

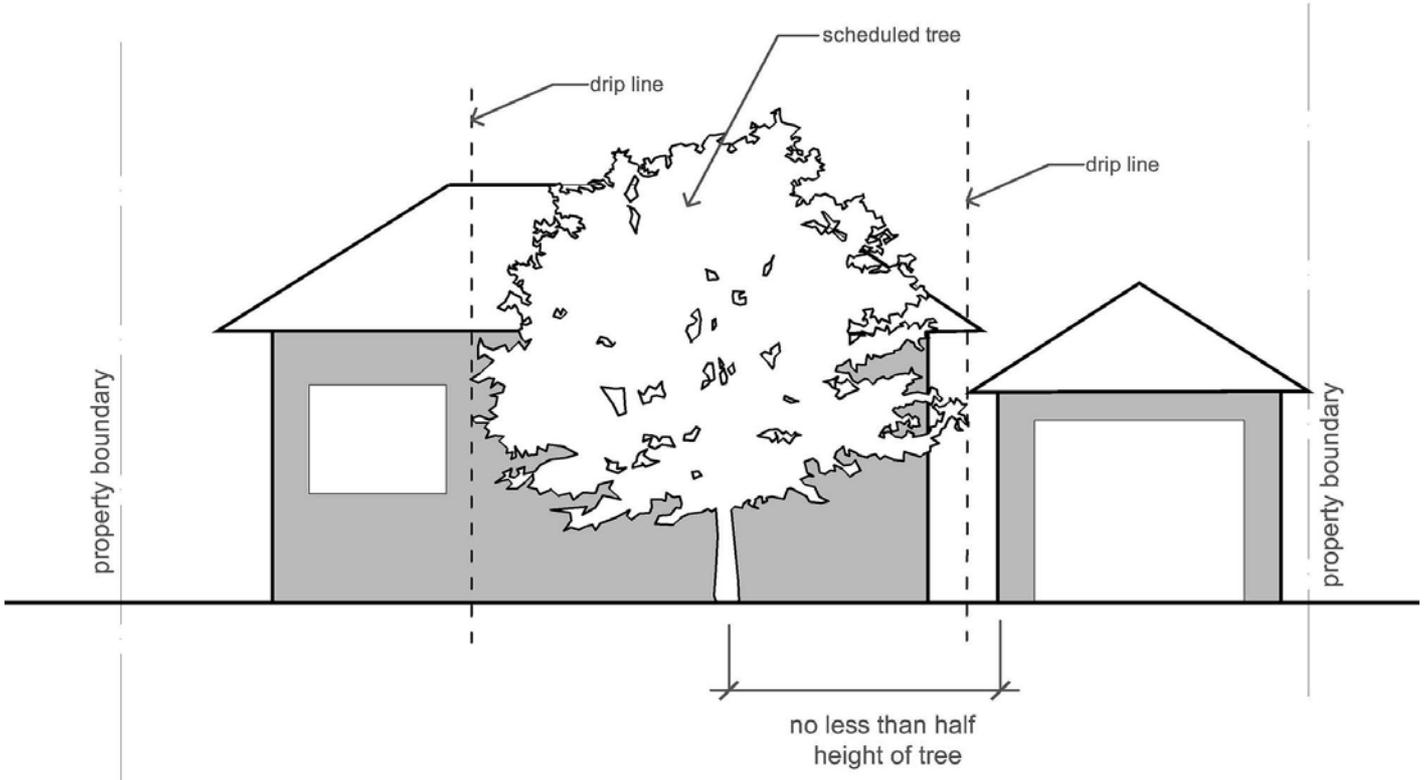

### **7.5.1 Best Arboricultural Practice**

1. Work is undertaken by a suitably qualified arborist using best arboricultural practice.
2. Activities that contravene this performance standard are non-complying activities.

### **7.5.2 Setback from Scheduled Tree**

1. The following activities must not take place under the dripline of a scheduled tree, or within a distance from the trunk equivalent to half the height of the tree, whichever is the greater, if they involve ground excavation or the installation of impermeable surfaces on the ground (see Figure 7.5.2A):
  - a. new buildings;
  - b. new structures;
  - c. new additions and alterations;
  - d. public amenities;
  - e. earthworks activities;
  - f. new roads or additions or alterations to roads;
  - g. network utility activities; and
  - h. site development activities.
2. Activities employing trenchless methods are exempt from this standard where all of the following are met:
  - a. the entry and exit points are outside the dripline of a scheduled tree, or a distance from the trunk equivalent to half the height of the tree, whichever is the greater (see Figure 7.5.2A);
  - b. the tunnel is a minimum of 1m below ground level;
  - c. the work is undertaken under the supervision of a suitably qualified arborist, who has determined that the work will not damage the health or stability of the scheduled tree; and
  - d. ten working days' notice of the work is provided to the DCC which includes the location of the work and the name of the supervising arborist.
3. Activities that contravene this performance standard are restricted discretionary activities.

Figure 7.5.2A: Setback from scheduled tree

## Rule 7.6 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### 7.6.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 7.6.2:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

7.6.2 Assessment of performance standard contraventions			
Performance standard	Matters of discretion	Guidance on the assessment of resource consents	
1. Setback from scheduled tree	a. Effects on long term health of tree	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>i. Objective 7.2.1.</li> <li>ii. Earthworks, public amenities, new roads and additions and alterations to roads, network utility activities, buildings, structures, additions and alterations and site development activities that involve the laying of an impermeable surface, are set back from a scheduled tree an adequate distance, or where appropriate trenchless methods are used, to avoid:               <ol style="list-style-type: none"> <li>1. damage to the scheduled tree; and</li> <li>2. potential future adverse effects caused by the tree on amenity values, structural integrity of buildings or infrastructure, or safety that may lead to future demand to remove the tree (Policy 7.2.1.4).</li> </ol> </li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>iii. In assessing effects on the scheduled tree, any consequential amenity effects from pressure to remove tree and tree removal will also be assessed.</li> </ol>	

## **Rule 7.7 Assessment of Restricted Discretionary Activities**

### **7.7.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 7.7.2:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
4. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**;
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard;
    - iii. the performance standard contravention will be assessed as indicated in Rule 7.6; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**;
    - ii. the performance standard contravention will be assessed; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**;
    - ii. the performance standard contravention will be assessed as indicated in Rule 7.8; and
    - iii. the assessment guidance in this section will also be considered.

### 7.7.2 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. Modification of a scheduled tree	a. Effects on long term health of tree	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 7.2.1.</li> <li>ii. The work is undertaken in accordance with best arboricultural practice by a suitably qualified arborist and will maintain or improve the health of the tree (Policy 7.2.1.3.a).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. The assessment of the long term health of the tree in relation to modification will consider the report from a suitably qualified arborist (see Special Information Requirements - Rule 7.9).</li> </ul>
	b. Effects on amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 7.2.1.</li> <li>ii. Any adverse effects from the modification of the tree on amenity values are avoided or, if avoidance is not practicable, no more than minor (Policy 7.2.1.3.b).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing adverse effects on amenity values, Council will consider the information held in the STEM assessment for the tree.</li> <li>iv. The assessment of the long term health of the tree in relation to modification will consider the report from a suitably qualified arborist (see Special Information Requirements - Rule 7.9).</li> </ul>
	c. Positive effects of tree modification	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 7.2.1.</li> <li>ii. The modification is necessary to improve the health of the tree to mitigate adverse effects of the tree on safety, sunlight access, or damage to property or infrastructure (Policy 7.2.1.3.c).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. The assessment of the long term health of the tree in relation to modification will consider the report from a suitably qualified arborist (see Special Information Requirements - Rule 7.9).</li> </ul>
2. Removal of a scheduled tree that is: dead, in terminal decline or with extreme failure, or subject to a court order for removal	a. Effects on amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 7.2.1.</li> <li>ii. Removal of a scheduled tree is enabled where it is certified as being dead or in terminal decline by a suitably qualified arborist or where subject to an order for removal in terms of section 333 of the Property Law Act 2007 (Policy 7.2.1.1).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. The assessment of the long term health of the tree in relation to modification will consider the report from a suitably qualified arborist (see Special Information Requirements - Rule 7.9).</li> </ul>

## Rule 7.8 Assessment of Non-complying Activities

### 7.8.1 Introduction

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 7.8.2 provides guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

7.8.2 Assessment of non-complying activities	
Activity	Guidance on the assessment of resource consents
1. Removal and any other work on a scheduled tree that will lead to the death or terminal decline of a scheduled tree	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objectives 7.2.1, 2.4.1.</li> <li>b. Policy 2.4.1.2.</li> <li>c. Avoid the removal of a scheduled tree (except as provided for in Policy 7.2.1.1) unless:           <ol style="list-style-type: none"> <li>i. there is a significant risk to personal/public safety or a risk to personal safety that is required to be managed under health and safety legislation;</li> <li>ii. the tree poses a substantial risk to a scheduled heritage building or scheduled heritage structure;</li> <li>iii. there is a moderate to significant risk to buildings;</li> <li>iv. the removal of the tree is necessary to avoid significant adverse effects on existing infrastructure and network utilities;</li> <li>v. removal of the tree will result in significant positive effects in respect of the efficient use of land; or</li> </ol> <p style="margin-left: 40px;">X. removal of the tree is required to allow for significant public benefit that could not otherwise be achieved, and the public benefit outweighs the adverse effects of loss of the tree (Policy 7.2.1.2).</p> </li> </ol>

### 7.8.3 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. Best arboricultural practice	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 7.2.1, 2.4.1.</li> <li>b. Policy 2.4.1.2.</li> <li>c. Only allow the modification of a scheduled tree where:               <ul style="list-style-type: none"> <li>i. the work is undertaken in accordance with best arboricultural practice by a suitably qualified arborist and will maintain or improve the health of the tree;</li> <li>ii. any adverse effects from the modification of the tree on amenity values are avoided or, if avoidance is not practicable, no more than minor; and</li> <li>iii. the modification is necessary to improve the health of the tree or to mitigate adverse effects of the tree on safety, sunlight access, or damage to property or infrastructure (Policy 7.2.1.3).</li> </ul> </li> </ul>

## Rule 7.9 Special Information Requirements

### 7.9.1 Arborist documentation

1. Any application for the removal of a scheduled tree due to the tree being dead or in terminal decline must include written documentation by a suitably qualified arborist to this effect.
2. Any application for the modification of a scheduled tree must include written documentation by a suitably qualified arborist that the modification will be in accordance with good arboricultural practice, and will not lead to the death or terminal decline of the scheduled tree.
3. Any application for the removal of a scheduled tree due to a court order must include a copy of that court order.

## **8. Natural Hazard Mitigation Activities**

### **8.1 Introduction**

Natural hazard mitigation activities include natural hazard mitigation structures and natural hazard mitigation earthworks and the repair, maintenance and emergency activities that are necessary to manage or reduce the risk and effects of natural hazards. Mitigation works do not entirely remove the risk from natural hazards, and the works themselves can cause adverse effects that require careful management, for example effects on biodiversity through the removal of vegetation. Also, in some instances, natural hazard mitigation activities have the potential to create, exacerbate or transfer risk.

There are many existing natural hazard mitigation works in Dunedin, particularly on the Taieri Plain, for example floodbanks and spillways, many of which are public works and some of which are privately owned. Existing works sometimes require maintenance and alterations and there can be requirements for new or emergency works.

The Plan manages the effects of natural hazard mitigation activities, including on the amenity and character of surrounding areas where mitigation works are proposed, through the consent process unless the works are repair, maintenance or emergency activities.

## 8.2 Objectives and Policies

<b>Objective 8.2.1</b>	
Natural hazard mitigation activities are enabled where they are the most effective and appropriate way of avoiding or mitigating the risks of natural hazards, and are designed and located to:	
a. minimise, as far as practicable, any adverse effects on the amenity and character of the zone; and	
b. meet the objectives and policies of the Plan related to all relevant overlay zones or mapped areas and any scheduled heritage item.	
Policy 8.2.1.1	Enable the repairs and maintenance of natural hazard mitigation structures and natural hazard mitigation earthworks features.
Policy 8.2.1.2	Only allow natural hazard mitigation earthworks and natural hazard mitigation structures where any significant adverse effects on the amenity and character of the surrounding area will be avoided or minimised as far as practicable.
Policy 8.2.1.3	Enable emergency natural hazard mitigation where necessary during a natural hazard event to provide immediate protection to life or property.

## Rules

### Rule 8.3 Activity Status

#### 8.3.1 Activity status introduction

1. The activity status table in Rule 8.3.2 shows the activity status of natural hazard mitigation activities across all zones. The activities in the natural hazard mitigation activities category are listed in the nested table in Section 1.3.
2. Performance standards apply to permitted, controlled and restricted discretionary activities.
3. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
4. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.
5. Any site development activities associated with an activity provided for in the activity status table in Rule 8.3.2 are subject to the provisions of the relevant management zone section.
6. Any earthworks, other than those that meet the definition of hazard mitigation earthworks, associated with an activity provided for in the activity status table in Rule 8.3.2 are subject to the provisions in Section 8A.
7. Any construction associated with an activity provided for in the activity status table in Rule 8.3.2 is subject to the provisions in Section 4.

#### Legend

Acronym	Meaning
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
ONCC	Outstanding Natural Coastal Character Overlay Zone
HNCC	High Natural Coastal Character Overlay Zone
NCC	Natural Coastal Character Overlay Zone
ONF	Outstanding Natural Feature Overlay Zone
ONL	Outstanding Natural Landscape Overlay Zone
SNL	Significant Natural Landscape Overlay Zone

### 8.3.2 Activity status table - Natural hazard mitigation activities

Activity	Activity Status
1. Emergency natural hazard mitigation	P
2. Repairs and maintenance of natural hazard mitigation earthworks features or natural hazard mitigation structures	P
3. Natural hazard mitigation earthworks	D
4. Natural hazard mitigation structures	D

#### Note 8.3.2A - Other relevant District Plan provisions

1. Shelterbelts and small woodlots for land instability mitigation is managed as an activity in zones.

#### Note 8.3.2B - General advice

1. Activities located below the level of mean high water springs are managed by the Otago Regional Council.
2. Land based activities involving, or in close proximity to, defences against water are managed by the following Otago Regional Council mechanisms:
  - a. Regional Plan: Water for Otago;
  - b. Otago Regional Council Flood Protection Management Bylaw; and
  - c. Otago Regional Council designations in this District Plan.
3. Activities within the coastal marine area are managed via the Regional Plan: Coast for Otago.

#### Note 8.3.2C - Other requirements outside of the District Plan

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan or a resource or building consent has been granted.
2. The Heritage New Zealand Pouhere Taonga Accidental Discovery Protocol (Appendix A8) manages archaeological sites that may be discovered as a result of earthworks. The protocol applies to any area, not just scheduled archaeological sites.
3. Scheduled archaeological sites are identified on the Planning Map. Archaeological sites may also be found outside these areas, but are more likely to be found within the archaeological alert layer.

## **Rule 8.4 Notification**

1. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided:
  1. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat to the **wāhi tūpuna mapped area** in Appendix A4.
2. Otago Regional Council will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided with respect to applications for resource consent in the following locations:
  1. hazard 1 and hazard 1A (flood) overlay zones; and
  2. **swale mapped areas**.
3. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 8.5 Assessment of Discretionary Activities**

### **8.5.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 8.5.2 provides guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies, with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance; and
  - d. conditions that may be imposed.

### 8.5.2 Assessment of discretionary natural hazard mitigation activities

Activity	Guidance on the assessment of resource consents
<p>1.</p> <ul style="list-style-type: none"> <li>• Natural hazard mitigation earthworks</li> <li>• Natural hazard mitigation structures</li> </ul>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>a. Objective 8.2.1.</li> <li>b. Natural hazard mitigation earthworks and natural hazard mitigation structures avoid or minimise, as far as practicable, significant adverse effects on the amenity and character of the surrounding area (Policy 8.2.1.2).</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>c. In assessing activities that are discretionary due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> <li>d. In assessing whether natural hazard mitigation activities are the most appropriate way to minimise risk on the site and on other sites, natural hazard mitigation activities will only be considered appropriate where there are no non-structural solutions that would be effective.</li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>e. See Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and effects related to biodiversity values.</li> <li>f. See Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.2 and effects related to biodiversity values and natural character of riparian margins and the coast.</li> <li>g. Where in a <b>ONCC, HNCC or NCC overlay zone</b>, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.3 and effects related to the natural character of the coast.</li> <li>h. See Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.4 and effects on public access.</li> <li>i. Where in a <b>ONF, ONL or SNL overlay zone</b>, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.5 and effects related to landscape values.</li> <li>j. See Section 11.6 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risks from natural hazards.</li> <li>k. Where in a <b>heritage precinct</b> or on a <b>heritage site</b> see Section 13.7 for guidance on the assessment of resource consents in relation to objectives 13.2.2 and 13.2.3 and effects on heritage values.</li> <li>l. Where in a <b>wāhi tūpuna mapped area</b>, see Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</li> </ol>

## **8A. Earthworks**

### **8A.1 Introduction**

Earthworks are an essential prerequisite for the use and development of Dunedin's land resource.

If not managed adequately, earthworks have the potential to result in adverse effects on rivers, lakes, streams, wetlands, coastal waters and groundwater, visual amenity, landscape, the natural character of the coast, indigenous flora and fauna, high class agricultural soils, and archaeological and cultural sites. Earthworks also have the potential to result in injury to people and damage to property, exacerbate certain existing hazards, create new hazards, and, if carried out at contaminated sites, release hazardous substances into the environment. Additionally, during construction, earthworks can cause adverse effects on local amenity and on locally, regionally and nationally important infrastructure, such as the transportation network, the reticulated water, foul sewer and stormwater networks, and the National Grid.

To manage the potential adverse effects of earthworks, mechanisms are included in the District Plan. These mechanisms include controls on the location, scale and design of earthworks, implementation of appropriate mitigation measures, and the avoidance of earthworks in sensitive locations. The aim of this management approach is to minimise adverse environmental effects and to prevent adverse effects on the safety of people and property.

Other regulatory and nonregulatory methods also control the effects of earthworks. Certain earthworks are carried out as part of building work; these are subject to the New Zealand Building Code and may require a building consent under the Building Act 2004. Other regulatory mechanisms through which earthworks of certain types are controlled include the Heritage New Zealand Pouhere Taonga Act 2014, the Regional Plan: Waste for Otago, the Regional Plan: Water for Otago and the Otago Regional Council Flood Protection Management Bylaw 2008.

## 8A.2 Objectives and Policies

<b>Objective 8A.2.1</b>	
<p>Earthworks necessary for permitted or approved land use and development are enabled, while avoiding, or adequately mitigating, any adverse effects on:</p> <ul style="list-style-type: none"> <li>a. visual amenity and character;</li> <li>b. the stability of land, buildings, and structures; and</li> <li>c. surrounding properties.</li> </ul>	
Policy 8A.2.1.1	<p>Require earthworks, and associated retaining structures, to be designed and located to avoid or minimise, as far as practicable, adverse effects on the stability of land, buildings, and structures by:</p> <ul style="list-style-type: none"> <li>a. being set back an adequate distance from property boundaries, buildings, structures and cliffs; and</li> <li>b. using a batter gradient that will be stable over time.</li> </ul>
Policy 8A.2.1.2	<p>Require earthworks and any associated retaining structures, to be designed, located and undertaken in a way that minimises, as far as practicable, adverse effects on surrounding sites and the wider area, including from:</p> <ul style="list-style-type: none"> <li>a. sediment run-off onto any property, or into any stormwater pipes, drains, channels or soakage systems; and</li> <li>b. dust nuisance on the amenity of surrounding sites.</li> </ul>
Policy 8A.2.1.3	<p>Only allow earthworks that exceed the scale thresholds (earthworks - large scale) and any associated retaining structures, where the following effects will be avoided or, if avoidance is not practicable, adequately mitigated:</p> <ul style="list-style-type: none"> <li>a. adverse effects on visual amenity and character;</li> <li>b. adverse effects on the amenity of surrounding properties, including from changes to drainage patterns; and</li> <li>c. adverse effects on the stability of land, buildings, and structures.</li> </ul>
Policy 8A.2.1.4	<p>Require earthworks ancillary to forestry to be carried out in accordance with industry best practice guidelines.</p>

## Rules

### Rule 8A.3 Activity Status

#### 8A.3.1 Activity status introduction

1. The activity status table in Rule 8A.3.2 shows the activity status of earthworks activities across all zones, provided any performance standards shown in the far right column are met. The activities in the earthworks category are listed in the Nested Table in Section 1.3.
2. Performance standards apply to permitted, and restricted discretionary activities.
3. If a permitted activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
4. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.
5. Any site development activities associated with an activity provided for in the activity status table in Rule 8A.3.2 is subject to the provisions of the relevant management zone section.
6. Any construction associated with an activity provided for in the activity status table in Rule 8A.3.2 is subject to the provisions in Section 4.

#### Legend

Acronym	Meaning
P	Permitted Activity
RD	Restricted Discretionary Activity
Res	Residential Zone

### 8A.3.2 Activity status table - earthworks activities

1.	Performance standards that apply to all earthworks activities	<ul style="list-style-type: none"> <li>a. Archaeological sites</li> <li>b. Batter gradient</li> <li>c. Setback from property boundary, buildings, structures and cliffs</li> <li>d. Setback from National Grid (earthworks)</li> <li>e. Setback from network utilities               <ul style="list-style-type: none"> <li>X. Setback from Critical Electricity Distribution Infrastructure (earthworks)</li> </ul> </li> <li>f. Sediment control</li> <li>g. Removal of high class soils</li> <li>h. NZ Environmental Code of Practice for Plantation Forestry</li> <li>i. Setback from scheduled tree</li> <li>j. Dust control</li> </ul>
Activity	Activity status	Performance standards
2.	Earthworks – small scale	P
3.	Earthworks – large scale	RD

#### Note 8A.3.2A - Other requirements outside the District Plan

1. The National Environmental Standards for Assessing and Managing Contaminants in Soil to Protect Human Health 2011 applies to any piece of land on which an activity described in the Hazardous Activities and Industries List (HAIL) is being undertaken, has been undertaken, or is more likely than not to have been undertaken. On land of this kind, any change of use, disturbance of soil, soil sampling, removal, replacement or upgrade of fuel tanks, and any subdivision will trigger the provisions of the NES, and may require a resource consent. The requirements of the NES are site specific; the DCC Resource Consents team can provide advice on likely requirements in relation to a particular property or activity. Information is also available from the Ministry for the Environment at [www.mfe.govt.nz/land/nes-assessing-and-managing-contaminants-soil-protect-human-health/about-nes](http://www.mfe.govt.nz/land/nes-assessing-and-managing-contaminants-soil-protect-human-health/about-nes).
2. The Otago Regional Plan: Water manages earthworks undertaken on the bed of any lake or river, and earthworks associated with drilling or bore construction (excluding the deposition of fill resulting from these activities).
3. The Otago Regional Plan: Waste manages discharges from offal pits, farm landfills and greenwaste landfills, and excavation and use of composting pits, silage pits and silage stacks.
  - X. The New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001) contains restrictions on the location of earthworks in relation to electricity transmission and distribution lines. Compliance with this code is mandatory. Compliance with this Plan does not ensure compliance with NZECP 34:2001.

## Rule 8A.4 Notification

1. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided:
  - a. large scale earthworks in a **wāhi tūpuna mapped area** where the activity is identified as a principal threat to values in Appendix A4; and
  - b. activities that contravene the sediment control performance standard in a **wāhi tūpuna mapped area**.
2. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## Rule 8A.5 Earthworks Performance Standards

### 8A.5.1 Earthworks - Small Scale Thresholds

#### 8A.5.1.1 General

The following earthworks are always considered earthworks - small scale:

- a. post holes for the erection of fences;
- b. post holes for permitted or approved buildings or signs;
- c. driving of piles for building foundations;
- d. earthworks in the Port Zone;
- e. earthworks in the rural or rural residential zones, outside flood hazard overlay zones, associated with burying material infected by unwanted organisms as declared by the Ministry for Primary Industries' Chief Technical Officer or an emergency declared by the Minister for Primary Industries under the Biosecurity Act 1993;
- f. earthworks subject to an approved building consent, except in the rural or rural residential zones or where they are located more than 1.8m from the building;
- g. earthworks for the erection of new fences or the construction of walking tracks or vehicle tracks, where the fence or track is associated with a permitted land use or city-wide activity, provided that the earthworks:
  - i. do not result in a change in finished ground level that exceeds 1m; and
  - ii. do not exceed 2m in width if located in an ASBV or ONF, ONCC, HNCC or NCC overlay zone, or 3m in width outside these areas.
- h. earthworks ancillary to the operation, repair and maintenance of the roading network;
- X. earthworks ancillary to the operation, repair and maintenance of the rail network;
  - i. earthworks ancillary to forestry; and
  - j. earthworks ancillary to the operation, repair, minor upgrading and maintenance of existing network utilities.

#### 8A.5.1.2 Scale thresholds for earthworks not listed in Rule 8A.5.1.1

- a. Earthworks not listed in Rule 8A.5.1.1 must not exceed the scale thresholds in Rule 8A.5.1.3, Rule 8A.5.1.4 or Rule 8A.5.1.5 to be considered earthworks - small scale. Earthworks that exceed these thresholds are treated as earthworks - large scale.
- b. For earthworks subject to Rule 8A.5.1.3, Rule 8A.5.1.4 or Rule 8A.5.1.5, where earthworks are located in one or more of the overlay zones or mapped areas indicated within those rules, the most restrictive scale threshold applies for the purposes of determining activity status.
- c. Resource consents will be assessed against all scale thresholds that are contravened.

#### 8A.5.1.3 Maximum change in finished ground level for earthworks not listed in Rule 8A.5.1.1

- a. The maximum change in finished ground level to be considered earthworks - small scale is as follows:

Zone/Overlay		Maximum change in finished ground level
i.	Residential, CMU, Industrial, Recreation, Dunedin Botanic Garden, Dunedin Hospital, Edgar Centre, Mercy Hospital, Moana Pool, Otago Museum, School, Stadium, Campus and Wakari Hospital zones	1.5m
ii.	Rural, Rural Residential, Ashburn Clinic, Dunedin International Airport, Invermay and Hercus, and Taieri Aerodrome zones	2m
iii.	GPMA	1m Maximum depth of 250mm (except as required for the foundation of buildings)
iv.	ONF, UBMA, SHS, ONL, ONCC, HNCC	1m
v.	SNL, NCC	1.5m
vi.	1. In an ASBV; 2. Within 20m of a water body <sup>1</sup> or MHWS in the Rural, and Invermay and Hercus Zones; or 3. Within 5m of a water body <sup>1</sup> or MHWS in all other zones.	0.5m
vii.	Haz1 (flood) & Haz1A (flood) Haz2 (flood) & Haz3 (flood, alluvial fan)	0.5m
viii.	Haz1 (land instability) & Haz2 (land instability)	1m

- b. The following activities are exempt from Rule 8A.5.1.3.a.ii:
- Earthworks in the rural zones, as part of a farming activity for the construction of ofal pits, silage pits and farm landfills.
- X. The following activities are exempt from Rule 8A.5.1.3.a.vi.3 (within 5m of MHWS):
- Earthworks ancillary to port activities in the Industrial Port Zone.

<sup>1</sup> See Rule 10.3.3.7 for how setbacks from water bodies will be measured.

#### 8A.5.1.4 Maximum area for earthworks not listed in Rule 8A.5.1.1

- a. The maximum area of earthworks to be considered earthworks - small scale is as follows:

Zone/Overlay		Maximum Area
i.	GPMA, ONF, UBMA, SHS	50m <sup>2</sup>
ii.	ONL, ONCC, HNCC	100m <sup>2</sup>
iii.	SNL, NCC	200m <sup>2</sup>
iv.	1. In an ASBV; 2. Within 20m of a water body <sup>1</sup> or MHWS in the Rural, and Invermay and Hercus Zones; or 3. Within 5m of a water body <sup>1</sup> or MHWS in all other zones.	25m <sup>2</sup>

- b. In zones other than rural zones, the maximum area stated in Rule 8A.5.1.4.a is the cumulative total area of earthworks undertaken on any site in any two calendar-year period.

- c. In rural zones, more than one earthworks activity up to the maximum area stated in Rule 8A.5.1.4.a may be undertaken provided that each earthworks activity is located at least 1km from any other earthworks taking place on the same site within the same two calendar year period.
  - d. The following activities are exempt from this standard:
    - i. Earthworks ancillary to network utility activities.
    - X. Earthworks ancillary to the maintenance or replacement of underground fuel storage systems.
- X. The following activities are exempt from Rule 8A.5.1.4.a.iv.3 (within 5m of MHWS):
- i. Earthworks ancillary to port activities in the Industrial Port Zone.

<sup>1</sup> See Rule 10.3.3.7 for how setbacks from water bodies will be measured.

#### 8A.5.1.5 Maximum volume of combined cut and fill for earthworks not listed in Rule 8A.5.1.1

- a. The maximum volume of combined cut and fill to be considered earthworks - small scale is as follows:

Location		Slope					
		Less than or equal to 12°	Greater than 12° but less than or equal to 15°	Greater than 15° but less than or equal to 20°	Greater than 20° but less than or equal to 26°	Greater than 26° but less than or equal to 35°	Greater than 35°
i.	All zones	30m <sup>3</sup> per 100m <sup>2</sup> of site	25m <sup>3</sup> per 100m <sup>2</sup> of site	15m <sup>3</sup> per 100m <sup>2</sup> of site	10m <sup>3</sup> per 100m <sup>2</sup> of site	0m <sup>3</sup> fill, 5m <sup>3</sup> cut per 100m <sup>2</sup> of site	0m <sup>3</sup>
ii.	GPMA, ONF, UBMA, SHS	10m <sup>3</sup>	10m <sup>3</sup>	10m <sup>3</sup>	10m <sup>3</sup>	0m <sup>3</sup> fill, 10m <sup>3</sup> cut	0m <sup>3</sup>
iii.	ONL, ONCC, HNCC	20m <sup>3</sup>	20m <sup>3</sup>	20m <sup>3</sup>	20m <sup>3</sup>	0m <sup>3</sup> fill, 20m <sup>3</sup> cut	0m <sup>3</sup>
iv.	SNL, NCC	50m <sup>3</sup>	50m <sup>3</sup>	50m <sup>3</sup>	50m <sup>3</sup>	0m <sup>3</sup> fill, 50m <sup>3</sup> cut	0m <sup>3</sup>
v.	1. In an ASBV; 2. Within 20m of a water body or MHWS in the Rural, and Invermay and Hercus zones; or 3. Within 5m of a water body or MHWS in all other zones.	1m <sup>3</sup>	1m <sup>3</sup>	1m <sup>3</sup>	1m <sup>3</sup>	0m <sup>3</sup> fill, 1m <sup>3</sup> cut	0m <sup>3</sup>
vi.	Haz1 (flood) & Haz1A (flood)	0m <sup>3</sup> fill	0m <sup>3</sup>				
X.	Haz2 (flood) & Haz3 (flood, alluvial fan) in a residential zone	40m <sup>3</sup> fill	40m <sup>3</sup> fill	40m <sup>3</sup> fill	40m <sup>3</sup> fill	0m <sup>3</sup> fill	0m <sup>3</sup>

Location		Slope					
		Less than or equal to 12°	Greater than 12° but less than or equal to 15°	Greater than 15° but less than or equal to 20°	Greater than 20° but less than or equal to 26°	Greater than 26° but less than or equal to 35°	Greater than 35°
Y.	Haz2 (flood) & Haz3 (flood, alluvial fan) in a rural or rural residential zone	7.5m <sup>3</sup> per 100m <sup>2</sup> of site, or 100m <sup>3</sup> , whichever is the lesser	6.25m <sup>3</sup> per 100m <sup>2</sup> of site, or 100m <sup>3</sup> , whichever is the lesser	3.75m <sup>3</sup> per 100m <sup>2</sup> of site, or 100m <sup>3</sup> , whichever is the lesser	2.5m <sup>3</sup> per 100m <sup>2</sup> of site, or 100m <sup>3</sup> , whichever is the lesser	0m <sup>3</sup> fill, 1.25m <sup>3</sup> cut per 100m <sup>2</sup> of site, or 100m <sup>3</sup> , whichever is the lesser	0m <sup>3</sup>
Z.	Haz2 (flood) & Haz3 (flood, alluvial fan) in all other zones	20m <sup>3</sup> fill	20m <sup>3</sup> fill	20m <sup>3</sup> fill	20m <sup>3</sup> fill	0m <sup>3</sup> fill	0m <sup>3</sup>
viii.	Haz1 (land instability)	10m <sup>3</sup>	10m <sup>3</sup>	10m <sup>3</sup>	10m <sup>3</sup>	0m <sup>3</sup> fill, 10m <sup>3</sup> cut	0m <sup>3</sup>
ix.	Haz2 (land instability)	20m <sup>3</sup>	20m <sup>3</sup>	20m <sup>3</sup>	20m <sup>3</sup>	0m <sup>3</sup> fill, 20m <sup>3</sup> cut	0m <sup>3</sup>
x.	<b>Swale mapped area</b> <b>Dune system mapped area</b>	0m <sup>3</sup>	0m <sup>3</sup>	0m <sup>3</sup>	0m <sup>3</sup>	0m <sup>3</sup>	0m <sup>3</sup>

- b. The maximum volume of combined cut and fill set out in Rule 8A.5.1.5.a is the maximum cumulative volume on any site within any two calendar year period, except that in rural zones:
- i. more than one earthworks activity up to the maximum volume stated in Rule 8A.5.1.5.a.i, X, Y, Z, viii or ix may be undertaken provided that each earthworks activity is located at least 400m from any other earthworks taking place on the same site within the same two calendar year period; and
  - ii. more than one earthworks activity up to the maximum volume stated in Rule 8A.5.1.5.a.ii, iii, iv or v may be undertaken provided that each earthworks activity is located at least 1km from any other earthworks taking place on the same site within the same two calendar year period.
- c. Where the part of the site in which the earthworks are located is in more than one slope category, the most restrictive volume threshold applies.
- d. The following activities are exempt from this standard:
- i. Earthworks ancillary to network utility activities.
  - ii. Earthworks in the rural zones as part of a farming activity for the construction of ofal pits, silage pits and farm landfills (exempt from Rule 8A.5.1.5.a.i only).
- X. Earthworks ancillary to the maintenance or replacement of underground fuel storage systems.
- X. The following activities are exempt from Rule 8A.5.1.5.a.v.3 (within 5m of MHWS):
- i. Earthworks ancillary to port activities in the Industrial Port Zone.

**Note 8A.5.1.5A - Other requirements outside of the District Plan**

1. Clause E1 – Surface water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework (including earthworks) in relation to managing surface water and effects on other property.
2. Earthworks that will divert water may require resource consent under the Otago Regional Plan: Water.
3. If earthworks affect the flow of water, this effect is also subject to the common law principle of natural servitude.

**Note 8A.5.1.5B - Other relevant District Plan provisions**

1. Earthworks for the purpose, or effect, of natural hazard mitigation (for example earth stop-banks and land contour changes) are considered to be natural hazard mitigation earthworks and require resource consent under Rule 8.3.2.

**8A.5.2 Archaeological Sites**

Earthworks must comply with Rule 13.3.3.

**8A.5.3 Batter Gradient**

1. Earthworks must:
  - a. have a maximum cut batter gradient of 1h:1v (i.e. rising 1m over a 1m distance); and
  - b. have a maximum fill batter gradient of 2h:1v (i.e. rising 1m over a 2m distance).
2. Earthworks ancillary to forestry are exempt from the batter gradient performance standard.
3. Activities that contravene this performance standard are restricted discretionary activities.

**8A.5.4 Setback from Property Boundary, Buildings, Structures and Cliffs**

1. Earthworks over 600mm in height or depth must be set back from: property boundaries, foundations of buildings, structures greater than 10m<sup>2</sup> footprint, and the top or toe of any cliff, the following minimum distances:
  - a. Earthworks not supported by retaining walls:
    - i. a distance at least equal to the maximum height of the fill, as measured from the toe of the fill (see Figure 8A.5.4A);
    - ii. a distance at least equal to 1.5 times the maximum depth of the cut, plus 300mm, as measured from the toe of the cut (see Figure 8A.5.4A); and
    - iii. 300mm, as measured from the crest of any cut (see Figure 8A.5.4A).
  - b. Retaining walls supporting a cut or fill must be set back a distance at least equal to the height of the retaining walls (see Figure 8A.5.4B), except:
    - i. retaining walls supporting a cut that have been granted building consent are exempt from this standard.
  - c. Earthworks ancillary to network utility activities, earthworks ancillary to the operation, repair and maintenance of the roading network, earthworks ancillary to the operation, repair and maintenance of the rail network, earthworks ancillary to the maintenance or replacement of underground fuel storage systems and earthworks ancillary to forestry are exempt from the setback from property boundary, buildings, structures and cliffs performance standard.
2. Activities that contravene this performance standard are restricted discretionary activities.

***{Note - appeal relates to earthworks for underground fuel storage systems only}***

Figure 8A.5.4A: Unsupported cut and fill (elevation view)

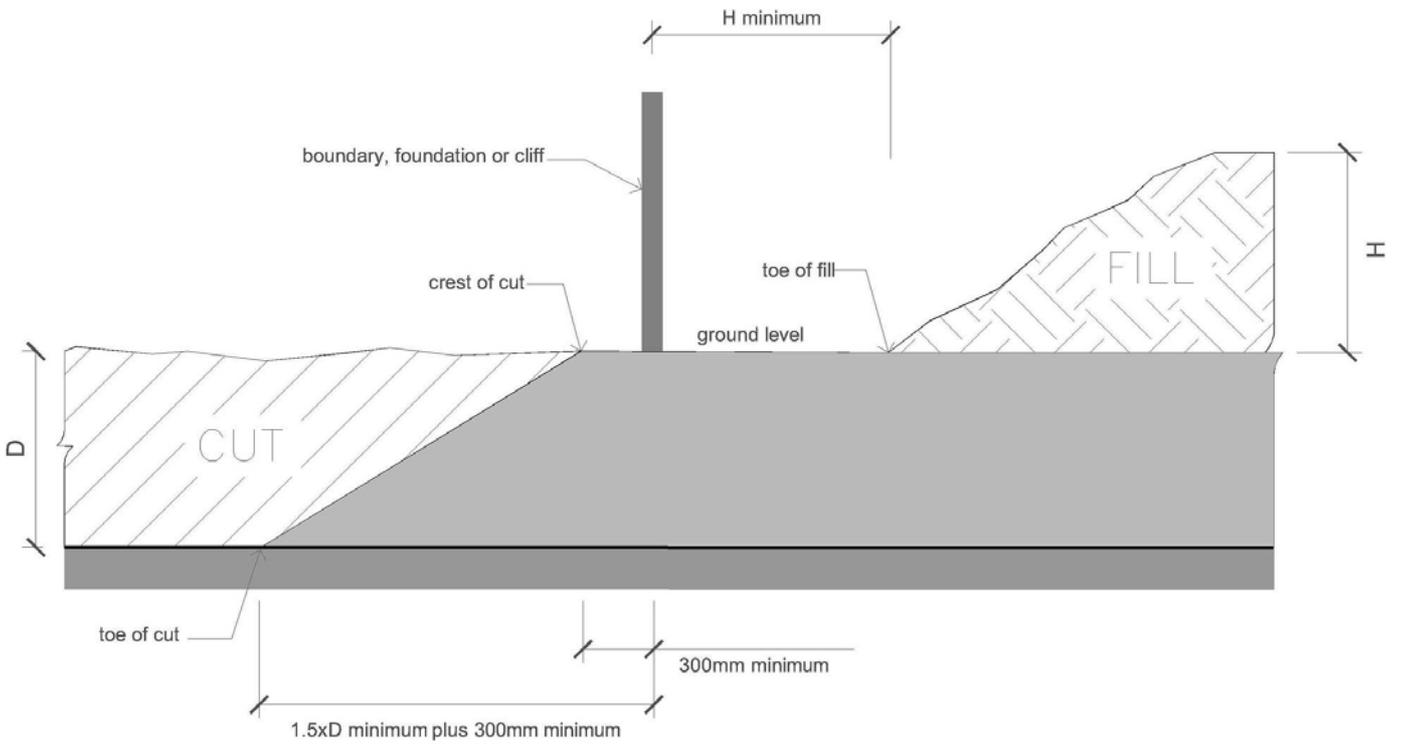

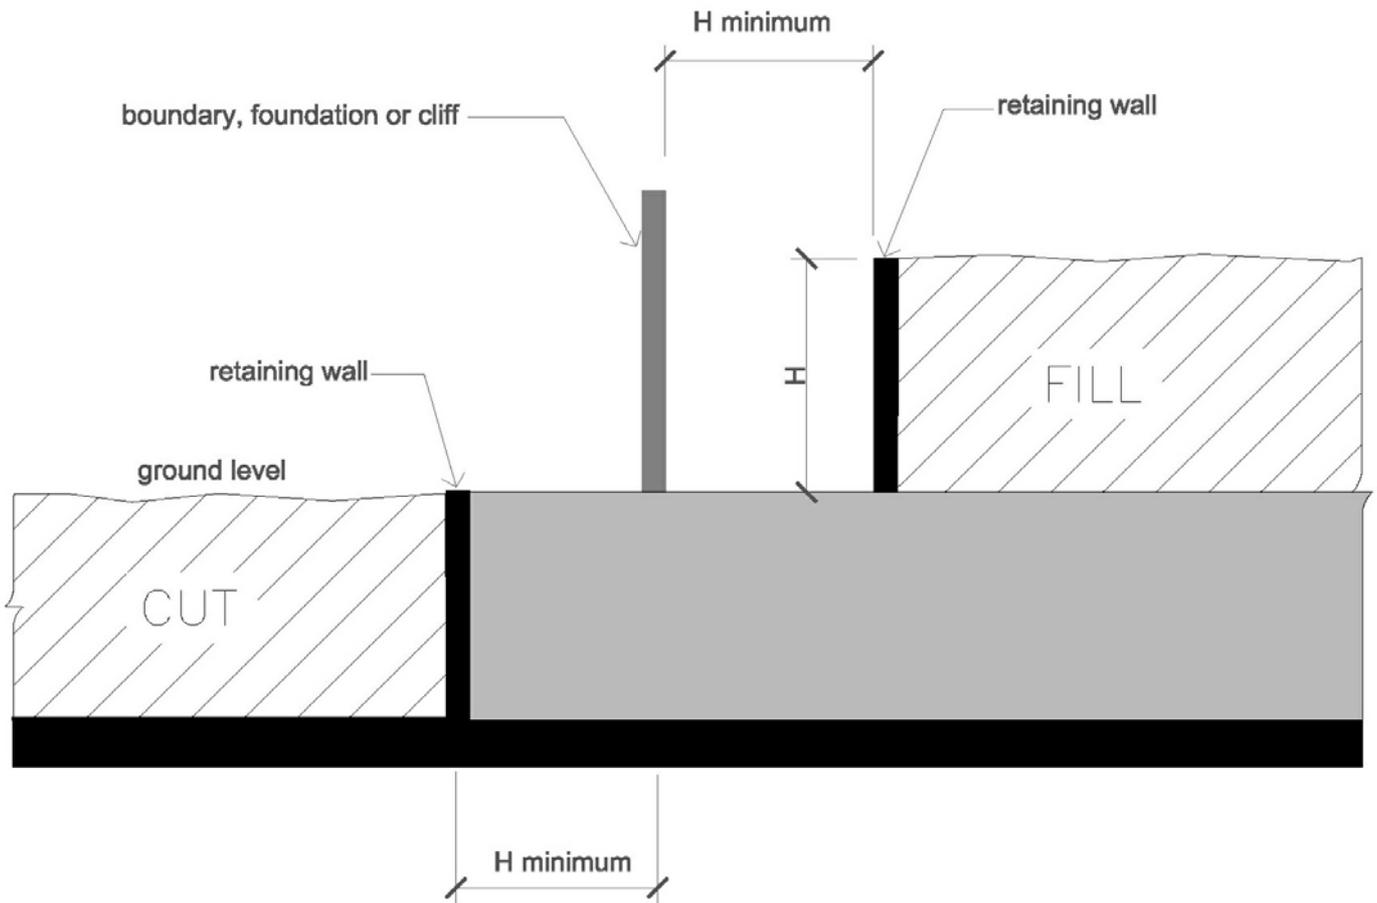

Figure 8A.5.4B: Cut and fill supported by retaining walls (elevation view)

### **8A.5.5 Setback from National Grid (Earthworks)**

Earthworks must comply with Rule 5.6.1.2.

### **8A.5.X Setback from Critical Electricity Distribution Infrastructure**

Earthworks must comply with Rule 5.6.X.2.

### **8A.5.6 Setback from Network Utilities**

Earthworks must comply with Rule 5.6.2.

### **8A.5.7 Sediment Control**

1. Earthworks must be undertaken using best practice sediment control management to prevent sediment entering water bodies, stormwater networks, or the coastal marine area, or going across property boundaries.
2. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 8A.5.7A - Other requirements outside of the District Plan**

1. Discharges of sediment, or of water containing sediment, may require resource consent under the Regional Plan: Water for Otago.
2. Discharges of sediment that cross property boundaries may be contrary to the common law principle of natural servitude.

### **8A.5.8 Removal of High Class Soils**

1. Earthworks must not remove topsoil or subsoil that is located within the **high class soils mapped area** from the site, except this rule does not apply within:
  - X. the **Ayr Street structure plan mapped area**.
  - Y. the **North Road structure plan mapped area**.
  - Z. the **Henderson Street structure plan mapped area**.
  - AA. the **South East Mosgiel structure plan mapped area**.
2. Activities that contravene this performance standard are restricted discretionary activities.

### **8A.5.9 NZ Environmental Code of Practice for Plantation Forestry**

1. Earthworks ancillary to forestry must be in accordance with the New Zealand Environmental Code of Practice for Plantation Forestry 2007.
2. Activities that contravene this performance standard are restricted discretionary activities.

### **8A.5.10 Setback from Coast and Water Bodies**

Earthworks - large scale must comply with Rule 10.3.3

### **8A.5.11 Setback from Scheduled Tree**

All earthworks must comply with Rule 7.5.2

### 8A.5.12 Dust Control

1. Earthworks must be undertaken in a manner that avoids or minimises, as far as practicable, creating a dust nuisance beyond any property boundary, by using best practice dust control management. For the sake of clarity dust nuisance includes:
  - a. suspended solids in the air beyond the site boundary; or
  - b. suspended solids traceable from a dust source settling on the ground, building or structure on a neighbouring site, or water.
2. Activities that contravene this performance standard are restricted discretionary activities.

## Rule 8A.6 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### 8A.6.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 8A.6.2 - 8A.6.4:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

### 8A.6.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>i. The degree of non-compliance with the performance standard is minor.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>ii. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> <li>iii. In assessing performance standard contraventions, consideration will be given to all relevant assessment guidance in the underlying zone.</li> </ol>

### 8A.6.3 Assessment of performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. Batter gradient	a. Effects on the stability of land, buildings and structures	<i>Relevant objectives and policies:</i> i. Objective 8A.2.1. ii. Earthworks and associated retaining structures are designed and located to avoid or minimise, as far as practicable, adverse effects on the stability of land, buildings, and structures by using a batter gradient that will be stable over time (Policy 8A.2.1.1.b).
2. Setback from property boundary, buildings, structures and cliffs	a. Effects on the stability of land, buildings and structures	<i>Relevant objectives and policies:</i> i. Objective 8A.2.1. ii. Earthworks and associated retaining structures are designed and located to avoid or minimise, as far as practicable, adverse effects on the stability of land, buildings, and structures by being set back an adequate distance from property boundaries, buildings and cliffs (Policy 8A.2.1.1.a).
3. Sediment control	a. Effects on surrounding sites	<i>Relevant objectives and policies:</i> i. Objective 8A.2.1. ii. Earthworks and any associated retaining structures are designed, located and undertaken in a way that minimises, as far as practicable, adverse effects on surrounding sites and the wider area (Policy 8A.2.1.2.a).
	b. Effects on biodiversity values and natural character values of riparian margins and coast	See Rule 10.5.
	c. Effects on efficiency and affordability of infrastructure	See Rule 9.5.
4. NZ Environmental Code of Practice for Plantation Forestry	a. Degree of compliance with New Zealand Code of Practice for Plantation Forestry	<i>Relevant objectives and policies:</i> i. Objective 8A.2.1. ii. Earthworks ancillary to forestry are carried out in accordance with industry best practice guidelines (Policy 8A.2.1.4).
5. Setback from coast and water bodies	a. Effects on biodiversity values and natural character values of riparian margins and the coast	See Rule 10.5.
	b. Effects on public access	
	c. Risk from natural hazards	See Rule 11.4.

### 8A.6.3 Assessment of performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
6.	Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6.
8.	Setback from network utilities	a. Effects on health and safety	See Rule 5.7.
		b. Effects on efficient and effective operation of network utilities	
9.	Dust control	a. Effects on amenity of surrounding sites	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 8A.2.1.</li> <li>ii. Earthworks and any associated retaining structures are designed, located and undertaken in a way that minimises, as far as practicable, adverse effects from dust nuisance on the amenity of surrounding sites (Policy 8A.2.1.2.b).</li> </ul>

**8A.6.4 Assessment of restricted discretionary performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>1. In a <b>high class soils mapped area</b>:</p> <ul style="list-style-type: none"> <li>removal of high class soils</li> </ul>	<p>a. Maintenance of high class soils resource</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>Objectives 16.2.4 and 17.2.4.</li> <li>Earthworks in a <b>high class soils mapped area</b> retain soils on the site (policies 16.2.4.1 and 17.2.4.1).</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>The development will involve productive rural activities.</li> <li>The site design will minimise the effect of the activity on the high class soils contained on the site.</li> <li>The soils are being removed to enhance the productivity of another site.</li> </ol>
<p>2. In a <b>wāhi tūpuna mapped area</b>:</p> <ul style="list-style-type: none"> <li>sediment control</li> <li>setback from coast and water bodies</li> </ul>	<p>a. Effects on cultural values of Manawhenua</p>	<p>See Rule 14.3.</p>
<p>X. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b>:</p> <ul style="list-style-type: none"> <li>Setback from Critical Electricity Distribution Infrastructure (earthworks)</li> </ul>	<p>a. Effects on health and safety</p> <p>b. Effects on efficient and effective operation of network utilities</p>	<p>See Rule 5.7.</p>

## **Rule 8A.7 Assessment of Restricted Discretionary Activities**

### **8A.7.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 8A.7.2 and 8A.7.3:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**;
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard;
    - iii. the performance standard contravention will be assessed as indicated in Section 8A.6; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**;
    - ii. the performance standard contravention will be assessed; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**;
    - ii. the performance standard contravention will be assessed as indicated in Section 8A.8; and
    - iii. the assessment guidance in this section will also be considered.

### 8A.7.2 Assessment of restricted discretionary earthworks activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. Earthworks - large scale (all zones)	<p>a. Effects on visual amenity</p> <p>b. Effects on amenity of surrounding properties</p>	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 8A.2.1.</p> <p>ii. Adverse effects on visual amenity and character will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 8A.2.1.3.a).</p> <p>iii. Adverse effects on the amenity of surrounding properties, including from changes to drainage patterns, will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 8A.2.1.3.b).</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>iv. There is no, or only minimal, alteration to the natural landform.</p> <p>v. Any cut or fill will be restored or treated to resemble natural landforms.</p> <p>vi. The earthworks will not remove or affect existing vegetation or landscaping.</p> <p><i>Conditions that may be imposed include:</i></p> <p>vii. Measures to minimise visual effects, e.g. requirements for revegetation and/or landscaping.</p> <p>viii. Maximum slopes of cut and fill batters.</p> <p>ix. Measures to divert surface water and rain away from, or prevent from discharging over, batter faces and other areas of bare earth.</p> <p>x. Measures to ensure there are no adverse effects from changes to drainage patterns on surrounding properties.</p> <p>xi. Requirement to de-compact soils; to take other remedial action to ensure the natural absorption capacity of the soils is not reduced; or to use other mitigation measures to ensure the overall absorption of rain water on-site is not diminished.</p> <p><i>General assessment guidance:</i></p> <p>xii. For earthworks in the rural zones, Council will consider the effects on the values specified in Objective 16.2.3, and the effects on the rural character values identified in Appendix A7.</p>

### 8A.7.2 Assessment of restricted discretionary earthworks activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>c. Effects on the stability of land, buildings, and structures</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 8A.2.1.</li> <li>ii. Adverse effects on the stability of land, buildings, and structures will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 8A.2.1.3.c).</li> </ul> <p><i>Potential circumstances that may support a consent application:</i></p> <ul style="list-style-type: none"> <li>iii. A geotechnical report confirms the existing ground is suitably stable for the proposed works, and proposed works will not create instability risks for surrounding land, buildings, or structures (see Special Information Requirements - Rule 8A.9.1).</li> <li>iv. Excavation, fill and retaining structures will be designed, and the work undertaken, in accordance with best practice engineering standards.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>v. Maximum slopes of cut and fill batters.</li> <li>vi. Time limits for retaining wall installation to avoid leaving a cut slope unsupported for an extended period.</li> <li>vii. Temporary shoring requirements to maintain stability before a wall is constructed.</li> <li>viii. Supervision and monitoring requirements for retaining wall construction and standard earthworks construction.</li> </ul>
<p>2. Earthworks - large scale (rural zones only)</p>	<p>a. Effects on biodiversity values</p>	<p>See Rule 10.6.</p>
<p>3. Earthworks - large scale that exceed scale thresholds within:</p> <ul style="list-style-type: none"> <li>• 20m of a water body or MHWS in rural zones or the Invermay and Hercus Zone</li> <li>• 5m of a water body or MHWS in all other zones</li> </ul>	<p>a. Effects on biodiversity values and natural character of riparian margins and the coast</p> <hr/> <p>b. Effects on public access</p>	<p>See Rule 10.6.</p>

### 8A.7.3 Assessment of restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In the <b>ONF, ONL</b> or <b>SNL overlay zones</b> : <ul style="list-style-type: none"> <li>Earthworks - large scale (that exceed scale thresholds for an ONF, ONL or SNL)</li> </ul>	a. Effects on landscape values	See Rule 10.6.
2. In the <b>ONCC, HNCC</b> or <b>NCC overlay zones</b> : <ul style="list-style-type: none"> <li>Earthworks - large scale (that exceed scale thresholds for an ONCC, HNCC or NCC)</li> </ul>	a. Effects on natural character of the coast	See Rule 10.6.
3. In an <b>ASBV</b> : <ul style="list-style-type: none"> <li>Earthworks - large scale (that exceed scale thresholds for an ASBV)</li> </ul>	a. Effects on biodiversity values	See Rule 10.6.
4. In a <b>wāhi tūpuna mapped area</b> where activity is identified as a threat: <ul style="list-style-type: none"> <li>Earthworks - large scale that exceed any threshold</li> </ul>	a. Effects on cultural values of Manawhenua	See Rule 14.4.
5. In a <b>hazard overlay zone</b> : <ul style="list-style-type: none"> <li>Earthworks - large scale (that exceed the scale threshold for a hazard overlay zone or <b>swale</b> or <b>dune system mapped area</b>)</li> </ul>	a. Risk from natural hazards	See Rule 11.5.
6. In a <b>groundwater protection mapped area (GPMA)</b> : <ul style="list-style-type: none"> <li>Earthworks - large scale (that exceed scale thresholds for a <b>GPMA</b>)</li> </ul>	a. Effects on health and safety	See Rule 9.6.
7. In a <b>UBMA</b> : <ul style="list-style-type: none"> <li>Earthworks - large scale (that exceed the scale thresholds for a <b>UBMA</b>)</li> </ul>	a. Effects on biodiversity values	See Rule 10.6.
8. On a <b>scheduled heritage site</b> : <ul style="list-style-type: none"> <li>Earthworks - large scale (that exceed the scale thresholds for a <b>scheduled heritage site</b>)</li> </ul>	a. Effects on heritage values	See Rule 13.6.

## **Rule 8A.8 Assessment of Non-complying Activities**

### **8A.8.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 8A.8.2 provides guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.

### 8A.8.2 Assessment of non-complying activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying activities that are linked to Section 8A.8</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 8A.2.1.</p> <p><i>General assessment guidance:</i></p> <p>b. In assessing the significance of effects, consideration will be given to:</p> <ul style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities;</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the grant of resource consent; and</li> <li>iii. any effects otherwise managed through performance standards and consistent with all relevant objectives and policies for the zone.</li> </ul> <p>c. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</p>
<p>2. Archaeological sites (earthworks)</p>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.4 and effects related to the inappropriate development and use in Dunedin's archaeological sites.</p>
<p>X. Setback from National Grid (earthworks)</p>	<p>See Rule 5.10.</p>

## **Rule 8A.9 Special Information Requirements**

### **8A.9.1 Geotechnical investigation report**

1. A geotechnical investigation report may be requested by Council for earthworks - large scale and/or where the earthworks are proposed:
  - a. on a site with a slope angle between 15° (3.7h:1v slope ratio, or 27% slope grade) and 26° (2h:1v slope ratio, or 50% slope grade);
  - b. on a site identified as hazard-prone in Council's Hazard Information Management System; or
  - c. on any other site that Council, with good cause, suspects to be hazard-prone.
2. A geotechnical investigation report must be provided for earthworks on all sites with a slope greater than a 26° angle (2h:1v slope ratio, or 50% slope grade).
3. All requested geotechnical investigation reports must be prepared by a suitably qualified expert who is experienced in the practice of geotechnical engineering and registered under the Chartered Professional Engineers Act of New Zealand 2002, and who has professional indemnity insurance.
4. The geotechnical investigation report must address the following factors:
  - a. special design or construction requirements;
  - b. special foundation requirements;
  - c. services;
  - d. access;
  - e. effluent disposal;
  - f. non-engineered fills; and
  - g. a statement of professional opinion as to the suitability of the land for the proposed development.

## C. City-wide Provisions

### 9. Public Health and Safety

#### 9.1 Introduction

The importance of the health and safety of people and communities is acknowledged within the purpose of the Resource Management Act 1991 and is a worldwide concern acknowledged through institutions such as the World Health Organisation. Throughout Dunedin, land use and development activities have the potential to affect the health and safety of people, including effects resulting from excessive or unreasonable noise, light spill, the storage and use of hazardous substances, and threats to the City's water, wastewater, and stormwater systems.

Almost all land use activities generate some degree of noise, and where this noise is excessive or unreasonable, or extended over long durations, there is the risk that the health of people will be adversely affected. Some environments and activities are particularly vulnerable to excessive or unreasonable noise, and these 'noise sensitive activities' require protection to ensure that adverse effects on the health of people are suitably managed, and reverse sensitivity issues are avoided.

Similarly, while artificial light is essential for security and safety, activities that generate artificial light have the potential to impact upon other activities, particularly when in proximity to residential areas and other places where people sleep. Light spill has the potential to disrupt sleeping patterns and adversely affect the health of people, and also the safety of people if light spills to the roading network. Therefore, activities that generate light need to be managed to ensure that these activities do not compromise the health and safety of people.

Hazardous substances are necessary for the operation of many commercial and other activities and need to be provided for. However, if not appropriately managed, their storage and use are potential threats to the health and safety of Dunedin's people and natural environment. Hazardous substances encompass those identified in the Hazardous Substances and New Organisms Act 1996 (HSNO) and may include substances such as industrial, agricultural, horticultural and household chemicals, medical wastes, petroleum products including LPG and lubricating oils, and radioactive substances. HSNO and associated regulations set controls for the management of these substances. The RMA enables plans to include additional land use controls for the prevention or mitigation of the adverse effects of storage, use, disposal and transport of hazardous substances where this is necessary to address a clear resource management issue. Such controls may relate to matters such as the location of hazardous substances and their potential impacts on other land uses and the natural environment.

The efficiency and affordability of water supply, wastewater and stormwater networks are also essential in enabling people to provide for their health and well-being and are among the most essential infrastructure networks in the city. While these networks are also captured by provisions in the Network Utilities section of the District Plan, these systems are also managed through provisions in this section to ensure that existing activities, and new development, do not adversely affect this infrastructure. By taking this approach to management, these essential networks are protected, thus maintaining the ability of people throughout the city to provide for their well-being.

Inappropriately sited forestry and shelterbelts and small woodlots activities pose potential risks to the safety of people when planted in close proximity to boundaries; creating the potential for trees to fall onto other activities or increase fire risk to other activities.

Fences that cannot be seen through or that are too high restrict passive surveillance between the street/ public places and private property and create environments that are potentially unsafe and encourage increased criminal and anti-social behaviour.

Earthworks activities often remove considerable amounts of soil, which if not undertaken appropriately, can create silt and sediment runoff which may enter sources of groundwater and other water bodies and cause risks to water supplies.

In response to these issues, the Plan controls the way that activities must operate. These controls include restricting the amount of noise and light spill that activities can generate; requiring appropriate acoustic insulation in identified areas; setting appropriate limits on the amount of hazardous substances allowed; setting requirements in relation to public water, stormwater, and wastewater infrastructure; requiring water supply for firefighting in un-reticulated areas; requiring forestry and shelterbelts and small woodlots to be set back from boundaries; setting controls on fencing to ensure that passive surveillance is provided for; and requiring earthworks to take into account the potential effects on groundwater.

By implementing these controls, the potential adverse effects of land use and development can be managed in a way that ensures people's health and safety and ensures that the efficiency and affordability of water supply, wastewater and stormwater infrastructure is maintained or enhanced.

## 9.2 Objectives and Policies

<b>Objective 9.2.1</b>	
Land use, development and subdivision activities maintain or enhance the efficiency and affordability of public water supply, wastewater and stormwater infrastructure.	
Policy 9.2.1.1	Only allow land use or subdivision activities that may result in land use or development activities outside the wastewater serviced area, where: <ul style="list-style-type: none"> <li>a. NA</li> <li>b. it will not lead to future pressure for unplanned expansion of wastewater public infrastructure; or <ul style="list-style-type: none"> <li>X. an unplanned extension (and any necessary upgrade) to the public wastewater network to provide for the activities can be implemented prior to development with agreement from the DCC.</li> </ul> </li> </ul>
Policy 9.2.1.2	Policy 9.2.1.2 to be deleted.
Policy 9.2.1.1A	Only allow land use or subdivision activities that may result in land use or development activities in a wastewater serviced area where: <ul style="list-style-type: none"> <li>a. it will not exceed the current or planned capacity of that infrastructure at the time of development or compromise its ability to service any permitted activities; or</li> <li>b. for controlled and restricted discretionary land use activities, communal on-site wastewater detention infrastructure can be integrated into the public wastewater network prior to development in a way that meets DCC's requirements; or</li> <li>c. an unplanned upgrade to the public wastewater network that addresses any capacity constraints can be implemented prior to development with agreement from the DCC.</li> </ul>
Policy 9.2.1.BB	Require subdivision, multi-unit development or supported living facilities in specified <b>new development mapped areas</b> to provide or connect to a communal wastewater detention system that ensures that all wastewater from the future development of the entire <b>new development mapped area</b> does not exceed the capacity of the wastewater public infrastructure network.
Policy 9.2.1.Z	Only allow multi-unit development; supported living facilities; subdivision; or development that contravenes the impermeable surfaces performance standard, where: <ul style="list-style-type: none"> <li>a. for stormwater generated by the activity (or future development enabled by a subdivision) that will flow through DCC stormwater public infrastructure at any point: <ul style="list-style-type: none"> <li>i. there is adequate capacity in the stormwater public infrastructure; or</li> <li>ii. any adverse effects from an increase in discharge on the stormwater public infrastructure are no more than minor; and</li> </ul> </li> <li>b. for stormwater generated by the activity (or future development enabled by a subdivision) that will flow through a private, natural/informal stormwater system, or Otago Regional Council public infrastructure at any point, that stormwater system or public infrastructure has the capacity to absorb the additional stormwater with no more than minor adverse effects on it or on other sites (public or private), including but not limited to, adverse effects from an increase in overland flow or ponding.</li> </ul>

**Objective 9.2.1**

Land use, development and subdivision activities maintain or enhance the efficiency and affordability of public water supply, wastewater and stormwater infrastructure.

Policy 9.2.1.Y	Only allow subdivision activities, multi-unit development, supported living facilities or development that contravenes Rule 9.3.7.AA in a <b>new development mapped area</b> where: <ul style="list-style-type: none"> <li>a. an integrated stormwater management plan that is designed for the whole NDMA has been prepared, and stormwater management system(s) for all parts of the NDMA that are hydrologically connected to the area proposed for subdivision will ensure there is no increase in the peak stormwater discharge rate from the NDMA into the stormwater public infrastructure, or into a private stormwater system (at any point) between pre-development and post-development; or</li> <li>b. where this is not practicable, any adverse effects from an increase in discharge on the stormwater system are no more than minor.</li> </ul>
Policy 9.2.1.X	Require development in a <b>new development mapped area</b> that creates impermeable surfaces to be connected to the stormwater management system that meets Policy 9.2.1.Y.
Policy 9.2.1.AA	Only allow subdivision in a <b>new development mapped area</b> where any new public or private 3-waters infrastructure is designed to connect to, and provide capacity for, future urban development on adjoining or nearby sites that are zoned for urban development, where necessary.
Policy 9.2.1.3	Require subdivision activities to ensure future land use and development activities: <ul style="list-style-type: none"> <li>X. have access to electricity and telecommunications networks;</li> <li>Y. in areas where there is water or wastewater public infrastructure, have access to this infrastructure in a way that will maintain its efficiency and affordability; and</li> <li>AA. in the commercial and mixed use zones and Recreation Zone, have access to piped stormwater public infrastructure, where available;</li> <li>Z. unless, for either (X), (Y) or (AA), allowing development without access will have long term positive effects on the public infrastructure or relevant network utility, or any adverse effects will be insignificant.</li> </ul>
Policy 9.2.1.4	Only allow land use or subdivision activities that may result in land use or development activities in an area with public water supply where: <ul style="list-style-type: none"> <li>a. it will not exceed the current or planned capacity of that infrastructure at the time of development or compromise its ability to service any permitted activities; or</li> <li>b. an unplanned upgrade to the public water supply network that addresses any capacity constraints can be implemented prior to development with agreement from the DCC.</li> </ul>
Policy 9.2.1.4A	Only allow land use or subdivision activities that may result in land use or development activities in an area without public water supply where: <ul style="list-style-type: none"> <li>a. it will not lead to future pressure for unplanned expansion of public water supply infrastructure; or</li> <li>b. an unplanned extension (and any necessary upgrade) to the public water supply network to provide for the activities can be implemented prior to development with agreement from the DCC.</li> </ul>
Policy 9.2.1.4B	Only allow development activities adjacent to stormwater open watercourses where it will not compromise the current or planned capacity of the stormwater infrastructure.

**Objective 9.2.1**

Land use, development and subdivision activities maintain or enhance the efficiency and affordability of public water supply, wastewater and stormwater infrastructure.

Policy 9.2.1.5	Require earthworks and scheduled mining activities to be designed to ensure adverse effects from sediment run-off from the site on any drains, channels, soakage and treatment systems or stormwater reticulation will be avoided or minimised, as far as practicable.
----------------	--

Policy 9.2.1.6	Policy 9.2.1.6 to be deleted.
----------------	-------------------------------

<b>Objective 9.2.2</b>	
Land use, development and subdivision activities maintain or enhance people's health and safety.	
Policy 9.2.2.1	Require activities to be designed and operated to avoid adverse effects from noise on the health of people or, where avoidance is not practicable, ensure any adverse effects would be insignificant.
Policy 9.2.2.2	Require that noise sensitive activities, where undertaken in buildings, have adequate acoustic insulation to avoid, as far as practicable, significant adverse effects from the higher noise environment anticipated in the following areas: <ul style="list-style-type: none"> <li>a. Central Business District (CBD) Zone;</li> <li>b. Warehouse Precinct (WP) Zone;</li> <li>c. Princes, Parry and Harrow Street (PPH) Zone;</li> <li>d. Harbourside Edge (HE) Zone;</li> <li>e. <b>port noise control mapped area;</b></li> <li>f. <b>airport noise inner control mapped area;</b></li> <li>g. <b>airport noise outer control mapped area;</b></li> <li>h. within 20m of an industrial zone;</li> <li>i. within 40m of a state highway;</li> <li>j. within 40m of the Taieri Aerodrome Zone;</li> <li>k. within 70m of a railway line;</li> <li>l. in-patient areas in the Dunedin Hospital Zone;</li> <li>m. the Stadium Zone; and</li> <li>X. <b>Fonterra noise control mapped area.</b></li> </ul>
Policy 9.2.2.3	Avoid residential and visitor accommodation activity within the <b>airport noise inner control mapped area.</b>
Policy 9.2.2.4	Require activities to be designed and operated to avoid adverse effects from light spill on the health of people or, where avoidance is not practicable, ensure any adverse effects would be insignificant.
Policy 9.2.2.5	Require forestry and shelterbelts and small woodlots to be set back from boundaries an adequate distance to avoid risks to safety from fire or tree fall or, if avoidance is not practicable, ensure any adverse effects would be insignificant.
Policy 9.2.2.6	Only allow mining or mineral exploration where any adverse effects from air blast and vibration on people's health and safety or on surrounding properties are avoided or, if avoidance is not practicable, no more than minor.
Policy 9.2.2.8	Require fences in residential, recreation and some major facility zones to be designed to allow a visual connection between buildings and public places, to enable opportunities for informal surveillance.
Policy 9.2.2.9	Require all new residential buildings, or subdivision activities that may result in new residential buildings, to have access to suitable water supply for firefighting purposes.
Policy 9.2.2.10	Require earthworks in a <b>groundwater protection mapped area</b> to not disturb or contaminate groundwater.

**Objective 9.2.2**

Land use, development and subdivision activities maintain or enhance people's health and safety.

Policy 9.2.2.11	Require hazardous substances to be stored and used in a way that avoids risk of adverse effects on the health and safety of people on the site or surrounding sites or, if avoidance is not practicable, ensures any adverse effects are no more than low.
Policy 9.2.2.13	Require public amenities and signs located on or above footpaths to avoid adverse effects on the safety of people or, if avoidance is not practicable, ensure any adverse effects will be no more than minor.
Policy 9.2.2.14	Require buildings and structures within the <b>Taieri Aerodrome flight fan mapped area</b> to be of a height that enables the safe operation of the aerodrome.
Policy 9.2.2.15	Avoid sensitive activities within a <b>hazard facility mapped area</b> unless the residual risk to people from a low probability but high consequence emergency event at the hazard facility is of an acceptable level.
Policy 9.2.2.X	Activities on land that has a history of land use that may have resulted in contamination are managed in accordance with the Resource Management (National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health) Regulations 2011, including by: <ul style="list-style-type: none"> <li>a. at the time of subdivision, land use or when land development activities involving soil disturbance take place, identifying and assessing risk to human health from contaminants in soil, where practicable; and</li> <li>b. if necessary based on the intended use of the land, remediating or managing the contaminants to make it safe for human use.</li> </ul>

## Rules

### Rule 9.3 Performance Standards

#### 9.3.1 Acoustic Insulation

1. In the locations specified below in clause 4, all rooms to be used for noise sensitive activities (other than those listed in clause 3 below) must have acoustic insulation that achieves a minimum design standard of  $DnT, w + Ctr > 30$ .
2. In the **port noise control mapped area**, all rooms to be used for noise sensitive activities (other than those listed in clause 3 below) must have a minimum indoor design standard of 40 dBA Ldn.
3. The following rooms are not required to have acoustic insulation: bathrooms, laundries, toilets, pantries, walk-in wardrobes, corridors, hallways, lobbies, clothes-drying rooms, or other spaces of a specialised nature occupied neither frequently nor for extended periods.
4. Rule 9.3.1.1 applies in the following locations:
  - a. Central Business District (CBD) Zone;
  - b. Warehouse Precinct (WP) zone;
  - c. Princes, Parry and Harrow Street (PPH) Zone;
  - d. Harbourside Edge (HE) Zone;
  - e. CEC - North Zone
  - f. **airport noise inner control mapped area;**
  - g. **airport noise outer control mapped area;**
  - h. within 20m of an industrial zone;
  - i. within 40m of a state highway;
  - j. within 40m of the Taieri Aerodrome Zone;
  - k. within 70m of a railway line;
  - l. in-patient areas in the Dunedin Hospital Zone;
  - m. the Stadium Zone; and

X. **Fonterra noise control mapped area.**
5. Rooms to which this acoustic insulation standard applies must be supplied with a positive supplementary source of ventilation that achieves a minimum of 7.5 litres per second per person, to enable adequate ventilation when windows are closed.
6. The schedule in Appendix 9A describes the minimum requirements necessary to achieve an external noise insulation level of  $DnT, w + Ctr > 30$ .
7. Any activity that contravenes this standard is a discretionary activity.

#### **Note 9.3.1A - Other relevant District Plan provisions**

1. Refer to Rule 9.9.2 Special Information Requirements – Acoustic insulation.

#### 9.3.3 Firefighting

1. Subdivision activities must ensure resultant sites have access to sufficient water supplies for firefighting consistent with the SNZ/PAS:4509:2008 New Zealand Fire Service Firefighting Water Supplies Code of Practice, except sites created and used solely for the following purposes are exempt from fire fighting

requirements:

- a. reserve;
  - b. Scheduled ASBV or QEII covenant;
  - c. access;
  - d. network utilities; or
  - e. road.
2. New residential buildings must either:
- a. have a connection to the public water supply and be located within 135m of a fire hydrant; or
  - b. provide an area of minimum dimensions of 4.5m x 11m with suitable fire engine access, water storage of 45,000 litres (45m<sup>3</sup>) or equivalent firefighting capacity, and have the water supply located within 90m of the fire risk or otherwise provide for water supply and access to water supplies for firefighting purposes consistent with the SNZ/PAS 4509:2008 New Zealand Fire Service Firefighting Water Supplies Code of Practice.
3. Activities that contravene this performance standard are restricted discretionary activities.

### 9.3.4 Hazardous Substances Quantity Limits and Storage Requirements

1. The storage and use of hazardous substances must comply with the quantity limits and storage requirements specified in Appendix A6, as follows:

Zones and activities		Appendix
a.	Residential activities in all zones, and all activities in the residential zones, Smith Street and York Place (SSYP), and Schools zones	A6.1
b.	Commercial and mixed use zones (except Smith Street and York Place (SSYP)), Stadium, Moana Pool, Edgar Centre and Taieri Aerodrome zones	A6.2
c.	Invermay and Hercus, Dunedin Public Hospital, Campus, and Otago Museum zones	A6.3
d.	Recreation, rural, rural residential, and Dunedin Botanic Garden zones	A6.4
e.	Industrial zones within a hazard 2 and 3 (flood), hazard 2 (land instability), hazard 3 (alluvial fan) or hazard 3 (coastal) Overlay Zone.	A6.2
f.	Dunedin International Airport Zone	A6.5
g.	Ashburn Clinic, Mercy Hospital, and Wakari Hospital zones	A6.6

- h. There are no quantity limits and storage requirements in the Port Zone; or in the Port Industrial Zone or Industrial Zone, where located outside a hazard 2 and 3 (flood), hazard 2 (land instability), hazard 3 (alluvial fan) or a hazard 3 (coastal) Overlay Zone.
2. The storage and use of hazardous substances with explosive or flammable properties must be set back 12m from National Grid transmission lines, support structures and substations, except:
- a. the storage and use of hazardous substances which comply with the residential zones hazardous substances quantity limits in Appendix A6.1.
3. The following facilities and quantities are exempt from this standard:
- a. storage of substances in or on vehicles being used in transit on public roads;
  - b. the storage and use of transformer cooling oils in electricity transformers;
  - c. fuel in mobile plant, motor vehicles, boats and small engines;

- d. gas and oil pipelines and associated equipment;
  - e. waste treatment and disposal facilities not within Hazard 1 and 2 (flood) Overlay Zones, and waste in process in the DCC's trade waste sewers, municipal liquid waste treatment and disposal facilities not within Hazard 1 and 2 (flood) Overlay Zones, which may contain hazardous substance residues;
  - f. the application of agrichemicals and fertilisers at a rate and in a manner consistent with their intended purpose;
  - g. storage at fire stations and on emergency response appliances of specialist hazardous substances for firefighting including compressed air, oxidising gas (medical oxygen), and foam (excluding within the Hazard 1 and 2 (flood) Overlay Zone and **groundwater protection mapped area**);
  - h. retail outlets selling domestic scale usage of hazardous substances, such as supermarkets, trade suppliers, and pharmacies;
  - i. the accessory use and storage of hazardous substances in minimal domestic scale quantities;
  - j. activities involving substances of HSNO sub-classes 1.4, 1.5, 1.6, 6.1D, 6.1E, 6.3, 6.4, 9.1D and 9.2D unless other hazard classification applies; and
  - k. the temporary storage, handling and distribution of national or international cargo containers.
4. The storage and use of hazardous substances that contravenes this standard is a restricted discretionary activity, except:
- a. contravention of Rule 9.3.4.2 is a non-complying activity.

### Note 9.3.4A - Other requirements outside of the District Plan

1. The Hazardous Substances and New Organisms Act 1996 (HSNO) and Health and Safety at Work (Hazardous Substances) Regulations 2017 in places of work also specifies other requirements for activities involving hazardous substances. The Environmental Protection Authority (EPA) Hazardous Substances (Hazardous Property Controls) Notice 2017 prescribe controls for places that are not workplaces.
2. Sections 15 and 17 of the Resource Management Act 1991 (RMA) are also relevant and specify the requirements for discharges and the duty to avoid, remedy or mitigate adverse effects.
3. Activities involving hazardous substances may also require resource consent from the Otago Regional Council.
4. Table 10, Schedule 12 of the Health and Safety at Work (Hazardous Substances) Regulations 2017 provides maximum quantities for the indoor storage and use of LPG as follows:

Location	a. Maximum quantity of LPG	b. Maximum cylinder size	
1.	A detached house or single storey attached dwellings; and multi-storey attached dwellings up to three storeys	20kg per dwelling	10kg cylinder
2.	Multi-storey attached dwellings over three storeys	10kg per dwelling	10kg cylinder
3.	Hotels, bars, restaurants, public buildings, places of worship, shops, offices and laboratories not attached to a dwelling	10kg per 10m <sup>2</sup> of the indoor floor area, up to a maximum total quantity of 100kg	10kg cylinder
4.	Hotels, bars, restaurants, public buildings, places of worship, shops, offices and laboratories attached to a dwelling	20kg per premises	10kg cylinder
5.	Factories and warehouses	45kg per 50m <sup>2</sup> of the indoor floor area, up to a maximum total quantity of 180kg per occupancy	45kg cylinder

### 9.3.5 Light Spill

1. Light spill measured at any point of the vertical plane that marks the boundary of any site within a residential zone, or in any other zone the notional boundary of any residential building must not exceed the following limits:

Time	Limit
a. 7.00am - 10.00pm	10 Lux
b. 10.00pm - 7.00am	3 Lux

- c. This standard does not apply to light spill from the headlights of motor vehicles or trains, or from street lighting.
2. Light spill must not be emitted in the angles above the horizontal.
  3. All outdoor lighting, except street lighting, must be shielded from or directed away from adjacent roads and site boundaries.
  4. Activities that contravene Rule 9.3.5.2 or Rule 9.3.5.3 or the limit in Rule 9.3.5.1 by 25% or less are discretionary activities.
  5. Activities that contravene any light spill limit in Rule 9.3.5.1 by greater than 25% are non-complying activities.

### Note 9.3.5A - General advice

1. Outdoor lighting such as security lights or strobe lights on irrigators that are not shielded or directed away from site boundaries will generally contravene this standard.

### 9.3.6 Noise

Land use activities, public amenity activities, network utility activities, temporary activities and the operation, repair and maintenance of the rail network must not exceed the following noise emission limits:

Zoning of receiving property		Noise level measured at the boundary of the receiving property or the notional boundary of noise sensitive activities in a rural, rural residential or Ashburn Clinic zone		
		a. 7.00am to 7.00pm	b. 7.00pm to 10.00pm	c. 10.00pm to 7.00am
1.	Residential, Recreation, Smith Street and York Place, schools, Dunedin Botanic Garden, Wakari Hospital, Mercy Hospital and Moana Pool zones	50 dB LAeq (15 min)	45 dB LAeq (15 min)	i. 40 dB LAeq (15 min); and ii. 70 dB LAFmax
2.	Rural, rural residential, centres and Ashburn Clinic zones (at notional boundary of noise sensitive activities); except in those parts of rural zones that are within 350m of the Industrial Zone	55 dB LAeq (15 min)	50 dB LAeq (15 min)	i. 40 dB LAeq (15 min); and ii. 70 dB LAFmax
3.	Those parts of a rural zone that are within 350m of the Industrial Zone, except where Rule 9.3.6.X applies	55 dB LAeq (15 min)	50 dB LAeq (15 min)	i. 45 dB LAeq (15 min); and ii. 75 dB LAFmax
4.	Rural, rural residential and Ashburn Clinic zones (at property boundaries, where there are no noise sensitive activities within 20 metres of boundary)	60 dB LAeq (15 min)	60 dB LAeq (15 min)	i. 60 dB LAeq (15 min); and ii. 85 dB LAFmax
5.	Commercial and mixed use (except centres, and Smith Street and York Place), Dunedin Hospital, Otago Museum, Campus, and Invermay and Hercus zones	60 dB LAeq (15 min)	60 dB LAeq (15 min)	i. 60 dB LAeq (15 min); and ii. 85 dB LAFmax
6.	Industrial, Industrial Port, Dunedin International Airport, Taieri Aerodrome, Edgar Centre, Port and Stadium zones	65 dB LAeq (15 min)	60 dB LAeq (15 min)	i. 60 dB LAeq (15 min); and ii. 85 dB LAFmax

X. noise generated at 222 Dukes Road North, North Taieri must not exceed the following noise emission limits measured at the furthest boundary of the **Fonterra noise control mapped area**:

- a. 7.00am to 10.00pm 55dB LAeq (15 min); and
  - b. After 10.00pm to before 7.00am 45 dB LAeq (15 min); and 75 dB LAFmax.
7. Except, the following activities are exempt from this standard:
- Z. noise generated by standby or temporary energy generators required by lifeline utilities to ensure the continued supply of electricity;
    - a. noise generated by port activities in the Port Zone (see Rule 30.5.4);

- b. noise generated by aircraft within the Dunedin International Airport Zone;
  - c. noise generated by events in the Stadium Zone (see Rule 32.5.6);
  - d. noise generated by aircraft within the Taieri Aerodrome Zone between the hours of 7.00am - 10.00pm;
  - e. noise generated as part of normal residential activities, other than from building utilities;
  - f. noise associated with early childhood education and schools between the hours of 8.00am - 6.00pm;
  - g. sport and recreation not involving the use of motor vehicles, amplified sound, or firearms;
  - h. vehicles operating on public roads;
  - X. operation of the rail network (including trains on rail lines at railway yards, railway sidings or stations, and level crossing warning devices);
  - Y. repair and maintenance of the rail network that complies with the limits for construction noise in Rule 4.5.4.1.a;
    - i. emergency services, including any warning device used by emergency services for emergency purposes;
    - j. noise generated by wind generators with a swept rotor area greater than 200m<sup>2</sup>, provided that when measured or assessed in accordance with NZS 6808:2010 Acoustics - Wind Farm Noise they do not exceed the LA90 (10min) background sound level by more than 5 dB or a level of 40 dB LA90 (10 min), whichever is greater;
    - k. construction, temporary events in CBD, helicopter movements, and military exercises (see Rule 4.5.4);
    - l. noise generated as part of a normal farming activity within the rural zones and rural residential zones;
    - m. noise generated as part of normal forestry activity within the rural zones;
    - n. noise generated by pyrotechnics and firing of a ceremonial cannon (see Rule 4.5.4.2.c); and
    - o. noise generated by blasting in rural zones, as part of mineral exploration (see Rule 16.5.15).
8. For the purpose of this standard, noise levels will be measured at the boundary of the receiving property, or the notional boundary of a noise sensitive activity in a rural, rural residential or Ashburn Clinic zone. If it is not possible to measure noise levels at the boundary, noise levels will be measured at the closest practical point within the boundary. Unless stated otherwise noise must be measured in accordance with NZS 6801:2008 - Acoustics - Measurement of environmental sound, and assessed in accordance with NZS 6802:2008 Acoustics - Environmental noise.
9. Activities that contravene this performance standard by less than 5dB LAeq (15 min) are discretionary activities.
10. Activities that contravene this performance standard by 5dB LAeq (15 min) or more are non-complying activities.

### **9.3.7 Service Connections**

- 1. NA
- 2. All subdivision activities must supply service connections to resultant sites in accordance with rules 9.3.7.X - 9.3.7.Z and Rule 9.3.7.AB, except for resultant sites created and used solely for the following purposes:
  - a. Scheduled ASBV or QEII covenant;
  - b. reserves;
  - c. access;
  - d. network utilities; or
  - e. roads.

3. NA
4. Activities that contravene this performance standard are restricted discretionary activities.

### 9.3.7.X Telecommunications and power

- a. Subdivision activities must provide all resultant sites with telecommunication (including UltraFast Broadband where available) and power supply, and any associated easements, to the site boundary.
- b. Activities that contravene this performance standard are restricted discretionary activities.

### 9.3.7.Y Water supply

- a. Within all areas that the DCC provides access to a public water supply network, subdivision activities must provide all resultant sites with connections to the public water supply network, which must be laid at least 600mm into each site.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### Note 9.3.7.YA - General advice

- a. The DCC Water Bylaw shows areas where the DCC provides access to a reticulated water supply and conditions of access. There may be a delay including recently rezoned areas in the Bylaw. In these cases, information on access is available by contacting the DCC. The Bylaw also outlines the water supply connection setup requirements for customers. See the Water Bylaw for details.
- b. For further information on connections to the public water supply network, please contact the DCC on 03 477 4000.

### 9.3.7.Z Wastewater

- a. Within any wastewater serviced area, subdivision activities must provide all resultant sites with connections to the wastewater public infrastructure network, which must be laid at least 600mm into each site. The wastewater network for the subdivision must provide for connection to the wastewater public infrastructure network.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### Note 9.3.7.ZA - General advice

- a. The DCC does not provide a wastewater public infrastructure network in all areas of the city. Refer to the definition of 'wastewater serviced area'.
- b. In **new development mapped areas** specified in Rule 9.6.2.Y, immediate connections to the wastewater public infrastructure network will not be available due to network capacity constraints. In these cases, subdivision consent may be refused even if this standard is met where an on-site communal wastewater detention system that serves 50 or more residential units is yet to be approved as a solution to capacity constraints.
- c. Trade and industrial discharges to the wastewater system are subject to the DCC Trade Waste Bylaw.
- d. The discharge of human sewage through on-site wastewater treatment systems is managed by rules in the Regional Plan: Water for Otago. Resource consent may be required from the Otago Regional Council for new systems.
- e. The New Zealand Building Code G13 - Foul Water for building work provides verification methods and acceptable solutions for the storage, treatment, and disposal of wastewater.
- f. For further information on connections to the wastewater public infrastructure network and the design of any wastewater management system, please contact the DCC on 03 477 4000 at the earliest opportunity.

### 9.3.7.AA Stormwater for development

- a. In a **new development mapped area**, all development activities that create an impermeable surface and new roads or additions or alterations to existing roads must:
  - i. connect to a stormwater management system that services the **new development mapped area** and meets the requirements set out in Rule 9.9.X; except:
    1. prior to the stormwater management system being installed, any development that creates less

than 60m<sup>2</sup> of impermeable surface; and

2. any development activities that create an impermeable surface on lots of less than 1000m<sup>2</sup> that were created by a subdivision consent approved prior to 31 May 2022, are exempt from this standard.

- b. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 9.3.7.AAA - General advice and other requirements outside of the District Plan**

- a. In a **new development mapped area**, Policy 9.2.1.Y requires installation of a stormwater management system prior to development as part of the assessment of a consent for the listed activities. The requirements for stormwater management are set out in the Special Information Requirements - Rule 9.9.X. Where development occurs prior to consideration of an integrated stormwater management plan through an application for consent, and installation of an associated stormwater management system, a resource consent will be required under Rule 9.3.7.AA to enable an integrated stormwater management plan to be assessed.
- b. Clause E1 - Surface Water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework in relation to managing surface water and effects on other property.
- c. Development that will divert surface water may require resource consent under the Otago Regional Plan: Water.
- d. Discharge of stormwater to any Otago Regional Council scheduled drain or overland flow path is managed by the Otago Regional Council Flood Protection Management Bylaw 2012.
- e. If development affects the flow of surface water, this effect is also subject to the common law principle of natural servitude.
- f. Part 4 of the Dunedin Code of Subdivision and Development 2010 ('Code of Subdivision') requires that design and construction of stormwater systems be undertaken in accordance with NZS 4404:2004 (now replaced by NZS 4404:2010), except as amended by the Code of Subdivision. This includes a requirement that stormwater systems be provided so that any new development results in an insignificant increase of runoff wherever possible (Clause 4.2.8).
- g. For further information on connections to the public stormwater network and for assistance with design requirements for stormwater management systems, please contact DCC 3 Waters on 03 477 4000 at the earliest opportunity.

### **9.3.7.AB Stormwater for subdivision**

- a. In a commercial and mixed use zone or Recreation Zone, subdivision activities must provide all resultant sites with connections to the stormwater public infrastructure network where available, which must be laid at least 600mm into each site.
- b. For the purposes of this rule 'where available' means where DCC allows connection to piped DCC stormwater public infrastructure in the vicinity of the site.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 9.3.7.ABA - General advice**

- a. In all zones where this standard does not apply, a requirement to connect to stormwater public infrastructure (where available) will be considered through the subdivision consent process. In most instances, a requirement to connect to any stormwater public infrastructure network will be required through a consent condition.

## **Rule 9.4 Assessment of Controlled Activities**

### **9.4.1 Assessment of controlled activities**

Activity	Matters of control	Guidance on the assessment of resource consents

**9.4.1 Assessment of controlled activities**

Activity	Matters of control	Guidance on the assessment of resource consents
<p>1. Student hostels in the Campus Zone</p>	<p>a. Effects on efficiency and affordability of infrastructure</p>	<p>Guidance on the assessment of resource consents</p> <p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.1.</li> <li>ii. NA</li> </ul> <p>X. Only allow land use activity in a wastewater serviced area where:</p> <ul style="list-style-type: none"> <li>1. it will not exceed the current or planned capacity of that infrastructure at the time of development or compromise its ability to service any permitted activities; or</li> <li>2. for controlled land use activities, communal on-site wastewater detention infrastructure can be integrated into the public wastewater network prior to development in a way that meets DCC’s requirements; or</li> <li>3. an unplanned upgrade to the public wastewater network that addresses any capacity constraints can be implemented prior to development with agreement from the DCC (Policy 9.2.1.1A).</li> </ul> <p>Y. Only allow supported living facilities where:</p> <ul style="list-style-type: none"> <li>1. for stormwater generated by the activity that will flow through DCC stormwater public infrastructure at any point: <ul style="list-style-type: none"> <li>1. there is adequate capacity in the stormwater public infrastructure; or</li> <li>2. any adverse effects from an increase in discharge on the stormwater public infrastructure are no more than minor; and</li> </ul> </li> <li>2. for stormwater generated by the activity that will flow through a private, natural/informal stormwater system, or Otago Regional Council public infrastructure at any point, that stormwater system or public infrastructure has the capacity to absorb the additional stormwater</li> </ul>

### 9.4.1 Assessment of controlled activities

Activity	Matters of control	Guidance on the assessment of resource consents
		<p>with no more than minor adverse effects on it or on other sites (public or private), including but not limited to, adverse effects from an increase in overland flow or ponding (Policy 9.2.1.Z).</p> <p>Z. Only allow land use activities in an area with public water supply where:</p> <ol style="list-style-type: none"> <li>1. it will not exceed the current or planned capacity of that infrastructure at the time of development or compromise its ability to service any permitted activities; or</li> <li>2. an unplanned upgrade to the public water supply network that addresses any capacity constraints can be implemented prior to development with agreement from the DCC (Policy 9.2.1.4).</li> </ol> <p><i>General assessment guidance:</i></p> <p>AA. For supported living facilities that may lead to new residential development, Council will consider how stormwater will be managed and may require an integrated stormwater management plan to be submitted with the application (see Special Information Requirement - Rule 9.9.X).</p>

## Rule 9.5 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### Rule 9.5.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 9.5.2 and 9.5.3:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

9.5.2 Assessment of all performance standard contraventions	
Performance standard	Guidance on the assessment of resource consents
1. Performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <p>a. The degree of non-compliance with the performance standard is minor.</p> <p><i>General assessment guidance:</i></p> <p>b. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</p>

### 9.5.3 Assessment of performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Public amenities located on or above the footpath (Rule 6.7.2)	a. Effects on health and safety	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.2</li> <li>ii. Public amenities and signs located on or above footpaths avoid adverse effects on the safety of people or, if avoidance is not practicable, ensure any adverse effects will be no more than minor (Policy 9.2.2.13).</li> </ul>
3.	Density - standard residential in General Residential 2 Zone <b>wastewater constraint mapped area</b> (Rule 15.5.2)	a. Effects on efficiency and affordability of infrastructure (wastewater)	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.1.</li> <li>ii. NA</li> </ul> <p>X. Only allow land use activity in a wastewater serviced area where:</p> <ul style="list-style-type: none"> <li>1. it will not exceed the current or planned capacity of that infrastructure at the time of development or compromise its ability to service any permitted activities; or</li> <li>2. an unplanned upgrade to the public wastewater network that addresses any capacity constraints can be implemented prior to development with agreement from the DCC (Policy 9.2.1.1A).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In determining whether Policy 9.2.1.1.A is achieved, Council will consider the cumulative effects of the proposed development together with existing development and permitted development that is likely to arise in the future.</li> </ul>

### 9.5.3 Assessment of performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
X.	Density - standard residential in ICR Zone (Rule 15.5.2.4.d)	a. Effects on efficiency and affordability of infrastructure (wastewater and water supply)	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.1</li> <li>ii. NA</li> </ul> <p>X. Only allow land use activity in a wastewater serviced area where:</p> <ul style="list-style-type: none"> <li>1. it will not exceed the current or planned capacity of that infrastructure at the time of development or compromise its ability to service any permitted activities; or</li> <li>2. an unplanned upgrade to the public wastewater network that addresses any capacity constraints can be implemented prior to development with agreement from the DCC (Policy 9.2.1.1A).</li> </ul> <p>Y. Only allow land use activities in an area with public water supply where:</p> <ul style="list-style-type: none"> <li>1. it will not exceed the current or planned capacity of that infrastructure at the time of development or compromise its ability to service any permitted activities; or</li> <li>2. an unplanned upgrade to the public water supply network that addresses any capacity constraints can be implemented prior to development with agreement from the DCC (Policy 9.2.1.4).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In determining whether policies 9.2.1.1A and 9.2.1.4 are achieved, Council will consider the cumulative effects of the proposed development together with existing development and permitted development that is likely to arise in the future.</li> </ul>
4.	Sediment control (Rule 8A.5.7)	a. Effects on efficiency and affordability of infrastructure	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.1</li> <li>ii. Adverse effects from sediment run-off from the site on any drains, channels, soakage and treatment systems or stormwater reticulation are avoided or minimised as far as practicable (Policy 9.2.1.5).</li> </ul>

### 9.5.3 Assessment of performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
6.	Fence height and design	a. Effects on health and safety	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.2.</li> <li>ii. Fences in residential, recreation and some major facility zones are designed to allow a visual connection between buildings and public places, to enable opportunities for informal surveillance (Policy 9.2.2.8).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The increased height or reduced visual permeability is necessary to provide security for a business, to protect public well-being or to provide a reasonable level of privacy for bedrooms or bathrooms, where not otherwise achievable under Rule 15.6.2.2.</li> <li>iv. Due to topography, the fence still enables a visual connection between buildings and public places.</li> </ul>
7.	Firefighting	a. Effects on health and safety	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.2</li> <li>ii. New residential buildings, or subdivision activities that may result in new residential buildings, have access to suitable water supply for firefighting purposes (Policy 9.2.2.9).</li> <li>iii. Subdivision that may result in new residential buildings ensures there is access to suitable water supply for firefighting purposes (Policy 9.2.2.9).</li> </ul>
8.	Forestry and shelterbelts and small woodlots setbacks	a. Effects on health and safety	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.2</li> <li>ii. Forestry and shelterbelts and small woodlots are set back from boundaries an adequate distance to avoid risks to safety from fire or tree fall or, if avoidance is not practicable, ensure any adverse effects would be insignificant (Policy 9.2.2.5).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Mitigation measures will be used to avoid risk to buildings in the event of fire originating from the forestry or shelterbelts and small woodlots activity.</li> <li>iv. The topography or characteristics of the site mean that there would be no risk or insignificant risk to buildings or people from tree fall and fire.</li> </ul>

### 9.5.3 Assessment of performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>9. Hazardous substances quantity limits and storage requirements</p>	<p>a. Effects on health and safety</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.2</li> <li>ii. Hazardous substances are stored and used in a way that avoids risk of adverse effects on the health and safety of people on the site or surrounding sites or, if avoidance is not practicable, ensures any adverse effects are no more than low (Policy 9.2.2.11).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Hazardous substances are stored in a way that meets HSNO requirements and Hazardous Substances Regulations.</li> <li>iv. There is little or no risk of any discharge of hazardous substances into the public stormwater infrastructure.</li> <li>v. The proposed hazardous site or hazardous sub-facility is located an appropriate distance from sensitive activities including population, services, schools, emergency services, hospitals or arterial routes.</li> <li>vi. A site management plan and emergency response plan appropriately addresses any potential adverse effects on health and safety (see Special Information Requirements - Rule 9.9.1).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>vii. In assessing the potential effects from hazardous substances, Council will consider: <ul style="list-style-type: none"> <li>1. any additional risk from natural hazards;</li> <li>2. implications on the future use of the site through any associated HAIL classification;</li> <li>3. cumulative effects from other hazardous substances stored on-site, or the storage of hazardous substances on adjacent sites, and whether they are incompatible when considered holistically;</li> <li>4. the nature and size of the proposed development or activity; and</li> <li>5. the sensitivity of other activities on the same or surrounding sites.</li> </ul> </li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>viii. Council may require the development of a site management plan and emergency response plan (see Rule 9.9.1) which outlines how the activity will respond to potential emergency arising from the hazard facility.</li> </ul>

### 9.5.3 Assessment of performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
10.	In a hazard overlay zone: <ul style="list-style-type: none"> <li>Hazardous substances quantity limits and storage requirements</li> </ul>	a. Risk from natural hazards	See Rule 11.4
11.	Maximum building site coverage and impermeable surfaces	<p>a. Effects on efficiency and affordability of infrastructure (stormwater)</p> <p>b. Effects of stormwater from future development</p>	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 9.2.1</p> <p>ii. NA</p> <p>X. Only allow development that contravenes the impermeable surfaces performance standard, where:</p> <ol style="list-style-type: none"> <li>for stormwater generated by the activity that will flow through DCC stormwater public infrastructure at any point: <ol style="list-style-type: none"> <li>there is adequate capacity in the stormwater public infrastructure; or</li> <li>any adverse effects from an increase in discharge on the stormwater public infrastructure are no more than minor; and</li> </ol> </li> <li>for stormwater generated by the activity that will flow through a private, natural/informal stormwater system, or Otago Regional Council public infrastructure at any point, that stormwater system or public infrastructure has the capacity to absorb the additional stormwater with no more than minor adverse effects on it or on other sites (public or private), including but not limited to, adverse effects from an increase in overland flow or ponding (Policy 9.2.1.Z).</li> </ol> <p><i>General assessment guidance:</i></p> <p>Y. Council will consider how stormwater will be managed and may require an integrated stormwater management plan to demonstrate that there will be no increase in peak stormwater discharge rate from the site (see Special Information Requirement - Rule 9.9.X).</p> <p>Z. In assessing contravention of this standard on any site that has on-site wastewater disposal, the additional loading of wastewater on remaining areas of permeable surfaces will be considered.</p> <p><i>Conditions that may be imposed include:</i></p> <p>AA. A requirement for easements, covenants, consent notices, or bonds to ensure future development will be in accordance with an integrated stormwater management plan.</p> <p>AB. A requirement for stormwater management, such as the installation of detention devices required in accordance with the approved integrated stormwater management plan.</p>

### 9.5.3 Assessment of performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
12.	Service connections (rules 9.3.7.2, 9.3.7.X – 9.3.7.Z and 9.3.7.AB) for subdivision	a. ### 9.5.3 Assessment of performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
Y.	Dust and sediment control (Rule 16.5.16.Y)	a. Effects on efficiency and affordability of infrastructure	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.1</li> <li>ii. Adverse effects from sediment run-off from the site on any drains, channels, soakage and treatment systems or stormwater reticulation are avoided or minimised as far as practicable (Policy 9.2.1.5).</li> </ul>

## Rule 9.6 Assessment of Restricted Discretionary Activities

### Rule 9.6.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 9.6.2:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

#### Note 9.6.1A - General advice

1. The DCC requires those persons undertaking development to pay a fair, equitable, and proportionate portion of the costs of capital expenditure to service growth.
2. The DCC's contribution to any off-site upgrades or delivery of higher specification for infrastructure will be based on an assessment of the public vs private benefit of the upgrade. This means that in principle the landowner(s) of the structure plan mapped area and/or new development mapped area will only be required to pay that portion of the costs of the upgrades that is necessary to address the effects of or needs of their proposed development area. Network infrastructure growth costs will generally be funded through development contribution charges as set out in the DCC's Development Contributions Policy (10-year Plan 2021-2031), which details the charges on a per equivalent household unit by area of benefit basis.
3. Where the results of a stormwater or wastewater management plan or an assessment of water supply requirements demonstrate the need for either:
  - a. Infrastructure upgrades outside of the site, or
  - b. Infrastructure built to a higher specification because of the need to provide for new growth areas or improve level of service for existing areas,
 the responsibility and funding for these upgrades will be negotiated between all landowners and the DCC. Where necessary, the DCC will appoint an independent facilitator or mediator to assist in these negotiations.
4. It is further noted that the completion of these upgrades prior to s224 certification or at a certain point in time agreed to in a condition of consent may be required.

### 9.6.2 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance for the assessment of resource consents
----------	-----------------------	--

<p>Z.</p>	<p>All RD activities that have 'effects on efficiency and affordability of infrastructure' as a matter of discretion</p>	<p>a. Effects on efficiency and affordability of infrastructure (wastewater and water supply)</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.1.</li> <li>ii. Only allow land use or subdivision activities that may result in land use or development activities outside the wastewater serviced area, where:             <ul style="list-style-type: none"> <li>1. it will not lead to future pressure for unplanned expansion of wastewater public infrastructure; or</li> <li>2. an unplanned extension (and any necessary upgrade) to the public wastewater network to provide for the activities can be implemented prior to development with agreement from the DCC (Policy 9.2.1.1).</li> </ul> </li> <li>iii. Only allow land use or subdivision activities that may result in land use or development activities in a wastewater serviced area where:             <ul style="list-style-type: none"> <li>1. it will not exceed the current or planned capacity of that infrastructure at the time of development or compromise its ability to service any permitted activities; or</li> <li>2. for restricted discretionary land use activities, communal on-site wastewater detention infrastructure can be integrated into the public wastewater network prior to development in a way that meets DCC's requirements; or</li> <li>3. an unplanned upgrade to the public wastewater network that addresses any capacity constraints can be implemented prior to development with agreement from the DCC (Policy 9.2.1.1A).</li> </ul> </li> <li>iv. Only allow land use or subdivision activities that may result in land use or development activities in an area with public water supply where:             <ul style="list-style-type: none"> <li>1. it will not exceed the current or planned capacity of that infrastructure at the time of development or compromise its ability to service any permitted activities; or</li> <li>2. an unplanned upgrade to the public water supply network that addresses any capacity constraints can be implemented prior to development with agreement from the DCC (Policy 9.2.1.4).</li> </ul> </li> <li>v. Activity	Matters of discretion	Guidance for the assessment of resource consents
<p><b>mapped area:</b></p> <ul style="list-style-type: none"> <li>• All subdivision activities</li> <li>• New buildings or additions and alterations to buildings that result in a multi-unit development</li> <li>• Supported living facilities</li> </ul>	<p>stormwater management and effects of stormwater from future development</p>	<p>i. Objective 9.2.1.</p> <p>ii. Only allow subdivision activities, multi-unit development, or supported living facilities in a <b>new development mapped area</b> where:</p> <ol style="list-style-type: none"> <li>1. an integrated stormwater management plan that is designed for the whole NDMA has been prepared and stormwater management system(s) for all parts of the NDMA that are hydrologically connected to the area proposed for subdivision will ensure there is no increase in the peak stormwater discharge rate from the NDMA into the stormwater public infrastructure, or into a private stormwater system (at any point) between pre-development and post development; or</li> <li>2. where this is not practicable, any adverse effects from an increase in discharge on the stormwater system are no more than minor (Policy 9.2.1.Y).</li> </ol> <p>iii. Only allow subdivision in a <b>new development mapped area</b> where any new public or private 3-waters infrastructure is designed to connect to, and provide capacity for, future urban development on adjoining or nearby sites that are zoned for urban development, where necessary (Policy 9.2.1.AA).</p> <p><i>General assessment guidance:</i></p> <p>iv. The assessment will consider the proposed integrated stormwater management plan submitted with the application (see Special Information Requirement - Rule 9.9.X).</p> <p>v. In assessing the effectiveness and efficiency of stormwater management and taking into account climate change, Council will consider any consequential effects that might arise, including, but not limited to:</p> <ol style="list-style-type: none"> <li>1. effects on personal safety;</li> <li>2. risks from surface water flooding;</li> <li>3. risks to property from inundation;</li> <li>4. risks to the ability of Council to meet its consent conditions for public infrastructure, which could lead to effects on freshwater quality and ecosystem health; and</li> <li>5. risks to the integrity and function of existing public infrastructure.</li> </ol> <p><i>Conditions that may be imposed include:</i></p> <p>vi. A requirement for the stormwater management system to be installed prior to certification of the survey plan pursuant to section 223 of the RMA.</p> <p>vii. A requirement for easements, covenants, consent notices, or bonds to ensure future development will be in accordance with the integrated stormwater management plan.</p>

### 9.6.2 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance for the assessment of resource consents
		viii. A requirement for the stormwater management system to be vested in the DCC, with necessary easements and a maintenance or defect period agreement in place prior to vesting.
<p>Y. In the following <b>new development mapped areas</b>, all subdivision activities, new buildings or additions and alterations to buildings that result in a multi-unit development and supported living facilities:</p> <ul style="list-style-type: none"> <li>Wattie Fox Lane <b>{Variation 2 appeal}</b></li> </ul>	<p>a. Effectiveness and efficiency of wastewater management and effects of wastewater from future development</p>	<p><i>Relevant objectives and policies (in addition to those outlined in 9.6.2.2 and 9.6.2.X above):</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.1.</li> <li>ii. Subdivision, multi-unit development or supported living facilities in specified <b>new development mapped areas</b> provides or connects to a communal wastewater detention system that ensures that all wastewater from the future development of the entire <b>new development mapped area</b> does not exceed the capacity of the wastewater public infrastructure network (Policy 9.2.1.BB).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. The identified <b>new development mapped areas</b> are serviced for wastewater but new connections to the network will not be allowed (and consequentially any multi-unit development, supported living facility or subdivision that will lead to development that will require a connection will likely be declined) until capacity constraints are resolved or a communal on-site wastewater detention system that is designed for and associated with subdivision and/or development of 50 or more residential units is integrated into the public network and vested in the DCC. After installation of the system, all activities that create wastewater will be required to connect to the system until it is no longer required.</li> <li>iv. In assessing the appropriateness of a proposed communal on-site wastewater detention system, Council will consider the proposed wastewater management plan submitted with the application (see Special Information Requirement - Rule 9.9.Y).</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>v. A requirement for the communal on-site wastewater detention system to be installed prior to certification of the survey plan pursuant to section 223 of the RMA.</li> <li>vi. A requirement for the communal on-site wastewater detention system to be vested in the DCC, along with a site containing it which is of a minimum 500m<sup>2</sup> in area and suitable for residential development.</li> <li>vii. A requirement for necessary easements and a fixed maintenance or defect period agreement to be in place prior to vesting the communal on-site wastewater detention system and associated land.</li> </ul>

## Rule 9.7 Assessment of Discretionary Activities

### Rule 9.7.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 9.7.2 - 9.7.4 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.

9.7.2 Assessment of all discretionary activities	
Activity	Guidance on the assessment of resource consents
1. All discretionary activities that are linked to Section 9.6, including but not limited to the activities listed below	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 9.2.2</li> <li>b. Activities are designed and operated to avoid adverse effects from noise on the health of people or, where avoidance is not practicable, ensure any adverse effects would be insignificant (Policy 9.2.2.1).</li> <li>c. Activities are designed and operated to avoid adverse effects from light spill on the health of people or, where avoidance is not practicable, ensure any adverse effects would be insignificant (Policy 9.2.2.4).</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>d. In assessing the significance of effects, consideration will be given to:               <ol style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ol> </li> </ol>

### 9.7.3 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
<p>1. Mining</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 9.2.2</li> <li>b. Any adverse effects from air blast and vibration on people's health and safety or on surrounding properties are avoided or, if avoidance is not practicable, no more than minor (Policy 9.2.2.6).</li> <li>c. NA</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>d. Blasting will be carried out in accordance with appropriate industry standards.</li> <li>e. Blast noise (air blast) measured at the notional boundary on adjoining properties will not exceed a peak overall sound pressure level of 128 dBZ.</li> <li>f. Vibration - the limit of peak particle velocity of vibration from blasting measured on the foundation or any suitable location on or adjacent to residential buildings on adjoining properties will not exceed 10mm/second.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>g. The assessment for a resource consent application for mining will consider the information provided by any site management plan and emergency response plan (see Special Information Requirements - Rule 9.9.1).</li> </ul>

#### 9.7.4 Assessment of discretionary performance standard contraventions

Activity	Guidance on the assessment of resource consents
1. Acoustic insulation	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 9.2.2</li> <li>b. Those parts of buildings used for noise sensitive activities in identified areas provide adequate acoustic insulation to avoid, as far as practicable, significant adverse effects from the higher noise environments anticipated in those areas (Policy 9.2.2.2).</li> <li>c. The location of noise sensitive activities is such that the insulation and/or supplementary ventilation are not necessary to achieve an acceptable internal noise environment.</li> <li>d. The orientation of a room subject to the acoustic insulation performance standard is such that the insulation and/or supplementary ventilation are not necessary to achieve an acceptable internal noise environment.</li> <li>e. Council may consider the extent to which it is practical to acoustically insulate or provide supplementary ventilation without compromising a protected part of a scheduled heritage building.</li> <li>f. Council will consider whether development will lead to an unacceptable internal noise environment or insufficient ventilation of sleeping areas compromising the health and safety of occupants.</li> <li>g. Council will consider the information provided by an acoustic engineer (see Rule 9.9.2 Acoustic insulation).</li> </ul>

### 9.7.4 Assessment of discretionary performance standard contraventions

Activity	Guidance on the assessment of resource consents
<p>2. Minimum site size (Rule 17.7.5.2)</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. NA</li> <li>X. Only allow subdivision activities that may result in land use or development activities outside the wastewater serviced area, where:               <ul style="list-style-type: none"> <li>i. it will not lead to future pressure for unplanned expansion of wastewater public infrastructure; or</li> <li>ii. an unplanned extension (and any necessary upgrade) to the public wastewater network to provide for the activities can be implemented prior to development with agreement from the DCC (Policy 9.2.1.1).</li> </ul> </li> <li>Y. Only allow subdivision activities that may result in land use or development activities in an area without public water supply where:               <ul style="list-style-type: none"> <li>i. it will not lead to future pressure for unplanned expansion of public water supply infrastructure; or</li> <li>ii. an unplanned extension (and any necessary upgrade) to the public water supply network to provide for the activities can be implemented prior to development with agreement from the DCC (Policy 9.2.1.4A).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>b. Subdivision activities where the parent site contains significant topographical features such as waterways or human-made features such as roads or rail corridors which make meeting the minimum site size impractical</li> </ul>
<p>3. Density (papakāika) in rural zones</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 9.2.1.</li> <li>b. NA</li> <li>X. Only allow land use activities outside the wastewater serviced area, where:               <ul style="list-style-type: none"> <li>i. it will not lead to future pressure for unplanned expansion of wastewater public infrastructure; or</li> <li>ii. an unplanned extension (and any necessary upgrade) to the public wastewater network to provide for the activities can be implemented prior to development with agreement from the DCC (Policy 9.2.1.1).</li> </ul> </li> <li>Y. Only allow land use activities in an area without public water supply where:               <ul style="list-style-type: none"> <li>i. it will not lead to future pressure for unplanned expansion of public water supply infrastructure; or</li> <li>ii. an unplanned extension (and any necessary upgrade) to the public water supply network to provide for the activities can be implemented prior to development with agreement from the DCC (Policy 9.2.1.4A).</li> </ul> </li> </ul>

#### 9.7.4 Assessment of discretionary performance standard contraventions

Activity	Guidance on the assessment of resource consents
<p>4. Density (visitor accommodation) in residential zones and the Campus Zone</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 9.2.1</li> <li>b. NA</li> <li>c. NA</li> </ul> <p>X. Only allow land use activity in a wastewater serviced area where:</p> <ul style="list-style-type: none"> <li>i. it will not exceed the current or planned capacity of that infrastructure at the time of development or compromise its ability to service any permitted activities; or</li> <li>ii. an unplanned upgrade to the public wastewater network that addresses any capacity constraints can be implemented prior to development with agreement from the DCC (Policy 9.2.1.1A).</li> </ul> <p>Y. Only allow land use activities in an area with public water supply where:</p> <ul style="list-style-type: none"> <li>i. it will not exceed the current or planned capacity of that infrastructure at the time of development or compromise its ability to service any permitted activities; or</li> <li>ii. an unplanned upgrade to the public water supply network that addresses any capacity constraints can be implemented prior to development with agreement from the DCC (Policy 9.2.1.4).</li> </ul>

The exceedance will be infrequent and/or short term.</li> <li>d. Sufficient ambient levels of light exist that the exceedance will be insignificant in the circumstances.</li> </ul>

**9.7.4 Assessment of discretionary performance standard contraventions**

Activity	Guidance on the assessment of resource consents
7. Blasting (mineral exploration)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 9.2.2</li> <li>b. Any adverse effects from air blast and vibration on people's health and safety or on surrounding properties are avoided or, if avoidance is not practicable, no more than minor (Policy 9.2.2.6).</li> </ul>

## Rule 9.8 Assessment of Non-complying Activities

### Rule 9.8.1 Introduction

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 9.8.2 - 9.8.3 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 9.8.2 - 9.8.3 apply as follows:
  - a. Rule 9.8.2 applies to non-complying performance standard contraventions.
  - b. Rule 9.8.3 applies to all non-complying land use activities that are linked to Section 9.8.

9.8.2 Assessment of non-complying performance standard contraventions	
Performance standard	Guidance on the assessment of resource consents
1. All non-complying performance standard contraventions that are linked to Section 9.8	<p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>a. In assessing the significance of effects, consideration will be given to:               <ol style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ol> </li> </ol>
2. Density	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 9.2.1, policies 9.2.1.1, 9.2.1.1A, 9.2.1.4, 9.2.1.4A.</li> </ol>
3. Hazardous substances quantity limits and storage requirements - (Rule 9.3.4.2) - Setback from National Grid	See Rule 5.10
4. Light spill - where the limit is exceeded by greater than 25%	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 9.2.2, Policy 9.2.2.4</li> <li>b. Objective 2.2.6, Policy 2.2.6.1</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>c. The exceedance will be infrequent and/or short term.</li> <li>d. Sufficient ambient levels of light exist such that the exceedance will be insignificant in the circumstances.</li> </ol>
5. Minimum site size	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 9.2.1, policies 9.2.1.1, 9.2.1.1A, 9.2.1.4, 9.2.1.4A, 9.2.1.Z.</li> <li>b. Objective 2.7.1, policies 2.7.1.1, 2.7.1.3.</li> </ol>

### 9.8.2 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>6.</p> <ul style="list-style-type: none"> <li>• Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>• Noise limits where the limit in Rule 32.5.6.2.a is exceeded</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 9.2.2, Policy 9.2.2.1</li> <li>b. Objective 2.2.6, Policy 2.2.6.1</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>c. The exceedance will be infrequent and/or short term.</li> <li>d. Sufficient ambient levels of noise exist that the exceedance will be insignificant in the circumstances.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>e. Council will consider the following potential 'FIDOL' factors as part of the assessment of a resource consent application:               <ol style="list-style-type: none"> <li>i. Frequency, which refers to how often the exceedance will occur;</li> <li>ii. Intensity, which refers to the level of noise experienced;</li> <li>iii. Duration, which refers to the length of time and the time of day;</li> <li>iv. Offensiveness, which refers to the character of the noise; and</li> <li>v. Location, which refers to where the noise will occur.</li> </ol> </li> <li>f. Council will consider the sensitivity of activities on surrounding sites to the noise source, and the distance of noise sensitive activities from the site boundary of the noise source.</li> </ol>

### 9.8.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying land use activities that are linked to Section 9.8, including but not limited to the activities listed below</p>	<ol style="list-style-type: none"> <li>a. Objective 9.2.2</li> <li>b. Activities are designed and operated to avoid adverse effects from noise on the health of people or, where avoidance is not practicable, ensure any adverse effects would be insignificant (Policy 9.2.2.1)</li> <li>c. Activities are designed and operated to avoid adverse effects from light spill on the health of people or, where avoidance is not practicable, ensure any adverse effects would be insignificant (Policy 9.2.2.4).</li> </ol>

### 9.8.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
2. In a <b>hazard facility mapped area</b> , bulk fuel storage facilities sensitive activities	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>x. Objective 9.2.2.</li> <li>y. Policy 9.2.2.15.</li> </ul> <p><i>Related strategic directions:</i></p> <ul style="list-style-type: none"> <li>z. Objective 2.3.1.</li> <li>aa. Policy 2.3.1.4.</li> <li>ab. Policy 2.3.1.X.</li> <li>ac. Objective 2.2.6.</li> <li>ad. Policy 2.2.6.2.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>ae. In considering whether residual risk is of an acceptable level, Council will be guided by the New South Wales Government Risk Criteria for Land Use Safety Planning (refer <a href="https://2qp.dunedin.govt.nz/2qp/supportingdocuments.html">https://2qp.dunedin.govt.nz/2qp/supportingdocuments.html</a>).</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>h. Council may require the development of a site management, risk assessment and/or emergency response plans (see Rule 9.9.1) which outlines how the activity will respond to a potential emergency arising from the hazard facility.</li> </ul>

## **Rule 9.9 Special Information Requirements**

### **9.9.1 Site management and emergency response plans**

X. Council may require a site management and an emergency response plan to be provided with an application for resource consent for the following activities:

- a. rural industry;
- b. landfills;
- c. mining (these plans may form part of a quarry management plan);
- d. any activity that contravenes the Hazardous Substances Quantity Limits and Storage Requirements performance standard 9.3.4;

Y. Council may require site management, risk assessment and/or emergency response plans to be provided with an application for resource consent for bulk fuel storage facilities sensitive activities within a **hazard facility mapped area**.

### **9.9.2 Acoustic insulation**

Where new or altered rooms in a building are proposed to be constructed using methods and materials that differ from the schedule in Appendix 9A, an acoustic design certificate must be provided to Council by a suitably qualified and experienced acoustic engineer, accepted by Council. This confirms that when built to the recommended design and specifications, the minimum acoustic insulation standard of Rule 9.3.1.1 will be achieved.

For the purposes of this rule, suitably qualified and experienced means a person who can provide sufficient evidence to demonstrate their suitability and competence.

## 9.9.X Stormwater management

1. In a **new development mapped area**, applications for the following activities must include a proposed integrated stormwater management plan prepared in accordance with clauses 4 to 6 of this rule, unless an earlier approved land use or subdivision consent includes such a plan, prepared in accordance with this rule:
  - a. subdivision;
  - b. multi-unit development;
  - c. supported living facilities; or
  - d. development that contravenes Rule 9.3.7.AA (service connections - stormwater management for development).
2. Where an integrated stormwater management plan has already been provided in accordance with this rule as part of an earlier approved consent, but did not include design details for stormwater management systems for any part of the **new development mapped area** that the current proposal is in, applications for the activities set out in clauses 1 (a) to (d) must provide those details in accordance with clauses 5 to 6 of this rule in a way that is consistent with the integrated stormwater management plan approved as part of the earlier consent
3. Outside a **new development mapped area**, applications for consent that include the following activities must provide details of how stormwater will be managed in accordance with clause 7 of this rule:
  - a. subdivision that may lead to new residential development;
  - b. development that contravenes the impermeable surfaces performance standard;
  - c. multi-unit development; or
  - d. supported living facilities.
4. Integrated stormwater management plans required for **new development mapped areas** must:
  - a. address the whole NDMA and demonstrate how Policy 9.2.1.Y will be achieved;
  - b. provide details in accordance with clause 5 of this rule of all stormwater management systems for the hydrologically connected parts of the **new development mapped area** in which the proposal is located and details of how those systems will be installed in full or in planned stages prior to development;
  - c. ensure that stormwater will be managed for both the current climatic conditions and climatic conditions based on climate change projections;
  - d. ensure that:
    - i. there is no increase in the peak stormwater discharge rate from the **new development mapped area** into the stormwater public infrastructure, or into a private, Otago Regional Council, or natural/informal stormwater system (at any point) between pre-development and post-development, based on the assessment required in clause i; or
    - ii. where this is not practicable, any adverse effects from an increase in discharge on the stormwater system are no more than minor;
    - iii. For the sake of clarity, the integrated stormwater management plan does not need to avoid volume increases;
  - e. include stormwater detention infrastructure that is designed to temporarily store and release flows from a generated 1% AEP rainfall event, such that peak pre-development flows are not exceeded in the post-development condition;
  - f. demonstrate that secondary flows at the development's upstream and downstream boundaries are not changed or adversely affected;
  - g. include the use of low-impact (or water-sensitive) design features, which may include features such as:

- i. grassed/landscaped swales and other vegetation areas;
    - ii. infiltration trenches/bio-retention systems;
    - iii. storage ponds/wetlands/sediment ponds;
    - iv. rainwater tanks, harvesting and reuse;
    - v. rain gardens, rooftop greening and planting, and porous surface treatments; and
    - vi. consideration of the existing natural topography and the natural course of water flow (overland flow paths) through the design of the subdivision;
  - h. consider whether stormwater management areas can be integrated into reserves and recreation spaces; and
  - i. include an assessment of the difference between pre-development peak flows and post-development peak flows (with and without mitigation) over a range of event durations, taking into account the maximum impermeable surfaces permitted in the district plan zone for the mapped area (and including any other development restrictions resulting from any other rules in the district plan or legal instruments registered on the title(s) for the mapped area). This assessment must meet the following criteria:
    - i. the assessment of pre-development and post-development flows and detention volumes must be based on the 10% and the 1% annual exceedance probability (AEP) rainfall events, covering durations from the mapped area's own critical duration to the critical duration of the catchment upstream of the point of discharge (unless agreed otherwise with the DCC, for example where direct discharge to the coastal environment is feasible). For the purposes of this requirement, 'critical duration' means the duration of rainfall event likely to cause the highest peak flows or water levels;
    - ii. the assessment must take account of climate change, using the climate adjustment rainfall sourced from HIRDS version 4 using RCP 8.5 2081-2100 values (or an alternative source approved by DCC); and
    - iii. the assessment must include a risk based assessment to determine to what extent measures (if any) are needed to manage flows downstream of the land.
5. Applications must include the following design details for proposed stormwater management systems:
  - a. the design and location of 'primary infrastructure' ('primary infrastructure' includes both open and closed conduits and must be designed to contain the flows generated by the 10% AEP rainfall event);
  - b. the design and location of 'secondary flow paths', with and without blockage of the primary stormwater system, through the development to the downstream boundary. 'Secondary flow paths' means the flow path over which surface water will flow if the primary flow path becomes overloaded or inoperative and consists of overland flow paths with sufficient capacity to transfer the flows generated by rainfall events up to the 1% AEP event. Secondary flow paths shall be clearly identified, and where possible aligned with natural flow paths and located on public land. If located in private property, 1% AEP secondary flows should be through primary infrastructure unless protected by an easement;
  - c. the design features that will enable safe operation in super-design conditions (for a 0.5% AEP rainfall event, but a greater rainfall event can be used if the applicant chooses to do so). Safe operation means without catastrophic, rapid or structural failure. This is to ensure that the proposed stormwater management system has a fail-safe mechanism. This does not mean the stormwater management system is to be designed to retain the volume of stormwater for a 0.5% AEP rainfall event;
  - d. the location and design details of stormwater management systems, including detention infrastructure required to meet clause 4(e) above;
  - e. how the integrity of the stormwater management system will not be compromised during and after subdivision (for example ensuring that open drains that form part of the system will not be blocked or altered);

- f. how erosion and sedimentation will be managed effectively within the development area during earthworks and as the area is developed, by taking measures and installing devices, where necessary, to:
    - i. divert clean runoff away from disturbed ground;
    - ii. control and contain stormwater run-off;
    - iii. avoid sediment laden run-off from the mapped area; and
    - iv. protect existing drainage infrastructure sumps and drains from sediment run-off;
  - g. the design and location of stormwater quality treatment that demonstrates the expected quality of stormwater leaving the specified system and its treatment of at least the 'first flush' volume (90th percentile daily rainfall depth) or flow rate (90th percentile rainfall intensity) in accordance with best practice techniques for at least 75% Total Suspended Solids (TSS) removal on a long-term average basis;
  - h. if a stormwater management system cannot practicably be designed to meet one or more of clauses c to g above in relation to additional stormwater discharge, an assessment of the broader catchment to determine whether design solutions external to the mapped area are available to manage the additional stormwater discharges as a result of the development on the mapped area;
  - i. how the stormwater management system will not create or exacerbate adverse effects that are more than minor outside the development area. This includes consideration of cumulative effects; and
  - j. where any proposed stormwater management system is intended to vest as public infrastructure, the design of an adjustable outlet mechanism such that the present day peak discharge flow rate from the land is not exceeded as a result of the development but that the outlet can be progressively adjusted for future climate change discharge rates up to the fully developed stormwater management system design capacity.
6. The integrated stormwater management plan, and the design of stormwater management systems, must be prepared by a chartered professional engineer or other suitably qualified person who has (or can call on) experience in hydrology, hydraulics, stormwater design, flood risk management and construction management.
7. Stormwater management information required outside a **new development mapped area** must demonstrate how Policy 9.2.1.Z will be achieved by:
- a. providing a stormwater management proposal prepared by a suitably qualified person, which:
    - i. contains a level of detail commensurate with the scale of the subdivision, land use or development activity;
    - ii. reflects the scale of any stormwater management issues in the catchment and any capacity constraints in the public infrastructure network; and
    - iii. where available, follows any relevant guidance on acceptable stormwater management solutions for similar activities in a similar context; and
  - b. for subdivision activities that result in more than six lots, or development areas greater than 1ha, providing an integrated stormwater management plan where requested by Council.

#### **Note 9.9.XA - General advice and other requirements outside of the District Plan**

1. DCC 3 Waters recommend that developers considering subdivision of land in a **new development mapped area** contact DCC 3 Waters regarding the assessment and design of stormwater management systems at the earliest opportunity to facilitate the development of mutually acceptable proposals.
2. Requirements for stormwater drainage set out in Part 4 of the Dunedin Code of Subdivision and Development 2010 must also be complied with.

3. Discharge of stormwater is also managed by the Otago Regional Council in the Regional Plan: Water for Otago.
4. Discharge of stormwater to any Otago Regional Council scheduled drain or overland flow path is managed by the Otago Regional Council Flood Protection Management Bylaw 2012.
5. Clause E1 - Surface Water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework in relation to managing surface water and effects on other property.
6. For consent applications in a **new development mapped area** that require the submission of an integrated stormwater management plan, Otago Regional Council will be considered an affected person in accordance with Rule 15.4.5.X.
7. For consent applications in a **new development mapped area** that require the submission of an integrated stormwater management plan, other landowners within the **new development mapped area** will be considered an affected person in accordance with Rule 15.4.Y.

### 9.9.Y Wastewater management plans

1. Any application for subdivision, multi-unit development or supported living facilities in a **new development mapped area** specified in Rule 9.6.2.Y must include a proposed wastewater management plan that ensures that all wastewater from the future development of the entire **new development mapped area** does not exceed the capacity of the wastewater public infrastructure network via the use of a communal wastewater detention system, unless such a system has already been approved for the site and will be connected to.
2. The wastewater management plan must be prepared by a chartered engineer and meet the following requirements:
  - a. Specify the design and location of one or more communal wastewater detention systems to detain wastewater from the entire **new development mapped area**.
  - b. The communal wastewater detention systems must:
    - i. have the capacity to detain wastewater for a 24-hour period, prior to releasing the wastewater via a connection to the wastewater public infrastructure network. The volume of wastewater to be detained will be calculated with reference to Part 5 of the Dunedin Code of Subdivision and Development 2010 ('Code of Subdivision');
    - ii. be compatible with DCC's Supervisory Control and Data Acquisition (SCADA) system;
    - iii. have a minimum 20 year expected life for all electrical / mechanical components and a minimum 50 year expected life for all civil components;
    - iv. where practicable, be located such that all flow goes to one communal wastewater detention system with no pumping;
    - v. have components and materials that comply with the DCC's 3-Waters Approved Product and Manufacturers List and Part 5 of the Dunedin Code of Subdivision and Development 2010 ('Code of Subdivision').
3. The wastewater management plan must be submitted along with the written approval of all landowners within the **new development mapped area** unless they are the applicant(s).

## Appendices

### Appendix 9A. Acoustic Insulation Requirements

1. Compliance with the acoustic insulation performance standard can be achieved by ensuring that rooms in which acoustic insulation is required by Rule 9.3.1 are designed and constructed in accordance with either:
  - a. an acoustic design certificate signed by a suitably qualified acoustic engineer stating that the design as proposed will achieve compliance with the acoustic insulation performance standard; or
  - b. in all areas other than the **port noise control mapped area**, the schedule of typical building construction in Table 9A.1A.

2. Table 9A.1A refers to common specifications for timber size. Nominal specifications may, in some cases, be slightly less than the common specifications stated in the schedule for timber size.
3. In determining the insulating performance of roof/ceiling arrangements, roof spaces are assumed to have no more than the casual ventilation typical of the jointing capping and guttering detail used in normal construction.

**Table 9A.1A Schedule of typical building construction to achieve acoustic insulation where required by Rule 9.3.1.1**

Building element		Minimum construction requirement	
a.	External walls	i. Stud Walls: Exterior cladding	20mm timber or 9mm compressed fibre cement sheet over timber frame (100mm x 50mm).
		ii. Cavity Infill	Fibrous acoustic blanket (batts or similar of a minimum mass of 9kg/m <sup>3</sup> ) required in cavity for all exterior walls. Minimum 90mm wall cavity.
		iii. Interior lining	One layer of 12mm gypsum plasterboard. Where exterior walls have continuous cladding with a mass of greater than 25kg/m <sup>2</sup> (e.g. brick veneer or minimum 25mm stucco plaster), internal wall linings need to be no thicker than 10mm gypsum plasterboard.
		iv. Combined superficial density	Minimum not less than 25kg/m <sup>2</sup> being the combined mass of external and internal linings excluding structural elements (e.g. window frames or wall studs) with no less than 10kg/m <sup>2</sup> on each side of structural elements.
		v. Mass Walls	190mm concrete block, strapped and lined internally with 10mm gypsum plasterboard, or 150mm concrete wall.
b.	Glazed areas	i. Glazed areas up to 10% of floor area	6mm glazing single float.
		ii. Glazed areas between 10% and 35% of floor area	6mm laminated glazing.
		iii. Glazed areas greater than 35% of floor area	Require a specialist acoustic report to show conformance with the insulation rule.
		iv. Frames to be aluminium window frames with compression seals.	
c.	Skillion roof	i. Cladding	0.5mm profiled steel or 6mm corrugated fibre cement, or membrane over 15mm thick ply, or concrete or clay tiles.
		ii. Sarking	17mm plywood (no gaps).
		iii. Frame	Minimum 100mm gap with fibrous acoustic blanket (batts or similar of a mass of 9kg/m <sup>3</sup> ).
d.	Ceiling	Two layers of 10mm gypsum plasterboard (no through-ceiling lighting penetrations unless correctly acoustically rated). Fibrous acoustic blanket (batts or similar of a minimum mass of 9kg/m <sup>3</sup> ).	
e.	Combined superficial density	Combined mass of cladding and lining of not less than 25kg/m <sup>2</sup> with no less than 10kg/m <sup>2</sup> on each side of structural elements.	

Building element		Minimum construction requirement	
f.	Pitched Roof (all roofs other than skillion roofs)	i. Cladding	0.5mm profiled steel or tiles, or membrane over 15mm thick ply.
		ii. Frame	Timber truss with 100mm fibrous acoustic blanket (batts or similar of a minimum mass of 9kg/m <sup>3</sup> ) required for all ceilings.
		iii. Ceiling	12mm gypsum plasterboard.
		iv. Combined superficial density	Combined mass with cladding and lining of not less than 25kg/m <sup>2</sup> .
g.	Floor areas open to outside	i. Cladding	Under-floor areas of non-concrete slab type floors exposed to external sound will require a cladding layer lining the underside of floor joists of not less than 12mm ply.
		ii. Combined superficial density	Floors to attain a combined mass not less than 25kg/m <sup>2</sup> for the floor layer and any external cladding (excluding floor joists or bearers).
h.	External door	Solid core door (minimum 25kg/m <sup>2</sup> ) with compression seals (where the door is exposed to exterior noise).	

## 10. Natural Environment

### 10.1 Introduction

Dunedin covers a large geographic area and contains a diverse range of landscapes and ecosystems, from off shore islands, Otago Peninsula and other coastal areas through to forests, river plains, and uplands to the Rock and Pillar, Lammermoor and Maungatua ranges. There is a vast diversity of indigenous flora and fauna within these areas, some of which are endemic to Dunedin and are rare and subject to threats.

The preservation of the natural character of the coastal environment and riparian margins, the protection of outstanding natural features and landscapes, the protection of areas of significant indigenous vegetation and significant habitats of indigenous fauna, and the maintenance and enhancement of public access to and along the coastal marine area, lakes and rivers are matters of national importance under section 6(a),(b),(c) and (d) of the RMA. The maintenance and enhancement of amenity values and the quality of the environment is provided for under section 7(c) and (f) of the RMA, which includes the maintenance and enhancement of Dunedin's significant natural landscapes. Section 31 states that it is a function of Council to control land use and development for the purpose of maintaining indigenous biological diversity. Further, the New Zealand Coastal Policy Statement 2010 requires protection of indigenous biological diversity in the coastal environment.

Dunedin's natural environment, and the life supporting capacity of Dunedin's air, water, soil and ecosystems are important for the social, cultural and economic well-being of communities. Vegetation, for example, (including trees), performs a range of environmental functions such as releasing oxygen; absorbing carbon dioxide and retaining water; moderating micro-climates; giving shade and shelter from winds; providing land stability, particularly on gully and river banks; and providing habitat for wildlife, both native and exotic species. Ecosystem services and natural processes such as these underpin much of Dunedin's economic activity, especially in the rural environment. Maintaining the quality of the environment is particularly important to the tourism sector. The city's natural features and landscapes, natural character of the coast and other water bodies, and biodiversity values, all play an important role in contributing to the visitor experience.

Protection of the natural environment is also an essential part of the maintenance and enhancement of the relationship between Manawhenua and their ancestral lands, water, sites, wāhi tūpuna, and other taoka, as recognised in Section 14 of this plan. For instance, high quality natural resources are necessary for the availability of mahika kai. The natural environment of Dunedin also makes an important contribution to the health and well-being of the residents of the city and to the quality of the city's landscape. For example, in the urban environment, areas of bush contribute significantly to amenity values, as well as providing habitat and ecological corridors for indigenous fauna and serving other environmental functions. Dunedin residents look to the natural environment (both rural and urban) for recreational opportunities, and natural character, biodiversity and landscape values of the natural environment help shape residents' sense of identity.

Threats to Dunedin's natural environment include the reduction or loss of habitats due to contamination, disturbance, destruction, fragmentation, invasive pest species, and surrounding land uses. Maintaining the city's biodiversity is challenging because:

- areas and habitats of indigenous species often occur on both private and public land;
- although many landowners actively protect areas of value there can at times be tensions between the aspirations of landowners for land use and development and the need to protect those areas and habitats;
- ecosystems are not always confined to definable sites;
- maintaining indigenous biodiversity requires both the protection of sites of especially high biodiversity value and the growth, creation or restoration of new or existing sites; and
- the costs of protecting areas and habitats are local and often specific to an individual, yet the benefits may be local, regional, and national.

Threats to the natural environment also include the adverse effects that inappropriate land use and development can have on natural landscapes, natural features, and the natural character of the coast and riparian margins. Sometimes these adverse effects only become apparent over a period of time, due to the cumulative effects that land use and development can have on landscape or natural character values.

In identifying the elements of the natural environment that need to be protected, the following key resource management issues have been identified:

- land use, development, and subdivision activities can lead to modification, fragmentation, or loss of biodiversity values, areas of indigenous vegetation, and habitats of indigenous fauna;
- land use, development, and subdivision activities can adversely affect values of natural features and landscapes;
- land use, development, and subdivision activities can adversely affect the natural character of the coast and riparian margins;
- land use, development, and subdivision activities can restrict public access to and along the coastal marine area, lakes and rivers; and
- conservation, including pest control and restorative planting, is an important activity and needs to be provided for and encouraged.

In response to these issues, the Natural Environment section focuses on maintaining and enhancing:

- areas of indigenous vegetation and the habitats of indigenous fauna;
- the landscape values of outstanding natural features, outstanding natural landscapes, and significant natural landscapes;
- the biodiversity values and natural character values of the coast and riparian margins;
- the conservation values of identified areas of urban biodiversity (**urban biodiversity mapped areas**); and
- public access to coastlines, identified water bodies and other parts of the natural environment.

The Natural Environment section provisions apply across all zones, although the landscape overlay zones and their rules only apply across rural and rural residential zones; and the coastal character overlay zones apply across rural, rural residential and recreation zones. Rules and assessment matters in the management and major facility zones that relate to the natural environment are linked to the relevant rules and assessment matters in this section.

## 10.2. Objectives and Policies

Objective 10.2.1	
Biodiversity values are maintained or enhanced, including by protecting areas of significant indigenous vegetation and the significant habitats of indigenous fauna.	
Policy 10.2.1.1	Only allow land use, development and city-wide activities where biodiversity values are maintained or enhanced.
Policy 10.2.1.2	Avoid adverse effects on areas of significant indigenous vegetation and significant habitats of indigenous fauna or, if avoidance is not practicable, ensure that: <ul style="list-style-type: none"> <li>a. there is no net loss and preferably a net gain in the biodiversity values of the area; or</li> <li>b. where there are no practicable alternative locations, any proposal for a biodiversity offset is in accordance with Policy 2.2.3.6; or</li> <li>c. where a biodiversity offset is not practicable, environmental compensation is proposed in accordance with Policy 2.2.3.7.</li> </ul>
Policy 10.2.1.3	Avoid rural activities (except for rural ancillary retail, rural tourism and rural research), residential activities (except for working from home), early childhood education, commercial activities (except for restaurants or retail activities ancillary to sport and recreation, and stand-alone car parking), industrial activities, major facility activities and indigenous vegetation clearance - large scale in Areas of Significant Biodiversity Value (ASBVs) unless: <ul style="list-style-type: none"> <li>a. there is no net loss and preferably a net gain in the biodiversity values of the ASBV including, but not limited to, those biodiversity values listed in Appendix A1.2; or</li> <li>b. where there are no practicable alternative locations, any proposal for a biodiversity offset is in accordance with Policy 2.2.3.6; or</li> <li>c. where a biodiversity offset is not practicable, environmental compensation is proposed in accordance with Policy 2.2.3.7.</li> </ul>
Policy 10.2.1.4	Only allow rural tourism - large scale, rural research - large scale, community and leisure - large scale, sport and recreation, restaurants and retail activities ancillary to sport and recreation, large buildings and structures, earthworks - large scale, shelterbelts and small woodlots, site development activities (except for outdoor storage, parking, loading and access, vegetation clearance, storage and use of hazardous substances), public amenities, network utility activities, transportation activities and natural hazard mitigation activities in Areas of Significant Biodiversity Value (ASBVs) where there is no net loss and preferably a net gain in the biodiversity values of the ASBV including, but not limited to, those biodiversity values listed in Appendix A1.2.
Policy 10.2.1.5	Encourage conservation activity in all zones.
Policy 10.2.1.6	Only allow indigenous vegetation clearance - large scale in the rural and rural residential zones where adverse effects on biodiversity values are avoided or, if avoidance is not practicable, no more than minor.
Policy 10.2.1.7	Only allow indigenous vegetation clearance in a wetland, or where there are threatened plant or fauna species or mature trees on the important native tree species list present, where there is no net loss and preferably a net gain in biodiversity values.
Policy 10.2.1.8	Only allow vegetation clearance over the maximum permitted area, earthworks - large scale, and subdivision in <b>urban biodiversity mapped areas (UBMAs)</b> where the biodiversity values of the UBMA are maintained or enhanced, including, but not limited to, those values listed in Appendix A10.

### Objective 10.2.1

Biodiversity values are maintained or enhanced, including by protecting areas of significant indigenous vegetation and the significant habitats of indigenous fauna.

Policy 10.2.1.9	Require forestry and shelterbelts and small woodlots to avoid the use of wilding tree species, unless the risk of wilding tree establishment in areas of indigenous vegetation is insignificant.
Policy 10.2.1.10	Require mineral exploration and mineral prospecting to restore indigenous vegetation and the habitats of indigenous fauna where cleared as part of the exploration or prospecting activity, or, where this is not practicable, to otherwise ensure that biodiversity values maintained or enhanced.
Policy 10.2.1.11	Only allow subdivision activities where the subdivision is designed to ensure any future land use or development will: <ul style="list-style-type: none"> <li>a. maintain or enhance, on an on-going basis, biodiversity values;</li> <li>b. protect areas of significant indigenous vegetation and the significant habitats of indigenous fauna; and</li> <li>c. be in accordance with policies 10.2.1.2, 10.2.1.3, 10.2.1.4 and 10.2.1.8.</li> </ul>

### Objective 10.2.2

In the coastal environment natural character is preserved and biodiversity values are protected. Outside the coastal environment, the biodiversity values and natural character of riparian margins are maintained and enhanced.

Policy 10.2.2.1	Encourage conservation activity in coastal and riparian margins.
Policy 10.2.2.2	Require buildings, structures, storage and use of hazardous substances, network utility activities, and earthworks - large scale to be set back from the coast and water bodies an adequate distance to enable: <ul style="list-style-type: none"> <li>a. in the coastal environment, natural character to be preserved and biodiversity values to be protected or, where this is not practicable in the case of network utility activities, natural character and biodiversity values to be maintained or enhanced; and</li> <li>b. outside the coastal environment, the biodiversity and natural character values of riparian margins to be maintained or enhanced.</li> </ul>
Policy 10.2.2.3	Require vegetation clearance to be set back an adequate distance from the coast and water bodies, including wetlands, to <ul style="list-style-type: none"> <li>a. minimise, as far as practicable, the risk of erosion; and</li> <li>b. protect, or enable the enhancement of, biodiversity and natural character values.</li> </ul>
Policy 10.2.2.4	Only allow indigenous vegetation clearance in the <b>coastal environment mapped area</b> where natural character values are preserved and biodiversity values are protected.
Policy 10.2.2.5	Require earthworks and scheduled mining activities to be located and undertaken in a way that minimises, as far as practicable, the risk of sediment entering the sea or water bodies.
Policy 10.2.2.6	Only allow activities adjacent to water bodies and the coast where: <ul style="list-style-type: none"> <li>a. in the coastal environment, natural character is preserved and biodiversity values are protected or, where this is not practicable in the case of network utility activities, natural character and biodiversity values are maintained or enhanced; and</li> <li>b. outside the coastal environment, the biodiversity values and natural character of riparian margins are maintained or enhanced.</li> </ul>

### Objective 10.2.2

In the coastal environment natural character is preserved and biodiversity values are protected. Outside the coastal environment, the biodiversity values and natural character of riparian margins are maintained and enhanced.

Policy 10.2.2.7	<p>Only allow subdivision activities adjacent to water bodies and the coast where the subdivision is designed to ensure that the following biodiversity values and natural character values are maintained or enhanced, including through provision of an esplanade reserve or esplanade strip in identified locations:</p> <ol style="list-style-type: none"> <li>biodiversity values of riparian margins and the coast;</li> <li>the water quality and aquatic habitats of the water body or coast; and</li> <li>the natural functioning of the adjacent sea or water body.</li> </ol>
Policy 10.2.2.8	<p>Only allow natural hazard mitigation earthworks and natural hazard mitigation structures where:</p> <ol style="list-style-type: none"> <li>in the coastal environment, natural character is preserved and biodiversity values are protected; or</li> <li>outside the coastal environment, the biodiversity values and natural character of riparian margins are maintained or enhanced; or</li> <li>where there are no practicable alternatives, effects are adequately mitigated.</li> </ol>

### Objective 10.2.3

Areas of outstanding natural coastal character (ONCC), high natural coastal character (HNCC), and natural coastal character (NCC) are protected from inappropriate use and development; and the values of ONCCs and HNCCs, as identified in Appendix A5, are preserved or enhanced; and the values of NCCs, as identified in Appendix A5, are maintained or enhanced.

Policy 10.2.3.1	<p>Avoid landfills and mining in the Outstanding Natural Coastal Character (ONCC) and High Natural Coastal Character (HNCC) overlay zones.</p>
Policy 10.2.3.2	<p>Avoid indigenous vegetation clearance - large scale, buildings and structures, rural activities (except for farming, grazing, rural ancillary retail, rural tourism and rural research - small scale), residential activities (except for working from home), commercial activities (except for restaurants or retail activities ancillary to sport and recreation, and stand-alone car parking), industrial activities, major facility activities, substations, and network utility structures - large scale (excluding amateur radio configurations), in the Outstanding Natural Coastal Character (ONCC) and High Natural Coastal Character (HNCC) overlay zones unless any adverse effects on the natural character values, as identified in Appendix A5, are insignificant.</p>
Policy 10.2.3.3	<p>Only allow shelterbelts and small woodlots, network utility structures - large scale (amateur radio configurations only), earthworks - large scale, transportation activities, and public amenities in the Outstanding Natural Coastal Character (ONCC) and High Natural Coastal Character (HNCC) overlay zones where any adverse effects on the natural character values identified in Appendix A5 are insignificant.</p>
Policy 10.2.3.4	<p>Only allow natural hazard mitigation activities and network utility structures - small scale in the Outstanding Natural Coastal Character (ONCC) and High Natural Coastal Character (HNCC) overlay zones where any adverse effects on the natural character values identified in Appendix A5 are:</p> <ol style="list-style-type: none"> <li>insignificant, or</li> <li>where there are no practicable alternative locations, adequately mitigated.</li> </ol>

### Objective 10.2.3

Areas of outstanding natural coastal character (ONCC), high natural coastal character (HNCC), and natural coastal character (NCC) are protected from inappropriate use and development; and the values of ONCCs and HNCCs, as identified in Appendix A5, are preserved or enhanced; and the values of NCCs, as identified in Appendix A5, are maintained or enhanced.

Policy 10.2.3.5	Only allow mining, landfills, crematoriums, large buildings and structures, forestry, earthworks - large scale and indigenous vegetation clearance - large scale in the Natural Coastal Character Overlay Zone (NCC) where adverse effects on the natural character values identified in Appendix A5 will be avoided or, if avoidance is not practicable, no more than minor.
Policy 10.2.3.6	Only allow public amenities, substations, network utility poles and masts - small scale, hydro generators - small scale, solar panels - small scale, wind generators - small scale, network utility structures - large scale, natural hazard mitigation activities and transportation activities in the Natural Coastal Character Overlay Zone (NCC) where adverse effects on the natural character values identified in Appendix A5 are avoided or, if avoidance is not practicable: <ul style="list-style-type: none"> <li>a. no more than minor, or</li> <li>b. where there are no practicable alternative locations, adequately mitigated.</li> </ul>
Policy 10.2.3.7	Only allow subdivision activities on a property that contains Outstanding Natural Coastal Character (ONCC), High Natural Coastal Character (HNCC) and Natural Coastal Character (NCC) overlay zones where the subdivision design will ensure that any future land use or development will: <ol style="list-style-type: none"> <li>1. preserve or enhance, on an on-going basis, the natural character values of ONCCs and HNCCs identified in Appendix A5;</li> <li>2. maintain or enhance, on an on-going basis, the natural character values of NCCs identified in Appendix A5; and</li> <li>3. be in accordance with policies 10.2.3.1, 10.2.3.2, 10.2.3.3, 10.2.3.4, 10.2.3.5 and 10.2.3.6.</li> </ol>
Policy 10.2.3.8	Require large buildings on landscape building platforms in the Natural Coastal Character Overlay Zone (NCC) to be of a size, design and appearance that ensures that adverse effects on the natural character values identified in Appendix A5 are avoided or, if avoidance is not practicable, no more than minor.
Policy 10.2.3.9	Require buildings and structures in a Natural Coastal Character Overlay Zone (NCC) to have exterior colours and materials that avoid or minimise, as far as practicable, adverse visual effects caused by reflectivity.
Policy 10.2.3.10	Provide for small buildings (no larger than 60m <sup>2</sup> ) in the Natural Coastal Character Overlay Zone (NCC) but limit the number of these clustered together with each other or existing large buildings to a level that avoids or, if avoidance is not practicable, ensures cumulative visual effects are no more than minor.
Policy 10.2.3.11	Require ancillary signs in coastal character overlay zones to be located and designed so that any adverse effects on natural character values, as identified in Appendix A5, are insignificant.
Policy 10.2.3.12	Require forestry and shelterbelts and small woodlots to avoid the use of wilding tree species, unless the risk of wilding tree establishment in Outstanding Natural Coastal Character (ONCC), High Natural Coastal Character (HNCC), and Natural Coastal Character (NCC) overlay zones is insignificant.

### Objective 10.2.3

Areas of outstanding natural coastal character (ONCC), high natural coastal character (HNCC), and natural coastal character (NCC) are protected from inappropriate use and development; and the values of ONCCs and HNCCs, as identified in Appendix A5, are preserved or enhanced; and the values of NCCs, as identified in Appendix A5, are maintained or enhanced.

Policy 10.2.3.13	Require network utility structures - small scale in a Natural Coastal Character Overlay Zone (NCC) to be located to ensure that adverse effects on the natural coastal character values identified in Appendix A5 are avoided or, if avoidance is not practicable: <ul style="list-style-type: none"> <li>a. no more than minor; or</li> <li>b. where there are no practicable alternative locations, adequately mitigated.</li> </ul>
---------------------	--

### Objective 10.2.4

Subdivision and development activities maintain and enhance access to coastlines, water bodies and other parts of the natural environment, including for the purposes of gathering of food and mahika kai.

Policy 10.2.4.1	Require buildings, structures, and earthworks - large scale to be set back from the coast and water bodies an adequate distance to maintain or enhance public access along riparian and coastal margins.
Policy 10.2.4.2	Require, within the Harbourside Edge Zone, buildings to be set back an adequate distance from the coast or edge of the wharf to achieve uninterrupted pedestrian access.
Policy 10.2.4.3	Require subdivision of land to enhance public access to the natural environment through: <ul style="list-style-type: none"> <li>a. requiring an esplanade reserve or esplanade strip of an appropriate width and location adjacent to identified water bodies and the coast; and</li> <li>b. where practicable, providing opportunities for access in other areas where this will enhance recreational opportunities, particularly through connecting to and expanding the existing tracks network or utilising adjacent unformed legal roads.</li> </ul>
Policy 10.2.4.4	Only allow natural hazard mitigation earthworks or natural hazard mitigation structures where public access to the coast and riparian margins is maintained or enhanced.

### Objective 10.2.5

Outstanding Natural Features (ONFs), Outstanding Natural Landscapes (ONLs) and Significant Natural Landscapes (SNLs) are protected from inappropriate development; and their values, as identified in Appendix A3, are maintained or enhanced.

Policy 10.2.5.1	Avoid new or expanded landfills and mining in the Outstanding Natural Feature Overlay Zone (ONF) other than where Policy 10.2.5.X is met.
Policy 10.2.5.2	Avoid buildings and structures, rural activities (except for farming, grazing, rural ancillary retail, rural tourism and rural research - small scale), residential activities (except for working from home), commercial activities (except for restaurants or retail activities ancillary to sport and recreation, and stand-alone car parking), industrial activities, major facility activities, substations, and network utility structures - large scale (excluding amateur radio configurations) in the Outstanding Natural Feature Overlay Zone (ONF), unless any adverse effects on the landscape values of the ONF as identified in Appendix A3 are insignificant.
Policy 10.2.5.3	Only allow shelterbelts and small woodlots, earthworks - large scale, indigenous vegetation clearance - large scale and network utility structures - large scale (amateur radio configurations only) in the Outstanding Natural Feature Overlay Zone (ONF) where any adverse effects on the landscape values of the ONF, as identified in Appendix A3, are insignificant.
Policy 10.2.5.4	Only allow crematoriums, natural hazard mitigation activities, transportation activities, network utility structures - small scale and public amenities in the Outstanding Natural Feature Overlay Zone (ONF) where any adverse effects on the landscape values of the ONF, as identified in Appendix A3, are: a. insignificant, or b. where there are no practicable alternative locations, adequately mitigated.
Policy 10.2.5.6	Avoid mining and landfills in the Outstanding Natural Landscape Overlay Zone (ONL) unless any adverse effects on the landscape values of the ONL, as identified in Appendix A3 are insignificant.
Policy 10.2.5.7	Only allow forestry in the Outstanding Natural Landscape Overlay Zone (ONL) where any adverse effects on the landscape values of the ONL, as identified in Appendix A3, are insignificant.
Policy 10.2.5.8	Only allow large buildings and structures, earthworks - large scale, public amenities, substations, network utility poles and masts - small scale, hydro generators - small scale, solar panels - small scale, wind generators - small scale, network utility structures - large scale, transportation activities and natural hazard mitigation activities in the Outstanding Natural Landscape Overlay Zone (ONL) where any adverse effects on the landscape values of the ONL, as identified in Appendix A3 are: a. insignificant, or b. where there are no practicable alternative locations, adequately mitigated.
Policy 10.2.5.9	Only allow forestry, mining, landfills, crematoriums, large buildings and structures, earthworks - large scale, public amenities, substations, network utility poles and masts - small scale, hydro generators - small scale, solar panels - small scale, wind generators - small scale, network utility structures - large scale, natural hazard mitigation activities and transportation activities in the Significant Natural Landscape Overlay Zone (SNL) where adverse effects on the landscape values of the SNL, as identified in Appendix A3, are avoided or, if avoidance is not practicable: a. no more than minor or; b. where there are no practicable alternative locations, adequately mitigated.

### Objective 10.2.5

Outstanding Natural Features (ONFs), Outstanding Natural Landscapes (ONLs) and Significant Natural Landscapes (SNLs) are protected from inappropriate development; and their values, as identified in Appendix A3, are maintained or enhanced.

Policy 10.2.5.10	Only allow subdivision activities in Outstanding Natural Feature (ONF), Outstanding Natural Landscape (ONL), and Significant Natural Landscape (SNL) overlay zones where the subdivision is designed to ensure that any future land use or development will maintain or enhance the landscape values identified in Appendix A3 and will be in accordance with policies 10.2.5.1, 10.2.5.2, 10.2.5.3, 10.2.5.4, 10.2.5.6, 10.2.5.7, 10.2.5.8 and 10.2.5.9.
Policy 10.2.5.11	Require large buildings on landscape building platforms in Outstanding Natural Landscape (ONL) and Significant Natural Landscape (SNL) overlay zones to be of a size, design and appearance that ensures that adverse effects on the landscape values identified in Appendix A3 are avoided or, if avoidance is not practicable, adequately mitigated.
Policy 10.2.5.12	Require buildings and structures in Outstanding Natural Landscape (ONL) and Significant Natural Landscape (SNL) overlay zones to have exterior colours and materials that avoid or minimise, as far as practicable, adverse visual effects caused by reflectivity.
Policy 10.2.5.13	Provide for small buildings (no larger than 60m <sup>2</sup> ) in landscape overlay zones but limit the number of these clustered together with each other or existing large buildings to a level that avoids or, if avoidance is not practicable, ensures cumulative visual effects are no more than minor.
Policy 10.2.5.14	Require ancillary signs in landscape overlay zones to be located and designed so that any adverse effects on landscape values, as identified in Appendix A3, are insignificant.
Policy 10.2.5.15	Require forestry and shelterbelts and small woodlots to avoid the use of wilding tree species, unless the risk of wilding tree establishment in Outstanding Natural Feature (ONF), Outstanding Natural Landscape (ONL) and Significant Natural Landscape (SNL) overlay zones is insignificant.
Policy 10.2.5.X	Avoid expansion of Saddle Hill Upper Quarry (SMA007) unless the expansion is minor and any adverse effects on the landscape values of the ONF as identified in Appendix A3 are insignificant.

## **Rule 10.3 Performance Standards**

### **10.3.1 Esplanade Reserves and Strips**

1. Subdivision activities along the mark of mean high water springs of the sea must provide an esplanade reserve with a minimum width of:
  - a. 6m in the Harbourside Edge Zone; and
  - X. 20m in all other locations.
  
- X. Subdivision activities along the bank of the following rivers, creeks and streams must provide an esplanade reserve with a minimum width of 20m:
  - a. Frasers Creek;
  - b. Kaikorai Stream;
  - c. Lindsays Creek;
  - d. Orokonui Creek;
  - e. Owhiro Stream;
  - f. Silverstream;
  - g. Lower Taieri River, being the Taieri River downstream from the Outram bridge;
  - h. Waikouaiti River downstream from the bridge on State Highway 1; and
  - i. Water of Leith, except within the Stadium Zone where no esplanade reserve will be required.
  
2. Subdivision activities along the bank of the following rivers, creeks and streams must provide an esplanade strip with a minimum width of 20m:
  - a. Abernathys Creek;
  - b. Battery Creek;
  - c. Andersons Bay Stream;
  - d. Bull Creek;
  - e. Carey's Creek;
  - f. Christies Creek;
  - g. Craigs Creek;
  - h. Deborah Bay Stream;
  - i. Deep Creek;
  - j. Deep Stream;
  - k. Dons Creek;
  - l. Fern Stream;
  - m. Flagstaff Creek;
  - n. Flat Stream;
  - o. Foote Stream;
  - p. Lagoon Creek;
  - q. Latham Bay Stream;
  - r. Lee Creek;
  - s. Lee Stream;

- t. Lug Creek;
  - u. Macandrew Bay Stream;
  - v. Mihiwaka Stream;
  - w. Nenthorn Stream;
  - x. Opoho Creek;
  - y. Orbells Creek;
  - z. Ōtākou Stream;
  - aa. Otokia Creek;
  - ab. Portobello Stream;
  - ac. Post Office Creek (Waikouaiti);
  - ad. Post Office Creek (Waipori);
  - ae. Pūrākaunui Creek;
  - af. Sawyers Bay Stream;
  - ag. Smiths Creek;
  - ah. Smugglers Creek;
  - ai. Stewarts Creek;
  - aj. Stony Creek;
  - ak. Styles Creek;
  - al. Sutton Stream;
  - am. Upper Taieri River, being the Taieri River upstream from the Outram bridge;
  - an. Three O'clock Stream;
  - ao. Toll Bar Creek;
  - ap. Traquair Burn;
  - aq. Verter Burn;
  - ar. Waikouaiti River upstream from the bridge on State Highway 1;
  - as. Waipori River;
  - at. Waitati River; and
  - au. Whare Creek.
3. For the purpose of this standard, an esplanade reserve or esplanade strip will be measured in a landward direction at 90 degrees to MHWS of the sea, tidal rivers or estuaries, or the bank of any stream, creek or river.
4. Activities that contravene this performance standard are restricted discretionary activities.

### 10.3.2 Vegetation Clearance

#### 10.3.2.1 Indigenous vegetation clearance - small scale thresholds

- a. The following types of indigenous vegetation clearance are always considered indigenous vegetation clearance - small scale:
- i. clearance that is part of conservation activity involving vegetation clearance and replacement with indigenous species;
  - ii. clearance for the maintenance or alteration of fences (including gates);
  - iii. clearance for the maintenance (but not extension) of existing network utilities, irrigation infrastructure, tracks, drains, structures, roads or firebreaks;
  - iv. clearance for the construction of tracks associated with permitted land use or city-wide activities provided that:
    1. the clearance does not take place in ASBVs, ONFs, ONCCs, HNCCs and NCCs; and
    2. outside ASBVs, ONFs, ONCCs, HNCCs and NCCs the clearance is no more than 3m in width;
- X. clearance for the erection of fences (including gates) associated with permitted land use or city-wide activities provided that:
- i. the clearance does not take place in an ASBV, ONF, ONCC, HNCC or NCC, unless it is for fencing required for stock exclusion under national regulations or regional rules and the clearance:
    1. meets Rule 10.3.2.2 (protected areas) and Rule 10.3.2.3 (protected species); and
    2. is no more than 4.5m in width, on slopes of over 10 degrees; or
    3. is no more than 3m in width, on slopes of 10 degrees or less;
  - ii. outside ASBVs, ONFs, ONCCs, HNCCs and NCCs, the clearance:
    1. meets Rule 10.3.2.2 (protected areas) and Rule 10.3.2.3 (protected species); and
    2. is no more than 3m in width; or
    3. if fencing is required for stock exclusion under national regulations or regional rules, and takes place on slopes of over 10 degrees, the clearance is no more than 4.5m in width, including any track associated with the fence (for the sake of clarity, the width of clearance provided for in this rule may not be added to the width of clearance provided for in Rule 10.3.2.1.a.iv.2);
  - v. clearance that is consistent with or provided for as part of a conservation management strategy, conservation management plan, reserve management plan or covenant established under the Conservation Act 1987 or any other Act specified in the First Schedule of the Conservation Act 1987;
- Y. clearance for the purpose of the sustainable customary harvest of food or resources undertaken by manawhenua, in accordance with tikaka Māori;
- vi. clearance that is required to remove material infected by unwanted organisms as declared by Ministry for Primary Industries' Chief Technical Officer, or to respond to an emergency declared by the Minister for Primary Industries under the Biosecurity Act 1993;
  - vii. clearance of a pest plant listed in Appendix 10B;
  - viii. vegetation clearance incidental to existing forestry activity where the clearance involves an understorey of indigenous vegetation, or is for the maintenance of forestry access or firebreaks;
  - ix. clearance that is necessary to maintain the flow of water free from obstruction or for natural hazard mitigation activities;
  - x. clearance that is incidental to the harvesting or maintenance of trees as part of forestry, provided that all vegetation that is felled within 10m of a water body must be felled away from the water body, and

that the forestry is conducted in accordance with recognised industry environmental codes of practice;

- xi. vegetation clearance of stands of matagouri-dominant shrubland that contain no matagouri individuals greater than 1.5m tall and that contain no more than one other non-matagouri indigenous shrub species; and
  - xii. clearance of indigenous vegetation from areas that, within the last 15 years, have been lawfully cleared of such vegetation (outside ASBVs, ONFs, ONCCs, HNCCs and NCCs only), provided that the clearance is associated with a permitted land use or city-wide activity.
- b. All indigenous vegetation clearance that occurs in an ASBV, ONF, ONCC, HNCC, or NCC and is not included in Rule 10.3.2.1.a is considered indigenous vegetation clearance - large scale.
- c. All other indigenous vegetation clearance must not exceed the following maximum areas on any site, over the time period indicated, to be considered indigenous vegetation clearance - small scale:

Zone/Area		Maximum Area	Per Time Period (calendar years)
i.	Coastal Rural Zone	500m <sup>2</sup>	3 years
ii.	High Country Rural Zone within the <b>Taieri Ridge and Mare Burn mapped area</b>	1000m <sup>2</sup> non-tussock species 1000m <sup>2</sup> tussock species	3 years
iii.	High Country Rural Zone not within the <b>Taieri Ridge and Mare Burn mapped area</b>	1000m <sup>2</sup> non-tussock species 10000m <sup>2</sup> (1ha) tussock species	3 years
iv.	Hill Country Rural Zone	1000m <sup>2</sup>	3 years
v.	Hill Slopes Rural Zone	1000m <sup>2</sup>	3 years
vi.	Middlemarch Basin Rural Zone	100m <sup>2</sup>	5 years
vii.	Peninsula Coast Rural Zone	250m <sup>2</sup>	5 years
viii.	Taieri Plain Rural Zone	100m <sup>2</sup>	5 years
ix.	Rural Residential 1 and Rural Residential 2 Zones	250m <sup>2</sup>	3 years

- d. For the purposes of Rule 10.3.2.1.c:
- i. if the area of indigenous vegetation to be cleared straddles two zones, the lesser maximum area will apply;
  - ii. the area to be cleared will be measured from stems at ground level; and
  - iii. the time period will be measured as the total clearance over the indicated number of calendar years.
- e. All indigenous vegetation clearance that does not meet this standard is considered indigenous vegetation clearance - large scale, which is:
- i. a non-complying activity in ASBVs, ONCCs and HNCCs;
  - ii. a restricted discretionary activity in NCCs, ONFs, rural zones and rural residential zones.

#### 10.3.2.2 Protected areas (vegetation clearance)

- a. Vegetation clearance must not occur within:
- i. 20m of any wetland identified in Appendix A1.2 as an Area of Significant Biodiversity Value; or

- ii. the following minimum setbacks from the coast and water bodies:

Activity		Minimum setback from mean high water springs	Minimum setback from any water body (except where Rule 10.3.2.2.a.i applies)
1.	Indigenous vegetation clearance in the rural, rural residential and recreation zones	20m	20m from any water body with a clearly defined bed of at least 3m in width; 5m from any other water body
2.	All vegetation clearance in the rural, rural residential, recreation and Ashburn Clinic zones	5m	5m

- b. Indigenous vegetation clearance must not occur within:
- i. any **coastal environment mapped area**; or
  - ii. any wetland in the rural, rural residential and recreation zones.
- c. For the purposes of Rule 10.3.2.2.a, setbacks will be measured as follows:
- i. for water bodies other than wetlands, setbacks will be measured from the bank of the water body at the point of its annual fullest flow or annual highest level without overtopping its bank (see Figure 10.3.3A and Figure 10.3.3B under Rule 10.3.3 Setback from Coast and Water Bodies); and
  - ii. for wetlands, setbacks will be measured from the edge of the wetland.
- d. Except that Rule 10.3.2.2.a and Rule 10.3.2.2.b do not apply to vegetation clearance that is:
- i. part of conservation activity involving vegetation clearance and replacement with indigenous species;
  - ii. for the maintenance or alteration of fences (including gates);
- X. clearance for the erection of fences (including gates) provided that if the vegetation clearance involves indigenous vegetation clearance:
1. the indigenous vegetation clearance is no more than 3m in width; or
  2. the indigenous vegetation clearance is for fencing on slopes of over 10 degrees required for stock exclusion under national regulations or regional rules provided that the clearance is no more than 4.5m in width, including any track associated with the fence (for the sake of clarity, the width of clearance provided for in this rule may not be added to the width of clearance provided for in Rule 10.3.2.2.d.iv).
- iii. for the maintenance (but not extension) of existing network utilities, irrigation infrastructure, tracks, drains, structures, roads, or firebreaks;
  - iv. for the construction of tracks, provided that any indigenous vegetation clearance is no more than 2m in width;
  - v. consistent with or provided for as part of a conservation management strategy, conservation management plan, reserve management plan or covenant established under the Conservation Act 1987 or any other Act specified in the First Schedule of the Conservation Act 1987;
- Y. clearance for the purpose of the sustainable customary harvest of food or resources undertaken by manawhenua, in accordance with tikaka Māori;
- vi. clearance required to remove material infected by unwanted organisms as declared by Ministry for Primary Industries' Chief Technical Officer, or to respond to an emergency declared by the Minister for Primary Industries under the Biosecurity Act 1993;

- vii. clearance of a pest plant listed in Appendix 10B;
  - viii. necessary to maintain the flow of water free from obstruction or for natural hazard mitigation activities;
  - ix. in the case of Rule 10.3.2.2.a, separated from mean high water springs or the water body by a formed legal road;
  - x. incidental to the harvesting or maintenance of trees as part of forestry, provided that all vegetation that is felled within 10m of a water body must be felled away from the water body, and that the forestry is conducted in accordance with recognised industry environmental codes of practice; or
  - xi. clearance of non-indigenous plant species and replanting within 3 months with indigenous or non-indigenous plant species, not on the pest plant list in Appendix 10B, that will attain at least the same height and coverage as the plants that have been cleared.
- e. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 10.3.2.2A - Other requirements outside of the District Plan**

1. The Resource Management (National Environmental Standards for Freshwater) Regulations 2020 manage vegetation clearance within, and within a 10m setback of, wetlands. Under regulation 54, vegetation clearance that is within, or within a 10m setback from, a wetland is a non-complying activity, unless the vegetation clearance is for a purpose specifically exempted from control, under regulation 37, or for a purpose specifically provided for as either permitted (where specified conditions are met) or restricted discretionary, under regulations 38 to 51. These purposes include: the customary harvest of food or resources undertaken in accordance with tikanga Māori, natural wetland restoration, scientific research, construction or maintenance of a wetland utility structure (e.g. boardwalk, maimai), construction of 'specified infrastructure' (as defined in the NPS for Freshwater Management 2020) and maintenance or operation of specified or other infrastructure, harvest of sphagnum moss, arable or horticultural land use, and natural hazard works.

#### **Note 10.3.2.2B - General advice**

1. In relation to measuring setbacks from wetlands, where there is uncertainty, the DCC will refer to the wetland delineation protocol to establish the location of the wetland edge. The protocol can be viewed here: [https://www.landcareresearch.co.nz/uploads/public/Discover-OurResearch/Biodiversity/Species-ecosystem-services/Restoring-wetlandecosystem-functioning/vegetation\\_tool\\_wetland\\_delineation.pdf](https://www.landcareresearch.co.nz/uploads/public/Discover-OurResearch/Biodiversity/Species-ecosystem-services/Restoring-wetlandecosystem-functioning/vegetation_tool_wetland_delineation.pdf).

#### 10.3.2.3 Protected species (indigenous vegetation clearance)

- a. In the rural, rural residential and recreation zones, indigenous vegetation clearance must not occur where the following are present in the area to be cleared:
  - i. any of the threatened plant species listed in Appendix 10A.1;
  - ii. any mature examples (greater than 15 years old) of the important indigenous tree species listed in Appendix 10A.3; or
  - iii. any threatened indigenous fauna species listed in Appendix 10A.2.
- b. This standard does not apply to indigenous vegetation clearance that is:
  - i. for the erection, maintenance or alteration of fences (including gates), provided:
    1. any fence posts are located outside of the dripline of mature indigenous trees listed in Appendix 10A.3; and
    2. the erection of new fences does not damage:
      1. specimens of threatened plant species listed in Appendix 10A.1;
      2. important breeding, refuge, feeding or resting sites for indigenous fauna listed in Appendix 10A.2; or
      3. mature indigenous trees listed in Appendix 10A.3.

- ii. for the maintenance (but not extension) of existing network utility activities, irrigation infrastructure, tracks, drains, structures, roads, or firebreaks;
  - iii. for the construction of tracks up to 3m in width, provided track construction does not damage:
    - 1. specimens of threatened plant species listed in Appendix 10A.1;
    - 2. important breeding, refuge, feeding or resting sites for indigenous fauna listed in Appendix 10A.2; or
    - 3. mature indigenous trees listed in Appendix 10A.3.
  - iv. consistent with or provided for as part of a conservation management strategy, conservation management plan, reserve management plan or covenant established under the Conservation Act 1987 or any other Act specified in the First Schedule of the Conservation Act 1987;
  - v. required to remove material infected by unwanted organisms as declared by Ministry for Primary Industries' Chief Technical Officer, or to respond to an emergency declared by the Minister for Primary Industries under the Biosecurity Act 1993; or
  - vi. for the clearance of a pest plant listed in Appendix 10B.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### 10.3.2.4 Maximum area of vegetation clearance (UBMA)

- a. Vegetation clearance in an **urban biodiversity mapped area** (UBMA) must not exceed 20m<sup>2</sup> on any site over any three year period.
- b. This standard does not apply to vegetation clearance that is:
  - i. part of conservation activity involving vegetation clearance and replacement with indigenous species;
  - ii. for the erection, maintenance or alteration of fences (including gates);
  - iii. for the maintenance (but not extension) of existing network utilities, irrigation infrastructure, tracks, drains, structures, roads or firebreaks;
  - iv. for the construction or maintenance of tracks up to 2m in width;
  - v. consistent with or provided for as part of a conservation management strategy, conservation management plan, reserve management plan or covenant established under the Conservation Act 1987 or any other Act specified in the First Schedule of the Conservation Act 1987;
  - vi. required to remove material infected by unwanted organisms as declared by Ministry for Primary Industries' Chief Technical Officer, or to respond to an emergency declared by the Minister for Primary Industries under the Biosecurity Act 1993;
  - vii. clearance of non-indigenous plant species and replanting within 3 months with indigenous or non-indigenous plant species, not on the pest plant list in Appendix 10B, that will attain at least the same height and coverage as the plants that have been cleared; or
  - viii. clearance of a pest plant listed in Appendix 10B.
- c. For the purposes of this standard:
  - i. the area to be cleared will be measured from stems at ground level; and
  - ii. the time period will be measured as the total clearance over any three calendar years.
- d. Activities that contravene this performance standard are restricted discretionary activities.

#### 10.3.3 Setback from Coast and Water Bodies

In all zones, other than the Harbourside Edge Zone, St Clair Neighbourhood Destination Centre, Dunedin Hospital

Zone, Dunedin International Airport Zone, Mercy Hospital Zone, Moana Pool Zone, Otago Museum Zone, Port Zone and Wakari Hospital Zone, new buildings and structures, additions and alterations, earthworks - large scale, storage and use of hazardous substances, and network utility activities must be set back a minimum of:

1. 20m from mean high water springs (MHWS); and
2. 20m from any wetland identified in Appendix A1.2, Schedule of Areas of Significant Biodiversity Value (ASBV);
3. 20m from any water body with a clearly defined bed of at least 3m in width in the rural zones;
4. 5m from any water body with a clearly defined bed less than 3m in width in the rural zones; and
5. 5m from any water body with a clearly defined bed in all other zones; and

X. 5m from a **stormwater open watercourse mapped area**;

6. Except, the following are exempt from this standard:
  - a. natural hazard mitigation activities;
  - b. hydro generators - small scale in the rural and industrial zones;
  - c. network utility poles and masts for the purposes of supporting lines across a water body;
  - d. network utility structures - small scale in existing roads that comply with Rule 5.5.2;
  - e. the operation, repair, minor upgrading and maintenance of existing network utilities;
  - f. river flow recording facilities;
  - g. navigational aids;
  - h. maimai and whitebait stands on the surface of water;
  - i. post and wire fences;
  - j. bridges, causeways, culverts and fords;
  - k. jetties, boat ramps, and wharves;
  - l. signs;
  - m. new buildings and structures, and additions and alterations, used for port activities in the Industrial Port Zone;
  - n. bird hides, viewing structures and viewing platforms with a maximum footprint of 10m<sup>2</sup> and maximum height of 2m, and boardwalks;
  - o. earthworks associated with the operation, repair and maintenance of the existing roading network;
  - p. irrigation pipes of any size, and other irrigation or stock water structures such as intake structures with a maximum footprint of 2m<sup>2</sup>;
  - X. wharflines, bunkerlines and associated ancillary equipment in the Industrial Port Zone;
  - q. earthworks required for any of the activities in (a) - (X) above; and
  - r. new buildings and structures, and additions and alterations, associated with the New Zealand Marine Studies Centre in the **Portobello Marine Science mapped area**.
7. For the purposes of this standard, setbacks will be measured from the bank of the water body at the point of its annual fullest flow or annual highest level without overtopping its bank (see Figure 10.3.3A and Figure 10.3.3B).
8. Activities that contravene this performance standard are restricted discretionary activities.

**Note 10.3.3A - Other requirements outside of the District Plan**

1. Activities below mean high water springs (MHWS) or on the beds of water bodies may require resource consent from the Otago Regional Council, including:
  - a. hazard protection works; and
  - b. jetties, boat ramps and wharves.

**Note 10.3.3B - Other relevant District Plan provisions**

1. Activities within the Harbourside Edge Zone are subject to Rule 18.6.17.3, which requires buildings, structures, additions and alterations to be set back an adequate distance from the harbour edge to enable the construction of a public walkway.

Figure 10.3.3A: Setback from a water body

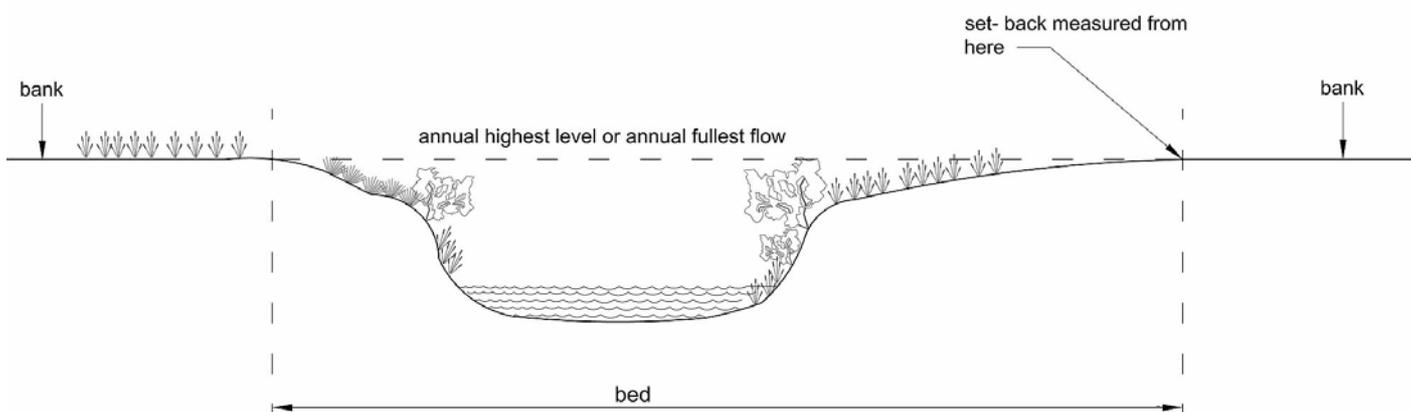

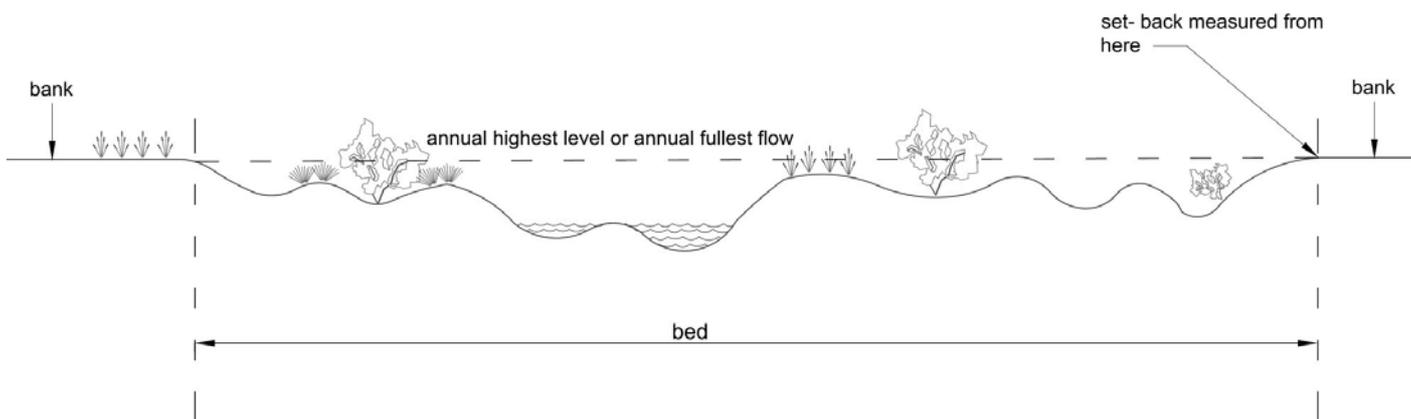

Figure 10.3.3B: Setback from a water body

### 10.3.4 Tree Species

1. Forestry and shelterbelts and small woodlots must not include any of the following species:
  - a. Scots pine (*Pinus sylvestris*)
  - b. Douglas fir (*Pseudotsuga menziesii*)
  - c. Corsican pine (*Pinus nigra*)
  - d. Larch (*Larix decidua*)
  - e. Ponderosa pine (*Pinus ponderosa*)
  - f. Maritime pine (*Pinus pinaster*)
  - g. Sycamore (*Acer pseudoplatanus*)
  - h. Hawthorn (*Crataegus mongyna*)
  - i. Boxthorn (*Lycium ferocissimum*)
  - j. Rowan (*Sorbus aucuparia*)
2. Forestry that contravenes the performance standard for tree species is a restricted discretionary activity, except in an ONL or NCC overlay zone where it is a non-complying activity.
3. Shelterbelts and small woodlots that contravene the performance standard for tree species are a restricted discretionary activity, except in an Area of Significant Biodiversity Value (ASBV) or an ONF, ONL, HNCC, ONCC or NCC overlay zone where they are a non-complying activity.

#### Note 10.3.4A - Other requirements outside of the District Plan

1. A range of species including, for example, Lodgepole/contorta pine (*Pinus contorta*), Grey willow (*Salix cinerea*), Crack willow (*Salix fragilis*) and *Cotoneaster simonsii*, are classified as “unwanted organisms” under the Biosecurity Act 1993. As a result, these species are subject to strict controls under sections 52 and 53 of that Act. Under section 52, no person may communicate, release or otherwise spread any unwanted organism (except: as part of a pest management plan; in an emergency, as provided for in section 150 of the Act; for a scientific purpose authorised by the Minister for Primary Industries; or if an exception is made by a chief technical officer appointed under the Act). Under section 53, owners of unwanted organisms must not cause or permit the sale, propagation, breeding, or multiplication of that organism, except where an exception is made by a chief technical officer appointed under the Act.

### 10.3.5 Area, Number and Location of Buildings and Structures

#### 10.3.5.X Area of buildings and structures

- a. In Outstanding Natural Landscape (ONL), Significant Natural Landscape (SNL) and Natural Coastal Character (NCC) overlay zones and scheduled Areas of Significant Biodiversity Value (ASBVs), new buildings and structures must not exceed 60m<sup>2</sup> footprint, and additions and alterations must not result in a building or structure that is greater than 60m<sup>2</sup> footprint, except that:
  - i. within the Township and Settlement Zone at Pukehiki, new buildings and structures must not exceed 250m<sup>2</sup> footprint, and additions and alterations must not result in a building or structure that is greater than 250m<sup>2</sup> footprint.
- b. Activities that contravene this performance standard are restricted discretionary activities, except in the following circumstances:
  - i. buildings greater than 60m<sup>2</sup> footprint on a landscape building platform are controlled activities, provided that:
    1. the building is located outside any scheduled ASBV; and
    2. Rule 10.3.5.X.b.ii does not apply; and

- ii. single residential buildings with a gross floor area greater than 400m<sup>2</sup> are discretionary activities.

#### 10.3.5.Y Number and location of permitted buildings

- a. In Outstanding Natural Landscape (ONL), Significant Natural Landscape (SNL) and Natural Coastal Character (NCC) overlay zones, a maximum of three new buildings less than or equal to 60m<sup>2</sup> footprint may be erected per site, provided that they are located within 30m of any building greater than 60m<sup>2</sup> footprint on the same site;
- b. Except that:
  - i. buildings less than or equal to 60m<sup>2</sup> footprint that are located at least 200m from any other buildings on the same site are exempt from this rule; and
  - ii. this rule does not apply within the Pukehiki Township and Settlement Zone.
- c. For the purposes of this rule:
  - i. distance will be measured as the distance between the closest points of the two buildings; and
  - ii. only buildings erected after 7 November 2018 are counted towards the maximum number of buildings.
- d. Activities that contravene this performance standard are restricted discretionary activities.

### **Note 10.3.5A - General advice**

1. Plan users should be aware that, due to the definition of “buildings” in this plan, this rule does not apply to any building with an area of 10m<sup>2</sup> footprint or less. In addition, it does not apply to “structures”, as defined in this plan. Finally, the minimum 200m distance does not apply from any building with an area of 10m<sup>2</sup> footprint or less.

### **10.3.6 Reflectivity**

1. In any landscape or coastal character overlay zone, new buildings and structures (except fences), and additions and alterations, must have exterior surfaces, including roofs, that have a light reflectance value (LRV) of 30% or less, except that this rule does not apply to:
  - a. natural wood finishes;
  - b. glass;
  - c. clear plastic;
  - d. soffits; or
  - e. flues.
2. For exterior surface materials whose LRV changes due to weathering (e.g. stone), the LRV will be measured based on an ‘as weathered’ condition.
3. Activities that contravene this performance standard are restricted discretionary activities.

## Rule 10.4 Assessment of Controlled Activities

### Rule 10.4.1 Introduction

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 10.4.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.

### 10.4.2 Assessment of controlled development activities

Activity	Matters of control	Guidance on the assessment of resource consents
1. In the <b>NCC Overlay Zone</b> : <ul style="list-style-type: none"> <li>• New buildings greater than 60m<sup>2</sup> footprint on a landscape building platform</li> </ul>	a. Size, design and appearance of buildings	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>i. Objective 10.2.3</li> <li>ii. Large buildings on landscape building platforms in the Natural Coastal Character Overlay Zone (NCC) are of a size, design and appearance that ensures that adverse effects on the natural character values, as identified in Appendix A5, are avoided or, if avoidance is not practicable, no more than minor (Policy 10.2.3.8).</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>iii. In assessing effects on natural character values, Council will consider the extent to which the development follows the design guidelines in Appendix A11.</li> </ol> <p><i>Conditions that may be imposed include:</i></p> <ol style="list-style-type: none"> <li>iv. Restrictions on the size and design of buildings, including height, footprint, colour, materials and lighting.</li> <li>v. Requirements for landscaping and other forms of screening of buildings.</li> </ol>

#### 10.4.2 Assessment of controlled development activities

Activity	Matters of control	Guidance on the assessment of resource consents
<p>2. In the <b>ONL or SNL overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• New buildings greater than 60m<sup>2</sup> footprint on a landscape building platform</li> </ul>	<p>a. Size, design and appearance of buildings</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 10.2.5</li> <li>ii. Large buildings on landscape building platforms in the outstanding natural landscape (ONL) and significant natural landscape (SNL) overlay zones are of a size, design and appearance that ensures that adverse effects on the landscape values of the ONL or SNL, as identified in Appendix A3, are avoided or, if avoidance is not practicable, adequately mitigated (Policy 10.2.5.11).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing effects on landscape values, Council will consider the extent to which the development follows the design guidelines in Appendix A11.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iv. Restrictions on the size and design of buildings, including height, footprint, colour, materials and lighting.</li> <li>v. Requirements for landscaping and other forms of screening of buildings.</li> </ul>

## Rule 10.5 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### Rule 10.5.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 10.5.2 - 10.5.4:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rule 10.5.2 applies to all performance standard contraventions. Rule 10.5.3 applies to performance standards located in the natural environment section; Rule 10.5.4 applies to performance standards located in the management and major facility zones.

### 10.5.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>General assessment guidance:</i></p> <p>a. Where more than one standard is contravened, the combined effects of the contraventions will be considered.</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>b. The degree of non-compliance with the performance standard is minor.</p>

### 10.5.3 Assessment of contraventions of performance standards in the natural environment section

Activity	Matters of discretion	Guidance on the assessment of resource consents

1.	All performance standard contraventions	a. Positive effects on biodiversity values or the natural character of the coast	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 10.2.1, 10.2.2, 10.2.3</li> <li>ii. Conservation activity is encouraged in all zones (Policy 10.2.1.5).</li> </ul> <p>X. Conservation activity is encouraged in coastal and riparian margins (Policy 10.2.2.1).</p> <p><i>General assessment guidance:</i></p> <p>Y. In assessing positive effects on biodiversity values, Council will take into account the extent to which indigenous vegetation and habitats are proposed to be retained or restored in a way that contributes to increased resilience, buffering and/or connectivity.</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The development incorporates conservation activity that will have significant positive effects on biodiversity or natural character values.</li> </ul>
2.	Esplanade reserves and strips	a. Effects on biodiversity values and natural character values of riparian margins and the coast	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 10.2.1, Objective 10.2.2</li> <li>ii. Subdivision activities adjacent to water bodies and the coast maintain or enhance the following biodiversity values and natural character values, including through provision of an esplanade reserve or esplanade strip in identified locations: <ul style="list-style-type: none"> <li>1. biodiversity values of riparian margins and the coast;</li> <li>2. the water quality and aquatic habitats of the water body or coast; and</li> <li>3. the natural functioning of the adjacent sea or water body (Policy 10.2.2.7).</li> </ul> </li> <li>iii. Adverse effects on areas of significant indigenous vegetation and significant habitats of indigenous fauna are avoided or, if avoidance is not practicable: <ul style="list-style-type: none"> <li>1. there is no net loss and preferably a net gain in the biodiversity values of the area; or</li> <li>2. where there are no practicable alternative locations, any proposal for a biodiversity offset is in accordance with Policy 2.2.3.6; or</li> <li>3. where a biodiversity offset is not practicable, environmental compensation is proposed in accordance with Policy 2.2.3.7 (Policy 10.2.1.2).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iv. In assessing a change or reduction to the required esplanade reserve or esplanade strip, Council will consider:</li> </ul>

### 10.5.3 Assessment of contraventions of performance standards in the natural environment section

Activity	Matters of discretion	Guidance on the assessment of resource consents
		<ol style="list-style-type: none"> <li>1. the effects on the values of the water body as identified in Appendix 10C;</li> <li>2. the effects on the natural functioning of the water body;</li> <li>3. the effects on other biodiversity values and natural character values; and</li> <li>4. any other measures proposed to enhance the biodiversity of the riparian or coastal margin and associated water body.</li> </ol> <p>v. In assessing whether an activity meets Policy 10.2.1.2, Council will consider whether the area affected meets one or more of the criteria set out in Policy 2.2.3.2.</p> <p><i>Conditions that may be imposed include:</i></p> <ol style="list-style-type: none"> <li>vi. Where there is an esplanade reserve requirement, Council may instead require an esplanade strip where it is considered that the management of the land in the coastal or riparian margin will achieve positive results for biodiversity and natural character values.</li> </ol>

**10.5.3 Assessment of contraventions of performance standards in the natural environment section**

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>b. Effects on public access</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 10.2.4</li> <li>ii. Public access to the natural environment is enhanced (Policy 10.2.4.3).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing a change or reduction to the required esplanade reserve or esplanade strip, Council will consider; <ul style="list-style-type: none"> <li>1. the effects on public recreation and access values as identified in Appendix 10C;</li> <li>2. any relevant circumstances listed in the New Zealand Coastal Policy Statement 2010 or the Regional Policy Statement for Otago that may support restriction of public access; and</li> <li>3. the potential effects of sea level rise on the future level of the mean high water springs, and thus the width of the reserve.</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Other opportunities to enhance public access are created by the subdivision.</li> <li>v. The design of the subdivision takes advantage of adjacent unformed legal roads to provide public access.</li> <li>vi. Restricting access is necessary to protect public health and safety.</li> </ul>

**10.5.3 Assessment of contraventions of performance standards in the natural environment section**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>3. Maximum area of vegetation clearance (UBMA)</p>	<p>a. Effects on biodiversity values</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 10.2.1.</li> <li>ii. Vegetation clearance maintains or enhances the biodiversity values of the UBMA including, but not limited to, those values listed in Appendix A10 (Policy 10.2.1.8).</li> <li>iii. Adverse effects on areas of significant indigenous vegetation and significant habitats of indigenous fauna are avoided or, if avoidance is not practicable:               <ol style="list-style-type: none"> <li>1. there is no net loss and preferably a net gain in the biodiversity values of the area; or</li> <li>2. where there are no practicable alternative locations, any proposal for a biodiversity offset is in accordance with Policy 2.2.3.6; or</li> <li>3. where a biodiversity offset is not practicable, environmental compensation is proposed in accordance with Policy 2.2.3.7 (Policy 10.2.1.2).</li> </ol> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. The clearance is of a non-local indigenous species that has extended beyond its range.</li> <li>v. For indigenous vegetation clearance, an ecological assessment supporting the clearance is supplied with the application (see Rule 10.9.2: Special Information Requirements).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>vi. In assessing whether an activity meets Policy 10.2.1.2, Council will consider whether the area affected meets one or more of the criteria set out in Policy 2.2.3.2.</li> <li>vii. Council will generally only consider activities to have no practicable alternative locations where an assessment that meets the requirements set out in Rule 10.9.4 demonstrates that the proposed site, including any proposed mitigation measures, is the option that has the least impact on biodiversity values, while meeting the operational needs of the activity.</li> <li>viii. #### 10.5.4 Assessment of contraventions of performance standards in other sections

Activity	Matters of discretion	Guidance on the assessment of resource consents
7. Site restoration	a. Effects on biodiversity values	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 10.2.1</li> <li>ii. Indigenous vegetation and the habitats of indigenous fauna are restored where cleared as part of the mineral exploration or prospecting activity, or, where this is not practicable, biodiversity values are otherwise maintained or enhanced (Policy 10.2.1.10).</li> <li>iii. Adverse effects on areas of significant indigenous vegetation and significant habitats of indigenous fauna are avoided or, if avoidance is not practicable:               <ul style="list-style-type: none"> <li>1. there is no net loss and preferably a net gain in the biodiversity values of the area, or</li> <li>2. where there are no practicable alternative locations, any proposal for a biodiversity offset is in accordance with Policy 2.2.3.6; or</li> <li>3. where a biodiversity offset is not practicable, environmental compensation is proposed in accordance with Policy 2.2.3.7 (Policy 10.2.1.2).</li> </ul> </li> </ul>
8. Location (network utility structures - small scale)	a. Effects on natural character of the coast	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 10.2.3</li> <li>ii. In Natural Coastal Character (NCC) overlay zones adverse effects on the natural character values identified in Appendix A5 are avoided or, if avoidance is not practicable:               <ul style="list-style-type: none"> <li>1. no more than minor; or</li> <li>2. where there are no practicable alternative locations, adequately mitigated (Policy 10.2.3.13).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. Council will generally only consider activities to have no practicable alternative locations where an assessment that meets the requirements set out in Rule 10.9.4 demonstrates that the proposed site, including any proposed mitigation measures, is the option that has the least impact on the values of the overlay, while meeting the operational needs of the activity.</li> </ul>
X. Dust and sediment control (Rule 16.5.16.Y)	a. Effects on biodiversity values and natural character of riparian margins and the coast	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 10.2.2</li> <li>ii. Scheduled mining activities are located and undertaken in a way that minimises, as far as practicable, the risk of sediment entering the sea or water bodies (Policy 10.2.2.5).</li> </ul>

#### 10.5.4 Assessment of contraventions of performance standards in other sections

Activity	Matters of discretion	Guidance on the assessment of resource consents
Y. All performance standard contraventions by any network utility activity that forms part of the National Grid, and any ancillary activities including earthworks and vegetation clearance	a. Effects on biodiversity values and natural character of riparian margins and the coast  b. Effects on natural character of the coast	<p><i>Relevant objectives and policies:</i></p> i. The objective and policies referenced below apply, in addition to the objectives and policies referenced elsewhere in Rule 10.5.4: <ol style="list-style-type: none"> <li>1. Objective 5.2.X.</li> <li>2. Policies 5.2.X.1, 5.2.X.2, 5.2.X.3.</li> </ol>

## Rule 10.6 Assessment of Restricted Discretionary Activities

### Rule 10.6.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 10.6.2 and 10.6.3:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

### 10.6.2 Assessment of all restricted discretionary activities

Activity	Guidance on the assessment of resource consents
1. All restricted discretionary activities that are linked to Section 10.6	<p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>a. For those activities that require assessment against Policy 10.2.1.2, in assessing whether the activity meets that policy, Council will consider whether the area affected meets one or more of the criteria set out in Policy 2.2.3.2.</li> <li>b. In assessing effects on landscape values or on the natural character of the coast, Council will consider the extent to which the activity follows any relevant design guidelines in Appendix A11.</li> <li>c. For those activities for which effects on the natural character of the coast is a matter of discretion, Council will consider the natural character values that have been identified in Appendix A5, which include biodiversity values among others. These values may not be comprehensive, as they are not based on site-specific assessments. Therefore, a more detailed assessment may be required, under Policy 10.2.1.2, to determine the effects of activities on areas of significant indigenous vegetation and significant habitats of indigenous fauna.</li> <li>d. In assessing the appropriateness of any proposed biodiversity offset or environmental compensation, in addition to Policy 2.2.3.6 or Policy 2.2.3.7, Council will consider the Guidance on Good Practice Biodiversity Offsetting in New Zealand (NZ Government, 2014).</li> <li>e. With respect to Policy 10.2.1.2, Council will generally only consider activities to have no practicable alternative locations where an assessment that meets the requirements set out in Rule 10.9.4 demonstrates that the proposed site, including any proposed mitigation measures, is the option that has the least impact on biodiversity values, while meeting the operational needs of the activity.</li> </ol>

### 10.6.3 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>1. All restricted discretionary activities that are linked to Section 10.6</p>	<p>a. Positive effects on biodiversity values or the natural character of the coast</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 10.2.1, 10.2.2, 10.2.3</li> <li>ii. Conservation activity is encouraged in all zones (Policy 10.2.1.5).</li> </ul> <p>X. Conservation activity is encouraged in coastal and riparian margins (Policy 10.2.2.1).</p> <p><i>General assessment guidance:</i></p> <p>Y. In assessing positive effects on biodiversity values, Council will take into account the extent to which indigenous vegetation and habitats are proposed to be retained or restored in a way that contributes to increased resilience, buffering and/or connectivity.</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The development incorporates conservation activity that will have significant positive effects on biodiversity or natural character values.</li> </ul>
<p>2.</p> <ul style="list-style-type: none"> <li>• Earthworks - large scale that exceed scale thresholds within 20m of a water body or MHWS (rural zones or Invermay and Hercus Zone)</li> <li>• Earthworks - large scale that exceed scale thresholds within 5m of a water body or MHWS (all other zones)</li> </ul>	<p>a. Effects on biodiversity values and natural character of riparian margins and the coast</p> <p>b. Effects on public access</p>	<p><i>General assessment guidance:</i></p> <p>X. Earthworks - large scale (that are treated as large scale because they exceed the small scale thresholds in Rule 8A.5.1 for earthworks near a water body or MHWS) will be assessed based on the related consent requirements linked to earthworks - large scale within the setback from coast and water bodies (Rule 10.3.3 Setback from Coast and Water Bodies). See assessment guidance in Rule 10.5.3.10.</p> <p><i>General assessment guidance:</i></p> <p>X. Earthworks - large scale (that are treated as large scale because they exceed the small scale thresholds in Rule 8A.5.1 for earthworks near a water body or MHWS) will be assessed based on the related consent requirements linked to earthworks - large scale within the setback from coast and water bodies (Rule 10.3.3 Setback from Coast and Water Bodies). See assessment guidance in Rule 10.5.3.10.</p>

### 10.6.3 Assessment of restricted discretionary activities

Activity		Matters of discretion	Guidance on the assessment of resource consents
3.	Earthworks - large scale in rural zones	a. Effects on biodiversity values	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 10.2.1.</li> <li>ii. Biodiversity values are maintained or enhanced (Policy 10.2.1.1).</li> <li>iii. Adverse effects on areas of significant indigenous vegetation and significant habitats of indigenous fauna are avoided or, if avoidance is not practicable:               <ul style="list-style-type: none"> <li>1. there is no net loss and preferably a net gain in the biodiversity values of the area; or</li> <li>2. where there are no practicable alternative locations, any proposal for a biodiversity offset is in accordance with Policy 2.2.3.6; or</li> <li>3. where a biodiversity offset is not practicable, environmental compensation is proposed in accordance with Policy 2.2.3.7 (Policy 10.2.1.2).</li> </ul> </li> </ul>

### 10.6.3 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
4. Indigenous vegetation clearance - large scale (rural and rural residential zones)	a. Effects on biodiversity values	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 10.2.1.</li> <li>ii. Adverse effects on biodiversity values are avoided or, if avoidance is not practicable, no more than minor (Policy 10.2.1.6).</li> <li>iii. Adverse effects on areas of significant indigenous vegetation and significant habitats of indigenous fauna are avoided or, if avoidance is not practicable:               <ul style="list-style-type: none"> <li>1. there is no net loss and preferably a net gain in the biodiversity values of the area; or</li> <li>2. where there are no practicable alternative locations, any proposal for a biodiversity offset is in accordance with Policy 2.2.3.6; or</li> <li>3. where a biodiversity offset is not practicable, environmental compensation is proposed in accordance with Policy 2.2.3.7 (Policy 10.2.1.2).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. The clearance is of a non-local indigenous species that has extended beyond its range.</li> <li>v. The clearance is part of conservation activity involving the clearance of indigenous species and replacement by other indigenous species.</li> <li>vi. The clearance is of indigenous vegetation that is diseased and unlikely to regain health and viability.</li> <li>vii. An ecological assessment supporting the clearance is supplied with the application (see Rule 10.9.2 Special Information Requirements).</li> </ul>

### 10.6.3 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
5. All subdivision activities	a. Effects on biodiversity values and the natural character of riparian margins and the coast	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 10.2.1, 10.2.2</li> <li>ii. The design of the subdivision and any future land use or development will:               <ol style="list-style-type: none"> <li>1. maintain or enhance, on an on-going basis, biodiversity values (Policy 10.2.1.11.a);</li> <li>2. protect areas of significant indigenous vegetation and the significant habitats of indigenous fauna (Policy 10.2.1.11.b); and</li> <li>3. be in accordance with policies 10.2.1.2, 10.2.1.3, 10.2.1.4 and 10.2.1.8 (Policy 10.2.1.11.c).</li> </ol> </li> <li>iii. General subdivision adjacent to water bodies and the coast maintains or enhances the following values, including through provision of an esplanade reserve or esplanade strip in identified locations:               <ol style="list-style-type: none"> <li>1. biodiversity values of riparian margins and the coast;</li> <li>2. the water quality and aquatic habitats of the water body or coast; and</li> <li>3. the natural functioning of the adjacent sea or water body (Policy 10.2.2.7).</li> </ol> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. The subdivision is designed to maximise the opportunities for protection or enhancement of important natural environment values on the site, including but not limited to, indigenous vegetation or other habitat, for example through:               <ol style="list-style-type: none"> <li>1. retaining indigenous vegetation on a single site, under single ownership; and</li> <li>2. fencing of indigenous vegetation.</li> </ol> </li> <li>v. A legal mechanism (such as a covenant) is offered by the applicant to protect indigenous vegetation.</li> <li>vi. The subdivision is designed to minimise any adverse effects from drainage on water bodies, including by minimising impermeable surfaces near open water bodies.</li> <li>vii. In the rural zones, subdivisions are designed to maintain natural overland flow paths and natural hydrology.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>viii. Threatened indigenous vegetation includes those species listed in Appendix 10A.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>ix. A building platform may be required to be registered against the title by way of consent notice.</li> </ul>

### 10.6.3 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>b. Effects on public access</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 10.2.4.</li> <li>ii. Subdivision of land enhances public access to the natural environment through:               <ul style="list-style-type: none"> <li>1. requiring an esplanade reserve or esplanade strip of an appropriate width and location adjacent to identified water bodies and the coast; and</li> <li>2. where practicable, providing opportunities for access in other areas where this will enhance recreational opportunities, particularly through connecting to and expanding the existing tracks network or utilising adjacent unformed legal roads (Policy 10.2.4.3).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Unformed legal roads will be fenced to maintain or enhance public access, or other mechanisms are proposed to enhance public access.</li> <li>iv. A management plan is provided for on-going pest and weed control on areas set aside for public access.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>v. Council will consider the positive effects for public access provided by the subdivision, including those that are additional to any esplanade reserve or esplanade strip requirements that apply.</li> </ul>

### 10.6.3 Assessment of restricted discretionary activities

Activity		Matters of discretion	Guidance on the assessment of resource consents
X.	Any restricted discretionary network utility activity that forms part of the National Grid, and any ancillary activities including earthworks and vegetation clearance	<p>a. Effects on biodiversity values and natural character of riparian margins and the coast</p> <p>b. Effects on public access</p> <p>c. Effects on biodiversity values</p> <p>d. Effects on natural character of the coast</p> <p>e. Effects on landscape values</p>	<p><i>Relevant objectives and policies:</i></p> <p>i. The following objective and policies referenced below apply, in addition to the objectives and policies referenced elsewhere in Rule 10.6.3:</p> <ol style="list-style-type: none"> <li>1. Objective 5.2.X.</li> <li>2. Policies 5.2.X.1, 5.2.X.2, 5.2.X.3.</li> </ol>
6.	<p>In the <b>ONCC</b> or <b>HNCC overlay zones:</b></p> <ul style="list-style-type: none"> <li>• Shelterbelts and small woodlots</li> <li>• Earthworks - large scale (that exceed scale thresholds for an ONCC, HNCC)</li> <li>• Network utility structures - large scale (amateur radio configurations only)</li> <li>• Network utility structures - small scale</li> <li>• Public artworks - large scale</li> <li>• General subdivision</li> </ul>	<p>a. Effects on natural character of the coast</p>	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 10.2.3</p> <p>ii. Adverse effects of shelterbelts and small woodlots, network utility structures - large scale (amateur radio configurations only), earthworks - large scale, transportation activities, and public amenities on the natural character values identified in Appendix A5 are insignificant (Policy 10.2.3.3).</p> <p>Y. Adverse effects of network utility structures - small scale on the natural character values identified in Appendix A5 are insignificant or, where there are no practicable alternatives, adequately mitigated (Policy 10.2.3.4).</p> <p>iii. The design of the subdivision and any future land use or development will:</p> <ol style="list-style-type: none"> <li>1. preserve or enhance, on an on-going basis, the natural character values identified in Appendix A5; and</li> <li>2. be in accordance with policies 10.2.3.1, 10.2.3.2, 10.2.3.3 and 10.2.3.4 (Policy 10.2.3.7).</li> </ol> <p>iv. Adverse effects on areas of significant indigenous vegetation and significant habitats of indigenous fauna are avoided or, if avoidance is not practicable:</p> <ol style="list-style-type: none"> <li>1. there is no net loss and preferably a net gain in the biodiversity values of the area; or</li> </ol>

### 10.6.3 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
		<div style="border: 1px solid red; padding: 5px; margin-bottom: 10px;"> <ul style="list-style-type: none"> <li>2. where there are no practicable alternative locations, any proposal for a biodiversity offset is in accordance with Policy 2.2.3.6; or</li> <li>3. where a biodiversity offset is not practicable, environmental compensation is proposed in accordance with Policy 2.2.3.7 (Policy 10.2.1.2).</li> </ul> </div> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>v. The assessment will consider the natural character values outlined in Appendix A5.</li> <li>vi. All development in an ONCC or HNCC overlay zone will consider the effects on biodiversity.</li> <li>vii. The assessment of resource consent applications for subdivision activities will consider any landscape assessment provided with the application (see Special Information Requirements - Rule 10.9.1).</li> <li>viii. The assessment will consider the appropriateness of the building platforms identified, as required by Rule 10.8.1.</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>ix. Development is associated with conservation.</li> <li>x. For utilities activities:               <ul style="list-style-type: none"> <li>1. The network utility is co-located with existing buildings or network utility structures.</li> <li>2. It is essential for the activity to locate on the feature to ensure the ongoing operation of a network utility service.</li> <li>3. Landscaping or other forms of screening (where appropriate) will be used to reduce the visibility of the network utility from surrounding properties and public viewpoints.</li> <li>4. Solar panels and other structures use a design and/or materials that minimise reflectivity and glare as far as practicable.</li> </ul> </li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>xi. For earthworks - large scale, requirements for batter gradients to be re-vegetated or screened by vegetation if visible from a public place.</li> </ul>

### 10.6.3 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>7. In the <b>NCC Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Crematoriums</li> <li>• Forestry</li> <li>• Indigenous vegetation clearance - large scale</li> <li>• Earthworks - large scale (that exceed the scale thresholds for an NCC)</li> </ul>	<p>a. Effects on natural character of the coast</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>i. Objectives 10.2.1, 10.2.3</li> <li>ii. Adverse effects on the natural character values identified in Appendix A5 are avoided or, if avoidance is not practicable, are no more than minor (Policy 10.2.3.5).</li> <li>iii. Adverse effects on areas of significant indigenous vegetation and significant habitats of indigenous fauna are avoided or, if avoidance is not practicable:               <ol style="list-style-type: none"> <li>1. there is no net loss and preferably a net gain in the biodiversity values of the area; or</li> <li>2. where there are no practicable alternative locations, any proposal for a biodiversity offset is in accordance with Policy 2.2.3.6; or</li> <li>3. where a biodiversity offset is not practicable, environmental compensation is proposed in accordance with Policy 2.2.3.7 (Policy 10.2.1.2).</li> </ol> </li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>iv. The assessment will consider the natural character values outlined in Appendix A5.</li> <li>v. For forestry, in assessing effects on natural character values, the Council will consider the extent to which the activity follows the design guidelines in Appendix A11.3.</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>vi. The activity incorporates key design elements as set out in Appendix A5.</li> <li>vii. Development is associated with conservation.</li> <li>viii. For indigenous vegetation clearance, an ecological assessment supporting the clearance is supplied with the application (see Rule 10.9.2 Special Information Requirements).</li> <li>ix. N/A</li> </ol> <p><i>Conditions that may be imposed include:</i></p> <ol style="list-style-type: none"> <li>x. For forestry, conditions on the siting, scale, species and/or layout of forestry blocks.</li> <li>xi. For earthworks - large scale, requirements for batter gradients to be re-vegetated or screened by vegetation if visible from a public place.</li> </ol>

### 10.6.3 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>8. In the <b>NCC Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Public Artworks - large scale</li> <li>• Network utility poles and masts - small scale</li> <li>• Wind generators - small scale</li> <li>• Hydro generators - small scale</li> <li>• Solar panels - small scale</li> </ul>	<p>a. The assessment will consider the landscape values outlined in Appendix A3.</li> <li>iv. Council will generally only consider activities to have no practicable alternative locations where an assessment that meets the requirements set out in Rule 10.9.4 demonstrates that the proposed site, including any proposed mitigation measures, is the option that has the least impact on the values of the overlay, while meeting the operational needs of the activity.</li> <li>v. For forestry, in assessing effects on landscape values, the Council will consider the extent to which the activity follows the design guidelines in Appendix A11.3.</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>vi. The activity incorporates key design elements as set out in Appendix A3.</li> <li>vii. Landscaping or other forms of screening will be used to reduce the visibility of development from surrounding properties and public viewpoints.</li> <li>viii. NA</li> <li>ix. For utilities activities:               <ol style="list-style-type: none"> <li>1. The network utility is co-located with existing buildings or network utility structures.</li> <li>2. The activity is associated with the operation of the National Grid.</li> <li>3. Landscaping or other forms of screening (where appropriate) will be used to reduce the visibility of the network utility from surrounding properties and public viewpoints.</li> </ol> </li> <li>x. For earthworks - large scale, requirements for batter gradients to be re-vegetated or screened by vegetation if visible from a public place.</li> </ol>

## Rule 10.7 Assessment of Discretionary Activities

### Rule 10.7.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 10.7.2 provides guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', but do not limit that assessment. They include:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.

### 10.7.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
1. All discretionary activities that are linked to Section 10.7, including but not limited to the activities listed below	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objectives 10.2.1 - 10.2.5</li> <li>b. Objective 2.2.3</li> <li>c. Activities maintain or enhance biodiversity values (Policy 10.2.1.1).</li> <li>d. Adverse effects on areas of significant indigenous vegetation and significant habitats of indigenous fauna are avoided or, if avoidance is not practicable:               <ol style="list-style-type: none"> <li>i. there is no net loss and preferably a net gain in the biodiversity values of the area; or</li> <li>ii. where there are no practicable alternative locations, any proposal for a biodiversity offset is in accordance with Policy 2.2.3.6; or</li> <li>iii. where a biodiversity offset is not practicable, environmental compensation is proposed in accordance with Policy 2.2.3.7 (Policy 10.2.1.2).</li> </ol> </li> <li>e. Activities adjacent to water bodies and the coast:               <ol style="list-style-type: none"> <li>i. in the coastal environment, preserve natural character and protect biodiversity values or, where this is not practicable in the case of network utility activities, maintain or enhance natural character and biodiversity values; and</li> <li>ii. outside the coastal environment, maintain or enhance the biodiversity values and natural character of riparian margins (Policy 10.2.2.6).</li> </ol> </li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>f. For discretionary land use activities, whether any associated buildings or structures meet relevant development performance standards, or otherwise achieve the relevant policies for development (See Rule 10.5 for performance standard contraventions). All relevant land use performance standards are met, including noise and light spill</li> </ol>

### 10.7.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
	<p>standards.</p> <p>g. The development incorporates conservation activity that will have significant positive effects on biodiversity or natural character values.</p> <p>h. A management plan is provided for weed and pest control in areas of indigenous vegetation or the habitat of indigenous fauna.</p> <p><i>General assessment guidance</i></p> <p>X. In assessing positive effects on biodiversity values, Council will take into account the extent to which indigenous vegetation and habitats are proposed to be retained or restored in a way that contributes to increased resilience, buffering and/or connectivity.</p> <p>i. With respect to Policy 10.2.1.2, Council will generally only consider activities to have no practicable alternative locations where an assessment that meets the requirements set out in Rule 10.9.4 demonstrates that the proposed site, including any proposed mitigation measures, is the option that has the least impact on biodiversity values, while meeting the operational needs of the activity.</p> <p>j. In assessing the significance of effects, consideration will be given to:</p> <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> <p>k. In assessing whether an activity meets Policy 10.2.1.2, Council will consider whether the area affected meets one or more of the criteria set out in Policy 2.2.3.2.</p> <p>l. In assessing the appropriateness of any proposed biodiversity offset or environmental compensation, in addition to Policy 2.2.3.6 or Policy 2.2.3.7, Council will consider the Guidance on Good Practice Biodiversity Offsetting in New Zealand (NZ Government, 2014).</p> <p>m. In the case of solar panels - large scale, Council will consider whether structures are designed to decrease the attractiveness of panels to polarotactic insects (i.e. insects that use polarised light as a cue to navigation).</p> <p>n. In assessing effects on landscape values or on the natural character of the coast, Council will consider the extent to which the activity follows any relevant design guidelines in Appendix A11.</p>

10.7.2 Assessment of discretionary activities	
Activity	Guidance on the assessment of resource consents
2. <ul style="list-style-type: none"> <li>• Natural hazard mitigation earthworks</li> <li>• Natural hazard mitigation structures</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objectives 10.2.2, 10.2.4</li> <li>b. Natural hazard mitigation earthworks or natural hazard mitigation structures maintain or enhance public access to the coast and riparian margins (Policy 10.2.4.4).</li> <li>c. Natural hazard mitigation earthworks and natural hazard mitigation structures are only allowed where:               <ol style="list-style-type: none"> <li>i. in the coastal environment, natural character is preserved and biodiversity values are protected; or</li> <li>ii. outside the coastal environment, the biodiversity values and natural character of riparian margins are maintained or enhanced; or</li> <li>iii. where there are no practicable alternatives, effects are adequately mitigated (Policy 10.2.2.8).</li> </ol> </li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>d. In assessing effects on public access to the coast and riparian margins, Council will consider any relevant circumstances listed in the New Zealand Coastal Policy Statement 2010 or the Regional Policy Statement for Otago that may support restriction of public access.</li> </ol>
3. In the <b>ONF Overlay Zone:</b> <ul style="list-style-type: none"> <li>• Natural hazard mitigation activities</li> <li>• Transportation activities</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 10.2.5</li> <li>b. Any adverse effects on the values identified in Appendix A3 are:               <ol style="list-style-type: none"> <li>i. insignificant, or</li> <li>ii. where there are no practicable alternative locations, adequately mitigated (Policy 10.2.5.4)</li> </ol> </li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>c. Council will generally only consider natural hazard mitigation activities to have no practicable alternative locations where the activity that is the most effective and appropriate way of avoiding or mitigating the risk of a natural hazard needs to locate at a certain site to be able to mitigate the hazard.</li> <li>d. Council will generally only consider other activities to have no practicable alternative locations where an assessment that meets the requirements set out in Rule 10.9.4 demonstrates that the proposed site, including any proposed mitigation measures, is the option that has the least impact on the values of the overlay, while meeting the operational needs of the activity.</li> </ol>

### 10.7.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
<p>4. In the <b>SNL or ONL overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• Network utility structures - large scale</li> <li>• Substations</li> <li>• Natural hazard mitigation activities</li> <li>• Transportation activities</li> <li>• Mining (SNLs only)</li> <li>• Landfills (SNLs only)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 10.2.5</li> <li>b. Adverse effects on the landscape values of the SNL, as identified in Appendix A3, are avoided or, where avoidance is not practicable:               <ol style="list-style-type: none"> <li>i. no more than minor; or</li> <li>ii. where there are no practicable alternative locations, adequately mitigated. (Policy 10.2.5.9).</li> </ol> </li> <li>c. Any adverse effects on the landscape values of the ONL, as identified in Appendix A3, are:               <ol style="list-style-type: none"> <li>i. insignificant; or</li> <li>ii. where there are no practicable alternative locations, adequately mitigated (Policy 10.2.5.8).</li> </ol> </li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>d. Council will generally only consider natural hazard mitigation activities to have no practicable alternative locations where the activity that is the most effective and appropriate way of avoiding or mitigating the risk of a natural hazard needs to locate at a certain site to be able to mitigate the hazard.</li> <li>e. Council will generally only consider other activities to have no practicable alternative locations where an assessment that meets the requirements set out in Rule 10.9.4 demonstrates that the proposed site, including any proposed mitigation measures, is the option that has the least impact on the values of the overlay, while meeting the operational needs of the activity.</li> </ol>

### 10.7.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
<p>5. In an <b>ASBV</b>:</p> <ul style="list-style-type: none"> <li>• Rural tourism - large scale (rural zones)</li> <li>• Rural research - large scale outside the <b>Invermay Farm mapped area</b> (rural zones)</li> <li>• Community and leisure - large scale (rural zones)</li> <li>• Sport and recreation (including commercial activities ancillary to sport and recreation) (rural and recreation zones)</li> <li>• Network utility structures - large scale (excluding amateur radio configurations)</li> <li>• Substations</li> <li>• Transportation activities</li> <li>• Natural hazard mitigation activities</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 10.2.1</p> <p>b. There is no net loss and preferably a net gain in the biodiversity values of the ASBV including, but not limited to, those biodiversity values listed in Appendix A1.2 (Policy 10.2.1.4).</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>c. Sport and recreation that involves motor vehicles takes place on existing formed roads.</p>
<p>6. In the <b>ONCC and HNCC overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• Transportation activities</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 10.2.3</p> <p>b. Any adverse effects on the values identified in Appendix A5 are insignificant (Policy 10.2.3.3).</p>
<p>7. In the <b>ONCC and HNCC overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• Natural hazard mitigation activities</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 10.2.3</p> <p>b. Any adverse effects on the values identified in Appendix A5 are:</p> <ul style="list-style-type: none"> <li>i. insignificant, or</li> <li>ii. where there are no practicable alternative locations, adequately mitigated (Policy 10.2.3.4).</li> </ul> <p><i>General assessment guidance:</i></p> <p>c. Council will generally only consider natural hazard mitigation activities to have no practicable alternative locations where the activity that is the most effective and appropriate way of avoiding or mitigating the risk of a natural hazard needs to locate at a certain site to be able to mitigate the hazard.</p>
<p>8. In the <b>NCC Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Mining</li> <li>• Landfills</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 10.2.3</p> <p>b. Any adverse effects on the natural character values, as identified in Appendix A5, are avoided or, where avoidance is not practicable, no more than minor (Policy 10.2.3.5).</p>

### 10.7.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
<p>9. In the <b>NCC Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Network utility structures - large scale</li> <li>• Substations</li> <li>• Natural hazard mitigation activities</li> <li>• Transportation activities</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 10.2.3</li> <li>b. Any adverse effects on the values identified in Appendix A5 are avoided or, if avoidance is not practicable:               <ul style="list-style-type: none"> <li>i. no more than minor, or</li> <li>ii. where there are no practicable alternative locations, adequately mitigated (Policy 10.2.3.6).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. Council will generally only consider natural hazard mitigation activities to have no practicable alternative locations where the activity that is the most effective and appropriate way of avoiding or mitigating the risk of a natural hazard needs to locate at a certain site to be able to mitigate the hazard.</li> <li>d. Council will generally only consider other activities to have no practicable alternative locations where an assessment that meets the requirements set out in Rule 10.9.4 demonstrates that the proposed site, including any proposed mitigation measures, is the option that has the least impact on the values of the overlay, while meeting the operational needs of the activity.</li> </ul>

### 10.7.X Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1. Area of buildings and structures in the <b>ONL</b> and <b>SNL overlay zones</b></p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objective 10.2.5.</li> <li>b. Adverse effects on the landscape values of the SNL, as identified in Appendix A3, are avoided or, where avoidance is not practicable:               <ul style="list-style-type: none"> <li>i. no more than minor; or</li> <li>ii. where there are no practicable alternative locations, adequately mitigated. (Policy 10.2.5.9).</li> </ul> </li> <li>c. Any adverse effects on the landscape values of the ONL, as identified in Appendix A3, are:               <ul style="list-style-type: none"> <li>i. insignificant; or</li> <li>ii. where there are no practicable alternative locations, adequately mitigated (Policy 10.2.5.8).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>d. In assessing effects on landscape values, Council will consider Rule 10.3.5.Y Number and location of buildings, and whether additional conditions to limit the future establishment of buildings on the site should apply.</li> </ul>

**10.7.X Assessment of discretionary performance standard contraventions**

Performance standard	Guidance on the assessment of resource consents
<p>2. Area of buildings and structures in the <b>NCC Overlay Zone</b></p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objective 10.2.3.</li> <li>b. Adverse effects on the natural character values identified in Appendix A5 are avoided or, if avoidance is not practicable, are no more than minor (Policy 10.2.3.5).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. In assessing effects on landscape values, Council will consider Rule 10.3.5.Y Number and location of buildings, and whether additional conditions to limit the future establishment of buildings on the site should apply.</li> </ul>

## Rule 10.8 Assessment of Non-complying Activities

### Rule 10.8.1 Introduction

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 10.8.2 provides guidance on how a consent application for the listed non-complying activities will be assessed but do not limit that assessment. They include:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.

### 10.8.2 Assessment of all non-complying activities

Activity	Guidance on the assessment of resource consents
1. All non-complying activities that are linked to Section 10.8, including but not limited to the activities listed below	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. The activity does not detract from, or preferably contributes to, the strategic directions objectives, including, but not limited to:               <ol style="list-style-type: none"> <li>i. Dunedin's significant indigenous biodiversity is protected or enhanced, and restored; and other indigenous biodiversity is maintained or enhanced, and restored; with all indigenous biodiversity having improved connections and improved resilience (Objective 2.2.3); and</li> <li>ii. The natural character of the coastal environment is preserved or enhanced (Objective 2.4.5).</li> </ol> </li> <li>b. The relationship between Manawhenua and the natural environment is maintained, including the cultural values and traditions associated with:               <ol style="list-style-type: none"> <li>i. wāhi tūpuna; and</li> <li>ii. the customary use of mahika kai (Objective 14.2.1).</li> </ol> </li> <li>c. Activities maintain or enhance biodiversity values (Policy 10.2.1.1); or</li> <li>d. Adverse effects on areas of significant indigenous vegetation and significant habitats of indigenous fauna are avoided or, if avoidance is not practicable:               <ol style="list-style-type: none"> <li>i. there is no net loss and preferably no net gain in the biodiversity values of the area; or</li> <li>ii. where there are no practicable alternative locations, any proposal for a biodiversity offset is in accordance with Policy 2.2.3.6; or</li> <li>iii. where a biodiversity offset is not practicable, environmental compensation is proposed in accordance with Policy 2.2.3.7 (Policy 10.2.1.2).</li> </ol> </li> <li>e. Activities adjacent to water bodies and the coast:               <ol style="list-style-type: none"> <li>i. in the coastal environment, preserve natural character and protect biodiversity values or, where this is not practicable in the case of network utility activities, maintain or enhance natural character and biodiversity values; and</li> <li>ii. outside the coastal environment, maintain or enhance the biodiversity values and natural character of riparian margins (Policy 10.2.2.6).</li> </ol> </li> </ol>

### 10.8.2 Assessment of all non-complying activities

Activity	Guidance on the assessment of resource consents
	<p><i>General assessment guidance:</i></p> <p>X. In assessing positive effects on biodiversity values, Council will take into account the extent to which indigenous vegetation and habitats are proposed to be retained or restored in a way that contributes to increased resilience, buffering and/or connectivity.</p> <p>f. In assessing the significance of the effects, consideration will be given to:</p> <ul style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.</li> </ul> <p>g. In assessing whether an activity meets Policy 10.2.1.2, Council will consider whether the area affected meets one or more of the criteria set out in Policy 2.2.3.2.</p> <p>h. In assessing the appropriateness of any proposed biodiversity offset or environmental compensation, in addition to Policy 2.2.3.6 or Policy 2.2.3.7, Council will consider the Guidance on Good Practice Biodiversity Offsetting in New Zealand (NZ Government, 2014).</p> <p>i. In assessing effects on natural character or landscape values, Council will consider the extent to which the activity follows relevant design guidelines in Appendix A11.</p> <p>j. With respect to Policy 10.2.1.2 and Policy 10.2.1.3, Council will generally only consider activities to have no practicable alternative locations where an assessment that meets the requirements set out in Rule 10.9.4 demonstrates that the proposed site, including any proposed mitigation measures, is the option that has the least impact on biodiversity values, while meeting the operational needs of the activity.</p>
<p>2. In an <b>ASBV</b>:</p> <ul style="list-style-type: none"> <li>• NC activities as indicated in the relevant management or major facility zone.</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 10.2.1</p> <p>b. There is no net loss and preferably a net gain in the biodiversity values of the ASBV including, but not limited to, those biodiversity values listed in Appendix A1.2; or where there are no practicable alternative locations, any proposal for a biodiversity offset is in accordance with Policy 2.2.3.6; or where a biodiversity offset is not practicable, environmental compensation is proposed in accordance with Policy 2.2.3.7 (Policy 10.2.1.3).</p>
<p>3. In an <b>ASBV</b>:</p> <ul style="list-style-type: none"> <li>• Contravention of tree species performance standard (Rule 10.3.4)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 10.2.1</p> <p>b. The risk of wilding tree establishment in areas of indigenous vegetation is insignificant (Policy 10.2.1.9).</p>

### 10.8.2 Assessment of all non-complying activities

Activity	Guidance on the assessment of resource consents
<p>4. In the <b>ONCC, HNCC or NCC overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• NC activities as indicated in the relevant management or major facility zone or city-wide activities section</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>Objective 10.2.3</li> <li>Any adverse effects on the natural character values, as identified in Appendix A5, are insignificant (Policy 10.2.3.2).</li> </ol>
<p>5. In the <b>ONCC, HNCC or NCC overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• Contravention of tree species performance standard (Rule 10.3.4)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>Objective 10.2.3</li> <li>The risk of wilding tree establishment in Outstanding Natural Coastal Character (ONCC), High Natural Coastal Character (HNCC), and Natural Coastal Character (NCC) overlay zones is insignificant (Policy 10.2.3.12).</li> <li>The risk of wilding tree establishment in areas of indigenous vegetation is insignificant (Policy 10.2.1.9).</li> </ol>
<p>6. In the <b>ONF or ONL overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• NC activities as indicated in the relevant management or major facility zone or city-wide activities section (except for expansion of scheduled mining activity SMA007)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>Objective 10.2.5</li> <li>Any adverse effects on the landscape values of the ONF, as identified in Appendix A3, are insignificant (Policy 10.2.5.2).</li> <li>Any adverse effects on the landscape values of the ONL, as identified in Appendix A3, are insignificant (Policy 10.2.5.6).</li> </ol>
<p>X. In the <b>ONF Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Expansion of scheduled mining activity SMA007</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>Objective 10.2.5</li> <li>Any adverse effects on the landscape values of the ONF, as identified in Appendix A3, are insignificant (Policy 10.2.5.X).</li> </ol>
<p>7. In the <b>ONF Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Performance standard contravention Rule 5.5.2.4 (co-location on an ONF)</li> </ul>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>Objective 10.2.5</li> <li>Any adverse effects on the landscape values identified in Appendix A3 are insignificant, or, where there are no practicable alternatives, adequately mitigated (Policy 10.2.5.4).</li> </ol>
<p>8. In the <b>ONF and ONL overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• Contravention of tree species performance standard (Rule 10.3.4)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>Objective 10.2.5</li> <li>The risk of wilding tree establishment in Outstanding Natural Feature (ONF) and Outstanding Natural Landscape (ONL) overlay zones is insignificant (Policy 10.2.5.15).</li> <li>The risk of wilding tree establishment in areas of indigenous vegetation is insignificant (Policy 10.2.1.9).</li> </ol>

## **Rule 10.9 Special Information Requirements**

### **10.9.1 Landscape Building Platforms**

1. Landscape building platforms must be identified for subdivision activities that create new residential development potential in a landscape or coastal character overlay zone, and may also be required by Council for other types of subdivision, if considered necessary to ensure any future land use or development will meet Policy 10.2.3.7 or Policy 10.2.5.10, as relevant.
2. Landscape building platforms are to be registered against the certificate of title by way of consent notice.
3. The identification of landscape building platforms must be supported by an assessment of the effects on, as appropriate: the landscape values identified in Appendix A3; or the natural character of the coast values identified in Appendix A5. The assessment must consider, but not necessarily be limited to, the following factors:
  - a. the extent to which the location of the building platforms follows relevant design guidelines in Appendix A11;
  - b. the visual prominence of the location of the building platforms;
  - c. the effects on landscape or natural character values of buildings constructed to the maximum building envelope provided for by the performance standards on each identified building platform;
  - d. the appropriateness of the location within the context of the wider landscape or coastal setting;
  - e. the effects of driveways or vehicle tracks that will be required to access the building platforms; and
  - f. whether the clustering of building platforms with other building platforms or existing buildings will minimise adverse effects on landscape or natural character values.
4. The assessment must be conducted by a landscape architect or similarly qualified person, supported by any other expert assessment necessary to assess effects on any specific values of the overlay zone (for example, cultural or ecological values, if assessment of those effects is beyond the expertise of the landscape architect).
5. If landscape building platforms are approved through the subdivision consent process, the construction of new buildings greater than 60m<sup>2</sup> footprint within the landscape building platform will be subject to Rule 16.3.4.3.b (rural zones) or Rule 17.3.4.3.c (rural residential zones).

### **10.9.2 Vegetation Clearance**

1. Council may request a report by a suitably qualified or experienced ecologist for applications where resource consent is required for vegetation clearance and will normally require a report if the application involves clearance of indigenous vegetation. Where requested the report should include:
  - a. a description of the indigenous vegetation present, including a species list;
  - b. a description of the indigenous wildlife present or known to use the site;
  - c. an ecological assessment of the site using the criteria in Policy 2.2.3.2;
  - d. a description of the proposed activities and an assessment of their impact on the biodiversity values of the site; and
  - e. a description of any mitigation or offsetting techniques to be utilised to maintain and enhance the biodiversity values of the site or compensate for any adverse effects that cannot be avoided, including an outline of how these will be designed and implemented to achieve Policy 2.2.3.6 or Policy 2.2.3.7.

### **10.9.3 Biodiversity Offset**

1. A resource consent application that includes a proposal for a biodiversity offset must include a biodiversity offset management plan prepared by an ecologist or similarly qualified person that:
  - a. outlines how the biodiversity offset will be designed and implemented to achieve Policy 2.2.3.6;
  - b. considers the role of the donor and recipient sites within a landscape and ecological context;
  - c. sets out baseline information on biodiversity values that are potentially impacted by the proposal at both the donor and recipient sites;
  - d. contains an explicit loss and gain calculation that assesses:
    - i. how any calculated gains will be achieved on the ground;
    - ii. how biodiversity values gained will be the same or similar to those being lost; and
    - iii. how gains in biodiversity values are additional to those that may have occurred if the proposed activity had not gone ahead;
  - e. addresses sources of uncertainty and the risk of failure by incorporating adaptive management responses;
  - f. addresses timing and duration of adverse effects in relation to timing and duration of positive offset effects; and
  - g. identifies the monitoring approach that will be used to demonstrate how the matters above will be addressed over an appropriate timeframe.

### **10.9.4 Assessment of alternative locations**

1. For activities that have the potential to adversely affect areas of significant indigenous vegetation and significant habitats of indigenous fauna or the identified values of a landscape or coastal character overlay zone, Council may request an assessment of alternative locations. Where requested, the level of detail and analysis provided in the assessment must reflect the scale of the project and will include:
  - a. a statement of the operational needs of the activity and any locational constraints;
  - b. a statement of the alternative locations considered and, if no sites were considered outside the area or overlay in question, an explanation of why this was not practicable;
  - c. an assessment of the proposed site and the alternative locations, in terms of the operational needs of the activity; and
  - d. an assessment of the proposed site and the alternative locations, in terms of adverse effects on (as relevant) the biodiversity values of the area of significant indigenous vegetation and significant habitats of indigenous fauna, or the identified values of the overlay zone.

## Appendices

### Appendix 10A. Protected Indigenous Species

#### Legend

Threat Classification	Table Code
Locally Uncommon	LU
At Risk - Naturally uncommon	AR-N
At Risk - Declining	AR-D
Threatened - Nationally vulnerable	T - NV
Threatened - Nationally critical	T - NC
Threatened - Nationally endangered	T - NE

#### Appendix 10A.1 Threatened plant species list

Species	Common name	Threat classification	Type of plant	Habitat
<i>Abrontanella patearoa</i>		AR-N	Dicot herb	Alpine herbfield
<i>Acaena dumicola</i>		LU	Dicot herb	Montane shrubland
<i>Acaena microphylla</i> var. <i>pauciglochidiata</i>		AR-N	Dicot herb	Coastal herbfield
<i>Acaena tesca</i>		LU	Dicot herb	Upland turf
<i>Aciphylla glaucescens</i>		LU	Dicot herb	Montane grassland
<i>Aciphylla sub flabellata</i>		AR-D	Dicot herb	Coastal grassland
<i>Amphibromus fluitans</i>	Water brome	T - NV	Grass	Ephemeral wetland
<i>Anemanthele lessoniana</i>	Wind grass; rainbow grass	T - NV	Grass	Dryland forest
<i>Anemone tenuicaulis</i>		AR-N	Dicot herb	Upland grassland
<i>Anthosachne falcis</i>		AR-N	Grass	Dryland grassland
<i>Atriplex buchananii</i>	Buchanan's orache	T - NV	Dicot herb	Coastal turfs/gravelfield
<i>Brachyglottis sciadophila</i>		AR-D	Liane	Coastal forest
<i>Carex cirrhosa</i>	Curly sedge	T - NV	Sedge	Wetland margin
<i>Carex echinata</i>		LU	Sedge	Upland bogs
<i>Carex inopinata</i>		T - NV	Sedge	Upland rock overhangs
<i>Carex litorosa</i>		AR-D	Sedge	Saltmarsh

Species	Common name	Threat classification	Type of plant	Habitat
<i>Carmichaelia crassicaulis</i>	Coral broom	AR-D	Shrub	Tussock grassland
<i>Carmichaelia kirkii</i>	Climbing broom	T - NV	Climbing shrub	Shrubland
<i>Celmisia hookeri</i>		LU	Dicot herb	Upland rock outcrops
<i>Chaerophyllum</i>	Chaerophyllum "Minute flower"	AR - N	Dicot herb	Coastal herbfield
<i>Chenopodium allanii</i>		AR - N	Dicot herb	Coastal cliff/dry shrubland
<i>Chionochloa rubra subsp. cuprea</i>	Copper tussock	LU	Grass	Poorly-drained grassland
<i>Coprosma acerosa</i>	Sand coprosma	AR-D	Shrub	Coastal dune
<i>Coprosma virescens</i>		LU	Shrub	Coastal/dry forest
<i>Crassula mataikona</i>		AR - N	Dicot herb	Coastal herbfield
<i>Crassula multicaulis</i>		T - NE	Dicot herb	Ephemeral wetland
<i>Crassula peduncularis</i>		T - NC	Dicot herb	Ephemeral wetland
<i>Crassula ruamahanga</i>		AR-D	Dicot herb	Ephemeral wetland
<i>Deschampsia cespitosa</i>	Tufted hair-grass	AR-D	Grass	Wetland
<i>Deyeuxia youngii</i>		AR - N	Grass	Grassland
<i>Donatia novae-zelandiae</i>		LU	Dicot herb	Bog wetlands
<i>Dracophyllum uniflorum var. frondosum</i>		AR-N	Shrub	Tussock grassland
<i>Drymoanthus flavus</i>	Little spotted moa	AR-N	Orchid	Forest
<i>Epilobium chionanthum</i>		LU	Dicot herb	Lowland swamps
<i>Epilobium pubens</i>		LU	Dicot herb	Dry habitats
<i>Euchiton ensifer</i>	Creeping cud weed	T - NE	Dicot herb	Dune slack
<i>Ficinia spiralis</i>	Pikao	AR-D	Rush	Sand dunes
<i>Fuchsia perscandens</i>		LU	Shrub	Montane gullies
<i>Geranium sessiliflorum var. arenarium</i>	Short-flowered cranesbill	AR-D	Dicot herb	Coastal herbfield
<i>Geranium retrorsum</i>	Turnip-rooted geranium	T - NE	Dicot herb	Coastal herbfield
<i>Gingidia grisea</i>		AR-N	Dicot herb	Rock outcrops
<i>Helichrysum selago var. tumidum</i>		AR - N	Shrub	Coastal cliff
<i>Hymenochilus tristis</i>		AR-D	Orchid	Coastal grassland

Species	Common name	Threat classification	Type of plant	Habitat
<i>Ileostylis micranthus</i>		LU	Shrub	Coastal shrubland
<i>Isolepis basilaris</i>	Pygmy clubrush	T - NV	Sedge	Ephemeral wetland
<i>Korthalsella salicornioides</i>	Dwarf mistletoe	AR-N	Shrub	Shrubland/forest
<i>Lachnagrostis tenuis</i>	Wind grass	T - NV	Grass	Estuaries
<i>Lepidium crassum</i>	Thick-leaved scurvy grass	T - NE	Dicot herb	Coastal herbfield
<i>Lepidium juvencum</i>	Scurvy grass	T - NC	Dicot herb	Coastal herbfield
<i>Lepidium oleraceum</i>		T - NV	Dicot herb	Coastal ledges
<i>Lepidium tenuicaule</i>		AR-D	Dicot herb	Coastal herbfield
<i>Lepilaena bilocularis</i>		T - NV	Monocot herb	Brackish lake
<i>Meliccytus flexuosus</i>		AR-D	Shrub	Upland shrubland
<i>Mimulus repens</i>		AR-N	Dicot herb	Saltmarsh
<i>Montia angustifolia</i>		AR-N	Dicot herb	Ephemeral wetland
<i>Myosotis pygmaea</i>		AR-D	Dicot herb	Coastal herbfield
<i>Myosotis rakiura</i>	Stewart Island forget-me-not	AR-N	Dicot herb	Coastal cliff
<i>Myosotis tenericaulis</i>		AR-N	Dicot herb	Alpine wetland
<i>Myosurus minimus subsp. novae-zelandiae</i>	NZ mouse tail	T - NE	Dicot herb	Ephemeral wetlands
<i>Olearia bullata</i>		LU	Shrub	Montane gullies
<i>Olearia fimbriata</i>		T - NV	Tree	Shrubland
<i>Olearia fragrantissima</i>		AR-D	Tree	Coastal forest/shrubland
<i>Olearia hectorii</i>		T - NE	Tree	Coastal forest
<i>Olearia lineata</i>		AR-D	Tree	Lowland-montane gullies
<i>Ophioglossum coriaceum</i>		LU	Fern ally	Ephemeral wetlands
<i>Parahebe canescens</i>	Tarn speedwell	AR-D	Dicot herb	Ephemeral wetlands
<i>Peraxilla colensoi</i>	Red mistletoe	AR-D	Shrub	Silver beech forest
<i>Peraxilla tetrapetala</i>	Scarlet mistletoe	AR-D	Shrub	Silver beech forest
<i>Potentilla anserinoides</i>		LU	Dicot herb	Coastal herbfield
<i>Pseudopanax ferox</i>	Fierce lancewood	AR-D	Tree	Dry forest
<i>Puccinellia walkeri</i>	Walkers saltgrass	AR-N	Grass	Estuaries

Species	Common name	Threat classification	Type of plant	Habitat
<i>Raoulia hectorii</i> var. <i>mollis</i>		AR-N	Dicot herb	Alpine herbfield
<i>Ranunculus maculatus</i>		AR-N	Dicot herb	Alpine wetland
<i>Ranunculus recens</i> var. <i>recens</i>		T - NV	Dicot herb	Coastal herbfield
<i>Raoulia monroi</i>	Fan-leaved mat daisy	AR-N	Dicot herb	Alpine herbfield
<i>Raoulia parkii</i>		LU	Dicot herb	Alpine herbfield
<i>Ruppia megacarpa</i>	Horses mane weed	AR-D	Monocot herb	Saline lagoon
<i>Rytidosperma merum</i>	Slender bristle grass	T - NV	Grass	Short tussock grassland
<i>Scandia geniculata</i>		LU	Liane	Coastal forest/scrub
<i>Senecio carnosulus</i>		AR-N	Dicot herb	Coastal herbfield
<i>Senecio glaucophyllus</i> ssp. <i>basinudus</i>		AR-N	Dicot herb	Coastal herbfield
<i>Sonchus kirkii</i>	Shore puha	AR-D	Dicot herb	Coastal herbfield
<i>Stenostachys laevis</i>	Grassland wheatgrass	AR-N	Grass	Coastal herbfield
<i>Tetrachondra hamiltonii</i>		Data Deficient	Dicot herb	Ephemeral wetlands
<i>Teucrium parvifolium</i>		AR-D	Shrub	Riparian forest
<i>Tupeia antarctica</i>		AR-D	Shrub	Lowland forest
<i>Uncinia purpurata</i>		AR-N	Sedge	Forest and grassland
<i>Uncinia sinclairii</i>		Data Deficient	Sedge	Wetlands
<i>Uncinia strictissima</i>		T - NE	Sedge	Montane gullies
<i>Urtica ferox</i>	Tree nettle	LU	Shrub	Coastal forest
<i>Zannichellia palustris</i>	Horned pondweed	AR-N	Monocot herb	Coastal lake
<i>Zostera muelleri</i> subsp. <i>novazelandica</i>	Sea grass	AR-D	Monocot herb	Estuaries

## Appendix 10A.2 Threatened fauna species list

Species	Common Name	Threat Classification	Type of Animal	Habitat
<i>Anthus novaeseelandiae novaeseelandiae</i>	New Zealand pipit	AR - D	Bird	Rough open habitats, from the coastline to alpine shrublands
<i>Bowdleria punctata punctata</i>	South Island fernbird	AR - D	Bird	Dense wetland and saltmarsh vegetation
<i>Charadrius bicinctus bicinctus</i>	Banded dotterel	T - NV	Bird	Estuaries, lake margins short grassland
<i>Chlidonias albobristatus</i>	Black-fronted tern	T - NE	Bird	Braided riverbeds, sheltered harbours, estuaries and lagoons, and near-coastal farmland
<i>Egretta sacra sacra</i>	Reef heron	T- NE	Bird	Coastal waterways and shoreline habitat
<i>Eudyptula minor minor</i>	Southern blue penguin	AR - D	Bird	Coastal areas and harbours
<i>Haematopus finschi</i>	South Island pied oystercatcher	AR - D	Bird	Coast and inland habitats including braided rivers
<i>Hydroprogne caspia</i>	Caspian tern	T - NV	Bird	Sheltered bays and harbours
<i>Larus bulleri</i>	Black-billed gull	T - NC	Bird	River beds and adjacent agricultural habitats, coastal marine zone
<i>Larus novaehollandiae scopulinus</i>	Red-billed gull	AR - D	Bird	Coastal areas; rarely inland
<i>Limosa lapponica baueri</i>	Eastern bar-tailed godwit	AR - D	Bird	Intertidal zone at Blueskin Bay
<i>Megadyptes antipodes</i>	Yellow-eyed penguin	T - NE	Bird	Coastal areas
<i>Naultinus gemmeus</i>	Jewelled gecko	AR - D	Reptile	Shrubland/forest and tussockland
<i>Oligosoma aff. polychroma Clade 5</i>	Southern grass skink	AR - D	Reptile	Rank grass and tussock grassland
<i>Oligosoma burganae</i>	Burgan skink	T - NC	Reptile	Tussock grassland
<i>Oligosoma chloronoton</i>	Green skink	AR - D	Reptile	Vegetated rock tumbles and screes; open habitats
<i>Oligosoma grande</i>	Grand skink	T - NE	Reptile	Rock outcrops in open habitats
<i>Oligosoma inconspicuum</i>	Cryptic skink	AR - D	Reptile	Damp gullies and seepages in and around vegetation
<i>Oligosoma otagense</i>	Otago skink	T - NE	Reptile	Rock outcrops in open habitats

Species	Common Name	Threat Classification	Type of Animal	Habitat
<i>Petroica australis australis</i>	South Island robin	AR - D	Bird	Mature forest, scrub, and exotic forest plantations
<i>Phocarctos hookeri</i>	Hooker's sea lion	T - NC	Mammal	Coast
<i>Puffinus griseus</i>	Sooty shearwater	AR - D	Bird	Coastal cliffs and headlands
<i>Sterna striata striata</i>	White-fronted tern	AR - D	Bird	Coastal waters and harbours
<i>Woodworthia</i> "Otago/Southland large"	Korero gecko	AR - D	Reptile	Rock substrate in open areas

### Appendix 10A.3 Important native tree list

Botanical Name	Common Name
<i>Dacrycarpus dacrydioides</i>	Kahikatea
<i>Dacrydium cupressinum</i>	Rimu
<i>Elaeocarpus hookerianus</i>	Pokaka
<i>Halocarpus bidwillii</i>	Bog pine
<i>Halocarpus biformis</i>	Pink pine
<i>Hoheria angustifolia</i>	Narrow-leaved lacebark
<i>Libocedrus bidwillii</i>	Cedar
<i>Lophomyrtus obcordata</i>	Rohutu
<i>Melicope simplex</i>	Poataniwha
<i>Myoporum laetum</i>	Ngaio
<i>Nothofagus menziesii</i>	Silver beech
<i>Phyllocladus alpinus</i>	Celery pine
<i>Plagianthus regius</i>	Lowland ribbonwood
<i>Podocarpus hallii</i>	Hall's totara
<i>Podocarpus totara</i>	Totara
<i>Prumnopitys ferruginea</i>	Miro
<i>Prumnopitys taxifolia</i>	Matai
<i>Sophora microphylla</i>	Kowhai
<i>Streblus heterophyllus</i>	Milk tree
<i>Weinmannia racemosa</i>	Kamaha

## Appendix 10B. Pest Plant Species

The table below sets out the pest plant species identified in the District Plan:

Species	Common name
<i>Acacia dealbata</i>	Silver wattle
<i>Acanthus mollis</i>	Bear's breeches
<i>Acer pseudoplatanus</i>	Sycamore
<i>Ageratina adenophora</i>	Mexican devil
<i>Ageratina riparia</i>	Mistflower
<i>Akebia quinata</i>	Chocolate vine or Akebia
<i>Alocasia brisbanensis</i>	Elephant ear
<i>Alternanthera philoxeroides</i>	Alligator weed
<i>Arundo donax</i>	Giant reed
<i>Berberis darwinii</i>	Darwin's barberry
<i>Berberis glaucocarpa</i>	Barberry
<i>Bomarea caldasii</i>	Bomarea, climbing alstroemeria
<i>Bryonia cretica ssp dioica</i>	White bryony
<i>Buddleja davidii</i>	Buddleia
<i>Calicotome spinosa</i>	Spiny broom
<i>Calluna vulgaris</i>	Heather
<i>Calotis lappulacea</i>	Bur daisy
<i>Cardiospermum grandiflorum</i>	Balloon vine
<i>Carduus nutans</i>	Nodding thistle
<i>Cestrum elegans and Cestrum fasciculatum</i>	Red cestrum
<i>Cestrum parqui</i>	Green cestrum
<i>Chrysanthemoides monilifera ssp. Monilifera</i>	Boneseed
<i>Clematis vitalba</i>	Old man's beard
<i>Cortaderia jubata</i>	Purple pampas
<i>Cortaderia selloana and Cortaderia jubata</i>	Pampas grass
<i>Cotoneaster franchettii</i>	Cotoneaster, Franchet's cotoneaster
<i>Cotoneaster glaucophyllus</i>	Cotoneaster
<i>Cotoneaster simonsii</i>	Khasia berry
<i>Crataegus monogyna</i>	Hawthorn

Species	Common name
<i>Crocasmia x crocosmiiflora</i>	Montbretia
<i>Cytisus scoparius</i>	Broom
<i>Dendrobenthamia capitata</i>	Strawberry dogwood
<i>Drosera capensis</i>	Cape sundew
<i>Dryopteris affinis</i>	Scaly male fern
<i>Dryopteris filix-mas</i>	Male fern
<i>Eccremocarpus scaber</i>	Chilean glory creeper
<i>Equisetum arvense</i>	Field horsetail
<i>Eragrostis curvula</i>	African love grass
<i>Erigeron karvinskianus</i>	The Mexican daisy
<i>Escallonia rubra</i>	Red escallonia
<i>Eschscholzia californica</i>	Californian poppy
<i>Euonymus europaeus</i>	Spindle tree
<i>Euonymus japonicus</i>	Japanese spindleberry
<i>Fallopia japonica</i>	Japanese knotweed
<i>Fraxinus excelsior</i>	Ash
<i>Fuchsia boliviana</i>	Bolivian fuchsia
<i>Gunnera tinctoria</i>	Chilean rhubarb and Brazilian rhubarb
<i>Hedera helix</i>	Ivy
<i>Hedychium flavescens</i>	Yellow ginger
<i>Hedychium gardnerianum</i>	Kahili ginger
<i>Heracleum mantegazzianum</i>	Giant hogweed
<i>Hieracium species</i>	Hawkweed
<i>Houttuynia cordata</i>	Houttuynia, Chameleon plant
<i>Ilex aquifolium</i>	Holly
<i>Impatiens glandulifera</i>	Himalayan balsam
<i>Ipomoea indica</i>	Blue morning glory
<i>Jasminum polyanthum</i>	Jasmine
<i>Juncus gerardii</i>	Saltmarsh rush, blackgrass, black needle rush
<i>Lagarosiphon major</i>	African oxygen weed
<i>Lamium galeobdolon 'Variegatum'; Galeobdolon luteum</i>	Aluminium plant, Artillery plant

Species	Common name
<i>Leycesteria formosa</i>	Himalayan honeysuckle
<i>Ligustrum sinense</i>	Chinese privet
<i>Lonicera japonica</i>	Japanese honeysuckle
<i>Lupinus arboreus</i>	Tree lupin
<i>Lupinus polyphyllus</i>	Russell lupin
<i>Lycium ferocissimum</i>	Boxthorn
<i>Lythrum salicaria</i>	Purple loosestrife
<i>Macfadyena unguis-cati</i>	Cat's claw creeper
<i>Myricaria germanica</i>	False tamarisk
<i>Myriophyllum aquaticum</i>	Parrots feather
<i>Nassella tenuissima</i>	Finestem needlegrass
<i>Nassella trichotoma</i>	Nassella tussock
<i>Nephrolepis cordifolia</i>	Tuber ladder fern
<i>Osmunda regalis</i>	Royal fern
<i>Paraserianthes lophantha</i>	Brush wattle
<i>Passiflora caerulea</i>	Blue passion flower
<i>Passiflora mixta</i>	Banana passionfruit, northern banana passionfruit
<i>Passiflora mollissima</i>	Banana passionfruit
<i>Passiflora pinnatistipula</i>	Yellow passionfruit
<i>Passiflora tripartita</i>	Banana passionfruit, northern banana passionfruit
<i>Pennisetum clandestinum</i>	Kikuyu
<i>Pennisetum macrourum</i>	African feather grass
<i>Pennisetum setaceum</i>	Fountain grass
<i>Phytolacca octandra</i>	Inkweed
<i>Pinus contorta</i>	Contorta pine
<i>Plectranthus ciliatus</i>	Plectranthus
<i>Prunus laurocerasus</i>	Cherry laurel
<i>Pseudosasa japonica</i>	Arrow bamboo
<i>Pueraria montana subspecies lobata</i>	Kudzu vine
<i>Reynoutria japonica</i>	Asiatic knotweed
<i>Rosa rubiginosa</i>	Sweet briar
<i>Rubus fruticosus agg.</i>	Blackberry

Species	Common name
<i>Sagittaria montevidensis</i>	Arrowhead
<i>Sambucus nigra</i>	Elder, elderflower, elderberry
<i>Salix cinerea</i>	Grey willow
<i>Salix fragilis</i>	Crack willow
<i>Selaginella kraussiana</i>	African club moss
<i>Senecio angulatus</i>	Cape ivy
<i>Senecio jacobaea</i>	Ragwort
<i>Senecio mikanioides</i>	German ivy
<i>Solanum dulcamara</i>	Bittersweet
<i>Solanum marginatum</i>	White-edged nightshade
<i>Spartina spp.</i>	Cordgrass
<i>Teline monspessulana</i>	Montpellier broom
<i>Tradescantia fluminensis</i>	Wandering jew
<i>Tropaeolum majus</i>	Nasturtium
<i>Tussilago farfara</i>	Coltsfoot
<i>Ulex europaeus</i>	Gorse
<i>Urtica dioica</i>	Perennial Nettle
<i>Utricularia gibba</i>	Bladderwort
<i>Vinca major</i>	Periwinkle
<i>Watsonia bulbifera</i>	Watsonia
<i>Zantedeschia aethiopica</i>	Arum lily
<i>Zantedeschia aethiopica</i> 'green goddess'	Green goddess
<i>Zizania latifolia</i>	Manchurian rice grass

## Appendix 10C. Water Body Values

Water body	Conservation values	Public recreation and access values
Abernathys Creek	Important as a refuge for native fish in significant lifecycle stages. Likely to be present: banded kokopu, common bully, inanga, koura.	
Andersons Bay Stream	Important as a refuge for native fish in significant lifecycle stages. Likely to be present: banded kokopu, common bully, inanga, koura, redfin bully and giant kokopu.	
Battery Creek	Common and redfin bullies, inanga, banded kokopu, eels and koura.	
Bull Creek	High biodiversity values - eel species, migratory galaxias	
Carey's Creek	High native fish values - whitebait spawning, passage for lamprey, longfin, shortfin, bully species and black flounder.	Recreation value, Mahika kai values.
Christies Creek	Black flounder, bullies and eel species.	Important for trout
Craigs Creek	Important as a refuge for native fish in significant lifecycle stages. Likely to be present: banded kokopu, bullies, eel.	
Deborah Bay Stream	Important as a refuge for native fish in significant lifecycle stages. Likely to be present: banded kokopu, bullies, eel.	
Deep Creek	Ecological values - Galaxias depressiceps (nationally vulnerable).	Recreation values
Deep Stream	Ecological values - Eldon's galaxias (nationally endangered) in upper tributaries.	Recreation values - brown trout
Dons Creek	Likely - lamprey, eel species, bullies, migratory galaxias.	
Fern Stream	Likely presence of banded kokopu, common bully, inanga, koura	
Flagstaff Creek	Kokopu, eel species	Trout
Flat Stream	Possible Galaxias eldons (nationally endangered)	
Foote Stream		
Frasers Stream	Banded kokopu	Trout
Kaikorai Stream	Mitigating flooding and erosion. Lower reaches have tidal influence and high conservation value	
Lagoon Creek	Common bully, inanga, perch, koura, longfin eel.	
Latham Bay Stream	Important as a refuge for native fish in significant lifecycle stages. Banded kokopu.	

Water body	Conservation values	Public recreation and access values
Lee Creek	High values for giant kokopu in upper reaches, also perch, common bully, freshwater mussel.	
Lee Stream	Eldon's galaxias (upper tributaries), longfin eel	Brown trout
Lindsays Creek	Mitigating flooding and erosion, Banded and giant kokopu, shortfin and longfin eel, koura.	Important trout spawning from Chingford park downstream. Maybe salmon. Potential transport and recreation corridor
Lug Creek	Potentially Galaxias anomalus (nationally endangered)	Brown trout in lower reaches
Macandrew Bay Stream	Important as a refuge for native fish in significant lifecycle stages - banded kokopu.	
Mihiwaka Stream		
Nenthorn Stream	Galaxias depressiceps (nationally vulnerable), freshwater mussel, longfin eel, koura.	Trout
Opoho Creek	Important as a refuge for native fish in significant lifecycle stages - banded kokopu and koura.	
Orbells Creek	Potential habitat for Galaxias depressiceps (nationally vulnerable).	
Orokonui Creek	Banded kokopu, giant kokopu, inanga, longfin eel, shortfin eel, giant bully, redfin bully, bluegill bully, lamprey	Brown trout
Ōtākou Stream	Important as a refuge for native fish in significant lifecycle stages	
Otokia Creek	Regionally significant Giant kokopu population, banded kokopu. longfin eel	
Owhiro Stream	Longfin and shortfin eel habitat, perhaps inanga.	Mahika kai values. Potential transportation and recreation corridor.
Portobello Stream	Important as a refuge for native fish in significant lifecycle stages - banded kokopu and redfin bully	
Post Office Creek (Waikouaiti)	Mitigating flooding and erosion. Migratory galaxias, longfin and shortfin eel	
Post Office Creek (Waipori)	Eldon's galaxias (nationally endangered), koaro, koura	
Pūrākaunui Creek	High biodiversity values in headwaters	High recreational use including whitebaiting in lower reaches
Sawyers Bay Stream	Important as a refuge for native fish in significant lifecycle stages.	

Water body	Conservation values	Public recreation and access values
Silverstream	Mitigating flooding and erosion. Migratory value for species in upper reaches	Transportation corridor. High trout values, with high demand for fishing opportunities near urban areas.
Smiths Creek	Important as a refuge for native fish in significant lifecycle stages	
Smugglers Creek	Eldon's galaxias (nationally endangered), longfin eel, koura	Brown trout
Stewarts Creek	Common and redfin bullies, inanga, banded kokopu, eels and koura.	
Stony Creek	Eldon's galaxias (nationally endangered)	
Styles Creek	Important as a refuge for native fish in significant lifecycle stages	
Sutton Stream	Ecological values	Important for trout
Taieri River (upper)	Mitigating flooding and erosion (Hyde to Sutton). Ecological values	Mahika kai values. Important for trout
Taieri River (lower)	High biodiversity - inanga, lamprey, longfin, shortfin, black flounder, smelt, blue gill bully, torrent fish. Tidal zone important for whitebait (especially near Henley) and flounder.	Mahika kai values. Important for trout
Three O'clock Stream	Galaxias depressiceps (nationally vulnerable).	Trout angling
Toll Bar Creek	Potential for Galaxias depressiceps (nationally vulnerable)	
Traquair Burn	Longfin eel, common bully. Galaxias eldoni (nationally endangered) at top end.	Brown trout
Verter Burn	Koaro, koura. Potential for Galaxias eldoni (nationally endangered) at top end.	Brown trout, rainbow trout
Waikouaiti River	Mitigating flooding and erosion. Ecological values - high native fishery values. Galaxias depressiceps (nationally vulnerable).	Mahika kai values. High recreational values, including whitebaiting, game bird hunting, fishing (especially downstream of Orbells Crossing). Potential transportation corridor from SH1 bridge to Karitane
Waipori River	Mitigating flooding and erosion. All migratory galaxias, Galaxias pullus and eldons (nationally endangered) in the headwaters. Koura.	Mahika kai values. Some hunting and angling

Water body	Conservation values	Public recreation and access values
Waitati River	Mitigating flooding and erosion. High biodiversity values in headwaters	High recreational use including whitebaiting in lower reaches
Water of Leith	Mitigating flooding and erosion. Important as a refuge for native fish in significant lifecycle stages. Lamprey and longfin eel, koura in tributary streams.	
Whare Creek	Galaxias eldoni (nationally endangered).	Brown trout

## 11. Natural Hazards

### 11.1 Introduction

#### 11.1.1 Dunedin's natural hazard risks

Under the Resource Management Act 1991 (RMA), the DCC is responsible for managing land use and subdivision to avoid or mitigate the risks from natural hazards. The DCC is also required to keep records of natural hazards. Communities in and around Dunedin are susceptible to a variety of natural hazards, including flooding from rivers alluvial fans, and from the sea due to storm events, tsunamis and sea level rise, land instability and earthquakes.

A large storm event could easily cause the Taieri River to flood, as well as several smaller rivers and alluvial fans. This issue is particularly acute on low-lying flood plains, where streams exit valleys (in the case of alluvial fans) and in coastal areas. Coastal storm surges may also result in flooding of certain areas.

Land instability can affect buildings built on steep sections and large storm events can contribute to land instability. Earthquakes can also contribute to land instability and cause liquefaction. Finally, sea level rise as a result of climate change poses some risk to Dunedin, particularly in low-lying coastal communities.

The effects of natural hazards vary in terms of both their likelihood and consequence. Some natural hazards such as flooding may occur relatively frequently and may damage property, whereas natural hazards such as tsunami occur infrequently, but when they do occur they pose serious risk to life.

This Plan manages natural hazards through policies and rules attached to different overlays (overlay zones and mapped areas). The rules vary according to the type of natural hazard, the risk it poses and the sensitivity of the activity proposed. The mapping of the overlay zones and mapped areas is based on the best available information at the time of any plan change, however, inevitably due to the scale of areas covered by the research and modelling that was used to produce the maps, they may not be 100% accurate at the site level and there may be site-specific variations.

Not all natural hazards defined in the RMA are identified or managed in this Plan. Other natural hazards Dunedin may be vulnerable to include snow, ice, drought, strong winds, and fire. These natural hazards are primarily managed outside the natural hazard provisions of the Plan. For example, the risks from snow and strong winds are managed through the Building Act 2004, and other mitigation measures are taken by the DCC Transportation team. The District Plan does, however, include requirements for water supply access and suitable access for fire appliances for firefighting purposes. These rules and their related objectives and policies sit within the Public Health and Safety section of the Plan.

#### 11.1.2 Guidance on risk

Land use, subdivision, and development need to be managed to minimise Dunedin's vulnerability to natural hazards.

The approach used in this Plan aims to strike a balance between enabling people to utilise their property without putting them or their important assets at risk if an event was to occur. The key priority in managing the risks from natural hazards is the protection of people including from loss of life, injury, the risk of being cut off from Civil Defence assistance, or the failure of key infrastructure required to ensure the health and safety of communities (such as wastewater treatment systems). After this, the focus is on risk to property, such as loss of, or damage to, buildings.

In the context of the natural hazards provisions, risk refers to the likelihood of a natural hazard event occurring, in combination with the potential adverse consequences of that event. Table 11.1.2A below sets out how the combination of likelihood and consequence is combined to produce a risk assessment of low, moderate, or high. This approach is based on guidance provided by the Ministry for the Environment (*Preparing for Future Flooding: A guide for local government in New Zealand, 2010*) and GNS Science (*Risk-based Land Use Planning for Natural Hazard*

*Risk Reduction, 2013*). The degree of risk is influenced by the magnitude of a natural hazard event, and the type of consequences to human safety, property, or the environment arising from the event either on-site or further afield.

For most natural hazard events, it is difficult to determine exact probabilities of occurrence, and likelihood estimates are indicatively applied, rather than specifically modelled. The consequences of a natural hazard event occurring are considered in the context of health and safety, costs of damage to the built environment, and social and economic impacts on the wider community.

In Table 11.1.2A likelihood is expressed as an Annual Exceedance Probability (AEP). AEP is a percentage chance of an event occurring in any given year. For example, a 1 in 50 year event can also be expressed as a 2% AEP and means that there is a 2% chance of an event that size occurring in any given year.

For the purposes of the natural hazards provisions, the sensitivity of land use activities is classified according to the health and safety implications of the land use. This helps to manage the consequences that may occur as a result of a natural hazard event. This sensitivity classification draws from, and broadly corresponds to, the building importance levels defined in the Building Regulations 1992 (Schedule 1: The building code).

Site specific investigation will identify local variation in the risk level specified in this Plan. Risk can also be reduced through mitigation measures including site design and layout, material used, and the design of buildings and structures. This means that while in a certain area there is a potential for a high risk (for example on a site in a Hazard 1 Overlay Zone), this risk can sometimes be reduced to a low risk, under the right circumstances. The resource consent process is used to determine the actual risk of a particular proposal at a specific location, and whether it can meet the policy test of being 'no more than low'. This assessment will also include the potential off-site risks (e.g. diversion of floodwater creating or exacerbating risk). It will also consider the residual risk in the event any proposed mitigation measures should fail.

**Table 11.1.2A Risk Guidance**

Likelihood	Minor consequences	Moderate consequences	Major consequences
Very likely (less than 1:50 (1 in 50 year event) or annual exceedance probability (AEP) 2% or more)	Low to Moderate risk	Moderate to High risk	High risk
Moderately likely <sup>1</sup> (1:50 - 1:200 or AEP range 0.5% to 2%)	Low risk	Moderate risk	High risk
Unlikely (1:200 - 1:500 or AEP range 0.2% to 0.5%)	Low risk	Low risk	Moderate risk
Very unlikely (1:500 to 1:2500 or AEP range 0.04% to 0.2%)	Very low risk	Low risk	Moderate risk
Extremely unlikely (more than 1: 2500 or AEP 0.04% or less)	Very low risk	Very low risk	Low risk

<sup>1</sup> Where likelihood is unknown or poorly established, use 'moderately likely'.

### 11.1.3 Hazard provisions sensitivity classification

For the purpose of the hazard provisions, activities are categorised as natural hazards sensitive activities, natural hazards potentially sensitive activities or natural hazards least sensitive activities as follows:

**Table 11.1.3A Hazard sensitivity**

Hazard provisions sensitivity classification	Activities
Natural hazards sensitive activities	<ul style="list-style-type: none"> <li>• Cemeteries</li> <li>• Crematoriums</li> <li>• Registered health practitioners</li> <li>• Early childhood education</li> <li>• Hospital</li> <li>• Landfills</li> <li>• Marae-related activities</li> <li>• Prisons or detention centres</li> <li>• Residential activities (excluding working from home that do not involve additional people on-site)</li> <li>• Schools</li> <li>• Visitor accommodation</li> </ul>
Natural hazards potentially sensitive activities	<ul style="list-style-type: none"> <li>• Airport</li> <li>• Campus</li> <li>• Community and leisure (excluding marae-related activities)</li> <li>• Commercial activities (excluding visitor accommodation, registered health practitioners, commercial advertising)</li> <li>• Intensive farming</li> <li>• Industrial activities</li> <li>• Invermay/Hercus</li> <li>• Major recreation facility</li> <li>• Mining</li> <li>• New Zealand Marine Studies Centre</li> <li>• Port</li> <li>• Rural tourism - large scale</li> <li>• Rural research - large scale</li> <li>• Sport and recreation</li> <li>• Taieri Aerodrome</li> </ul>
Natural hazards least sensitive activities	All other activities not specifically listed above as natural hazards sensitive activities or natural hazards potentially sensitive activities.

### 11.1.4 Hazard overlays

Dunedin's hazard prone areas are managed through eight overlay zones, and two mapped areas (swales and dune systems). Initial assessments have established that risk (as defined in the guidance above) within the hazard overlay zones is as follows:

**Table 11.1.4A Potential risk within hazard overlay zones**

Hazard overlay zones	Risk (in accordance with the guidance on defining risk in Table 11.1.2A above)
Hazard 1A (flood) Overlay Zone	High
Hazard 1 (flood) Overlay Zone	
Hazard 1 (land instability) Overlay Zone	
Hazard 2 (flood) Overlay Zone	Moderate
Hazard 2 (land instability) Overlay Zone	
Hazard 3 (flood) Overlay Zone	Low
Hazard 3 (coastal) Overlay Zone	
Hazard 3 (alluvial fan) Overlay Zone	

*\*Note that the level of risk is a broad assessment of potential risk. Potential risk may vary from site to site and within sites, and actual risk is dependent on the location and design of activities.*

At this stage, no areas have been identified as being exposed to a high or moderate risk from coastal hazards (Hazard 1 or 2 overlay zones), however areas may be included in these categories on the basis of future assessments.

While no areas have been identified as being exposed to a low risk of land instability (as hazard 3 overlay zones), many sites in Dunedin could fit within this category, but risk is managed primarily through the earthworks provisions, and Building Act 2004 requirements (e.g. foundation design).

Assessments of risk have been done on a catchment, landslide, or area-wide basis, often as a desk-top assessment drawing on previous on-the-ground investigations and observations, and should be used as a starting point only. Local, site specific assessments are recommended. Where site specific assessments have been carried out and these have been provided to the DCC or Otago Regional Council, these may be available from the DCC by a Land Information Memorandum or Hazard Information Report request, or the Otago Regional Council online Otago Natural Hazards Database.

It is acknowledged that risk can be influenced by site or area specific factors, such as topography, elevation, soil make-up and other factors. Factors such as these should always be taken into account when assessing risk in relation to a particular proposal.

In addition, swales and undeveloped parts of dune systems are identified as mapped areas. Swales form part of the natural drainage system of the Taieri and can act to convey floodwater away from development. In these areas development is considered to be inappropriate, due to the role these features play in mitigating the effects of natural hazard events. Dune systems buffer land from coastal processes.

## 11.2 Objectives and Policies

### Objective 11.2.1

Land use and development is located and designed in a way that ensures that the risk from natural hazards, and from the potential effects of climate change on natural hazards, is no more than low, in the short to long term.

Policy 11.2.1.1	In the Hazard 1 (flood) Overlay Zone, avoid natural hazards sensitive activities and natural hazards potentially sensitive activities unless: <ul style="list-style-type: none"> <li>a. the risk from natural hazards is avoided, or is no more than low; and</li> <li>b. the activity has a critical operational need to locate within the Hazard 1 (flood) Overlay Zone and locating outside it is not practicable.</li> </ul>
Policy 11.2.1.2	In the Hazard 1A (flood) Overlay Zone, avoid natural hazards sensitive activities.
Policy 11.2.1.3	In the Hazard 1A (flood) Overlay Zone, avoid natural hazards potentially sensitive activities, unless: <ul style="list-style-type: none"> <li>a. the risk from natural hazards is avoided, or is no more than low; and</li> <li>b. the activity has a critical operational need to locate within the Hazard 1A (flood) Overlay Zone and locating outside it is not practicable.</li> </ul>
Policy 11.2.1.4	In the hazard 1, hazard 1A and hazard 2 (flood) overlay zones, only allow new buildings and additions and alterations to buildings, where the scale, location and design of the building or other factors mean risk is avoided, or is no more than low.
Policy 11.2.1.5	In the hazard 1 and hazard 1A (flood) overlay zones, require outdoor storage to be designed, managed, and located so that: <ul style="list-style-type: none"> <li>a. potentially dangerous materials will not be mobilised in a flood; and</li> <li>b. materials will not obstruct or impede flood water.</li> </ul>
Policy 11.2.1.6	In the Hazard 2 (flood) Overlay Zone, only allow natural hazards sensitive activities and natural hazards potentially sensitive activities where: <ul style="list-style-type: none"> <li>a. the activity has a critical operational need to locate within the Hazard 2 (flood) Overlay Zone and risk is minimised as far as practicable; or</li> <li>b. the scale, location and design of the activity or other factors means risk is avoided, or is no more than low.</li> </ul>
Policy 11.2.1.7	Only allow large quantities of hazardous substances in hazard 1, hazard 1A and 2 overlay zones where they are stored in a manner that ensures risk from natural hazards is avoided, or is no more than low.
Policy 11.2.1.8	In the Hazard 3 (coastal) Overlay Zone, require new buildings containing residential activity on the ground floor to be relocatable, unless site constraints mean this is not practicable.
Policy 11.2.1.9	Avoid development activities and public amenities in a <b>swale mapped area</b> unless they will not obstruct or impede water, or cause water to be diverted out of a swale, during a flood hazard event.
Policy 11.2.1.10	Avoid buildings and structures within the <b>dune system mapped area</b> unless: <ul style="list-style-type: none"> <li>a. they have an operational need to locate there;</li> <li>b. there is no risk that development will cause, exacerbate, or be at risk from coastal erosion; and</li> <li>c. the risk from natural hazards is no more than low.</li> </ul>

### Objective 11.2.1

Land use and development is located and designed in a way that ensures that the risk from natural hazards, and from the potential effects of climate change on natural hazards, is no more than low, in the short to long term.

<p>Policy 11.2.1.11</p>	<p>In all hazard overlay zones, the <b>swale mapped area</b>, and the <b>dune system mapped area</b>, only allow earthworks - large scale where:</p> <ol style="list-style-type: none"> <li>the risk from natural hazards will be avoided, or is no more than low;</li> <li>they will not have adverse effects on land instability nor create, exacerbate, or transfer risk from natural hazards;</li> <li>they will not have adverse effects on the stability or buffering capacity of dune systems; and</li> <li>they will not obstruct or impede flood water, unless part of approved natural hazard mitigation activities.</li> </ol>
<p>Policy 11.2.1.12</p>	<p>In all hazard overlay zones, the <b>swale mapped area</b>, the <b>dune system mapped area</b>, or in any other area that the DCC has information to suspect there may be risk from a natural hazard, only allow subdivision activities where there is a reasonable level of certainty that any future land use or development will meet policies 11.2.1.1 - 11.2.1.11.</p>
<p>Policy 11.2.1.13</p>	<p>Limit vegetation clearance in hazard (land instability) overlay zones, the <b>dune system mapped area</b>, and along the banks of water bodies, to a scale and type that ensures any resultant risk from erosion or land instability is avoided, or is no more than low.</p>
<p>Policy 11.2.1.14</p>	<p>Require buildings, structures, storage and use of hazardous substances, network utility activities, and earthworks - large scale to be set back an adequate distance from water bodies to ensure that the risk from natural hazards, including from erosion and flooding, is avoided, or is no more than low.</p>
<p>Policy 11.2.1.15</p>	<p>Only allow hazard mitigation earthworks and hazard mitigation structures where:</p> <ol style="list-style-type: none"> <li>the option of doing nothing is not the best practicable option; and</li> <li>it will reduce risk overall.</li> </ol>

## Rules

### Rule 11.3 Natural Hazards Performance Standards

#### 11.3.1 Hazard Exclusion Areas

##### 11.3.1.1 Swale mapped area

- a. New buildings and structures, additions and alterations and public amenities, must not be located inside the boundaries of a **swale mapped area**, except:
  - i. buildings or structures less than 36m<sup>2</sup> in a residential zone or the Rural Centre Zone; and
  - ii. post and wire fences or other fences where 80% of the surface area will permit the unobstructed passage of water.
- b. Other development activities, including outdoor storage, must not obstruct or impede water in a manner that may cause water to be diverted out of a **swale mapped area**.
- c. Activities that contravene the performance standard for **swale mapped areas** are non-complying activities, except in a residential zone or the Rural Centre Zone, in which case they are restricted discretionary activities.

##### 11.3.1.2 Dune system mapped area

- a. New buildings and structures, and additions and alterations, must not be located inside the boundaries of a **dune system mapped area**, except for buildings or structures used for:
  - i. surf life saving;
  - ii. conservation activity or public access that is provided for in a conservation management strategy, conservation management plan or reserve management plan; and
  - iii. wildlife conservation.
- b. Activities that contravene this performance standard are non-complying activities.

#### 11.3.2 Maximum Area of Vegetation Clearance in the Hazard Overlay Zones

1. In the Hazard 1 (land instability) or Hazard 2 (land instability) Overlay Zones, the maximum area of vegetation clearance is 50m<sup>2</sup> per site, per year, except that, on sites that are located within rural zones, more than one area up to 50m<sup>2</sup> may be cleared if one of the following situations apply:
  - a. the area to be cleared is located at least 400m from any other area of vegetation clearance on the same site; or
  - b. the area to be cleared is located within 400m of another area of vegetation clearance on the same site, but the other area is not located within the same Hazard 1 (land instability) or Hazard 2 (land instability) Overlay Zone.
2. This standard does not apply to vegetation clearance as part of any of the following:
  - a. the erection, maintenance or alteration of fences (including gates);
  - b. the maintenance (but not extension) of existing network utilities, irrigation infrastructure, tracks, drains, structures, firebreaks or roads;
  - c. the construction of tracks up to 2m in width;
  - d. clearance of areas that, within the last 10 years, have been cultivated or clear of vegetation; or
  - e. removal of pest plant species listed in Appendix 10B, or of grasses or plant species with a root depth of less than 30cm, provided that the area is replanted within 3 months.
3. For the purposes of this standard:
  - a. the area to be cleared will be measured from stems at ground level; and

- b. the time period will be measured as the total clearance over any calendar year.
4. Vegetation clearance must not occur in the **dune system mapped area** except vegetation clearance as part of any of the following is exempt from this standard:
  - a. planting of indigenous species as part of a conservation activity;
  - b. the maintenance or alteration of fences (including gates);
  - c. the maintenance (but not extension) of existing network utilities, irrigation infrastructure, tracks, drains, structures, firebreaks or roads;
  - d. vegetation clearance that is consistent with or provided for as part of a conservation management strategy, conservation management plan, reserve management plan or covenant established under the Conservation Act 1987 or any other Act specified in the First Schedule of the Conservation Act 1987; or
  - e. removal of pest plant species listed in Appendix 10B, or of grasses or plant species with a root depth of less than 30cm, provided that the area is replanted within 3 months.
5. Activities that contravene this performance standard are restricted discretionary activities.

### **11.3.3 Relocatable Buildings**

1. In the hazard 3 (coastal) Overlay Zone, new buildings containing residential activity on the ground floor must be relocatable.
2. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 11.3.3A - General advice**

1. Relocatable buildings may not avoid all risks from natural hazards, particularly in the long term.
2. Development in hazard prone areas, including in the identified hazard overlay zones, are at an owner's risk and the DCC does not accept any liability in regards to development and risk from natural hazards.

### **11.3.4 Outdoor Storage**

1. In the hazard 1 (flood) and hazard 1A (flood) overlay zones, materials and goods must be stored in a way that prevents:
  - a. potentially dangerous materials being mobilised in the event of a flood; or
  - b. any materials or goods from obstructing or impeding water in a manner that may cause water to be diverted to another site.
2. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 11.3.4A - Other requirements outside of the District Plan**

1. Minimum floor levels are required by the New Zealand Building Code to safeguard people from injury or illness and other property from damage caused by surface water. These are implemented through the building consent process. Surface water is defined in the Building Code as "all naturally occurring water, other than sub-surface water, which results from rainfall on the site or water flowing onto the site, including that flowing from a drain, stream, river, lake or sea" (Schedule 1, Building Regulations 1992).

## **Rule 11.4 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **11.4.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 11.4.2:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

#### 11.4.2 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1.	All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The risks from natural hazards will be no more than low when assessed against the guidance provided in Table 11.1.2A, taking into account site or area specific factors, including the elevation of the site or the topography of the area.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>b. Where more than one standard is contravened, the combined effects of the contraventions will be considered.</li> <li>c. In balancing consideration of the objectives and policies related to reducing risk and those related to general amenity (for example height or setbacks), greater weight will usually be placed on reducing risk.</li> <li>d. In assessing the risks from natural hazards, Council will consider: <ul style="list-style-type: none"> <li>i. how the risk from natural hazards may worsen over time due to climate change; and</li> <li>ii. the policies of the New Zealand Coastal Policy Statement 2010 in terms of acceptable levels of risk.</li> </ul> </li> <li>e. In assessing the appropriateness of alternative mitigation measures: <ul style="list-style-type: none"> <li>i. consideration will be given to their potential effectiveness, in the short to longer term;</li> <li>ii. preference will be given to non-structural solutions, over engineering or structural solutions, where practicable;</li> <li>iii. mitigation measures that rely on significant capital investment or requirements for ongoing maintenance by the DCC or Otago Regional Council will generally not be seen as appropriate; and</li> <li>iv. any mitigation measures that may result in more than negligible adverse effects on biodiversity values, more than minor adverse effects on access to the coast, or significant effects on amenity or natural coastal sedimentation processes, will generally not be seen as appropriate.</li> </ul> </li> <li>f. Council will consider the findings of any report by a suitably qualified person, where required (see Special Information Requirements - Rule 11.8.1).</li> </ul>

### 11.4.2 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Hazard exclusion areas (Rule 11.3.1.1) <b>swale mapped area</b> (residential zones and Rural Centre Zone only)	a. Risk from natural hazards	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 11.2.1</li> <li>ii. Development activities and public amenities in a <b>swale mapped area</b> do not obstruct or impede water, or cause water to be diverted out of a swale, during a flood hazard event (Policy 11.2.1.9).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. An assessment by a suitably qualified person has established that the development will not obstruct or impede water in a flood hazard event, and not cause water to be diverted out of the swale.</li> </ul>
3. Hazardous substances quantity limits and storage requirements (Rule 9.3.4)	a. Risk from natural hazards	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 11.2.1</li> <li>ii. Hazardous substances in hazard 1, hazard 1A and 2 overlay zones are stored in a manner that ensures the risk from natural hazards is avoided, or is no more than low (Policy 11.2.1.7).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. An assessment by a suitably qualified person has established an appropriate manner of storage.</li> </ul>
4. Maximum area of vegetation clearance in the hazard overlay zones	a. Risk from natural hazards	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 11.2.1</li> <li>ii. In a Hazard 1 (land instability) or Hazard 2 (land instability) Overlay Zone, or <b>dune system mapped area</b>, the scale and type of vegetation clearance will ensure the risk from erosion or land instability is avoided, or is no more than low (Policy 11.2.1.13).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. A report by a suitably qualified person confirms that the risk from the vegetation clearance will be no more than low.</li> <li>iv. The area is to be replanted with species that will have equal or greater positive effects in terms of land stability and erosion control.</li> </ul>
5. Outdoor storage	a. Risk from natural hazards	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 11.2.1</li> <li>ii. In the hazard 1 and 1A (flood) overlay zones, outdoor storage is designed, managed, and located so that potentially dangerous materials will not be mobilised in a flood; and materials will not obstruct or impede flood water (Policy 11.2.1.5).</li> </ul>

#### 11.4.2 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
6.	Relocatable buildings	a. Risk from natural hazards	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 11.2.1</li> <li>ii. In the Hazard 3 (coastal) Overlay Zone, new buildings containing residential activity on the ground floor are relocatable, unless site constraints mean this is not practicable (Policy 11.2.1.8).</li> </ul>
7.	Setback from coast and water bodies (Rule 10.3.3)	a. Risk from natural hazards	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 11.2.1</li> <li>ii. New buildings, structures, storage and use of hazardous substances, network utility activities, and earthworks - large scale are set back an adequate distance from water bodies so that the risk from natural hazards, including from erosion and flooding, is avoided, or is no more than low (Policy 11.2.1.14).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. A site specific assessment by a suitably qualified person has established an appropriate alternative setback.</li> </ul>

## Rule 11.5 Assessment of Restricted Discretionary Activities

### Rule 11.5.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 11.5.2:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

### 11.5.2 Assessment of all restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All restricted discretionary activities	a. Risk from natural hazards	<p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>i. In assessing the risks from natural hazards, Council will consider:               <ol style="list-style-type: none"> <li>1. existing hazards assessment reports on the DCC's Hazard Information Management System;</li> <li>2. the Otago Regional Council's Otago Natural Hazards Database;</li> <li>3. any new hazard assessment or engineers' reports provided as part of an application;</li> <li>4. site or area specific factors, including the elevation of the site or topography and geology of the area;</li> <li>5. risk to activities proposed on a site, as well as risk that is created, transferred, or exacerbated on other sites;</li> <li>6. cumulative effects of natural hazards, including from multiple hazards with different risks; and</li> <li>7. how the risk from natural hazards may worsen over time due to climate change.</li> </ol> </li> <li>ii. The creation, transference or exacerbation of risk off-site by the proposed activity, or future proposed activities, for example risk from redirected floodwaters, or risk from landslide on another site will generally not be seen as appropriate.</li> <li>iii. In assessing risk, Council will also consider the policies of the New Zealand Coastal Policy Statement 2010 in terms of acceptable levels of risk.</li> <li>iv. In assessing the appropriateness of mitigation measures (other</li> </ol>

### 11.5.2 Assessment of all restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
		<p>than those prescribed in performance standards):</p> <ol style="list-style-type: none"> <li>1. consideration will be given to its potential effectiveness, in the short to long term;</li> <li>2. preference will be given to non-structural solutions, over engineering or structural solutions, where practicable;</li> <li>3. mitigation measures that rely on significant capital investment or requirements for ongoing maintenance by the DCC or Otago Regional Council will generally not be seen as appropriate; and</li> <li>4. any mitigation measures that may result in more than negligible adverse effects on biodiversity values, more than minor effects on access to the coast, or significant effects on amenity or natural coastal sedimentation processes, will generally not be seen as appropriate.</li> </ol> <p>v. Council will consider the findings of any report by a suitably qualified person, where required (see Special Information Requirements - Rule 11.8.1).</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>vi. The risk from natural hazards will be no more than low when assessed against the guidance provided in Table 11.1.2A.</li> <li>vii. In the Hazard 2 (land instability) Overlay Zone, a report by a suitably qualified person confirms that the risks to the development, or resulting from the development, will be no more than low.</li> <li>viii. Measures are proposed (including legal instruments), that will avoid DCC or the community from being subject to claims for protection, compensation, reinstatement, or rectification of buildings or structures intended for natural hazards sensitive activities, or natural hazards potentially sensitive activities, undertaken in hazard overlay zones.</li> <li>ix. The availability of clear, practicable and safe evacuation routes and/or alternate means of maintaining access during a natural hazard event that will be equally available to future owners, occupiers, or operators.</li> </ol> <p><i>Conditions that may be imposed include:</i></p> <ol style="list-style-type: none"> <li>x. Building platforms registered against the title by way of consent notice.</li> </ol>

### 11.5.2 Assessment of all restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>2. In a hazard 1 (flood), 1A (flood) or 2 (flood) overlay zone:</p> <ul style="list-style-type: none"> <li>• new buildings and additions and alterations to buildings that create within any two calendar-year period: more than 36m<sup>2</sup> of new ground floor area in a residential zone or in the <b>Henley mapped area</b>, or more than 60m<sup>2</sup> of new ground floor area in all other locations</li> </ul>	<p>a. Risk from natural hazards</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 11.2.1</li> <li>ii. The scale, location and design of the building or other factors mean risk is avoided, or is no more than low (Policy 11.2.1.4).</li> </ul>
<p>3. In the Hazard 2 (flood) Overlay Zone:</p> <ul style="list-style-type: none"> <li>• natural hazards sensitive activities</li> <li>• natural hazards potentially sensitive activities</li> </ul>	<p>a. Risk from natural hazards</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 11.2.1</li> <li>ii. The activity has a critical operational need to locate within the overlay zone and risk is minimised as far as practicable; or the scale, location and design of the activity or other factors mean risk is avoided, or is no more than low (Policy 11.2.1.6).</li> </ul>

### 11.5.2 Assessment of all restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>4. Earthworks - large scale (that exceed the scale threshold for a hazard overlay zone or <b>swale</b> or <b>dune system mapped area</b>).</p>	<p>a. Risk from natural hazards</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 11.2.1</li> <li>ii. The risk from natural hazards, will be avoided, or no more than low (Policy 11.2.1.11).</li> </ul> <p><i>General assessment guidance:</i> In assessing changes in risk, Council will specifically consider:</p> <ul style="list-style-type: none"> <li>iii. In the <b>dune system mapped area</b>, any adverse effects on the stability or buffering capacity of dune systems that may lead to increased risk from natural hazards;</li> <li>iv. In a flood or alluvial fan overlay zone or the <b>swale mapped area</b>, whether the earthworks will obstruct, impede, or redirect flood water; and</li> <li>v. In a land instability overlay zone, general effects on land instability.</li> </ul>
<p>5. • General subdivision • Cross lease, company lease and unit title subdivision</p>	<p>a. Risk from natural hazards</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 11.2.1</li> <li>ii. In all hazard overlay zones, the <b>swale mapped area, dune system mapped area</b> or in any other area that the DCC has information to suspect there may be risk from a natural hazard, there is a reasonable level of certainty that any future land use or development will meet policies 11.2.1.1 - 11.2.1.11 (Policy 11.2.1.12).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the risk from natural hazards, Council will consider the proposed and potential future development or land use that may occur as a result of the subdivision to create, transfer or exacerbate risk off site, including, but not limited to: <ul style="list-style-type: none"> <li>1. earthworks;</li> <li>2. new driveways and vehicle tracks, including culverts or driveway crossings or other site development activities that may restrict or impede drainage;</li> <li>3. wastewater disposal systems (public or private);</li> <li>4. stormwater management;</li> <li>5. drainage;</li> <li>6. all buildings, structures and other development; and</li> <li>7. primary and ancillary land use activities, and their sensitivity.</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. The availability of clear, practicable and safe evacuation routes and/or alternate means of maintaining access during a natural hazard event that will be equally available to future owners, occupiers, or operators.</li> </ul>

**11.5.2 Assessment of all restricted discretionary activities**

Activity	Matters of discretion	Guidance on the assessment of resource consents
		<p>v. That resultant sites provide building platforms that will allow buildings associated with natural hazards sensitive or natural hazards potentially sensitive activities to ensure the risk from natural hazards is avoided, or is no more than low, including through meeting relevant performance standards.</p> <p>vi. Any associated consents for land use and development activities are approved at the same time consents for subdivisions are granted.</p> <p>vii. Confirmation (including certification) by a suitably qualified expert that the site is suitable for the intended use and the conditions on land use or development that are required for the site to be developed safely.</p> <p>viii. Where development of the resultant sites is likely to result in on-site wastewater disposal or storage, the effects of flooding and sea level rise will be such that safe and effective on-site disposal is likely to be practicable in the long term.</p> <p><i>Conditions that may be imposed include:</i></p> <p>ix. Building platforms registered against the title by way of consent notice.</p> <p>x. Restrictions and conditions, including by way of consent notice, on development activities including:</p> <ol style="list-style-type: none"> <li>1. stormwater management systems, for example, retention basins to regulate the rate and volume of surface runoff;</li> <li>2. establishment, enhancement, or retention of vegetation;</li> <li>3. conditions on the design of earthworks;</li> <li>4. the type of water and waste services to be used; and</li> <li>5. the location and design of driveways and vehicle tracks.</li> </ol> <p>xi. Restrictions or conditions, including by way of consent notice, on land use activities allowed on the site.</p>

## Rule 11.6 Assessment of Discretionary Activities

### Rule 11.6.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 11.6.2 provides guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.

### 11.6.2 Assessment of all discretionary activities

Activity	Guidance on the assessment of resource consents
1. All discretionary activities that are linked to section 11.6, including but not limited to the activities listed below	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 2.2.1 and Objective 11.2.1</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>b. In assessing the risks from natural hazards, Council will consider:               <ol style="list-style-type: none"> <li>i. existing hazards assessment reports on the DCC's Hazard Information Management System;</li> <li>ii. the Otago Regional Council's Otago Natural Hazards Database;</li> <li>iii. any new hazard assessment or engineers' reports provided as part of an application;</li> <li>iv. site or area specific factors, including the elevation of the site, or topography and geology of the area;</li> <li>v. the type, nature and scale of the activity, and how this affects its sensitivity to natural hazards;</li> <li>vi. short to long term effects, including effects in combination with other activities;</li> <li>vii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent;</li> <li>viii. risk to activities proposed on a site, as well as risk that is created, transferred, or exacerbated on other sites;</li> <li>ix. new or changes to land use activities and any associated development activities together, as development may not be appropriate given the risk associated with a site, or conditions on development activities may be required to mitigate the risk from natural hazards;</li> <li>x. cumulative effects of natural hazards, including from multiple hazards with different risks; and</li> <li>xi. how the risk from natural hazards may worsen over time due to</li> </ol> </li> </ol>

### 11.6.2 Assessment of all discretionary activities

Activity	Guidance on the assessment of resource consents
	<p>climate change.</p> <p>c. The creation, transference or exacerbation of risk off-site by the proposed activity, or future proposed activities, for example risk from redirected floodwaters, or risk from landslide on another site will generally not be seen as appropriate.</p> <p>d. In assessing risk, Council will also consider the policies of the New Zealand Coastal Policy Statement 2010 in terms of acceptable levels of risk.</p> <p>e. In assessing the appropriateness of mitigation measures (other than those prescribed in performance standards):</p> <ul style="list-style-type: none"> <li>i. consideration will be given to its potential effectiveness, in the short to longer term;</li> <li>ii. preference will be given to non-structural solutions, over engineering or structural solutions, where practicable;</li> <li>iii. mitigation measures that rely on significant capital investment or requirements for ongoing maintenance by the DCC or Otago Regional Council will generally not be seen as appropriate; and</li> <li>iv. any mitigation measures that may result in more than negligible adverse effects on biodiversity values, more than minor effects on access to the coast, or significant effects on amenity or natural coastal sedimentation processes, will generally not be seen as appropriate.</li> </ul> <p>f. Council will consider the findings of any report by a suitably qualified person, where required (see Special Information Requirements - Rule 11.8.1).</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>g. The availability of clear, practicable and safe evacuation routes and/or alternate means of maintaining access during a natural hazard event that will be equally available to future owners, occupiers, or operators.</p> <p>h. Measures are taken (including legal instruments), that will avoid Council or the community from being subject to claims for compensation, reinstatement, or rectification of natural hazards sensitive activities, or natural hazards potentially sensitive activities, undertaken in hazard overlay zones.</p> <p>i. A report by a suitably qualified person confirms that the risk to the activity, or resulting from the activity, will be no more than low.</p> <p>j. For discretionary land use activities, whether any associated buildings or structures meet relevant hazards-related development performance standards, or otherwise achieve the relevant policies for development (see Rule 11.4 for performance standard contraventions).</p> <p><i>Conditions that may be imposed include:</i></p> <p>k. Building platforms registered against the title by way of consent notice.</p>

### 11.6.2 Assessment of all discretionary activities

Activity	Guidance on the assessment of resource consents
2. <ul style="list-style-type: none"> <li>• Natural hazard mitigation earthworks</li> <li>• Natural hazard mitigation structures</li> </ul>	<i>Relevant objectives and policies (priority considerations):</i> <ol style="list-style-type: none"> <li>a. Objective 11.2.1</li> <li>b. The option of doing nothing is not the best practicable option and it will reduce risk overall (Policy 11.2.1.15).</li> </ol>

### 11.6.2 Assessment of all discretionary activities

Activity	Guidance on the assessment of resource consents
1. All discretionary activities that are linked to section 11.6, including but not limited to the activities listed below	<i>Relevant objectives and policies (priority considerations):</i> <ol style="list-style-type: none"> <li>a. ## Rule 11.7 Assessment of Non-complying Activities

### Rule 11.7.1 Introduction

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 11.7.2 - 11.7.3 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.

### 11.7.2 Assessment of non-complying activities

Activity	Guidance on the assessment of resource consents
1. In the hazard 1 (flood) Overlay Zones: <ul style="list-style-type: none"> <li>• Natural hazards potentially sensitive activities</li> <li>• Natural hazards sensitive activities</li> </ul> In the Hazard 1A (flood) Overlay Zone: <ul style="list-style-type: none"> <li>• Natural hazards potentially sensitive activities</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 2.2.1, Policy 2.2.1.8</li> <li>b. Objective 11.2.1</li> <li>c. In the Hazard 1 (flood) Overlay Zone, natural hazards sensitive activities and natural hazards potentially sensitive activities are avoided unless:               <ol style="list-style-type: none"> <li>i. the risk from natural hazards is avoided, or is no more than low; and</li> <li>ii. the activity has a critical operational need to locate within the Hazard 1 (flood) Overlay Zone and locating outside it is not practicable (Policy 11.2.1.1).</li> </ol> </li> <li>d. In the Hazard 1A (flood) Overlay Zones, natural hazards potentially sensitive activities are avoided unless:               <ol style="list-style-type: none"> <li>i. the risk from natural hazards is avoided, or is no more than low; and</li> <li>ii. the activity has a critical operational need to locate within the Hazard 1A (flood) Overlay Zone and locating outside it is not practicable (Policy 11.2.1.3).</li> </ol> </li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>e. In assessing whether the risk is no more than low, Council will consider the guidance provided in Section 11.1.2 and will generally require a report by a suitably qualified person (see Special Information Requirements - Rule 11.8.1) to confirm that the risks to the development, or resulting from the development, will be no more than low.</li> <li>f. In assessing the risks from natural hazards, Council will consider:               <ol style="list-style-type: none"> <li>i. existing hazards assessment reports on the DCC's Hazard Information Management System;</li> <li>ii. the Otago Regional Council's Otago Natural Hazards Database;</li> <li>iii. any new hazard assessment or engineers' reports provided as part of an application;</li> <li>iv. site or area specific factors, including the elevation of the site, or topography and geology of the area;</li> </ol> </li> </ol>

### 11.7.2 Assessment of non-complying activities

Activity	Guidance on the assessment of resource consents
	<ul style="list-style-type: none"> <li>v. the type, nature and scale of the activity, and how this affects its sensitivity to natural hazards;</li> <li>vi. short to long term effects, including effects in combination with other activities;</li> <li>vii. risk to activities proposed on a site, as well as risk that is created, transferred, or exacerbated on other sites;</li> <li>viii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent;</li> <li>ix. evacuation routes, and/or alternate means of maintaining access during a natural hazard event;</li> <li>x. cumulative effects of natural hazards, including from multiple hazards with different risks;</li> <li>xi. The creation, transference or exacerbation of risk off-site by the proposed activity, or future proposed activities, for example risk from redirected floodwaters, or risk from landslide on another site will generally not be seen as appropriate; and</li> <li>xii. how the risk from natural hazards may worsen over time due to climate change.</li> </ul> <p>g. In assessing risk, Council will also consider the policies of the New Zealand Coastal Policy Statement 2010 in terms of acceptable levels of risk.</p> <p>h. Council will consider whether the proposal could make the DCC or Otago Regional Council subject to claims for protection, compensation, reinstatement, or rectification of buildings or structures intended for natural hazards sensitive activities, or natural hazards potentially sensitive activities, undertaken in hazard overlay zones, and whether a mechanism is proposed to protect the DCC or ORC from these claims.</p> <p>i. In assessing the appropriateness of mitigation measures (other than those prescribed in performance standards):</p> <ul style="list-style-type: none"> <li>i. consideration will be given to its potential effectiveness, in the short to longer term;</li> <li>ii. preference will be given to non-structural solutions, over engineering or structural solutions, where practicable;</li> <li>iii. mitigation measures that rely on significant capital investment or requirements for ongoing maintenance by the DCC or Otago Regional Council will generally not be seen as appropriate; and</li> <li>iv. any mitigation measures that may result in more than negligible adverse effects on biodiversity values, more than minor effects on access to the coast, or significant effects on amenity or natural coastal sedimentation processes, will generally not be seen as appropriate.</li> </ul>

### 11.7.3 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1. Hazard exclusion areas (Rule 11.3.1.1) - <b>swale mapped area</b></p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.2.1</li> <li>b. Objective 11.2.1</li> <li>c. Development activities and public amenities in a <b>swale mapped area</b> do not obstruct or impede water, or cause water to be diverted out of a swale, during a flood hazard event. (Policy 11.2.1.9).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>d. Council will consider the findings of any report by a suitably qualified person, where required (see Special Information Requirements - Rule 11.8.1).</li> </ul>
<p>2. Hazard exclusion areas (Rule 11.3.1.2) - <b>dune system mapped area</b></p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.2.1, Policy 2.2.1.8</li> <li>b. Avoid buildings and structures within a <b>dune system mapped area</b> unless: <ul style="list-style-type: none"> <li>i. they have an operational need to locate there;</li> <li>ii. they will not increase the risk of coastal erosion; and</li> <li>iii. the risk from natural hazards is no more than low (Policy 11.2.1.10).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. Council will consider the findings of any report by a suitably qualified person, where required (see Special Information Requirements - Rule 11.8.1).</li> </ul>

## **Rule 11.8 Special Information Requirements**

1. A report by a suitably qualified person, which addresses the relevant assessment matters of this plan, may be requested by Council for any activity that is subject to:
  1. a hazard overlay zone;
  2. a **dune system mapped area**;
  3. a **swale mapped area**; or
  4. land that Council has information on indicating it may be hazard prone.
2. For the purpose of natural hazard risk, a suitably qualified person includes:
  1. Hydrologists;
  2. Geotechnical engineers; and
  3. Geomorphological specialists (including coastal).

## 12. New Urban Land Provisions

### 12.1 Introduction

The National Policy Statement for Urban Development 2020 (NPS-UD) recognises the national significance of having well-functioning urban environments that enable all people and communities to provide for their social, economic, and cultural wellbeing, and for their health and safety, now and into the future, and of providing sufficient development capacity to meet the different needs of people and communities.

The strategic directions section of the Plan outlines the objectives and policies that guide when and where urban expansion should occur, in what form, and give effect to the NPS-UD. The strategic directions are based on the Dunedin Spatial Plan's goal of being a compact city with resilient townships.

A number of preferred areas for transition to, or between, urban uses are identified in this Plan, and rules included which provide for their transition to a different zoning.

The Residential Transition Overlay Zone (RTZ) is used to provide for future residential zoning where land has been identified as appropriate for growth and where infrastructure servicing is not planned in the medium term (out to 10 years). The RTZ enables these areas to transition to the provisions for their specified transition zone once infrastructure servicing is available (existing constraints are resolved). It also manages activities in the meantime to ensure areas remain suitable for future residential use by restricting activities that may make it harder to develop in the future. The transition zone for each Residential Transition Overlay Zone is specified through the overlay name on the Planning Map, for example: *Residential Transition Overlay Zone (General Residential 1 Zone)*, and in Appendix 12A.

The Industrial Transition Overlay Zone (IndTZ) is used to provide for future industrial zoning where land has been identified as appropriate but where an agreement between the DCC and developer on the provision of any necessary public infrastructure is not yet in place. It also manages subdivision in the meantime to ensure future industrial development is not adversely impacted. The transition zone for each Industrial Transition Overlay Zone is specified through the overlay name on the Planning Map and in Appendix 12B.

The Harbourside Edge Transition Overlay Zone (HETZ) is used to provide for future Harbourside Edge zoning when at least 70% of the existing zoned area is being used for residential or commercial activities and when there is an agreement between the DCC and developer on the provision of any necessary public infrastructure. It also manages subdivision in the meantime to ensure future commercial and mixed use development is not adversely impacted.

The transition of land is managed through a certification process, where land is released by the Chief Executive Officer or their delegate, once identified triggers are met.

To ensure the development of well-functioning urban environments that provide for people's well-being, this section also includes an objective, policies and assessment rules to guide the subdivision and development of larger areas of 'greenfield' residential zoned land (identified by the **new development mapped area** in the Planning Map). These provisions reflect the Plan's strategic directions and best practice urban planning and design principles.

## 12.2 Objectives and Policies

<b>Objective 12.2.1</b>	
Land within the Residential Transition Overlay Zone (RTZ) is able to be released and developed in a coordinated way as residential zoned land, in advance of the need for additional residential capacity to accommodate growth.	
Policy 12.2.1.1	In the Residential Transition Overlay Zone (RTZ) provide for land to transition to residential zoned land through a certification process by the Chief Executive Officer or their delegate when: <ol style="list-style-type: none"> <li>NA</li> <li>water supply, wastewater and stormwater infrastructure capacity is sufficient to support the additional residential development; and</li> <li>an agreement between the DCC and the developer on the method, timing and funding of any necessary transportation infrastructure is in place.</li> </ol>
Policy 12.2.1.2	Avoid landfills and mining activity or other activities that may otherwise inhibit future use of Residential Transition Overlay Zone (RTZ) land for residential activity, including by creating contaminated land, unless the activities will be designed or located to have no more than minor potential adverse effects on the future use of the land for residential activities.
Policy 12.2.1.3	Only allow forestry and intensive farming in the Residential Transition Overlay Zone (RTZ) where these activities will not inhibit future use of the land for residential activity.
Policy 12.2.1.4	Only allow subdivision activities where: <ol style="list-style-type: none"> <li>after land has been released, it is in accordance with the objectives and policies of the specified future residential zone; or</li> <li>prior to land being released, the subdivision will not undermine or inhibit the future development of the area at the intended future residential density.</li> </ol>
<b>Objective 12.2.2</b>	
Land within the Harbourside Edge Transition Overlay Zone is able to be released and developed in a coordinated way as Harbourside Edge zoned land when there is a need for additional land to accommodate growth.	
Policy 12.2.2.1	In the Harbourside Edge Transition Overlay Zone (HETZ), provide for land to transition from industrial zoned land to Harbourside Edge zoned land through a certification process by the Chief Executive Officer or their delegate when: <ol style="list-style-type: none"> <li>an agreement between the DCC and the developer on the method, timing, and funding of any necessary public infrastructure provision is in place; and</li> <li>at least 70% of the zone area in the Harbourside Edge Zone, excluding roading, amenity areas and land required for public accessways and the public walkway, is being used for residential or commercial activities.</li> </ol>
Policy 12.2.2.2	Only allow subdivision activities where: <ol style="list-style-type: none"> <li>after land has been released, it is in accordance with the objectives and policies of the Harbourside Edge Zone; or</li> <li>prior to land being released, the subdivision will not undermine or inhibit the future development of the area as Harbourside Edge-zoned land.</li> </ol>

### Objective 12.2.3

Land within the Industrial Transition Overlay Zone is able to be released and developed in a coordinated way as industrial zoned land when there is a need for additional land to accommodate growth.

Policy 12.2.3.1	In the Industrial Transition Overlay Zone (IndTZ), provide for land to transition from rural zoned land to industrial zoned land through a certification process by the Chief Executive Officer or their delegate when an agreement between the DCC and the developer on the method, timing, and funding of any necessary public infrastructure provision is in place.
Policy 12.2.3.2	Only allow subdivision activities where: <ul style="list-style-type: none"> <li>a. after land has been released, it is in accordance with the objectives and policies of the Industrial Zone; or</li> <li>b. prior to land being released, the subdivision will not undermine or inhibit the future development of the area as Industrial-zoned land.</li> </ul>

### Objective 12.2.X

Future residential growth areas are developed in a way that achieves the Plan's strategic directions for:

- a. facilities and spaces that support social and cultural well-being (Objective 2.3.3);
- b. indigenous biodiversity (Objective 2.2.3);
- c. environmental performance and energy resilience (Objective 2.2.2);
- d. form and structure of the environment (Objective 2.4.1);
- e. a compact and accessible city (Objective 2.2.4);
- f. efficient public infrastructure (Objective 2.7.1);
- g. land, facilities and infrastructure that are important for economic productivity and social well-being (Objective 2.3.1); and
- h. heritage (Objective 2.4.2).

Policy 12.2.X.1	Only allow subdivision in a <b>new development mapped area</b> where it will provide or otherwise ensure good access to outdoor recreation opportunities (including playgrounds) and, where possible, opportunities for off-road cycling and walking tracks within and between different residential developments and connecting to community facilities and services.
Policy 12.2.X.2	Only allow subdivision in a <b>new development mapped area</b> where the subdivision is designed to ensure any future land use and development will protect, and where necessary restore, any water bodies, areas of important indigenous vegetation or habitats of indigenous fauna, or other areas with important natural environment values.
Policy 12.2.X.3	Only allow subdivision in a <b>new development mapped area</b> where the subdivision layout and orientation provides for houses to be designed with good solar access to living areas and outdoor living spaces.
Policy 12.2.X.4	Only allow subdivision in a <b>new development mapped area</b> where the subdivision will provide adequate areas of amenity planting (including but not limited to street trees) and public amenities to ensure an attractive residential environment.
Policy 12.2.X.5	Only allow subdivision in a <b>new development mapped area</b> where the subdivision design ensures the efficient use of land, while also achieving the other elements of Objective 12.2.X.

### Objective 12.2.X

Future residential growth areas are developed in a way that achieves the Plan's strategic directions for:

- a. facilities and spaces that support social and cultural well-being (Objective 2.3.3);
- b. indigenous biodiversity (Objective 2.2.3);
- c. environmental performance and energy resilience (Objective 2.2.2);
- d. form and structure of the environment (Objective 2.4.1);
- e. a compact and accessible city (Objective 2.2.4);
- f. efficient public infrastructure (Objective 2.7.1);
- g. land, facilities and infrastructure that are important for economic productivity and social well-being (Objective 2.3.1);  
and
- h. heritage (Objective 2.4.2).

Policy 12.2.X.6	Only allow subdivision in a <b>new development mapped area</b> where the subdivision design will enable any new or upgraded electricity or telecommunications network utilities necessary to service the anticipated future development to be efficiently and effectively provided by network utility operators.
Policy 12.2.X.7	Only allow subdivision in a <b>new development mapped area</b> where the subdivision design (including any associated off-site access and infrastructure) maintains or enhances any significant heritage values.

## Rules

### 12.3 Rules for Transition Overlay Zones

#### Rule 12.3.1 Release of Land in the Residential Transition Overlay Zone (RTZ)

1. In a Residential Transition Overlay Zone (RTZ), other than the RTZ listed in Rule 12.3.4, the provisions of the specified future residential zone will apply to any part of that zone that is "released" by the Chief Executive Officer or their delegate certifying that the requirements in Rule 12.3.1.2 (b) and (c) are met.
2. The Chief Executive Officer or their delegate must certify to release land in a Residential Transition Overlay Zone (RTZ) following receipt of an application demonstrating that:
  - a. NA
  - b. the DCC has published a statement on its website that:
    - i. further development within the Residential Transition Overlay Zone will meet the following criteria, demonstrated by modelling using accepted industry practice:
      1. fire flows within the piped treated water network servicing the Residential Transition Overlay Zone meet the New Zealand Fire Service Firefighting Water Supplies Code of Practice (SNZ 4509:2008);
      2. water pressure within the piped treated water network servicing the Residential Transition Overlay Zone is maintained between 300-900 kPa; and
      3. surcharge of pipes and flooding out of manholes will not occur during a design rainfall event (10% AEP) within the wastewater network necessary for the servicing of potential development that is being released; or
    - ii. a contract has been awarded that will ensure any necessary infrastructure upgrades required to meet the tests in Rule 12.3.1.2.b.i are completed within three years; and
  - c. an agreement between the DCC and the developer on the method, timing and funding of any necessary transportation infrastructure is in place.
3. Areas that have a Residential Transition Overlay Zone may be released in whole or in part, and where more areas are requested to be released than can meet the criteria above, they will be released on a first come first served basis following an application to the Chief Executive Officer or their delegate that meets the criteria outlined in Rule 12.3.1.
4. NA
5. The statement on water supply and wastewater infrastructure capacity may specify the number of additional dwellings for which there is infrastructure capacity.

#### **Note 12.3.1A - General Advice**

1. Stormwater management will be assessed at the time of building consent, subdivision consent or service connection application.

### **Rule 12.3.2 Release of Harbourside Edge Transition Overlay Zone land**

1. In a Harbourside Edge Transition Overlay Zone (HETZ), the provisions of the Harbourside Edge Zone will apply to any part of that zone that is "released" by the Chief Executive Officer or their delegate certifying that the requirements in Rule 12.3.2.2 (a) and (b) are met.
2. The Chief Executive Officer or their delegate must certify to release land in a Harbourside Edge Transition Overlay Zone following receipt of an application demonstrating that:
  - a. an agreement between the DCC and the developer on the method, timing and funding of any necessary public infrastructure provision is in place; and
  - b. at least 70% of the zone area in the Harbourside Edge Zone, excluding roading, amenity areas and land required land for public accessways and the public walkway, is being used for residential or commercial activities.

### **Rule 12.3.3 Release of Industrial Transition Overlay Zone land**

1. In an Industrial Transition Overlay Zone (IndTZ), the provisions of the Industrial Zone will apply to any part of that zone that is "released" by the Chief Executive Officer or their delegate certifying that the requirement in 12.3.3.2 is met.
2. The Chief Executive Officer or their delegate must certify to release land in an Industrial Transition Overlay Zone following receipt of an application demonstrating that an agreement between the Dunedin City Council and the developer on the method, timing, and funding of any necessary public infrastructure provision is in place.

### **Rule 12.3.4 Release of RTZ in Structure Plan Mapped Areas**

#### **Rule 12.3.4.1 Release of land in the South East Mosgiel Residential Transition Overlay Zone (RTZ)**

- a. In the South East Mosgiel Residential Transition Overlay Zone, the provisions of the specified future residential zone will apply to any part or all of that zone that is "released" by the Chief Executive Officer or their delegate certifying that the requirements below are met.
- b. The Chief Executive Officer or their delegate must certify to release land in the South East Mosgiel Residential Transition Overlay Zone following receipt of an application demonstrating all of the following criteria have been met:
  - i. An Integrated Transportation Assessment (ITA) for the **structure plan mapped area** is completed; and
    1. Where transportation infrastructure required by the ITA or the structure plan provisions for the site requires DCC funding or a cost-sharing agreement that requires DCC involvement, there is provision for that in the Long Term Plan and Development Contributions Policy, or there is an agreement between the DCC and landowners/developers of sites proposed for release on the method, timing, and funding of the transportation infrastructure identified in the ITA, or both.
  - ii. A high level stormwater management plan developed in consultation with the Otago Regional Council that (but not involving detailed subdivision design) addresses the requirements of the integrated stormwater management plan required by Rule 9.9.X.4 and that indicates all land that will be required to be set aside for stormwater management based on the level of development allowed and including land necessary to manage overland flows and to retain existing on-site storage;
    1. Where the stormwater management plan requires DCC funding or a cost-sharing agreement for stormwater infrastructure that requires DCC involvement, there is provision for that in the Long Term Plan and development Contributions Policy, or there is an agreement between the DCC and landowners/developers of sites proposed for release on the method, timing, and funding of the stormwater infrastructure identified in the stormwater management plan, or both.
    2. Where the stormwater management plan requires stormwater to be directly or indirectly

discharged to the Owhiro Stream or to any work, system or facility owned or operated by the Otago Regional Council, there is an agreement in place between the applicant landowner and the Otago Regional Council in relation to the terms on which the Otago Regional Council will accept the receipt of the stormwater discharge.

- iii. An open space and amenity planting plan for the entire **structure plan mapped area** that must at a minimum provide for:
  - 1. street trees in road reserves and planting associated with the esplanade reserve adjacent to Owhiro Stream; and
  - 2. a 5000m<sup>2</sup> recreation reserve in a location that:
    - 1. is located outside of areas used for stormwater or flood management or storage;
    - 2. as close as practicable considering other requirements and other reserves in the wider area, allows residential activities in and adjacent to the **structure plan mapped area** to have access to an open space reserve within a 400m walking radius of their homes;
    - 3. has frontages of no less than 80m onto at least two road frontages, and
    - 4. adjoins or links to the esplanade reserve on the Owhiro Stream.
- iv. Where implementation of the required open space and amenity planting plan requires DCC funding or a cost-sharing agreement that requires DCC involvement, there is provision for that in the Long Term Plan and Development Contributions Policy, or there is an agreement between the DCC and landowners/developers of sites proposed for release on the method, timing, and funding of the delivery of the open space and amenity planting plan, or both.

#### **Note 12.3.4.1A - General advice**

- a. Where the results of the Integrated Transportation Assessment required to release the land demonstrate the need for either:
  - i. transportation infrastructure upgrades outside the **structure plan mapped area**; or
  - ii. transportation infrastructure built to a higher specification because of the need to provide for new growth areas or improve level of service for existing areas.
  - iii. the responsibility and funding for these upgrades will be negotiated between all landowners and the DCC. Where necessary, the DCC will appoint an independent facilitator or mediator to assist in these negotiations.
- b. Prior to initiating work on an Integrated Transportation Assessment, applicants are encouraged to contact DCC City Development for the latest information regarding the status of the South East Mosgiel Residential Transition Zone Overlay (RTZ), and remaining requirements.

#### **Note 12.3A - General Advice**

- 1. Where the release of land in a Transition Overlay Zone depends upon additional or upgraded public infrastructure, the developer may be required to enter into a Private Development Agreement with the Dunedin City Council. This will normally be required where the Dunedin City Council's Development Contributions Policy does not clearly set out the specific contribution towards the costs of the additional or upgraded public infrastructure required. The Private Development Agreement will normally include a lease clause, and be registered against the Computer Register (Certificate of Title) for the land, to ensure that the developer meets their agreed obligations.

## 12.X Assessment of Restricted Discretionary Activities

### Rule 12.X.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 12.X.2:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

### 12.X.2 Assessment of restricted discretionary activities in a Transition Overlay Zone or mapped area

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In a <b>Residential Transition Overlay Zone (RTZ)</b> (prior to release): <ul style="list-style-type: none"> <li>• General subdivision</li> </ul>	a. Effects on future urban development	<i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>i. Objective 12.2.1.</li> <li>ii. Subdivision activities prior to land being released will not undermine or inhibit the future development of the area at the intended residential density (Policy 12.2.1.4).</li> </ol>
2. In a <b>Harbourside Edge Transition Overlay Zone (HETZ)</b> (prior to release): <ul style="list-style-type: none"> <li>• Subdivision activities</li> </ul>	a. Effects on future urban development	<i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>i. Objective 12.2.2.</li> <li>ii. Subdivision activities prior to land being released will not undermine or inhibit the future development of the area as Harbourside Edge-zoned land (Policy 12.2.2.2).</li> </ol>
3. In an <b>Industrial Transition Overlay Zone (IndTZ)</b> (prior to release): <ul style="list-style-type: none"> <li>• General subdivision</li> </ul>	a. Effects on future urban development	<i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>i. Objective 12.2.3.</li> <li>ii. Subdivision activities prior to land being released will not undermine or inhibit the future development of the area as Industrial-zoned land (Policy 12.2.3.2).</li> </ol>

### 12.X.2 Assessment of restricted discretionary activities in a Transition Overlay Zone or mapped area

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>4. In a <b>Residential Transition Overlay Zone (RTZ)</b> (prior to release):</p> <ul style="list-style-type: none"> <li>• Forestry</li> </ul>	<p>a. Effects on future urban development</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>Objective 12.2.1.</li> <li>Forestry will not inhibit future use of the land for residential activity (Policy 12.2.1.3).</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>Council will consider the location and scale of the activity in assessing the likelihood that the activity may render the site, or any surrounding sites that are zoned as RTZ, unable to be developed as residential zoned land when required.</li> </ol>
<p>5. In a <b>new development mapped area:</b></p> <ul style="list-style-type: none"> <li>• All subdivision activities</li> </ul>	<p>a. Whether subdivision design supports energy efficient housing</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>Objective 12.2.X.</li> <li>The subdivision layout and orientation provides for houses to be designed with good solar access to living areas and outdoor living spaces (Policy 12.2.X.3).</li> </ol>

### 12.X.2 Assessment of restricted discretionary activities in a Transition Overlay Zone or mapped area

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>b. Provision for amenity planting and public amenities</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 12.2.X.</li> <li>ii. The subdivision provides adequate areas of amenity planting (including but not limited to street trees) and public amenities to ensure an attractive residential environment (Policy 12.2.X.4).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the adequacy of amenity planting and public amenities, some of the key design elements Council will consider are whether:               <ul style="list-style-type: none"> <li>1. Street trees support the road hierarchy by distinguishing main thoroughfares from local roads and are spaced at regular intervals of between 10-15m;</li> <li>2. Street tree species are suitable to the local conditions in terms of shade, leaf fall, longevity, pest and disease resilience and maintenance requirements;</li> <li>3. Underground services will be located clear of berm areas for planting with street trees;</li> <li>4. At least 20% of berm areas will be planted as garden beds with remaining areas turfed;</li> <li>5. Roundabouts, traffic medians and intersections integrate appropriate planting, designed to ensure maintenance can occur safely; and</li> <li>6. Public amenities are of robust design and cater to a range of users.</li> </ul> </li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iv. Requirements for street tree and other subdivision amenity planting.</li> <li>v. Requirements for maintenance of planting for a specified period.</li> </ul>

**12.X.2 Assessment of restricted discretionary activities in a Transition Overlay Zone or mapped area**

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>c. Provision of recreation spaces</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 12.2.X.</li> <li>ii. The subdivision provides or otherwise ensures good access to outdoor recreation opportunities (including playgrounds) and, where possible, opportunities for offroad cycling and walking tracks within and between different residential developments and connecting to community facilities and services (Policy 12.2.X.1).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the requirements for recreation spaces, Council will consider the contents of the New Zealand Recreation Association Parks Categories Framework.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iv. Location, size and shape of recreation reserves, including a minimum length of road frontage.</li> <li>v. A requirement to vest recreation spaces in DCC as DCC reserve.</li> <li>vi. Public amenities to be included in a recreation reserve.</li> <li>vii. A requirement for the recreation space to be developed prior to vesting in DCC.</li> </ul>

### 12.X.2 Assessment of restricted discretionary activities in a Transition Overlay Zone or mapped area

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>d. Whether subdivision design maintains or enhances areas with important natural environment values</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 12.2.X</li> <li>ii. The subdivision is designed to ensure any future land use and development will protect, and where necessary restore, any water bodies, areas of important indigenous vegetation or habitats of indigenous fauna, or other areas with important natural environment values (Policy 12.2.X.2).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing water bodies, areas of important indigenous vegetation or habitats of indigenous fauna, Council will consider the presence of: <ul style="list-style-type: none"> <li>1. Areas that would meet the criteria set out in Policy 2.2.3.2 for identification of areas of significant indigenous vegetation and/or significant habitats of indigenous fauna;</li> <li>2. Individual or groups of mature indigenous trees on the 2GP Important Native Tree List in Appendix 10A.3;</li> <li>3. Individual or groups of exotic trees that meet the criteria in Policy 2.4.1.2 for scheduling as a significant tree (provided they are not on the 2GP Pest Plant List or Otago Regional Council Regional Pest Management Plan);</li> <li>4. Riparian and freshwater values of water bodies listed in Appendix 10C and the temporary or permanent tributaries of those water bodies;</li> <li>5. Areas of vegetation that are part of a network of sites that cumulatively provide important habitat for indigenous biodiversity in the urban environment, or when aggregated make an important contribution to the provision of a particular ecosystem in the urban landscape context; or</li> <li>6. Areas that make an important contribution to the resilience and ecological integrity of surrounding areas, or, if restored, would provide ecological connectivity or buffering for indigenous vegetation or fauna.</li> </ul> </li> <li>iv. In assessing other areas with important natural environment values, Council will consider the presence of any aspects of the natural environment which make an important contribution to the sense of place or character of the landscape (provided that for vegetation, plants are not on the 2GP Pest Plant List or Otago Regional Council Regional Pest Management Plan), for example: <ul style="list-style-type: none"> <li>1. Wind breaks, orchards or established trees;</li> <li>2. Exotic plant communities; or</li> <li>3. Geological features</li> </ul> </li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>v. A requirement to protect areas through reserve status or other</li> </ul>

**12.X.2 Assessment of restricted discretionary activities in a Transition Overlay Zone or mapped area**

Activity	Matters of discretion	Guidance on the assessment of resource consents legal mechanisms.
	<p>e. Whether subdivision design supports efficient use of land</p>	<p>vi. A requirement to undertake conservation activity.</p> <p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 12.2.X.</li> <li>ii. The subdivision design ensures the efficient use of land, while also achieving the other elements of Objective 12.2.X (Policy 12.2.X.5).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing whether a subdivision design for an NDMA ensures the efficient use of land, Council will generally expect developable sites to be at or close to the minimum site size (for either a single dwelling or duplex) or, if part of a proposed comprehensive development or staged subdivision, otherwise enable an equivalent residential development capacity considering the applicable rules and after deducting land allocated to roads, reserves, stormwater management areas and other non-developable areas.</li> <li>iv. Where a subdivision proposes a residential development capacity less than anticipated by clause (iii) above , Council will consider:               <ul style="list-style-type: none"> <li>1. the extent to which this is required to achieve other plan objectives or policies, for example to protect on site values or manage risk from natural hazards;</li> <li>2. the extent to which the slope of the parent site makes achieving a higher yield impractical;</li> <li>3. how the lower yield might affect the affordability and efficient delivery of public infrastructure; and</li> <li>4. how the lower yield might affect the affordability of land or housing within the subdivision.</li> </ul> </li> </ul>

### 12.X.2 Assessment of restricted discretionary activities in a Transition Overlay Zone or mapped area

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>f. Effects on efficient and effective operation of network utilities (electricity and telecommunications)</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 12.2.X.</li> <li>ii. The subdivision design enables any new or upgraded electricity or telecommunications network utilities necessary to service the anticipated future development to be efficiently and effectively provided by network utility operators (Policy 12.2.X.6).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In determining whether Policy 12.2.X.6 is achieved, Council will consider feedback from all relevant telecommunication and electrical network utility operators on the subdivision design, undertaken by the applicant and provided with the application.</li> <li>iv. In assessing whether Policy 12.2.X.6 is achieved, Council will only consider whether the design enables new or upgraded network utilities that utility operators may need to install to provide services to future development enabled by the subdivision. Requirements for telecommunications and power supply service connections within subdivisions are covered by Rule 9.3.7.</li> </ul>
	<p>g. Whether the subdivision design (including any associated off-site access and infrastructure) maintains or enhances significant heritage values</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 12.2.X.</li> <li>ii. The subdivision is designed (including any associated off-site access and infrastructure) to maintain or enhance any significant heritage values.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. Where significant heritage values are identified or suspected in any area that may be developed as a result of the subdivision (including any associated off-site access and infrastructure), Council will require an assessment of those heritage values by a suitably qualified professional and a plan which indicates how the significant heritage values will be maintained or if values are to be diminished by aspects of the activity why there is no practicable alternative to that loss.</li> </ul>

## 12.4 Assessment of Discretionary Activities

### Rule 12.4.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 12.4.2 provides guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.

### 12.4.2 Assessment of discretionary activities in a Transition Overlay Zone

Activity	Guidance on the assessment of resource consents
<p>1. In a <b>Residential Transition Overlay Zone (RTZ)</b> (prior to release):</p> <ul style="list-style-type: none"> <li>• Intensive farming</li> <li>• Forestry</li> </ul>	<p><i>Relevant objectives and policies:</i></p> <p>a. Objective 12.2.1</p> <p>b. The activities will not inhibit future use of the land for residential activity (Policy 12.2.1.3).</p> <p><i>General assessment guidance:</i></p> <p>c. Council will consider the location and scale of the activity in assessing the likelihood that the activity may render the site, or any surrounding sites that are zoned as RTZ, unable to be developed as residential zoned land when required.</p>
<p>X. In a <b>Residential Transition Overlay Zone (RTZ)</b> (prior to release):</p> <ul style="list-style-type: none"> <li>• Cross lease, company lease and unit title subdivision</li> </ul>	<p><i>Relevant objectives and policies:</i></p> <p>a. Objective 12.2.1.</p> <p>b. Subdivision activities prior to land being released will not undermine or inhibit the future development of the area at the intended residential density (Policy 12.2.1.4).</p>
<p>Y. In an <b>Industrial Transition Overlay Zone (IndTZ)</b> (prior to release):</p> <ul style="list-style-type: none"> <li>• Cross lease, company lease and unit title subdivision</li> </ul>	<p><i>Relevant objectives and policies:</i></p> <p>a. Objective 12.2.3.</p> <p>b. Subdivision activities prior to land being released will not undermine or inhibit the future development of the area as Industrial-zoned land (Policy 12.2.3.2).</p>

## 12.5 Assessment of Non-complying Activities

### Rule 12.5.1 Introduction

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 12.5.2 provides guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.

### 12.5.2 Assessment of non-complying activities in a Transition Overlay Zone

Activity	Guidance on the assessment of resource consents
<p>1. In a <b>Residential Transition Overlay Zone (RTZ)</b> (prior to release):</p> <ul style="list-style-type: none"> <li>• Mining</li> <li>• Landfills</li> <li>• Intensive farming</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 12.2.1</p> <p>b. The activities will be designed or located to have no more than minor potential adverse effects on the future use of the land for residential activities (Policy 12.2.1.2).</p> <p><i>General assessment guidance:</i></p> <p>c. Council will consider the location and scale of the activity in assessing the likelihood that the activity may render the site, or any surrounding sites that are zoned as RTZ, unable to be developed as residential zoned land when required.</p>

### 12.5.2 Assessment of non-complying activities in a Transition Overlay Zone

Activity	Guidance on the assessment of resource consents
X. In a <b>Residential Transition Overlay Zone (RTZ)</b> (prior to release): <ul style="list-style-type: none"> <li>• General subdivision</li> <li>• Cross lease, company lease and unit title subdivision</li> </ul>	<i>Relevant objectives and policies (priority considerations):</i> <ol style="list-style-type: none"> <li>Objective 12.2.1.</li> <li>Subdivision activities prior to land being released will not undermine or inhibit the future development of the area at the intended residential density (Policy 12.2.1.4).</li> </ol>

## Appendices

### Appendix 12A. Residential Transition Zones

RTZ Name	Existing Zone	Transition Zone
North Road	Rural Hill Slopes	General Residential 1
Montague Street	Rural Hill Slopes	General Residential 1
Burkes Drive	Rural Residential 1	General Residential 1
Pine Hill Road	Rural Hill Slopes	General Residential 1
Balmacewen Road	Rural Hill Slopes	General Residential 1
Wakari Road	Rural Residential 2	General Residential 1
Taieri Road	Rural Residential 1	General Residential 1
St Albans Street North	Rural Hill Slopes	General Residential 1
St Albans Street South	Rural Hill Slopes	General Residential 1
Bradford	Rural Residential 2	General Residential 1
Salisbury Road	Rural Residential 2	General Residential 1
Isadore Road	Rural Coastal	General Residential 1
Irvine Road	Rural Hill Slopes	General Residential 1
South East Mosgiel	Rural Taieri Plain	General Residential 1
Selwyn Street	Rural Residential 2	General Residential 1

### Appendix 12B. Industrial Transition Zones

IndTZ Name	Existing Zone	Transition Zone
Kaikorai Valley	Rural Hill Slopes	Industrial Zone
Boundary Road A	Rural Hill Slopes	Industrial Zone
Boundary Road B	Rural Hill Slopes	Industrial Zone

Boundary Road C	Rural Hill Slopes	Industrial Zone
Old Brighton Road	Rural Hill Slopes	Industrial Zone
Saunders Road	Rural Taieri Plains	Industrial Zone
Dukes Road	Rural Taieri Plains	Industrial Zone

### Appendix 12C. New Development Mapped Areas

NDMA Name	Description
Emerson Street	Emerson Street/Blackhead Road, Concord
Patmos Avenue	Patmos Avenue, Pine Hill
Bradford	Glenelg Street/Ronay Street/Bradford Street, Bradford
Westacott Heights	Dalziel Road, Halfway Bush
Burkes Drive	Burkes Drive, St Leonards
Montague Street	Montague Street, Opoho
Pine Hill Road	Pine Hill Road, Pine Hill
Balmacewen Road	Balmacewen Road, Wakari
Taieri Road	Taieri Road, Halfway Bush
Isadore Road	Isadore Road, St Clair
St Albans Street South	St Albans Street, Kaikorai Valley
St Albans Street North	Ettrick Street, Kaikorai Valley
Salisbury Road	Salisbury Road, Kaikorai Valley
Kaikorai Valley Road	Kaikorai Valley Road, Kaikorai Valley
South East Mosgiel	Land bounded by Hagart-Alexander Drive, Gladstone Road North and Wingatui Road
Riccarton Road East	Elizabeth Avenue / Riccarton Road East, East Taieri
Ayr Street	Inglis Street and Ayr Street, Mosgiel
Norwood Street	Norwood Street / North Road, Dunedin
Irvine Road	Irvine Road, Dunedin
Doctors Point	Doctors Point Road, Waitati
Henderson Street	Soper Road and Henderson Street
Gladstone Road South	Gladstone Road South, Mosgiel near Riccarton Road West
Fairfield	Main Road, Fairfield <b>{Variation 2 appeal}</b>
Sunnyvale	Main South Road, Sunnyvale

Lower Emerson Street	Emerson Street, Concord (near Thoreau Street)
Concord	Main South Road, Concord
Honeystone Street	Honeystone Street, Dunedin
Weller Street	Weller Street, The Cove
Wattie Fox Lane	Wattie Fox Lane, Kenmure
Helensburgh	Wakari Road
Polwarth Road	Polwarth Road / Wakari Road
Hare Road	Hare Road, Ocean View
Weir Street	Weir Street, Green Island
Portobello 1	Area west of Highcliff Road, Portobello
Portobello 2	Area east of Highcliff Road, Portobello
Gloucester Street	Gloucester Street <b>{Variation 2 appeal}</b>

## 13. Heritage

### 13.1 Introduction

The Resource Management Act 1991 (RMA) identifies "the protection of historic heritage from inappropriate subdivision, use, and development" as a matter of national importance (section 6(f) RMA). Dunedin has a wealth of heritage items, particularly its remarkable collection of heritage buildings, but also significant heritage sites and archaeological sites, which reflect both its Māori history and early European settlement. Dunedin's strength is that its heritage is strongly visible in all parts of the city, including suburban centres, residential areas, industrial areas and outlying settlements. These diverse buildings tell the stories of the various social classes and activities that have contributed to the city's growth.

Heritage items are listed within schedules within the Plan appendices, and are managed through rules within each zone. The objectives, policies and assessment rules relating to heritage are contained within this section of the Plan.

#### **Heritage buildings and structures**

One of Dunedin's strengths is its collection of heritage buildings and structures. The city's appearance is still strongly that of a Victorian/Edwardian city. The design and appearance of many large buildings of that era, individually and collectively, give the central city an appearance of grandeur and permanence. Development that has taken place since Edwardian times has generally retained and enhanced the values of that period, cumulatively giving Dunedin a unique and coherent heritage character. Heritage buildings and structures are listed in Appendix A1.1 Schedule of Protected Heritage Items and Sites.

One of the key resource management issues relating to such buildings is the degradation of the heritage fabric, leading to demolition because the building has become dangerous under the Building Act 2004, or because it has become too costly to repair. In some cases, a lack of long-term maintenance has led to this 'demolition by neglect'.

In order to avoid the loss of heritage character and values, it is necessary to manage changes to these buildings and structures. These changes should be considered in relation to the heritage values of the building or structure as originally assessed when first scheduled, to allow consideration of the cumulative effects of any previously approved works to be considered. However, it is also recognised that the best way of retaining heritage buildings and avoiding demolition by neglect is to encourage their ongoing use and re-use. Remarkable progress has been made in recent years, particularly in the older commercial and industrial parts of the central city, in terms of adaptive re-use of heritage buildings that might otherwise have been under-utilised and fallen into decay. This has been instrumental in revitalising those parts of the city.

In response to these issues, the Plan aims to both protect heritage values and to also encourage and allow changes necessary to facilitate appropriate re-use. To achieve this, the Plan contains more enabling rules and policies related to repairs and maintenance, restoration, earthquake strengthening, and other alterations required by the Building Act 2004, while activities resulting in irreversible changes to protected parts of the building, removal for relocation or demolition are subject to greater levels of control. In order to encourage re-use, the range of activities provided for within heritage buildings in specific zones is broadened to offer additional development opportunities. For example, in the Warehouse Precinct Zone, general retail activity is provided for only in heritage buildings, and in the Smith Street and York Place Zone, office activity is only provided for in heritage buildings.

#### **Heritage sites**

Heritage sites recognise the heritage values of a larger number of elements within a defined geographic area. This may include buildings and structures and their curtilage, gardens, open spaces and other landscape features. Such sites are also under threat from inappropriate development if not adequately protected.

Heritage sites are listed in Appendix A1.1. The Plan provisions manage changes to these sites to ensure that the heritage values for which the site is protected are not eroded. There is a focus on managing the effects of new

buildings, larger structures and site development activities, given the effects these can have on the relationships between existing structures and open space on sites. Where a site contains scheduled heritage buildings, the rules relating to heritage buildings govern changes to those buildings.

## **Heritage Precincts**

The Plan identifies a number of areas that have high heritage streetscape values within both the residential and commercial mixed use zones. These are areas with concentrated collections of high quality period buildings, whose appearance and character contributes significantly to the streetscape. In many cases, these areas were protected as heritage or townscape precincts in the Dunedin City District Plan (2006).

Many of these areas contain large numbers of individually scheduled heritage buildings. The remainder of the buildings are classified as either character-contributing or non character-contributing buildings, depending on whether the building or site is consistent with the predominant character of the area. Character-contributing buildings are included within Appendix A1.1. Rules differ between these types of building, recognising that changes to, or removal of, non character-contributing buildings may have little negative effect on the heritage character of the area.

The focus in the precincts is on managing the collective historic streetscape character created by individually scheduled heritage buildings and character-contributing buildings of that precinct, as assessed at the time of scheduling. The rules, therefore, only apply to the parts of buildings visible from the street or other adjoining public place, with alterations that are not visible from an adjoining public place not requiring consent. As with individual heritage buildings, the provisions recognise that the ongoing use or re-use of buildings is the most effective way of maintaining the character of the precinct. As such, activities such as repairs and maintenance, restoration, and earthquake strengthening are permitted activities, while additions and alterations, removal or demolition, require consent.

New buildings that are visible from an adjoining public place require consent, with design criteria detailed for each precinct to ensure that these buildings are sympathetic to the character of the precinct (Appendix A2). However, this does not mean they are required to be replica buildings. There are also specific rules relating to fences, retaining walls and car parking areas in residential heritage precincts that aim to protect streetscape character. Car parking areas must be located away from the front boundary. This is to discourage existing front gardens, which contribute to the streetscape character, from being converted to parking areas, and to ensure that parking areas associated with new development are appropriately located. The rules around fences will ensure that heritage buildings and their curtilage remain visible from the street.

Within the commercial heritage precincts, colours are restricted to a neutral, heritage or muted palette. The range of possible colours is broad, but does not include excessively bright colours which may detract from the streetscape character. There are also additional controls around demolition and removal for relocation within the commercial heritage precincts. Policy 13.2.3.6 requires that consent is only granted where there is reasonable certainty that the land will be put to an alternative acceptable land use (for example, another building or green space). This is to avoid the creation of unsightly gaps within the central city streetscape, which can significantly reduce the streetscape character. For this reason, consent is required for demolition of all buildings within a heritage precinct that are visible from an adjoining public place.

## **Archaeological sites**

Statutory responsibility for archaeological sites rests with Heritage New Zealand. Archaeological sites are defined in the Heritage New Zealand Pouhere Taonga Act 2014 as:

"...any place in New Zealand, including any building or structure (or part of a building or structure), that—

- (i) was associated with human activity that occurred before 1900 or is the site of the wreck of any vessel where the wreck occurred before 1900; and
- (ii) provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand..."

Sites dating from after 1900 may also be declared to be archaeological sites if they may provide significant evidence relating to the historical and cultural heritage of New Zealand.

The Heritage New Zealand Pouhere Taonga Act 2014 makes it unlawful for any person to destroy, damage or modify the whole or any part of an archaeological site without the prior authority of Heritage New Zealand. This is the case regardless of whether the land on which the site is located is designated, the activity is permitted under the District or Regional Plan, or a resource or building consent has been granted. The Act also provides for substantial penalties for unauthorised destruction, damage or modification. There is a specific statutory process for applying for an authority, which is managed by Heritage New Zealand.

The key issue with regard to archaeological sites is that most are not identified in the Dunedin City District Plan (2006), and are therefore at risk of damage if landowners are unaware of them when undertaking activities on their land. In response to this issue, this Plan alerts land and building owners to their responsibilities under the Heritage New Zealand Pouhere Taonga Act 2014 rather than duplicating the authority process by requiring additional resource consents for work that may disturb archaeological sites. This is achieved in the following three ways.

Firstly, a number of highly significant archaeological sites are identified in Appendix A1.1 and their extent mapped. These are sites with high archaeological values and are a small subset of the known archaeological sites within Dunedin. Earthworks within these areas are subject to a performance standard requiring an archaeological authority to be obtained if one is required. A breach of this standard is a non-complying activity. Inclusion of this rule allows enforcement action to be taken if a site is disturbed without appropriate authority from Heritage New Zealand.

Secondly, the Plan establishes an archaeological alert layer. This includes many other known archaeological sites and areas of historical Māori settlement, and identifies areas that have a strong likelihood of containing archaeological remains. There are no specific rules attached to these areas in relation to archaeological remains. Instead, people undertaking development are specifically alerted that archaeological remains may be present, and are encouraged to check with Heritage New Zealand as to whether there are any recorded archaeological sites close by. There is increased potential for archaeological sites to be disturbed within the **wāhi tūpuna mapped areas**. These are generally included either as scheduled archaeological sites or within the archaeological alert layer.

Thirdly, the Plan includes advice notes in all zones reminding site owners of their responsibilities under the Heritage New Zealand Pouhere Taonga Act 2014, given that archaeological remains may be present anywhere within the District. This includes advice on the correct process to be followed should an archaeological site be uncovered, and advice that demolition of pre-1900 buildings requires an archaeological authority.

## 13.2 Objectives and Policies

<b>Objective 13.2.1</b>	
Scheduled heritage buildings and structures are protected.	
Policy 13.2.1.1	Encourage the maintenance, ongoing use and adaptive re-use of scheduled heritage buildings, including by enabling repairs and maintenance, earthquake strengthening, and work required to comply with section 112 (Alterations) and section 115 (Change of Use) of the Building Act 2004 where it is done in line with policies 13.2.1.2-13.2.1.4.
Policy 13.2.1.2	Require repairs and maintenance and restoration that affect a protected part of a scheduled heritage building or scheduled heritage structure to preserve and protect the heritage values of the building or structure by using appropriate materials and design.
Policy 13.2.1.3	Require earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure to use appropriate materials and design to minimise, as far as practicable, any adverse effects on the heritage values of the building, including by: <ul style="list-style-type: none"> <li>a. protecting, as far as possible, architectural features and details that contribute to the heritage values of the building;</li> <li>b. retaining the original façade material where practicable;</li> <li>c. minimising, as far as practicable, the visual impact of additions on protected parts of the building; and</li> <li>d. in the case of the replacement of an elevated feature on a façade or roof, the new feature is visually indistinguishable from the feature being replaced.</li> </ul>
Policy 13.2.1.4	Enable work required to comply with section 112 (Alterations) and section 115 (Change of Use) of the Building Act 2004 that affects a protected part of a scheduled heritage building or scheduled heritage structure, provided both of the following criteria are met: <ul style="list-style-type: none"> <li>a. it is carried out in a manner that minimises, as far as practicable, adverse effects on the heritage values of the building; and</li> <li>b. the benefit in terms of long term protection and future use of the building, including earthquake strengthening, outweighs any loss of heritage values.</li> </ul>
Policy 13.2.1.5	Only allow other additions and alterations that affect a protected part of a scheduled heritage building or scheduled heritage structure where: <ul style="list-style-type: none"> <li>a. adverse effects on heritage values are avoided or minimised as far as practicable;</li> <li>b. the visual impact of additions on protected parts of the building, including building utilities, is minimised, as far as practicable; and</li> <li>c. the benefit in terms of long term protection and future use of the building outweighs any loss of heritage values.</li> </ul>
Policy 13.2.1.6	Only allow subdivision of sites containing scheduled heritage buildings and scheduled heritage structures where the subdivision is designed to: <ul style="list-style-type: none"> <li>a. provide sufficient curtilage around the scheduled heritage building or scheduled heritage structure to protect heritage values; and</li> <li>b. ensure any future land use or development will maintain existing views of scheduled heritage buildings or scheduled heritage structures from adjoining public places, as far as practicable.</li> </ul>

### Objective 13.2.1

Scheduled heritage buildings and structures are protected.

Policy 13.2.1.7	<p>Avoid the demolition of a protected part of a scheduled heritage building or scheduled heritage structure, unless the following criteria are met:</p> <ul style="list-style-type: none"> <li>a. <ul style="list-style-type: none"> <li>i. the building or part of the building poses a significant risk to safety or property; or</li> <li>ii. the demolition is required to allow for significant public benefit that could not otherwise be achieved, and the public benefit outweighs the adverse effects of loss of the building; and</li> </ul> </li> <li>b. there is no reasonable alternative to demolition, including repair, adaptive re-use, relocation or stabilising the building for future repair; and</li> <li>c. for buildings and structures located within a heritage precinct: <ul style="list-style-type: none"> <li>i. development post demolition will maintain or enhance the heritage streetscape character and amenity in accordance with Policy 13.2.3.6; and</li> <li>ii. conditions will be imposed which would give reasonable certainty that this will be completed within an acceptable timeframe.</li> </ul> </li> </ul>
Policy 13.2.1.8	<p>Only allow removal for relocation of a scheduled heritage building or scheduled heritage structure where the following criteria are met:</p> <ul style="list-style-type: none"> <li>a. the removal is necessary to <ul style="list-style-type: none"> <li>i. facilitate the ongoing use or protection of the building;</li> <li>ii. ensure public safety; or</li> <li>iii. allow for significant public benefit that could not otherwise be achieved, and the public benefit outweighs the adverse effects of removal of the building;</li> </ul> </li> <li>b. measures are in place to minimise, as far as practicable, the risk of damage to the building;</li> <li>c. the heritage values of the building or structure in its new location are not significantly diminished; and</li> <li>d. for buildings and structures located within a heritage precinct: <ul style="list-style-type: none"> <li>i. development post relocation will maintain or enhance the heritage streetscape character and amenity in accordance with Policy 13.2.3.6; and</li> <li>ii. conditions will be imposed which would give reasonable certainty that this will be completed within an acceptable timeframe.</li> </ul> </li> </ul>
Policy 13.2.1.9	<p>Provide for general retail - retail services in scheduled heritage buildings in the Warehouse Precinct Zone and offices in scheduled heritage buildings in the Smith Street and York Place and Warehouse Precinct zones, in order to maximise the potential opportunities for adaptive re-use of heritage buildings in these areas.</p>

### Objective 13.2.2

The heritage values of scheduled heritage sites are protected.

Policy 13.2.2.1	<p>Only allow new buildings and structures, additions and alterations, network utility activities, public amenities, natural hazard mitigation activities, transportation activities, and parking, loading and access on a scheduled heritage site where the heritage values of the site are protected, including by ensuring:</p> <ol style="list-style-type: none"> <li>the form, scale and proportion of the development, and the materials used, are architecturally compatible with the existing scheduled heritage buildings and scheduled heritage structures within the scheduled heritage site;</li> <li>the location of the development is compatible with that of scheduled heritage buildings and scheduled heritage structures on the site, and respects the relationship between scheduled heritage buildings, scheduled heritage structures and open space;</li> <li>existing views of scheduled heritage buildings or scheduled heritage structures from adjoining public places and publicly accessible areas within the scheduled heritage site are maintained as far as is practicable;</li> <li>scheduled heritage sites that are primarily open space are protected from inappropriate development; and</li> <li>network utility activities, natural hazard mitigation activities and building utilities are designed, located and/or screened to be as unobtrusive as practicable.</li> </ol>
Policy 13.2.2.2	<p>Only allow subdivision of scheduled heritage sites where:</p> <ol style="list-style-type: none"> <li>the subdivision is designed to ensure any future land use or development respects the relationship between scheduled heritage buildings, scheduled heritage structures and open space;</li> <li>scheduled heritage sites that are primarily open space are protected from unnecessary development; and</li> <li>the heritage values of the site are maintained.</li> </ol>

### Objective 13.2.3

The heritage streetscape character of heritage precincts is maintained or enhanced.

Policy 13.2.3.1	<p>Require repairs and maintenance, restoration and earthquake strengthening of a character-contributing building, where the work is visible from an adjoining public place, to be undertaken in a way that maintains or enhances the heritage streetscape character of the precinct by using appropriate materials and design.</p>
Policy 13.2.3.2	<p>Require development within residential heritage precincts to maintain or enhance heritage streetscape character, including by ensuring:</p> <ol style="list-style-type: none"> <li>garages and carports do not dominate the street;</li> <li>off-street car parking is appropriately located or screened from view;</li> <li>building heights, boundary setbacks and scale reflect heritage streetscape character;</li> <li>building utilities are appropriately located, taking into consideration operational and technical requirements; and</li> <li>fences do not screen buildings from view.</li> </ol>

### Objective 13.2.3

The heritage streetscape character of heritage precincts is maintained or enhanced.

Policy 13.2.3.3	Require development within commercial heritage precincts to maintain or enhance heritage streetscape character by ensuring: <ul style="list-style-type: none"> <li>a. off-street car parking is located within or behind buildings;</li> <li>b. building heights, boundary setbacks and scale reflect heritage streetscape character;</li> <li>c. vehicle crossings are kept to a minimum, including avoiding commercial drive-through facilities; and</li> <li>d. building utilities are appropriately located, taking into consideration operational and technical requirements.</li> </ul>
Policy 13.2.3.4	Require signs within commercial heritage precincts to be located and designed to avoid or minimise, as far as practicable, adverse effects on heritage streetscape character.
Policy 13.2.3.5	Only allow additions and alterations to character-contributing buildings where visible from a public place, where their design, materials and location achieve the following: <ul style="list-style-type: none"> <li>a. for work that is required in order to comply with the Building Act 2004 section 112 and section 115, the benefits in terms of long term protection and future use of the building, including earthquake strengthening, outweighs any adverse effects on heritage streetscape character; and</li> <li>b. for all other additions and alterations, heritage streetscape character is maintained or enhanced.</li> </ul>
Policy 13.2.3.6	Only allow demolition or removal for relocation of a building where: <ul style="list-style-type: none"> <li>a. the heritage streetscape character of the precinct will be maintained or enhanced; and</li> <li>b. conditions will be imposed that will give reasonable certainty that within an acceptable timeframe: <ul style="list-style-type: none"> <li>i. a replacement building will be constructed; or</li> <li>ii. the land will be put to an acceptable alternative land use that will make a positive contribution to the amenity of the streetscape.</li> </ul> </li> </ul>
Policy 13.2.3.7	Only allow buildings and structures that are visible from an adjoining public place, where their design, materials and location ensure the heritage streetscape character of the precinct is maintained or enhanced, including by: <ul style="list-style-type: none"> <li>a. incorporating into the design the relevant preferred design features and characteristics listed in Appendix A2 and, where practicable and appropriate, the relevant suggested features and characteristics;</li> <li>b. maintaining existing views of scheduled heritage buildings and character-contributing buildings from adjoining public places as far as practicable; and</li> <li>c. ensuring structures whose design unavoidably conflicts with precinct characteristics are as unobtrusive as practicable.</li> </ul>
Policy 13.2.3.8	Encourage the maintenance, ongoing use and adaptive re-use of character-contributing buildings, including by enabling repairs and maintenance, earthquake strengthening, network utility connections and work required in order to comply with the Building Act 2004 section 112 and section 115 where it is done in line with policies 13.2.3.1 and 13.2.3.5.
Policy 13.2.3.9	Require buildings within commercial heritage precincts, where painted, to be a muted or heritage palette colour.

### Objective 13.2.3

The heritage streetscape character of heritage precincts is maintained or enhanced.

Policy 13.2.3.10	Only allow public amenities, natural hazard mitigation activities and network utility activities where these are located and designed to minimise, as far as practicable, any adverse effects on heritage streetscape character.
Policy 13.2.3.11	Require additions to non character-contributing buildings to use materials and design that are the same or closely similar to the building being added to, or are in accordance with the preferred design features and characteristics for the precinct, as appropriate.

### Objective 13.2.4

Dunedin's archaeological sites are protected from inappropriate development and use.

Policy 13.2.4.1	Require an archaeological authority to be obtained, if one is required, prior to undertaking earthworks on a scheduled archaeological site.
-----------------	---

## Rules

### Rule 13.3 Development Performance Standards

#### 13.3.1 Building Colour

1. The following activities in commercial heritage precincts must meet the performance standard in Rule 13.3.1.2 below:
  - a. repairs and maintenance of buildings and structures;
  - b. additions and alterations to buildings and structures; and
  - c. new buildings and structures.
2. Paint on a roof or wall that is visible from an adjoining public place must be a colour from, or indistinguishable from a colour from, the following colour palettes:
  - a. Resene Heritage Colour Palette (2006);
  - b. Resene Whites and Neutrals (2001); or
  - c. British Standard BS 5252:1976 A01 to C40.
3. Public artworks and the painting of decorative trims, windows, and doors are exempt from this performance standard.
4. Activities that contravene this performance standard are restricted discretionary activities.

#### 13.3.2 Materials and Design

1. For earthquake strengthening of any protected part of a scheduled heritage building or scheduled heritage structure, or any part of a character-contributing building or non-protected part of a scheduled heritage building within a heritage precinct that is visible from an adjoining public place:
  - a.
    - i. Where an elevated feature is replaced, the replacement feature must appear exactly the same as the feature being replaced, when viewed from a public place; and
    - ii. Shotcrete must not be applied to the exterior.
2. Activities that contravene this performance standard are restricted discretionary activities.

#### 13.3.3 Archaeological sites

1. Earthworks on a scheduled archaeological site must have an archaeological authority if required.
2. Activities that contravene this performance standard are non-complying activities.

### **Note 13.3.3A - Other requirements outside of the District Plan**

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. This is the case regardless of whether resource consent for the activity has been obtained under this rule. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan or a resource or building consent has been granted.
2. The Heritage New Zealand Pouhere Taonga Accidental Discovery Protocol (Appendix A8) manages archaeological sites that may be discovered as a result of earthworks. The protocol applies to any area, not just scheduled archaeological sites.
3. Scheduled archaeological sites are identified on the Planning Map. Archaeological sites may also be found outside these areas, but are more likely to be found within the archaeological alert layer.
4. Where an archaeological authority is held for the earthworks, no resource consent from the DCC is required under this rule. Resource consent for the same earthworks may be required under other rules in this Plan.

## Rule 13.4 Assessment of Controlled Activities

### Rule 13.4.1 Introduction

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 13.4.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.

### 13.4.2 Assessment of controlled activities

Activity	Matters of control	Guidance on the assessment of resource consents
1. Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected.	a. Effects on heritage values	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>i. Objective 13.2.1</li> <li>ii. Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure uses appropriate materials and design to minimise, as far as practicable, any adverse effects on the heritage values of the building, including by:               <ol style="list-style-type: none"> <li>1. protecting, as far as possible, architectural features and details that contribute to the heritage values of the building;</li> <li>2. retaining the original façade material where practicable;</li> <li>3. minimising, as far as practicable, the visual effect of additions on protected parts of the building; and</li> <li>4. in the case of the replacement of an elevated feature on a façade or roof, the new feature is visually indistinguishable from the feature being replaced (Policy 13.2.1.3).</li> </ol> </li> </ol> <p><i>Conditions that may be imposed include:</i></p> <ol style="list-style-type: none"> <li>iii. Requirements around the design and implementation of the works, including materials and methods used.</li> </ol>
2. Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)	a. Effects on heritage values	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>i. Objective 13.2.1</li> <li>ii. Restoration preserves and protects the heritage values of the building or structure by using appropriate materials and design (Policy 13.2.1.2).</li> </ol> <p><i>Conditions that may be imposed include:</i></p> <ol style="list-style-type: none"> <li>iii. The design and implementation of the works, including materials and methods used.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>iv. Council will consider the extent to which the materials used and the design of any replacement building components are the same or closely similar to those being repaired or replaced.</li> </ol>

### 13.4.2 Assessment of controlled activities

Activity	Matters of control	Guidance on the assessment of resource consents
<p>3. In a heritage precinct, additions and alterations to a non character-contributing building that involve:</p> <ul style="list-style-type: none"> <li>• an increase in the footprint of 10m<sup>2</sup>;</li> <li>• an increase in the height of the building by more than 2m; or</li> <li>• the replacement of a pitched roof with a mono plane roof (residential heritage precincts only).</li> </ul>	<p>a. Effect on heritage streetscape character</p>	<p><i>Relevant objectives and policies</i></p> <ol style="list-style-type: none"> <li>i. Objective 13.2.3</li> <li>ii. The design and materials used are the same or closely similar to the building being added to, or are in accordance with the preferred design features and characteristics for the precinct, as appropriate (Policy 13.2.3.11).</li> </ol> <p><i>Conditions that may be imposed include:</i></p> <ol style="list-style-type: none"> <li>iii. The design of the works, including materials used.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>iv. Council will consider the extent to which: <ol style="list-style-type: none"> <li>1. the relevant preferred design features and characteristics and, where practicable and appropriate, the relevant suggested features and characteristics, listed in Appendix A2; are achieved in the design; and</li> <li>2. the design of any additions and alterations that does not detract further from the heritage streetscape character of the precinct.</li> </ol> </li> </ol>

## **Rule 13.5 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 13.5.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 13.5.2 - 13.5.4:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided ; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

### 13.5.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.4.2, 2.4.3</li> <li>b. Policies 2.4.2.1, 2.4.3.2</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>c. The degree of non-compliance with the performance standard is minor.</li> <li>d. There are positive effects on heritage values through not meeting the performance standards.</li> <li>e. The need to meet other performance standards or site specific factors, including topography, make meeting the standard impracticable.</li> <li>f. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>g. For work affecting a scheduled heritage building or scheduled heritage structure, Council will consider the extent to which the work enables the ongoing use of the building or structure in line with Policy 13.2.1.1</li> <li>h. For work affecting a character-contributing building or scheduled heritage structure, Council will consider the extent to which the work enables ongoing use of the building in line with Policy 13.2.3.8</li> <li>i. Where more than one standard is contravened, Council will consider the combined effects of the contraventions.</li> <li>j. In balancing consideration of the objectives and policies related to the maintenance of heritage values or heritage precinct streetscape character and those related to general amenity, Council will usually place greater weight on heritage policies.</li> <li>k. In assessing the effects on heritage streetscape character, Council will consider the heritage precinct values in Appendix A2.</li> <li>l. Where there is a conflict between compliance with performance standards and protection of heritage values, Council will give precedence to protection of heritage values.</li> </ul>

### 13.5.3 Assessment of performance standard contraventions that affect a protected part of a Scheduled Heritage Building, Scheduled Heritage Structure, or Scheduled Heritage Site

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
----------------------	-----------------------	---

### 13.5.3 Assessment of performance standard contraventions that affect a protected part of a Scheduled Heritage Building, Scheduled Heritage Structure, or Scheduled Heritage Site

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. Materials and design	a. Effects on heritage values	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 13.2.1</li> <li>ii. Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure uses appropriate materials and design to minimise, as far as practicable, any adverse effects on the heritage values of the building, including by: <ul style="list-style-type: none"> <li>1. protecting, as far as possible, architectural features and details that contribute to the heritage values of the building;</li> <li>2. retaining the original façade material where practicable; and</li> <li>3. minimising, as far as practicable, the visual effect of additions on protected parts of the building; and</li> <li>4. in the case of the replacement of an elevated feature on a façade or roof, the new feature is visually indistinguishable from the feature being replaced (Policy 13.2.1.3).</li> </ul> </li> </ul>
2. Maximum volume in <b>pedestrian street frontage mapped areas</b> , heritage precincts and scheduled heritage sites (network utility activities)	a. Effects on heritage values	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 13.2.2</li> <li>ii. The heritage values of the site are protected, including by ensuring that network utility activities are designed, located and/or screened to be as unobtrusive as practicable (Policy 13.2.2.1).</li> </ul>
X. All performance standard contraventions by any network utility activity that forms part of the National Grid, and any ancillary activities including earthworks and vegetation clearance	a. Effects on heritage values	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. The following objective and policies apply, in addition to the objectives and policies referenced elsewhere in Rule 13.5.3: <ul style="list-style-type: none"> <li>1. Objective 5.2.X.</li> <li>2. Policies 5.2.X.1, 5.2.X.2, 5.2.X.3.</li> </ul> </li> </ul>

### 13.5.4 Assessment of performance standard contraventions in a Heritage Precinct

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
----------------------	-----------------------	---

### 13.5.4 Assessment of performance standard contraventions in a Heritage Precinct

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Boundary setbacks	a. Effects on heritage streetscape character	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 13.2.3</li> <li>ii. Development within heritage precincts maintains or enhances heritage streetscape character by ensuring that building heights, boundary setbacks and scale reflect heritage streetscape character (policies 13.2.3.2.c, 13.2.3.3.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The boundary setback is consistent with the setbacks of surrounding properties.</li> <li>iv. The visual cohesion of the street is not reduced by the increase in setback.</li> <li>v. There is significant variability in the setback of buildings from the street frontage in the vicinity of the site.</li> </ul>
2.	Building colour	a. Effects on heritage streetscape character	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 13.2.3</li> <li>ii. Buildings are painted a muted or heritage palette colour (Policy 13.2.3.9).</li> </ul>
3.	Fence height and design	a. Effects on heritage streetscape character	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 13.2.3</li> <li>ii. Development within residential heritage precincts maintains or enhances heritage streetscape character by ensuring that fences do not screen buildings from view (Policy 13.2.3.2.e).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The fence is highly permeable.</li> <li>iv. The fence only screens an existing non character-contributing building.</li> <li>v. The fence maintains an attractive interface with the street.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>vi. Landscaping requirements between the fence and any public place.</li> </ul>

### 13.5.4 Assessment of performance standard contraventions in a Heritage Precinct

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
4. <ul style="list-style-type: none"> <li>Height in relation to boundary</li> <li>Maximum height</li> <li>Height (CMU)</li> </ul>	a. Effects on heritage streetscape character	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 13.2.3</li> <li>ii. Development within heritage precincts maintains or enhances heritage streetscape character by ensuring that building heights, boundary setbacks and scale reflect heritage streetscape character (policies 13.2.3.2.c, 13.2.3.3.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The height and height profile is consistent with that of the buildings on either side.</li> <li>iv. There is significant variability in the height and height profile of buildings from the street frontage in the vicinity of the site.</li> <li>v. The height of the building does not reduce the visual cohesion of the street.</li> <li>vi. The building is to the rear of the site, located behind a building on the street frontage.</li> </ul>
5. Location and screening of car parking	a. Effects on heritage streetscape character	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 13.2.3</li> <li>ii. Development within commercial heritage precincts maintains or enhances heritage streetscape character by ensuring off-street car parking is located within or behind buildings (Policy 13.2.3.3.a).</li> <li>iii. Development within residential heritage precincts maintains or enhances heritage streetscape character by ensuring off-street car parking is appropriately located or screened from view; (Policy 13.2.3.2.b)</li> </ul>
6. Materials and design	a. Effects on heritage streetscape character	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 13.2.3</li> <li>ii. Require that earthquake strengthening of a character-contributing building, where the work is visible from an adjoining public place, to be undertaken in a way that maintains or enhances the heritage streetscape character of the precinct by using appropriate materials and design (Policy 13.2.3.1).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The earthquake strengthening avoids, or where avoidance is not possible, minimises loss of fabric and features that contribute to the heritage streetscape character.</li> </ul>

### 13.5.4 Assessment of performance standard contraventions in a Heritage Precinct

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
7. Number, location and design of ancillary signs	a. Effects on heritage streetscape character	<i>Relevant objectives and policies:</i> i. Objective 13.2.3 ii. Signs within commercial heritage precincts are located and designed to avoid or minimise, as far as practicable, adverse effects on heritage streetscape character (Policy 13.2.3.4).
8. <ul style="list-style-type: none"> <li>Location (network utility activities)</li> <li>Maximum volume in <b>pedestrian street frontage mapped areas</b>, heritage precincts and scheduled heritage sites (network utility activities)</li> </ul>	a. Effects on heritage streetscape character	<i>Relevant objectives and policies:</i> i. Objective 13.2.3 ii. Network utility activities are located and designed to minimise, as far as practicable, any adverse effects on heritage streetscape character (Policy 13.2.3.10).
X. All performance standard contraventions by any network utility activity that forms part of the National Grid, and any ancillary activities including earthworks and vegetation clearance	a. Effects on heritage streetscape character	<i>Relevant objectives and policies:</i> i. The following objective and policies apply, in addition to the objectives and policies referenced elsewhere in Rule 13.5.4: 1. Objective 5.2.X. 2. Policies 5.2.X.1, 5.2.X.2, 5.2.X.3.

## Rule 13.6 Assessment of Restricted Discretionary Activities

### Rule 13.6.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 13.6.2 - 13.6.4:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

### 13.6.2 Assessment of all restricted discretionary activities

Activity	Guidance on the assessment of resource consents
1. All restricted discretionary activities	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>a. Objectives 2.4.1, 2.4.2, 2.4.3</li> <li>b. Policies 2.4.1.3, 2.4.2.1, 2.4.2.2, 2.4.3.2</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>c. For work affecting a scheduled heritage building or scheduled heritage structure, Council will consider:               <ol style="list-style-type: none"> <li>i. the extent to which the work enables the ongoing use of the building or structure in line with Policy 13.2.1.1; and</li> <li>ii. the cumulative effects of the proposed work together with any previous changes on the heritage values of the property.</li> </ol> </li> <li>d. For work affecting a character-contributing building or scheduled heritage structure, Council will consider:               <ol style="list-style-type: none"> <li>i. the extent to which the work enables the ongoing use of the building in line with Policy 13.2.3.8; and</li> <li>ii. the cumulative effects of the proposed work together with any previous changes on the heritage values of the property and on the overall heritage character of the precinct.</li> </ol> </li> <li>e. For all restricted discretionary activities, Council will consider whether there are positive effects on heritage values.</li> <li>f. In assessing the effects on heritage streetscape character, Council will consider the heritage precinct values in Appendix A2.</li> </ol>

**13.6.3 Assessment of restricted discretionary activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or scheduled heritage site**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>1. On a <b>scheduled heritage site</b>:</p> <ul style="list-style-type: none"> <li>• New buildings and structures where visible from an adjoining public place or a public place within the heritage site</li> <li>• Parking, loading and access where visible from an adjoining public place or a public place within the heritage site</li> <li>• Earthworks - large scale (that exceed scale thresholds for a scheduled heritage site)</li> <li>• Network utility poles and masts - small scale</li> <li>• Wind generators - small scale</li> <li>• Hydro generators - small scale</li> <li>• Solar panels - small scale</li> <li>• All restricted discretionary public amenities activities</li> </ul>	<p>a. Effects on heritage values</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>i. Objective 13.2.2</li> <li>ii. Activities on a scheduled heritage site protect the heritage values of the site, including by ensuring:               <ol style="list-style-type: none"> <li>1. the form, scale and proportion of the development, and the materials used, are architecturally compatible with the existing scheduled heritage buildings and scheduled heritage structures within the scheduled heritage site;</li> <li>2. the location of the development is compatible with that of scheduled heritage buildings and scheduled heritage structures on the site, and respects the relationship between scheduled heritage buildings, scheduled heritage structures and open space;</li> <li>3. existing views of scheduled heritage buildings or scheduled heritage structures from adjoining public places and publicly accessible areas within the scheduled heritage site are maintained as far as is practicable;</li> <li>4. scheduled heritage sites that are primarily open space are protected from inappropriate development; and</li> <li>5. network utility activities and building utilities are designed, located and/or screened to be as unobtrusive as practicable (Policy 13.2.2.1).</li> </ol> </li> </ol>

### 13.6.3 Assessment of restricted discretionary activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or scheduled heritage site

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>2. On a <b>scheduled heritage site</b>:</p> <ul style="list-style-type: none"> <li>All subdivision activities</li> </ul>	<p>a. ## Rule 13.7 Assessment of Discretionary Activities

### Rule 13.7.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 13.7.2 provides guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.

### 13.7.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
1. All discretionary activities that are linked to section 13.7, including but not limited to the activities listed below	<i>Relevant objectives and policies (priority considerations):</i> <ol style="list-style-type: none"> <li>a. Objectives 2.4.2, 2.4.3</li> <li>b. Policies 2.4.2.2, 2.4.3.2</li> </ol>
2. On a <b>scheduled heritage site</b> : <ul style="list-style-type: none"> <li>• Discretionary transportation activities</li> <li>• Discretionary public amenities</li> <li>• Natural hazard mitigation earthworks</li> <li>• Natural hazard mitigation structures</li> <li>• Network utility structures - large scale other than amateur radio configurations</li> <li>• Substations</li> </ul>	<i>Relevant objectives and policies (priority considerations):</i> <ol style="list-style-type: none"> <li>a. Objective 13.2.2</li> <li>b. The heritage values of the scheduled heritage site are maintained or enhanced, including by ensuring:               <ol style="list-style-type: none"> <li>i. the form, scale and proportion of the development, and the materials used, are architecturally compatible with the existing scheduled heritage buildings and scheduled heritage structures within the site;</li> <li>ii. the location of the development is compatible with that of the scheduled heritage buildings and scheduled heritage structures on the site, and respects the relationship between scheduled heritage buildings, scheduled heritage structures and open space;</li> <li>iii. existing views of scheduled heritage buildings or scheduled heritage structures from adjoining public places and publicly accessible areas within the site are maintained as far as is practicable;</li> <li>iv. sites that are primarily open space are protected from inappropriate development; and</li> <li>v. network utility activities and hazard mitigation activities are designed, located and/or screened to be as unobtrusive as practicable (Policy 13.2.2.1).</li> </ol> </li> </ol>

### 13.7.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
<p>3. In a <b>heritage precinct</b>:</p> <ul style="list-style-type: none"> <li>• Natural hazard mitigation earthworks</li> <li>• Natural hazard mitigation structures</li> <li>• Network utility structures - large scale other than amateur radio configurations</li> <li>• Substations</li> </ul>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>a. Objective 13.2.3</li> <li>b. Network utility activities and natural hazard mitigation activities are located and designed to minimise, as far as practicable, any adverse effects on heritage streetscape character (Policy 13.2.3.10).</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>c. In assessing the effects on heritage streetscape character, Council will consider the heritage precinct values in Appendix A2.</li> </ol>

## Rule 13.8 Assessment of Non-complying Activities

### Rule 13.8.1 Introduction

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 13.8.2 - 13.8.4 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.

### 13.8.2 Assessment of all non-complying activities

Activity	Guidance on the assessment of resource consents
1. All non-complying activities that are linked to section 13.8, including but not limited to the activities listed below	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. The activity does not detract from, or preferably contributes to, the strategic directions objectives, including, but not limited to Objective 2.4.2</li> <li>b. Policy 2.4.2.1.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>c. In assessing the significance of effects, consideration will be given to:               <ol style="list-style-type: none"> <li>i. both short and long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent.;</li> </ol> </li> <li>d. In assessing the effects on heritage streetscape character, Council will consider the values in Appendix A2.</li> </ol>

### 13.8.3 Assessment of non-complying activities

Activity	Guidance on the assessment of resource consents
1. Demolition of a protected part of a scheduled heritage building or scheduled heritage structure	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objective 13.2.1</li> <li>b. Policy 13.2.1.7.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>c. The assessment for resource consent for demolition of a scheduled heritage building will consider the information provided with the consent application (see Special Information Requirements - Rule 13.9.1).</li> </ol>

#### 13.8.4 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. Archaeological sites (earthworks)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 13.2.4</li> <li>b. Policy 13.2.4.1</li> </ul>
2. Location and screening of car parking	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 13.2.3</li> <li>b. Policy 13.2.3.3.a</li> </ul>

## **Rule 13.9 Special Information Requirements**

### **13.9.1 Demolition of heritage building requirements**

1. For resource consent applications proposing demolition of a scheduled heritage building, the following is required:
  - a. A Heritage Impact Assessment addressing the effect the demolition will have on heritage values, including a full discussion of the alternatives considered, including quantified reasons why the alternatives are not reasonable.
  - b. Where demolition is proposed due to seismic risk, a detailed seismic assessment, fully quantified costs and an economic analysis of seismic upgrade (including a staged upgrade) to the minimum requirements by a Chartered Professional Engineer with demonstrated experience of assessment and seismic upgrade of buildings with comparable construction type and materials. For the sake of clarity, this need not be the same construction method. The information should include the methods of strengthening considered.
  - c. In addition, where partial demolition is proposed,
    - i. evidence of the structural feasibility of retaining the part of the building proposed for retention.
2. All information provided in support of any resource consent application, including engineering assessments, consideration of alternatives and design statements may be peer reviewed by Council prior to making a decision.

## 14. Manawhenua

### 14.1 Introduction

#### 14.1.1 Kāi Tahu

The Kāi Tahu<sup>1</sup> tribal area occupies most of the South Island. The area ranges from Rakiura (Stewart Island) in the south to Te Parinuiowhiti (White Cliffs, Blenheim) in the north and Kahurangi Point on the West Coast/Te Tai o Poutini. Te Rūnanga o Ngāi Tahu, the tribal iwi authority, is made up of 18 papatipu rūnaka. Located predominantly in traditional coastal settlements, papatipu rūnaka are a focus for whānau and hapū (extended family groups) who have Manawhenua status within their area. Manawhenua hold traditional customary authority and maintain contemporary relationships within an area determined by whakapapa (genealogical ties), resource use and ahi-kā-roa (the long burning fires of occupation).

<sup>1</sup> In the south of the South Island, the local Māori dialect can use a 'k' in place of the 'ng' so southern Māori are known as Kāi Tahu, as well as Ngāi Tahu. The 'ng' and 'k' are used interchangeably. In this Plan, 'k' is generally used.

#### 14.1.2 Relationship of Kāi Tahu Whānui with Dunedin

The first people of the South Island, Te Waipounamu, were the Waitaha people. The first place name applied to any site in the Dunedin area is believed to be Kaikarae, the Kaikorai estuary, where the Waitaha raketira Rakaihautu and his people made camp and ate a meal of karae (seabird). Successive waves of iwi followed, first the Kāti Mamoe, and later Kāi Tahu, who both migrated from the North Island. Over time the three iwi merged through conquest, marriage and peace alliances. Kāi Tahu are therefore a fusion of Waitaha, Kāti Mamoe and Kāi Tahu whakapapa, referred to collectively as Kāi Tahu whānui.

At the time of first European contact the greatest concentration of Kāi Tahu population south of the Waitaki was settled within the East Otago bight from Karitāne to the Otago Peninsula. Sealer John Boulton recorded in 1820 that Ōtākou was the "oldest and largest" Ngāi Tahu settlement south of the Waitaki. Seasonally, trips would be made to inland Otago to visit relations, harvest various species and gather plants and stone resources. Journeys were also made south to the Titi (Mutton Bird) Islands. Trails along the Otago coast and inland became well established. Waterways and the coastal waters also provided transport routes.

#### 14.1.3 Manawhenua

The Dunedin City Council (DCC) has an established relationship with the two Kāi Tahu papatipu rūnaka within the Dunedin City boundary: Te Rūnanga o Ōtākou, based on the Otago Peninsula, and Kāti Huirapa Rūnaka ki Puketeraki, based at Puketeraki Marae near Karitāne. In this Plan Te Rūnanga o Ōtākou and Kāti Huirapa Rūnaka ki Puketeraki are recognised as having Manawhenua status within specific areas of the city.

The DCC acknowledges that Dunedin is also home to Māori from other iwi and hapū (mātāwaka). The Araiteuru marae in Shetland Street in Dunedin is an important pan-tribal cultural centre for mātāwaka and sits within the manaakitaka of Manawhenua.

#### 14.1.4 Papatipu Rūnaka

##### 14.1.4.1 Te Rūnanga o Ōtākou

The takiwā of Te Rūnanga o Ōtākou centres on Muaupoko/Otago Peninsula, and extends from Purehurehu (Heyward Point) to Mata-Au (Clutha River) and inland, sharing an interest in the lakes and mountains to the western coast with rūnaka to the north and south. The Otago Harbour has a pivotal role in the well-being of Ōtākou people. The harbour is a source of identity and a bountiful provider of kaimoana, and it is the pathway to the fishing grounds beyond. Traditionally it was the mode for other hapū to visit, and in today's world it is the lifeline to the international trade that benefits the region. The ebb and flow of the harbour tides is a valued certainty in a world of change, a taoka to be

treasured and protected for the benefit of current and future generations.

Figure 14.1.4.1A: Ōtākou Marae, Otago Peninsula

#### **14.1.4.2 Kāti Huirapa Rūnaka ki Puketeraki**

The takiwā of Kāti Huirapa Rūnaka ki Puketeraki centres on Karitāne and extends from the Waihemo (Shag) River to Purehurehu (Heyward Point) and includes an interest in Ōtepoti and the greater harbour of Ōtākou. The takiwā extends inland to the Main Divide sharing an interest in the lakes and mountains to Wakatipu Waitai with rūnaka to the south. The kaimoana resources of the coast from Karitāne to Okahau/Blueskin Bay and Pūrākaunui, and the kai awa of the Waikouaiti River are treasured and well-utilised mahika kai to Kāti Huirapa Rūnaka ki Puketeraki. The people that lived in this area chose to do so because of the strategic position close to European traders and the abundance of kaimoana and mahika kai. In the early 1800s Whareakeake became a central focus of Kāi Tahu commerce with European traders, based on the manufacture of pounamu trade items. In the late 1830s the shore whaling stations at Karitāne and Pūrākaunui attracted whānau involvement and later in 1840 the Reverend James Watkin established the first Wesleyan Mission Station in the south. At Karitāne, then called Old Waikouaiti, the young chiefs of southern Kāi Tahu learnt to read and write and heard about the karakia bora, the new Christian religion.

Figure 14.1.4.2A: Puketeraki Marae, Puketeraki

## **14.1.5 Kāi Tahu Values**

### **14.1.5.1 Introduction**

Kāi Tahu do not see their existence as separate from Te Ao Tūroa (the natural world), but as an integral part of it. Through whakapapa (genealogy), all people and life forms descend from a common source. Whakapapa binds Kāi Tahu to the mountains, forests and waters and the life supported by them, and this is reflected in traditional attitudes towards the natural world and resource management.

Whakawhanaukataka (the process of establishing relationships) embraces whakapapa, through the relationship between people, and between people and the environment. The nature of these relationships determines people's rights and responsibilities in relation to the use and management of taoka of the natural world.

All things have the qualities of wairua (spiritual dimension) and mauri (essential life force, or life supporting capacity), are living and have a genealogical relationship with each other. Mauri provides the common centre between the natural resources (taoka), the people or guardians who care for the taoka (the kaitiaki), and the management framework (tikaka) of how taoka are to be managed by the kaitiaki. It is through kawa (protocol) that the relationship between taoka, tikaka and kaitiakitaka is realised. As noted above, each papatipu rūnaka has its own takiwā, determined by natural boundaries such as headlands, mountain ranges and rivers, with areas of shared interest, particularly inland. This political and operational authority over an area is undertaken by Manawhenua and encompasses kaitiakitaka and rakatirataka.

An integral element of the concepts of kaitiakitaka and rakatirataka is the recognition that Kāi Tahu have their own traditional means of managing and maintaining resources and the environment. This system of rights and responsibilities is inherited from previous generations and has evolved over time.

The resources in any given area are a point of prestige for the people who reside there and are a statement of identity. Traditionally, the abundance or lack of resources directly determines the welfare of every tribal group, and so affects their mana.

### **14.1.5.2 Tikaka**

Tikaka Māori encompasses the beliefs, values, practices and procedures that guide appropriate codes of conduct, or ways of behaving. It seeks to unify the three planes of reality in a holistic way: te taha tinana (the physical plane), te taha hinengaro (the intellectual plane), and te taha wairua (the spiritual plane).

In the context of natural resource management, observing tikaka is part of the ethic and exercise of kaitiakitaka. It is underpinned by a body of Mātauraka Māori (Māori knowledge), and is based on a general understanding that people belong to the land and have a responsibility to care for and manage the land. It incorporates forms of social control to manage the relationship of people and the environment, including concepts such as tapu, noa and rāhui.

Tikaka is based on traditional practices, but is dynamic and continues to evolve in response to different situations. One example of tikaka is the concept of kanohi ki te kanohi, or meeting face-to-face. For consultation on natural resource management issues, kanohi ki te kanohi may be the appropriate tikaka. Tikaka may also limit public access to wāhi tapu sites or require that certain protocols are observed before entering a site.

### **14.1.5.3 Ki Uta Ki Tai**

Ki Uta ki Tai is a Kāi Tahu term that has become synonymous with the way Kāi Tahu think about natural resource management. Ki Uta ki Tai is the concept used to describe the overall approach to integrated natural resource management by Kāi Tahu - from the mountains to the sea.

Ki Uta ki Tai is a Kāi Tahu paradigm and ethic that has at its heart a holistic view of natural resource management - it is the Kāi Tahu way of understanding the natural environment, including how it functions, how people relate to it and how it can be looked after appropriately. It involves not only a planning and policy framework, but also the

development of monitoring, reporting, geographical information system analysis, information databases, area management and succession tools for natural resource management.

#### **14.1.5.4 Kaitiakitaka**

Kaitiakitaka entails the active protection and responsibility for natural and physical resources by tākata whenua. To give effect to kaitiakitaka it is important to engage meaningfully with the appropriate papatipu rūnaka. Kaitiakitaka means "the exercise of guardianship by the tākata whenua of an area in accordance with tikaka Māori in relation to natural and physical resources; and includes the ethic of stewardship." This Resource Management Act 1991 (RMA) definition of kaitiakitaka is, however, only a starting point for Kāi Tahu, as kaitiakitaka is a much wider cultural concept than pure guardianship.

Kaitiakitaka is fundamental to the relationship between Kāi Tahu and the environment. The responsibility of kaitiakitaka is twofold: first, there is the ultimate aim of protecting life supporting capacity and, secondly, there is the duty to pass the environment to future generations in a state that is as good as, or better than, the current state. To Kāi Tahu, kaitiakitaka is not passive custodianship, nor is it simply the exercise of traditional property rights, but it entails an active exercise of rights and responsibilities in a manner beneficial to the resource. In managing the use, development, and protection of natural and physical resources, decision makers must have regard to kaitiakitaka.

#### **14.1.5.5 Rakatirataka**

Rakatirataka is about having the mana or authority to give effect to Kāi Tahu culture and traditions in the management of the natural world. Recognition of the relationship of Kāi Tahu and their culture and traditions with their ancestral lands, water, sites, wāhi tapu, and other taoka are embedded in the RMA and the Treaty of Waitangi.

Traditionally, rakatirataka incorporates the right to make, alter and enforce decisions pertaining to how a resource is to be used and managed, and by whom (in accordance with kawa (Māori customs) and tikaka). Kāi Tahu ki Otago Natural Resource Management Plan 2005 is an expression of rakatirataka. A practical expression of rakatirataka is the active involvement of Kāi Tahu in resource management decision-making processes.

#### **14.1.5.6 Taoka**

In the management of natural resources, it is important that the habitats and wider needs of taoka are protected and sustainably managed and enhanced.

All natural resources - air, land, water, and indigenous biodiversity - are taoka. Taoka are treasures, things highly prized and important to Kāi Tahu, derived from the atua (gods) and left by the tūpuna (ancestors) to provide and sustain life. Taoka include sites and resources such as wāhi tapu, tauraka waka and kai mātaimai, other sites for gathering food and cultural resources, tribally significant landforms, features and cultural landscapes (wāhi tūpuna). Taoka may also be intangible, such as tikaka and te reo (Māori language). All taoka are part of the cultural and tribal identity of an iwi.

The protection of the relationship of tākata whenua and their taoka is included in Article II of the Treaty of Waitangi, section 6(e) of the RMA, and more recently the Ngāi Tahu Claims Settlement Act 1998. To ensure taoka are available for future generations, resource management decision-making processes need to recognise tikaka (Māori protocol and customs) and have the conservation and sustainability of resources as their focus.

#### **14.1.5.7 Mahika Kai**

Mahika kai is one of the cornerstones of Kāi Tahu cultural identity. Mahika kai is a term that literally means "food workings" and refers to the customary gathering of food and natural materials and the places where those resources are gathered or produced. The term also embodies the traditions, customs and collection methods, and the gathering of natural resources for cultural use<sup>2</sup>, including raraka (weaving) and rokoā (traditional medicines). Maintaining mahika kai sites, gathering resources, and continuing to practice the tikaka that governs each resource, is an important means of passing on cultural values and mātauraka Māori (traditional knowledge) to the next generation.

<sup>2</sup> Ngāi Tahu Claims Settlement Act 1998, s.167

#### 14.1.5.8 Wāhi tapu or Wāhi taoka sites

Wāhi tapu or wāhi taoka sites hold special historical, spiritual, or cultural associations for Kāi Tahu. The term refers to places that hold the respect of the people in accordance with tikaka.

In addition to urupā, physical resources such as landforms, mountains and ranges, remaining areas of indigenous vegetation, springs, and waterways are examples of wāhi tapu or wāhi taoka sites.

#### 14.1.5.9 Wāhi Tūpuna

Kāi Tahu use the term 'wāhi tūpuna' to describe landscapes that embody the ancestral, spiritual and religious traditions of all the generations prior to European settlement. Waitaha, Kāti Mamoe and Kāi Tahu whakapapa is closely interwoven in Te Wai Pounamu. The use of the term wāhi tūpuna is intended to encompass and respect these separate strands of whakapapa and tradition. It is important to understand this concept in the context of the distinctive seasonal lifestyle that Kāi Tahu evolved in the south.

These sites used by Kāi Tahu are spread throughout the wider Dunedin area. These places did not function in isolation from one another but were part of a wider cultural setting and pattern of seasonal resource use. The values and potential threats to wāhi tūpuna are described in Appendix A4. The table below lists the types of wāhi tūpuna.

Type of wāhi tūpuna	Explanation
Ara tawhito	Ancient trails. A network of trails crossed the region linking the permanent villages with seasonal inland campsites and the coast, providing access to a range of mahika kai resources and inland stone resources, including pounamu and silcrete.
Kāika	Permanent settlements or occupation sites. These occurred throughout wider Dunedin, particularly in coastal areas.
Kāika Nohoaka	A network of seasonal settlements. Kāi Tahu were based largely on the coast in permanent settlements, and ranged inland on a seasonal basis. Iwi history shows, through place names and whakapapa, continuous occupation of a network of seasonal settlements, which were distributed along the main river systems from the source lakes to the sea.
Kai moana	Food obtained from the sea. Seafood occupies a key role in Kāi Tahu culture; it plays a part in many tribal histories and forms a part of cultural identity. The ability to provide kai moana as a part of manaakitaka (hospitality) responsibilities reflects on a tribe's mana.
Mahika kai	The customary gathering of food or natural materials and the places where those resources are gathered. Mahika kai remains one of the cornerstones of Kāi Tahu culture.
Mauka	Important mountains. Mountains are of great cultural importance to Kāi Tahu. Many are places of spiritual presence, and prominent peaks in the district are linked to Kāi Tahu creation stories, identity and mana.
Papatipu marae	The marae atea and the buildings around it, including the wharenui, wharekai, church and urupā. The sheltering havens of Kāi Tahu cultural expression, a place to gather, kōrero and to welcome visitors. Expressions of Kāi Tahu past and present.
Repo raupo	Wetlands or swamps. These provide valuable habitat for taoka species and mahika kai resources.
Tauraka waka	Canoe mooring site. These were important for transport and gathering kai, and included such places such as present day Wellers Rock and Koputai (Port Chalmers).

Type of wāhi tūpuna	Explanation
Tūāhu	Places of importance to Māori identity. These are generally sacred ground and marked by an object, or a place used for purposes of divination.
Taumanu	Fishing sites. These are traditional fishing easements which have been gazetted by the South Island Māori Land Court. There are taumanu at Hawksbury Lagoon and on the south bank of the Waikouaiti River at the confluence of the mainstem of the Waikouaiti with the south branch (Hakariki).
Umu, Umu-tī	Earth ovens. Used for cooking tī-kōuka (cabbage tree), these are found in a diversity of areas, including old stream banks and ancient river terraces, on low spurs or ridges, and in association with other features, such as kāika nohoaka.
Urupā	Human burial sites. These include historic burial sites associated with kāika, and contemporary sites, such as the urupā at Ōtākou and Puketeraki marae.
Wāhi kohātu	Rock outcrops. Rocky outcrops provided excellent shelters and were intensively occupied by Māori from the moa-hunter period into early European settlement during seasonal hikoī. Tuhituhi neherā (rock art) may be present due to the occupation of such places by the tūpuna.
Wāhi pakaka	Battle sites. Historic battle sites occur throughout Dunedin, such as that at Ohinepouwera (Waikouaiti sandspit) where Taoka's warriors camped for six months while they laid siege on Te Wera on the Huriawa Peninsula.
Wāhi paripari	Cliff areas.
Wāhi taoka	Resources, places and sites treasured by Manawhenua. These valued places reflect the long history and association of Kāi Tahu with the Dunedin district.
Wāhi tapu	Places sacred to the takata whenua. These occur throughout the Dunedin district and include urupā (human burial sites).
Wāhi tohu	Features used as location markers within the landscape. Prominent landforms formed part of the network of trails along the coast and inland. These acted as fixed point locators in the landscape for travellers and are imbued with history.
Wai māori	Freshwater areas important to Māori. These include wai puna (springs), roto (lakes) and awa (rivers).

## 14.2 Objectives and Policies

<b>Objective 14.2.1</b>	
<p>The relationship between Manawhenua and the natural environment is maintained or enhanced, including the cultural values and traditions associated with:</p> <ul style="list-style-type: none"> <li>a. wāhi tūpuna;</li> <li>b. mahika kai; and</li> <li>c. occupation of original native reserve land through papakāika.</li> </ul>	
Policy 14.2.1.1	Only allow activities in or adjacent to wetlands and coastal and riparian areas that are wāhi tūpuna and are identified as having mahika kai values in Appendix A4, where adverse effects on mahika kai are avoided or, if avoidance is not practicable, are no more than minor.
Policy 14.2.1.2	Require buildings, structures, earthworks and network utilities to be set back an adequate distance from the coast and water bodies that are wāhi tūpuna and are identified as having mahika kai values in Appendix A4, to maintain or enable access to the coast and riparian margins for the purpose of gathering mahika kai.
Policy 14.2.1.3	Only allow subdivision of land adjacent to water bodies and the coast that are wāhi tūpuna and are identified as having mahika kai values in Appendix A4, where the subdivision is designed to maintain or enable access to the coast and riparian margins for the purpose of gathering mahika kai.
Policy 14.2.1.4	Only allow activities that are identified as a threat to wāhi tūpuna in Appendix A4, where adverse effects on the relationship between Manawhenua and the wāhi tūpuna are avoided or, if avoidance is not practicable, are no more than minor.
Policy 14.2.1.5	Only allow cemeteries, crematoriums and landfills where any adverse effects on Manawhenua values, including the relationship between Manawhenua and sites of cultural importance to them, are avoided or, if avoidance is not practicable, are no more than minor.
Policy 14.2.1.6	Enable Manawhenua to live in original native reserve areas where any adverse effects will be adequately managed in line with the objectives and policies of the relevant zone.
Policy 14.2.1.7	Require residential buildings used for papakāika to be removed from a site when they are no longer used for that purpose.

## Rules

### Rule 14.3 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

#### Rule 14.3.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 14.3.2:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.

#### 14.3.2 Assessment of performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1.	All performance standard contraventions including performance standards listed below	<p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>c. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>d. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> <li>e. Council will consider the findings of any cultural impact assessment provided with a resource consent application, where required (see Special Information Requirements - Rule 14.7).</li> <li>f. In assessing the effects on Manawhenua and their relationship with a <b>wāhi tūpuna mapped area</b>, Council will consider the values in Appendix A4.</li> </ol>

### 14.3.2 Assessment of performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Density (papakāika - residential zones)	a. Effects on cultural values of Manawhenua	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 14.2.1</li> <li>ii. Manawhenua are able to live in original native reserve areas where any adverse effects will be adequately managed in line with the objectives and policies of the relevant zone (Policy 14.2.1.6).</li> <li>iii. Residential buildings used for papakāika are removed when no longer used for that purpose (Policy 14.2.1.7).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iv. Council will consider the information required by Rule 15.14.1 provided with any resource consent application (see Special Information Requirements - Rule 15.14.1).</li> </ul>
3. Esplanade reserves and strips	a. Where in a <b>wāhi tūpuna mapped area</b> , effects on cultural values of Manawhenua	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 14.2.1</li> <li>ii. In a <b>wāhi tūpuna mapped area</b> identified as having mahika kai values in Appendix A4, the subdivision is designed to maintain or enable access to the coast and riparian margins for the purpose of gathering mahika kai (Policy 14.2.1.3).</li> </ul>
4. Maximum height	<p>a. In the <b>Huriawa height restriction mapped area</b>, effects on cultural values of Manawhenua</p> <p>b. In the Dunedin International Airport Zone, effects on cultural values of Manawhenua (in relation to Maukaatua <b>wāhi tūpuna mapped area</b>)</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 14.2.1</li> <li>ii. Adverse effects on the relationship between Manawhenua and wāhi tūpuna are avoided or, if avoidance is not practicable, are no more than minor (Policy 14.2.1.4).</li> </ul>

### 14.3.2 Assessment of performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
5. Vegetation clearance standards: <ul style="list-style-type: none"> <li>• Maximum area of vegetation clearance (UBMA)</li> <li>• Protected areas (vegetation clearance)</li> <li>• Protected species (indigenous vegetation clearance)</li> </ul>	a. Where in a <b>wāhi tūpuna mapped area</b> , effects on cultural values of Manawhenua	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 14.2.1</li> <li>ii. In a <b>wāhi tūpuna mapped area</b> identified as having mahika kai values in Appendix A4, vegetation clearance avoids adverse effects on mahika kai, or if avoidance is not practicable, effects are no more than minor (Policy 14.2.1.1).</li> <li>iii. In a <b>wāhi tūpuna mapped area</b> where indigenous vegetation clearance is identified as a threat in Appendix A4, adverse effects on the relationship between Manawhenua and the wāhi tūpuna are avoided or, if avoidance is not practicable, are no more than minor (Policy 14.2.1.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Where the <b>wāhi tūpuna mapped area</b> has mahika kai values: <ul style="list-style-type: none"> <li>1. the area of vegetation to be cleared is not a source of mahika kai, nor will its removal affect adjoining areas of mahika kai.</li> <li>2. sufficient vegetation will remain to ensure mahika kai can continue to be gathered to the extent it is currently gathered.</li> </ul> </li> </ul>
6. Setback from coast and water bodies	a. Where in a <b>wāhi tūpuna mapped area</b> , effects on cultural values of Manawhenua	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 14.2.1</li> <li>ii. In a <b>wāhi tūpuna mapped area</b> where activities affecting access to a water body are identified as a threat in Appendix A4, adverse effects on the relationship between Manawhenua and the wāhi tūpuna are avoided or, if avoidance is not practicable, are no more than minor (Policy 14.2.1.4).</li> <li>iii. In a <b>wāhi tūpuna mapped area</b> identified as having mahika kai values in Appendix A4, buildings and structures, earthworks and network utilities are set back an adequate distance from the coast and water bodies to ensure access to the coast and riparian margins for the purpose of gathering mahika kai is maintained or enabled (Policy 14.2.1.2).</li> </ul>
7. Maximum height (rural and rural residential zones)	a. Where in a <b>wāhi tūpuna mapped area</b> , effects on cultural values of Manawhenua	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 14.2.1</li> <li>ii. In a <b>wāhi tūpuna mapped area</b> where buildings, structures and network utility structures that affect the peaks, upper slopes or skyline are identified as a threat in Appendix A4, adverse effects on the relationship between Manawhenua and the wāhi tūpuna are avoided or, if avoidance is not practicable, are no more than minor (Policy 14.2.1.4).</li> </ul>

### 14.3.2 Assessment of performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
8.	Sediment control	a. Where in a <b>wāhi tūpuna mapped area</b> , effects on cultural values of Manawhenua	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 14.2.1</li> <li>ii. In a <b>wāhi tūpuna mapped area</b> where impacts on water quality from earthworks or sediment discharge are identified as a threat in Appendix A4, adverse effects on the relationship between Manawhenua and the wāhi tūpuna are avoided or, if avoidance is not practicable, are no more than minor (Policy 14.2.1.4).</li> </ul>

## Rule 14.4 Assessment of Restricted Discretionary Activities

### Rule 14.4.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rule 14.4.2:
  - a. lists the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provides guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 14.4.2 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All restricted discretionary activities		<p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>a. Council will consider the findings of any cultural impact assessment provided with a resource consent application, where required (see Special Information Requirements - Rule 14.7).</li> <li>b. In assessing the effects on Manawhenua and their relationship with a <b>wāhi tūpuna mapped area</b>, Council will consider the values in Appendix A4.</li> </ol> <p><i>Potential circumstances that may support a consent application:</i></p> <ol style="list-style-type: none"> <li>c. The development incorporates conservation activity that will have significant positive effects on biodiversity or natural character values.</li> </ol>

#### 14.4.2 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>2. Activities where effects on cultural values of Manawhenua is a matter of discretion, including but not limited to:</p> <ul style="list-style-type: none"> <li>• Indigenous vegetation clearance - large scale</li> <li>• Earthworks - large scale</li> <li>• Network utility activities</li> <li>• Forestry</li> <li>• Shelterbelts and small woodlots</li> <li>• Public amenities</li> <li>• New buildings, structures, and additions and alterations</li> </ul>	<p>a. Where in a <b>wāhi tūpuna mapped area</b>, effects on cultural values of Manawhenua</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 14.2.1</li> <li>ii. In a <b>wāhi tūpuna mapped area</b> where the activity is identified as a threat in Appendix A4, adverse effects on the relationship between Manawhenua and wāhi tūpuna are avoided or, if avoidance is not practicable, are no more than minor (Policy 14.2.1.4).</li> </ul>
<p>3. Crematoriums and Cemeteries</p>	<p>a. Effects on cultural values of Manawhenua</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 14.2.1</li> <li>ii. Adverse effects on cultural values, including the relationship between Manawhenua and sites of cultural importance to them, are avoided or, if avoidance is not practicable, are no more than minor (Policy 14.2.1.5).</li> </ul>

#### 14.4.2 Assessment of restricted discretionary activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>4. All general subdivision activities where effects on cultural values of Manawhenua is a matter of discretion</p>	<p>a. Where in a <b>wāhi tūpuna mapped area</b>, effects on cultural values of Manawhenua</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 14.2.1</li> <li>ii. In a <b>wāhi tūpuna mapped area</b> where subdivision is identified as a threat in Appendix A4, the subdivision is designed to ensure any future land use or development will avoid or, if avoidance is not practicable, ensure adverse effects on values of significance to Manawhenua are no more than minor (Policy 14.2.1.4).</li> <li>iii. In a <b>wāhi tūpuna mapped area</b> identified as having mahika kai values, the subdivision is designed to maintain or enable access to the coast and riparian margins for the purpose of gathering mahika kai (Policy 14.2.1.3).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Subdivisions are designed to maximise the opportunities for protection or enhancement of important Manawhenua values on the site, for example through: <ul style="list-style-type: none"> <li>1. retaining indigenous vegetation on a single allotment, under single ownership;</li> <li>2. fencing of indigenous vegetation; or</li> <li>3. enabling access to, and protection of, sites of significance.</li> </ul> </li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>v. A building platform registered against the Certificate of Title by way of consent notice.</li> </ul>

## Rule 14.5 Assessment of Discretionary Activities

### Rule 14.5.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 14.5.2 - 14.5.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.

### 14.5.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
1. All discretionary activities that are linked to section 14.5, including but not limited to the activities listed below	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objectives 2.5.1, 2.5.3, 2.5.4, 14.2.1</p> <p><i>General assessment guidance:</i></p> <p>b. Council will consider the findings of any cultural impact assessment provided with a resource consent application, where required (see Special Information Requirements - Rule 14.7.1).</p> <p>c. In assessing the significance of effects, Council will consider:</p> <ol style="list-style-type: none"> <li>i. Maintaining the relationship between Manawhenua and the natural environment, including the cultural values and traditions associated with:               <ol style="list-style-type: none"> <li>1. wāhi tūpuna; and</li> <li>2. the customary use of mahika kai (Objective 14.2.1).</li> </ol> </li> </ol>
2. <ul style="list-style-type: none"> <li>• Crematoriums</li> <li>• Cemeteries</li> <li>• Landfills</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Adverse effects on cultural values, including the relationship between Manawhenua and sites of cultural importance to them, are avoided or, if avoidance is not practicable, are no more than minor (Policy 14.2.1.5).</p>
3. <ul style="list-style-type: none"> <li>• Mining</li> <li>• Network utility activities</li> <li>• New roads or additions or alterations to existing roads</li> <li>• Passenger transportation hubs</li> <li>• Heliports</li> <li>• Natural hazard mitigation earthworks</li> <li>• Natural hazard mitigation structures</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. In a <b>wāhi tūpuna mapped area</b> where the activity is identified as a threat in Appendix A4, adverse effects on the relationship between Manawhenua and wāhi tūpuna are avoided or, if avoidance is not practicable, are no more than minor (Policy 14.2.1.4).</p> <p><i>General assessment guidance:</i></p> <p>b. Where effects on the cultural values of Manawhenua are assessed, the findings of a cultural impact assessment will be considered, where required (see Special Information Requirements - Rule 14.7).</p>

### 14.5.3 Assessment of discretionary performance standard contraventions

Activity	Guidance on the assessment of resource consents
1. Density (papakāika - rural zones)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.5.2, 14.2.1</li> <li>b. Manawhenua are able to live in original native reserve areas where any adverse effects will be adequately managed in line with the policies of the relevant zone (Policy 14.2.1.6).</li> <li>c. Residential buildings used for papakāika are removed from the site when they are no longer used for that purpose (Policy 14.2.1.7).</li> </ul>

## Rule 14.6 Assessment of Non-complying Activities

### Rule 14.6.1 Introduction

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rule 14.6.2 provides guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 14.6.2 Assessment of non-complying activities

Activity	Guidance on the assessment of resource consents
1. All non-complying activities that are linked to section 14.6, including but not limited to the activities listed below	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objectives 2.5.1, 2.5.3, 2.5.4</p> <p><i>General assessment guidance:</i></p> <p>b. Council will consider the findings of a cultural impact assessment provided with the application for resource consent, where required (see Special Information Requirements - Rule 14.7.1).</p> <p>c. In assessing the significance of effects, Council will consider:</p> <ol style="list-style-type: none"> <li>i. Maintaining the relationship between Manawhenua and the natural environment, including the cultural values and traditions associated with:           <ol style="list-style-type: none"> <li>1. wāhi tūpuna; and</li> <li>2. the customary use of mahika kai (Objective 14.2.1).</li> </ol> </li> </ol>
2. <ul style="list-style-type: none"> <li>• Cemeteries</li> <li>• Crematoriums</li> <li>• Landfills</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 14.2.1</p> <p>b. Policy 14.2.1.5</p> <p><i>General assessment guidance:</i></p> <p>c. The assessment of a resource consent application for crematoriums, cemeteries and landfills will consider the findings of a cultural impact assessment (see Special Information Requirements - Rule 14.7)</p>

### 14.6.X Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
----------------------	---

#### 14.6.X Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1. All non-complying performance standard contraventions that are linked to Section 14.6</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 14.2.1.</li> <li>b. In a <b>wāhi tūpuna mapped area</b> where the activity is identified as a threat in Appendix A4, adverse effects on the relationship between Manawhenua and wāhi tūpuna are avoided or, if avoidance is not practicable, are no more than minor (Policy 14.2.1.4).</li> </ul> <p><i>Related strategic directions:</i></p> <ul style="list-style-type: none"> <li>c. Objectives 2.5.1, 2.5.3, 2.5.4, policies 2.5.1.2, 2.5.3.1 and 2.5.4.1.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>d. Council will consider the findings of a cultural impact assessment provided with the application for resource consent, where required (see Special Information Requirements - Rule 14.7.1).</li> </ul>

## **Rule 14.7 Special Information Requirements**

### **14.7.1 Cultural Impact Assessment**

1. Where Manawhenua are considered an affected person, a cultural impact assessment may be required.

*Note:* The notification rules within the relevant management zone, major facility or city-wide activities section provide advice on when Manawhenua will be considered an affected person.

## 15.1 Introduction

Dunedin's residential environments are diverse in character and include a variety of housing types ranging from apartments to stand-alone residential buildings. This diversity stems from successive waves of settlement and the prior zoning regimes, and will continue through the approaches proposed in this Plan.

These residential environments are an important resource for the city and contribute to the social, economic, and cultural well-being of people. The types and condition of housing, and the services available to it are important considerations in determining the distribution of resources and providing attractive residential environments. Developing residential environments that maintain and improve people's enjoyment of residential amenity is key.

In achieving this, of importance is the development of an urban form that ensures that Dunedin remains compact, with resilient townships, and sustainably managed urban expansion. The city has a limited amount of residential land, and so to facilitate a more compact form, it needs to be ensured that development is undertaken in a suitable manner. Also, changing demographics, including an aging population and an increase in single person households, has led to a requirement for greater flexibility in the size and type of dwelling options available throughout Dunedin.

Inappropriate land use, subdivision, and development in residential areas can adversely affect the character and amenity of Dunedin's residential environments and is a major concern. Furthermore, commercial activities that do not support the day-to-day living of residents and which detract from residential character and amenity need to be avoided.

In response to these issues, the Plan encourages the development of attractive, safe and compact residential environments through controlling matters including the siting of appropriate activities in residential zones, the design, location and scale of land use activities and buildings, the avoidance of certain activities in sensitive locations, and impacts on the efficiency and affordability of public infrastructure and services.

Many of the provisions for the residential zones are designed to manage the potential for development to adversely affect the amenity and character of streets and neighbourhoods. In some cases, provisions are designed to ensure new houses have a similar character to existing houses; however, in some areas the provisions may allow for houses of a different character in order to support the development of high quality medium density housing. In these areas, which include the Inner City Residential Zone and General Residential 2 Zone, the desired 'future character' includes houses that may be different in style or even size, but that are designed to be attractive and integrate well with surrounding housing. This outcome is achieved through a mixture of performance standards for bulk and location and rules that require consent for larger buildings and multi-unit developments (3 or more units). Resource consents for these developments will consider whether:

- the building design and placement is appropriate for the context of the site, including considering the appropriateness of form (roof pitch, scale, massing, window placement, entrance detailing and/or proportion) and materials
- adequate green space is provided.

Parts of the residential zones are also managed through heritage precincts, which include more controls on new development as well as alterations to existing buildings if they are scheduled heritage buildings or identified character-contributing buildings. Natural Hazard overlays also apply to some parts of residential zones.

In addition to standard residential activities, residential zones also provide for other types of residential activities including supported living facilities in the form of student hostels, rest homes and retirement villages. These activities will often need to be developed in a different form to standard residential activity and the Plan provides for this by managing these activities as a restricted discretionary activity and not applying the density provisions that apply to standard residential activity.

This management approach will result in residential zones that support the needs of residents, provide a range of housing types and sizes; maintain and improve amenity values; enhance streetscapes; maintain and enhance efficient

and affordable water and waste infrastructure networks; enable land use activities that are accessible by a range of travel modes, and contribute to compact living environments.

The various residential zones proposed in this Plan are briefly described below.

## **15.1.1 Zone descriptions**

### **15.1.1.1 General Residential 1**

The General Residential 1 Zone covers the majority of the middle to outer suburban areas of Dunedin and Mosgiel and is often applied when rezoning areas of greenfield land on the urban fringes. Historically, this zone has been characterised by relatively low density suburban development patterns, which arose from a long-standing minimum site size requirement of 500m<sup>2</sup> and allowance for one dwelling per site. However, as a result of development of the 2GP and its subsequent variation ('Variation 2'), these rules have been amended to enable change in residential character over time to a slightly denser suburban form but with retention of requirements around maximum site coverage and provision of outdoor living space to maintain suburban green space.

Where two units are provided for on sites up to 800m<sup>2</sup> in size, these are required to either be in the form of a size-limited ancillary residential unit (which cannot be subdivided off) or a duplex to ensure a pattern of development that is consistent with the existing character of the zone. The duplex provisions also encourage efficient use of sites through less wasted space in narrow side yards and provide for more usable outdoor living space in other parts of the site.

The anticipated future character of the General Residential 1 Zone will include:

- stand-alone dwellings, duplexes, and occasionally on larger sites multi-unit attached, 'terrace style' developments up to 9m in height;
- sites generally between 400m<sup>2</sup> and 800m<sup>2</sup> in size;
- a greater variety in site sizes encouraged by flexibility in the minimum site size rule;
- small (up to 80m<sup>2</sup>) ancillary residential units where site sizes allow; and
- larger developments that house supported living facilities (rest homes, retirement villages and student hostels) or social housing where site sizes allow.

In new greenfield areas, the General Residential 1 Zone is generally subject to the **new development mapped area** provisions in order to ensure good urban design outcomes. These provisions are contained in Section 12 and apply in addition to the provisions in this section.

### **15.1.1.2 General Residential 2**

The General Residential 2 Zone covers large areas of the main urban area of Dunedin and Mosgiel in locations that have good accessibility to services and public transport and higher relative demand for housing. It provides for change in the existing urban form to medium density suburban residential living through redevelopment of older and poorer-quality housing stock. This will provide a range of housing choices over time, including well-designed multi-unit developments such as terrace housing and low-rise apartments typically up to 9m in height (generally two-storeys). The rules for this zone vary by location to provide for a higher density of development in areas which have historically been developed to a higher density, and for a lower density of development in areas which are subject to coastal hazards or wastewater or stormwater infrastructure capacity constraints. This is achieved by the application of the following mapped areas:

- **South Dunedin mapped area**
- **wastewater constraint mapped area** (applied in various locations around Dunedin and Mosgiel); and
- **Variation 2 mapped area.**

### **15.1.1.3 Inner City Residential**

The Inner City Residential Zone primarily covers the residential area near the campus and between the town belt and the central business district, being the locations that are closest to Dunedin's main centres of employment or study, and have the greatest accessibility to services and public transport. It provides for existing and new medium density residential living, including through the redevelopment of older and poorer-quality housing stock and the conversion of scheduled heritage buildings to multi-unit apartments. This will provide for an increasing range of housing choices close to the central area of Dunedin over time, including new well-designed multi-unit developments such as terrace housing and low-rise apartments up to 12m in height (three-storeys). Within this zone there are several residential heritage precincts that have additional rules to protect heritage items and to encourage new development to be compatible with heritage values.

### **15.1.1.4 Low Density Residential**

The Low Density Residential Zone is a small subset of the outer Dunedin suburban environment, and has slightly larger sites than the General Residential 1 Zone. It is characterised by a more spacious and open suburban environment with larger stand-alone dwellings and gardens. Sites in this zone may also be developed with an ancillary residential unit to provide additional accommodation.

### **15.1.1.5 Large Lot Residential 1**

The Large Lot Residential 1 Zone includes a small number of residential areas that provide for residential development at a low density due to hazards; slope; the need for onsite stormwater attenuation; the need to protect important biodiversity, water bodies, landscape or natural character values; or other factors that make a standard density of residential development inappropriate. Several areas in this zone are not serviced with wastewater, water supply or stormwater public infrastructure and the large site sizes also provide for on-site wastewater disposal. The zone rules provide for an ancillary residential unit to provide additional accommodation.

### **15.1.1.6 Large Lot Residential 2**

The Large Lot Residential 2 Zone includes a small number of residential areas that provide for residential development at a very low density due to hazards; slope; the need for onsite stormwater attenuation; the need to protect important biodiversity, water bodies, landscape or natural character values; or other factors that make a standard density of residential development inappropriate. Many areas in this zone are not serviced with wastewater, water supply or stormwater public infrastructure. The zone rules provide for an ancillary residential unit to provide additional accommodation.

### **15.1.1.7 Township and Settlement**

The Township and Settlement Zone applies to areas beyond the main urban areas of Dunedin and Mosgiel and includes areas that were once independent settlements, such as Port Chalmers and Portobello. It includes larger residential townships supported by a commercial centre and smaller residential settlements that are not attached to a commercial centre. The existing and intended future characteristics of this zone vary depending on the context. In some cases this zone is applied in areas that are not reticulated with water supply, stormwater or wastewater public infrastructure. Areas that are not reticulated with wastewater public infrastructure are indicated by a '**no DCC reticulated wastewater mapped area**'. In these areas a low density of residential development is required in order to enable on-site wastewater disposal. Where wastewater public infrastructure is provided, the anticipated pattern of development is the same as for the General Residential 1 Zone. The development of ancillary residential units is provided for across this zone.

## 15.2 Objectives and Policies

Objective 15.2.1	
Residential zones are primarily reserved for residential activities and only provide for a limited number of compatible activities, including: visitor accommodation, community activities, major facility activities, and commercial activities that support the day-to-day needs of residents.	
Policy 15.2.1.1	Provide for a range of residential and community activities, where the effects of these activities will be managed in line with objectives 15.2.2, 15.2.3 and 15.2.4 and their policies.
Policy 15.2.1.2	Provide for a limited range of major facility activities and commercial activities, including dairies, registered health practitioners, training and education, and visitor accommodation, where the effects of these activities will be managed in line with objectives 15.2.3 and 15.2.4, and their policies.
Policy 15.2.1.3	Limit the size of working from home and dairies in residential zones to a size that: <ul style="list-style-type: none"> <li>a. is compatible with the character and amenity of the residential zone; and</li> <li>b. does not detract from the vibrancy and functioning of the centres hierarchy.</li> </ul>
Policy 15.2.1.4	Require activities ancillary to visitor accommodation to be located and designed to cater to patrons of the primary activity rather than the general public.
Policy 15.2.1.5	Avoid commercial activities, other than those expressly provided for, from locating in residential zones, unless: <ul style="list-style-type: none"> <li>a. the activity will not detract from the vibrancy and functioning of the centres hierarchy; and</li> <li>b. the site is adjacent to a centre and it provides a logical extension to a centre; and</li> <li>c. the centre is at, or very close to, capacity; and</li> <li>d. the development activities are done in accordance with the performance standards of the street typology (if relevant) of the adjacent centre zoned sites; and</li> <li>e. the development maximises opportunities for integration with the centre; or</li> <li>f. if the site is in the Township and Settlement Zone: <ul style="list-style-type: none"> <li>i. the commercial activity would have significant positive effects in terms of supporting the needs of the community and visitors to the area; and</li> <li>ii. the activity is unable to be located in, or adjacent to, the nearest centre, or no centre exists within the relevant township or settlement; and</li> <li>iii. the location is appropriate for the proposed activity; and</li> <li>iv. any adverse effects from noise, vehicle movements, and on-street parking supply will be avoided or, if avoidance is not practicable, adequately mitigated.</li> </ul> </li> </ul>
Policy 15.2.1.6	Avoid industrial activities, rural activities, and major facility activities other than those expressly provided for, sport and recreation that involves motor vehicles, and any other activities not compatible with the character and amenity of the residential zone.
Policy 15.2.1.7	Provide for service stations on a strategic road or arterial road where: <ul style="list-style-type: none"> <li>X. safe and convenient access to the site for pedestrians and cyclists can be provided;</li> <li>Y. there is adequate public infrastructure to service the development or any necessary upgrades to public infrastructure will be provided;</li> <li>Z. the service station will not detract from the economic and social vibrancy and viability of any nearby centres; and</li> <li>AA. policies 15.2.3.4 and 15.2.4.7 can be achieved.</li> </ul>

### Objective 15.2.2

Residential activities, development, and subdivision activities provide high quality on-site amenity for residents.

Policy 15.2.2.1	Require residential development to achieve a high quality of on-site amenity by: <ul style="list-style-type: none"> <li>a. providing functional, sunny, and accessible outdoor living spaces that allow enough space for on-site food production, leisure, green space or recreation;</li> <li>b. having adequate separation distances between residential buildings;</li> <li>c. retaining adequate open space uncluttered by buildings; and</li> <li>d. having adequate space available for service areas.</li> </ul>
-----------------	---

### Objective 15.2.3

Activities in residential zones maintain a good level of amenity on surrounding residential properties and public spaces.

Policy 15.2.3.1	Require buildings and structures to be of a height and setback from boundaries that ensures there are no more than minor effects on the sunlight access of current and future residential buildings and their outdoor living spaces.
Policy 15.2.3.2	Require working from home, dairies, training and education, and community and leisure - small scale to operate in a way (including hours of operation) that avoids or, if avoidance is not practicable, adequately mitigates, noise or other adverse effects on the amenity of surrounding residential properties.
Policy 15.2.3.3	Require buildings and structures in the Inner City Residential Zone to be of a height and setback from boundaries that: <ul style="list-style-type: none"> <li>a. enables a high quality, medium density form of development;</li> <li>b. is consistent with the existing streetscape character of the zone; and</li> <li>c. avoids or, if avoidance is not practicable, adequately mitigates, adverse effects on sunlight access on outdoor spaces at the rear of adjacent sites.</li> </ul>
Policy 15.2.3.4	Only allow schools, emergency services, early childhood education, community and leisure - large scale, sport and recreation, registered health practitioners, training and education, visitor accommodation, supported living facilities, service stations and stand-alone car parking where they are designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties.
Policy 15.2.3.5	Only allow cemeteries where they are designed and located: <ul style="list-style-type: none"> <li>a. to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties; and</li> <li>b. to avoid, as far as practicable, the potential for reverse sensitivity.</li> </ul>
Policy 15.2.3.6	Avoid sport and recreation that involves motor vehicles unless the adverse effects on the amenity of surrounding properties will be no more than minor.

#### Objective 15.2.4

Activities maintain or enhance the amenity of the streetscape, and reflect the current or intended future character of the neighbourhood.

Policy 15.2.4.1	Require activities to maintain or enhance streetscape amenity by ensuring: <ul style="list-style-type: none"> <li>a. garages, carports and car parking do not dominate the street;</li> <li>b. there are adequate green space areas free from buildings or hard surfacing;</li> <li>c. buildings' height and boundary setbacks, and scale reflect the existing or intended future residential character;</li> <li>d. shared service areas are not visible from ground level from outside the site; and</li> <li>e. outdoor storage is managed in a way that does not result in unreasonable visual amenity effects or create nuisance effects.</li> </ul>
Policy 15.2.4.2	Only allow residential activity that exceeds the permitted density where the built form of any new development, as viewed from public places, reflects the existing residential character or intended future character of the zone as set out in the residential zone descriptions.
Policy 15.2.4.3	Only allow stand-alone ancillary residential units between 60m <sup>2</sup> and 80m <sup>2</sup> gross floor area where the building is designed and located to ensure that streetscape and neighbourhood amenity is maintained or enhanced.
Policy 15.2.4.4	Require fences to be of a height and design that contributes positively to the streetscape amenity and character of the neighbourhood.
Policy 15.2.4.5	Require ancillary signs to be located and designed to maintain residential amenity including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles and not being oversized or too numerous for what is necessary for that purpose.
Policy 15.2.4.6	Only allow subdivision activities where the subdivision is designed to ensure any future land use and development will: <ul style="list-style-type: none"> <li>a. maintain the amenity of the streetscape</li> <li>b. reflect the current or future intended character of the neighbourhood;</li> <li>c. provide for development to occur without unreasonable earthworks or engineering requirements; and</li> <li>d. provide for quality housing.</li> </ul>
Policy 15.2.4.7	Only allow schools, emergency services, early childhood education, community and leisure - large scale, sport and recreation, registered health practitioners, training and education, visitor accommodation, supported living facilities, restaurants or retail ancillary to sport and recreation, service stations and stand-alone car parking where they are designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on streetscape amenity.
Policy 15.2.4.8	Only allow buildings over 300m <sup>2</sup> footprint or multi-unit developments where they are designed to ensure that streetscape and neighbourhood amenity and character is maintained or enhanced.

## Rules

### Rule 15.3 Activity Status

#### 15.3.1 Rule Location

The activity status tables in rules 15.3.3 to 15.3.6 specify the activity status of land use activities, development activities, and subdivision activities in the residential zones and relevant overlay zones, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 15.3.2 Activity Status Introduction

1. The activity status tables in rules 15.3.3 - 15.3.5 show the activity status of activities in the residential zones and the overlay zones indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Additional activity status rules in hazard overlay zones*

7. For the purpose of the hazards provisions, activities are categorised as natural hazards sensitive activities, natural hazards potentially sensitive activities or natural hazards least sensitive activities. The activities that are in each hazards sensitivity category are included in the definitions section and in Section 11.1.
8. In the Hazard 1 (flood) Overlay Zone or the Hazard 2 (flood) Overlay Zone, the activity statuses in Rule 15.3.6 apply to the following activities:
  - a. natural hazards sensitive activities;
  - b. natural hazards potentially sensitive activities; and
  - c. new buildings and additions and alterations to buildings that create within any two calendar-year period more than 36m<sup>2</sup> of new ground floor area.
9. Where the activity status in Rule 15.3.6 differs from that in rules 15.3.3 - 15.3.5, the most restrictive activity

status always applies.

10. In addition to the rules in Rule 15.3.6, performance standards for development activities within hazard overlay zones are included in Rules 15.3.4.
11. Activities in a hazard overlay zone must comply with all of the rules in rules 15.3.3 - 15.3.6.

### *Performance Standards*

12. Performance standards are listed in the far right column of the activity status tables.
13. Performance standards apply to permitted, controlled, and restricted discretionary activities.
14. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
15. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

### **Legend**

<b>Acronym</b>	<b>Meaning</b>
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
GR1	General Residential 1 Zone
GR2	General Residential 2 Zone
ICR	Inner City Residential Zone
LDR	Low Density Residential Zone
LLR1	Large Lot Residential 1 Zone
LLR2	Large Lot Residential 2 Zone
TS	Township and Settlement Zone
ASBV	Areas of Significant Biodiversity Value
Haz1	Hazard 1 Overlay Zones
Haz2	Hazard 2 Overlay Zones
Haz3	Hazard 3 Overlay Zones

### 15.3.3 Land Use Activity Status Table

1.	Performance standards that apply to all land use activities		<ul style="list-style-type: none"> <li>a. Acoustic insulation (noise sensitive activities only)</li> <li>b. NA</li> <li>c. Light spill</li> <li>d. Noise</li> <li>e. Setback from National Grid (National Grid sensitive activities only)</li> <li>f. <b>Structure plan mapped area</b> performance standards (where relevant)</li> </ul>
Residential activities		Activity status	Performance standards
2.	Supported living facilities	RD	<ul style="list-style-type: none"> <li>a. Minimum mobility car parking</li> <li>b. Outdoor living space</li> <li>c. Service areas</li> </ul>
3.	Standard residential	P	<ul style="list-style-type: none"> <li>a. Density</li> <li>b. N/A</li> <li>c. Outdoor living space</li> <li>d. Service areas</li> <li>e. Ancillary residential units</li> </ul>
4.	Working from home	P	<ul style="list-style-type: none"> <li>a. Hours of operation</li> <li>b. Maximum gross floor area</li> <li>c. Minimum mobility car parking</li> </ul>
Community activities		Activity status	Performance standards
5.	Community and leisure - small scale	P	<ul style="list-style-type: none"> <li>a. Minimum mobility car parking</li> <li>b. Hours of operation</li> </ul>
6.	Community and leisure - large scale	RD	<ul style="list-style-type: none"> <li>a. Minimum mobility car parking</li> <li>b. Hours of operation</li> </ul>
7.	Conservation	P	
8.	Early childhood education - small scale	RD	<ul style="list-style-type: none"> <li>a. Minimum mobility car parking</li> </ul>
9.	Early childhood education - large scale	D	
10.	Sport and recreation that involves motor vehicles	NC	
11.	All other sport and recreation activity	D	
Commercial activities		Activity status	Performance standards
12.	Ancillary licensed premises	Same status as underlying activity	

13.	Dairies	RD	a. Hours of operation b. Maximum gross floor area
14.	Registered health practitioners	D	
15.	Restaurants, or retail, ancillary to sport and recreation	D	
16.	Restaurants, retail, or conference, meeting and function activity, ancillary to visitor accommodation	RD	a. Location
17.	Service stations on a strategic road or arterial road	D	
18.	Service stations, other than on a strategic road or arterial road	NC	
19.	Stand-alone car parking	D	
20.	Training and education	RD	a. Hours of operation b. Minimum mobility car parking
21.	Visitor accommodation in the George Street North residential heritage precinct	P	a. Density
22.	Visitor accommodation, other than in George Street North residential heritage precinct	RD	a. NA b. Minimum mobility car parking c. Minimum vehicle loading
23.	All other activities in the commercial activities category	NC	
Major facility activities		Activity status	Performance standards
24.	Cemeteries	RD	
25.	Emergency Services	RD	a. Minimum mobility car parking

30.	Mining	NC	
X.	Expansion of scheduled mining activity	NC	
31.	All other activities in the rural activities category	NC	
Industrial activities		Activity status	Performance standards
32.	All activities in the industrial activities category	NC	

### **Note 15.3.3A- General advice**

1. Papakāika activity (a sub-activity of standard residential activity) is intended to allow descendants of the original native reserve grantees to live on this land. If papakāika is developed and is subsequently no longer required for the use of Manawhenua in accordance with the papakāika definition, resource consent will be required to allow its use as other residential development. In this situation, the provisions that govern residential activity, including density of residential development, will apply. It is strongly recommended that the use of relocatable buildings is considered for papakāika development in order to avoid potential future problems of being unable to obtain consent for ownership or occupation of dwellings by people other than descendants of the original grantees.
2. Where papakāika is on Māori Land, the provisions of the Te Ture Whenua Māori Act 1993 or subsequent legislation apply.
3. New marae may only be established with the agreement of Manawhenua.

**Note 15.3.3X- Other requirements outside of the District Plan**

1. Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

**15.3.4 Development Activity Status Table**

1.	Performance standards that apply to all development activities		<ul style="list-style-type: none"> <li>a. Natural Hazards Performance Standards</li> <li>b. Maximum building site coverage and impermeable surfaces</li> <li>c. Setback from scheduled tree</li> <li>d. <b>Structure plan mapped area</b> performance standards (where relevant)</li> <li>Y. Service connections - stormwater for development (in a <b>new development mapped area</b>)</li> </ul>
2.	Performance standards that apply to all buildings and structures activities		<ul style="list-style-type: none"> <li>a. Boundary setbacks</li> <li>b. Building length</li> <li>c. Firefighting</li> <li>d. Height in relation to boundary</li> <li>e. Maximum height</li> <li>f. Setback from coast and water bodies</li> <li>g. Setback from National Grid               <ul style="list-style-type: none"> <li>AA. Setback from Critical Electricity Distribution Infrastructure</li> <li>X. Setback from designated rail corridor</li> <li>Y. Area of buildings and structures (SNL Overlay Zone)</li> <li>Z. Reflectivity (SNL Overlay Zone)</li> </ul> </li> </ul>
All buildings and structures activities not covered in rows below		Activity status	Performance standards
3.	Signs attached to buildings and structures	P	<ul style="list-style-type: none"> <li>a. Number, location and design of ancillary signs</li> </ul>
4.	All other buildings and structures activities not covered in rows 5 to 22 below	P	<ul style="list-style-type: none"> <li>a. Fence height and design</li> <li>b. Number, location and design of ancillary signs</li> </ul>
In all locations		Activity status	Performance standards

5.	New buildings and additions and alterations that result in: <ul style="list-style-type: none"> <li>• a building that is greater than 300m<sup>2</sup> footprint or</li> <li>• a multi-unit development</li> </ul>	RD	
Buildings and structures activities in a heritage precinct that are visible from an adjoining public place		Activity status	Performance standards
6.	New buildings	RD	
7.	Earthquake strengthening or restoration of a character-contributing building or non-protected part of a scheduled heritage building	P	a. Materials and design
8.	Demolition or removal for relocation of a character-contributing building or non-protected part of a scheduled heritage building	RD	
9.	All other additions and alterations to a character-contributing building or non-protected part of a scheduled heritage building (other than signs attached to buildings and structures)	RD	
10.	Additions and alterations to a non character-contributing building that: <ul style="list-style-type: none"> <li>• increase the footprint of the building by 10m<sup>2</sup> or more</li> <li>• increase the height of the building by more than 2m; or</li> <li>• replace a pitched roof with a mono pitch roof</li> </ul>	C	
11.	New retaining walls greater than 1m high	RD	
12.	All other new structures that are greater than 2.5m high or have a footprint of 2m <sup>2</sup> or more	RD	a. Number, location and design of ancillary signs
Buildings and structures activities that affect a protected part of a scheduled heritage building or scheduled heritage structure		Activity status	Performance standards
13.	Repairs and maintenance	P	
14.	Restoration of a building or structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)	C	
15.	Restoration of all other scheduled heritage buildings and structures	P	
16.	Earthquake strengthening where external features only are protected	C	a. Materials and design
17.	All other additions and alterations (other than signs attached to buildings or structures)	RD	
18.	Demolition	NC	

19.	Removal for relocation	RD	
Development activities on a scheduled heritage site, where visible from an adjoining public place or a public place within the heritage site		Activity status	Performance standards
20.	New structures that are greater than 2.5m high or have a footprint of 2m <sup>2</sup> or more	RD	a. Number, location and design of ancillary signs
21.	New buildings	RD	
22.	Parking, loading and access	RD	a. Parking, loading and access standards
Site development activities in all areas (except as covered by row 22 above)		Activity status	Performance standards
23.	Parking, loading and access	P	a. Parking, loading and access standards b. Location and screening of car parking
24.	New or additions to parking areas that result in 50 or more new parking spaces.	RD	a. Parking, loading and access standards b. Location and screening of car parking
25.	Storage and use of hazardous substances	P	a. Hazardous substances quantity limits and storage requirements b. Setback from coast and water bodies
26.	Outdoor storage	P	a. Location and screening of outdoor storage
27.	Vegetation clearance	P	a. Vegetation clearance standards
28.	All other site development activities	P	

#### Note 15.3.4A- General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

#### 15.3.5 Subdivision Activity Status Table

Subdivision activities		Activity status	Performance standards
1.	Cross lease, company lease and unit title subdivision	RD	a. Access b. Esplanade reserves and strips c. Firefighting d. Service connections e. Shape Y. Setback from National Grid (subdivision activities) X. <b>Structure plan mapped area</b> performance standards (where relevant) Z. Minimum landscaping
2.	General subdivision	RD	a. Access b. Esplanade reserves and strips c. Firefighting d. Minimum site size e. Service connections f. Shape g. <b>Structure plan mapped area</b> performance standards (where relevant) X. Setback from National Grid (subdivision activities) Y. Minimum landscaping

#### Note 15.3.5A - Other RMA considerations

- Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

#### Note 15.3.5X - Other relevant District Plan provisions

- Additional matters of discretion apply to the subdivision of land within a **Critical Electricity Distribution Infrastructure Corridor mapped area**. These are set out in Rule 15.11.5.
- Additional matters of discretion apply to the subdivision of land within a **National Grid Subdivision Corridor mapped area**. These are set out in Rule 15.11.5.

### 15.3.6 Activity Status in Hazard 1 (Flood) Overlay Zone and Hazard 2 (Flood) Overlay Zone

Activity	Activity status	
	a. Haz1 (flood)	b. Haz2 (flood)
Land Use Activities		

Activity		Activity status	
		a. Haz1 (flood)	b. Haz2 (flood)
1.	Natural hazards sensitive activities	NC	RD
2.	Natural hazards potentially sensitive activities	NC	RD
Development Activities			
3.	New buildings and additions and alterations to buildings that create within any two calendar-year period more than 36m <sup>2</sup> of new ground floor area	RD	RD

### Note 15.3.6A - Other RMA considerations

X Section 10 of the RMA (existing use rights) provides for land to be used in a manner that contravenes a rule in a district plan if the use was lawfully established before the rule became operative or the proposed plan was notified, and the effects of the use are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified.

- Accordingly, activities that are shown to have effects that are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified will not usually trigger the provisions for natural hazards sensitive activities and natural hazards potentially sensitive activities in Rule 15.3.6. However, Council will consider specific circumstances associated with the development and how this affects the character, intensity and scale of effects from the land use activity.

### Note 15.3.6B - Other requirements outside the District Plan

- Clause E1 – Surface water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework (including earthworks) in relation to managing surface water and effects on other property.
- Buildings and structures that will divert water may require resource consent under the Otago Regional Plan: Water.
- If buildings and structures affect the flow of water, this effect is also subject to the common law principle of natural servitude.

## Rule 15.4 Notification

- Applications for resource consent for the following activities will be considered without the need to obtain a written approval of affected persons and will not be notified in accordance with section 95A or section 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:
  - earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand;
  - contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is not listed by Heritage New Zealand;
  - In the Holyhead Street **structure plan mapped area**, subdivision activities in accordance with Rule 15.7A Holyhead Street **structure plan mapped area** performance standards; and

X. social housing.
- With respect to resource consent applications, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided for the following:

1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand;
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is listed by Heritage New Zealand; and
  3. contravention of the archaeological sites performance standard (Rule 13.3.3).
3. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided:
1. cemeteries;
  2. all restricted discretionary activities that list 'effect on cultural values of Manawhenua' as a matter for discretion; and
  3. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat in Appendix A4.
4. With respect to sections 95D(b) and 95E(2)(a) of the RMA, Council will not consider:
- X. ancillary residential units as part of the permitted baseline in considering residential density effects in the residential zones; and
  - Y. potential permitted new buildings and structures or compliance with the maximum building site coverage and impermeable surfaces performance standard (Rule 15.6.10) as part of the permitted baseline in considering the effects of subdivision activities on stormwater management in the residential zones.
5. With respect to resource consent applications for the following activities, the Otago Regional Council will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:
1. activities in the hazard 1 or hazard 1A (flood) overlay zones;
  2. activities in **swale mapped areas**; and
- X. activities in a **new development mapped area** where an integrated stormwater management plan is required to be submitted with a resource consent application in accordance with Rule 9.9.X
- Z. With respect to resource consent applications in a **new development mapped area** that include a new or modified integrated stormwater management plan or details for a stormwater management system as required by Rule 9.9.X, any owners of land within the area to which the proposed plan or system relates (who are not the applicant) will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided.
6. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 15.5 Land Use Performance Standards**

### **15.5.1 Acoustic Insulation**

Noise sensitive activities in the following areas must comply with Rule 9.3.1:

1. **port noise control mapped area**;
2. **airport noise outer control mapped area**;
3. **airport noise inner control mapped area**;
4. within 40m of the Taieri Aerodrome Zone;
5. within 40m of a state highway;
6. within 20m of an industrial zone; and

7. within 70m of a railway line.

### 15.5.2 Density

1. Standard residential activities in any location and visitor accommodation in the George Street North residential heritage precinct (or any combination of the two on a single site) must not exceed the following density limits:

Zone		i. Minimum site area for a residential unit (excluding ancillary residential units)	ii. Maximum development potential per site
a.	General Residential 1 Zone	1 per 400m <sup>2</sup> or 2 per 500m <sup>2</sup> where in the form of a duplex	1 habitable room per 100m <sup>2</sup>
b.	General Residential 2 Zone not within a <b>wastewater constraint mapped area</b> or the <b>South Dunedin mapped area</b>	N/A	1 habitable room per 45m <sup>2</sup>
c.	General Residential 2 Zone within a <b>wastewater constraint mapped area</b>	N/A	1 habitable room per 100m <sup>2</sup>
d.	General Residential 2 Zone within the <b>South Dunedin mapped area</b>	N/A	1 habitable room per 60m <sup>2</sup>
e.	Inner City Residential Zone	N/A	1 habitable room per 45m <sup>2</sup>
f.	Low Density Residential Zone	1 per 750m <sup>2</sup>	1 habitable room per 150m <sup>2</sup>
g.	Large Lot Residential 1 Zone	1 per 2000m <sup>2</sup>	1 habitable room per 400m <sup>2</sup>
h.	Large Lot Residential 2 Zone	1 per 3500m <sup>2</sup>	1 habitable room per 700m <sup>2</sup>
i.	Township and Settlement Zone not within a <b>no DCC reticulated wastewater mapped area</b>	1 per 400m <sup>2</sup> or 2 per 500m <sup>2</sup> where in the form of a duplex	1 habitable room per 100m <sup>2</sup>
j.	Township and Settlement Zone within a <b>no DCC reticulated wastewater mapped area</b>	1 per 1000m <sup>2</sup>	1 habitable room per 200m <sup>2</sup>

- k. Except in all zones, other than the GR2 and ICR zones:
- i. a single residential unit may be erected on a site of any size.
  - ii. one ancillary residential unit is allowed per site in association with a primary residential unit provided:
    1. the maximum development potential per site is not exceeded;

X the site size meets the minimum site size performance standard in Rule 15.7.4; and

Y it does not result in more than two residential units on the site, including the ancillary residential unit.

2. For the purposes of this standard:

- a. the calculation of habitable rooms includes rooms in ancillary residential units and sleep outs;
  - b. the calculation of minimum site area includes access legs provided for rear sites; and
  - c. the calculation of maximum development potential applies to:
    - X. visitor accommodation in the George Street North residential heritage precinct;
    - Y. standard residential activity in the Inner City Residential and General Residential 2 Zones; and
    - Z. standard residential activity outside the Inner City Residential and General Residential 2 Zones only for determining whether an ancillary residential unit or second unit in the form of a duplex, can be developed.
3. More than one residential building (other than an ancillary residential unit) may only be built on a site if all residential buildings are able to meet all the following performance standards if they were ever subdivided into separate sites:
- a. site coverage;
  - b. height in relation to boundary;
  - c. setbacks; and
  - d. access.
4. Standard residential activity that contravenes the performance standard for density is a non-complying activity, except contravention of the following standards only is a restricted discretionary activity:
- a. papakāiika that contravenes the performance standards for density;
  - b. standard residential in the General Residential 2 Zone (**wastewater constraint mapped area**) that contravenes the performance standards for maximum development potential per site (15.5.2.1.c.ii), provided the maximum development potential per site of the activity proposed does not exceed 1 habitable room per 45m<sup>2</sup>;
  - c. contravention of Rule 15.5.2.3 (bulk and location performance standards for multiple residential buildings on the same site);
    - X. standard residential in the ICR Zone that contravenes the performance standard for maximum development potential per site (15.5.2.1.e.ii), provided the maximum development potential per site of the activity proposed does not exceed 1 habitable room per 30m<sup>2</sup>; and
    - Y. social housing in the General Residential 1 and Township and Settlement zones (except in a **no DCC reticulated wastewater mapped area**) where it meets the density standard for General Residential 2.
5. Visitor accommodation in the George Street North residential heritage precinct that contravenes the performance standard for density is a discretionary activity.

**Note 15.5.2A - General advice**

1. Maximum development potential may not be achievable on all sites as site size, shape, topography, and design will all influence development potential.

#### 15.5.4 Hours of Operation

Activity	Hours of operation
1. Working from home (excluding homestay)	7.00am - 7.00pm
2. Dairies	6.00am - 10.00pm
3. Community and leisure	Sunday - Thursday: 6.00am - 10.30pm Friday - Saturday: 6.00am - 12.00am (midnight)
4. Training and education	8.00am - 8.00pm

5. Working from home hours of operation do not apply to activities that:
  - a. are located entirely within a building; and
  - b. do not involve machinery operation, visitors, customers, or deliveries.
6. Special church celebrations, including Christmas midnight mass, are exempt for this standard, provided they occur no more than 3 times in a calendar year.
7. Activities that contravene the performance standard for hours of operation are restricted discretionary activities.

#### 15.5.5 Light Spill

Land use activities must comply with Rule 9.3.5.

#### 15.5.6 Location

1. For restaurants, retail, or conference, meeting and function ancillary to visitor accommodation, all customer pedestrian access must not be orientated to the street frontage.
2. Land use activities that contravene the performance standard for location are restricted discretionary activities.

#### 15.5.7 Maximum Gross Floor Area

Activity	Maximum gross floor area
1. Working from home	50m <sup>2</sup> (includes any internal or external area occupied for storage of materials or goods)
2. Dairies	50m <sup>2</sup>

3. Working from home or dairies that contravene the performance standard for maximum gross floor area are discretionary activities.

#### Note 15.5.7A - Other requirements outside of the District Plan

1. Registration must be obtained from the DCC's Environmental Health Department for any working from home activity which involves food products, hairdressing, beauty therapy or tattooing. Please contact the DCC's Environmental Health Department on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.
2. Approval from DCC's Alcohol Licensing Department may be required for working from home activity that involves the sale or distribution of alcohol. Please contact the DCC on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.

#### 15.5.8 Minimum Mobility Car Parking

Activity	Minimum car parking rate
1- <i>Removed to comply with the</i> 9. <i>National Policy Statement on Urban Development 2020 requirement to remove minimum car parking requirements. Rule numbering to be corrected at a later date.</i>	

10. Land use activities must provide on-site mobility parking spaces as follows:

Total number of parking spaces provided	Minimum number of these that must be mobility parking spaces
a. 1 - 20	1 parking space
b. 21 - 50	2 parking spaces
c. For every additional 50 parking spaces	1 additional parking space

11. NA.

12. Parking spaces may be shared between land use activities (i.e. the same parking spaces may be used to fulfil the minimum mobility car parking requirement for more than one land use activity), as long as the hours of operation of the land use activities do not overlap.

13. Residential and office activities (excluding registered health practitioners) undertaken entirely within a scheduled heritage building do not need to provide any additional mobility car parking other than what is already on-site and may remove any car parking that does not meet the performance standards for location of car parking.

14. NA.

15. NA.

16. Activities that contravene this performance standard are restricted discretionary activities.

**Note 15.5.8A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

**15.5.9 Minimum Vehicle Loading**

1. Land use activities must provide on-site vehicle loading as follows:

Activity	Minimum vehicle loading
a. Visitor accommodation with more than 50 visitor accommodation units (except in relation to scheduled heritage buildings in the George Street North Residential Heritage Precinct)	1 loading space to accommodate the turning circle of a coach (See Appendix 6B, Figure 6B.12).

2. Activities that contravene this performance standard are restricted discretionary activities.

**Note 15.5.9A - Other relevant District Plan provisions**

1. Vehicle loading must comply with the vehicle loading design performance standards in Section 6.6: Parking, Loading and Access Standards.

**15.5.10 Noise**

Land use activities must comply with Rule 9.3.6.

**15.5.11 Outdoor Living Space**

15.5.11.1 Minimum area of outdoor living space for standard residential activity

- a. Standard residential activity must provide a minimum of outdoor living space per residential unit as follows:

Number of habitable rooms in unit	1. Ground level units in ICR, GR2, and campus zones	2. Ground level units in all other zones	3. Units not at ground level
i. 1	15m <sup>2</sup>	25m <sup>2</sup>	6m <sup>2</sup>
ii. 2	15m <sup>2</sup>	25m <sup>2</sup>	10m <sup>2</sup>
iii. 3	20m <sup>2</sup>	35m <sup>2</sup>	10m <sup>2</sup>
iv. More than 3 habitable rooms	20m <sup>2</sup> + 5m <sup>2</sup> per additional habitable room over 3 habitable rooms	35m <sup>2</sup> + 5m <sup>2</sup> per additional habitable room over 3 habitable rooms	10m <sup>2</sup>

- v. Except: ancillary residential units that have direct access to at least 25m<sup>2</sup> of outdoor living space provided for the primary residential unit do not need to provide additional outdoor living space.
- vi. Required outdoor living space for residential units must be for the exclusive use of the individual residential unit, however, for the sake of clarity, this does not require that the area to be fenced or otherwise partitioned from another unit's outdoor living space.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 15.5.11.2 Minimum area of outdoor living space for supported living facilities

- a. Supported living facilities that offer individual residential units, must provide a minimum area of outdoor living space per residential unit as follows:

Number of habitable rooms in unit		Minimum area
i.	1-2	15m <sup>2</sup>
ii.	3	20m <sup>2</sup>
iii.	More than 3 habitable rooms	20m <sup>2</sup> + 5m <sup>2</sup> per additional habitable room over 3 habitable rooms

- b. Required outdoor living space for individual residential units must be for the exclusive use of the residential unit, however for the sake of clarity, this does not require that the area to be fenced or otherwise partitioned from another unit's outdoor living space.
- c. For supported living facilities, such as rest homes or student hostels, which only provide bedrooms or beds for residents (not residential units), shared outdoor living space must be provided as follows:

Type of room		Minimum area of outdoor living space per bedroom
i.	Single occupancy bedrooms	5m <sup>2</sup>
ii.	Multiple occupancy bedrooms/hospital rooms/dorms (rooms used to accommodate 2 or more residents)	10m <sup>2</sup>

- d. Shared outdoor living space may be provided as a mixture of ground level balcony, decks or terrace spaces, provided at least 60% is at ground level, and each space is at least 20m<sup>2</sup>.
- e. Where a facility provides a mixture of residential units and bed/bedroom only options, such as a retirement village, the outdoor living space must comply with the respective standards above based on the amount of each type of accommodation.
- f. Activities that contravene this performance standard are restricted discretionary activities.

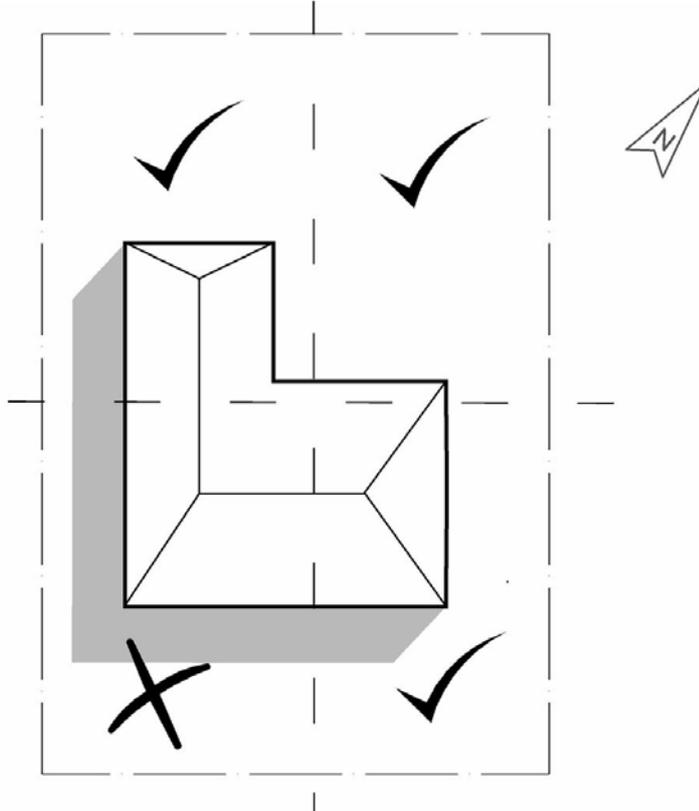

#### 15.5.11.3 Quality and location of outdoor living space for all residential activities

- a. Outdoor living space provided at ground level must:
- be clear of buildings and structures, except for pools, building eaves, pergolas, decks and terraces;
  - have an average vertical grade not exceeding 1:12 (vertical:horizontal) in any direction;
  - have dimensions no less than 3m;
  - be usable for its intended purpose and not used for vehicle parking, manoeuvring, driveways, or pedestrian accessways to other residential units or properties, or other uses; and
  - include at least one continuous area no smaller than 15m<sup>2</sup>.
- b. Outdoor living space provided not at ground level must:
- if provided as a deck, balcony, or roof terrace, have dimensions no less than 1.8m.
- c. All outdoor living space must:
- be located on the northern, eastern or western sides of residential buildings as per Figure 15.5.11.3A; and
  - be directly accessible from a principal living area, except if provided as shared outdoor living space for

supported living facilities.

- d. Activities that contravene this performance standard are restricted discretionary activities.

Figure 15.5.11.3A: Location of outdoor living space

### 15.5.12 Service Areas

1. Residential activity with 3 or more residential units on a site must provide service areas with a minimum area of 2.5m<sup>2</sup> per residential unit. Service area requirements are in addition to outdoor living space requirements.
2. Activities that contravene this performance standard are restricted discretionary activities.

### 15.5.13 Setback from National Grid

National Grid sensitive activities must comply with Rule 5.6.1.1.

### 15.5.14 Ancillary Residential Units

#### 15.5.14.2 Ancillary Residential Units - Design

- a. Ancillary residential units must:
  - i. not exceed a maximum gross floor area of 60m<sup>2</sup>.
  - ii. NA
  - iii. NA
  - iv. NA
- X. Ancillary residential units that are within the same residential building as a primary residential unit are exempt from this standard.
- b. Standard residential activity that contravenes this performance standard but does not exceed a maximum gross floor area of 80m<sup>2</sup> is a restricted discretionary activity.

#### **Note 15.5.14A - General advice**

1. Residential units over 80m<sup>2</sup> gross floor area do not meet the definition of ancillary residential units and are considered primary residential units.

### **15.5.15 Scheduled Mining Activity**

#### 15.5.15.1

Fairfield Sandpit No. 1 must meet the performance standards listed below.

#### 15.5.15.2

If Fairfield Sandpit No. 1 contravenes any of these standards it will be considered expansion of scheduled mining activity and will be subject to the rules that apply to that activity in Rule 15.3.

#### 15.5.15.3 Maximum annual extraction

- a. Fairfield Sandpit No. 1 must not exceed a maximum annual limit of 10,000 tonnes.

#### 15.5.15.4 Operating limits

- a. Fairfield Sandpit No. 1:
  - i. may only operate: Monday to Friday 6.00am to 8.00pm and Saturday 7.00am to 5.00pm;
  - ii. must not use blasting;
  - iii. must not undertake aggregate processing; and
  - iv. must not quarry within 15m of any adjoining property boundary which is used for residential purposes.

#### 15.5.15.5 Noise

Fairfield Sand Pit No. 1 must comply with Rule 9.3.6, subject to the following:

- a. an adjustment of minus 5 dBA for noise emissions having special audible characteristics; and
- b. noise level readings for the purpose of determining compliance with the noise conditions must be provided by the quarry operator for two hours, at times representative of the operation and at which maximum noise levels can be assessed. For continuous operations, readings must take place at 12 monthly intervals; for intermittent operations readings must be provided at the time of every subsequent operation of the site.

#### 15.5.15.6 Landscaping and rehabilitation

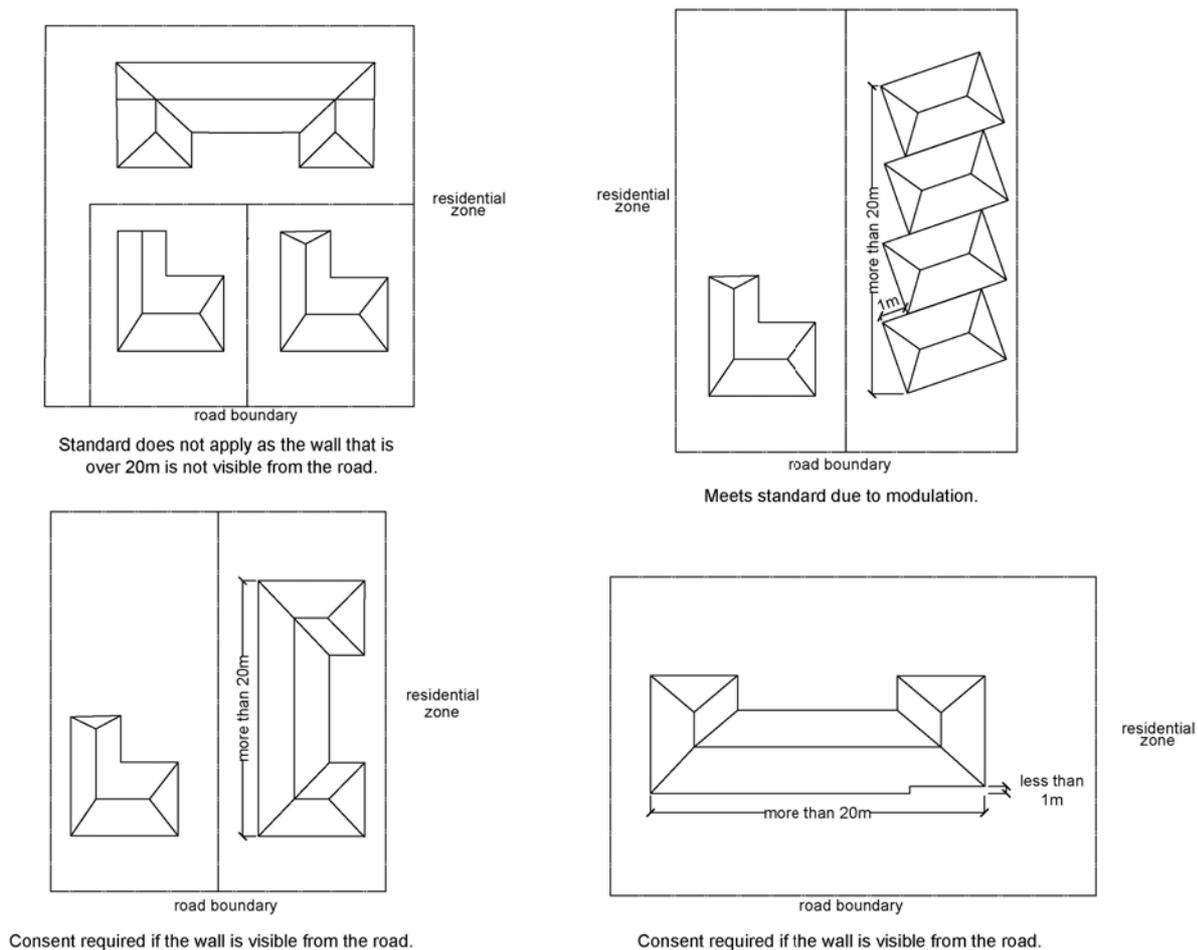

- a. Fairfield Sand Pit No. 1 must undertake a programme of screen planting designed to mitigate adverse visual effects as viewed from adjacent residential areas, road and other viewing areas, and a programme of landscaping to encourage the revegetation of areas that are no longer being mined. The programmes must ensure that:
  - i. all planting is in accordance with a landscape plan prepared by a qualified landscape architect;
  - ii. all vegetation established as part of this programme is maintained in a healthy state at all times;
  - iii. where practical, existing screening vegetation within 15m of any adjoining property boundary which is used for residential purposes will be retained; and
  - iv. the site is rehabilitated to an appearance and character similar to that of the surrounding environment.
- b. Fairfield Sand Pit No. 1 must ensure the edge of the quarried area is designed and certified by a suitably qualified geotechnical engineer to ensure that the edge will not adversely affect any adjoining property boundary.

## Rule 15.6 Development Performance Standards

### 15.6.1 Building Length

1. New buildings and additions and alterations to buildings must not result in any wall with a continuous length that is greater than 20m, if the wall is visible, in full or in part, from an adjoining public place.
2. For the purposes of this rule, the length of walls will be measured parallel to the boundary of the site.
3. For the purposes of this rule, a 'continuous length' will be measured as follows for walls that modulate: where modulation involves a step-back of 1 metre or more in depth it will be counted as a new wall, but where modulation is less than 1 metre in depth it will be considered a continuous length.
4. New buildings and additions and alterations that contravene this standard are restricted discretionary activities.

Figure 15.6.1A: Building length

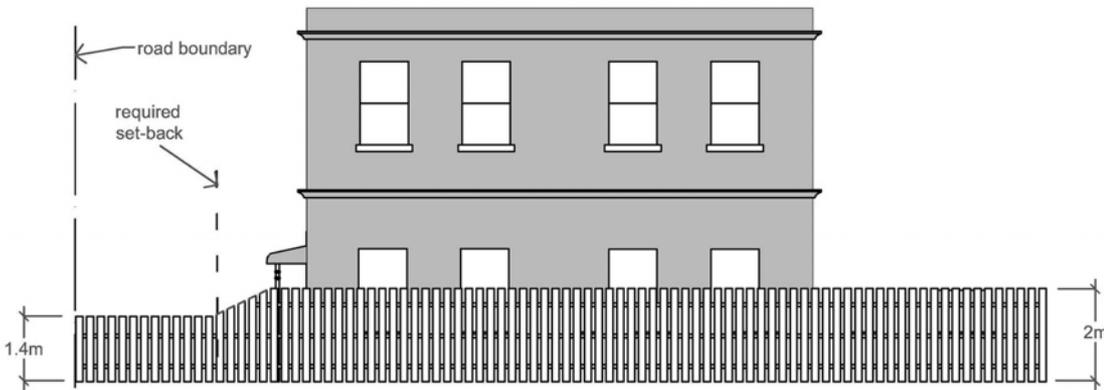

### 15.6.2 Fence Height and Design

#### 15.6.2.1 Maximum Height

- a. The maximum height of fences along boundaries (including within the boundary setbacks required by Rule 15.6.13) is 2m, except:
  - i. for sites within a residential heritage precinct, fences along the part of a side boundary that is within the road boundary setback required by Rule 15.6.13 (see Figure 15.6.2.1A) the maximum height is 1.4m.

- b. For the purposes of calculating maximum height, where a fence is erected atop a retaining wall, the height will be calculated as the combined height measured from ground level to the top of the fence.
- c. Activities that contravene this performance standard are restricted discretionary activities.

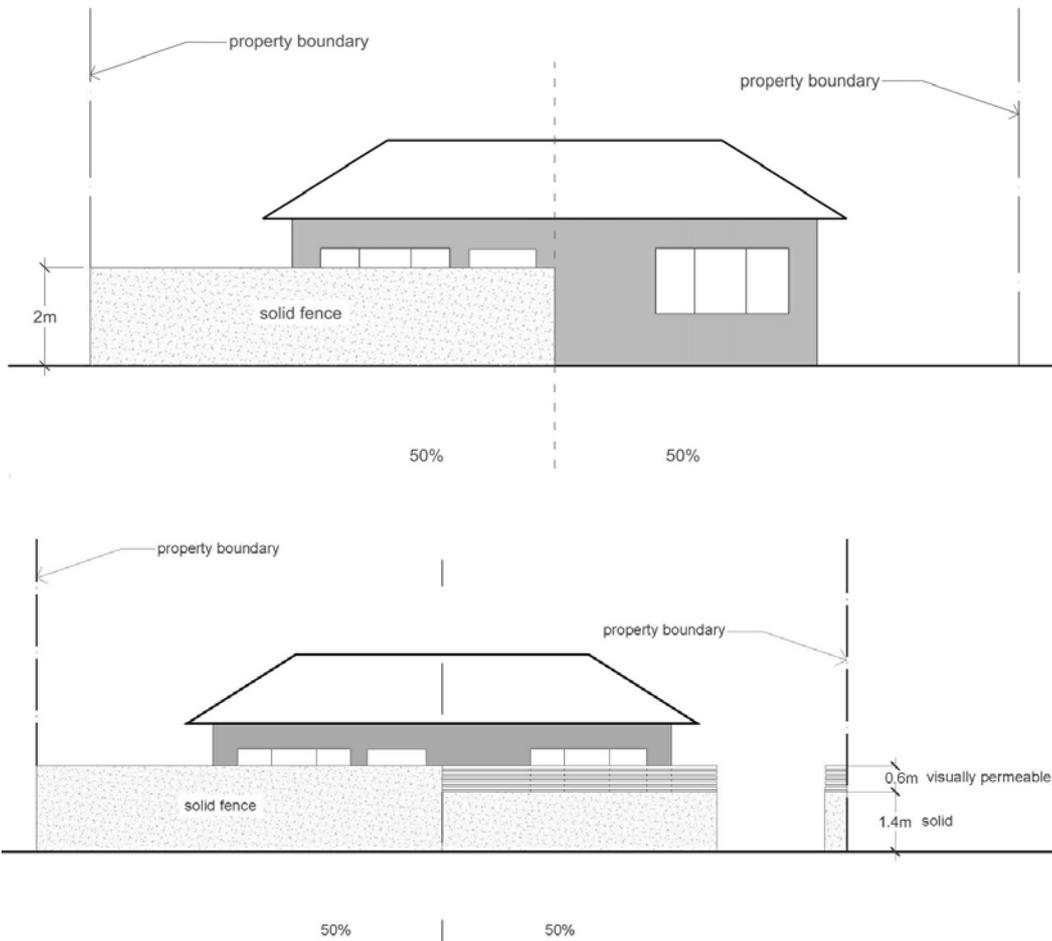

Figure 15.6.2.1A: Side boundary fences in heritage precincts

#### 15.6.2.2 Visual Permeability

- a. Fences along road boundaries or boundaries adjoining a reserve (including within the boundary setbacks required by Rule 15.6.13) must be constructed to a length and/or height that maintains visual permeability for 50% of the length of the boundary measured at a height of 1.4m above ground level (see Figure 15.6.2.2A).
- b. The following fences are exempt from this requirement:
  - i. fences along the road boundary of a state highway;
  - ii. fences required to meet Rule 15.6.8 (Location and Screening of Outdoor Storage) or to otherwise screen service areas; and
  - iii. boundaries with a reserve that is not in the Recreation Zone or a residential zone.
- c. Fences that contravene this performance standard are restricted discretionary activities.

Figure 15.6.2.2A: Examples of fencing that meet Rule 15.6.2.2 Visual Permeability

### 15.6.3 Firefighting

All new residential buildings and subdivision activities must comply with Rule 9.3.3.

### 15.6.4 Natural Hazards Performance Standards

#### 15.6.4.1 Hazard exclusion areas (**swale mapped area**)

New buildings and structures, and additions and alterations located in a **swale mapped area** must comply with Rule 11.3.1.1.

#### 15.6.4.2 Maximum area of vegetation clearance in the hazard overlay zones

Vegetation clearance in the Hazard 1 or 2 (land instability) overlay zones must comply with Rule 11.3.2.

#### 15.6.4.3 Relocatable buildings

New buildings containing residential activity on the ground floor in the Hazard 3 (coastal) Overlay Zone must comply with Rule 11.3.3.

#### 15.6.4.4 Outdoor storage

Outdoor storage in the Hazard 1 (flood) Overlay Zone must comply with Rule 11.3.4.

### 15.6.5 Hazardous Substances Quantity Limits and Storage Requirements

The storage and use of hazardous substances must comply with Rule 9.3.4.

### 15.6.6 Height

#### Note 15.6.6A - General advice

1. The permitted height of buildings and structures is controlled by both the maximum height standard and height in relation to boundary standard. The absolute maximum height specified in the 'maximum height performance standard' may not be achievable on all sites due to site dimensions and topography.
  2. NA
- X. The New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001) contains restrictions on the location of structures and activities in relation to transmission lines. Compliance with this code is mandatory. Compliance with this plan does not ensure compliance with NZECP 34:2001.

#### 15.6.6.1 Height in relation to boundary

- a. On all side and rear boundaries that adjoin a site with a residential zone or a Residential Transition Overlay Zone, new buildings and additions and alterations to buildings must not protrude through the following planes:
  - i. in the General Residential 1 Zone, a plane rising at an angle of 45 degrees measured from a point 2.5m above ground level at the boundary; or for parts of the site where the width of the site as measured at right angles to the side or rear boundaries is under 16m (see Figure 15.6.6.1G), or that have a slope angle of 6 degrees or more and where the ground level at the nearest boundary is lower than the existing ground level of the building platform (see Figure 15.6.6.1H), through a plane rising at an angle of 55 degrees from a point 2.5m above ground level at the boundary.
  - ii. in the Inner City Residential Zone, a plane rising at an angle of 45 degrees measured from a point 3m above ground level at the boundary (see Figure 15.6.6.1B); or for parts of the site where the width of the site as measured at right angles to the side or rear boundaries is under 16m (see Figure 15.6.6.1G), or that have a slope angle of 6 degrees or more and where the ground level at the nearest boundary is lower than the existing ground level of the building platform (see Figure 15.6.6.1H), through

a plane rising at an angle of 55 degrees from a point 3m above ground level at the boundary.

- iii. in the General Residential 2 Zone, a plane rising at an angle of 55 degrees measured from a point 3m above ground level at the boundary (see Figure 15.6.6.1A);
  - iv. in all other residential zones, a plane rising at an angle of 45 degrees measured from a point 2.5m above ground level at the boundary (see Figure 15.6.6.1C)
  - v. except:
    1. in the Inner City Residential Zone, for any new buildings and additions or alterations to buildings within 16m of the road boundary, the height in relation to boundary will be measured from 6.5m above ground level at side boundaries, provided that all buildings on the remainder of the site are set back from the side boundaries by at least 2m (see Figure 15.6.6.1D);
    2. where new buildings or additions and alterations are built to a common wall, any part of a building where the height and angle of the roofline are the same as the adjoining building is exempt from this standard Figure 15.6.6.1E;
    3. gable ends and dormers may protrude through the height in relation to boundary plane by a maximum of 2m (see Figure 15.6.6.1F); and
    4. rooftop structures are exempt from the performance standard for height in relation to boundary.
- b. Activities that contravene this performance standard are restricted discretionary activities.

Figure 15.6.6.1A: General Residential 2 Zone

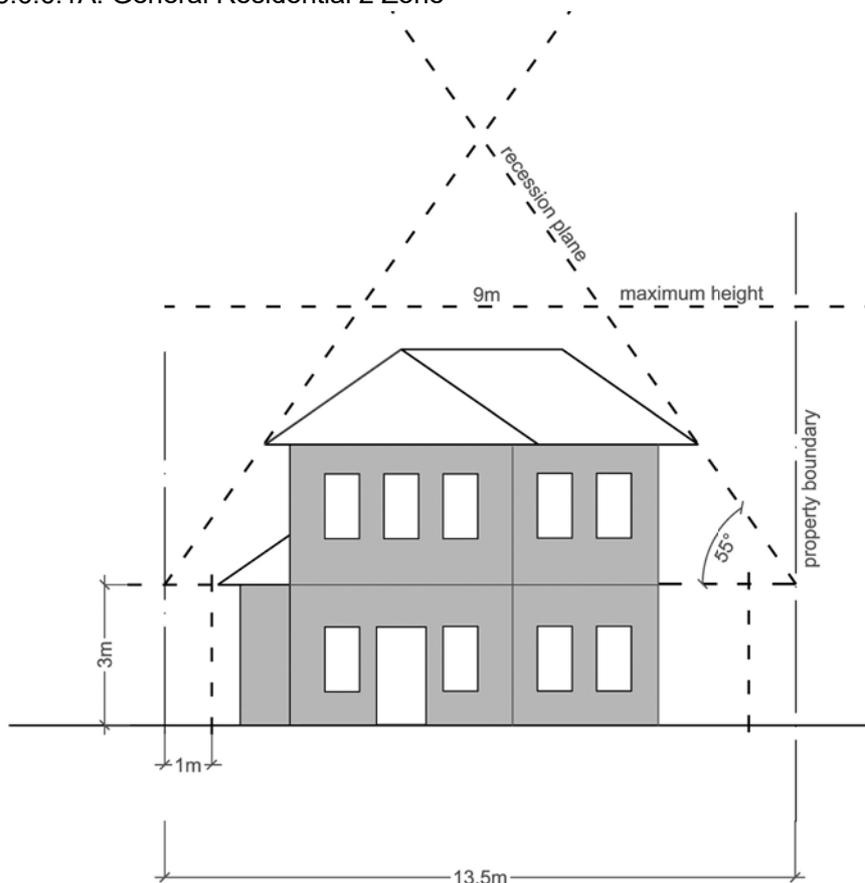

Figure 15.6.6.1B: Inner City Residential Zone

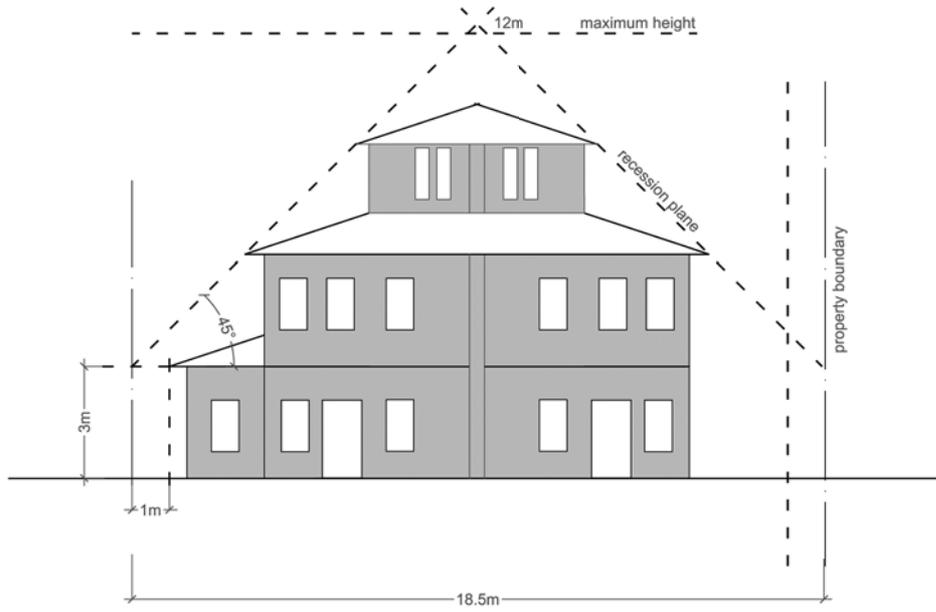

Figure 15.6.6.1C: All other residential zones

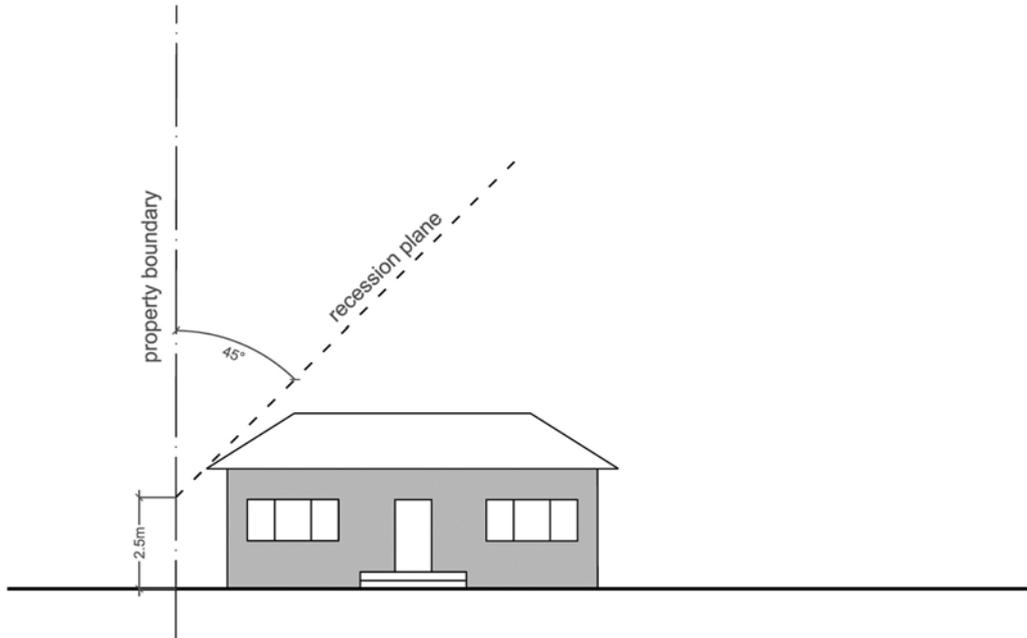

Figure 15.6.6.1D: Inner City Residential Zone height in relation to boundary special provision

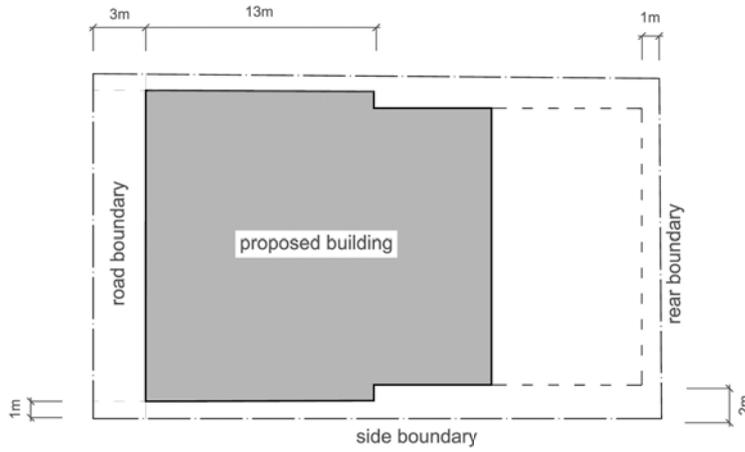

Figure 15.6.6.1E: Roof line mirror image where shared wall

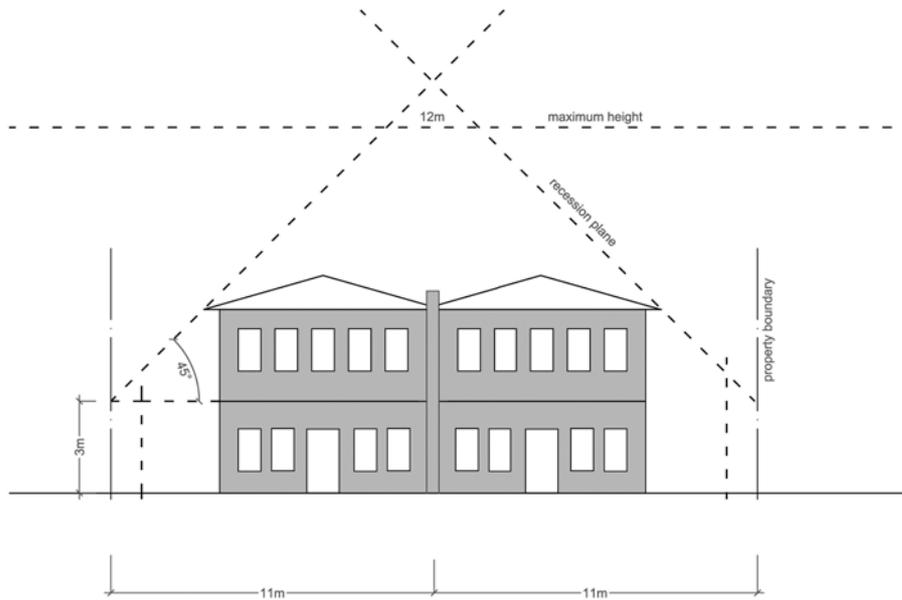

Figure 15.6.6.1F: Gable ends and dormers protruding through height plane

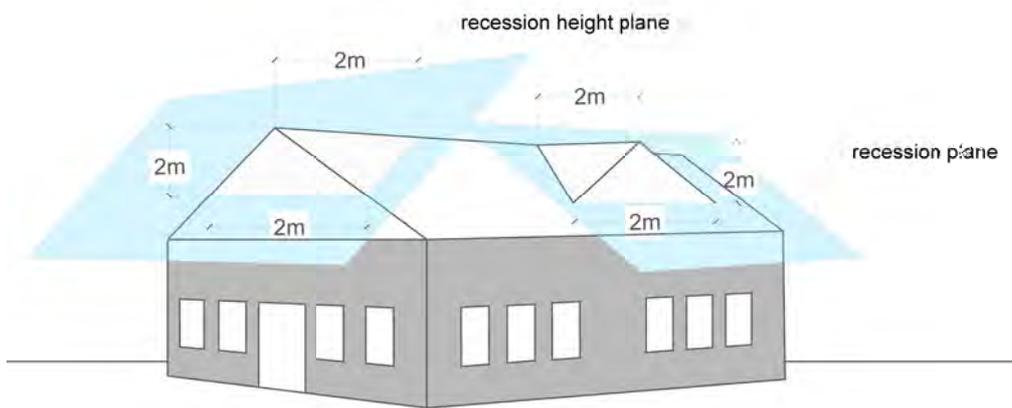

Figure 15.6.6.1G: Site width exception rule

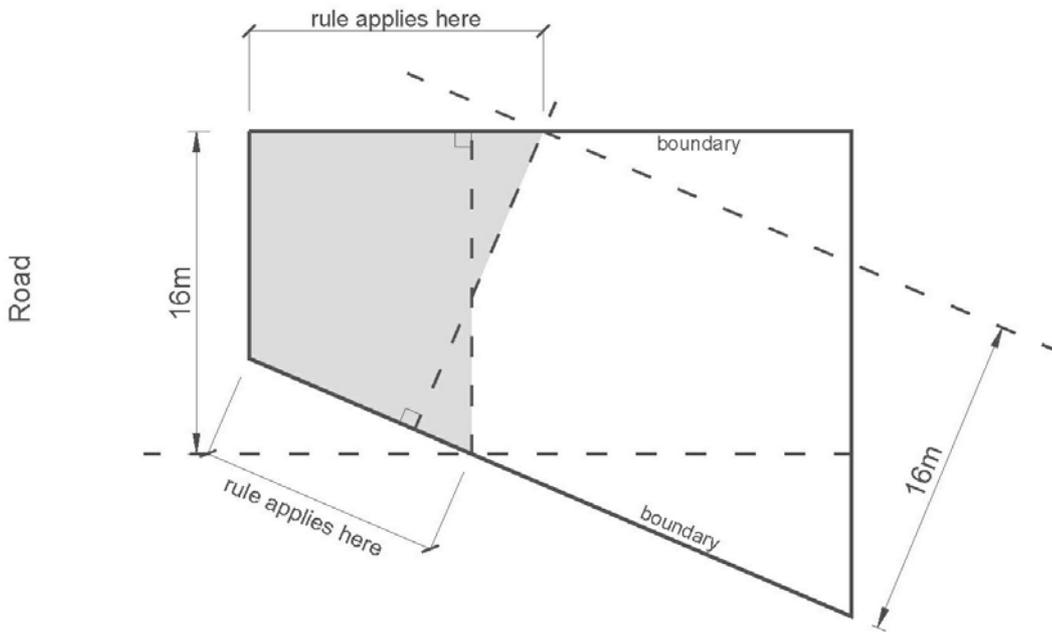

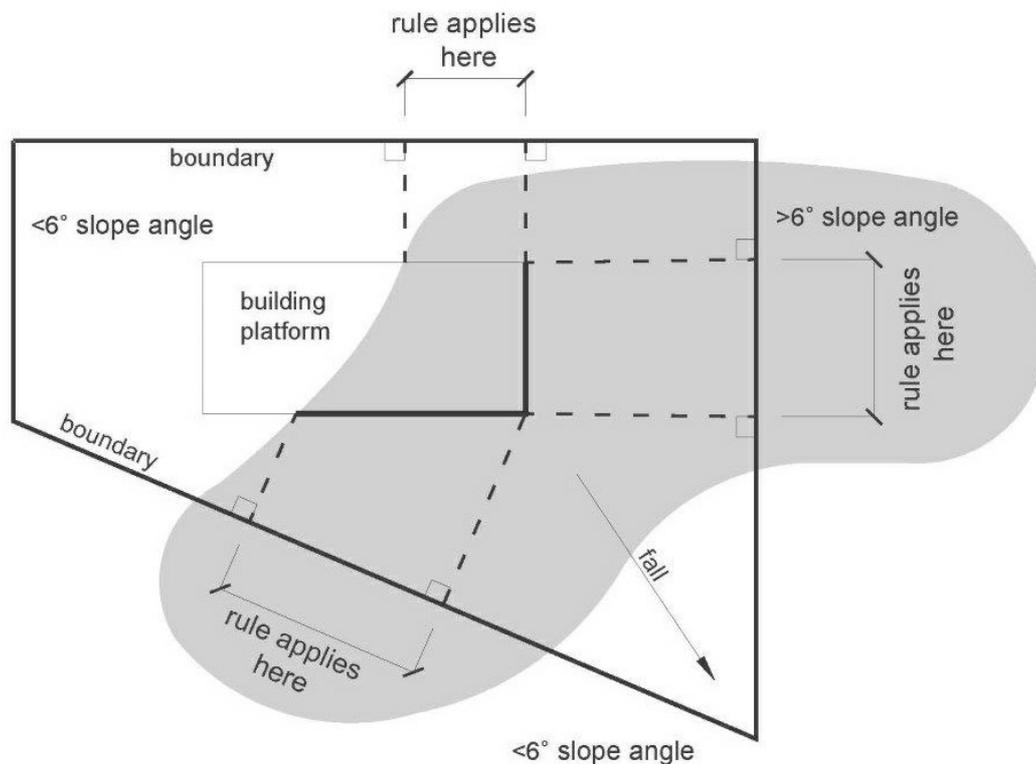

Figure 15.6.6.1H: Sloping site exception rule

### 15.6.6.2 Maximum height

- a. New buildings and structures, and additions and alterations must not exceed the following maximum height above ground level:

		1. Maximum height in the Inner City Residential Zone	2. Maximum height in all other residential zones
i.	Ancillary residential units (stand-alone building)	Not provided for	3m (from ground level to the bottom of the eaves)
ii.	Garages and carports in road boundary setback	3m (from ground level to the bottom of the eaves)	3m (from ground level to the bottom of the eaves)
iii.	All other new buildings and structures, and additions and alterations within setbacks from boundaries, except as provided for in Rule 15.6.13.1	2m	2m
iv.	All other new buildings and structures, and additions and alterations	12m	9m

- v. Except:

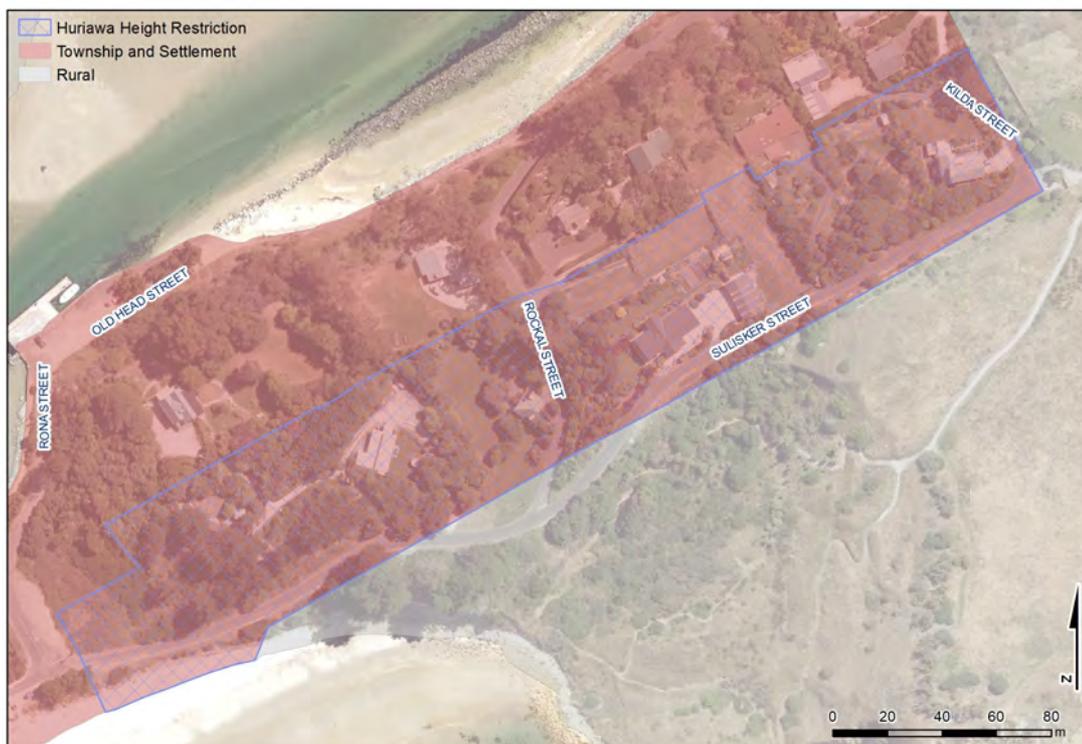

1. rooftop structures are exempt from the performance standard for height provided they do not exceed the maximum height limit for all other buildings and structures by more than one third of that limit.
2. within the **Huriawa height restriction mapped area** (see Figure 15.6.6.2A):

1. new buildings and additions and alterations to buildings on sites between Rockal Street and Kilda Street must not protrude through a horizontal plane 4.5m above ground level at the Sulisker Street boundary of the site;
2. new buildings and additions and alterations to buildings on sites between Rona Street and Rockal Street must not exceed 4.5m.

X. within the Pukehiki Township and Settlement Zone, and the **Chelivode Street Structure Plan mapped area**, new buildings and structures, and additions and alterations located within a Significant Natural Landscape Overlay Zone must not exceed 5m above ground level.

- b. New buildings and structures, and additions and alterations must not protrude through the height restriction for the Taieri Aerodrome approach and take-off fans shown on the **Taieri Aerodrome flight fan mapped area**.
- c. Activities that contravene this performance standard are restricted discretionary activities.

Figure 15.6.6.2A: **Huriawa height restriction mapped area**

### 15.6.7 Location and Screening of Car Parking

1. In all residential areas, parking, loading and access areas and garages and carports must not occupy more than 50% of the area of the front yard that is part of the road boundary setback required by Rule 15.6.13.
2. In residential heritage precincts, parking areas must not be visible from an adjoining public place, unless they are set back a minimum of 4m from the road boundary.
3. Activities that contravene this performance standard are restricted discretionary activities.

### 15.6.8 Location and Screening of Outdoor Storage

1. Shared service areas provided for 3 or more residential units must be located or screened so they are not visible at ground level from residential activities within the site, residential activities on adjacent sites, or public places.
2. Outdoor storage, including service areas, must not encroach into required parking, loading, manoeuvring, or outdoor living areas.
3. Materials stored outside must be stored in a way that prevents them contaminating any off-site area.
4. Activities that contravene this performance standard are restricted discretionary activities.

### 15.6.9 Materials and Design

Earthquake strengthening must comply with Rule 13.3.2.

### 15.6.10 Maximum Building Site Coverage and Impermeable Surfaces

1. Development activities must not exceed the following maximum building site coverage limits:

Zone		i. Maximum building site coverage: buildings and structures with a footprint greater than 10m <sup>2</sup> (% of site)	ii. Maximum building site coverage: buildings and structures and any impermeable surfaces (% of site)
a.	General Residential 1 Zone	40%	70%
b.	General Residential 2 Zone not within the <b>Variation 2 mapped area</b>	50%	80%
X.	General Residential 2 Zone within the <b>Variation 2 mapped area</b>	50%	70%
c.	Inner City Residential Zone	60%	80%
d.	Low Density Residential Zone	35%	65%
e.	Large Lot Residential 1 and 2 Zones	30%	50%
f.	Township and Settlement Zone not within a <b>no DCC reticulated wastewater mapped area</b>	40%	70%
g.	Township and Settlement Zone within a <b>no DCC reticulated wastewater mapped area</b>	30%	50%

2. Any driveway that provides access to another site and access leg for rear sites will be excluded from the calculation of total site area for the purpose of calculating site coverage in column i but included in the calculation of site coverage in column ii (See Figure 15.6.10A).

X. In the Variation 2 mapped area, any new development which will result in a new residential building with one or more new residential units must provide 20% of the site area or 30m<sup>2</sup> (whichever is the greater) as minimum landscaping that is to be located and landscaped in a way that meets the following requirements:

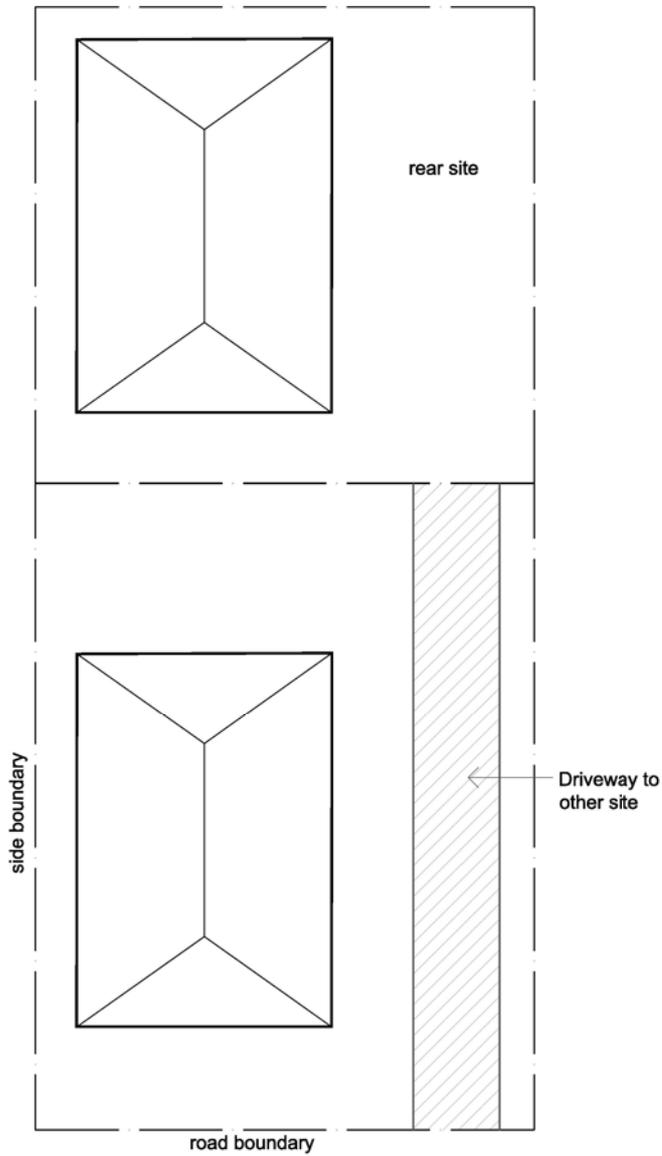

- a. every site (or comprehensive multi-unit development proposed for fee simple subdivision) larger than 250m<sup>2</sup> must include a minimum of 1 tree per 250m<sup>2</sup> of site area from the Appendix 10A.3 Important Native Tree List or the DCC Native Planting Guide – Dunedin Hillslopes Forest Species List (DCC, 2021). The required tree/s must be:
  - i. at least 2m high at the time of planting and capable of growing to a minimum of 3m high; and

- ii. setback a minimum of 2.5m from all boundaries;
  - b. where the site adjoins a road, at least 50% of the land within the road boundary setback must be planted with trees, shrubs or groundcover species that are native to New Zealand (it may not be managed as lawn) except where more than 50% of the land within the road boundary setback is occupied by driveways, buildings or impermeable surfaces that were lawfully established prior to 31 May 2022, 75% of the remaining area of permeable surface within the road boundary setback must be planted with trees, shrubs or groundcover species that are native to New Zealand (it may not be managed as lawn); and
  - c. all trees and landscaping required by this rule must be maintained and if dead, diseased or damaged, must be replaced.
  - d. For the sake of clarity:
    - i. the area required to meet Rule 15.6.10.X will not count towards the maximum area of impermeable surfaces in Rule 15.6.10.1; and
    - ii. existing native plants that meet the requirements of this rule will be counted towards meeting the rule (mature native trees that are retained on site do not need to meet the setback for boundaries).
3. Activities that contravene this performance standard are restricted discretionary activities.

**Note 15.6.10X - Other requirements outside of the District Plan**

1. Clause E1 - Surface Water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework in relation to managing surface water and effects on other property.
2. Buildings and structures that will divert water may require resource consent under the Otago Regional Plan: Water.
3. Discharge of stormwater to any Otago Regional Council scheduled drain or overland flow path is managed by the Otago Regional Council Flood Protection Management Bylaw 2012.
4. If buildings and structures affect the flow of water, this effect is also subject to the common law principle of natural servitude.
5. Part 4 of the Dunedin Code of Subdivision and Development 2010 ('Code of Subdivision') requires that design and construction of stormwater systems be undertaken in accordance with NZS 4404:2004 (now replaced by NZS 4404:2010), except as amended by the Code of Subdivision. This includes a requirement that stormwater systems be provided so that any new development results in an insignificant increase of runoff wherever possible (Clause 4.2.8).

Figure 15.6.10A: Site coverage calculation

## **15.6.11 Number, Location and Design of Ancillary Signs**

### 15.6.11.1 General

- a. Signs visible from a public place must meet all of the following performance standards, except that regulatory signs, directional signs and warning signs that do not exceed 0.25m<sup>2</sup> are exempt from these standards.
- b. Signs must also comply with:
  - i. Rule 6.7.2 where located on or above the footpath; and
  - ii. Rule 6.7.3 where visible from a road.
- c. Signs must not be illuminated or digital, except signs ancillary to visitor accommodation in the George Street North Residential Heritage Precinct and North Ground Residential Precinct.
- d. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

### 15.6.11.2 All signs in residential zones

- a. Signs must not be attached to roofs.
- b. Signs must not project higher than the lowest point of the roof, except as mounted flat against a parapet or gable end.
- c. Signs must have a maximum of 2 display faces per sign.
- d. Where attached to a building, signs must not protrude from a building façade by more than 1m.

### 15.6.11.3 All signs (ancillary to residential activities)

- a. Maximum one sign per site, either attached to a building, freestanding or attached to a fence or retaining wall.
- b. The height, above ground level, at the highest point of any sign:
  - i. attached to a residential building, is 4m; and
  - ii. where attached to a fence, retaining wall or freestanding, is 2m.
- c. Signs must have a maximum area of 0.6m<sup>2</sup> per display face.
- d. Portable freestanding signs must not be located on the road reserve.

### 15.6.11.4 All signs (ancillary to dairies)

- a. The height, above ground level, at the highest point of any sign attached to a building is 6m.
- b. Signs attached to a verandah fascia must not exceed a height of 0.5m, or the height of a verandah fascia, whichever is greater.
- c. The maximum area of walls up to 4m above ground level, or the bottom of a verandah, whichever is the lesser that signs may occupy is 50%.
- d. One sign with a maximum display face of 2m<sup>2</sup> is allowed per building between 4 and 6m in height above ground level.
- e. Signs attached at right angles to the façade of a building (including attached to the underside of a verandah), must not exceed:
  - i. a maximum of 2 signs per site; and
  - ii. a maximum area per display face of 1.5m<sup>2</sup>
- f. Portable freestanding signs on footpaths outside dairies must not exceed:
  - i. a maximum height of 0.9m above ground level;
  - ii. a maximum width of 0.6m; and

- iii. a maximum of 1 portable freestanding sign per street frontage of dairy.

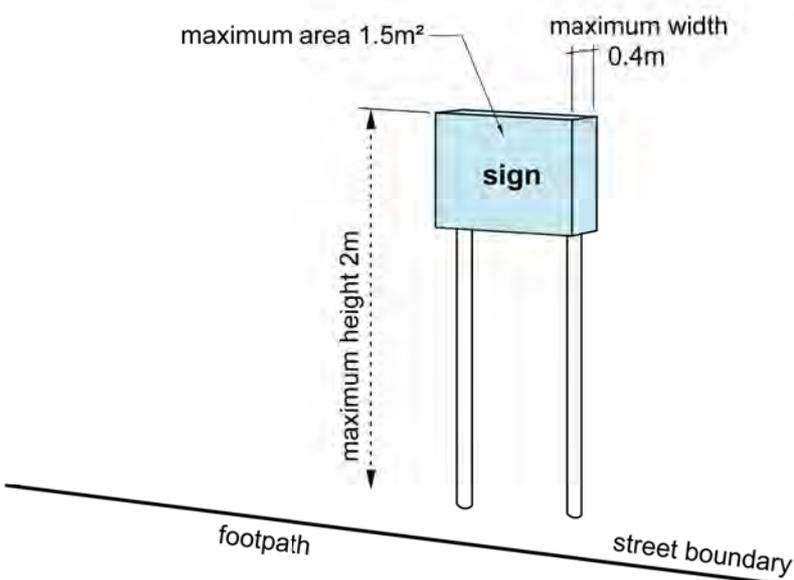

#### 15.6.11.5 Signs attached to buildings (ancillary to commercial activities and community activities)

- a. Maximum 1 sign per site attached to a building.
- b. The height, above ground level, at the highest point of any sign, attached to a building is 4m.
- c. Signs must have a maximum area per display face of 1.5m<sup>2</sup>, except signs ancillary to visitor accommodation may have a maximum area of 2m<sup>2</sup> per display face in the George Street North Residential Heritage Precinct and North Ground Residential Precinct.

#### 15.6.11.6 Freestanding signs (ancillary to commercial activities and community activities)

- a. Maximum of 1 permanently fixed freestanding sign or 1 portable freestanding sign per site.
- b. Freestanding signs must be positioned entirely within site boundaries.
- c. The maximum dimensions of freestanding signs are:
  - i. maximum height of 2m above ground level;
  - ii. maximum area of 1.5m<sup>2</sup> per display face, except signs ancillary to visitor accommodation may have a maximum area of 2m<sup>2</sup> per display face in the George Street North Residential Heritage Precinct and North Ground Residential Heritage Precinct; and
  - iii. maximum depth of 0.4m.

Figure 15.6.11.6A: Freestanding signs (ancillary to commercial activities and community activities)

#### **Note 15.6.11A - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy.
  - c. Dunedin City Council Roadway Bylaw.

d. Dunedin City Council Traffic and Parking Bylaw.

### 15.6.12 Parking, Loading and Access Standards

Parking, loading and access must comply with Rule 6.6.

### 15.6.13 Setbacks

#### 15.6.13.1 Boundary setbacks

- a. New buildings and structures, and additions and alterations, must have a minimum set back from boundaries, as follows:

Zone		1. Setback from any road boundary	2. Setback from side and rear boundaries	3. Setback from boundary with right of way
i.	General Residential 1 Zone	4.5m	2m	1m
ii.	General Residential 2 Zone (except for <b>Gardens, Mornington, Mosgiel, South Dunedin, and Caversham mapped areas</b> )	4.5m	2m	1m
iii.	General Residential 2 Zone ( <b>Gardens, Mornington, Mosgiel, South Dunedin, and Caversham mapped areas</b> )	3m	1m	1m
iv.	Inner City Residential Zone	3m	1m	1m
v.	Low Density Residential Zone	4.5m	2m	1m
vi.	Large Lot Residential 1 and 2 Zones	4.5m	4m	1m
vii.	Township and Settlement Zone	4.5m	2m	1m

viii. Except:

- where residential buildings are located on a site between two sites (including corner sites) with residential buildings that do not meet the standard for setback from the road boundary, then the minimum setback may be reduced to the depth of the larger of the two existing setbacks, as shown in Figure 15.6.13.1A<sup>1</sup>;
- where buildings are built to the boundary and share a common wall no setback is required for the length of the buildings where joined (see Figure 15.6.13.1B);
- the setback from any road boundary may be reduced to 0.5m for garages (stand-alone and attached) and carports no greater than 4.5m in width (as measured parallel to the road boundary) that have their entry facing the road and that meet Rule 15.6.6.2.a.ii (maximum height);
- the setback from the side and rear boundary may be reduced to 1m for garages (stand-alone and attached) and carports that are no greater than 6m in length (as measured parallel to the boundary) and that meet Rule 15.6.6.2.a.ii (maximum height);
- decks less than 0.5m above ground level, signs attached to buildings and structures, and buildings or structures less than 10m<sup>2</sup> in footprint and 2m in height, and all fences are exempt from this standard;
- eaves, gutters and downpipes less than 3m above ground level may project over a required setback provided that they project by no more than 25% of the width of the required setback;

and

7. for new buildings or additions and alterations to buildings in the Inner City Residential Zone being built in accordance with Rule 15.6.6.1.a.v.1 (alternate height in relation to boundary performance standard) where a 2m minimum setback is required in accordance with that rule.

b. Activities that contravene this performance standard are restricted discretionary activities.

<sup>1</sup> Note: for the purposes of this rule 'existing setbacks' will be measured from the main part of residential buildings and will not include any garages or carports, or other parts of buildings that occupy less than 50% of the building frontage (within the setback), e.g. bay windows, porches, steps, or decks (See Figure 15.6.13.1C). Where the main part of an existing building is not parallel to the road boundary (e.g. not consistently the same distance from the road boundary), the nearest point of the building from the boundary will be used to determine the existing setback.

**Note 15.6.13.1A - Other requirements outside the District Plan**

1. Buildings less than 10m<sup>2</sup> in floor area and closer than 1m to a site boundary must comply with clauses C1 – C6 of the New Zealand Building Code. Please contact Dunedin City Council, Building Services Unit, on 477 4000 for further information.

Figure 15.6.13.1A: Setback from road boundary consistent with neighbour

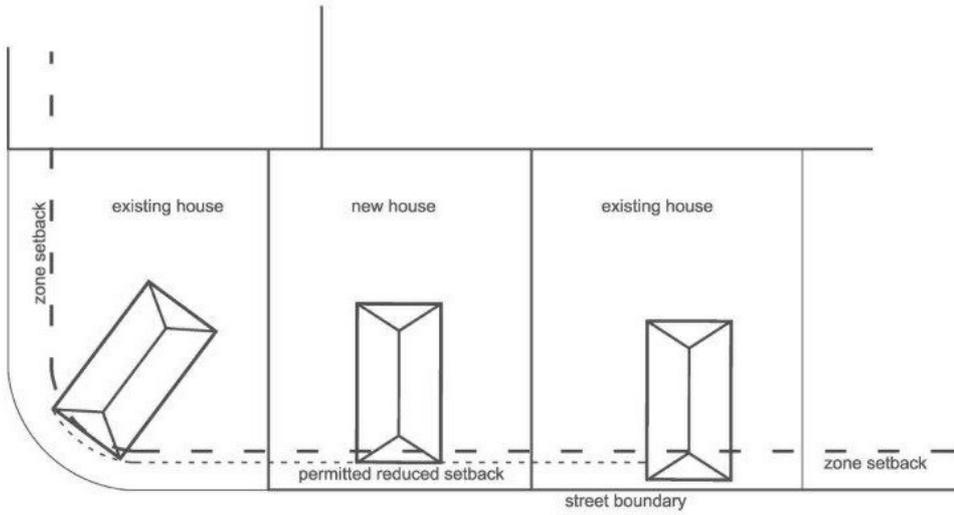

Figure 15.6.13.1B: Setbacks for buildings sharing common wall

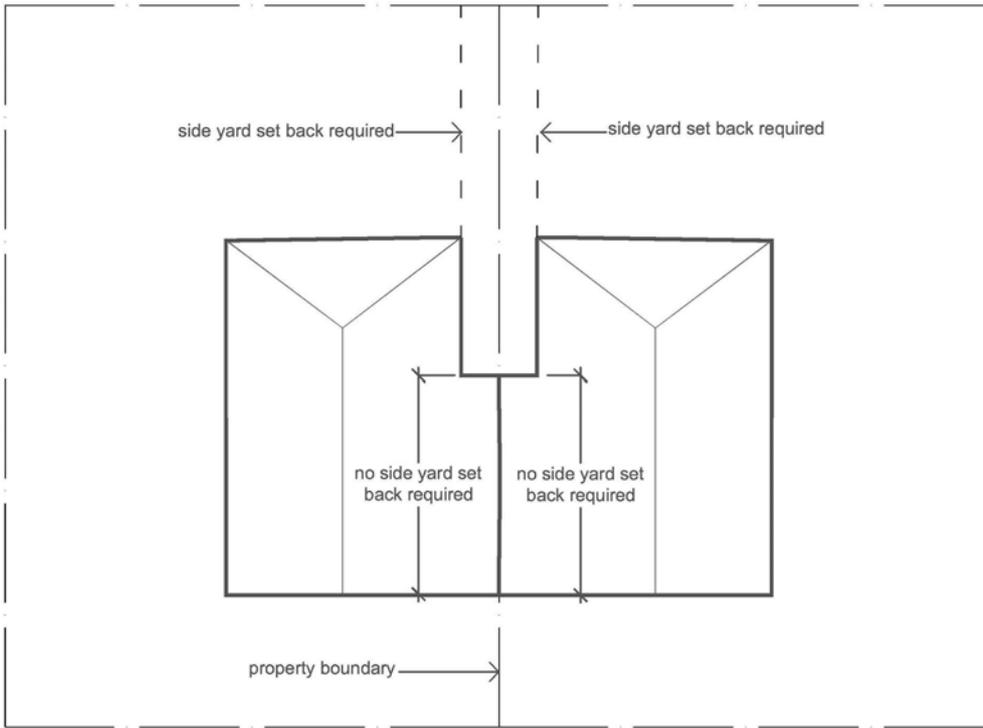

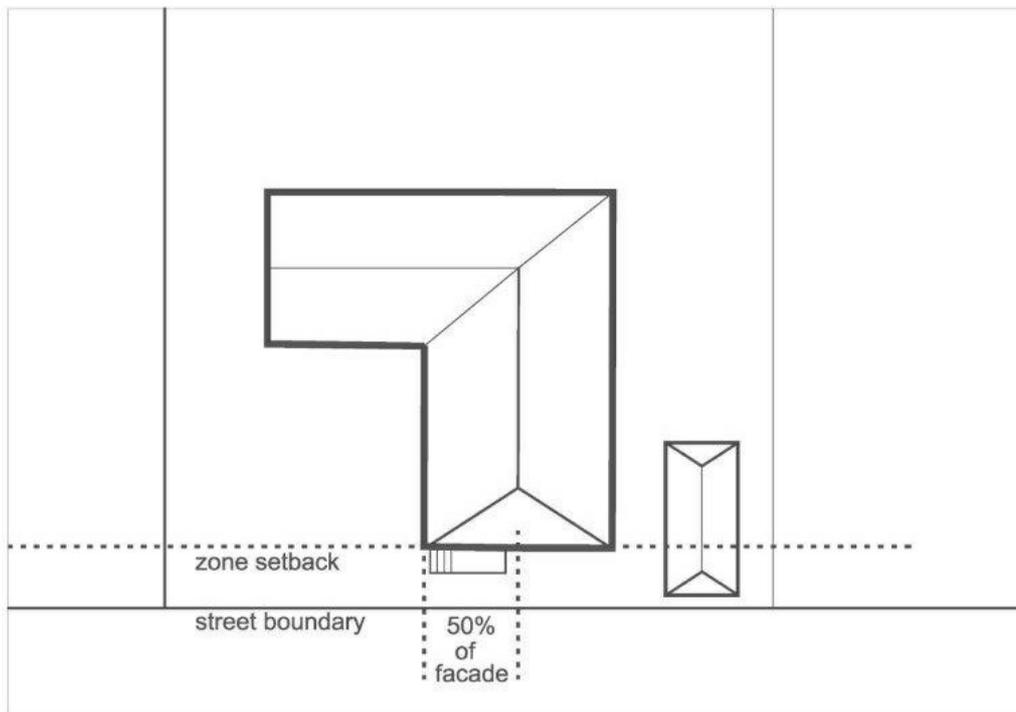

Figure 15.6.13.1C: Determining existing setbacks

#### 15.6.13.2 Setback from scheduled tree

New buildings and structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2.

#### 15.6.13.3 Setback from coast and water bodies

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

#### 15.6.13.4 Setback from National Grid

New buildings and structures, and additions and alterations must comply with Rule 5.6.1.1.

#### 15.6.13.Y Setback from Critical Electricity Distribution Infrastructure

New buildings, new structures and additions and alterations must comply with Rule 5.6.X.1.

#### 15.6.13.X Setback from designated rail corridor

New buildings, new structures and additions and alterations must comply with Rule 6.7.4.

### **15.6.14 Vegetation Clearance Standards**

#### 15.6.14.1 - Maximum area of vegetation clearance (UBMA)

Vegetation clearance in an **urban biodiversity mapped area** (UBMA) must comply with Rule 10.3.2.4.

#### 15.6.14.2 - Maximum area of vegetation clearance in a hazard overlay zone

Vegetation clearance in the Hazard 1 (land instability) or Hazard 2 (land instability) Overlay Zone must comply with Rule 11.3.2.

### **15.6.X Service Connections - Stormwater for Development**

In a **new development mapped area**, all development that creates an impermeable surface must comply with Rule 9.3.7.AA.

### **15.6.Y Area of Buildings and Structures**

1. In the Significant Natural Landscape (SNL) Overlay Zone, new buildings, new structures and additions and alterations must comply with Rule 10.3.5.X.

### **15.6.Z Reflectivity**

1. New buildings, new structures (except fences) and additions and alterations in a Significant Natural Landscape (SNL) Overlay Zone must comply with Rule 10.3.6.

## **Rule 15.7 Subdivision Performance Standards**

### **15.7.1 Access**

Subdivision activities must comply with Rule 6.8.1.

### **15.7.2 Esplanade Reserves and Strips**

Subdivision activities must comply with Rule 10.3.1.

### **15.7.3 Firefighting**

Subdivision activities must comply with Rule 9.3.3.

### **15.7.4 Minimum Site Size**

1. The minimum site size for new resultant sites is:

Zone		Minimum site size
a.	General Residential 1 Zone	400m <sup>2</sup>
b.	General Residential 2 Zone 1. not within a <b>wastewater constraint mapped area</b> ; or 2. within the <b>wastewater constraint mapped area</b> (Mosgiel)	300m <sup>2</sup>
c.	General Residential 2 Zone within a <b>wastewater constraint mapped area</b> , except for the <b>wastewater constraint mapped area</b> (Mosgiel)	400m <sup>2</sup>
d.	Inner City Residential Zone	200m <sup>2</sup>
e.	Low Density Residential Zone	750m <sup>2</sup>
f.	Large Lot Residential Zone 1	2000m <sup>2</sup>
g.	Large Lot Residential Zone 2	3500m <sup>2</sup>
h.	Township and Settlement Zone not within a <b>no DCC reticulated wastewater mapped area</b>	400m <sup>2</sup>
i.	Township and Settlement Zone within a <b>no DCC reticulated wastewater mapped area</b>	1000m <sup>2</sup>

- j. Except the following are exempt from the minimum site size:
- i. resultant sites created and used solely for the following purposes:
    1. Scheduled ASBV or QEII covenant;
    2. reserve;
    3. access;
    4. utility;
    5. road; or

X. a resultant site in any residential zone (except within a **no DCC reticulated wastewater mapped area**):

1. that will contain at least one residential building for which a code compliance certificate or building permit has been issued (that was not established as a family flat or ancillary residential unit) prior to certification of the survey plan pursuant to section 223 of the RMA; and
2. that is of a size and shape that means the residential building is able to meet all the relevant land use and development performance standards as if it was new.

X. Minimum site size includes access legs for subdivision of sites up to 1200m<sup>2</sup> in the General Residential 1 Zone and Township and Settlement Zone (not within a **no DCC reticulated wastewater mapped area**) and for subdivision of all sites in other zones, but excludes access legs in all other cases.

2. General subdivision that contravenes the standard for minimum site size is non-complying, except in the following circumstances where the subdivision is restricted discretionary:

X. subdivision as described in Rule 15.7.4.1.j.X.1 that does not meet the conditions in Rule 15.7.4.1.j.X.2; and

Y. a subdivision of a proposed multi-unit development which has an approved land use consent but the

development has not been established, or land use consent is sought under Rule 15.3.4.5 concurrently with the subdivision application, and the standard residential activity complies with the density performance standard (Rule 15.5.2); and

- a. a subdivision where:
  - i. any resultant site is below the minimum site size but not less than 75% of the minimum site size;
  - ii. the average of the site sizes (excluding any sites that will be used solely for road, access, utility or reserve) meets the minimum site size in Rule 15.7.4.1;
  - iii. the subdivision does not result in any resultant site being of a size that could be further subdivided in accordance with the minimum site size performance standards, except as provided for in Rule 15.7.4.1.j.X; and
  - iv. all resultant sites that are below the minimum site size (excluding any sites that will be used solely for road, access, utility or reserve) are large enough to contain a building platform of at least 7m by 10m that meets the performance standards of this Plan including, but not limited to:
    1. outdoor living space;
    2. minimum mobility car parking;
    3. setbacks from boundaries, water bodies, significant trees, National Grid transmission lines;
    4. esplanade reserves and strips; and
    5. maximum building site coverage and impermeable surfaces.
- b. NA
- c. NA

#### **Note 15.7.4A - Other relevant District Plan provisions**

1. Note that Rule 15.3.4.3 requires restricted discretionary resource consent for new buildings and additions and alterations that result in a multi-unit development. Landowners undertaking subdivision may wish to apply for subdivision and land use consent simultaneously if three or more units are proposed in a development.

#### **15.7.5 Service Connections**

Subdivision activities must comply with Rule 9.3.7.

#### **15.7.6 Shape**

1. Each resultant site that is intended to be developed must be of a size and shape that is large enough to contain a building platform of at least 7m by 10m that meets the performance standards of this Plan including, but not limited to:
  - a. outdoor living space;
  - b. NA;
  - c. setbacks from boundaries, water bodies, scheduled trees; and
  - d. esplanade reserves or strips.
2. Building platforms must have a slope of 12° (1:4.7 or 21%) or less and must:
  - a. not contain scheduled heritage buildings or scheduled heritage structures; or
  - b. not contain right-of-way easements.
  - c. NA.

3. For unreticulated areas, resultant sites must provide for a wastewater disposal area to be located at least 50m from any water body and Mean High Water Springs.
4. Sites created and used solely for the following purposes are exempt from the shape standard:
  - a. Scheduled ASBV or QEII covenant;
  - b. reserve;
  - c. access;
  - d. network utility; or
  - e. road.
5. Subdivision activities that do not meet this standard are restricted discretionary activities.

### **15.7.X Setback from National Grid (Subdivision Activities)**

Subdivision activities must comply with Rule 5.6.1.X.

### **15.7.Y Minimum Landscaping**

1. In the **Variation 2 mapped area**, any resultant site which contains an existing residential building with one or more residential units must provide 20% of the site area or 30m<sup>2</sup> (whichever is the greater) as minimum landscaping that is to be located and landscaped in a way that meets the following requirements:
  - a. every resultant site larger than 250m<sup>2</sup> must include a minimum of 1 tree per 250m<sup>2</sup> of site area from the Appendix 10A.3 Important Native Tree List or the DCC Native Planting Guide – Dunedin Hillslopes Forest Species List (DCC, 2021). The required tree/s must be:
    - i. at least 2m high at the time of planting and capable of growing to a minimum of 3m high; and
    - ii. setback a minimum of 2.5m from all boundaries;
  - b. where the site adjoins a road, at least 50% of the land within the road boundary setback must be planted with trees, shrubs or groundcover species that are native to New Zealand (it may not be managed as lawn) except, where more than 50% of the land within the road boundary setback is occupied by driveways, buildings or impermeable surfaces that were lawfully established prior to 31 May 2022, 75% of the remaining area of permeable surface within the road boundary setback must be planted with trees, shrubs or groundcover species that are native to New Zealand (it may not be managed as lawn); and
  - c. all trees and landscaping required by this rule must be maintained and if dead, diseased or damaged, must be replaced.
  - d. For the sake of clarity, existing native plants that meet the requirements of this rule will be counted towards meeting the rule (mature native trees that are retained on site do not need to meet the setback for boundaries).
2. Activities that contravene this performance standard are restricted discretionary activities.

## **Rule 15.8 Structure Plan Mapped Area Rules**

### **15.8.1**

1. In addition to the performance standards in 15.5, 15.6 and 15.7, activities in a structure plan mapped area must meet the area-specific performance standards below. Where a performance standard in this section specifically provides an exemption or alternative performance standard to a standard in 15.5, 15.6 or 15.7, the standard in this section supersedes that standard unless otherwise indicated.
2. In addition to the notification requirements in Rule 15.4, activities in a structure plan mapped area must meet any area-specific notification requirements below. Where a notification requirement in this section specifically provides an exemption or alternative requirement to a requirement in 15.4, the requirement in this section

supersedes that requirement unless otherwise indicated.

3. In addition to the special information requirements in Rule 15.14, activities in a structure plan mapped area must meet any area-specific information requirements below. Where an information requirement in this section specifically provides an alternative information requirement to a requirement in 15.14, the requirement in this section supersedes that requirement unless otherwise indicated.
4. In addition to the assessment guidance in 15.9, 15.10, 15.11, 15.12, 15.13, activities in a structure plan mapped area must meet any area-specific assessment guidance below. Where assessment guidance in this section specifically provides an alternative assessment guidance to assessment guidance in 15.9, 15.10, 15.11, 15.12, 15.13, the assessment guidance in this section supersedes that requirement unless otherwise indicated.

### **15.8.3 East Taieri Structure Plan Mapped Area Performance Standards**

#### 15.8.3.1 Subdivision

- a. Transport network
  - i. Access links to Gladstone Road, Riccarton Road, and Cemetery Road must be provided for full development of the site to occur.
  - ii. The legal road width of a collector road must be a minimum of 20m wide, including footpaths 2m wide, and cycle lanes 1.5m wide.
  - iii. The legal road width of a local road must be a minimum of 16m wide, including footpaths a minimum 1.5m wide.
- b. Reserve
  - i. A 4000m<sup>2</sup> recreation reserve must be provided within the region marked 'Area A' on the structure plan. The reserve is to have road frontages of at least 20m, and the detailed location of this reserve must be shown in a resource consent application for subdivision of land in the area and vest in Council accordingly.

#### 15.8.3.2 Density

Up to 20% of the land used for residential purposes within the region marked "Area A", may be developed at a density of one residential unit per 300m<sup>2</sup>.

#### 15.8.3.3 Development requirements or conditions of subdivision consent

- a. Stormwater network
  - i. On-site stormwater systems (retention/detention and secondary flowpaths, etc.) must be designed for 1 in 100 (1%) annual exceedance probability event. A stormwater retention/detention pond to service the **East Taieri structure plan mapped area** (see Figure 15.8.3A) must be established in the general location of the area marked "detention area" on the structure plan and developed to the satisfaction of Council.
  - ii. Local stormwater reticulation systems must be designed for a 1 in 10 (10%) annual exceedance probability event.
  - iii. Development within the 'specified floor level' area shown on the structure plan is to be designed to adequately address potential flooding issues, with finished floor levels for dwellings above the 1:50 year flood level in accordance with the NZ Building Code.
- b. Reserve
  - i. The reserve must have a consistent boundary treatment where it adjoins residential properties, installed by the developer prior to vesting in Council. The reserve must be flattened and grassed to a standard that can be cut with a ride-on mower, and free of buildings, tree stumps, or other obstacles, prior to

vesting in Council.

#### 15.8.3.4 Information requirements

- a. Subdivision applications must include an Integrated Traffic Assessment (ITA) (refer Rule 6.14.2).
- b. Subdivision applications must include information outlining:
  - i. the techniques to be used to manage stormwater, and the location and extent to which these techniques are accommodated on-site; and
  - ii. how the integrity of the stormwater mitigation and management measures will not be compromised during and after subdivision; and
  - iii. a maintenance plan for stormwater infrastructure, including actions to be taken to ensure the on-going management and maintenance of on-site mitigation measures and the responsibilities for this; and
  - iv. design details highlighting the adequacy of the proposed measures and identifying areas of greatest risk; and
  - v. how subdivision within the 'specified floor level' area shown on the structure plan is to be designed to adequately address potential flooding issues.

#### 15.8.3.5

In the case of conflict with performance standards 15.5 to 15.7 the rules in this performance standard apply.

#### 15.8.3.6

Activities that contravene this performance standard are a non-complying activity.

Figure 15.8.3A: East Taieri structure plan

### 15.8.4 Formby Street Structure Plan Mapped Area Performance Standards

#### 15.8.4.1 Subdivision

- a. Wastewater network
  - i. Proprietary wastewater treatment facility must be established in the area marked "wastewater treatment area" on the Formby Street structure plan (see Figure 15.8.4A).
- b. Transport network
  - i. A public pedestrian accessway with a minimum width of 1.5m must be established along the "possible 1.5m footpath" line marked on the Formby Street structure plan (see Figure 15.8.4A).
  - ii. The legal road width of the two cul-de-sacs must be at least 16m, with a footpath on at least one side of each of the cul-de-sacs.
- c. New buildings and structures, and additions and alterations, on Lots 1-10 must have a minimum set back from the side or rear boundary (as relevant) on the eastern site boundary, of 10m.
- d. The maximum height for new buildings and structures, and additions and alterations above ground level on Lots 1-10 is 6m.

#### 15.8.4.2

In the case of conflict with performance standards 15.5 to 15.7, the rules in this performance standard apply.

15.8.4.3

Activities that contravene this performance standard are a non-complying activity.

Figure 15.8.4A: Formby Street structure plan

## 15.8.5 Mosgiel East Structure Plan Mapped Area Performance Standards

### 15.8.5.1 Subdivision

- a. Transport network
  - i. Access points for roads must be provided as indicated in the Mosgiel East structure plan (see Figure 15.8.5A).
  - ii. The legal width of a collector road must be a minimum of 20m wide, including footpaths of a minimum 2m wide, and cycle lanes 1.5m wide.
  - iii. The legal width of a local road must be a minimum of 16m wide, including footpaths a minimum 1.5m wide.
- b. Stormwater network
  - i. The rate of stormwater discharge to the Silverstream must remain equal to or less than that of pre-development up to the 1 in 100 (1%) annual exceedance probability event.

### 15.8.5.2 Development requirement or condition of subdivision consent

- a. Stormwater network
  - i. Local stormwater reticulation systems must be designed for a 1 in 10 (10%) annual exceedance probability event.
  - ii. On-site stormwater systems (retention/detention and secondary flowpaths, etc.) must be designed for 1 in 100 (1%) annual exceedance probability event. Stormwater retention/detention measures must be provided on-site as part of the overall development.
  - iii. There must be no individual discharge of stormwater to the Silverstream or Owhiro Stream.

### 15.8.5.3 Information requirements

- a. Subdivision and land use applications must include information outlining:
  - i. the techniques to be used to manage stormwater and the extent to which these techniques are

accommodated on-site; and

- ii. how the integrity of the stormwater mitigation and management measures will not be compromised during and after a subdivision; and
- iii. a maintenance plan for stormwater infrastructure, including actions to be taken to ensure the on-going management and maintenance of on-site mitigation measures and the responsibilities for this; and
- iv. design details highlighting the adequacy of the proposed measures and identifying areas of greatest risk.

#### 15.8.5.4

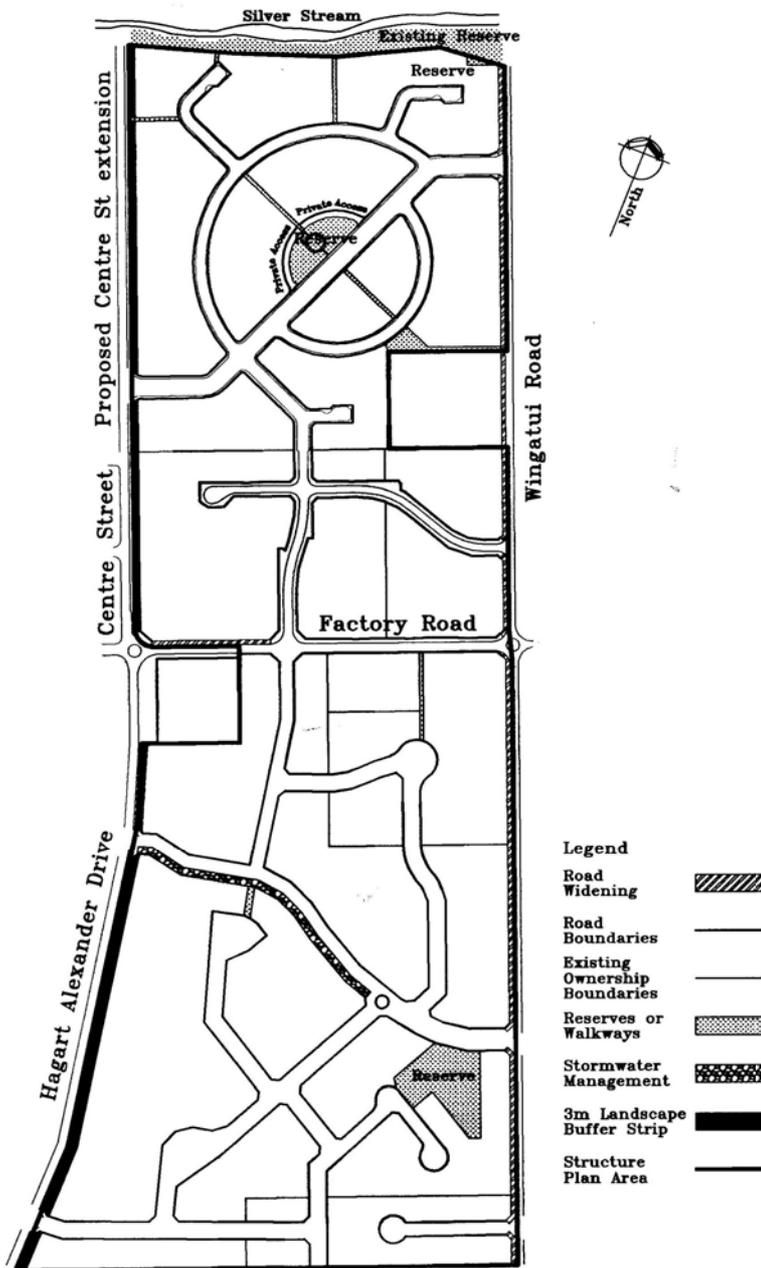

In the case of conflict with performance standards 15.5 to 15.7, the rules in this performance standard apply.

#### 15.8.5.5

Activities that contravene this performance standard are a non-complying activity.

Figure 15.8.5A: Mosgiel East structure plan

**MOSGIEL EAST STRUCTURE PLAN**

**15.8.6 Holyhead Street Structure Plan Mapped Area Performance Standards**

15.8.6.1 Subdivision

- a. Staging: the subdivision may be staged with the first stage comprising some or all of lots 1-8 (inclusive), 17, 18, 24, 25 and 30 as shown on the Holyhead Street structure plan (see Figure 15.8.6A).
- b. Vehicle access to the resultant sites must be as follows:
  - i. Lots 1-4 from Montfort Street (State Highway 87);
  - ii. Lots 5-7 from Montfort Street (State Highway 87) via access Lot 30;
  - iii. Lots, 8, 24, and 25 initially from Montfort Street (State Highway 87) via access Lot 30, but from Holyhead Street via lot 29 once Lot 29 is formed; and

- iv. All other lots via Holyhead Street directly, or Holyhead Street via Lot 29.

#### 15.8.6.2 Development requirement or condition of subdivision consent

##### a. Vehicle access

- i. Lot 29 must be formed as an access road either once all of Lots 1-8 (inclusive), 24 and 25 have residential development established on them, or before any residential development is established on any of Lots 9-16 (inclusive) or any of Lots 19-23 (inclusive).

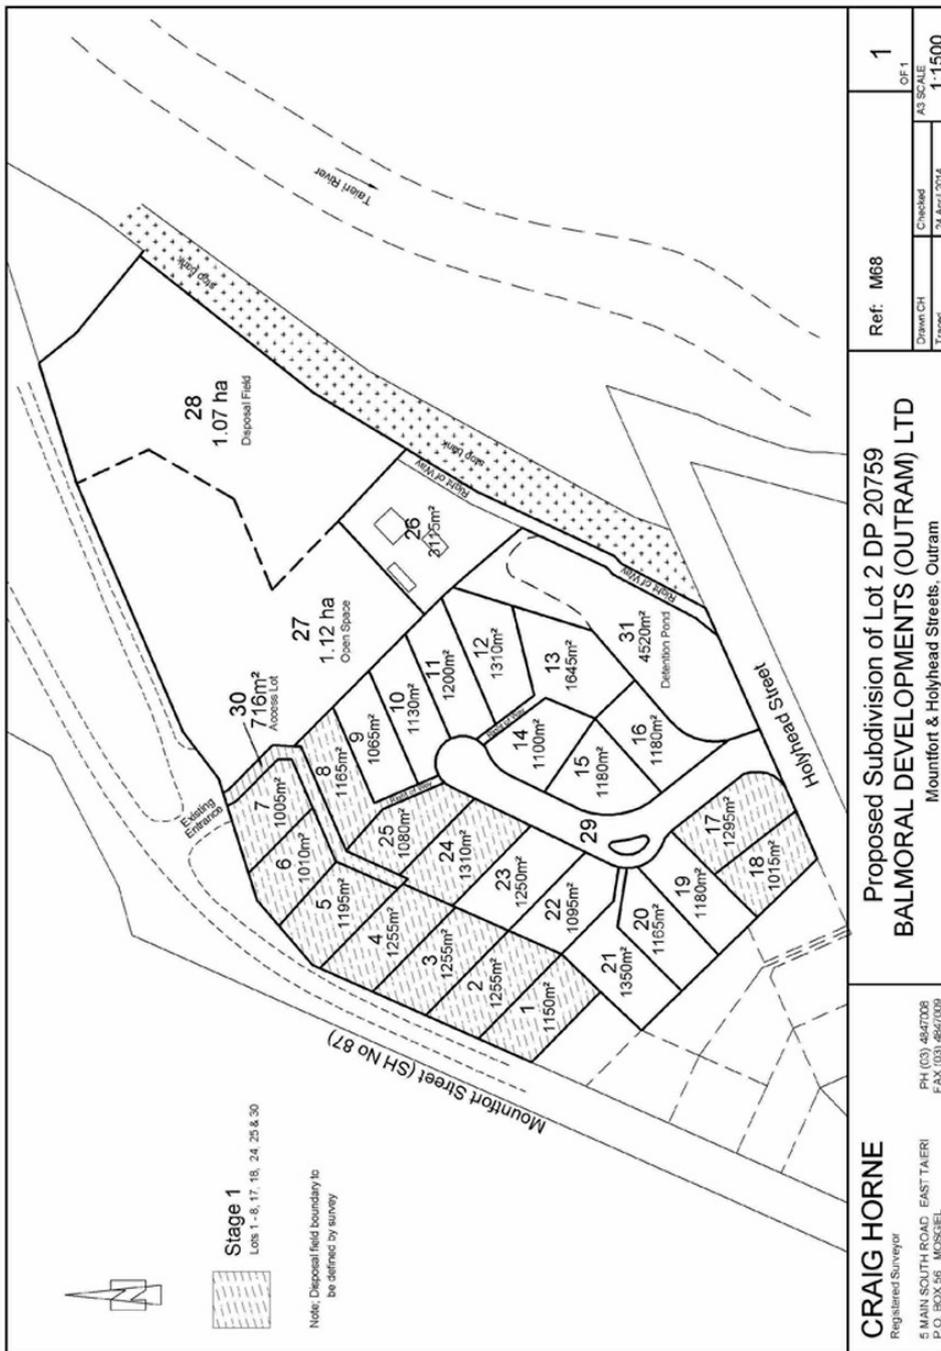

#### 15.8.6.3

In the case of conflict with performance standards 15.5 to 15.7, the rules in this performance standard apply.

#### 15.8.6.4

Activities that contravene this performance standard are a non-complying activity.

Figure 15.8.6A: Holyhead Street structure plan

## 15.8.7 Patmos Avenue Structure Plan Mapped Area Performance Standards

### 15.8.7.1 Development performance standards

- a. Timing of construction
  - i. Construction of dwellings must not take place until all roading, stormwater, wastewater, and water supply infrastructure is in place for that stage of the development, and connections to future stages and adjoining sites (if required) are provided for.
  - ii. Activities that contravene this performance standard are non-complying activities.
- b. Vegetation clearance
  - i. Indigenous vegetation clearance must not occur in the area of indigenous vegetation marked “Restricted development area (biodiversity)” in Figure 15.8.7A, except for indigenous vegetation clearance that is:
    1. part of conservation activity involving vegetation clearance and replacement with indigenous species;
    2. clearance for the maintenance of fences (including gates);
    3. clearance for the maintenance (but not extension) of existing network utilities, irrigation infrastructure, tracks, drains, structures, roads, or firebreaks;
    4. clearance that is consistent with or provided for as part of a conservation management strategy, conservation management plan, reserve management plan or covenant established under the Conservation Act 1987 or any other Act specified in the First Schedule of the Conservation Act 1987;
    5. clearance that is required to remove material infected by unwanted organisms as declared by Ministry for Primary Industries’ Chief Technical Officer, or to respond to an emergency declared by the Minister for Primary Industries under the Biosecurity Act 1993;
    6. clearance of a pest plant listed in Appendix 10B to Section 10 of the Plan; and
    7. clearance that is necessary to maintain the flow of water free from obstruction or for natural hazard mitigation activities.
  - ii. Vegetation clearance must not damage any protected tree identified in Figure 15.8.7A (two Hall's totara and one rimu).
  - iii. Activities that contravene this performance standard are non-complying activities.
- c. Setback from protected trees
  - i. The three protected tree specimens identified in Figure 15.8.7A (two Hall's totara and one rimu) must not be damaged through any site development activities.
  - ii. Buildings and structures must not be located under the dripline or within a distance from the trunk equivalent to half the height of the tree, whichever is the greater.
  - iii. Vehicle tracks, driveways and other site development activities and earthworks must not occur under the dripline or within a distance from the trunk equivalent to half the height of the tree, whichever is the greater.
  - iv. Activities that contravene this performance standard are non-complying activities.

### 15.8.7.2 Subdivision performance standards

- a. Access
  - i. Access for vehicles must not be provided through the part of 28 Patmos Avenue that is outside the **Patmos Avenue structure plan mapped area** (see Figure 15.8.7A).

- ii. No more than six resultant sites in the **structure plan mapped area** may access Patmos Avenue via the right of way through PT LOT 3 DP 3151.
  - iii. Activities that contravene this performance standard are non-complying activities.
  - iv. For the sake of clarity, this performance standard is additional to Rule 6.6.3.
- b. Minimum site size
- i. The minimum site size for new resultant sites in the areas marked A and C on the Patmos Avenue structure plan (see Figure 15.8.7A) is 1,000m<sup>2</sup>.
  - ii. The minimum site size for new resultant sites in the area marked B on the Patmos Avenue structure plan (see Figure 15.8.7A) is 2,000m<sup>2</sup>.
  - iii. Activities that contravene this performance standard are non-complying activities.

**Note 15.8.7.3A – General advice**

- a. The number of sites that are able to access the **structure plan mapped area** via the right of way through PT LOT 3 DP 3151 has been capped at six resultant sites in order to manage effects on the scheduled heritage building at 16 Patmos Avenue (B425, Bishopgrove (ex Bible College)). Assessment of a subdivision application may result in a greater level of restriction on access for vehicles across this right of way.

Figure 15.8.7A: Patmos Avenue structure plan

### 15.8.8 Torquay Street Structure Plan Mapped Area Performance Standards

1. 'Lot 100' as shown in the Torquay Street structure plan (see Figure 15.8.8A) may not be subdivided from the residential dwelling marked 'existing dwelling'.
2. No dwelling may be constructed in Areas A or B as shown on the Torquay Street structure plan (see Figure 15.8.8A).
3. Construction of dwellings must not take place until:
  - a. all roading, stormwater, wastewater and water supply infrastructure is in place for that stage of the development, and connections to future stages, and adjoining sites, are provided for; and
  - b. the public pathway shown in the Torquay Street structure plan (see Figure 15.8.8A) is constructed.
4. In the case of conflict with performance standards 15.5 to 15.7, the rules in this performance standard apply.
5. Activities that contravene this performance standard are a non-complying activity.

Figure 15.8.8A: Torquay Street structure plan

Layout of residential areas and roading are indicative.

### **15.8.9 Emerson Street Structure Plan Mapped Area Performance Standards**

1. The layout of any subdivision must include provision for vehicle access to Mulford Park recreation reserve for maintenance purposes.
2. The layout of any subdivision must provide for roading access to 18 Roy Crescent.
3. Construction of dwellings must not take place until all roading, stormwater, wastewater and water supply infrastructure is in place for that stage of the development, and connections to future stages, and adjoining sites, are provided for.
4. In the case of conflict with performance standards 15.5 to 15.7, the rules in this performance standard apply.
5. Activities that contravene this performance standard are a non-complying activity.

Figure 15.8.9A: Emerson Street structure plan

### 15.8.10 North Road Structure Plan Mapped Area Performance Standards

X. In addition to the performance standards in 15.5, 15.6 and 15.7, activities in the **North Road structure plan mapped area** must meet the area-specific performance standards below. Where a performance standard in this section specifically provides an exemption or alternative performance standard to a standard in 15.5, 15.6, or 15.7, the standard in this section supersedes that standard.

#### 15.8.10.Y Development performance standards

- a. Timing of construction
  - i. Construction of dwellings must not take place until all roading, stormwater, wastewater and water

supply infrastructure is in place for that stage of the development, and connections to future stages, and adjoining sites, are provided for.

ii. Activities that contravene this performance standard are non-complying activities.

b. Vegetation clearance

i. Indigenous vegetation clearance must not occur in the area of indigenous vegetation marked “Restricted development area (biodiversity)” in Figure 15.8.10X.

ii. The following types of indigenous vegetation clearance are exempt from Rule 15.8.10.Y.b.i, indigenous vegetation clearance that is:

1. part of conservation activity involving vegetation clearance and replacement with indigenous species;
2. clearance for the maintenance of fences (including gates), provided:
  1. any fence posts are located outside of the dripline of mature indigenous trees listed in Appendix 10A.3; and
  2. the erection of new fences does not damage:
    1. specimens of threatened plant species listed in Appendix 10A.1;
    2. important breeding, refuge, feeding or resting sites for indigenous fauna listed in Appendix 10A.2; or
    3. mature indigenous trees listed in Appendix 10A.3.
3. clearance for the maintenance (but not extension) of existing network utilities, irrigation infrastructure, tracks, drains, structures, roads, or firebreaks;
4. clearance that is consistent with or provided for as part of a conservation management strategy, conservation management plan, reserve management plan or covenant established under the Conservation Act 1987 or any other Act specified in the First Schedule of the Conservation Act 1987;
5. clearance that is required to remove material infected by unwanted organisms as declared by Ministry for Primary Industries’ Chief Technical Officer, or to respond to an emergency declared by the Minister for Primary Industries under the Biosecurity Act 1993;
6. clearance of a pest plant listed in Appendix 10B to Section 10 of the Plan;
7. clearance that is necessary to maintain the flow of water free from obstruction or for natural hazard mitigation activities;
8. clearance of non-indigenous plant species and replanting within 3 months with indigenous or non-indigenous plant species, not on the pest plant list in Appendix 10B to Section 10 of the Plan, that will attain at least the same height and coverage as the plants that have been cleared.

iii. Activities that contravene this performance standard are non-complying activities.

15.8.10.Z Subdivision performance standards

a. Access

Subdivision activities must provide for the following:

- i. A road to connect Norwood Street and North Road.
- ii. A minimum of two roading connection points from the structure plan mapped area onto North Road. Note: additional connections may be required, subject to the results of the Integrated Transport Assessment referred to at Rule 15.8.10.AA.b.
- iii. The Norwood Street legal road corridor must be widened along the full length of the frontage of the

structure plan mapped area onto Norwood Street, to a minimum of 16m and both sides of this section of Norwood Street must be upgraded in accordance with Table 3.1R of the Dunedin Code of Subdivision and Development.

- iv. A footpath must be constructed along the entire length of the frontage of the structure plan mapped area onto North Road (including a linkage across the frontages of 633 and 649 North Road). This footpath may be constructed in stages but must match the development of the subdivision along North Road at all times.
- v. Subdivision activities that contravene this performance standard are non-complying activities.

#### 15.8.10.AA Information requirements

##### a. Natural hazards

- i. Applications for subdivision activities within the structure plan mapped area must include a geotechnical investigation report by a suitably qualified geotechnical consultant. This assessment should examine the ground stability over the whole mapped area and identify areas suitable for residential development and, if required, suitable building platforms. This assessment must be prepared and submitted to Council for approval prior to, or as part of, the resource consent application for the first stage of any subdivision.

For the sake of clarity, the standard assessment matters in Rule 11.5.2 still apply.

##### b. Transportation

- i. Prior to any subdivision of the structure plan mapped area, an Integrated Transport Assessment (ITA) for the whole mapped area must be prepared and submitted to Council for approval prior to, or as part of, the resource consent application for the first stage. The ITA must include, but is not limited to, the following matters (see further information on the content of ITAs in Rule 6.14.2):
  1. The appropriate number and location of intersections onto North Road. This will also need to assess the sight distances at any new intersections to ensure compliance with Austroads Guide to Road Design Part 4A: Unsignalised and Signalised Intersections ([www.austroads.com.au](http://www.austroads.com.au)).
  2. An assessment of driveway locations (existing and new), including proximity to intersections.
  3. An assessment of streetlighting on North Road.
  4. An assessment of the full length of Norwood Street and whether any improvements are deemed necessary to support the development for all modes of transportation, in addition to those specified in Rule 15.8.10.Z.a.iii. This may include footpath extensions and/or installation of safe crossing points. This assessment will also need to include the intersection of North Road and Norwood Street.
  5. Consideration of internal roading design, layout, and connection points to the existing transportation network for all modes of transport (including cyclists) in accordance with the Dunedin Code of Subdivision and Development 2010.
  6. Consideration of appropriate design measures to encourage traffic generated by the subdivision to use North Road rather than Norwood Street.
  7. Consideration of potential linkages to Cottle Street and if these are appropriate.

For the sake of clarity, the standard assessment matters in Rule 6.11.2 still apply.

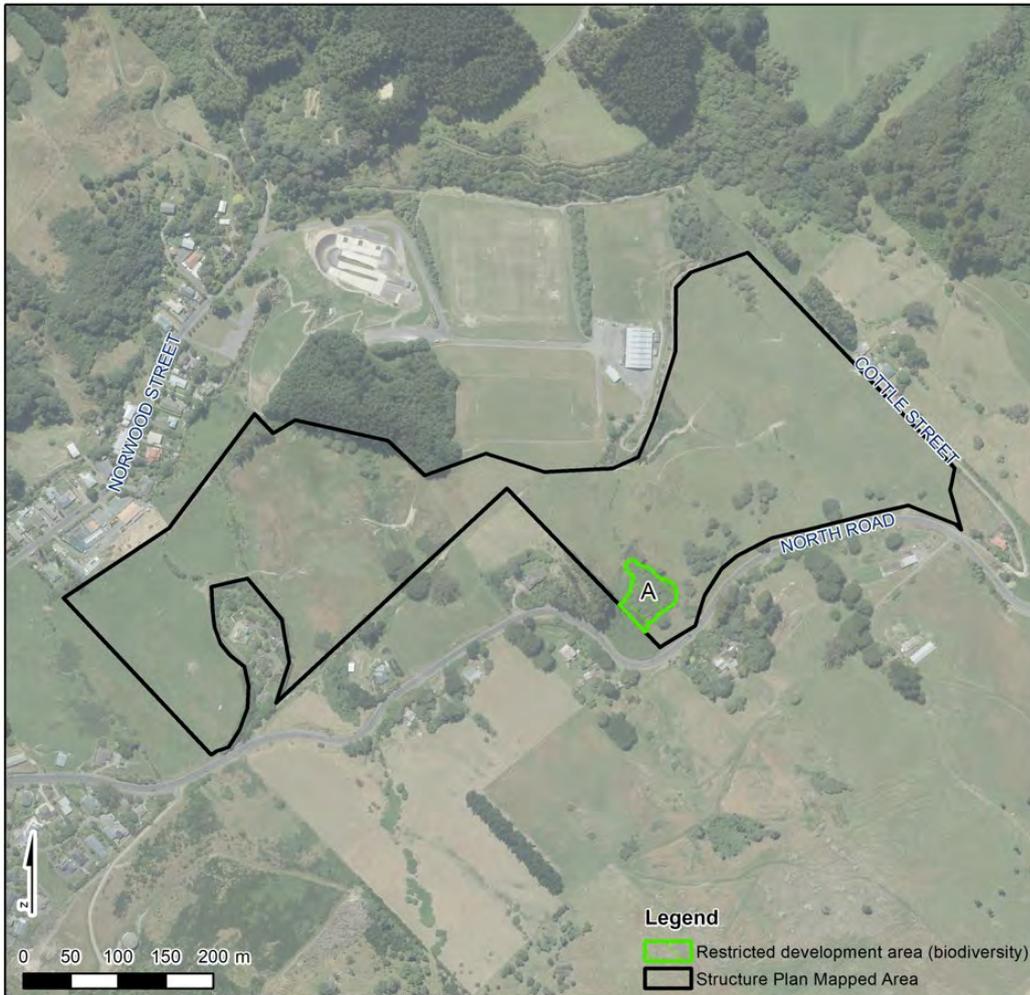

##### c. Amenity tree planting and public amenities

- i. Prior to any subdivision application of the structure plan mapped area, the applicant must provide a proposal, which covers the whole mapped area, for areas of amenity tree planting (including, but not limited to, street trees) and public amenities. This proposal must be prepared and submitted to Council for approval prior to, or as part of, the resource consent application for the first stage of any

subdivision.

For the sake of clarity, the standard assessment matters in Rule 15.11.4 still apply.

Figure 15.8.10X: North Road structure plan

### 15.8.11 Bradford Structure Plan Mapped Area Performance Standards

1. The layout of any subdivision must provide for:
  - a. pedestrian access from Glenelg Street through to Bradford School; and
  - b. vehicle access between Ronay Street and Bradford Street.
2. Construction of dwellings must not take place until all roading, stormwater, wastewater and water supply infrastructure is in place for that stage of the development, and connections to future stages, and adjoining sites, are provided for.
3. In the case of conflict with performance standards 15.5 to 15.7, the rules in this performance standard apply.
4. Activities that contravene this performance standard are a non-complying activity.

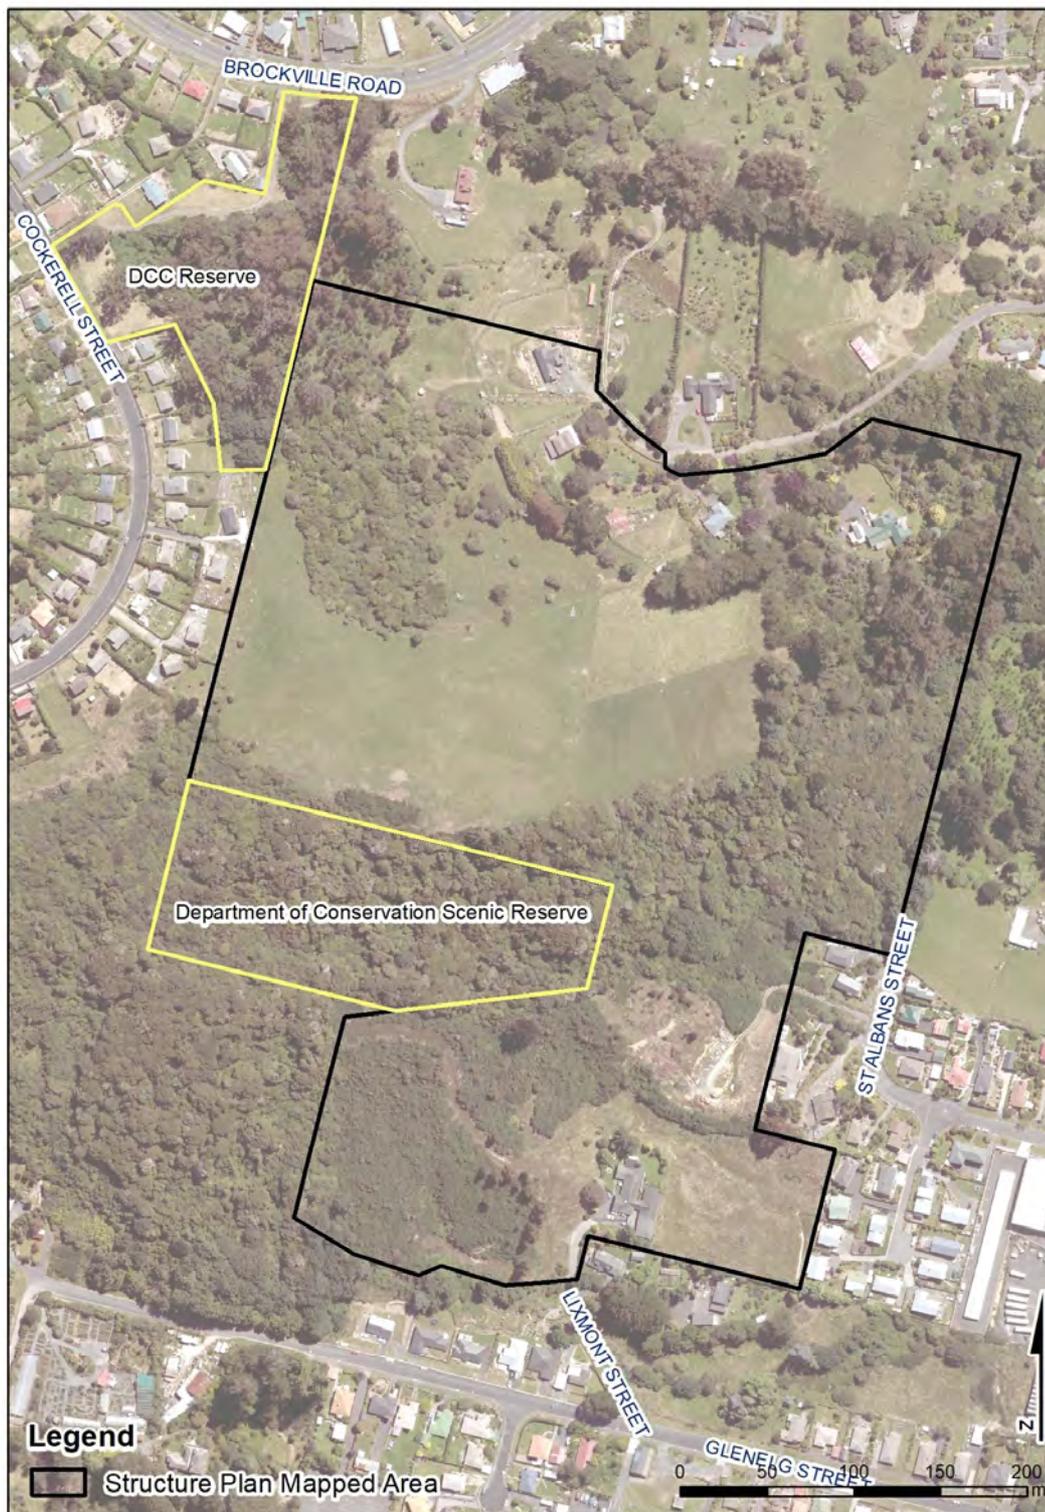

Figure 15.8.11A: Bradford structure plan

### 15.8.12 St Albans Street Structure Plan Mapped Area Performance Standards

1. The layout of any subdivision must provide for:
  - a. pedestrian access to the Department of Conservation reserve at PT Sec 121 Lixmont Street;
  - b. pedestrian access to the DCC Reserve at 79 Cockerell Street, to enable access to Brockville Road; and
  - c. vehicle access between Lixmont Street, St Albans Street and Etrick Street.
2. Construction of dwellings must not take place until all roading, stormwater, wastewater and water supply infrastructure is in place for that stage of the development and connections to future stages, and adjoining sites, are provided for.
3. In the case of conflict with performance standards 15.5 to 15.7, the rules in this performance standard apply.
4. Activities that contravene this performance standard are a non-complying activity.

Figure 15.8.12A: St Albans Street structure plan

### 15.8.13 Westacott Heights Structure Plan Mapped Area Performance Standards

1. All sites in Area Z on the Westacott Heights structure plan (see Figure 15.8.13A) must have access via a road or private way (shared driveway) from Taieri Road.
2. All sites in Area Y on the Westacott Heights structure plan (see Figure 15.8.13A) must have access via a road or private way (shared driveway) from Dalziel Road, except that a site with a boundary adjoining Dalziel Road

may access directly onto Dalziel Road.

X. All sites in Area X on the Westacott Heights structure plan (see Figure 15.8.13A) must have access via a road or private way (shared driveway) from Taieri Road by 21 October 2023 but until then may have access only via a road or private way (shared driveway) from Dalziel Road.

Y. Within the hatched area on the Westacott Heights structure plan (see Figure 15.8.13A) (Lot 2 DP 534910), a maximum of seven sites with a minimum site size of 1,800m<sup>2</sup> are allowed.

Z. Only one site, apart from the access allotment, may have a boundary adjoining Dalziel Road, and that site must have a minimum frontage onto Macleod Avenue of 47.5m, as shown as A-B on the Westacott Heights structure plan (see Figure 15.8.13A).

3. Construction of dwellings must not take place until all roading, stormwater, wastewater and water supply infrastructure is in place for that stage of the development and connections to future stages, and adjoining sites, are provided for.
4. In the case of conflict with performance standards 15.5 to 15.7, the rules in this performance standard apply.
5. Activities that contravene this performance standard are a non-complying activity.

Figure 15.8.13A: Westacott Heights structure plan

## 15.8.14 Helensburgh Structure Plan Mapped Area Rules

### 15.8.14.1 Land use performance standards

#### a. Density

- i. In 'Area A' of the **structure plan mapped area**, Rule 15.5.2.1.a is replaced by the following rule:

Zone		i. Minimum site area for a residential unit (excluding ancillary residential units)	ii. Maximum development potential per site
a.	<b>Helensburgh structure plan mapped area, Area A</b>	1000m <sup>2</sup>	1 habitable room per 150m <sup>2</sup>

- ii. Activities that contravene this performance standard are non-complying activities.

### 15.8.14.2 Subdivision performance standards

#### a. Access

- i. In addition to the requirements set out in Rule 6.8.1, each resultant site must have direct or indirect (e.g. leg-in) access to an internal roading network that serves the whole **structure plan mapped area** and provides for all sites to have access through the **structure plan mapped area** to a minimum of two road connection points from the **structure plan mapped area** directly or indirectly (e.g. via **Honeystone Street structure plan mapped area**) to Wakari Road.

- ii. Activities that contravene this performance standard are non-complying activities.

#### b. Minimum site size

- i. In 'Area A' of the **structure plan mapped area**, Rule 15.7.4.1.a is replaced by the following rule:

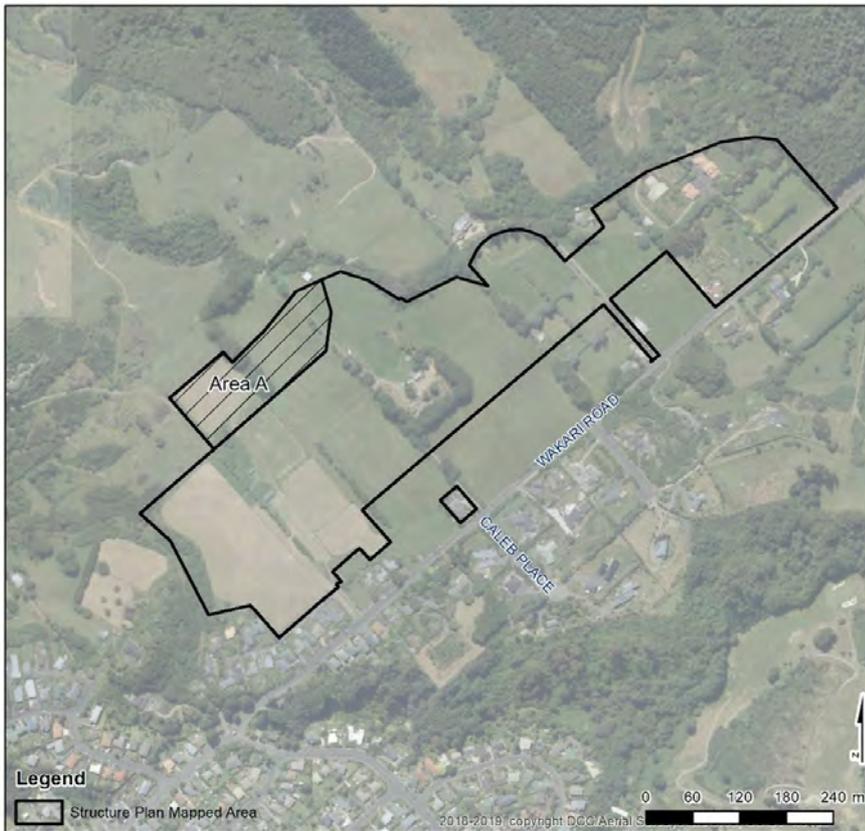

Zone		Minimum site size
a.	<b>Helensburgh structure plan mapped area, Area A</b>	1000m <sup>2</sup>

- ii. Activities that contravene this performance standard are non-complying activities.

### 15.8.14.3 Assessment guidance

- a. For activities that contravene the density or minimum site size performance standard, Council will consider effects on the adjacent Flagstaff-Mt Cargill SNL (Objective 10.2.5), including having an appropriate transition between urban development and the SNL.

Figure 15.8.14A: Helensburgh structure plan

## 15.8.Z Kaikorai Valley Road Structure Plan Mapped Area Performance Standards

### 15.8.Z.1 Natural Hazards

- a. Applications for subdivision activities in the area shown hatched red on the Kaikorai Valley Road structure plan and labelled 'Restricted Development Area (Hazard)' (see Figure 15.8.ZA) must include a comprehensive geotechnical investigation report by a suitably qualified geotechnical consultant. The geotechnical report must examine the ground stability over the entire area and identify areas suitable for residential development and, if required, suitable building platforms.
- b. Until such time that new certificates of title for allotments have been issued in accordance with rule 15.8.Z.1.a above, residential activities, buildings and structures activities, new roads or additions or alterations to existing roads, and earthworks must not be located in the area shown hatched red on the Kaikorai Valley Road structure plan and labelled 'Restricted Development Area (Hazard)'.

### 15.8.Z.2

In the case of conflict with performance standards 15.5 to 15.7, the rules in this performance standard apply.

### 15.8.Z.3

Activities that contravene this performance standard are a discretionary activity.

### 15.8.Z.4

- a. The layout of any subdivision must not provide any through road connection for motor vehicles between Kaikorai Valley Road and Northview Crescent.
- b. In the case of conflict with performance standards 15.5 to 15.7, the rules in this performance standard apply.

- c. Activities that contravene this performance standard are a non-complying activity.

Figure 15.8.ZA: Kaikorai Valley Road structure plan

## 15.8.AA Honeystone Street Structure Plan Mapped Area Rules

### 15.8.AA.1 Development performance standards

#### a. Vegetation clearance

- i. Vegetation clearance must not occur within 5m of the water body that is identified on the Honeystone Street structure plan and labelled 'Water Body' (see Figure 15.8.AAA), except for:
  - 1. vegetation clearance that is necessary for the construction of a crossing point for a single accessway to the part of the **structure plan mapped area** that is on the northern side of the water body; and
  - 2. if a connection to the adjacent **Helensburgh structure plan mapped area** is required, vegetation clearance that is necessary for the construction of a crossing point for a road into the **Helensburgh structure plan mapped area**.

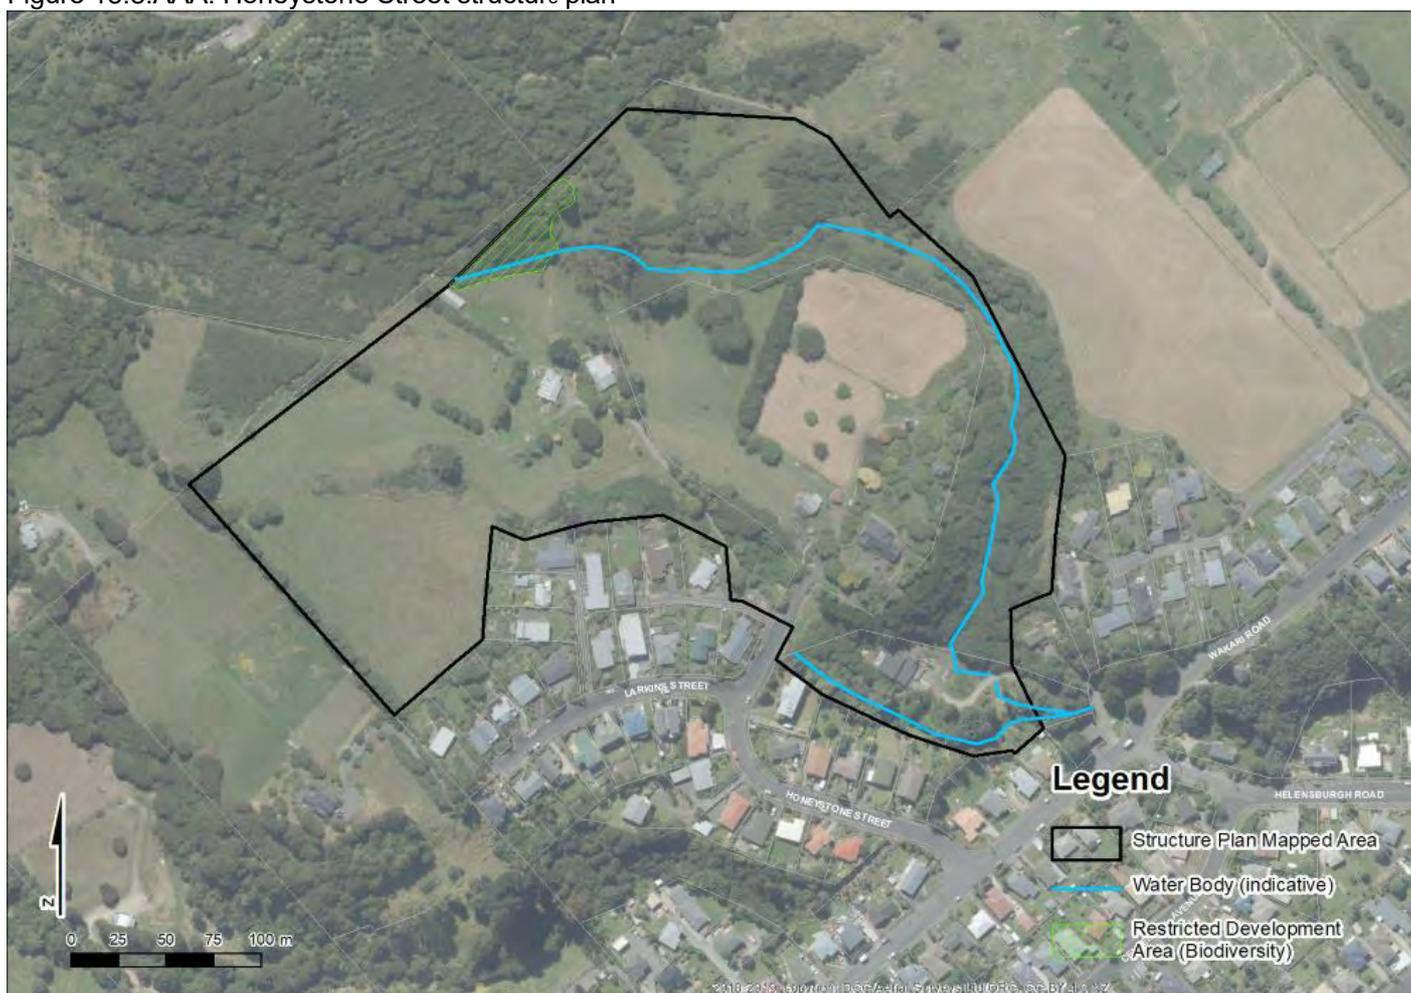

Note the location of the water body on the map is indicative only. The setback must be measured from the bank of the water body at the point of its annual fullest flow or annual highest level without overtopping its bank (see Figure 10.3.3A and Figure 10.3.3B under Rule 10.3.3 Setback from Coast and Water Bodies).

- ii. Indigenous vegetation clearance must not occur within the area shown hatched green on the **Honeystone Street structure plan** and labelled 'Restricted Development Area (Biodiversity)'.
  - iii. The following types of indigenous vegetation clearance are exempt from rules 15.8.AA.1.a.i and 15.8.AA.1.a.ii:
    - 1. clearance that is part of conservation activity involving vegetation clearance and replacement with indigenous species;
    - 2. clearance for the maintenance of fences (including gates);

3. clearance for the maintenance (but not extension) of existing network utilities, irrigation infrastructure, tracks, drains, structures, roads, or firebreaks;
4. clearance that is consistent with or provided for as part of a conservation management strategy, conservation management plan, reserve management plan or covenant established under the Conservation Act 1987 or any other Act specified in the First Schedule of the Conservation Act 1987;
5. clearance that is required to remove material infected by unwanted organisms as declared by the Ministry for Primary Industries' Chief Technical Officer, or to respond to an emergency declared by the Minister for Primary Industries under the Biosecurity Act 1993;
6. clearance of a pest plant listed in Appendix 10B to Section 10 of the Plan;
7. clearance that is necessary to maintain the flow of water free from obstruction or for natural hazard mitigation activities; and
8. clearance of non-indigenous plant species and replanting within 3 months with indigenous or non-indigenous plant species, not on the pest plant list in Appendix 10B to Section 10 of the Plan, that will attain at least the same height and coverage as the plants that have been cleared.

iv. Activities that contravene this performance standard are non-complying activities

Figure 15.8.AAA: Honeystone Street structure plan

### 15.8.AB Main South Road, Concord Structure Plan Mapped Area Rules

#### 15.8.AB.1 Development performance standards

a. Vegetation clearance

- i. Vegetation clearance must not occur within 5m of the water body that is identified on the Main South Road, Concord structure plan and labelled 'Water Body' (see Figure 15.8.ABA). Note the location of the water body on the map is indicative only. The setback must be measured perpendicular from the bank of the water body at the point of its annual fullest flow or annual highest level without overtopping its bank (see Figure 10.3.3A and Figure 10.3.3B under Rule 10.3.3 Setback from Coast and Water Bodies).
- ii. The following types of vegetation clearance are exempt from Rule 15.8.AB.1.a.i:
  1. clearance that is part of conservation activity involving vegetation clearance and replacement with indigenous species;
  2. clearance for the maintenance of fences (including gates);
  3. clearance for the maintenance (but not extension) of existing network utilities, irrigation infrastructure, tracks, drains, structures, roads, or firebreaks;
  4. clearance that is consistent with or provided for as part of a conservation management strategy, conservation management plan, reserve management plan or covenant established under the Conservation Act 1987 or any other Act specified in the First Schedule of the Conservation Act 1987;
  5. clearance that is required to remove material infected by unwanted organisms as declared by the Ministry for Primary Industries' Chief Technical Officer, or to respond to an emergency declared by the Minister for Primary Industries under the Biosecurity Act 1993;
  6. clearance of a pest plant listed in Appendix 10B to Section 10 of the Plan;
  7. clearance that is necessary to maintain the flow of water free from obstruction or for natural hazard mitigation activities; and
  8. clearance of non-indigenous plant species and replanting within 3 months with indigenous or non-indigenous plant species, not on the pest plant list in Appendix 10B to Section 10 of the Plan, that will attain at least the same height and coverage as the plants that have been cleared.
- iii. Activities that contravene this performance standard are non-complying activities.

15.8.AB.2 Additional matter of discretion (acoustic assessment)

- a. In addition to the matters of discretion for subdivision consents in Rule 15.11.4, the following matter of discretion applies for subdivision activities.

Activity		Matters of discretion	Guidance for the assessment of resource consents
i.	Subdivision activities	1. Effects on health and safety	<p><i>Relevant objectives and policies:</i></p> <p>1. Objective 9.2.2.</p> <p><i>General assessment guidance:</i></p> <p>2. Council will consider the acoustic assessment required by Rule 15.8.AB.3.a.i.</p>

15.8.AB.3 Special information requirements

- a. Acoustic assessment
- i. Applications for subdivision must include an acoustic assessment for the whole **structure plan mapped area**, unless such an assessment has already been approved as part of an earlier subdivision consent. This acoustic assessment should identify any "no build" areas where residential activity must not take place, and any "noise sensitive effects area" where additional mitigation requirements above those required under Rule 9.3.1 are necessary. The acoustic assessment should identify what

additional mitigations are required to be implemented in the “noise sensitive effects area”. The acoustic assessment should include consultation with Waka Kotahi. See assessment guidance in Rule 15.8.AB.2.a.

Figure 15.8.ABA: Main South Road, Concord structure plan

### 15.8.AD Doctors Point Road Structure Plan Mapped Area Performance Standards

1. The performance standards in Rule 15.8.AD apply to all parts of the Doctors Point Road structure plan mapped area, including land zoned Large Lot Residential 1 and land zoned Rural Residential 2.
2. In addition to the performance standards in 15.5, 15.6 and 15.7, activities in the Doctors Point Road structure plan mapped area must meet the area-specific performance standards below. Where a performance standard in this section specifically provides an exemption or alternative performance standard to a standard in 15.5, 15.6 or 15.7, the standard in this section supersedes that standard.

#### Note 15.8.ADA - General advice

1. Rural Residential 2 Zoning applies to part of the **Doctors Point Road structure plan mapped area** in order to maintain the protection that the rules associated with this zoning apply to the scheduled Area of Significant Biodiversity Value and the Natural Coastal Character Overlay Zone that cover parts of the mapped area.

#### 15.8.AD.1 Land use performance standards

- a. Density
  - i. Standard residential activities must not exceed a density of one residential activity per site (note that Rule 15.8.AD.2.b limits the maximum number of sites in the **structure plan mapped area**), except

that:

1. one family flat is allowed per site in association with a standard residential activity, provided that the number of habitable rooms across both the primary residential activity and the family flat does not exceed one habitable room per 400m<sup>2</sup> of site area.
  - ii. Activities that contravene this performance standard are non-complying activities.
  - iii. For the sake of clarity, this performance standard supersedes Rule 15.5.2.
- b. Service connections
- i. All activities must discharge any wastewater to the communal wastewater system required by Rule 15.8.AD.2.c, except that residential activities that were established before 1 July 2021 may continue to use any individual wastewater systems established before 1 July 2021
  - ii. Activities that contravene this performance standard are non-complying activities.
- c. Family flats
- i. Family flats must:
    1. only be occupied by a person or persons:
      1. related to or dependent on the household that lives in the primary residential unit on the same site: or
      2. employed on-site, in a paid or voluntary capacity, as a domestic, child-care, farm or conservation worker by the household that lives in the primary residential unit on the same site.
    2. not be on a different tenancy agreement to the primary residential unit.
  - ii. Family flats must:
    1. not exceed a maximum gross floor area of 60m<sup>2</sup>;
    2. be on the same available water and waste infrastructure connection, or the same non-reticulated wastewater disposal system as the primary residential unit;
    3. be on the same household electricity account;
    4. share the same driveway as the primary residential unit; and
    5. be attached to or located in the same residential building as the primary residential unit, or located within 30m of the primary residential building (house), as measured as the closest distance between any wall of the primary residential building and any wall of the family flat.
  - iii. Standard residential activities that contravene this performance standard are non-complying activities.
  - iv. For the sake of clarity, this performance standard supersedes Rule 15.5.14.

#### 15.8.AD.2 Subdivision performance standards

- a. Access
- i. Subdivision activities must provide suitably designed and formed public walking access through the mapped area, in general alignment with the route marked in blue on Figure 15.8.ADA.
  - ii. Legal access to fulfil clause i above must be created, and accessways must be formed, prior to the issuing of the section 224c certificate for the subdivision.
  - iii. Subdivision activities that do not meet this standard are non-complying activities.
  - iv. For the sake of clarity, this performance standard is additional to Rule 6.8.1.
- b. Minimum site size
- i. The minimum site size for new resultant sites is 1650m<sup>2</sup>

- ii. The maximum number of resultant sites within the **structure plan mapped area** is 33.
  - iii. Resultant sites created and used solely for the following purposes are exempt from both clause i and clause ii of this performance standard:
    - 1. scheduled ASBV or QEII covenant;
    - 2. reserve;
    - 3. access;
    - 4. utility; or
    - 5. road
  - iv. Activities that contravene this performance standard are non-complying activities.
  - v. For the sake of clarity, this performance standard supersedes Rule 15.7.4.
- c. Shape
- i. Each resultant site that does not contain a residential building that was established before 1 July 2021 must provide for a building platform outside of the areas mapped as ASBV and NCC.
  - ii. Resultant sites created and used solely for the following purposes are exempt from the shape standard:
    - 1. scheduled ASBV or QEII covenant;
    - 2. reserve;
    - 3. access;
    - 4. network utilities; or
    - 5. road.
  - iii. Subdivision activities that contravene this performance standard are non-complying activities.
  - iv. For the sake of clarity, this performance standard applies in addition to Rule 15.7.6.
- d. Wastewater infrastructure
- i. Subdivision activities must provide, if not already present, a communal wastewater system that is designed to facilitate connection to a public wastewater network.
  - ii. The communal wastewater system must be installed, and ready to allow connections, prior to the issuing of the section 224c certificate for the subdivision.
  - iii. The communal wastewater system must include the following components:
    - 1. a UV treatment module designed to minimise the risk of any pathogens passing out of the system;
    - 2. nitrogen and phosphorous attenuation modules that reduce their concentration prior to any discharge to the ground of treated wastewater; and
    - 3. a telemetric monitoring system that is capable of distributing an instantaneous alert in the event of infrastructure failure or accidental discharge to the Otago Regional Council, Dunedin City Council and Southern Clams Ltd.
  - iv. The communal wastewater system must be installed and operated in accordance with a legal instrument that:
    - 1. is registered in favour of Dunedin City Council; and
    - 2. gives ownership and management responsibilities to a residents' association, which all lot owners (with the exception of any owners of lots that use individual wastewater systems permitted under Rule 15.8.AD.1.b.i) must be members of, and which will be responsible for

ensuring that the system is appropriately monitored, serviced, maintained and operated, in accordance with the manufacturer's specifications.

- v. Activities that contravene this performance standard are non-complying activities.
- vi. For the sake of clarity, this performance standard is in addition to the requirements of Rule 9.3.7.

**Note 15.8.AD.2A - Other requirements outside the District Plan**

- a. Under the Regional Plan: Water, resource consent will be needed from the Otago Regional Council for any discharge of wastewater to water or land.

15.8.AD.3 Special information requirements

- a. Prior to any subdivision of the **structure plan mapped area**, a stormwater management plan for the whole **structure plan mapped area** must be prepared, which addresses the following matters.
  - i. How the design and operation of the stormwater infrastructure will ensure that there will be no increase in the peak post-development stormwater discharge rate (taking into account climate change) relative to pre-development as a result of additional impermeable or semi-impermeable surfaces expected over the structure plan area or through modification of the site's natural drainage regime. This includes ensuring that at post-development stage there is no increase in peak stormwater discharge rates from the structure plan area as a result of the development from the **structure plan mapped area** during the 'critical duration' rainfall events and any modified flows will not create adverse effects from stormwater discharge.
  - ii. How the stormwater management system will address stormwater quality in order to manage impacts on the quality of the receiving water. The management plan must include the design and location of stormwater quality treatment that demonstrates:
    - 1. the expected quality of stormwater leaving the specified system; and
    - 2. its treatment of at least the 'first flush' volume (90th percentile daily rainfall depth) or flow rate (90th percentile rainfall intensity) in accordance with best practice techniques for at least 75% Total Suspended Solids (TSS) removal on a long-term average basis.
  - iii. How the integrity of the stormwater mitigation and management measures will not be compromised during and after subdivision (for example ensuring that open drains that form part of the system will not be blocked or altered).
  - iv. The plan to ensure effective management of erosion and sedimentation on the site during earthworks and as the site is developed, including any measures that will be taken and devices to be installed, where necessary, to:
    - 1. divert clean runoff away from disturbed ground;
    - 2. control and contain stormwater run-off;
    - 3. avoid sediment laden run-off from the site; and
    - 4. protect existing drainage infrastructure sumps and drains from sediment run-off.
- b. In addressing the above, consideration should be given to the use of low-impact (or water-sensitive) design features including but not limited to:
  - i. grassed/landscaped swales and other vegetation areas;
  - ii. avoidance of formed gutters;
  - iii. infiltration trenches/bio-retention systems;
  - iv. storage ponds/wetlands/sediment ponds;
  - v. rainwater tanks- harvesting and reuse;

- vi. rain gardens, rooftop greening and planting;
- vii. porous surface treatments; and
- viii. consideration of the existing natural topography and the natural course of water flow (overland flow paths) through the design of the subdivision.

Figure 15.8.ADA: Doctors Point Road structure plan

### 15.8.AE Ayr Street Structure Plan Mapped Area Performance Standards

1. In addition to the performance standards in 15.5, 15.6 and 15.7, activities in the **Ayr Street structure plan mapped area** must meet the area-specific performance standards below. Where a performance standard in this section specifically provides an exemption or alternative performance standard to a standard in 15.5, 15.6 or 15.7, the standard in this section supersedes that standard.

#### 15.8.AE.2 Development performance standards

- a. Water saving devices
  - i. Residential buildings must be designed to install water saving devices, including low-flow shower heads, 6/3 dual flush toilets and aerated sink mixers.
  - ii. Activities that contravene this performance standard are non-complying activities.

#### 15.8.AE.3 Information requirements

- a. Integrated Transport Assessment
  - i. Prior to any subdivision of the **structure plan mapped area**, an Integrated Transport Assessment

(ITA) for the whole mapped area must be prepared. ITAs must include, but are not limited to, the following matters (see further information on the content of ITAs in Rule 6.14.2):

1. An assessment of the effects of subdivision on the safety and efficiency of the existing transport network, which identifies any transport infrastructural improvements deemed necessary to ensure adverse effects on the safety and efficiency of the transport network, for all modes, are appropriately addressed in accordance with Objective 6.2.3 and Policy 6.2.3.8.
2. Consideration of internal roading design, layout, and connection points to the existing transportation network for all modes of transport in accordance with the Dunedin Code of Subdivision and Development 2010.

#### **Note 15.8.AE.3A - General advice**

1. Where the results of an Integrated Transportation Assessment required by Rule 15.8.AE.3 demonstrate the need for either:
  - a. transportation infrastructure upgrades outside of the site; or
  - b. transportation infrastructure built to a higher specification because of the need to provide for new growth areas or improve level of service for existing areas.

The responsibility and funding for these upgrades will be negotiated between all landowners and the DCC. Where necessary, the DCC will appoint an independent facilitator or mediator to assist in these negotiations.

2. The DCC requires those persons undertaking development to pay a fair, equitable, and proportionate portion of the costs of capital expenditure to service growth.
3. DCC's contribution to any off-site upgrades or delivery of higher specification for infrastructure will be based on an assessment of the public vs private benefit of the upgrade. This means that in principle the landowner(s) of the **structure plan mapped area** and/or **new development mapped area** will only be required to pay that portion of the costs of the upgrades that is necessary to address the effects of or needs of their proposed development area. The balance of the costs will generally be funded through development contribution charges as set out in the DCC's Development Contributions Policy (10 year plan 2021-2031), which details the charges on a per equivalent household unit by area of benefit basis.
4. It is further noted that the completion of these upgrades prior to s224 certification or at a certain point in time agreed to in a condition of consent may be required.

### **15.8.AF Riccarton Road East Structure Plan Mapped Area Performance Standards**

#### 15.8.AF.1 Subdivision

- a. Subdivision activities must provide vehicle access, in the form of a legal road, to Riccarton Road East from 49 Riccarton Road East.
- b. No more than four sites may have direct or indirect vehicle access to Elizabeth Avenue.
- c. In the case of conflict with performance standards 15.5 to 15.7, the rules in this performance standard apply.
- d. Activities that contravene this performance standard are non-complying activities.

Figure 15.8.AFA: Riccarton Road East structure plan

## 15.8.AH South East Mosgiel Structure Plan Mapped Area Rules

### 15.8.AH.1 Application of this performance standard

- a. This performance standard does not apply to land within the South East Mosgiel structure plan mapped area until such time as the RTZ applying to the part of the land under consideration has been released in accordance with Rule 12.3.4.1.

### 15.8.AH.2 Subdivision performance standards

- a. Roading connections
  - i. Subdivision activities in the **South East Mosgiel structure plan mapped area** must enable and provide for access through the **structure plan mapped area** for, pedestrians, cyclists and vehicles, such that all sites within the **structure plan mapped area** will or can have (after future stages are completed):
    1. a minimum of four external road connections from the **structure plan mapped area** to: Owhiro Avenue, Hagart-Alexander Drive, Wingatui Road and the Highland Park subdivision (Lochinvar Street or Armadale Street); and
    2. a minimum of one road connection between Hagart-Alexander Drive and Wingatui Road that will include an alignment and space for buses to travel and stop; and
    3. a design which provides for a potential second road connection to Wingatui Road should the current rural residentially zoned land between the **structure plan mapped area** and Wingatui Road be rezoned in future.
  - ii. Subdivision activities that do not meet this performance standard are non-complying activities.

### 15.8.AH.3 Information requirements

- a. Geotechnical investigation report
  - i. Applications for subdivision activities, multi-unit development or supported living facilities must include a

geotechnical investigation report prepared by a suitably qualified geotechnical consultant. The geotechnical report must examine the ground stability over the entire area and identify areas suitable for building platforms, considering the risk to people, buildings and associated infrastructure from earthquake, including from the Titri Fault shown crossing the **structure plan mapped area**, as described in the GNS Science Consultancy Report 2020\88, dated April 2021. Applications that are in accordance with a previously prepared geotechnical report will generally be exempt from this requirement, unless newer hazards information is available that may make the previous assessment incomplete.

#### 15.8.AH.4 Assessment guidance

- a. In addition to assessment guidance for subdivision provided in rules 15.11.4 and 6.11.2 the following guidance is provided for the assessment of subdivision activities within the **South East Mosgiel structure plan mapped area**.

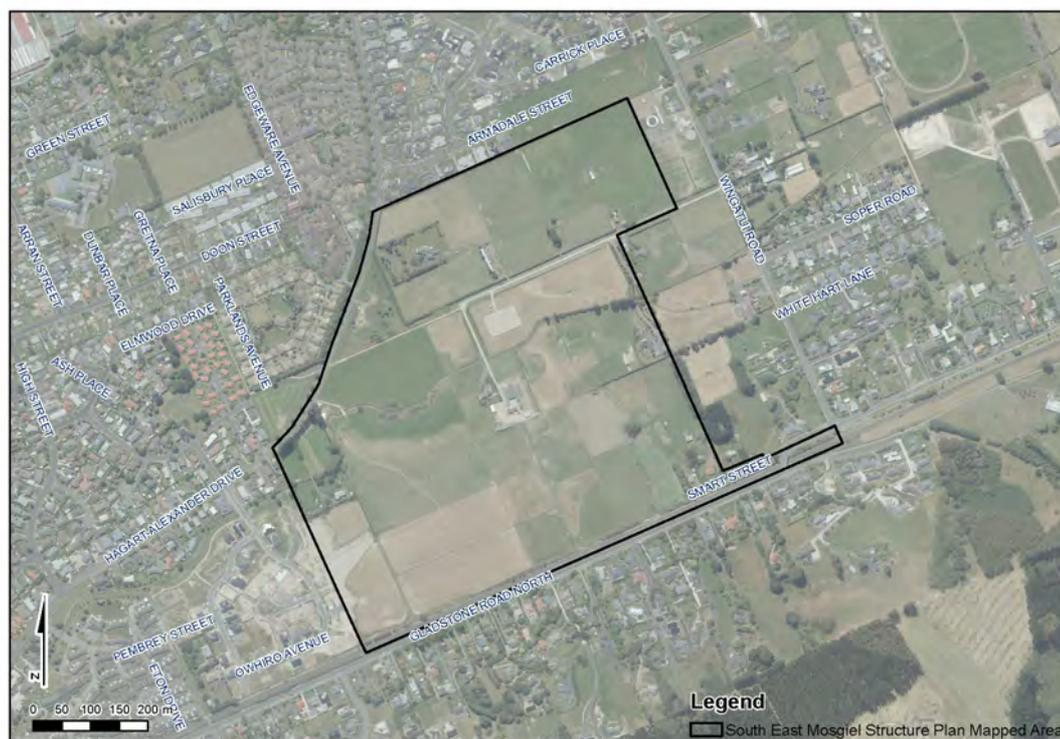

##### *General assessment guidance*

- b. In assessing effects on the safety and efficiency of the transport network, Council will consider the Integrated Transport Assessment (ITA) submitted with the application to release the land, but may also require additional transportation assessment information if necessary to assess the potential effects of any subdivision or land use application.
- c. In assessing effects on risk from natural hazards, Council will consider the geotechnical investigation report submitted with the application (as required by Rule 15.8.AH.3).
- d. In assessing the requirements for the provision of amenity planting, public amenities and recreation spaces in a **new development mapped area** (Rule 12.X.2.5.b and Rule 12.X.2.5.c), Council will consider the open space and amenity planting plan required by Rule 12.3.4.1.b.iii.

##### *Conditions that may be imposed include:*

- e. A requirement that, prior to the vesting in DCC of the roads linking to Owhiro Avenue, Hagart-Alexander Drive, Wingatui Road and the Highland Park subdivision (Lochinvar Street or Armadale Street), these roads are constructed to a suitable standard commensurate with their intended use, in accordance with the Dunedin Code of Subdivision and Development 2010 or New Zealand Standard 4404:2010.
- f. A requirement that any required upgrades identified by the ITA be completed prior to a particular stage in the subdivision.
- g. Requirements for water saving devices including but not limited to, low-flow shower heads, 6/3 dual flush toilets and aerated sink mixers to be required through an appropriate legal mechanism.

Figure 15.8.AH: South East Mosgiel structure plan

### 15.8.AI Henderson Street Structure Plan Mapped Area Performance Standards

1. In addition to the performance standards in 15.5, 15.6 and 15.7, activities in the **Henderson Street structure plan mapped area** must meet the area-specific performance standards below. Where a performance standard in this section specifically provides an exemption or alternative performance standard to a standard in 15.5, 15.6 or 15.7, the standard in this section supersedes that standard.

#### 15.8.AI.2 Notification

- a. With respect to resource consent applications in the **structure plan mapped area** that include a new or modified integrated stormwater management plan or details for a stormwater management system as required by Rule 15.8.AI.4.c, any owners of land within the area to which the proposed plan or system relates and the Otago Regional Council will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided.

#### 15.8.AI.3 Subdivision performance standards

- a. Access
  - i. Subdivision activities must establish, if not already present, a legal road linking Soper Road and Henderson Street.
  - ii. This road must be vested in the DCC as Road prior to the issuing of the section 224c certificates for any resultant sites.
  - iii. Activities that contravene this performance standard are non-complying activities.
  - iv. For the sake of clarity, this performance standard is additional to Rule 6.8.1.
- b. Stormwater easement
  - i. Subdivision activities must establish, if not already present, a 4m wide easement along the western boundary of 41 Soper Road in favour of DCC for stormwater conveyance and associated infrastructure.
  - ii. Activities that contravene this performance standard are non-complying activities.

#### 15.8.AI.4 Information requirements

- a. Integrated transport assessment
- i. Applications for subdivision activities must include an Integrated Transport Assessment (ITA) for the whole **structure plan mapped area**, unless such a plan has already been approved as part of an earlier subdivision consent. ITAs must include, but are not limited to, the following matters (see further information on the content of ITAs in Rule 6.14.2):
    1. An assessment of the effects of subdivision on the safety and efficiency of the existing transport network, which identifies any transport infrastructural improvements deemed necessary to ensure adverse effects on the safety and efficiency of the transport network, for all modes, are appropriately addressed in accordance with Objective 6.2.3 and Policy 6.2.3.8.
    2. Consideration of internal roading design, layout, and connection points to the existing transportation network for all modes of transport in accordance with the Dunedin Code of Subdivision and Development 2010 or NZS 4404:2010.
- b. Geotechnical investigation report
- i. Applications for subdivision activities, multi-unit development or supported living facilities must include a geotechnical investigation report prepared by a suitably qualified geotechnical consultant, unless such a plan has already been approved as part of an earlier subdivision or land use consent. The geotechnical report must examine the ground stability over the entire area and identify areas suitable for building platforms, taking into account the risk to people, buildings and associated infrastructure from earthquake, with particular consideration of the Titri Fault shown crossing the **structure plan mapped area**, as described in the GNS Science Consultancy Report 2020\88, dated April 2021.
- c. Stormwater management
- i. Applications for subdivision activities, multi-unit development or supported living facilities within the **structure plan mapped area** must include a proposed integrated stormwater management plan that addresses the whole area and is prepared in accordance with clauses iii – v of this rule, unless an earlier approved subdivision or land use consent includes such a plan, prepared in accordance with this rule.
  - ii. Where an integrated stormwater management plan has already been provided as part of an earlier approved subdivision or land use consent, but did not include design details for stormwater management systems for any part of the **structure plan mapped area**, applications for activities set out in clause (i) must provide those details in accordance with clauses (iv) and (v) of this rule in a way that is consistent with the integrated stormwater management plan approved as part of the earlier consent.
  - iii. The integrated stormwater management plan must:
    1. Demonstrate how Policy 9.2.1.Y will be achieved.
    2. Provide details in accordance with clause iv of this rule of all stormwater management systems for the hydrologically connected parts of the **structure plan mapped area** and details of how those systems will be installed in full or in planned stages prior to development. The stormwater infrastructure must be designed to be resilient
    3. Ensure that stormwater will be managed for both the current climatic conditions and climatic conditions based on climate change projections.
    4. Take account of the loss of storage capacity of the undeveloped land.
    5. Ensure that:
      1. there is no increase in the peak stormwater discharge rate from the **structure plan mapped area** into the stormwater public infrastructure, or into a private, Otago Regional Council, or natural/informal stormwater system or overland flow path (at any point)

- between pre-development to post-development based on the assessment required in clause (iii)(10); or
2. where this is not practicable, any adverse effects from an increase in discharge on the stormwater system are no more than minor.
  3. For the sake of clarity, the stormwater management plan does not need to avoid volume increases.
6. Include stormwater detention infrastructure that is designed to temporarily store and release flows from a generated 1% annual exceedance probability (AEP) rainfall event, such that peak pre-development flows are not exceeded in the post-development condition.
  7. Demonstrate that secondary flows at the **structure plan mapped area's** upstream and downstream boundaries are not changed or adversely affected.
  8. Include the use of low-impact (or water-sensitive) design features, which may include features such as:
    1. grassed/landscaped swales and other vegetation areas;
    2. infiltration trenches/bio-retention systems;
    3. storage ponds/wetlands/sediment ponds;
    4. rainwater tanks harvesting and reuse;
    5. rain gardens, rooftop greening and planting;
    6. porous surface treatments; and
    7. consideration of the existing natural topography and the natural course of water flow (overland flow paths) through the design of the subdivision.
  9. Consider whether stormwater management areas can be integrated into reserves and recreation spaces.
  10. Include an assessment of the difference between pre-development peak flows and post-development peak flows (with and without mitigation) over a range of event durations, taking into account the maximum impermeable surfaces permitted in the District Plan zone for the **structure plan mapped area** (and including any other development restrictions resulting from any other rules in the District Plan or legal instruments registered on the title(s) for the **structure plan mapped area**). This assessment must meet the following criteria:
    1. The assessment of pre-development and post-development flows and detention volumes must be based on the 10% and the 1% annual exceedance probability (AEP) rainfall events, covering durations from the mapped area's own critical duration to the critical duration of the catchment upstream of the point of discharge (unless agreed otherwise with the DCC, for example where direct discharge to the coastal environment is feasible). For the purposes of this requirement, 'critical duration' means the duration of rainfall event likely to cause the highest peak flows or water levels.
    2. The assessment must take account of climate change, using the climate adjustment rainfall sourced from HIRDS version 4 using RCP 8.5 2081-2100 values (or an alternative source approved by DCC).
    3. The assessment must include a risk based assessment to determine to what extent measures (if any) are needed to manage flows downstream of the **structure plan mapped area**.
- iv. Applications must include the following design details for proposed stormwater management systems.
1. the design and location of 'primary infrastructure' ('primary infrastructure' includes both open and

- closed conduits and must be designed to contain the flows generated by the 10% AEP rainfall event);
2. the design and location of 'secondary flow paths', with and without blockage of the primary stormwater system, through the development to the downstream boundary. 'Secondary flow paths' means the flow path over which surface water will flow if the primary flow path becomes overloaded or inoperative and consists of overland flow paths with sufficient capacity to transfer the flows generated by rainfall events up to the 1% AEP event. Secondary flow paths shall be clearly identified, and where possible aligned with natural flow paths and located on public land. If located in private property, 1% AEP secondary flows should be through primary infrastructure unless protected by an easement;
  3. to the design features that will enable safe operation in super-design conditions (for a 0.5% AEP rainfall event, but a greater rainfall event can be used if the applicant chooses to do so). Safe operation means without catastrophic, rapid or structural failure. This is to ensure that the proposed stormwater management system has a fail-safe mechanism. This does not mean the stormwater management system is to be designed to retain the volume of stormwater for a 0.5% AEP rainfall event;
  4. the location and design details of stormwater management systems, including detention infrastructure required to meet clause c.iii.6 above;
  5. how the integrity of the stormwater mitigation and management system will not be compromised during and after subdivision (for example ensuring that open drains that form part of the system will not be blocked or altered);
  6. how erosion and sedimentation will be managed effectively within the structure plan mapped area during earthworks and as the structure plan mapped area is developed, by taking measures and installing devices, where necessary, to:
    1. divert clean runoff away from disturbed ground;
    2. control and contain stormwater run-off;
    3. avoid sediment laden run-off from the mapped area; and
    4. protect existing drainage infrastructure sumps and drains from sediment run-off; and
  7. the design and location of stormwater quality treatment that demonstrates the expected quality of stormwater leaving the specified system and its treatment of at least the 'first flush' volume (90th percentile daily rainfall depth) or flow rate (90th percentile rainfall intensity) in accordance with best practice techniques for at least 75% Total Suspended Solids (TSS) removal on a long-term average basis;
  8. if a stormwater management system cannot practicably be designed to meet one or more of clauses 3 to 7 above in relation to additional stormwater discharge, an assessment of the broader catchment to determine whether design solutions external to the mapped area are available to manage the additional stormwater discharges as a result of the development on the mapped area;
  9. how the stormwater management system will not create or exacerbate adverse effects that are more than minor outside the **structure plan mapped area**. This includes consideration of cumulative effects; and
  10. where any proposed stormwater management system is intended to vest as public infrastructure, the design must incorporate an adjustable outlet mechanism such that the present day peak discharge flow rate from the **structure plan mapped area** is not exceeded as a result of the development but that the outlet can be progressively adjusted for future climate change discharge rates up to the fully developed stormwater management system design capacity.

- v. The integrated stormwater management plan, and the design of the integrated stormwater management systems, must be prepared by a chartered professional engineer or other suitably qualified person who has (or can call on) experience in hydrology, hydraulics, stormwater design, flood risk management and construction management.

#### **Note 15.8.AI.4A - General advice**

- a. Where the results of an Integrated Transportation Assessment required by Rule 15.8.AI.4.a demonstrate the need for either:
  - i. Transportation Infrastructure upgrades outside of the site; or
  - ii. Transportation infrastructure built to a higher specification because of the need to provide for new growth areas or improve level of service for existing areas;
 the responsibility and funding for these upgrades will be negotiated between all landowners and the DCC. Where necessary, the DCC will appoint an independent facilitator or mediator to assist in these negotiations.
- b. Where the stormwater management plan required by Rule 15.8.AI.4.c involves the construction of infrastructure across sites owned by more than one landowner, the responsibility and funding for these upgrades will be negotiated between all landowners and, if necessary (e.g. in cases where infrastructure is to be built to a higher specification because of the need to provide for new growth areas or improve level of service for existing areas), the DCC. Where necessary, the DCC will appoint an independent facilitator or mediator to assist in these negotiations.
- c. In the case of both transportation and stormwater infrastructure:
  - i. The DCC will require those persons undertaking development to pay a fair, equitable, and proportionate amount of the costs of capital expenditure to service growth.
  - ii. DCC's contribution to any off-site upgrades or delivery of higher specification for infrastructure will be based on an assessment of the public vs private benefit of the upgrade. This means that in principle the landowner(s) of the **structure plan mapped area** and/or new development mapped area will only be required to pay that portion of the costs of the upgrades that is necessary to address the effects of or needs of their proposed development area. The balance of the costs will generally be funded through development contribution charges as set out in the DCC's Development Contributions Policy (10 year plan 2021-2031), which details the charges on a per equivalent household unit by area of benefit basis.
  - iii. It is further noted that the completion of these upgrades prior to s224 certification or at a certain point in time agreed to in a condition of consent may be required.

#### 15.8.AI.5 Assessment guidance

- a. In addition to assessment guidance for subdivision provided in Rule 15.11.4, the following guidance is provided for the assessment of subdivision activities within the **Henderson Street structure plan mapped area**.

#### *General assessment guidance:*

- b. In assessing effects on the safety and efficiency of the transport network, Council will consider the Integrated Transport Assessment (ITA) submitted with the application (as required by Rule 15.8.AI.4.a), including whether upgrades to transportation infrastructure are required to enable the development provided for in the **structure plan mapped area**.
- c. In assessing effects on risk from natural hazards, Council will consider the geotechnical investigation report submitted with the application (as required by Rule 15.8.AI.4.b).
- d. In assessing (as relevant) effects on efficiency and affordability of infrastructure, effects of stormwater from future development and/or effectiveness and efficiency of stormwater management, and taking into account climate change, Council, will consider:
  - i. the proposed stormwater management plan submitted with the application (as required by Rule 15.8.AI.4.c);
  - ii. any consequential effects that might arise, including, but not limited to:
    - 1. effects on personal safety;

2. risks from surface water flooding;
3. risks to property from inundation;
4. risks to the ability of Council to meet its consent conditions for public infrastructure, which could lead to effects on freshwater quality and ecosystem health; and
5. risks to the integrity and function of existing public infrastructure

iii. the need for water saving devices or other methods to manage demand on water supply

*Conditions that may be imposed include:*

- e. A requirement for the stormwater management system to be installed prior to certification of the survey plan pursuant to section 224c of the RMA.
- f. A requirement for easements, covenants, consent notices, or bonds to ensure future development will be in accordance with the stormwater management plan.
- g. A requirement for the stormwater management system to be vested in the DCC, with necessary easements and a maintenance or defect period agreement in place prior to vesting.
- h. A requirement that, prior to the vesting in DCC of the road linking Soper Road and Henderson Street, the road is constructed to a suitable standard commensurate with its intended use, in accordance with the Dunedin Code of Subdivision and Development 2010 or New Zealand Standard 4404:2010.
- i. A requirement that any required upgrades identified by the ITA be completed prior to a particular stage in the subdivision.
- j. Conditions requiring water saving devices including but not limited to, low-flow shower heads, 6/3 dual flush toilets and aerated sink mixers.

Figure 15.8.AIA: Henderson Street structure plan

### 15.8.AJ Chelivode Street Structure Plan Mapped Area Performance Standards

- a. In addition to the performance standards in 15.5, 15.6 and 15.7, activities in the **Chelivode Street structure plan mapped area** must meet the area-specific performance standards below. Where a performance standard in this section specifically provides an exemption or alternative performance standard to a standard in 15.5, 15.6 or 15.7, the standard in this section supersedes that standard.
- b. Except where otherwise specified, the performance standards in Rule 15.8.AJ apply to all parts of the **Chelivode Street structure plan mapped area**, including land zoned Township and Settlement and land zoned Large Lot Residential 2.

#### 15.8.AJ.1 Land use performance standards

- a. Density
  - i. Standard residential activities in the **Chelivode Street structure plan mapped area** must not exceed the following density limits:

Zone		i. Minimum site area for a residential unit (including ancillary residential units)	ii. Maximum development potential per site
a.	Large Lot Residential 2 Zone	1 per 3500m <sup>2</sup>	1 habitable room per 700m <sup>2</sup>
b.	Township and Settlement Zone within a no DCC reticulated wastewater mapped area	1 per 1000m <sup>2</sup>	1 habitable room per 200m <sup>2</sup>

- ii. For the purposes of this standard:
  1. the calculation of habitable rooms includes rooms in sleep outs;
  2. the calculation of minimum site area includes access legs provided for rear sites; and
  3. the calculation of maximum development potential applies to standard residential activity for determining whether a second unit in a single residential building or in the form of a duplex, can be developed.
- iii. More than one residential building may only be built on a site if all residential buildings are able to meet all the following performance standards if they were ever subdivided into separate sites:
  1. site coverage;
  2. height in relation to boundary;
  3. setbacks; and
  4. access.
- iv. Standard residential activity that contravenes the performance standard for density is a non-complying activity, except contravention of the following standards only is a restricted discretionary activity:
  1. contravention of Rule 15.5.2.3 (bulk and location performance standard for multiple residential buildings on the same site).
- b. Service connections
  - i. All activities in the part of the **structure plan mapped area** that is zoned Large Lot Residential 2 must self-service for water supply.
  - ii. All activities in all parts of the **structure plan mapped area** must discharge any wastewater to the communal wastewater system required by Rule 15.8.AJ.3.b.

- iii. Activities that contravene this performance standard are non-complying activities.

#### 15.8.AJ.2 Development performance standards

- a. Activities within the Significant Natural Landscape Overlay Zone
  - i. New buildings, new structures and additions and alterations associated with residential activities, but excluding fencing, must be located outside the Pūrākaunui and Ōrokonui Significant Natural Landscape Overlay Zone.
  - ii. Activities that contravene this performance standard are non-complying activities.
  - iii. For the sake of clarity, this performance standard applies in addition to Rule 15.6.6.2, Rule 15.6.Y and Rule 15.6.Z for new buildings, new structures and additions and alterations within the Pūrākaunui and Ōrokonui Significant Natural Landscape Overlay Zone.

#### 15.8.AJ.3 Subdivision performance standards

- a. Access
  - i. Subdivision activities must provide a suitably designed and formed internal road network connecting to Doctors Point Road.
  - ii. This road must be vested with the Council as part of the section 223 certification for the subdivision (or the relevant stage of subdivision if subdivision is staged).
  - iii. In addition to the roading connection to Doctors Point Road, subdivision activities must provide a cycle and pedestrian accessway for public use between the new roading within the **structure plan mapped area** and Chelivode Street (via Buckingham Street or Mixbury Street, which is the paper road that runs parallel to Buckingham Street, to the south-east). Where not already legal road or road to vest, the land of the accessway must have adequate legal provision for public use (including over balance land for staged subdivisions) created as part of the section 223 certification for the subdivision.
  - iv. The accessway described in Rule 15.8.AJ.3.a.iii above must be designed to be able to be used by emergency vehicles but otherwise closed to vehicle access.
  - v. Activities that do not meet this standard are non-complying activities.
  - vi. For the sake of clarity, this performance standard is additional to Rule 6.8.1.
- b. Wastewater infrastructure
  - i. Subdivision activities must provide, if not already present, a communal wastewater system that is designed to facilitate connection to a public wastewater network.
  - ii. The communal wastewater system must be installed, and ready to allow connections, prior to the issuing of the section 224c certificate for the subdivision.
  - iii. The communal wastewater system must include the following components:
    - 1. a UV treatment module designed to minimise the risk of any pathogens passing out of the system;
    - 2. nitrogen and phosphorous attenuation modules that reduce their concentration prior to any discharge to the ground of treated wastewater; and
    - 3. a telemetric monitoring system that is capable of distributing an instantaneous alert in the event of infrastructure failure or accidental discharge to the Otago Regional Council and the Dunedin City Council.
  - iv. The communal wastewater system must be installed and operated in accordance with a legal instrument that:
    - 1. is registered in favour of Dunedin City Council; and
    - 2. gives ownership and management responsibilities to a residents' association, which all lot

owners must be members of, and which will be responsible for ensuring that the system is appropriately monitored, serviced, maintained and operated, in accordance with the manufacturer's specifications.

- v. Activities that contravene this performance standard are non-complying activities.
- vi. For the sake of clarity, this performance standard is additional to Rule 9.3.7.

**Note 15.8.AJ.3X – Other requirements outside of the District Plan**

- a. Under the Regional Plan: Water, resource consent may be needed from the Otago Regional Council for any discharge of wastewater to water or land.
- b. The area zoned Township and Settlement will be serviced under the restricted water supply scheme only.

**15.8.AJ.4 Information requirements**

- a. Planting plan to enhance amenity values
  - i. Applications for subdivision activities within the **structure plan mapped area** must include a proposal, which covers the whole mapped area, for a planting plan to enhance the amenity values of the site, unless such a plan has already been approved as part of an earlier subdivision consent.
  - ii. For the sake of clarity, the standard assessment guidance in Rule 15.11.4.1 still applies.
- b. Natural hazards
  - i. Applications for subdivision activities within the **structure plan mapped area** must include a geotechnical investigation report by a suitably qualified person (usually a geotechnical engineer), unless such a plan has already been approved as part of an earlier subdivision consent. This assessment should examine the ground stability over the whole mapped area and identify areas suitable for residential development and, if required, suitable building platforms.
  - ii. For the sake of clarity, the standard assessment guidance in Rule 11.5.2.5 still applies.

Figure 15.8.AJA Chelivode Street Structure Plan Mapped Area

### 15.8.AM Main Road, Fairfield Structure Plan Mapped Area Rules

#### 15.8.AM.1 Additional matter of discretion (acoustic assessment)

- a. In addition to the matters of discretion for subdivision consents in Rule 15.11.4, the following matter of discretion applies for subdivision activities in the **structure plan mapped area**:

Activity	Matters of discretion	Guidance for the assessment of resource consents
i. Subdivision activities	1. Effects on health and safety	<p><i>Relevant objectives and policies:</i></p> <p>1. Objective 9.2.2.</p> <p><i>General assessment guidance:</i></p> <p>2. Council will consider the acoustic assessment required by Rule 15.8.AM.2.a.i.</p>

{Variation 2 appeal}

### 15.8.AM.2 Special information requirements

#### a. Acoustic assessment

- i. Applications for subdivision must include an acoustic assessment for the whole **structure plan mapped area**, unless such an assessment has already been approved as part of an earlier subdivision consent. This acoustic assessment should identify any “no build” areas where residential activity must not take place, and any “noise sensitive effects area” where additional mitigation requirements above those required under Rule 9.3.1 are necessary. The acoustic assessment should identify what additional mitigations are required to be implemented in the “noise sensitive effects area”. The acoustic assessment should include consultation with Waka Kotahi. See assessment guidance in Rule 15.8.AM.1.a. **{Variation 2 appeal}**

Figure 15.8.AMA: Main Road, Fairfield structure plan

**{Variation 2 appeal}**

### 15.8.AN Wattie Fox Lane Structure Plan Mapped Area Rules

#### 15.8.AN.1 Subdivision performance standards

##### a. Access

- i. In addition to the requirements set out in Rule 6.8.1, each resultant site must have direct or indirect (e.g. leg-in) access to an internal roading network that serves the whole **structure plan mapped area** and provides for all sites to have access through the **structure plan mapped area** to a minimum of two road connection points from the **structure plan mapped area** to Barr Street, Kaikorai Valley Road or Mornington Road.
- ii. Activities that contravene this performance standard are non-complying activities. **{Variation 2 appeal}**

15.8.AN.2 Assessment guidance

- a. In assessing the matters in Rule 6.11.2, Council will consider the Integrated Transport Assessment submitted with the application (as required by Rule 15.8.AN.3). **{Variation 2 appeal}**

15.8.AN.3 Special information requirements

- a. Integrated Transport Assessment
  - i. Applications for subdivision activities must provide an Integrated Transport Assessment unless one has already been provided and accepted as part of an earlier subdivision consent. **{Variation 2 appeal}**

Figure 15.8.ANX: Wattie Fox Lane structure plan

**{Variation 2 appeal}**

**15.8.AO The Cove Structure Plan Mapped Area Rules**

15.8.AO.1 Subdivision performance standards

- a. Maximum number of sites
  - i. Subdivision activities must not create more than nine resultant sites within the **structure plan mapped area**.
  - ii. The sites must be of a size, shape and location that enables all relevant performance standards to be met, including but not limited to, the minimum site size in Rule 15.7.4.
  - iii. One of the sites must be a 'balance lot' that includes, in a single record of title, the remaining land from the parent title that is within the RR2 Zone. The balance lot must include at least 500m<sup>2</sup> of land within the **structure plan mapped area**.

- iv. For the purposes of Rules 15.5.2 and 17.5.2.c, the balance lot must be treated as a single site (meaning that despite the balance lot having a split zoning, that site must not be treated as two sites for the purposes of determining the number of residential activities provided for).
  - v. Resultant sites created and used solely for the following purposes are exempt from this performance standard:
    - 1. Scheduled ASBV or QEII covenant;
    - 2. reserve;
    - 3. access;
    - 4. utility; or
    - 5. road.
  - vi. Activities that contravene this performance standard are non-complying activities, except that non-compliance with another performance standard rule, required by clause ii, has the same status as listed in that rule.
- b. Service connections (water supply)
- i. In addition to the requirements in Rule 9.3.7.Y, subdivision activities within the **structure plan mapped area** must provide the following properties with connections to the public water supply network to the boundary of those sites, unless this has already been provided through a previous subdivision application:
    - 1. Lot 21 DP 5628 and Lot 23 DP 5628 (currently 335 Portobello Road);
    - 2. Lot 1 DP 5628 (currently 338 Portobello Road);
    - 3. Lot 2 DP 5628 (currently 339 Portobello Road);
    - 4. Lot 3 DP 5628 (currently 340 Portobello Road);
    - 5. Lot 4 DP 5628 (currently 341 Portobello Road);
    - 6. Lot 5 DP 5628 (currently 342 Portobello Road); and
    - 7. Lot 6 DP 5628, Lot 7 DP 5628, and Lot 1 DP 26993 (currently 343 Portobello Road).
  - ii. Activities that contravene this performance standard are non-complying activities.

#### 15.8.AO.2 Assessment guidance

- a. In assessing the matters in Rule 6.11.2, Council will consider the Integrated Transport Assessment submitted with the application (as required by Rule 15.8.AO.3).

#### 15.8.AO.3 Special information requirements

- a. Integrated Transport Assessment
  - i. Applications for subdivision activities must provide an Integrated Transport Assessment unless one has already been provided and accepted as part of an earlier subdivision consent. This must consider upgrades to provide appropriate access to all properties that are or will be accessed from Weller Street.

Figure 15.8.AOA: The Cove structure plan

## 15.8.AP Gloucester Street Structure Plan Mapped Area Rules

### 15.8.AP.1 Subdivision performance standards

#### a. Access

- i. Unless already provided for as part of an earlier subdivision, subdivision activities must provide for, at a minimum, a legal accessway of a suitable width to be used for pedestrian access that connects Gloucester Street with Tomahawk Road. This accessway must be vested in Council as accessway.
- ii. Subdivision activities that do not meet this standard are non-complying activities.

#### b. Esplanade reserves and strips

- i. Subdivision activities must provide an esplanade reserve with a minimum width of 15m along the property boundary labelled C in Figure 15.8.APA.
- ii. Subdivision activities that do not meet this performance standard are restricted discretionary activities and will be assessed in accordance with Rule 10.5.3.2.

#### c. Maximum number of sites

- i. The maximum number of resultant residential sites within the part of the **structure plan mapped area** labelled A is eight.
- ii. The maximum number of resultant residential sites within the part of the **structure plan mapped area** labelled B is one.
- iii. Resultant sites created and used solely for the following purposes are exempt from this performance standard:
  1. Scheduled ASBV or QEII covenant;
  2. reserve;
  3. access;

- 4. utility; or
- 5. road.

- iv. The balance lot resulting from any subdivision of residential sites in land parcel Pt Lot 1 DP 2138 or land parcel Pt Lot 2 DP2138 must be amalgamated with Lot 1 DP 10814.
- v. Activities that contravene this performance standard are non-complying activities.

d. Stormwater

- i. Prior to any subdivision application, a stormwater discharge consent must be obtained from the Otago Regional Council, if required, for any stormwater discharge from the site. For the sake of clarity:
  - 1. The applicant is responsible for obtaining any resource consents, with input from the Dunedin City Council.
  - 2. The consent must be issued in, or transferred to, the Dunedin City Council's name.
  - 3. All costs associated with obtaining resource consents associated with stormwater discharge are to be borne by the developer.
- ii. Activities that contravene this performance standard are non-complying activities.

- e. For the sake of clarity, these performance standards are additional to those in Rule 15.7. **{Variation 2 appeal}**

15.8.AP.2 Assessment guidance

- a. In assessing whether the subdivision design maintains or enhances areas with important natural environment values (Rule 12.X.2.5.d), Council will consider the biodiversity enhancement plan required by Rule 15.8.AP.3.
- b. In assessing any contravention of Rule 15.8.AP.1.d.ii, Council will consider the effectiveness and efficiency of stormwater management and effects of stormwater from future development (Objective 9.2.1), particularly in relation to water quality impacts on Tomahawk Lagoon. **{Variation 2 appeal}**

15.8.AP.3 Special information requirements

- a. Biodiversity enhancement
  - i. Applications for subdivision must include a biodiversity enhancement plan for the area marked Biodiversity Enhancement Area on Figure 15.8.APA, showing how vegetation will be enhanced and restored to assist with maintaining or improving indigenous biodiversity on the site and water quality in the Tomahawk Lagoon, unless this plan has been provided and accepted through an earlier subdivision consent application. **{Variation 2 appeal}**

Figure 15.8.APA: Gloucester Street structure plan

**{Variation 2 appeal}**

## 15.8.AR Sunnyvale Structure Plan Mapped Area Rules

### 15.8.AR.1 Separation distances

- a. New residential buildings, and additions and alterations to residential buildings, must be located at least 12m from:
  - i. scheduled mining activity SMA004; and
  - ii. any industrial zoned site.
- b. Activities that contravene this performance standard are non-complying activities.

### 15.8.AR.2 Areas of restricted development (hazard)

- a. Residential activities, buildings and structures activities, new roads or additions or alterations to existing roads, and earthworks must not be undertaken in the area shown hatched red on the Sunnyvale structure plan and labelled 'Restricted Development Area (Hazard)' before new certificates of title for allotments have been issued in accordance with Rule 15.8.AR.5.a.i.
- b. Activities that contravene this performance standard are discretionary activities.

### 15.8.AR.3 Access

- a. Subdivision activities must provide a suitably designed and formed public pedestrian and cycle path that connects Severn Street with Main South Road, unless this has already been provided as part of a previous subdivision consent.

- b. The pedestrian and cycle path must be formed and vested in DCC prior to the issuing of the section 224c certificate for the subdivision.
- c. Activities that contravene this performance standard are non-complying activities.

#### 15.8.AR.4 Assessment guidance

- a. In assessing risk from natural hazards (Rule 11.5.2.5), Council will consider the geotechnical investigation report submitted with the application (as required by Rule 15.8.AR.5.a).
- b. In assessing the matters in Rule 6.11.2, Council will consider the Integrated Transport Assessment submitted with the application (as required by Rule 15.8.AR.5.b).
- c. For activities that contravene the separation distances performance standard, Council will consider potential effects on health and safety (Objective 9.2.2) and reverse sensitivity effects (Objective 2.3.1).

#### 15.8.AR.5 Special information requirements

- a. Geotechnical investigation report
  - i. Applications for subdivision activities must include a comprehensive geotechnical investigation report by a suitably qualified geotechnical consultant. The geotechnical report must examine the ground stability over the entire area and identify areas suitable for development and, if required, suitable building platforms. It must also identify any areas where development, including earthworks, should be restricted.
- b. Integrated Transport Assessment
  - i. Applications for subdivision activities must provide an Integrated Transport Assessment (ITA) unless one has already been provided and accepted as part of an earlier subdivision consent. The ITA must consider the need for a suitable pedestrian crossing facility on Main South Road.

Figure 15.8.ARA: Sunnyvale structure plan

## Rule 15.9 Assessment of Controlled Activities

### Rule 15.9.1 Introduction

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 15.9.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:

- a. if the contravention of the performance standard defaults to **restricted discretionary** then:
  - i. the activity, as a whole, will be treated as **restricted discretionary**; and
  - ii. the performance standard contravention will be assessed as indicated in Section 15.10; and
  - iii. the matters of control become matters of discretion and will be assessed as indicated in this section.
  
- b. if the contravention of the performance standard defaults to **discretionary** then:
  - i. the activity, as a whole, will be treated as **discretionary**; and
  - ii. the performance standard contravention will be assessed as indicated in Section 15.12; and
  - iii. the assessment guidance in this section will also be considered.
  
- c. if the contravention of the performance standard defaults to **non-complying** then:
  - i. the activity, as a whole, will be **non-complying**; and
  - ii. the performance standard contravention will be assessed as indicated in Section 15.13; and
  - iii. the assessment guidance in this section will also be considered.

<b>15.9.2 Assessment of controlled activities</b>		
Activity	Matters of control	Guidance on the assessment of resource consents
1. Affecting a scheduled heritage building or a scheduled heritage structure: <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected.</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing as detailed in Appendix A1.1</li> </ul>	a. Effects on heritage values	See Rule 13.4
2. In a heritage precinct, additions and alterations to a non character-contributing building that involve: <ul style="list-style-type: none"> <li>• an increase in the footprint of 10m<sup>2</sup> or more;</li> <li>• an increase in the height of the building by more than 2m; or</li> <li>• the replacement of a pitched roof with a mono pitch roof.</li> </ul>	a. Effect on heritage streetscape character	See Rule 13.4

## Rule 15.10 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### Rule 15.10.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 15.10.2 - 15.10.6:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 15.10.2 - 15.10.6 apply as follows:
  - a. Rule 15.10.2 applies to all performance standard contraventions;
  - b. Rule 15.10.3 applies to land use performance standard contraventions;
  - c. Rule 15.10.4 applies to development performance standard contraventions;
  - d. Rule 15.10.5 applies to subdivision performance standard contraventions; and
  - e. Rule 15.10.6 applies to performance standards that apply in an overlay zone, mapped area, heritage precinct or affecting a scheduled heritage item.

### 15.10.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards or topography, or other site specific factors, make meeting the standard impracticable.</li> <li>c. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>d. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> <li>e. In balancing consideration of the objectives and policies related to the maintenance of heritage values or heritage precinct streetscape character and those related to general amenity, greater weight will usually be placed on heritage policies.</li> </ol>

### 15.10.3 Assessment of land use performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Density - (rules 15.5.2.1.c.ii and 15.5.2.3) all residential units are able to meet bulk and location performance standards	a. Effects on on-site amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.2</li> <li>ii. Residential development achieves high quality on-site amenity for residents (Policy 15.2.2.1).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. Non-compliance with rules 15.5.2.4.c or 15.5.2.3 will be assessed based on which performance standard(s) the second residential building does not provide for compliance with, if subdivided in future. See assessment rules in relation to performance standard contraventions for: <ul style="list-style-type: none"> <li>1. site coverage;</li> <li>2. height in relation to boundary;</li> <li>3. setbacks; and</li> <li>4. access.</li> </ul> </li> </ul>
2.	Density - (Rule 15.5.2.4.a) Papakāika	a. Effects on cultural values of Manawhenua	See Rule 14.3
		b. NA	NA
		c. Effects on the safety and efficiency of the transport network	See Rule 6.10
3.	Density <ul style="list-style-type: none"> <li>• standard residential in General Residential 2 Zone <b>wastewater constraint mapped area</b> (Rule 15.5.2.4.b)</li> <li>• standard residential in ICR Zone (Rule 15.5.2.4.X)</li> </ul>	a. Effects on efficiency and affordability of infrastructure	See Rule 9.5

### 15.10.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
X. Density <ul style="list-style-type: none"> <li>social housing in the GR1 Zone or T&amp;S Zone (except in a <b>no DCC reticulated wastewater mapped area</b>) (Rule 15.5.2.4.y)</li> </ul>	a. Effects on efficiency and affordability of infrastructure	See Rule 9.5.
	b. Effects on accessibility	See Rule 6.10.
	c. Effects on neighbourhood residential character and amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.4.</li> <li>ii. Where residential activity exceeds the permitted density, the built form of any new development, as viewed from public places, reflects the existing residential character or intended future character of the zone as set out in the residential zone descriptions (Policy 15.2.4.2).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the effects on neighbourhood character and amenity from social housing proposals that contravene the density standard, Council will only consider character effects in terms of the proposed scale and built form of development and this consideration will be made without public or limited notification (see Rule 15.4).</li> <li>iv. The assessment of character and amenity will consider the potential adverse effects from repeated, standardised, or visually monotonous design of large blocks of similar housing and will consider what design tools have been used to create visually diverse neighbourhood appearance.</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>v. For large scale social housing proposals an appropriate mix of building typologies and design elements is proposed.</li> </ul>

### 15.10.3 Assessment of land use performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
4.	Ancillary residential units - design	a. Effects on neighbourhood residential character and amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.4.</li> <li>ii. Stand-alone ancillary residential units between 60m<sup>2</sup> and 80m<sup>2</sup> gross floor area are designed and located to ensure that streetscape and neighbourhood amenity is maintained or enhanced (Policy 15.2.4.3).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. NA</li> <li>iv. The design of the ancillary residential unit matches the design of the primary residential building.</li> <li>v. Landscaping or other forms of screening will be used to reduce the visibility of the ancillary residential unit.</li> <li>vi. The ancillary residential unit will not be easily viewed from outside the site.</li> <li>vii. NA</li> <li>viii. NA</li> </ul>
6.	Hours of operation	a. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.3</li> <li>ii. Working from home, dairies, training of education, and community and leisure operate in a way (including hours of operation), that avoids or, if avoidance is not practicable, adequately mitigates, effects on the amenity of surrounding properties (Policy 15.2.3.2).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The extension of hours will not result in unreasonable disturbance from vehicle headlights, deliveries/pick-ups, vehicle movements, or other noise.</li> </ul>
7.	Location	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.1</li> <li>ii. Activities ancillary to visitor accommodation are located and designed to cater to patrons of the primary activity rather than the general public (Policy 15.2.1.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The ancillary activity is designed and managed so as to be unlikely to attract external customers.</li> <li>iv. There will be no external advertising on buildings facing the street, for the ancillary activity.</li> </ul>

### 15.10.3 Assessment of land use performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
8.	Minimum mobility car parking	<p>a. Effects on accessibility</p> <p>b. Effects on the safety and efficiency of the transport network</p>	See Rule 6.10
9.	Minimum vehicle loading	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
10.	Outdoor living space	a. Effects on on-site amenity for residents	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 15.2.2</p> <p>ii. Residential development achieves high quality on-site amenity by providing functional, sunny, and accessible outdoor living spaces that allow enough space for on-site food production, leisure, green space or recreation (Policy 15.2.2.1.a).</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>iii. The property is within a short walking distance from public green space.</p> <p>iv. Juliet balconies (balconies less than the width required by the rule, including zero depth) with glass doors that can be opened to create an opening greater than 1m wide and allow direct sunlight into the principal living area, may be acceptable if alternate shared outdoor living space is available and easily accessed and it is more compatible with the design of the dwelling than alternative balcony forms.</p>
11.	Service areas	a. Effects on on-site amenity for residents	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 15.2.2</p> <p>ii. Adequate space is available for service areas (Policy 15.2.2.1.d).</p>

### 15.10.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
----------------------	-----------------------	---

**15.10.4 Assessment of development performance standard contraventions**

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. Boundary setback	a. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.3.</li> <li>ii. Buildings and structures are of a height and setback from boundaries that ensures no more than minor effects on the sunlight access of current and future residential buildings and their outdoor amenity spaces (Policy 15.2.3.1).</li> <li>iii. In the Inner City Residential Zone, buildings and structures are of a height and setback from boundaries that avoids or, if avoidance is not practicable, adequately mitigates adverse effects on sunlight access on outdoor space at the rear of adjacent sites (Policy 15.2.3.3.c).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Residential buildings on neighbouring sites receive adequate natural light and privacy.</li> <li>v. The reduced setback will mirror the setback of the adjacent residential building, both in minimum distance from the boundary, and the maximum extent to which the encroachment occurs along the boundary (including length and height).</li> <li>vi. There are no windows from living or sleeping areas proposed along the wall of the new building or existing along the wall of any adjacent parallel residential building.</li> </ul>
	b. Effects on neighbourhood residential character and amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.4.</li> <li>ii. Development maintains or enhances streetscape amenity by ensuring buildings' height, boundary setbacks, and scale reflect existing or intended future residential character (Policy 15.2.4.1.c).</li> <li>iii. In the Inner City Residential Zone, buildings and structures are of a height and setback from boundaries that:               <ul style="list-style-type: none"> <li>1. enables a high quality, medium density development (Policy 15.2.3.3.a);</li> <li>2. is consistent with the existing streetscape character of the zone (Policy 15.2.3.3.b).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. The boundary setback is consistent with surrounding properties.</li> <li>v. Landscaping or fences screen or soften the visual effects of buildings.</li> <li>vi. The building is designed to integrate with residential buildings on the site and contribute to residential character and amenity e.g. similar materials to residential buildings, and roof pitch.</li> </ul>

### 15.10.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
2.	Boundary setback - (Rule 15.6.13.1.a.viii.3) garages and carports setback from road boundary	a. Effects on health and safety	See Rule 6.10.
3.	Building length	a. Effects on neighbourhood residential character and amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.4.</li> <li>ii. Development maintains or enhances streetscape amenity by ensuring buildings' scale reflect existing or intended future residential character (Policy 15.2.4.1.c).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The bulk of the building is broken up by: <ul style="list-style-type: none"> <li>1. varying building elevations;</li> <li>2. setting parts of the building back;</li> <li>3. using different textures;</li> <li>4. architectural features; or</li> <li>5. other forms of building modulation.</li> </ul> </li> <li>iv. The visual impact of the building length is screened and softened by landscaping, fencing, or other screening, which provides an attractive interface for surrounding properties.</li> <li>v. The building is set back from boundaries an adequate distance to avoid shading or visual effects on adjacent residential properties or public places.</li> <li>vi. Topography of the site mitigates the effects of the building scale on adjacent residential properties or public places.</li> <li>vii. In the case of buildings to be used for emergency services, there is a need for longer buildings to meet operational requirements.</li> </ul>

#### 15.10.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
4.	Fence height and design	a. Effects on health and safety	See Rule 9.5.
		b. Effects on neighbourhood residential character and amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.4.</li> <li>ii. Fences are of a height and design that contributes positively to the streetscape amenity and character of the neighbourhood (Policy 15.2.4.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The increased height or reduced visual permeability is necessary to meet protection requirements, to provide security, minimise noise effects from a busy road or activity, or for public well-being.</li> <li>iv. An attractive interface with the street is achieved.</li> <li>v. The fence will be screened by landscaping. <ul style="list-style-type: none"> <li>X. The fence is replacing a hedge of similar (or greater) height and visual permeability.</li> </ul> </li> </ul>
5.	Firefighting	a. Effects on health and safety	See Rule 9.5.
6.	Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5.

### 15.10.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
7. <ul style="list-style-type: none"> <li>• Maximum height</li> <li>• Height in relation to boundary</li> </ul>	a. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.3.</li> <li>ii. Buildings and structures are of a height and setback from boundaries that ensures no more than minor effects on the sunlight access of current and future residential buildings and their outdoor living spaces (Policy 15.2.3.1).</li> <li>iii. In the Inner City Residential Zone, buildings and structures are of a height and setback from boundaries that avoids or, if avoidance is not practicable, adequately mitigates adverse effects on sunlight access on outdoor space at the rear of adjacent sites (Policy 15.2.3.3.c).</li> </ul>
	b. Effects on neighbourhood residential character and amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.4.</li> <li>ii. Development maintains or enhances streetscape amenity by ensuring buildings' height, boundary setbacks, and scale reflect existing or intended future residential character (Policy 15.2.4.1.c).</li> <li>iii. In the Inner City Residential Zone, buildings and structures are of a height and setback from boundaries that:               <ul style="list-style-type: none"> <li>1. enables a high quality, medium density development (Policy 15.2.3.3.a);</li> <li>2. is consistent with the existing streetscape character of the zone (Policy 15.2.3.3.b).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. The height and/or height in relation to boundary is consistent with surrounding properties.</li> <li>v. Landscaping or fences screen or soften the visual effects of buildings.</li> <li>vi. Natural landforms or topography (e.g. cliffs, tall trees on adjacent reserves) provide a backdrop to the building.</li> </ul>

#### 15.10.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
8.	Location and screening of car parking	a. Effects on neighbourhood residential character and amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.4, 6.2.1.</li> <li>ii. Garages, carports, and car parking do not dominate the street (Policy 15.2.4.1a).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Landscaping or other features soften the impact of these activities.</li> <li>iv. In order to meet Rule 6.6.1.2.a.i (requirement to not reverse onto a motorway, strategic road, arterial road, urban high density corridor, commercial centre street, or collector road), there are no reasonably practicable alternatives other than to contravene the standard.</li> </ul>
9.	Location and screening of outdoor storage	a. Effects on neighbourhood residential character and amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.4.</li> <li>ii. Development maintains or enhances streetscape amenity by ensuring shared service areas are not visible from ground level from outside the site (Policy 15.2.4.1.d).</li> <li>iii. Development maintains or enhances streetscape amenity by ensuring outdoor storage is managed in a way that does not result in unreasonable visual amenity effects or create nuisance effects (Policy 15.2.4.1.e).</li> </ul>
10.	Maximum building site coverage and impermeable surfaces	a. Effects on on-site amenity for residents	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.2.</li> <li>ii. Residential development achieves high quality on-site amenity by retaining adequate open space uncluttered by buildings (Policy 15.2.2.1.c).</li> </ul>
		b. Effects on neighbourhood residential character and amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.4.</li> <li>ii. Development maintains or enhances streetscape amenity and by ensuring there are adequate green space areas free from buildings or hard surfacing (Policy 15.2.4.1.b).</li> </ul>
		c. Effects on efficiency and affordability of infrastructure (stormwater)	See Rule 9.5.
		d. Effects of stormwater from future development	

#### 15.10.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
11.	Number, location and design of ancillary signs	a. Effects on neighbourhood residential character and amenity	<i>Relevant objectives and policies:</i> i. Objective 15.2.4. ii. Ancillary signs are located and designed to maintain residential amenity by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles and not being oversized or too numerous for what is necessary for that purpose (Policy 15.2.4.5).
		b. Effects on the safety and efficiency of the transport network	See Rule 6.10.
12.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10.
13.	Setback from coast and water bodies	a. Effects on biodiversity values and natural character of riparian margins and the coast	See Rule 10.5.
		b. Effects on public access	
		c. Risk from natural hazards	See Rule 11.4.
14.	Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6.
X.	Setback from designated rail corridor	a. Effects on the safety and efficiency of the transport network	See Rule 6.10.6.

### 15.10.5 Assessment of subdivision performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. Access	a. Effects on accessibility	See Rule 6.10
2. Esplanade reserves and strips	a. Effects on biodiversity values and the natural character of riparian margins and the coast	See Rule 10.5
	b. Effects on public access	
3. Firefighting	a. Effects on health and safety	See Rule 9.5
4. Minimum site size - (Rule 15.7.4.2)	a. Effects on neighbourhood residential character and amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 2.4.1</li> <li>ii. Resultant sites are of a size: <ul style="list-style-type: none"> <li>1. that provides for compliance of all relevant land use and development performance standards; and</li> <li>2. where in a <b>structure plan mapped area</b>, reflects the requirements of the <b>structure plan mapped area</b> performance standards (Policy 2.4.1.8).</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <p>X. For subdivision concurrent with an application for multi-unit development, Council will generally only grant subdivision consent where the land use consent is also granted.</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The adjustment of site boundaries is necessary to achieve: <ul style="list-style-type: none"> <li>1. a more balanced division of site sizes relative to an existing residential buildings size, location or access requirements;</li> <li>2. better alignment with topographical or other site development constraints; or</li> <li>3. the protection of heritage items, significant trees, indigenous vegetation, or waterways on a site.</li> </ul> </li> </ul> <p><i>Conditions of consent that may be imposed include:</i></p> <p>Y. For subdivision concurrent with an application for multi-unit development or an approved land use consent for multi-unit development but where the development has not been established, a condition requiring that the development is established in accordance with the approved land use consent prior to certification of the survey plan pursuant to section 223 of the RMA.</p>

15.10.5 Assessment of subdivision performance standard contraventions		
Performance standard	Matters of discretion	Guidance on the assessment of resource consents
5. Service connections	a. Effects on efficiency and affordability of infrastructure	See Rule 9.5
6. Shape	<p><i>Relevant objectives and policies:</i></p> <p>a. Objective 2.4.1</p> <p>b. Subdivision is designed to ensure any future land use or development is able to meet the performance standards in the zone, or where in a <b>structure plan mapped area</b>, reflects the requirements of the <b>structure plan mapped area</b> performance standards, unless:</p> <p>i. a resource consent is approved for a development that does not meet the performance standard and the subdivision is intended for and capable of providing for that approved development; or</p> <p>ii. the resultant site is required for:</p> <ol style="list-style-type: none"> <li>1. Scheduled ASBV; QEII covenant; or</li> <li>2. reserve; or</li> <li>3. access; or</li> <li>4. utility; or</li> <li>5. road (Policy 2.4.1.8).</li> </ol> <p><i>General assessment guidance:</i></p> <p>c. Non-compliance with the performance standard for shape will be assessed based on which performance standard(s) the shape of the resultant site does not provide for compliance with. See matters of discretion and assessment rules in relation to performance standard contraventions for:</p> <ol style="list-style-type: none"> <li>i. outdoor living space;</li> <li>ii. NA;</li> <li>iii. boundary setbacks;</li> <li>iv. setbacks from water bodies; and</li> <li>v. setback from scheduled tree.</li> <li>vi. NA.</li> </ol> <p>d. For contravention of the building platform slope part of the shape performance standard (Rule 15.7.6.2), see the matters of discretion and assessment rules in relation to earthworks - large scale (Rule 8A.7.2.1).</p> <p><i>Conditions that may be imposed include:</i></p> <p>e. Restrictions or conditions, including by way of consent notice, on land use or development activities allowed on the site.</p> <p>f. A building platform may be required to be registered against the title by way of consent notice.</p>	

**15.10.6 Assessment of restricted discretionary performance standard contraventions in an overlay zone, mapped area, heritage precinct or affecting a scheduled heritage item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>1. In a <b>hazard overlay zone</b> or <b>swale mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Hazard exclusion areas (Rule 11.3.1.1) – <b>Swale mapped area</b></li> <li>• Maximum area of vegetation clearance in the hazard overlay zones (Hazard 1 or 2 (land instability) Overlay Zones)</li> <li>• Relocatable buildings (Hazard 3 (coastal) Overlay Zone)</li> <li>• Outdoor Storage (Hazard 1 (flood) Overlay Zone)</li> <li>• Hazardous substances quantity limits and storage requirements</li> </ul>	<p>a. Risk from natural hazards</p>	<p>See Rule 11.4</p>
<p>2. In an <b>urban biodiversity mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Vegetation clearance standards: Maximum area of vegetation clearance (UBMA)</li> </ul>	<p>a. Effects on biodiversity values</p>	<p>See Rule 10.5</p>
<p>3. In a <b>Huriawa height restriction mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Maximum height</li> </ul>	<p>a. Effects on cultural values of Manawhenua</p>	<p>See Rule 14.3</p>
<p>4. In a <b>heritage precinct</b>:</p> <ul style="list-style-type: none"> <li>• Fence height and design</li> <li>• Materials and design</li> <li>• Maximum height</li> <li>• Height in relation to boundary</li> <li>• Location and screening of car parking</li> <li>• Number, location and design of ancillary signs (Rule 15.6.11.6.d) - Freestanding signs ancillary to commercial and community activities in the George Street North Residential Heritage Precinct and North Ground Residential Heritage Precinct</li> </ul>	<p>a. Effects on heritage streetscape character</p>	<p>See Rule 13.5</p>
<p>5. In a <b>wāhi tūpuna mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Esplanade reserves and strips</li> <li>• Setback from coast and water bodies</li> </ul>	<p>a. Effects on cultural values of Manawhenua</p>	<p>See Rule 14.3</p>
<p>6. Affecting a <b>scheduled heritage building or scheduled heritage structure</b>:</p> <ul style="list-style-type: none"> <li>• Materials and design</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.5</p>

**15.10.6 Assessment of restricted discretionary performance standard contraventions in an overlay zone, mapped area, heritage precinct or affecting a scheduled heritage item**

Activity		Matters of discretion	Guidance on the assessment of resource consents
7.	In the <b>Taieri Aerodrome flight fan mapped area</b> : <ul style="list-style-type: none"> <li>• Maximum height (Rule 15.6.6.2.b)</li> </ul>	a. Effects on health and safety	See Rule 9.5
X.	In the SNL Overlay Zone: <ul style="list-style-type: none"> <li>• Maximum height</li> <li>• Area of buildings and structures</li> <li>• Reflectivity</li> </ul>	a. Effects on landscape values	See Rule 10.5.
Y.	In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> : <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (buildings, structures, citywide activities)</li> </ul>	a. Effects on health and safety  b. Effects on efficient and effective operation of network utilities	See Rule 5.7.

**15.10.6 Assessment of restricted discretionary performance standard contraventions in an overlay zone, mapped area, heritage precinct or affecting a scheduled heritage item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>Z. In the <b>Variation 2 mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Maximum building site coverage and impermeable surfaces (Rule 15.10.4.Y minimum landscaping)</li> <li>• Minimum landscaping (Rule 15.7.Y)</li> </ul>	<p>a. Effects on neighbourhood residential character and amenity</p>	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>i. Objective 15.2.4.</li> <li>ii. The activity maintains or enhances streetscape amenity by ensuring there are adequate green space areas free from buildings or hard surfacing (Policy 15.2.4.1.b).</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>iii. For trees that are within the required boundary setback, Council will consider whether there will likely be adequate space for the canopy to grow and whether any part of the canopy that extends beyond the boundary will likely create a nuisance or require cutting back in a way which could damage the health of the tree.</li> <li>iv. For proposals which seek to use different plant species than required by the rule, Council will consider the relative contribution of the proposed planting to amenity and character and its support for native animal species.</li> </ol>
<p>AA. In a <b>stormwater open watercourse mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Setback from <b>stormwater open watercourse mapped area</b> (Rule 10.3.3)</li> </ul>	<p>a. Effects on the efficiency and affordability of infrastructure</p>	<p>See Rule 9.5.</p>
<p>AB. In a <b>new development mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Service connections – stormwater for development</li> </ul>	<p>a. Effectiveness and efficiency of stormwater management and effects of stormwater from future development</p>	<p>See Rule 9.5.</p>

## Rule 15.11 Assessment of Restricted Discretionary Activities

### Rule 15.11.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 15.11.2 - 15.11.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 15.11.2 - 15.11.5 apply as follows:
  - a. Rule 15.11.2 applies to restricted discretionary land use activities;
  - b. Rule 15.11.3 applies to restricted discretionary development activities;
  - c. Rule 15.11.4 applies to restricted discretionary subdivision activities; and
  - d. Rule 15.11.5 applies to activities that are restricted discretionary due to a rule that applies in an overlay zone, mapped area, heritage precinct, or affecting a scheduled heritage item.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 15.10; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 15.12; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 15.13; and

iii. the assessment guidance in this section will also be considered.

6. With respect to section 104(2), Council will not consider ancillary residential units as part of the permitted baseline in considering residential density effects in the residential zones.

### 15.11.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All restricted discretionary land use activities in the residential zones, including but not limited to the activities listed below	a. Effects on accessibility	See Rule 6.11
	b. Effects on the safety and efficiency of the transport network	
	c. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.3</li> <li>ii. Activities are designed to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 15.2.3.4).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the effects on amenity, Council will:               <ul style="list-style-type: none"> <li>1. consider the effects of vehicle movements on the site as well as any significant changes to the number and nature of vehicle movements on the adjoining road, and the appropriateness of higher levels of vehicle movements based on the road classification hierarchy in Appendix 6A; and</li> <li>2. consider the relevant policies for development activities, including policies 15.2.3.1, 15.2.3.3, 15.2.4.1.</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Performance standards for development activities are met.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>v. Conditions on signage, lighting, hours of operation.</li> <li>vi. Delivery time restrictions.</li> <li>vii. Requirements for fencing or landscaping of car parking areas to minimise adverse visual and nuisance effects from lighting and/or vehicle headlights on surrounding properties.</li> </ul>

### 15.11.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
	d. Effects on streetscape amenity and character	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.4</li> <li>ii. Activities are designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on streetscape amenity (Policy 15.2.4.7).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the effects on amenity, Council will:               <ul style="list-style-type: none"> <li>1. consider the effects of vehicle movements on the site as well as any significant changes to the number and nature of vehicle movements on the adjoining road, and the appropriateness of higher levels of vehicle movements based on the road classification hierarchy in Appendix 6A; and</li> <li>2. consider the relevant policies for development activities, including policies 15.2.3.1, 15.2.3.3, 15.2.4.1.</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Performance standards for development activities are met.</li> </ul>
2. Cemeteries	a. Effects on surrounding sites' residential amenity.	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.3</li> <li>ii. Cemeteries are designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties and avoid, as far as practicable, the potential for reverse sensitivity (Policy 15.2.3.5).</li> </ul> <p><i>General assessment guidance/Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the effects on amenity, Council will consider the location of graves being a suitable distance away from boundaries and any screening or landscaping proposed. These aspects may be included as conditions of consent.</li> </ul>
	b. Effects on cultural values of Manawhenua	See Rule 14.4

### 15.11.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
3. Emergency Services	a. Effects on the safety and efficiency of the transport network	See Rule 6.11
	b. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.3</li> <li>ii. Activities are designed to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 15.2.3.4).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the effects on amenity, Council will consider:               <ul style="list-style-type: none"> <li>1. whether the facility has been designed to minimise effects on surrounding sites amenity.</li> <li>2. the functional requirements and operational needs of the emergency service when considering the above matters.</li> </ul> </li> </ul>
	c. Positive effects for natural hazard resilience	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Policy 2.2.1.11</li> </ul>
4. Restaurants, retail, or conference, meeting and function ancillary to visitor accommodation	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.1</li> <li>ii. Activities ancillary to visitor accommodation are located and designed to cater to patrons of the primary activity rather than the general public (Policy 15.2.1.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The ancillary activity is designed and managed so as to be unlikely to attract external customers.</li> <li>iv. There will be no external advertising on buildings facing the street, for the ancillary activity.</li> <li>v. Communal outdoor gathering areas are located or screened to minimise effects on adjacent residential properties.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>vi. Entrances to be located internally to the visitor accommodation.</li> <li>vii. No signs related to the ancillary activity to be visible from a public place.</li> </ul>

15.11.2 Assessment of restricted discretionary land use activities		
Activity	Matters of discretion	Guidance on the assessment of resource consents
5. Supported living facilities	a. Effects on efficiency and affordability of infrastructure	See Rule 9.6
	X. Effects of stormwater from future development	
	b. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.3.</li> <li>ii. Supported living facilities are designed to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 15.2.3.4).</li> </ul> <p><i>Potential circumstances that may support a consent application:</i></p> <ul style="list-style-type: none"> <li>iii. Communal outdoor gathering areas are located or screened to minimise effects on adjacent residential properties.</li> </ul>
6. Early childhood education - small scale	a. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.3.</li> <li>ii. Early childhood education - small scale are designed to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 15.2.3.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. For early childhood education centres: <ul style="list-style-type: none"> <li>1. acoustic insulation, acoustic fencing, low noise surfaces for play areas, or other such treatments; and</li> <li>2. use of a noise management plan.</li> </ul> </li> </ul>

### 15.11.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
7. Visitor accommodation, other than in the George Street North residential heritage precinct	a. Effects on surrounding sites' residential amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.3.</li> <li>ii. Visitor accommodation is designed to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 15.2.3.4).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Communal outdoor gathering areas are located or screened to minimise effects on adjacent residential properties.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iv. For campgrounds:               <ul style="list-style-type: none"> <li>1. Limits on the scale of the activity.</li> <li>2. Location of dump stations (for disposal of waste from motor homes) away from boundaries with residential properties.</li> <li>3. Restrictions on location and hours of operation of generators to minimise any effects from noise on neighbours.</li> <li>4. Road upgrades necessary to handle the amount and type of vehicles anticipated.</li> <li>5. Location, screening, or acoustic fencing of communal outdoor living/ gathering areas.</li> </ul> </li> </ul>
	X. Effects on efficiency and affordability of infrastructure	See Rule 9.6.

### 15.11.3 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>1. New buildings or additions and alterations to buildings that result in:</p> <ul style="list-style-type: none"> <li>• a building that is greater than 300m<sup>2</sup> footprint or</li> <li>• a multi-unit development</li> </ul>	<p>a. Effects on streetscape amenity and character</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.4</li> <li>ii. Buildings over 300m<sup>2</sup> footprint and multi-unit developments are designed to maintain or enhance streetscape and neighbourhood amenity and character (Policy 15.2.4.8)</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing the effects on amenity Council will consider whether building design reflects, and is conducive with, the residential scale. The cumulative effect of buildings on the streetscape amenity will also be considered.</li> <li>iv. In assessing the effects on streetscape amenity and character, Council will consider: <ul style="list-style-type: none"> <li>1. building design and placement in terms of appropriateness for the context of the site, including: considering the appropriateness of form (roof pitch, scale, massing, window placement, entrance detailing, and/or proportion) and materials</li> <li>2. any landscaping proposed and its effectiveness in enhancing amenity and/or mitigating adverse effects</li> <li>3. the level of visibility from the street</li> <li>4. the location of any car parking</li> <li>5. whether the development provides adequate green space and maintains an appropriate balance of green space vs built and hard features</li> <li>6. whether the development has the potential to adversely affect any heritage streetscape values in the immediate neighbourhood</li> </ul> </li> <li>v. in general, where a new building is located within an integrated group of buildings that contribute strongly to the heritage streetscape character of the immediate neighbourhood, design maintains the coherence of the group and the contribution it makes to the overall character and amenity.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>vi. Requirements for design features to break up the bulk of the building, for example by varying building elevations, by setting parts of the building back, use of different textures, by the use of architectural features, or modulation.</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>vii. The visual effects of the building is screened and softened by landscaping, fencing, or other screening, which provides an attractive interface with the street.</li> <li>viii. The building is set back from boundaries adequate distance to</li> </ul>

### 15.11.3 Assessment of restricted discretionary development activities

Activity		Matters of discretion	Guidance on the assessment of resource consents
			<p>avoid shading or visual effects on adjacent residential properties or public places.</p> <p>ix. Topography of the site mitigates the effects of the building scale on adjacent residential properties or public places.</p>
X.	New buildings or additions and alterations to buildings that result in a multi-unit development	<p>a. Effects on efficiency and affordability of infrastructure (stormwater)</p> <p>b. Effects of stormwater from future development</p>	See Rule 9.6.
Z.	<p>In the General Residential 1 Zone or Township and Settlement Zone (except within a <b>no DCC reticulated wastewater mapped area</b>):</p> <ul style="list-style-type: none"> <li>New buildings or additions and alterations to buildings that result in a multi-unit development</li> </ul>	a. Effects on the safety and efficiency of the transport network	See Rule 6.11.
2.	<p>High trip generators:</p> <ul style="list-style-type: none"> <li>New or additions to parking areas that result in 50 or more new parking spaces</li> </ul>	<p>a. Effects on the safety and efficiency of the transport network</p> <p>b. Effects on accessibility</p>	See Rule 6.11.

15.11.4 Assessment of restricted discretionary subdivision activities		
Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All subdivision activities	a. Effects on neighbourhood residential character and amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 15.2.4.</li> <li>ii. Subdivision is designed to ensure any future land use and development will:               <ul style="list-style-type: none"> <li>1. maintain the amenity of the streetscape;</li> <li>2. reflect the current or future intended character of the neighbourhood;</li> <li>3. provide for development to occur without unreasonable earthworks or engineering requirements; and</li> <li>4. provide for quality housing (Policy 15.2.4.6).</li> </ul> </li> </ul> <p><i>Design considerations that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The layout of the subdivision takes into account solar orientation and is designed to ensure future development will facilitate a high level of passive solar gain.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iv. Building platforms registered against the title by way of consent notice.</li> </ul>
	b. Risk from natural hazards	See Rule 11.5.
	c. Effects on efficiency and affordability of infrastructure	See Rule 9.6.
	X. Effects of stormwater from future development	
	d. Effects on the safety and efficiency of the transport network	See Rule 6.11.
2. All subdivision activities that involve a new road	a. Effects on the safety and efficiency of the transport network	See Rule 6.11.

**15.11.5 Assessment of restricted discretionary activities in an overlay zone, mapped area, heritage precinct or affecting a scheduled heritage item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In a <b>hazard 1 or 2 (flood) overlay zone</b> (see Rule 15.3.6): <ul style="list-style-type: none"> <li>• New buildings, and additions and alterations to buildings that create within any two calendar-year period more than 36m<sup>2</sup> of new ground floor area</li> </ul>	a. Risk from natural hazards	See Rule 11.5
2. In <b>all hazard overlay zones, swale mapped areas and dune system mapped areas</b> : <ul style="list-style-type: none"> <li>• All subdivision activities</li> </ul>	a. Risk from natural hazards	See Rule 11.5
3. In a <b>UBMA</b> : <ul style="list-style-type: none"> <li>• All subdivision activities</li> </ul>	a. Effects on biodiversity values	See Rule 10.6
4. In a <b>heritage precinct</b> : <ul style="list-style-type: none"> <li>• All RD activities due to being in a heritage precinct</li> </ul>	a. Effects on heritage streetscape character	See Rule 13.6
5. Activities affecting a <b>scheduled heritage site</b> : <ul style="list-style-type: none"> <li>• New buildings and all other structures on a scheduled heritage site, where visible from an adjoining public place or a public place within the site</li> <li>• Parking, loading and access on a scheduled heritage site, where visible from an adjoining public place or a public place within the site</li> <li>• All subdivision activities</li> </ul>	a. Effects on heritage values	See Rule 13.6
6. Activities affecting a <b>scheduled heritage building</b> or a <b>scheduled heritage structure</b> : <ul style="list-style-type: none"> <li>• Additions and alterations that affect a protected part of a scheduled heritage building or scheduled heritage structure</li> <li>• Removal for relocation</li> <li>• All subdivision activities on sites containing a scheduled heritage building or scheduled heritage structure</li> </ul>	a. Effects on heritage values	See Rule 13.6
7. In a <b>wāhi tūpuna mapped area</b> where the activity is identified as a threat in Appendix A4: <ul style="list-style-type: none"> <li>• General subdivision</li> </ul>	a. Effects on cultural values of Manawhenua	See Rule 14.4

**15.11.5 Assessment of restricted discretionary activities in an overlay zone, mapped area, heritage precinct or affecting a scheduled heritage item**

Activity		Matters of discretion	Guidance on the assessment of resource consents
8.	In the <b>Hazard 2 (flood) Overlay Zone</b> : <ul style="list-style-type: none"> <li>Natural hazards sensitive activities</li> <li>Natural hazards potentially sensitive activities</li> </ul>	a. Risk from natural hazards	See Rule 11.5
9.	In the <b>National Grid Subdivision Corridor mapped area</b> : <ul style="list-style-type: none"> <li>All subdivision activities</li> </ul>	a. Risk to the safety of people and property b. Reverse sensitivity effects c. Effects on efficient and effective operation of the National Grid and access to it	See Rule 5.8.
AA.	In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> : <ul style="list-style-type: none"> <li>All subdivision activities</li> </ul>	a. Effects on health and safety b. Reverse sensitivity effects c. Effects on efficient and effective operation of network utilities	See Rule 5.8.

**15.11.5 Assessment of restricted discretionary activities in an overlay zone, mapped area, heritage precinct or affecting a scheduled heritage item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>Y. In a <b>new development mapped area</b>:</p> <ul style="list-style-type: none"> <li>All subdivision activities</li> </ul>	<p>a. Whether subdivision design supports energy-efficient housing</p> <p>b. Provision for amenity planting and public amenities</p> <p>c. Provision of recreation spaces</p> <p>d. Whether subdivision design maintains or enhances areas with important natural environment values</p> <p>e. Whether subdivision design supports efficient use of land</p> <p>f. Effectiveness and efficiency of stormwater management and effects of stormwater from future development</p> <p>g. Effects on efficient and effective operation of network utilities (electricity and telecommunications)</p> <p>h. Whether the subdivision design (including any associated off-site access and infrastructure) maintains or enhances significant heritage values</p>	<p>See Rule 12.X.</p> <p>See Rule 9.6.</p> <p>See Rule 12.X.</p> <p>See Rule 12.X.</p>
<p>Z. In the following <b>new development mapped areas</b>, all subdivision activities, multi-unit development, and supported living facilities:</p> <ul style="list-style-type: none"> <li>Wattie Fox Lane {<i>Variation 2 appeal</i>}</li> </ul>	<p>a. Effectiveness and efficiency of wastewater management and effects of wastewater from future development</p>	<p>See Rule 9.6.</p>
<p>AB. In the <b>Variation 2 mapped area</b>:</p> <ul style="list-style-type: none"> <li>New buildings or additions and alterations to buildings that result in a multi-unit development</li> </ul>	<p>a. Effects on the safety and efficiency of the transport network</p>	<p>See Rule 6.11.</p>

## Rule 15.12 Assessment of Discretionary Activities

### Rule 15.12.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 15.12.2 - 15.12.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 15.12.2 - 15.12.3 apply as follows:
  - a. Rule 15.12.2 applies to discretionary land use activities; and
  - b. Rule 15.12.3 applies to discretionary performance standard contraventions.
4. With respect to section 104(2), Council will not consider ancillary residential units as part of the permitted baseline in considering residential density effects in the residential zones.
5. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 15.12.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
1. All discretionary land use activities listed below	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. See Section 6.12 for guidance on the assessment of resource consents in relation to Objectives 6.2.2 and 6.2.3 and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>b. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>c. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ol>

### 15.12.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
<p>2. Registered health practitioners</p>	<p><i>Relevant objectives and policies (priority considerations)</i></p> <p>a. Objective 15.2.3</p> <p>b. Registered health practitioners are designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 15.2.3.4).</p> <p><i>General assessment guidance:</i></p> <p>c. In assessing the effects on amenity, Council will consider the effects of vehicle movements on the site as well as any significant changes to the number and nature of vehicle movement on the adjoining road, with consideration of the Road Hierarchy in Appendix 6A.</p> <p><i>Potential circumstance that may support a consent application include</i></p> <p>d. The scale of the facilities is appropriate to the residential environment, providing for a small number of registered health practitioners, rather than a medical centre, which should be located in a centre.</p> <p><i>Conditions that may be imposed include:</i></p> <p>e. Delivery/pick uptime restrictions.</p> <p>f. Landscaping to minimise amenity effects of lighting, vehicle headlights, or parking areas on surrounding properties.</p> <p>g. Number of registered practitioners to be employed.</p>
<p>3.</p> <ul style="list-style-type: none"> <li>• Early childhood education - large scale</li> <li>• Schools</li> </ul>	<p><i>Relevant objectives and policies (priority considerations)</i></p> <p>a. Objective 15.2.3</p> <p>b. Schools and early childhood education are designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 15.2.3.4).</p> <p><i>General assessment guidance:</i></p> <p>c. In assessing the effects on amenity Council will consider whether buildings and outdoor areas are designed and located to reduce noise emissions.</p> <p><i>Conditions that may be imposed include:</i></p> <p>d. Delivery time restrictions</p> <p>e. Landscaping to minimise amenity effects of lighting, vehicle headlights or parking areas on surrounding properties.</p> <p>f. Mitigation measures to minimise noise such as insulation, acoustic fencing, low noise surfaces for play areas, or other such treatments.</p> <p>g. A noise management plan may be required.</p>

### 15.12.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
<p>4. Sport and recreation (not involving the use of motor vehicles)</p>	<p><i>Relevant objectives and policies (priority considerations)</i></p> <ul style="list-style-type: none"> <li>a. Objective 15.2.3</li> <li>b. Sport and recreation is designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 15.2.3.4).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. In assessing the effects on amenity Council will consider whether buildings and outdoor areas are designed and located to reduce noise emissions.</li> <li>d. The design or location of the activity will not result in impacts or parking pressure on the surrounding residential environment.</li> <li>e. Hours of operation proposed are appropriate for the residential environment.</li> <li>f. The scale of the facilities is appropriate to the residential environment.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>g. Landscaping to minimise amenity effects of lighting, vehicle headlights or parking areas on surrounding properties.</li> <li>h. Hours of operation.</li> <li>i. Car parking requirements.</li> </ul>
<p>5. Stand-alone car parking</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 15.2.3</li> <li>b. Stand-alone car parking is designed and located in a way that avoids or, if avoidance is not practicable, adequately mitigates, adverse effects on the amenity of surrounding residential properties (Policy 15.2.3.4).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. In assessing the effects on the amenity of surrounding residential properties, Council will consider the effects of vehicle movements on the site as well as any significant changes to the number and nature of vehicle movement on the adjoining road, with consideration of the Road Hierarchy in Appendix 6A.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>d. Requirements for fencing or landscaping of car parking areas to minimise adverse visual or nuisance effects from lighting and/ or vehicle headlights on surrounding properties.</li> </ul>

### 15.12.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
<p>6. Restaurants or retail ancillary to sport and recreation</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 15.2.4</li> <li>b. Sport and recreation facilities are designed and operated in a way that avoids or, if avoidance is not practicable, adequately mitigates, adverse effects on streetscape amenity (Policy 15.2.4.7).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. The ancillary activity is designed and managed so as to be unlikely to attract external customers.</li> <li>d. There will be no external advertising on buildings facing the street, for the ancillary activity.</li> </ul>
<p>7. Service stations on a strategic road or arterial road</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 15.2.1, 15.2.3 and 15.2.4.</li> <li>b. Provide for service stations on a strategic road or arterial road where: <ul style="list-style-type: none"> <li>X. safe and convenient access to the site for pedestrians and cyclists can be provided;</li> <li>Y. there is adequate public infrastructure to service the development or any necessary upgrades to public infrastructure will be provided;</li> <li>Z. the service station will not detract from the economic and social vibrancy and viability of any nearby centres; and</li> <li>AA. policies 15.2.3.4 and 15.2.4.7 can be achieved (Policy 15.2.1.7).</li> </ul> </li> <li>c. Service stations are designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 15.2.3.4).</li> <li>d. Service stations are designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on streetscape amenity (Policy 15.2.4.7).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>e. In assessing the effects on the amenity of surrounding residential properties and the streetscape amenity, Council will consider the: <ul style="list-style-type: none"> <li>i. design and location of buildings, forecourts/yards and signs;</li> <li>ii. location of access/egress points;</li> <li>iii. effects of vehicle movements on the site; and</li> <li>iv. the hours of operation, light spill, noise and location of service station development in relation to site boundaries.</li> </ul> </li> <li>f. See Rule 6.12.2.1 for guidance on the assessment of the effects on the safety and efficiency of the transportation network, and other transportation effects. <ul style="list-style-type: none"> <li>X. In assessing the effects on public infrastructure, Council will consider the extent to which the service station is likely to attract pedestrians and cyclists and if necessary whether safe and convenient access for pedestrians and cyclists is available or will be provided.</li> </ul> </li> </ul>

### 15.12.2 Assessment of discretionary activities

Activity	Guidance on the assessment of resource consents
	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>Y. The service station is located on a site previously used for service station activity or that is otherwise a Hazardous Activities and Industries List (HAIL) site.</li> <li>Z. Any necessary upgrades to available public infrastructure will be made.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>g. Requirements for fencing, landscaping and/or setbacks of buildings, forecourts/yards, signs and access/egress points to minimise adverse visual or nuisance effects from noise, lighting and/or vehicle headlights on surrounding properties.</li> <li>h. Restrictions on hours of operation.</li> <li>i. Restrictions on on-site lighting.</li> <li>j. Requirements for screening of storage areas.</li> <li>k. Requirement to control dust.</li> <li>l. Conditions related to building design, scale and bulk including roof lines, height, façade articulation, colour and materials to ensure compatibility with surrounding residential amenity.</li> <li>m. Restrictions on signage.</li> </ul>

### 15.12.3 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1.</p> <ul style="list-style-type: none"> <li>• Acoustic insulation</li> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>
<p>2. Maximum gross floor area for working from home and dairies</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 15.2.3</p> <p>b. Working from home and dairies operate in a way that avoids or, if avoidance is not practicable, adequately mitigates, noise or other adverse effects on the amenity of surrounding residential properties (Policy 15.2.3.2).</p> <p>c. The size of working from home and dairies is compatible with the character and amenity of the residential zones (Policy 15.2.1.3.a).</p> <p>d. The size of working from home and dairies does not detract from the vibrancy and functioning of the centres hierarchy (Policy 15.2.1.3.b).</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>e. The degree of non-compliance with the performance standard is minor.</p> <p><i>General assessment guidance:</i></p> <p>f. In assessing the effects on amenity, Council will consider if:</p> <ul style="list-style-type: none"> <li>i. the increased scale of the activity will result in increased vehicle movements or parking requirements, or the need for additional outdoor storage.</li> <li>ii. the scale of the activity is appropriate to the residential environment and is secondary to the residential activity.</li> </ul>

### 15.12.3 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
3. Density (visitor accommodation)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objectives 15.2.3, 15.2.4</p> <p>b. Visitor accommodation is designed to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on the amenity of surrounding residential properties (Policy 15.2.3.4).</p> <p>c. Visitor accommodation is designed and located to avoid or, if avoidance is not practicable, adequately mitigate, adverse effects on streetscape amenity (Policy 15.2.4.7).</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>d. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.1 and effects related to the efficiency and affordability of infrastructure.</p> <p>e. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3 and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</p>
X. <b>Structure plan mapped area</b> performance standards: <ul style="list-style-type: none"> <li>• Areas of restricted development (hazard)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 11.6 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risk from natural hazards.</p>
Y. <b>Structure plan mapped area</b> performance standards: <ul style="list-style-type: none"> <li>• Areas of restricted development (hazard)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 11.6 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risk from natural hazards.</p>

## Rule 15.13 Assessment of Non-complying Activities

### Rule 15.13.1 Introduction

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 15.13.2 - 15.13.5 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. With respect to section 104(2), Council will not consider ancillary residential units as part of the permitted baseline in considering residential density effects in the residential zones.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 15.13.2 Assessment of all non-complying activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying land use activities listed below</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 15.2.1</p> <p><i>General assessment guidance:</i></p> <p>b. In assessing the significance of effects, consideration will be given to:</p> <ul style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the grant of resource consent.</li> <li>iii. any effects otherwise managed through performance standards and consistent with all relevant objectives and policies for the zone.</li> </ul> <p>c. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>d. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</p> <p>e. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</p> <p>f. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</p>

### 15.13.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
<p>1. Sport and recreation that involves motor vehicles</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objectives 15.2.1, 2.2.6</p> <p>b. Policies 15.2.1.6, 2.2.6.1.f</p>
<p>2. Commercial advertising</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 2.4.1</p> <p>b. Policy 2.4.1.6.c</p>

### 15.13.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
<p>3. All non-complying commercial activities</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 15.2.1</li> <li>b. Strategic Directions - Objective 2.4.3, Policy 2.4.3.4, Objective 2.3.2, Policy 2.3.2.2</li> <li>c. Commercial activities, other than those expressly provided for, are avoided from locating in residential zones, unless:               <ul style="list-style-type: none"> <li>i. the activity will not detract from the vibrancy and functioning of the centres hierarchy; and</li> <li>ii. the site is adjacent to a centre and it provides a logical extension to a centre; and</li> <li>iii. the centre is at, or very close to, capacity; and</li> <li>iv. the development activities are done in accordance with the performance standards of the street typology (if relevant) of the adjacent centre zoned sites; and</li> <li>v. the development maximises opportunities for integration with the centre; or</li> <li>vi. if the site is in the Township and Settlement Zone:                   <ul style="list-style-type: none"> <li>1. the commercial activity would have significant positive effects in terms of supporting the needs of the community and visitors to the area; and</li> <li>2. the activity is unable to be located in, or adjacent to, the nearest centre, or no centre exists within the relevant township or settlement; and</li> <li>3. the location is appropriate for the proposed activity; and</li> <li>4. any adverse effects from noise, vehicle movements, and on-street parking supply will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 15.2.1.5).</li> </ul> </li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>d. In assessing the effects on the vibrancy and functioning of the centres hierarchy, Council will also consider effects on the economic feasibility of any redevelopment necessary to maintain the vibrancy and attractiveness of those centres.</li> </ul>
<p>4.</p> <ul style="list-style-type: none"> <li>• All major facility activities (excluding cemeteries, emergency services and schools)</li> <li>• All rural activities (excluding grazing and scheduled mining activity)</li> <li>• All industrial activities</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 15.2.1</li> <li>b. Policy 15.2.1.6</li> </ul>

### 15.13.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
5. In the <b>hazard 1 (flood) overlay zones</b> : <ul style="list-style-type: none"> <li>Natural hazards potentially sensitive activities</li> <li>Natural hazards sensitive activities</li> </ul>	See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risk from natural hazards.

### 15.13.4 Assessment of non-complying development activities

Activity	Guidance on the assessment of resource consents
1. Demolition of a protected part of a scheduled heritage building or scheduled heritage structure	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1 and effects on heritage values.

### 15.13.5 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. Density	<i>Relevant objectives and policies (priority considerations):</i> a. Strategic Directions - Objectives 2.7.1 (policies 2.7.1.1, 2.7.1.3), 2.4.1 (Policy 2.4.1.5). b. Objective 15.2.4, Policy 15.2.4.2. c. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.1 and effects related to the efficiency and affordability of infrastructure.
2. <ul style="list-style-type: none"> <li>Light spill - where the limit is exceeded by greater than 25%</li> <li>Noise - where the limit is exceeded by 5dB LAeq (15 min) or more</li> <li>Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.
3. <ul style="list-style-type: none"> <li>Setback from National Grid (buildings, structures, city-wide activities, and National Grid sensitive activities (Rule 5.6.1.1).</li> <li>Setback from National Grid (subdivision activities) (Rule 15.7.X)</li> </ul>	<i>Relevant guidance from other sections:</i> a. See Section 5.10 for guidance on the assessment of resource consents in relation to Objective 5.2.X and effects related to the operation, maintenance, upgrading and development of the National Grid.

### 15.13.5 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
4. Minimum site size	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objectives 15.2.4, 9.2.1</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>b. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.1 and effects related to the efficiency and affordability of infrastructure.</p>
5. <b>Structure plan mapped area</b> performance standards	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. The objectives and policies that should be considered as a priority will depend on the specific issues being managed through the structure plan rules, which vary from site to site. All objectives and policies related to managing the relevant issues should be considered.</p>
6. NA	NA

## Rule 15.14 Special Information Requirements

### 15.14.1 Papakāika - ownership and occupation

For papakāika activity, proof that both the owner and occupier of the land fall into one of the classes listed in the definition of papakāika is required. Proof can be obtained from the Māori Land Court or the Ngāi Tahu Whakapapa Unit.

## 16. Rural Zones

### 16.1 Introduction

Dunedin's rural environment is large, at around 314,822 hectares or approximately 96% of the total land area of the city. This rural environment is highly varied, stretching from coastal lowlands north and south of the main urban part of the city, through river plains, valley systems, hill country and rolling uplands, to the inland mountain ranges at the western extent of the city.

The rural environment is dominated by pastoral farming in many areas, which contributes to the sense of openness and low density of development throughout much of Dunedin. Significant areas of indigenous vegetation and habitat for indigenous fauna are found across the city, ranging from estuarine and coastal habitat through to alpine plant communities on the Rock and Pillar and Lammermoor ranges. Plantation forestry is found mainly on the hills to the north of the Taieri Plain or in the southern coastal parts of the city.

The principal functions of the rural environment are firstly to provide for productive rural activities such as pastoral farming, livestock, horticulture, forestry, and mining and associated resource-based activities; and secondly, the provision of ecosystem services - soil, water and air resources and the setting for the vast majority of the city's indigenous vegetation and habitat for indigenous species.

The rural environment contributes significantly to Dunedin's economy through rural primary production activities such as farming, forestry, and mining and associated processing and service activities that rely on these. The rural parts of Dunedin also play an important role in providing for tourism (another key sector of the Dunedin economy), not least eco-tourism activities. The functions of the rural environment are interrelated, with much of Dunedin's rural economic activity reliant on maintaining the quality of the natural environment. The provision of ecosystem services, and issues relating to the natural environment more generally, are addressed in the Natural Environment section (Section 10).

The rural environment also contains a number of outstanding and significant natural landscapes and features, along with coastal areas with natural character values. Along with the biodiversity values referred to above, these elements of the rural environment make an important contribution to the social and cultural well-being of the residents of Dunedin, and to the quality of the city's natural environment.

The key issues facing the rural environment are:

- the fragmentation of rural landholdings from subdivision, which can lead to rural properties too small to be used for productive purposes. Dunedin already has a large number of small rural sites as a result of historic subdivision patterns under earlier district plans and schemes. Pressure for rural residential subdivision in rural areas threatens to further fragment rural land; and
- non-productive land uses or those activities that would ordinarily be expected to locate in the urban parts of Dunedin seeking to locate in rural areas.

The following issues stem directly from these two key issues:

- the productive capacity of the rural environment can be diminished through the loss of rural land and soil resources, including the finite high class soils resource that needs to be retained for future generations;
- the spread of non-rural uses including rural residential activities into rural areas can have adverse effects on landscape values, rural character and amenity values; and natural environment functions and values;
- potential conflicts between activities in the rural environment, which often arises from new activities in rural areas complaining about established productive rural activities and is known as 'reverse sensitivity'; and
- demand for the inefficient provision of infrastructure and services, stemming from the fact that sometimes people living on small rural blocks in close proximity to urban areas demand urban public infrastructure and services, such as reticulated services or sealed roads.

In response to these issues, seven rural zones and their objectives, policies and rules manage Dunedin's rural environment in a manner that recognises its diversity. The Plan emphasises the importance of providing for rural activities and for other activities which are reliant on or associated with the rural environment, while acknowledging that residential uses are clearly secondary and subordinate to these activities. This approach seeks to achieve the strategic outcomes for the rural zones, while ensuring that environmental effects are managed at an acceptable level.

To achieve this, the Plan sets a minimum site size for subdivision based on average rural property sizes in different parts of the rural environment, using the average property size as an indicator of the site size required for a commercial rural activity. A limited degree of flexibility has been incorporated into the subdivision rules that apply in the rural zones, via provision for surplus dwelling subdivision. The minimum site size required for new residential activities (Rule 16.5.2 Density) is set based on the median rural property size in each rural zone, to better reflect the current pattern of subdivision (which includes sites that are not used for commercial farming). The use of median rather than average property size as a basis for this standard reduces the number of existing sites that fall below the density standard for new residential activity because the median rural property size is lower than the average rural property size in all rural zones.

The rural zones are supported by overlays relating to landscape, natural character of the coast, and scheduled areas of significant indigenous vegetation and habitats of indigenous fauna. Provisions relating to these are located in the Natural Environment section, along with rules relating to other matters that apply more generally throughout the rural zones, such as rules on vegetation clearance and setback from coast and water bodies.

Appendix A7 provides descriptions and rural character values for each of the seven rural zones. The seven rural zones are: Coastal Rural Zone, High Country Rural Zone, Hill Country Rural Zone, Hill Slopes Rural Zone, Middlemarch Basin Rural Zone, Peninsula Coast Rural Zone and Taieri Plain Rural Zone.

## 16.2 Objectives and Policies

<b>Objective 16.2.1</b>	
	Rural zones are reserved for productive rural activities and the protection and enhancement of the natural environment, along with certain activities that support the well-being of communities where these activities are most appropriately located in a rural rather than an urban environment.
Policy 16.2.1.1	Enable farming, grazing and conservation in the rural zones.
Policy 16.2.1.2	Provide for rural activities, veterinary services, rural industry, rural contractor and transport depots, community activities, emergency services, cemeteries and crematoriums in the rural zones where the effects will be adequately managed in line with objectives 16.2.2 and 16.2.3, 16.2.4 and their policies, and the objectives and policies of any relevant overlay zones.
Policy 16.2.1.3	Require rural ancillary retail, rural tourism and working from home to be at a scale that: <ol style="list-style-type: none"> <li>a. is ancillary to and supportive of productive rural activities or conservation activity on the same property; and</li> <li>b. supports objectives 2.3.2 and 2.4.3 and their policies.</li> </ol>
Policy 16.2.1.4	Only allow visitor accommodation in the rural zones where it supports productive rural activities or a significant conservation activity on the same property.
Policy 16.2.1.X	Avoid subdivision activities that create one or more resultant sites that contravene the minimum site size standard for the zone, unless: <ol style="list-style-type: none"> <li>a. the subdivision is provided for under Policy 16.2.1.10; or</li> <li>b. the subdivision, considered as a whole:               <ol style="list-style-type: none"> <li>i. will not result in an increase in the number of sites that contravene the minimum site size; and</li> <li>ii. will not result in an increase in the residential development potential of the subject land, beyond that provided for by the density land use performance standard and the minimum site size subdivision standard, and</li> <li>iii. will meet policies 16.2.3.8 and 16.2.4.3.</li> </ol> </li> </ol>
Policy 16.2.1.6	Restrict the tenancy and design of family flats to: <ol style="list-style-type: none"> <li>a. avoid, as far as practicable, the risk they will be used for a separate, non-ancillary, residential activity; and</li> <li>b. avoid, as far as practicable, future pressure to subdivide off family flats.</li> </ol>
Policy 16.2.1.7	Avoid residential activity in the rural zones on a site that does not comply with the density standards for the zone, unless: <ol style="list-style-type: none"> <li>X. it is the result of a surplus dwelling subdivision; or</li> <li>Y. the residential activity will be associated with long term land management and/or capital investment that will result in:               <ol style="list-style-type: none"> <li>i. significant positive effects for rural productivity; and/or</li> <li>ii. a significant contribution to the enhancement or protection of biodiversity values.</li> </ol> </li> </ol>
Policy 16.2.1.8	Avoid supported living facilities, commercial activities, industrial activities, and major facility activities, unless otherwise provided for, in the rural zones.
Policy 16.2.1.9	Only allow cross lease, company lease and unit title subdivision in the rural zones where it does not result in an increase in residential development potential beyond that which might be achieved through a general subdivision.

### Objective 16.2.1

Rural zones are reserved for productive rural activities and the protection and enhancement of the natural environment, along with certain activities that support the well-being of communities where these activities are most appropriately located in a rural rather than an urban environment.

Policy 16.2.1.10	Only allow the subdivision of a surplus dwelling where: <ul style="list-style-type: none"> <li>a. the subdivision meets policies 16.2.3.8 and 16.2.4.3.a, b and d;</li> <li>b. the dwelling is habitable and in good condition; and</li> <li>c. the subdivision will not result in any additional development potential for residential activity across resultant sites than would otherwise be provided for by the minimum site size standard.</li> </ul>
Policy 16.2.1.11	Provide for service stations on a strategic road or arterial road where: <ul style="list-style-type: none"> <li>X. safe and convenient access to the site for pedestrians and cyclists can be provided;</li> <li>Y. there is adequate public infrastructure to service the development or any necessary upgrades to public infrastructure will be provided;</li> <li>Z. the service station will not detract from the economic and social vibrancy and viability of any nearby centres; and</li> <li>AA. policies 16.2.2.5 and 16.2.3.6 can be achieved.</li> </ul>
Policy 16.2.1.12	Enable the New Zealand Marine Studies Centre in the <b>Portobello Marine Science mapped area</b> .

### Objective 16.2.2

The potential for conflict between activities within the rural zones, and between activities within the rural zones and adjoining residential zones, is minimised through measures that ensure:

- a. the potential for reverse sensitivity in the rural zones is minimised;
- b. the residential character and amenity of adjoining residential zones is maintained; and
- c. a reasonable level of amenity for residential activities in the rural zones.

Policy 16.2.2.1	Require residential buildings and cemeteries to minimise, as far as practicable, the potential for reverse sensitivity by being set back an adequate distance from: <ul style="list-style-type: none"> <li>a. site boundaries; and</li> <li>b. intensive farming, domestic animal boarding and breeding (including dogs), mining, landfills, wind generators - large scale, and the Waitati Rifle Range.</li> </ul>
Policy 16.2.2.2	Require buildings that house animals to be set back from site boundaries an adequate distance to ensure that any adverse effects on sensitive activities on adjoining sites, such as residential activities, are avoided or, if avoidance is not practicable, are no more than minor.
Policy 16.2.2.3	Require all new buildings to be located an adequate distance from site boundaries to ensure a good level of amenity for residential activities on adjoining sites.
Policy 16.2.2.4	Require rural ancillary retail, rural tourism - small scale, working from home, mineral exploration, and mineral prospecting to operate in a way (including hours of operation or, for mineral exploration, use of blasting) that avoids or, if avoidance is not practicable, adequately mitigates noise or adverse effects on the amenity of sensitive activities on surrounding properties.

**Objective 16.2.2**

The potential for conflict between activities within the rural zones, and between activities within the rural zones and adjoining residential zones, is minimised through measures that ensure:

- a. the potential for reverse sensitivity in the rural zones is minimised;
- b. the residential character and amenity of adjoining residential zones is maintained; and
- c. a reasonable level of amenity for residential activities in the rural zones.

Policy 16.2.2.5	Only allow rural tourism - large scale, rural research - large scale (outside the <b>Invermay Farm mapped area</b> ), rural contractor and transport depots - large scale, community and leisure - large scale, sport and recreation, veterinary services, visitor accommodation, cemeteries, crematoriums, intensive farming, domestic animal boarding and breeding (including dogs), rural industry, mining, service stations, or landfills where adverse effects on the amenity of residential activities on surrounding properties will be avoided or, if avoidance is not practicable, adequately mitigated.
Policy 16.2.2.6	Require forestry and shelterbelts and small woodlots to be set back an adequate distance to avoid or minimise, as far as practicable, significant effects from shading on residential buildings on surrounding properties.
Policy 16.2.2.7	Only allow cemeteries where they are designed to avoid, as far as practicable, the potential for reverse sensitivity by locating graves a suitable distance from site boundaries and providing adequate screening from surrounding activities.

### Objective 16.2.3

The rural character values and amenity of the rural zones are maintained or enhanced, elements of which include:

- a. a predominance of natural features over human made features;
- b. a high ratio of open space, low levels of artificial light, and a low density of buildings and structures;
- c. buildings that are rural in nature, scale and design, such as barns and sheds;
- d. a low density of residential activity, which is associated with rural activities;
- e. a high proportion of land containing farmed animals, pasture, crops, and forestry;
- f. extensive areas of indigenous vegetation and habitats for indigenous fauna; and
- g. other elements as described in the character descriptions of each rural zone located in Appendix A7.

Policy 16.2.3.1	Require buildings and structures to be set back from site boundaries and of a height that maintains the rural character values and visual amenity of the rural zones.
Policy 16.2.3.2	Require residential activity to be at a density that maintains the rural character values and visual amenity of the rural zones.
Policy 16.2.3.3	Require mineral exploration and mineral prospecting to restore land to at least the same standard as before the activity commenced with respect to landform and productive potential.
Policy 16.2.3.4	Only allow mining and landfills where there is reasonable certainty that land will be restored or rehabilitated to an acceptable standard with respect to landform and to enable a return to productive, recreational or conservation use as soon as possible.
Policy 16.2.3.5	Only allow intensive farming, rural tourism - large scale, rural industry, rural research - large scale (outside the <b>Invermay Farm mapped area</b> ), rural contractor and transport depots - large scale, mining and landfills where adverse effects from large scale development on rural character and visual amenity will be avoided or minimised as far as practicable.
Policy 16.2.3.6	Only allow community and leisure - large scale, sport and recreation, early childhood education, service stations, and visitor accommodation where the adverse effects of development on rural character and visual amenity are avoided or, if avoidance is not practicable, no more than minor.
Policy 16.2.3.7	Require ancillary signs to be located and designed to maintain rural character and visual amenity, including by being of an appropriate size and number to convey information about the name, location, and nature of the activity on-site to passing pedestrians and vehicles and not being oversized or too numerous for that purpose.
Policy 16.2.3.8	Only allow subdivision activities where the subdivision is designed to ensure any associated future land use and development will maintain or enhance the rural character and visual amenity of the rural zones.
Policy 16.2.3.9	Require activities to be designed and operated to ensure that any adverse effects from light spill on rural character and amenity, and the ability of people to view the night sky, will be no more than minor.
Policy 16.2.3.10	Require large buildings and structures in the Hill Slopes Rural Zone to avoid adverse visual effects caused by reflectivity or, if avoidance is not practicable, ensure effects are no more than minor.
Policy 16.2.3.11	Require papakāika to maintain, as far as practicable, the rural character values and amenity of the rural zones in terms of the design, scale and location of the development.

### Objective 16.2.3

The rural character values and amenity of the rural zones are maintained or enhanced, elements of which include:

- a. a predominance of natural features over human made features;
- b. a high ratio of open space, low levels of artificial light, and a low density of buildings and structures;
- c. buildings that are rural in nature, scale and design, such as barns and sheds;
- d. a low density of residential activity, which is associated with rural activities;
- e. a high proportion of land containing farmed animals, pasture, crops, and forestry;
- f. extensive areas of indigenous vegetation and habitats for indigenous fauna; and
- g. other elements as described in the character descriptions of each rural zone located in Appendix A7.

Policy 16.2.3.X	Require scheduled mining activities to be designed, located and undertaken in a way that avoids or, if avoidance is not practicable, adequately mitigates: <ol style="list-style-type: none"> <li>a. sediment run-off onto any property, or into any stormwater pipes, drains, channels or soakage systems; and</li> <li>b. dust nuisance on the amenity of surrounding sites.</li> </ol>
Policy 16.2.3.Y	Require residential buildings in the Hill Slopes Rural Zone to be of a size that avoids adverse visual effects or, if avoidance is not practicable, ensure effects are no more than minor.

**Objective 16.2.4**

The productivity of rural activities in the rural zones is maintained or enhanced.

Policy 16.2.4.1	Require earthworks in a <b>high class soils mapped area</b> to retain soils on the site.
Policy 16.2.4.2	Only allow activities other than farming on highly productive land where: <ul style="list-style-type: none"> <li>a. the scale, size and nature of the activity means that any loss of current or potential future rural productivity would be: <ul style="list-style-type: none"> <li>i. insignificant in any <b>high class soils mapped area</b>; and</li> <li>ii. no more than minor in other areas of highly productive land; unless</li> </ul> </li> <li>b. for mining, the activity must locate on highly productive land due to operational requirements and there are no practicable alternative locations.</li> </ul>
Policy 16.2.4.3	Only allow subdivision activities where the subdivision is designed to ensure any future land use and development will: <ul style="list-style-type: none"> <li>a. maintain or enhance the productivity of rural activities;</li> <li>b. maintain highly productive land for farming activity, or ensure the effects of any change in land use are: <ul style="list-style-type: none"> <li>i. insignificant on any <b>high class soils mapped area</b>; and</li> <li>ii. no more than minor on other areas of highly productive land;</li> </ul> </li> <li>c. maintain land in a rural rather than rural residential land use; and</li> <li>d. not increase the potential for reverse sensitivity.</li> </ul>
Policy 16.2.4.4	Require residential activity in the rural zones to be at a density that will not, over time and/or cumulatively, reduce rural productivity by displacing rural activities.

## Rules

### Rule 16.3 Activity Status

#### 16.3.1 Rule Location

The activity status tables in rules 16.3.3 to 16.3.6 specify the activity status of land use activities, development activities, and subdivision activities in the rural zones and relevant overlay zones, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 16.3.2 Activity Status Introduction

1. The activity status tables in rules 16.3.3 - 16.3.5 show the activity status of activities in the rural zones and the overlay zones indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Additional activity status rules in hazard overlay zones*

7. For the purpose of the hazards provisions, activities are categorised as natural hazards sensitive activities, natural hazards potentially sensitive activities or natural hazards least sensitive activities. The activities that are in each hazards sensitivity category are included in the definitions section and in Section 11.1.
8. In the Hazard 1 (Flood) Overlay Zone or the Hazard 2 (Flood) Overlay Zone, the activity statuses in Rule 16.3.6 apply to the following activities:
  - a. natural hazards sensitive activities;
  - b. natural hazards potentially sensitive activities; and
  - c. new buildings and additions and alterations to buildings that create within any two calendar-year period: more than 36m<sup>2</sup> of new ground floor area in the **Henley mapped area**, or more than 60m<sup>2</sup> of new ground floor area outside the **Henley mapped area**.

9. Where the activity status in Rule 16.3.6 differs from that in rules 16.3.3 - 16.3.5, the most restrictive activity status always applies.
10. In addition to the rules in Rule 16.3.6, performance standards for development activities within hazard overlay zones are included in Rule 16.3.4.
11. Activities in a hazard overlay zone must comply with all of the rules in 16.3.3 - 16.3.5.

#### *Performance Standards*

12. Performance standards are listed in the far right column of the activity status tables.
13. Performance standards apply to permitted, controlled, and restricted discretionary activities.
14. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
15. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary (unless otherwise indicated in the performance standard).

#### **Legend**

<b>Acronym</b>	<b>Meaning</b>
+	Additional provisions apply (assessment criteria for activities in overlay need to be viewed)
N/A	Not Applicable
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
Pr	Prohibited Activity
RU	Rural Zones
ONF	Outstanding Natural Feature Overlay Zone
ONL	Outstanding Natural Landscape Overlay Zone
SNL	Significant Natural Landscape Overlay Zone
ONCC	Outstanding Natural Coastal Character Overlay Zone
HNCC	High Natural Coastal Character Overlay Zone
NCC	Natural Coastal Character Overlay Zone
ASBV	Areas of Significant Biodiversity Value
Haz1A	Hazard 1A (flood) Overlay Zone
Haz1	Hazard 1 Overlay Zones
Haz2	Hazard 2 Overlay Zones
Haz3	Hazard 3 Overlay Zones

Acronym	Meaning
RTZ	Residential Transition Overlay Zone

### 16.3.3 Land Use Activity Status Table

1.	Performance standards that apply to all land use activities					<ul style="list-style-type: none"> <li>a. Acoustic insulation (noise sensitive activities only)</li> <li>b. NA</li> <li>c. Light spill</li> <li>d. Noise</li> <li>e. Setback from National Grid (National Grid sensitive activities only)</li> </ul>

#### Note 16.3.3A - General advice

1. <sup>1</sup> Papakāika activity is intended to allow descendants of the original native reserve grantees to live on this land. It is not intended to allow other residential use of rural land at a higher density than provided for in the rural zones. If papakāika is developed and is subsequently no longer required for the use of Manawhenua in accordance with the papakāika definition, resource consent will be required to allow its use as other residential development. In this situation, the provisions of the rural zones that govern residential activity, including density of residential development, will apply. It is strongly recommended that the use of relocatable buildings is considered for papakāika development in order to avoid potential future problems of being unable to obtain consent for ownership or occupation of dwellings by people other than descendants of the original grantees.
2. Where papakāika is on Māori Land, the provisions of the Te Ture Whenua Māori Act 1993 or subsequent legislation apply.
3. New marae may only be established with the agreement of Manawhenua.
4. For papakāika activity, see also Rule 16.13 Special Information Requirements.

**Note 16.3.3B – Other requirements outside of the District Plan**

Plantation forestry and associated activities are addressed by the NESPF rather than Rule 16.3.3.7 for rural zones in Rule 16.3.3.7.a and for SNLs in Rule 16.3.3.7.b.

Plantation forestry and associated activities are addressed by the NESPF rather than Rule 16.3.3.7 for ONLs in Rule 16.3.3.7.b, except that Rule 16.5.13 (which is more stringent than the NESPF) and assessment Rule 16.10.5.7 (which is an effect not addressed by the NESPF) apply in addition to the NESPF.

For NCCs in Rule 16.3.3.7.b, ONFs, ONCC and HNCCs in Rule 16.3.3.7.c, and ASBVs in column Rule 16.3.3.7.d the NESPF does not apply.

The NESPF does not apply to vegetation clearance prior to afforestation and therefore rules 16.3.4.23, 16.3.4.24 and 16.3.4.25 and the rules in Section 10 Natural Environment apply.

**Note 16.3.3X- Other requirements outside of the District Plan**

1. Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

**16.3.4 Development Activity Status Table**

1.	Performance standards that apply to all development activities	<ol style="list-style-type: none"> <li>a. Natural Hazards Performance Standards</li> <li>b. Setback from scheduled tree</li> </ol>
----	--	--

27.	Shelterbelts and small woodlots	P	P	RD	RD	i. Forestry and shelterbelts and small woodlots setbacks ii. Tree species
28.	All other site development activities	P	P	P	RD	

#### Note 16.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

### 16.3.5 Subdivision Activity Status Table

Subdivision Activities		Activity status				Performance standards
		a. RU	b. ONL/ SNL/NCC	c. ONF/ ONCC/HNCC	d. ASBV	
1.	General subdivision	RD	RD+	RD+	RD+	i. Access ii. Esplanade reserves and strips iii. Firefighting iv. Minimum site size v. Shape X. Setback from National Grid (subdivision activities)
2.	Cross lease, company lease and unit title subdivision	D	D	D	D	

#### Note 16.3.5A - Other RMA considerations

- Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

#### Note 16.3.5X - Other relevant District Plan provisions

- Additional matters of discretion apply to the subdivision of land within a **Critical Electricity Distribution Infrastructure Corridor mapped area**. These are set out in Rule 16.10.5.
- Additional matters of discretion apply to the subdivision of land within a **National Grid Subdivision Corridor mapped area**. These are set out in Rule 16.10.5.

### 16.3.6 Activity Status in Hazard 1 (Flood), Hazard 1A (Flood) and Hazard 2 (Flood) Overlay Zones

Activity		Activity status		
		a. Haz1A (flood)	b. Haz1 (flood)	c. Haz2 (flood)
Land Use Activities				
1.	Natural hazards sensitive activities	Pr	NC	RD
2.	Natural hazards potentially sensitive activities	NC	NC	RD
Development Activities				

Activity		Activity status		
		a. Haz1A (flood)	b. Haz1 (flood)	c. Haz2 (flood)
3.	New buildings and additions and alterations to buildings that create within any two calendar-year period: more than 36m <sup>2</sup> of new ground floor area in the <b>Henley mapped area</b> , or more than 60m <sup>2</sup> of new ground floor area outside the <b>Henley mapped area</b>	RD	RD	RD

#### Note 16.3.6A - Other RMA considerations

X Section 10 of the RMA (existing use rights) provides for land to be used in a manner that contravenes a rule in a district plan if the use was lawfully established before the rule became operative or the proposed plan was notified, and the effects of the use are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified.

- Accordingly, activities that are shown to have effects that are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified will not usually trigger the provisions for natural hazards sensitive activities and natural hazards potentially sensitive activities in Rule 16.3.6. However, Council will consider specific circumstances associated with the development and how this affects the character, intensity and scale of effects from the land use activity.

#### Note 16.3.6B - Other requirements outside the District Plan

- Clause E1 – Surface water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework (including earthworks) in relation to managing surface water and effects on other property.
- Buildings and structures that will divert water may require resource consent under the Otago Regional Plan: Water.
- If buildings and structures affect the flow of water, this effect is also subject to the common law principle of natural servitude.

### Rule 16.4 Notification

- Applications for resource consent for the following activities will be considered without the need to obtain a written approval of affected persons and will not be notified in accordance with section 95A or 95B of the RMA, unless either Council considers special circumstances exist in relation to the application that require public notification or specific parties are required to be notified by rules 16.4.2, 16.4.3, 16.4.4, 16.4.5 or 16.4.7:
  - papakāika (controlled activity) where the associated site development activities are permitted;
  - earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand;
  - contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is not listed by Heritage New Zealand; and

X new buildings or structures greater than 60m<sup>2</sup> footprint, or additions and alterations that result in a building or structure that is greater than 60m<sup>2</sup> footprint, within an SNL, ONL or NCC Overlay Zone (Rule 16.6.6.X), where the building or structure is to be used for farming.
- With respect to resource consent applications for the following activities, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not

provided:

1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand;
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is listed by Heritage New Zealand; and
  3. contravention of the archaeological sites performance standard (Rule 13.3.3).
3. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided:
1. cemeteries, crematoriums and landfills;
  2. all restricted discretionary activities that list 'effect on cultural values of Manawhenua as a matter for discretion; and
  3. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat in Appendix A4.
4. With respect to resource consent applications for the following activities, the Department of Conservation will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:
1. indigenous vegetation clearance - large scale in a scheduled Area of Significant Biodiversity Value; or
  2. indigenous vegetation clearance - large scale or any discretionary or non-complying activity in a Natural Coastal Character, High Natural Coastal Character or Outstanding Natural Coastal Character Overlay Zone.
5. With respect to resource consent applications for the following activities within the **radio transmitters mapped area**, Radio New Zealand Limited will be considered an affected person in accordance with section 95B of the RMA, unless its written approval is provided or discretion is restricted and excludes consideration of reverse sensitivity effects:
1. any activities that may be sensitive to electromagnetic interference, noise or visual effects from Radio New Zealand's facilities at 740 Highcliff Road and 35 Karetai Road; and
  2. subdivision that could result in activities of this kind.
6. With respect to sections 95D(b) and 95E(2)(a) of the RMA, Council will not consider papakāika or family flats as part of the permitted baseline in considering residential density effects in the rural zones.
7. With respect to resource consent applications for the following activities, the Otago Regional Council will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:
1. activities in the hazard 1 or hazard 1A (flood) overlay zones; and
  2. activities in **swale mapped areas**.
8. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## Rule 16.5 Land Use Performance Standards

### 16.5.1 Acoustic Insulation

Noise sensitive activities in the following areas must comply with Rule 9.3.1:

1. port noise control mapped area;
  2. airport noise inner control mapped area;
  3. airport noise outer control mapped area;
  4. within 40m of the Taieri Aerodrome Zone;
  5. within 40m of a state highway;
  6. within 20m of an industrial zone;
  7. within 70m of a railway line; and
- X. Fonterra noise control mapped area.

### 16.5.2 Density

1. The maximum density of standard residential activity is as follows:

Rural Zone		i. Minimum site size - first residential activity per site	ii. Minimum site size - second residential activity per site	iii. Minimum site size - third residential activity per site
a.	Coastal	15ha	80ha	120ha
b.	High Country	100ha	200ha	300ha
c.	Hill Country	100ha	200ha	300ha
d.	Hill Slopes	15ha	50ha	75ha
e.	Middlemarch Basin	40ha	160ha	240ha
f.	Peninsula Coast	20ha	80ha	120ha
g.	Taieri Plain	25ha	80ha	120ha

- h. Except,
  - i. papakāika may be developed at a density of 6 residential units, or 15 habitable rooms per site, whichever is the lesser.
  - ii. in the Middlemarch Basin, Hill Country and High Country rural zones, a single residential activity is permitted on any site that existed before 26 September 2015, and that is 15ha or larger, provided the residential activity is established prior to 7 November 2025.

X. in the Peninsula Coast Rural Zone, a single residential activity is permitted on any site that existed before 26 September 2015, and that is 15ha or larger.

  - i. Multiple standard residential activities (additional primary residential buildings (houses)) are only allowed on a single site where they are located no closer than 80m from other residential buildings on the same site (family flats or sleepouts are considered part of the same residential activity), except:
    - i. multiple residential units developed as part of papakāika may be located closer than 80m to each other.

- j. if a site is crossed by a boundary between two or more rural zones, the maximum density of the standard residential activity must meet the density required for the rural zone in which the residential activity is to be established; and
  - i. the total site size must meet the minimum site size for the zone in which the residential activity is to be established; and
  - ii. for each new residential activity per site, a minimum of 2ha of the site per residential activity must be located within the rural zone in which the residential activity is to be established.
- 2. One family flat is allowed in association with each standard residential activity that meets this performance standard for density.
- 3. Standard residential activity that contravenes the performance standard for density is a non-complying activity, except:
  - a. papakāika that contravenes the performance standard for density is a discretionary activity; and
  - X. a family flat that contravenes Rule 16.5.2.2 is:
    - i. a restricted discretionary activity where the area of the site is 15ha or more;
    - ii. a discretionary activity where the area of the site is less than 15ha.

#### 16.5.4 Hours of Operation

Activity	Hours of operation
1. Mineral exploration and mineral prospecting	7:00am - 10:00pm
2. Rural ancillary retail	Customers must not arrive before 7:00am or depart after 7:00pm
3. Rural tourism - small scale	Visitors must not arrive before 7:00am or depart after 7:00pm
4. Working from home (excluding homestay)	Customers and deliveries must not arrive before 7:00am or depart after 7:00pm

- 5. Wildlife and night sky viewing activities are exempt from this standard.
- 6. Activities that contravene this performance standard are restricted discretionary activities.

#### 16.5.5 Light Spill

- 1. Light spill measured 1.5m above ground level at the boundary of a site must not exceed 1 Lux between 10:00pm and 7:00am.
- 2. Lights must be:
  - a. cut-off or fully shielded;
  - b. and directed away from roads and any adjacent property
- 3. Light spill measured at the boundary of the residential zone or any site used for residential purposes between 7:00am and 10:00pm must not exceed 3 Lux.
  - a. Except this standard does not apply to light spill from the headlights of motor vehicles.
- 4. Activities that contravene rules 16.5.5.1 and 16.5.5.2 are discretionary activities.
- 5. Activities that contravene any light spill limit in Rule 16.5.5.3 by 25% or less are discretionary activities.
- 6. Activities that contravene any light spill limit in Rule 16.5.5.3 by greater than 25% are non-complying activities.

#### 16.5.6 Location

1. Domestic animal boarding and breeding, rural ancillary retail and rural tourism - small scale must not be accessed directly from a state highway with a speed limit of 80kmh or over.
2. Activities that contravene this performance standard are restricted discretionary activities.

### 16.5.7 Maximum Gross Floor Area

Activity	Maximum gross floor area
1. Rural ancillary retail	60m <sup>2</sup>
2. Working from home	100m <sup>2</sup>

3. Except the retailing of plants grown on the site is exempt from the performance standard for maximum gross floor area.
4. Activities that contravene this performance standard are restricted discretionary activities.

#### Note 16.5.7A - Other requirements outside of the District Plan

1. Registration must be obtained from DCC Environmental Health Department for any working from home activity which involves food products, hairdressing, beauty therapy or tattooing. Please contact the DCC's Environmental Health Department on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.
2. A licence from the DCC's Alcohol Licensing Department may be required for any working from home activity involving the sale or distribution of alcohol. Please contact the DCC on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.

### 16.5.8 Minimum Mobility Car Parking

Activity	Minimum car parking
1- 7. <i>Removed to comply with the National Policy Statement on Urban Development 2020 requirement to remove minimum car parking requirements. Rule numbering to be corrected at a later date.</i>	

8. Land use activities must provide on-site mobility parking spaces as follows:

Total number of parking spaces provided	Minimum number of these that must be mobility parking spaces
a. 1 - 20	1 parking space
b. 21 - 50	2 parking spaces
c. For every additional 50 parking spaces	1 additional parking space

9. NA.
10. Parking spaces may be shared between land use activities (i.e. the same parking spaces may be used to fulfil the minimum mobility car parking requirement for more than one land use activity), as long as the hours of operation of the land use activities do not overlap.
11. NA.
12. Activities that contravene this performance standard are restricted discretionary activities.

#### Note 16.5.8A - Other relevant District Plan provisions

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

### **16.5.9 Noise**

Land use activities must comply with Rule 9.3.6.

### **16.5.10 Separation Distances**

1. New residential buildings and cemeteries must be located at least:
  - a. 100m from:
    - i. an existing, lawfully established intensive farming activity on a separate site;
    - ii. an existing, lawfully established domestic animal boarding and breeding (including dogs) activity on a separate site; and
    - iii. the Waitati Rifle Range at 108 Miller Road, Waitati (Minister of Defence designation D158);
  - b. 150m from existing, lawfully established landfills on a separate site;
  - c. 250m from existing, lawfully established wind generators - large scale on a separate site;
  - d. 200m from an existing, lawfully established mining activity, that does not involve blasting, on a separate site; and
  - e. 500m from an existing, lawfully established mining activity, that involves blasting, on a separate site.
2. For the purposes of this standard, separation distance is measured from either the closest wall of the new residential building or the closest edge of the cemetery, as relevant, to the closest edge of any active operational area or other part of the site being used as part of the activities listed.
3. Activities that contravene this performance standard are restricted discretionary activities.

### **16.5.11 Setback from National Grid**

National Grid sensitive activities must comply with Rule 5.6.1.

### **16.5.12 Site Restoration**

1. Areas disturbed by mineral prospecting and mineral exploration must restore any areas disturbed with respect to landform, biodiversity values and productive potential. Restoration must be completed prior to the end of the lease, licence, or consent, whichever is earliest.
2. Activities that contravene this performance standard are restricted discretionary activities.

### **16.5.13 Tree Species**

Forestry and shelterbelts and small woodlots must comply with Rule 10.3.4.

### **16.5.14 Family Flats**

#### **16.5.14.1 Family Flats - Tenancy**

- a. Family flats must:
  - i. only be occupied by:
    1. a person or persons related to or dependent on the household that lives in the primary residential unit on the same site; or
    2. employed on-site, in a paid or voluntary capacity, as a domestic, child-care, farm or conservation worker by the household that lives in the primary residential unit on the same site.
  - ii. not be on a different tenancy agreement to the primary residential unit.

- b. Standard residential activity that contravenes this performance standard is a non-complying activity.

#### 16.5.14.2 Family Flats - Design

- a. Family flats (which include farm workers' accommodation) in all rural zones must:
- not exceed a maximum gross floor area of 60m<sup>2</sup>.
- X. Family flats in the Coastal, Hill Slopes, Peninsula Coast and Taieri Plain rural zones must:
- be on the same available water and wastewater infrastructure connection, or the same non-reticulated wastewater disposal system as the primary residential unit;
  - be on the same household electricity account;
  - share the same driveway as the primary residential unit; and
  - be attached to or located in the same residential building as the primary residential unit, or located within 30m of the primary residential building (house), as measured as the closest distance between any wall of the primary residential building and any wall of the family flat.
- b. Standard residential activity that contravenes this performance standard is a restricted discretionary activity.

#### 16.5.15 Blasting

- Mineral exploration that involves blasting must comply with the following:
  - There are no more than 3 blast events per site per day, and no more than 21 blast events in a calendar year.
  - Blast events may only occur between 8.00am and 6.00pm Monday to Saturday (excluding public holidays).
  - The peak amplitude (Vmax) must not exceed 5 mm/second, measured on any foundation or suitable adjacent location of an adjoining residential property; Overpressure (Pmax) must not exceed 120 dBL, measured at the boundary of the receiving property, or the notional boundary of noise sensitive activities in a rural, rural residential or Ashburn Clinic Zone.
  - Quantum of earth moved must not exceed the earthworks - small scale standards.
- Mineral exploration that contravenes the performance standard for blasting is a discretionary activity.

#### 16.5.16 Scheduled Mining Activity

##### 16.5.16.1

Scheduled mining activity must meet the performance standards listed below.

##### 16.5.16.2

- Scheduled mining activity that contravenes Rule 16.5.16.3, Rule 16.5.16.4, Rule 16.5.16.6 or Rule 16.5.16.7 will be considered expansion of scheduled mining activity and will be subject to the rules that apply to that activity in Rule 16.3.
- Scheduled mining activity that contravenes Rule 16.5.16.5, Rule 16.5.16.X or Rule 16.5.16.Y has the activity status set out in that standard.

##### 16.5.16.3 Maximum Annual Extraction

- Aramoana Quarry must not exceed a maximum annual extraction limit of 50,000m<sup>3</sup>.
- Fairfield Sand Pit No. 3 must not exceed a maximum annual extraction limit of 10,000 tonnes.

##### 16.5.16.4 Operating Limits

- a. Blackhead Quarry:
  - i. may only operate: Monday to Saturday 6.00am to 10.00pm;
  - ii. must not extract material on Sec 153 Green Island Bush SD or within 100m of Blackhead Road on Secs 154 and 155 Green Island Bush SD. However, these areas may be used for quarry activities not involving extraction such as stock piling overburden; and
  - iii. must not undertake mining in the area defined by Conservation Covenant 779741/2.
- b. Fairfield Sand Pit No. 3:
  - i. may only operate: Monday to Friday 6.00am to 8.00pm and Saturday 7.00am to 5.00pm;
  - ii. must not use blasting; and
  - iii. must not extract material on Pt Sec 11 -13 Green Island West SD. However, these areas may be used for quarry activities not involving extraction, such as stockpiling overburden.
- c. Aramoana Quarry:
  - i. may only operate: Monday to Saturday 7.00am to 7.00pm;
  - ii. may only operate for the purpose of maintaining and repairing of the Aramoana Mole and the Long Mac Groyne; and
  - iii. may only transport rock on the Aramoana Road/Moana Street route, between the hours of 7.00am to 7.00pm Monday to Saturday.
- d. Mt Kettle Quarry:
  - i. may only operate: Monday to Saturday 6.00am to 10.00pm;
  - ii. must not undertake mining on more than 40 days each calendar year;
  - iii. must ensure quarrying does not alter the skyline as viewed from Portobello Road or from State Highway No 1;
  - iv. must not quarry closer than 50m to adjoining properties; and
  - v. must retain existing native vegetation on areas not quarried.
- X. Saddle Hill Upper Quarry:
  - i. must not operate outside of the hours Monday to Saturday 6.00am to 10.00pm; and
  - ii. must not involve any rock extraction or earthworks (either excavation or deposition of fill) that alters the profile of the ridgeline outside Area B as shown in Figure 16.5.16.4A.
- Y. Saddle Hill Lower Quarry:
  - i. must not operate outside of the hours Monday to Saturday 6.00am to 10.00pm; and
  - ii. must not involve any rock extraction or earthworks (either excavation or deposition of fill) outside Area A as shown in Figure 16.5.16.4B.

**Figure 16.5.16.4A: Saddle Hill Upper Quarry: Operating Limits**

Area B    Property Boundaries

Scale at A4: 1:2,000

**Figure 16.5.16.4B: Saddle Hill Lower Quarry: Operating Limits**

Area A Property Boundaries Scale at A4: 1:2,000

**16.5.16.5 Noise**

Aramoana Quarry, Blackhead Quarry, Mt Kettle Quarry Fairfield Sand Pit No. 3, Saddle Hill Upper Quarry and Saddle Hill Lower Quarry must comply with Rule 9.3.6, subject to the following:

- a. An adjustment of minus 5 dBA for noise emissions having special audible characteristics.
- b. Noise level readings for the purpose of determining compliance with the noise conditions must be provided by the quarry operator for two hours, at times representative of the operation and at which maximum noise levels can be assessed. For continuous operations, readings must take place at 12 monthly intervals; for intermittent operations readings must be provided at the time of every subsequent operation of the site.

**16.5.16.6 Blasting**

- a. Aramoana Quarry, Blackhead Quarry, Mt Kettle Quarry, Saddle Hill Upper Quarry and Saddle Hill Lower Quarry must ensure that airblast over-pressure from a blasting event on the site, when assessed at any point within the notional boundary of any residence, does not exceed a peak non-frequency-weighted (linear or flat) level of 115 dB (Peak) at any time.

#### 16.5.16.7 Landscaping and rehabilitation

- a. Aramoana Quarry, Blackhead Quarry, Mt Kettle Quarry and Fairfield Sand Pit No. 3 must carry out a programme of landscaping to encourage the revegetation of areas that are no longer being mined. The landscaping programme must ensure that:
  - i. all planting is in accordance with a landscape plan prepared by a qualified landscape architect; and
  - ii. all vegetation established as part of this programme is maintained in a healthy state at all times.
- b. For Aramoana Quarry, Blackhead Quarry and Mt Kettle Quarry, the landscaping must include creating areas of loose scree on any benching for the colonisation of rock plants.
- c. For Fairfield Sand Pit No. 3, the site must be rehabilitated to an appearance and character similar to that of the surrounding environment.
- d. Aramoana Quarry must use the overburden and the stockpiling of fines that are retained on the site to recontour the area adjacent to Aramoana Road on sections 46 and 47 Blk V, North Harbour and Blueskin Survey District and must be progressively regrassed.
- e. Fairfield Sand Pit No. 3 must undertake a programme of screen planting designed to mitigate adverse visual effects as viewed from the adjacent residential areas, road and other viewing areas. The programme must ensure that:
  - i. all planting is in accordance with a landscape plan prepared by a qualified landscape architect; and
  - ii. all vegetation established as part of this programme is maintained in a healthy state at all times.
- f. Fairfield Sand Pit No. 3 must ensure the edge of the quarried area is designed and certified by a suitably qualified geotechnical engineer to ensure that the edge is stable and will not adversely affect any adjoining property boundary.

#### 16.5.16.X Landscaping and rehabilitation Saddle Hill Upper Quarry

- a. Commencing within 12 months of the rule being treated as operative, at the Saddle Hill Upper Quarry, the quarry owner must progressively implement revegetation in accordance with best practice, to the extent shown practicable through a staged programme, and in accordance with health and safety obligations. Revegetation is to commence with the upper benches followed by other completed quarry work surfaces, to achieve the progressive greening of the scheduled quarry area.
- b. For the sake of clarity, this standard does not preclude mining of surfaces that have been revegetated, provided that any such surfaces are subsequently revegetated in accordance with this standard.
- c. Prior to quarry closure, the quarry owner must, after consultation with the Council, submit to the Council a final quarry landscape rehabilitation plan, prepared by suitably qualified and experienced persons, including a landscape architect and any other technical experts.
- d. Activities that contravene this performance standard are non-complying activities.

#### 16.5.16.Y Dust and sediment control

- a. At Saddle Hill Upper Quarry, and Saddle Hill Lower Quarry, mining must be undertaken using best practice dust and sediment control management to prevent dust or sediment entering water bodies, stormwater networks, or going across property boundaries.
- b. Activities that contravene this performance standard are restricted discretionary activities.

**Note 16.5.16A - Other requirements outside of the District Plan**

- a. The Health and Safety at Work (Mining Operations and Quarrying Operations) Regulations 2016 contains regulations that manage effects from mining on public health and safety, including effects on land stability.

**Rule 16.6 Development Performance Standards**

**16.6.1 Firefighting**

New residential buildings and subdivision activities must comply with Rule 9.3.3.

**16.6.2 Natural Hazards Performance Standards**

16.6.2.1 Hazard exclusion areas

- a. New buildings and structures, and additions and alterations located in a **swale mapped area** must comply with Rule 11.3.1.1.
- b. New buildings and structures, and additions and alterations located in a **dune system mapped area** must comply with Rule 11.3.1.2.

16.6.2.2 Maximum area of vegetation clearance in the hazard overlay zones

Vegetation clearance in the Hazard 1 (land instability) Overlay Zone, Hazard 2 (land instability) Overlay Zone, or in a **dune system mapped area**, must comply with Rule 11.3.2.

16.6.2.3 Relocatable buildings

New buildings containing residential activity on the ground floor in the Hazard 3 (coastal) Overlay Zone must comply with Rule 11.3.3.

16.6.2.4 Outdoor storage

Outdoor storage in the Hazard 1 and 1A (flood) Overlay Zones must comply with Rule 11.3.4.

### 16.6.3 Hazardous Substances Quantity Limits and Storage Requirements

The storage and use of hazardous substances must comply with Rule 9.3.4.

### 16.6.4 Materials and Design

Earthquake strengthening must comply with Rule 13.3.2.

### 16.6.5 Maximum Height

1. New buildings and structures, and additions and alterations must not exceed a maximum height above ground level as follows:

Activity	i. Rural zones	ii. Landscape and coastal character overlay zones
a. Roadside produce stall	3.5m	3.5m
b. Buildings associated with the New Zealand Marine Studies Centre in the <b>Portobello Marine Science mapped area</b>	10m	10m
c. All other buildings and structures	10m	5m

2. Rooftop structures are exempt from the performance standard for height provided they do not exceed the maximum height limit for all other buildings and structures by more than one third of that limit.
3. New buildings and structures, additions and alterations must not protrude through the height restriction for the Taieri Aerodrome approach and take-off fans shown on the **Taieri Aerodrome flight fan mapped area**.
4. Activities that contravene this performance standard are restricted discretionary activities.

### 16.6.6 Area, Number and Location of Buildings and Structures

#### 16.6.6.X Area, number and location of buildings and structures – ONLs, SNLs, NCCs, ASBVs

- a. In Outstanding Natural Landscape (ONL), Significant Natural Landscape (SNL), and Natural Coastal Character (NCC) overlay zones and scheduled Areas of Significant Biodiversity Value (ASBVs), all new buildings, new structures and additions and alterations must comply with Rule 10.3.5.

#### 16.6.6.Y Area of Residential Buildings – Hill Slopes Rural Zone

- a. In the Hill Slopes Rural Zone, new residential buildings must not exceed 400m<sup>2</sup> gross floor area, and additions and alterations must not result in a residential building that is greater than 400m<sup>2</sup> gross floor area.
- b. Activities that contravene this performance standard are restricted discretionary activities.

### 16.6.7 Number, Location and Design of Ancillary Signs

#### 16.6.7.1 General

- a. A maximum of one sign attached to a building and one freestanding sign is allowed per site, except:
  - i. only one sign may be located in any part of a site in an ONF, ONL, SNL, ONCC, HNCC or NCC overlay zone.
- b. Signs visible from a public place must meet all of the following performance standards, except that regulatory signs, directional signs and warning signs that do not exceed 0.25m<sup>2</sup> are exempt from these standards.

- c. Signs that only give address, occupant or place name information (not including any commercial business names) do not count toward maximum sign numbers.
- d. Signs must comply with Rule 6.7.3 where visible from a road.
- e. Signs must not be illuminated or digital.
- f. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### 16.6.7.2 Signs attached to buildings

- a. The maximum height above ground level, at the highest point of any sign, attached to a building is 4m, except:
  - i. the maximum height is 2m in an ONF, ONL, SNL, ONCC, HNCC or NCC overlay zone.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except where mounted flat against a parapet or gable end.
- d. The maximum area of signs, per display face, is 2m<sup>2</sup>, except:
  - i. the maximum area of signs, per display face, is 0.6m<sup>2</sup> in an ONF, ONCC or HNCC overlay zone; and
  - ii. the maximum area of signs, per display face, is 1m<sup>2</sup> in an ONL, SNL or NCC overlay zone.
- e. In an ONF, ONCC or HNCC overlay zone the sign must only provide information about the values of the overlay zone (refer Appendices A3 and A5).

#### 16.6.7.3 Freestanding signs

- a. Maximum dimensions of freestanding signs are:
  - i. maximum height of 4m, except:
    1. 2m in an ONF, ONL, SNL, ONCC, HNCC or NCC overlay zone;
  - ii. maximum area of 2m<sup>2</sup> per display face, except:
    1. 0.6m<sup>2</sup> per display face in an ONF, ONCC or HNCC overlay zone; and
    2. 1m<sup>2</sup> per display face in an ONL, SNL or NCC overlay zone;
  - iii. maximum of 2 display faces per sign;
  - iv. maximum width of 2m, except:
    1. 1m in an ONF, ONL, SNL, ONCC, HNCC or NCC overlay zone; and
  - v. maximum depth of 400mm.
- b. Freestanding signs must:
  - i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within site boundaries.
- c. In an ONF, ONCC or HNCC overlay zone the sign must only provide information about the values of the overlay zone (refer Appendices A3 and A5).

#### **Note 16.6.7A - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy.
  - c. Dunedin City Council Roadway Bylaw.
  - d. Dunedin City Council Traffic and Parking Bylaw.

#### **16.6.8 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

### 16.6.9 Reflectivity

1. New buildings and structures (except fences), and additions and alterations, in any landscape or coastal character overlay zone must comply with Rule 10.3.6.
2. In the Hill Slopes Rural Zone, new buildings and structures that exceed 300m<sup>2</sup> footprint must have exterior surfaces that have a light reflectance value (LRV) of 30% or less, except that this rule does not apply to the following exterior surfaces:
  - a. natural wood finishes;
  - b. glass;
  - c. clear plastic;
  - d. soffits; or
  - e. flues.
3. For the purposes of Rule 16.6.9.2, the LRV of exterior surface materials whose reflectivity changes due to weathering (e.g. stone) will be measured based on an 'as weathered' condition.
4. For the sake of clarity, Rule 16.6.9.2 applies to roofs and does not apply to fences.
5. Activities that contravene this performance standard are restricted discretionary activities.

### 16.6.10 Setbacks

#### 16.6.10.1 Boundary setbacks

- a. New buildings and structures, and additions and alterations, must be set back from boundaries as follows:

Activity		1. Minimum setback from road boundary	2. Minimum setback from side and rear boundaries with sites held in separate ownership
i.	Residential buildings (see Figure 16.6.10.1A)	20m	The greater of either: <ol style="list-style-type: none"> <li>i. 20m; or</li> <li>ii. a setback that provides a 40m separation from any residential building on any adjoining site</li> </ol>
ii.	Non-residential buildings housing animals (see Figure 16.6.10.1B)	20m	<ol style="list-style-type: none"> <li>i. Buildings with a maximum height of up to 7m above ground level: 12m</li> <li>ii. Buildings with a maximum height that is over 7m above ground level: Twice the maximum height of the building</li> </ol>
iii.	Non-residential buildings not housing animals (see Figure 16.6.10.1C)	20m	<ol style="list-style-type: none"> <li>i. Buildings with a maximum height of up to 7m above ground level: 6m</li> <li>ii. Buildings with a maximum height that is over 7m above ground level: Twice the maximum height of the building</li> </ol>
iv.	Roadside produce stall	No requirement	6m
v.	All other structures	No requirement	No requirement

- vi. Except:

1. additions and alterations to an existing building located within the minimum setback from road

- boundary, provided the addition and alteration does not further increase the contravention of the setback and does not increase the height of the building;
  - 2. additions and alterations to an existing building used for residential activity located within the minimum setback from side and/or rear boundary, provided the addition and alteration does not further increase the contravention of the setback and does not increase the height of the residential building; and
  - 3. buildings associated with the New Zealand Marine Studies Centre in the **Portobello Marine Science mapped area**.
- vii. Rooftop structures are exempt from any calculation of maximum height in this performance standard.
  - viii. For the purposes of this standard, the separation between residential buildings is measured from the closest wall of each residential building.
- b. Activities that contravene this performance standard are restricted discretionary activities.

Figure 16.6.10.1A: Setbacks for new residential buildings

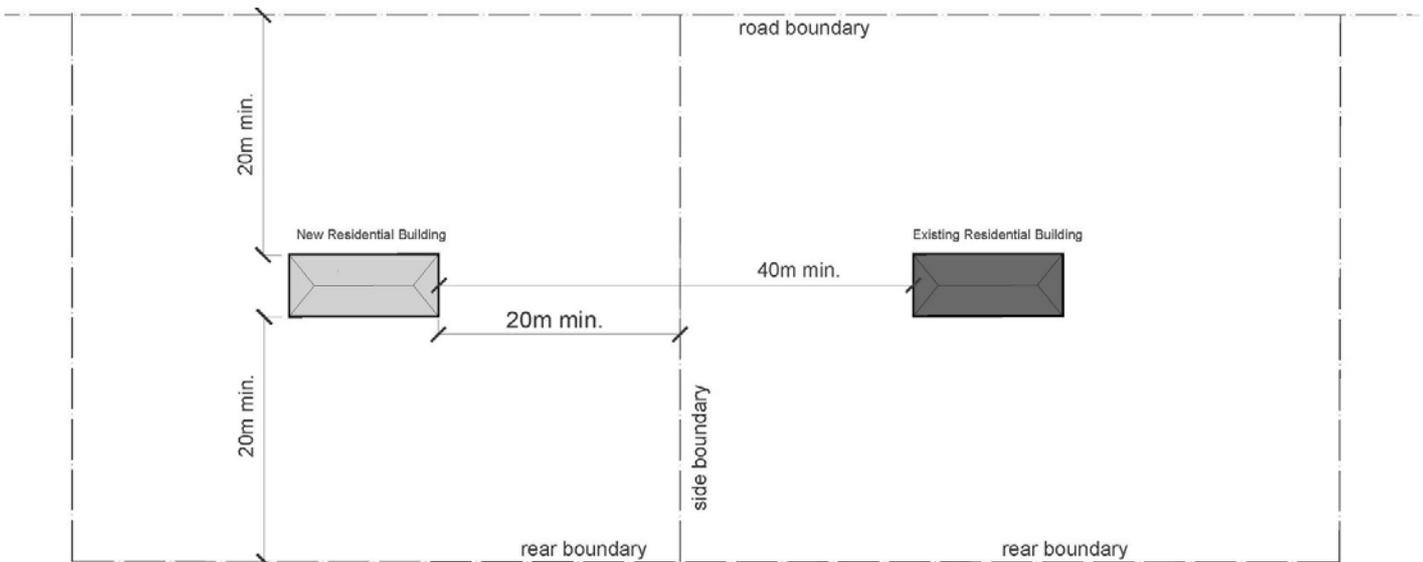

Figure 16.6.10.1B: Setbacks for non-residential buildings housing animals

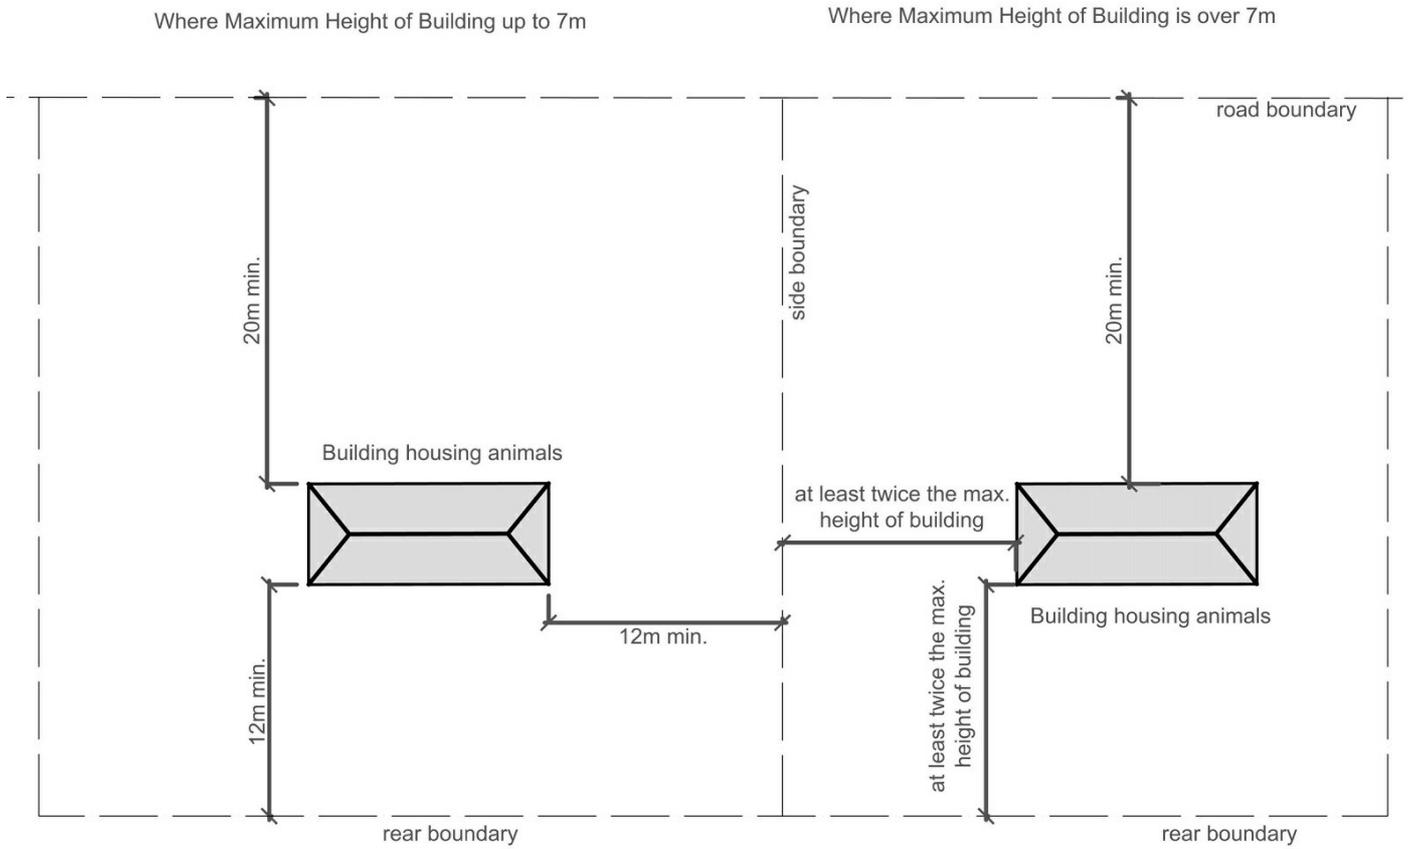

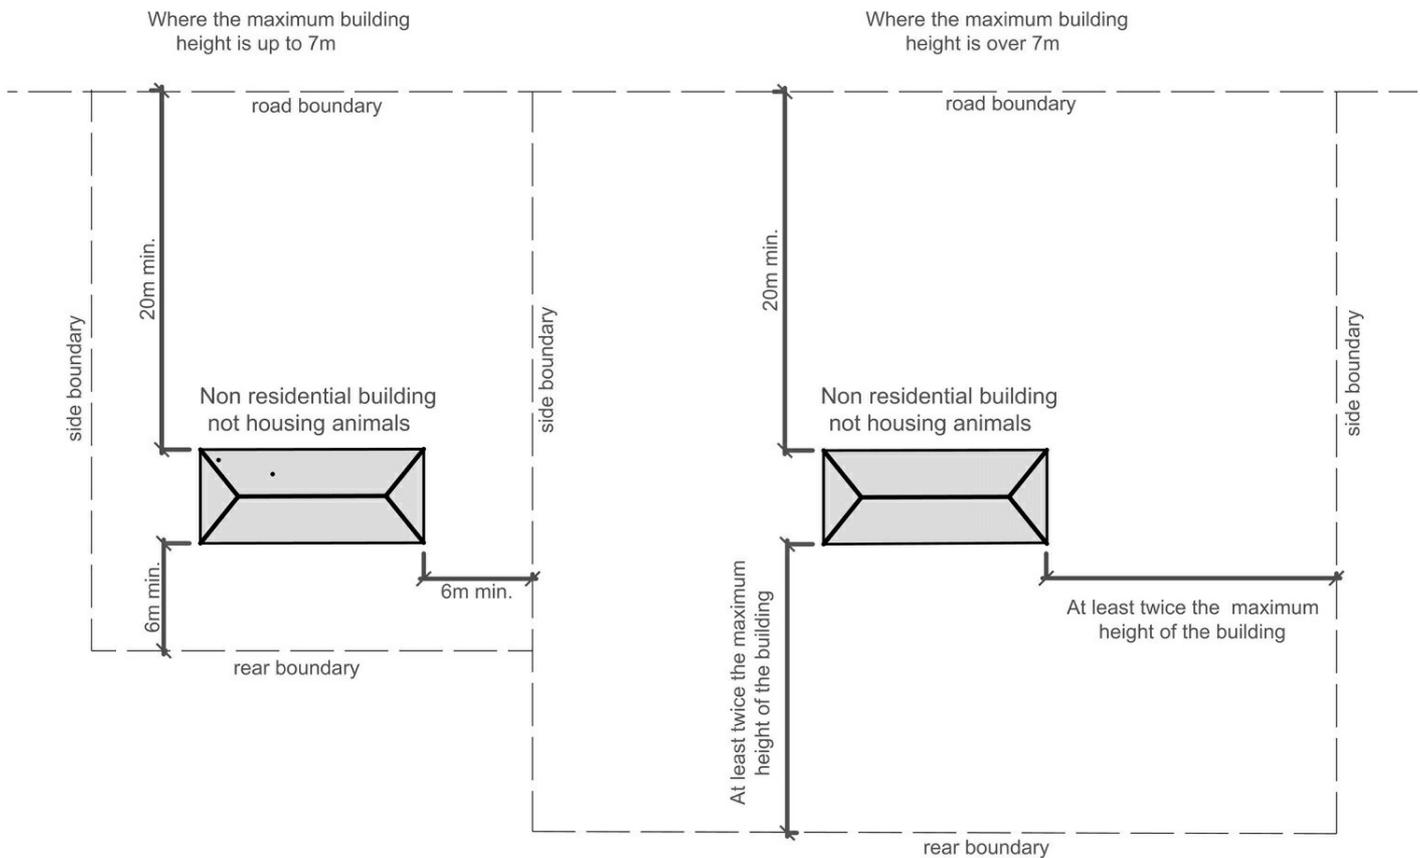

Figure 16.6.10.1C: Setbacks for non-residential buildings not housing animals

### 16.6.10.2 Forestry and shelterbelts and small woodlots setbacks

- a. Trees associated with forestry:
  - i. must not be planted within 30m of the boundary of any residential zone or rural residential zone;
  - ii. must not be planted within 40m of a residential building where the building exists at the time of planting;
  - iii. must not shade a motorway or a strategic road, arterial road or collector road between 10am and 2pm on the shortest day of the year; and
  - iv. must not be planted within 10m of the boundary of the designated rail corridor.

X. must not be planted within the **Critical Electricity Distribution Infrastructure Corridor mapped area**.
- b. Trees associated with shelterbelts and small woodlots:
  - i. must be set back, or managed, so that they maintain a minimum distance of their own height from any residential building on an adjoining site, where the building exists at the time of planting;
  - ii. must not shade a motorway or a strategic road, arterial road or collector road between 10am and 2pm on the shortest day of the year; and
  - iii. must not be planted within 10m of the boundary of the designated rail corridor.
- c. Activities that contravene this performance standard are restricted discretionary activities.

### 16.6.10.3 Setback from National Grid

New buildings and structures, and additions and alterations must comply with Rule 5.6.1

#### 16.6.10.4 Setback from scheduled tree

New buildings and structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2.

#### 16.6.10.5 Setback from coast and water bodies

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

#### 16.6.10.X Setback from Critical Electricity Distribution Infrastructure

New buildings, new structures and additions and alterations must comply with Rule 5.6.X.1.

##### **Note 16.6.10X - General advice**

1. The **Critical Electricity Distribution Infrastructure Corridor mapped area** is measured either side of the centreline of above ground Critical Electricity Distribution Infrastructure (except in the case of designated zone substations where the measurement is taken from the designation boundary), as follows:
  - a. 5m from the centreline of a 11kV line;
  - b. 8.5m from the centreline of a 33kV line;
  - c. 8.5m from designated zone substations; and
  - d. 9.5m from the centreline of a 66kV or a 110kV line.
2. Work near Aurora Energy's overhead lines and power poles requires Close Approach consent. For more information contact Aurora Energy.
3. Vegetation to be planted near Critical Electricity Distribution Infrastructure should be selected and/or managed to ensure that it will not result in that vegetation breaching the Electricity (Hazards from Trees) Regulations 2003.

#### **16.6.11 Vegetation Clearance Standards**

##### 16.6.11.1 Maximum area of vegetation clearance (UBMA)

Vegetation clearance in an **urban biodiversity mapped area** must comply with Rule 10.3.2.4.

##### 16.6.11.2 Indigenous vegetation clearance - small scale thresholds

Indigenous vegetation clearance - small scale must comply with Rule 10.3.2.1.

##### 16.6.11.3 Protected areas (vegetation clearance)

Vegetation clearance and indigenous vegetation clearance must comply with Rule 10.3.2.2.

##### 16.6.11.4 Protected species (indigenous vegetation clearance)

Indigenous vegetation clearance must comply with Rule 10.3.2.3.

##### 16.6.11.5 Maximum area of vegetation clearance in a hazard overlay zone

Vegetation clearance in the hazard 1 (land instability), hazard 2 (land instability) overlay zones, or in a **dune system mapped area**, must comply with Rule 11.3.2.

#### **Rule 16.7 Subdivision Performance Standards**

##### **16.7.1 Access**

General subdivision must comply with Rule 6.8.1.

##### **16.7.2 Esplanade Reserves and Strips**

General subdivision must comply with Rule 10.3.1.

### 16.7.3 Firefighting

General subdivision must comply with Rule 9.3.3.

### 16.7.4 Minimum Site Size

1. The minimum site size for new resultant sites is:

Rural Zone		Minimum site size
a.	Coastal	40ha
b.	High Country	100ha
c.	Hill Country	100ha
d.	Hill Slopes	25ha
e.	Middlemarch Basin	80ha
f.	Peninsula Coast	40ha
g.	Taieri Plain	40ha
h.	For the purposes of this standard, if a site is crossed by a boundary between two or more rural zones, then new resultant sites must comply with the minimum site size required for new resultant sites in each relevant rural zone.	

2. Resultant sites created and used solely for the following purposes are exempt from the minimum site size standard:
  - a. Scheduled ASBV or QEII covenant;
  - b. conservation covenant with the Department of Conservation or a local government agency;
  - c. protected private land agreement under the Reserves Act 1977;
  - d. a heritage covenant with Heritage New Zealand Pouhere Taonga;
  - e. protection of a scheduled heritage site, building or structure listed in Appendix A1.1 - Schedule of Protected Heritage Items and Sites;
  - f. reserve;
  - g. access;
  - h. network utilities; or
  - i. road.
3. General subdivision that contravenes the standard for minimum site size is non-complying, except for surplus dwelling subdivision which is restricted discretionary in either of the following sets of circumstances:
  - a. The first set of circumstances is as follows:
    - i. the subdivision of one site into two sites, where one resultant site is below the minimum site size and contains an existing residential building greater than 100m<sup>2</sup> gross floor area that was built before 26 September 2015; and
    - ii. the second resultant site is:
      1. at least the minimum site size; and
      2. a condition is offered (to be secured by consent notice) that restricts further subdivision in terms of the total number of sites that can be used for residential activity, and further residential activity on the second resultant site, to a level that is no greater than would

have otherwise been allowed had the minimum site size standard been met for both sites.

- b. The second set of circumstances is as follows:
- i. every new site that will be created by the subdivision contains an existing residential building greater than 100m<sup>2</sup> gross floor area that was built before 26 September 2015; and
  - ii. if any of these new sites is equal to, or greater than, twice the minimum site size, a condition is offered (to be secured by consent notice), if necessary, to restrict:
    1. further subdivision of that site, in terms of the total number of sites that can be used for residential activity; and
    2. further residential activity on that site,

to a level that is no greater than would have otherwise been allowed had the minimum site size standard been met for all sites.

### **16.7.5 Shape**

1. Each resultant site that is intended to be developed must be of a size and shape that is large enough to contain a building platform of at least 8m by 15m that meets the performance standards of this Plan including, but not limited to:
  - a. all setbacks from boundaries, water bodies, scheduled trees.
2. Building platforms must have a slope of 12° (1:4.7 or 21%) or less and must:
  - a. not contain esplanade reserves or strips;
  - b. not contain scheduled heritage buildings or scheduled heritage structures; and
  - c. not contain right-of-way easements.
  - d. NA.
3. For unreticulated areas, resultant sites must provide for a wastewater disposal area to be located at least 50m from any water body and Mean High Water Springs.
4. Sites created and used solely for the following purposes are exempt from the shape standard:
  - a. Scheduled ASBV or QEII covenant;
  - b. conservation covenant with the Department of Conservation or a local government agency;
  - c. protected private land agreement under the Reserves Act 1977;
  - d. a heritage covenant with Heritage New Zealand Pouhere Taonga;
  - e. protection of a scheduled heritage site, scheduled heritage building or scheduled heritage structure in Appendix A1.1;
  - f. reserve;
  - g. access;
  - h. network utility; or
  - i. road.
5. Subdivision activities that do not meet this standard are restricted discretionary activities.

## **16.7.X Setback from National Grid (Subdivision Activities)**

Subdivision activities must comply with Rule 5.6.1.X.

## **Rule 16.8 Assessment of Controlled Activities**

### **Rule 16.8.1 Introduction**

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rules 16.8.2 and 16.8.3:
  - a. list the matters over which Council has reserved its control; and
  - b. provide guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 16.9; and
    - iv. the matters of control become matters of discretion and will be assessed as indicated in this section.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 16.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 16.12; and
    - iii. the assessment guidance in this section will also be considered.
4. Rules 16.8.2 and 16.8.3 apply as follows:
  - a. Rule 16.8.2 applies to controlled land use activities; and
  - b. Rule 16.8.3 applies to controlled development activities.

**16.8.2 Assessment of controlled land use activities**

Activity		Matters of control	Guidance on the assessment of resource consents
1.	Papakāika	a. Design, scale, location and number of dwellings	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 16.2.3, 14.2.1, 9.2.2, 6.2.3.</li> <li>ii. Manawhenua are able to live in original native reserve areas where any adverse effects will be adequately managed in line with the objectives and policies of the rural zones (Policy 14.2.1.6).</li> <li>iii. NA</li> <li>iv. Adverse effects on the safety and efficiency of the transport network are avoided or, if avoidance is not practicable, adequately mitigated (6.2.3.9.a).</li> <li>v. Any associated changes to the transportation network will be affordable to the public in the long term (Policy 6.2.3.9.b).</li> <li>vi. Papakāika maintains, as far as practicable, the rural character values and amenity of the rural zones in terms of the design, scale and location of the development (Policy 16.2.3.11).</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>vii. requirements for wastewater disposal systems and wastewater disposal areas;</li> <li>viii. requirements for stormwater disposal;</li> <li>ix. water supply;</li> <li>x. driveways and vehicle tracks; and</li> <li>xi. number, design and location of residential units.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>xii. Council will consider the information required by Rule 16.13.1 provided with any resource consent application (see Special Information Requirements - Rule 16.13.1).</li> </ul>
		b. Design, scale and location of other buildings, structures and site development activities	
		c. Disposal of stormwater and wastewater	
		d. NA	
X.	Scheduled mining activity (SMA008)	a. Restoration and rehabilitation measures	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.3.</li> <li>ii. There is reasonable certainty that land will be restored or rehabilitated to an acceptable standard with respect to landform and to enable a return to productive, recreational or conservation use as soon as possible (Policy 16.2.3.4).</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>iii. Requirement to rehabilitate areas disturbed with respect to landform, biodiversity values and productive potential, considering the values of the Saddle Hill SNL as described in Appendix A3.3.6 and how these can be restored.</li> </ul>
		b. Effects on the safety and efficiency of the transport network	

### 16.8.3 Assessment of controlled development activities

Activity	Matters of control	Guidance on the assessment of resource consents
1. Affecting a scheduled heritage building or a scheduled heritage structure: <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)</li> </ul>	a. Effects on heritage values	See Rule 13.4
2. In the <b>NCC Overlay Zone</b> : <ul style="list-style-type: none"> <li>• New buildings greater than 60m<sup>2</sup> footprint on a landscape building platform</li> </ul>	a. Size, design and appearance of buildings	See Rule 10.4
3. In the <b>ONL or SNL overlay zones</b> : <ul style="list-style-type: none"> <li>• New buildings greater than 60m<sup>2</sup> footprint on a landscape building platform</li> </ul>	a. Size, design and appearance of buildings	See Rule 10.4

## Rule 16.9 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### Rule 16.9.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 16.9.2 - 16.9.6:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 16.9.2 - 16.9.6 apply as follows:
  - a. Rule 16.9.2 applies to all performance standard contraventions;
  - b. Rule 16.9.3 applies to land use performance standard contraventions;
  - c. Rule 16.9.4 applies to development performance standard contraventions;

- d. Rule 16.9.5 applies to subdivision performance standard contraventions; and
- e. Rule 16.9.6 applies to performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item.

<b>16.9.2 Assessment of all performance standard contraventions</b>	
Performance standard	Guidance on the assessment of resource consents
1. All performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards, or site specific factors including topography, make meeting the standard impracticable.</li> <li>c. The nature of activities on surrounding sites, topography of the site and/or surrounding sites, or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>e. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> </ul>

### 16.9.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. Family flats - design	<p>a. Effects on long term maintenance of rural land for productive rural activities</p> <p>b. Effects on rural character and visual amenity</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.1, 16.2.3</li> <li>ii. The design of family flats avoids, as far as practicable, the risk they will be used for a separate, non-ancillary residential activity and future pressure to subdivide off family flats (Policy 16.2.1.6).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. For contravention of maximum gross floor area, the extra area is required due to occupant needs.</li> <li>iv. For contravention of maximum separation distance, other mechanisms such as covenants are proposed to avoid pressure for subdivision of the family flat.</li> <li>v. The size of the residential unit will not create future pressure or expectation for it to be subdivided or be consented to operate as a second residential activity on site.</li> <li>vi. For contravention of maximum gross floor area, the family flat is in the same residential building as the primary residential unit.</li> <li>vii. For family flats in separate buildings to the primary dwelling the design of the family flat matches the design of the primary residential building.</li> <li>viii. For family flats in separate buildings to the primary dwelling, landscaping or other forms of screening will be used to reduce the visibility of the family flat.</li> <li>ix. For family flats in separate buildings to the primary dwelling, the family flat will not be easily viewed from outside the site.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>x. As well as the effects on the values specified in Objective 16.2.3, Council will consider the effects on the rural character values identified in Appendix A7.</li> </ul>

### 16.9.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
X. Density (family flats on sites of 15ha or over)	a. Effects on long term maintenance of rural land for productive rural activities	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.4.</li> <li>ii. The scale, size and nature of activities on highly productive land means that any loss of current or potential future rural productivity would be: <ul style="list-style-type: none"> <li>1. insignificant in any <b>high class soils mapped area</b>; and</li> <li>2. no more than minor in other areas of highly productive land (Policy 16.2.4.2).</li> </ul> </li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Family flats are located in the existing curtilage of the main dwelling, outside productive parts of the site.</li> </ul>
	b. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.2.</li> <li>ii. Residential buildings minimise, as far as practicable, the potential for reverse sensitivity by being set back an adequate distance from site boundaries (Policy 16.2.2.1.a).</li> </ul>
	c. Effects on rural character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.3.</li> <li>ii. The density of residential activity maintains the rural character values and visual amenity of the rural zones (Policy 16.2.3.2).</li> </ul>
	d. Effects on health and safety	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.2.</li> <li>ii. Only allow land use and development in areas without public water supply, wastewater and stormwater infrastructure where these activities ensure wastewater and stormwater will be disposed of in such a way that avoids or, if avoidance is not practicable, ensures adverse effects on the health of people on the site or surrounding sites are insignificant (Policy 9.2.2.7).</li> </ul>
	e. Effects on efficiency and affordability of infrastructure	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 9.2.1.</li> <li>ii. Development will not lead to future pressure for unplanned expansion of the public wastewater and/or water supply infrastructure (Policy 9.2.1.1.b).</li> </ul>
3. Hours of operation	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.2</li> <li>ii. Rural ancillary retail, rural tourism - small scale, working from home, mineral exploration, and mineral prospecting operate in a way that avoids or, if avoidance is not practicable, adequately mitigates noise or adverse effects on the amenity of sensitive activities on surrounding properties (Policy 16.2.2.4).</li> </ul>

16.9.3 Assessment of land use performance standard contraventions		
Performance standard	Matters of discretion	Guidance on the assessment of resource consents
4. Location	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
5. Maximum gross floor area	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 2.3.2, 2.4.3, 16.2.1.3</li> <li>ii. Policies 2.3.2.2 and 2.4.3.4</li> <li>iii. Rural ancillary retail and working from home are at a scale that is ancillary to and supportive of productive rural activities or conservation on the same property (Policy 16.2.1.3.a).</li> </ul>
6. Minimum mobility car parking	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
	b. Effects on accessibility	
7. Separation distances	a. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.2</li> <li>ii. Residential buildings and cemeteries minimise, as far as practicable, the potential for reverse sensitivity by being set back an adequate distance from intensive farming, domestic animal boarding and breeding (including dogs), mining, landfills, wind generators - large scale and the Waitati Rifle Range (Policy 16.2.2.1.b).</li> </ul>
8. Site restoration	a. Effects on biodiversity values	See Rule 10.5
	b. Effects on rural character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.3</li> <li>ii. Land will be restored to at least the same standard as before the mineral exploration or mineral prospecting activity commenced with respect to landform and productive potential (Policy 16.2.3.3).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. As well as the effects on the values specified in Objective 16.2.3, Council will consider the effects on the rural character values identified in Appendix A7.</li> </ul>

### 16.9.3 Assessment of land use performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
9.	Tree species	a. Effects on biodiversity values	See Rule 10.5
		b. Effects on natural character of the coast	
		c. Effects on landscape values	
Y.	Dust and sediment control	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.3.</li> <li>ii. Scheduled mining activities are designed, located and undertaken in a way that avoids or, if avoidance is not practicable, adequately mitigates: <ul style="list-style-type: none"> <li>1. sediment run-off onto any property, or into any stormwater pipes, drains, channels or soakage systems; and</li> <li>2. dust nuisance on the amenity of surrounding sites (Policy 16.2.3.X).</li> </ul> </li> </ul>
		b. Effects on biodiversity values and natural character values of riparian margins and coast	See Rule 10.5.
		c. Effects of efficiency and affordability of infrastructure	See Rule 9.5.

### 16.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	All development performance standard contraventions listed below	a. Positive effects in terms of supporting farming or conservation activity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.1</li> </ul>

**16.9.4 Assessment of development performance standard contraventions**

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
2.	Boundary setbacks	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.2</li> <li>ii. Buildings that house animals are set back from site boundaries an adequate distance to ensure adverse effects on sensitive activities, such as residential activities, on adjoining sites are avoided or, if avoidance is not practicable, are no more than minor (Policy 16.2.2.2).</li> <li>iii. New buildings are located an adequate distance from site boundaries to ensure a good level of amenity for residential activities on adjoining sites (Policy 16.2.2.3).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Screening or landscaping will be used in the development to ensure a good level of amenity for residential activities on adjoining sites.</li> <li>v. Where a building used to house animals contravenes the boundary setback standard, the type and/or number of animals or the frequency of housing them mean that the potential for adverse effects from noise, odour or dust on sensitive activities on adjoining sites will be avoided or will be no more than minor.</li> </ul>
		b. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.2</li> <li>ii. Residential buildings minimise as far as practicable the potential for reverse sensitivity by being set back an adequate distance from site boundaries (Policy 16.2.2.1.a).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Screening or landscaping will ensure potential for reverse sensitivity is minimised as far as practicable.</li> </ul>

### 16.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
	c. Effects on rural character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.3</li> <li>ii. Buildings and structures are set back from site boundaries to maintain the rural character values and visual amenity of the rural zones (Policy 16.2.3.1).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Landscaping or other forms of screening will be used to reduce the visibility of buildings or structures.</li> <li>iv. Colours and materials used in the development will blend in with the character of the surrounding rural environment, with natural finishes and low levels of reflectivity.</li> <li>v. The proposed building or structure will not obstruct any important views from public viewpoints, or cause significant obstruction of views from dwellings on surrounding sites.</li> <li>vi. The proposed building platform is low lying in relation to surrounding sites and roads and the proposed building will not be easily viewed from outside the site.</li> <li>vii. There are already existing buildings on the site in breach of the same setback.</li> <li>viii. There would be positive effects from maintaining open space through the clustering of buildings on the site.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>ix. As well as the effects on the values specified in Objective 16.2.3, Council will consider the effects on the rural character values identified in Appendix A7.</li> </ul>
3.	Hazardous substances quantity limits and storage requirements	a. Effects on health and safety See Rule 9.5
4.	Firefighting	a. Effects on health and safety See Rule 9.5

#### 16.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
5.	Forestry and shelterbelts and small woodlots setbacks	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.2</li> <li>ii. Forestry and shelterbelts and small woodlots are set back an adequate distance from residential buildings on surrounding properties to avoid or minimise, as far as practicable, significant effects from shading (Policy 16.2.2.6).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The area to be planted is to the south of any adjoining residential zone</li> <li>iv. Slope or orientation or other topographical aspects of the sites involved mean that there will be no shading of residential buildings on an adjoining site.</li> </ul>
		b. Effects on health and safety	See Rule 9.5
		c. Effects on the safety and efficiency of the transport network	See Rule 6.10
6.	Maximum height	a. Effects on rural character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.3</li> <li>ii. Buildings and structures are of a height that maintains the rural character values and visual amenity of the rural zones (Policy 16.2.3.1).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. As for Rule 16.9.4.2.c.iii-vi</li> <li>iv. The terrain provides an adequate backdrop to the proposed building or structure and mitigates any adverse visual effects from the building or structure.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>v. As well as the effects on the values specified in Objective 16.2.3, Council will consider the effects on the rural character values identified in Appendix A7.</li> </ul>

#### 16.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
7.	Number, location and design of ancillary signs	a. Effects on rural character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.3</li> <li>ii. Ancillary signs are located and designed to maintain rural character and visual amenity, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on-site to passing pedestrians and vehicles and not being oversized or too numerous for that purpose (Policy 16.2.3.7).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. As well as the effects on the values specified in Objective 16.2.3, Council will consider the effects on the rural character values identified in Appendix A7.</li> </ul>
		b. Effects on the safety and efficiency of the transport network	See Rule 6.10
8.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
9.	Reflectivity (Hill Slopes Rural Zone)	a. Effects on rural character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.3</li> <li>ii. Adverse visual effects caused by reflectivity are avoided or, if avoidance is not practicable, no more than minor (Policy 16.2.3.10)</li> </ul> <p><i>General assessment guidance</i></p> <ul style="list-style-type: none"> <li>iii. In assessing adverse visual effects, Council will consider the level of visibility of the building or structure from public places.</li> </ul>
10.	Setback from coast and water bodies	a. Effects on biodiversity values and natural character values of riparian margins and the coast	See Rule 10.5
		b. Effects on public access	
		c. Risk from natural hazards	See Rule 11.4
11.	Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6

#### 16.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
12.	Vegetation clearance standards: <ul style="list-style-type: none"> <li>Protected species (indigenous vegetation clearance)</li> </ul>	a. Effects on biodiversity values	See Rule 10.5
13.	Vegetation clearance standards: <ul style="list-style-type: none"> <li>Protected areas (vegetation clearance)</li> </ul>	a. Effects on biodiversity values and natural character values of riparian margins and the coast	See Rule 10.5
X.	In the Hill Slopes Rural Zone: <ul style="list-style-type: none"> <li>Area of residential buildings</li> </ul>	a. Effects on rural character and amenity	<i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>i. Objective 16.2.3</li> <li>ii. Residential buildings in the Hill Slopes Rural Zone are of a size that avoids adverse visual effects or, if avoidance is not practicable, ensures effects are no more than minor (Policy 16.2.3.Y).</li> </ol>

#### 16.9.5 Assessment of subdivision performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Access	a. Effects on accessibility	See Rule 6.10
2.	Esplanade reserves and strips	a. Effects on biodiversity values and natural character of the coast and riparian margins b. Effects on public access	See Rule 10.5
3.	Firefighting	a. Effects on health and safety	See Rule 9.5

### 16.9.5 Assessment of subdivision performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
4. Shape		<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Subdivisions are designed to ensure future land use or development is able to meet the performance standards in the zone, or where in a <b>structure plan mapped area</b>, the subdivision reflects the requirements of the <b>structure plan mapped area</b> performance standards, unless: <ul style="list-style-type: none"> <li>i. a resource consent is approved for a development that does not meet the performance standard and the subdivision is intended for and capable of providing for that approved development; or</li> <li>ii. the resultant site is required for: <ul style="list-style-type: none"> <li>1. Scheduled ASBV or QEII covenant;</li> <li>2. reserve; or</li> <li>3. access; or</li> <li>4. network utility; or</li> <li>5. road (Policy 2.4.1.8).</li> </ul> </li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. Non-compliance with the performance standard for shape will be assessed based on which performance standard(s) the shape of the resultant site does not provide for compliance with. See matters of discretion and assessment rules in relation to performance standard contraventions for: <ul style="list-style-type: none"> <li>i. boundary setbacks;</li> <li>ii. setbacks from water bodies; and</li> <li>iii. setback from scheduled tree.</li> <li>iv. NA.</li> </ul> </li> <li>d. For contravention of the building platform slope part of the shape performance standard (Rule 16.7.5.2), see the matters of discretion and assessment rules in relation to earthworks - large scale (Rule 8A.7.2.1).</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>e. The requirements for a consent notice to be registered against the title that restricts development on the site.</li> <li>f. Restrictions or conditions, including by way of consent notice, on land use or development activities allowed on the site.</li> <li>g. A building platform may be required to be registered against the title by way of consent notice.</li> </ul>

### 16.9.5 Assessment of subdivision performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
<p>5. Minimum site size (surplus dwelling subdivision Rule 16.7.4.3)</p>	<p>a. Effects on long term maintenance of rural land for productive rural activities</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 16.2.1, 16.2.3, 16.2.4</li> <li>ii. The subdivision of a surplus dwelling does not result in any additional development potential for residential activity (Policy 16.2.1.10.c).</li> <li>iii. The subdivision is designed to ensure any associated future land use and development maintains or enhances the rural character and visual amenity of the rural zones (16.2.3.8).</li> <li>iv. The subdivision is designed to ensure any future land use and development maintains or enhances the productivity of rural activities, maintains highly productive land for farming activity, or ensures the effects of any change in land use are insignificant on any <b>high class soil mapped area</b> and no more than minor on other areas of highly productive land, and does not increase the potential for reverse sensitivity (Policy 16.2.4.3.a, b and d).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>v. A legal mechanism such as a consent notice on the title of the second resultant site will ensure that there will be no increase in the potential for residential activity as a result of the subdivision.</li> <li>vi. The dwelling can be shown to be in a suitable condition for occupation, with recent history of use for residential activity.</li> <li>vii. The resultant site on which the surplus dwelling will be located is large enough to support on-site disposal of effluent.</li> <li>viii. The dwelling is surplus to the requirements of the property.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>ix. In determining whether land is 'highly productive land', Council will consider its land use capability (LUC) classification (<a href="https://soils.landcareresearch.co.nz/soil-data/nzlri-soils/">https://soils.landcareresearch.co.nz/soil-data/nzlri-soils/</a>), the <b>high class soils mapped area</b> (HCS), as well as any other evidence related to productive values. The expectation is that land in the HCS and/or that has a LUC 1-3 classification will be considered 'highly productive land'. Note that information about the LUC classification is provided on the Landcare Research website (<a href="https://www.landcareresearch.co.nz">https://www.landcareresearch.co.nz</a>) and LUC 1-3 areas are shown on the Data Map (<a href="https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/">https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/</a>)</li> </ul>

**16.9.6 Assessment of restricted discretionary performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. In the <b>ONL, SNL or ONF overlay zones</b> : • Number, location and design of ancillary signs	a. Effects on landscape values	See Rule 10.5
2. In the <b>ONL or SNL overlay zones</b> : • Maximum height • Reflectivity • Area, number and location of buildings and structures	a. Effects on landscape values	See Rule 10.5
3. In the <b>HNCC, ONCC or NCC overlay zones</b> : • Number, location and design of ancillary signs	a. Effects on natural character of the coast	See Rule 10.5
4. In the <b>NCC Overlay Zone</b> : • Reflectivity • Maximum height • Area, number and location of buildings and structures	a. Effects on natural character of the coast	See Rule 10.5
X. In an <b>ASBV</b> : • Area of buildings and structures	a. Effects on biodiversity values	See Rule 10.5.
5. In a <b>wāhi tūpuna mapped area</b> : • Maximum height • Setback from coast and water bodies • Vegetation clearance standards: Maximum area of vegetation clearance (UBMA), Protected areas (vegetation clearance), Protected species (indigenous vegetation clearance) • Esplanade reserves and strips	a. Effects on cultural values of Manawhenua	See Rule 14.3
6. In a <b>hazard overlay zone or dune system mapped area</b> : • Maximum area of vegetation clearance in the hazard overlay zones (Hazard 1 or 2 (land instability) Overlay Zones and <b>dune system mapped area</b> ) • Relocatable buildings (Hazard 3 (coastal) Overlay Zone) • Outdoor Storage (Hazard 1 (flood) Overlay Zone) • Hazardous substances quantity limits and storage requirements	a. Risk from natural hazards	See Rule 11.4
7. In an <b>urban biodiversity mapped area</b> : • Vegetation clearance standards: Maximum area of vegetation clearance (UBMA)	a. Effects on biodiversity values	See Rule 10.5
8. In the <b>Taieri Aerodrome flight fan mapped area</b> : • Maximum height (Rule 16.6.5.3)	a. Effects on health and safety	See Rule 9.5

**16.9.6 Assessment of restricted discretionary performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
9. Affecting a <b>scheduled heritage building</b> or <b>scheduled heritage structure</b> : <ul style="list-style-type: none"> <li>• Materials and design</li> </ul>	a. Effects on heritage values	See Rule 13.5
Y. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> : <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (forestry setbacks)</li> </ul>	a. Effects on the safety and efficiency of network utilities	See Rule 5.7.
Z. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> : <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (buildings, structures, citywide activities)</li> </ul>	a. Effects on health and safety	See Rule 5.7.
	b. Effects on efficient and effective operation of network utilities	

**Rule 16.10 Assessment of Restricted Discretionary Activities**

**Rule 16.10.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 16.10.2 - 16.10.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 16.10.2 - 16.10.5 apply as follows:
  - a. Rule 16.10.2 applies to restricted discretionary land use activities;
  - b. Rule 16.10.3 applies to restricted discretionary development activities;
  - c. Rule 16.10.4 applies to restricted discretionary subdivision activities; and
  - d. Rule 16.10.5 applies to restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item.
4. For all land use activities that require consent, all associated development activities will be considered as part

of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
- a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 16.9; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 16.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 16.12; and
    - iii. the assessment guidance in this section will also be considered.
6. With respect to section 104(2) of the RMA, Council will not consider family flats or papakāika as part of the permitted baseline in considering residential density effects in the rural zones.

#### 16.10.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
----------	-----------------------	---

<p>1. All restricted discretionary land use activities in the rural zones that also involve development activities</p>	<p>a. Effects on rural character and visual amenity</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.3</li> <li>ii. Adverse effects from large scale development on rural character and visual amenity will be avoided or minimised as far as practicable (Policy 16.2.3.5).</li> <li>iii. Adverse effects of development on rural character and amenity are avoided or, if avoidance is not practicable, no more than minor (Policy 16.2.3.6).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Landscaping or other forms of screening will be used to reduce the visibility of development from surrounding properties and public viewpoints.</li> <li>v. The development is not situated on visually prominent land.</li> <li>vi. The form, scale and materials used in buildings and structures are compatible with the character values of the rural zones as listed in Appendix A7.</li> <li>vii. Building colours and materials are chosen to blend in with the rural setting and minimise reflectivity.</li> <li>viii. Signage and entranceways are in character with the surrounding environment.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>ix. As well as the effects on the values specified in Objective 16.2.3, Council will consider the effects on the rural character values identified in Appendix A7.</li> </ul>
<p>2. All high trip generators, which include:</p> <ul style="list-style-type: none"> <li>• any activities that generate 250 or more vehicle movements a day</li> </ul>	<p>a. Effects on accessibility</p> <p>b. Effects on the safety and efficiency of the transport network</p>	<p>See Rule 6.11</p>

### 16.10.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
3. <ul style="list-style-type: none"> <li>• Cemeteries outside a <b>hazard facility mapped area</b></li> <li>• Crematoriums outside a <b>hazard facility mapped area</b></li> </ul>	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.2</li> <li>ii. Any adverse effects on the amenity of residential activities on surrounding properties will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 16.2.2.5).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The activity will be set back a sufficient distance from its own property boundaries to avoid, or adequately mitigate, any adverse effects from noise, odour or visual impact on surrounding properties.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iv. In assessing the effects on amenity, Council will consider the effects of vehicle movements on the site as well as any significant changes to the number and nature of vehicle movements on the adjoining road.</li> </ul>
	b. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.2</li> <li>ii. Cemeteries are designed to avoid, as far as practicable, the potential for reverse sensitivity by locating graves a suitable distance from site boundaries and providing adequate screening (Policy 16.2.2.7).</li> </ul>

### 16.10.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
	<p>c. Maintenance of highly productive land</p>	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.4</li> <li>ii. Activities other than farming are only allowed on highly productive land where the scale, size and nature of the activity means the loss of current or potential future rural productivity would be insignificant in any <b>high class soils mapped area</b> and no more than minor in other areas of highly productive land (Policy 16.2.4.2.a).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The site design will ensure the effect of the activity on any high class soils contained on the site, and any impact on the potential for future use of the high class soils, is insignificant.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iv. In determining whether land is 'highly productive land', Council will consider its land use capability (LUC) classification (<a href="https://soils.landcareresearch.co.nz/soil-data/nzlri-soils/">https://soils.landcareresearch.co.nz/soil-data/nzlri-soils/</a>), the <b>high class soils mapped area</b> (HCS), as well as any other evidence related to productive values. The expectation is that land in the HCS and/or that has a LUC 1-3 classification will be considered 'highly productive land'. Note that information about the LUC classification is provided on the Landcare Research website (<a href="https://www.landcareresearch.co.nz">https://www.landcareresearch.co.nz</a>) and LUC 1-3 areas are shown on the Data Map (<a href="https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/">https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/</a>)</li> </ul>
	<p>d. Effects on cultural values of Manawhenua</p>	<p>See Rule 14.4</p>
	<p>e. Effects on the safety and efficiency of the transport network</p>	<p>See Rule 6.11</p>

### 16.10.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
4. Domestic animal boarding and breeding (including dogs)	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.2</li> <li>ii. Any adverse effects on the amenity of residential activities on surrounding properties will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 16.2.2.5).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The activity will be set back a sufficient distance from its own property boundaries to avoid, or adequately mitigate, any adverse effects from noise on surrounding properties.</li> <li>iv. The design and acoustic insulation of kennel buildings, dog runs and fencing will mitigate adverse effects from noise on surrounding properties.</li> <li>v. Areas used for parking, drop-off and collection of dogs are separated from kennel buildings and dog runs an adequate distance to avoid or minimise barking triggered by the arrival or departure of customers.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>vi. In assessing effects on the amenity of residential activities on surrounding properties, Council will consider effects from noise, traffic, odour and dust contaminants.</li> <li>vii. In assessing the effects on amenity, Council will consider the effects of vehicle movements on the site as well as any significant changes to the number and nature of vehicle movements on the adjoining road.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>viii. Restrictions on the hours of operation in terms of the arrival and departure times of customers.</li> </ul>
	b. Effects on the safety and efficiency of the transport network	See Rule 6.11

### 16.10.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
5. Intensive farming	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.2</li> <li>ii. Any adverse effects on the amenity of residential activities on surrounding properties will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 16.2.2.5).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The activity will be set back a sufficient distance from its own property boundaries to avoid or adequately mitigate any adverse effects on surrounding properties.</li> <li>iv. Management plans or other mitigation measures will be employed to avoid or mitigate the effects of odour, dust, vehicle movements and operating noise on surrounding properties.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>v. In assessing effects on the amenity of residential activities on surrounding properties, Council will consider effects from noise, traffic, odour and dust contaminants.</li> <li>vi. In assessing the effects on amenity, Council will consider the effects of vehicle movements on the site as well as any significant changes to the number or nature of vehicle movements on the adjoining road.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>vii. ### 16.10.2 Assessment of restricted discretionary land use activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
6. Veterinary services (large animal practice)	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.2</li> <li>ii. Any adverse effects on the amenity of residential activities on surrounding properties will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 16.2.2.5).</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>iii. In assessing effects on the amenity of residential activities on surrounding properties, Council will consider effects from noise, traffic, odour and dust contaminants.</li> <li>iv. In assessing the effects on amenity, Council will consider the effects of vehicle movements on the site as well as any significant changes to the number and nature of vehicle movements on the adjoining road.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>v. Restrictions on the hours of operation in terms of the arrival and departure times of customers.</li> </ul>
	b. Effects on the safety and efficiency of the transport network	See Rule 6.11

### 16.10.3 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All restricted discretionary activities listed below	a. Positive effects in terms of supporting farming or conservation activity	<i>Relevant objectives and policies:</i> i. Objective 16.2.1
2. High trip generators: • New or additions to parking areas that result in 50 or more new parking spaces	a. Effects on the safety and efficiency of the transport network b. Effects on accessibility	See Rule 6.11
3. Indigenous vegetation clearance - large scale	a. Effects on biodiversity values	See Rule 10.6

### 16.10.4 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. General subdivision	a. Effects on long term maintenance of rural land for productive rural activities	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 16.2.4.</p> <p>ii. The design of a subdivision ensures any future land use and development will:</p> <ol style="list-style-type: none"> <li>1. maintain or enhance the productivity of rural activities;</li> <li>2. maintain highly productive land for farming activity, or ensure any loss is insignificant on any <b>high class soils mapped area</b> and no more than minor on other areas of highly productive land;</li> <li>3. maintain land in a rural rather than rural residential land use; and</li> <li>4. not increase the potential for reverse sensitivity (Policy 16.2.4.3).</li> </ol> <p><i>General assessment guidance:</i></p> <p>iii. In determining whether land is 'highly productive land', Council will consider its land use capability (LUC) classification, the <b>high class soils mapped area</b> (HCS), as well as any other evidence related to productive values. The expectation is that land in the HCS and/or that has a LUC 1-3 classification will be considered 'highly productive land'. Note that information about the LUC classification is provided on the Landcare Research website (<a href="https://www.landcareresearch.co.nz">https://www.landcareresearch.co.nz</a>) and LUC 1-3 areas are shown on the Data Map (<a href="https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/">https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/</a>)</p>

#### 16.10.4 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
	b. Effects on rural character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 16.2.3.</li> <li>ii. The subdivision is designed to ensure any associated future land use and development will maintain or enhance the rural character and visual amenity of the rural zones (Policy 16.2.3.8).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Sites are designed to respond to the topography and characteristics of the land and surrounding environment.</li> <li>iv. Building platforms are located to respond to landform and avoid significant visual effects.</li> <li>v. Driveways, vehicle tracks, utilities and services are designed and located to minimise the need for significant earthworks.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>vi. As well as the effects on the values specified in Objective 16.2.3, Council will consider the effects on the rural character values identified in Appendix A7.</li> </ul>
	c. Effects on biodiversity values and natural character values of riparian margins and coast	See Rule 10.6
	d. Effects on public access	
	e. Risk from natural hazards	See Rule 11.5
	f. Effects on the safety and efficiency of the transport network	See Rule 6.11
	g. NA	NA

### 16.10.5 Assessment of restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. All restricted discretionary activities listed below	a. Positive effects in terms of supporting farming or conservation activity	<i>Relevant objectives and policies:</i> i. Objective 16.2.1
2. In the <b>ONF Overlay Zone:</b> <ul style="list-style-type: none"> <li>Indigenous vegetation clearance - large scale</li> <li>Shelterbelts and small woodlots</li> <li>General subdivision</li> </ul>	a. Effects on landscape values	See Rule 10.6
3. In the <b>ONL or SNL overlay zones:</b> <ul style="list-style-type: none"> <li>Crematoriums</li> <li>Forestry</li> <li>General subdivision</li> </ul>	a. Effects on landscape values	See Rule 10.6
4. In the <b>ONCC or HNCC overlay zones:</b> <ul style="list-style-type: none"> <li>Shelterbelts and small woodlots</li> <li>General subdivision</li> </ul>	a. Effects on natural character of the coast	See Rule 10.6
5. In the <b>NCC Overlay Zone:</b> <ul style="list-style-type: none"> <li>Crematoriums</li> <li>Forestry</li> <li>Indigenous vegetation clearance - large scale</li> <li>General subdivision</li> </ul>	a. Effects on natural character of the coast	See Rule 10.6
6. In an <b>ASBV:</b> <ul style="list-style-type: none"> <li>General subdivision</li> <li>Shelterbelts and small woodlots</li> <li>Site development activities (except for outdoor storage, parking, loading and access, vegetation clearance, storage and use of hazardous substances)</li> </ul>	a. Effects on biodiversity values	See Rule 10.6
7. In a <b>wāhi tūpuna mapped area</b> where activity is identified as a threat: <ul style="list-style-type: none"> <li>All RD Forestry</li> <li>All RD buildings and structures</li> <li>Indigenous vegetation clearance - large scale</li> <li>Shelterbelts and small woodlots</li> <li>General subdivision</li> </ul>	a. Effects on cultural values of Manawhenua	See Rule 14.4

**16.10.5 Assessment of restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>8. Activities affecting a <b>scheduled heritage building or scheduled heritage structure</b>:</p> <ul style="list-style-type: none"> <li>• Additions and alterations that affect a protected part of a scheduled heritage building or scheduled heritage structure</li> <li>• Removal for relocation</li> <li>• All subdivision activities on sites containing a scheduled heritage building or scheduled heritage structure</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.6</p>
<p>9. Activities affecting a <b>scheduled heritage site</b>:</p> <ul style="list-style-type: none"> <li>• All subdivision activities</li> <li>• New buildings and all other structures where visible from an adjoining public place or a publicly accessible place within the site</li> <li>• Parking, loading and access on a scheduled heritage site, where visible from an adjoining public place or a public place within the site</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.6</p>
<p>10. In <b>all hazard overlay zones, swale mapped areas and dune system mapped areas</b>:</p> <ul style="list-style-type: none"> <li>• General subdivision</li> </ul>	<p>a. Risk from natural hazards</p>	<p>See Rule 11.5</p>
<p>11. In the <b>Hazard 2 (flood) Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Natural hazards sensitive activities</li> <li>• Natural hazards potentially sensitive activities</li> </ul>	<p>a. Risk from natural hazards</p>	<p>See Rule 11.5</p>
<p>12. In a <b>hazard 1, 1A or 2 (flood) overlay zone</b> (see Rule 16.3.6):</p> <ul style="list-style-type: none"> <li>• New buildings and additions and alterations to buildings that create within any two calendar-year period: more than 36m<sup>2</sup> of new ground floor area in the <b>Henley mapped area</b>, or more than 60m<sup>2</sup> of new ground floor area outside the <b>Henley mapped area</b></li> </ul>	<p>a. Risk from natural hazards</p>	<p>See Rule 11.5</p>
<p>13. In the <b>National Grid Subdivision Corridor mapped area</b>:</p> <ul style="list-style-type: none"> <li>• All subdivision activities</li> </ul>	<p>a. Risk to the safety of people and property</p> <p>b. Reverse sensitivity effects</p> <p>c. Effects on efficient and effective operation of the National Grid and access to it</p>	<p>See Rule 5.8</p>

**16.10.5 Assessment of restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item**

Activity		Matters of discretion	Guidance on the assessment of resource consents
14.	In the <b>radio transmitters mapped area</b> : <ul style="list-style-type: none"> <li>• General subdivision</li> </ul>	a. Reverse sensitivity effects	See Rule 5.8
Y.	In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> : <ul style="list-style-type: none"> <li>• All subdivision activities</li> </ul>	a. Effects on health and safety b. Reverse sensitivity effects c. Effects on efficient and effective operation of network utilities	See Rule 5.8.
X.	In a <b>Residential Transition Overlay Zone (RTZ)</b> or an <b>Industrial Transition Overlay Zone (IndTZ)</b> (prior to release): <ul style="list-style-type: none"> <li>• General subdivision</li> </ul>	a. Effects on future urban development	See Rule 12.X.

## **Rule 16.11 Assessment of Discretionary Activities**

### **Rule 16.11.1 Introduction**

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 16.11.2 - 16.11.4 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 16.11.2 - 16.11.4 apply as follows:
  - a. Rule 16.11.2 applies to discretionary land use activities;
  - b. Rule 16.11.3 applies to discretionary performance standard contraventions; and
  - c. Rule 16.11.4 applies to discretionary subdivision activities.
4. With respect to section 104(2), Council will not consider family flats or papakāiika as part of the permitted baseline in considering residential density effects in the rural zones.
5. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 16.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
<p>1. All discretionary land use activities listed below</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objectives 16.2.1, 16.2.2, 16.2.3, 16.2.4.</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>b. For discretionary land use activities, whether any associated development activities meet relevant performance standards, or are otherwise consistent with relevant objectives and policies for development (see Rule 16.9 for performance standard contraventions).</p> <p>c. Development is not situated on visually prominent land.</p> <p>d. The form, scale and materials used in buildings and structures are compatible with the character values of the rural zones as listed in Appendix A7.</p> <p>e. Colours and materials used in development are chosen to blend in with the rural setting and minimise reflectivity.</p> <p>f. Landscaping or other forms of screening are used to reduce the visibility of development from surrounding properties and public viewpoints.</p> <p><i>General assessment guidance:</i></p> <p>g. As well as the effects on the values specified in Objective 16.2.3, Council will consider the effects on the rural character values identified in Appendix A7.</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>h. For activities taking place within the <b>radio transmitters mapped area</b>, see Section 5.9 for guidance on the assessment of resource consents in relation to management of reverse sensitivity effects on Radio New Zealand's facilities at 740 Highcliff Road and 35 Karetai Road.</p> <p>i. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3 and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</p> <p>j. For activities that may have effects on biodiversity values, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1.</p> <p>k. For activities adjacent to water bodies and the coast, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.2.</p> <p>l. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</p>

### 16.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
2. <ul style="list-style-type: none"> <li>• Rural tourism - large scale</li> <li>• Rural research - large scale (outside the <b>Invermay Farm mapped area</b>)</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 16.2.2, 16.2.3, 16.2.4.</li> <li>b. Adverse effects on the amenity of residential activities on surrounding properties is avoided or, if avoidance is not practicable, adequately mitigated (Policy 16.2.2.5).</li> <li>c. Adverse effects on rural character and visual amenity from large scale development will be avoided or minimised as far as practicable (Policy 16.2.3.5).</li> <li>d. Activities other than farming are only allowed on highly productive land where the scale, size and nature of the activity means the loss of current or potential future rural productivity would be insignificant in any <b>high class soils mapped area</b> and no more than minor in other areas of highly productive land (Policy 16.2.4.2.a).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>e. The activity is set back a sufficient distance from its own boundaries and existing sensitive activities on surrounding sites to avoid or adequately mitigate effects.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>f. Restriction on hours of operation.</li> <li>g. Restriction on maximum number of guests (rural tourism).</li> <li>h. Controls on lighting.</li> <li>i. Parking requirements.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>j. In assessing effects on amenity, Council will consider the effects of vehicle movements on the site as well as any significant changes to the number or nature of vehicle movements on the adjoining road.</li> <li>k. In determining whether land is 'highly productive land', Council will consider its land use capability (LUC) classification, the <b>high class soils mapped area</b> (HCS), as well as any other evidence related to productive values. The expectation is that land in the HCS and/or that has a LUC 1-3 classification will be considered 'highly productive land'. Note that information about the LUC classification is provided on the Landcare Research website (<a href="https://www.landcareresearch.co.nz">https://www.landcareresearch.co.nz</a>) and LUC 1-3 areas are shown on the Data Map (<a href="https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/">https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/</a>)</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>l. In an ASBV, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and effects related to biodiversity values.</li> </ul>

### 16.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
<p>3.</p> <ul style="list-style-type: none"> <li>• Rural industry</li> <li>• Rural contractor and transport depots - large scale</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.2.2, 16.2.2, 16.2.3, 16.2.4, 5.2.1</li> <li>b. Adverse effects on rural character and visual amenity from large scale development will be avoided or minimised as far as practicable (Policy 16.2.3.5).</li> <li>c. Adverse effects on the amenity of residential activities on surrounding properties, are avoided or, if avoidance is not practicable, adequately mitigated (Policy 16.2.2.5).</li> <li>d. Activities other than farming are only allowed on highly productive land where the scale, size and nature of the activity means the loss of current or potential future rural productivity would be insignificant in any <b>high class soils mapped area</b> and no more than minor in other areas of highly productive land (Policy 16.2.4.2.a).</li> <li>e. NA</li> <li>f. For rural industry, the use and development of renewable energy generation is encouraged (Policy 5.2.1.1).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>g. The activity will be set back a sufficient distance from its own property boundaries to avoid or adequately mitigate any adverse effects from noise, odour, dust, contaminants or visual effects on surrounding properties.</li> <li>h. High noise generating equipment is located within acoustically insulated buildings or fitted with noise reduction devices to ensure noise emissions are maintained at a reasonable level.</li> <li>i. If noise is not able to be adequately controlled at its source, noise reduction is achieved through noise barriers or bunds to ensure noise emissions are maintained at a reasonable level.</li> <li>j. Management plans or other mitigation measures will be employed to limit the effects of dust, vehicle movements and operating noise on surrounding properties.</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>k. Restriction on hours of operation.</li> <li>l. Controls on on-site lighting.</li> <li>m. A requirement for screening of storage areas.</li> <li>n. A requirement to control dust.</li> <li>o. Provision of car parking areas.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>p. In assessing effects on amenity, Council will consider the effects of vehicle movements on the site as well as any significant changes to the number or nature of vehicle movements on the adjoining road.</li> <li>q. In determining whether land is 'highly productive land', Council will consider its land use capability (LUC) classification, the <b>high class soils mapped area</b> (HCS), as well as any other evidence related to productive values. The expectation is that land in the HCS and/or that has a LUC 1-3 classification will be considered 'highly productive land'. Note that information about the LUC classification is provided on the Landcare Research website (<a href="https://www.landcareresearch.co.nz">https://www.landcareresearch.co.nz</a>) and LUC 1-3 areas are shown on the Data Map (<a href="https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/">https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/</a>).</li> </ul>

### 16.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
<p>4.</p> <ul style="list-style-type: none"> <li>• Mining</li> <li>• Landfills</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objectives 2.2.2, 16.2.2, 16.2.3, 16.2.4, 5.2.1.</li> <li>b. Policies 2.3.1.2, 2.3.1.8, 2.3.1.9</li> <li>c. Adverse effects on the amenity of residential activities on surrounding properties are avoided or, if avoidance is not practicable, adequately mitigated (Policy 16.2.2.5).</li> <li>d. Adverse effects on rural character and visual amenity from large scale development are avoided, or minimised as far as practicable (Policy 16.2.3.5).</li> <li>e. Land will be restored or rehabilitated to an acceptable standard with respect to landform and to enable a return to productive, recreational or conservation use as soon as possible (Policy 16.2.3.4).</li> <li>f. The mining activity is located on highly productive land due to operational requirements and there are no practicable alternative locations (Policy 16.2.4.2.b).</li> <li>g. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>h. The activity will be set back a sufficient distance from its own property boundaries to avoid or adequately mitigate any adverse effects from noise, odour, dust, contaminants or visual effects on surrounding properties.</li> <li>i. For mining sand from dunes or beaches, there will be no significant impact on the look of the area.</li> <li>j. Management plans or other mitigation measures will be used to adequately manage any adverse effects from dust, vehicle movements and operating noise on surrounding properties.</li> <li>k. There will be no adverse effects in terms of land instability.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>l. In assessing effects on amenity, Council will consider the effects of vehicle movements on the site as well as any significant changes to the number or nature of vehicle movements on the adjoining road.</li> <li>m. In assessing an application for mining, Council will consider:               <ol style="list-style-type: none"> <li>X. the functional and operational needs of mining, particularly when considering what is 'practicable' in terms of policies 16.2.2.5, 16.2.3.5, and 16.2.4.2; and</li> <li>Y. the transport benefit of locating close to where the product of mining is required.</li> </ol> </li> <li>n. In assessing effects on rural character values and amenity, Council will consider whether any proposed restoration or rehabilitation measures will ensure that final landforms:               <ol style="list-style-type: none"> <li>i. screen or enhance the view of excavated faces from surrounding public and residential viewpoints through appropriate landscaping, plantings or siting of public amenities; and/or</li> <li>ii. minimise evidence of landfills or mining activity by blending final contours with surrounding landforms to achieve as natural appearance as possible, and by providing for the establishment of vegetation cover appropriate to the local</li> </ol> </li> </ol>

### 16.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
	<p>character.</p> <p>o. In determining whether land is 'highly productive land', Council will consider its LUC classification, the <b>high class soils mapped area</b> (HCS), as well as any other evidence related to productive values. The expectation is that land in the HCS and/or that has a LUC 1-3 classification will be considered 'highly productive land'. Note that information about the LUC classification is provided on the Landcare Research website (<a href="https://www.landcareresearch.co.nz">https://www.landcareresearch.co.nz</a>) and LUC 1-3 areas are shown on the Data Map (<a href="https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/">https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/</a>).</p> <p><i>Conditions that may be imposed include:</i></p> <p>p. Controls on overall waste volumes for landfills.</p> <p>q. Restrictions on aggregate processing activity for mining.</p> <p>r. A requirement for buffer areas and bunds.</p> <p>s. For quarries, a quarry management plan addressing noise, dust and other amenity effects.</p> <p>t. A site restoration or rehabilitation plan and/or bond to provide for site restoration or rehabilitation.</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>u. See Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and effects related to biodiversity values.</p> <p>v. Where in the SNL or NCC overlay zones, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.3 and effects related to the natural character of the coast, and Objective 10.2.5 and effects related to landscape.</p> <p>w. For mining in a <b>wāhi tūpuna mapped area</b>, and landfills in any location, see Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</p> <p>x. For landfills, the use and development of renewable energy generation is encouraged (Policy 5.2.1.1).</p>

### 16.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
<p>5.</p> <ul style="list-style-type: none"> <li>• Community and leisure - large scale outside a <b>hazard facility mapped area</b></li> <li>• Early childhood education outside a <b>hazard facility mapped area</b></li> <li>• Restaurants or retail activities ancillary to sport and recreation</li> <li>• Sport and recreation</li> <li>• Visitor accommodation outside a <b>hazard facility mapped area</b></li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objectives 2.3.1, 16.2.1, 16.2.2, 16.2.3, 16.2.4.</li> <li>b. Commercial and community activities in the rural zones are restricted to those which require a rural location and/or support rural activities (Policy 2.3.1.2.h).</li> <li>c. Adverse effects of development on rural character and visual amenity are avoided or, if avoidance is not practicable, no more than minor (Policy 16.2.3.6).</li> <li>d. Visitor accommodation supports productive rural activities or a significant conservation activity on the same property (Policy 16.2.1.4).</li> <li>e. Adverse effects on the amenity of residential activities on surrounding properties is avoided or, if avoidance is not practicable, adequately mitigated (Policy 16.2.2.5).</li> <li>f. Activities other than farming are only allowed on highly productive land where the scale, size and nature of the activity means the loss of current or potential future rural productivity would be insignificant in any <b>high class soils mapped area</b> and no more than minor in other areas of highly productive land (Policy 16.2.4.2.a).</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>g. The activity is set back a sufficient distance from its own boundaries and existing sensitive activities.</li> <li>h. The activity supports a conservation activity that is associated with an ASBV, QEII covenant, conservation covenant with the Department of Conservation or a local government agency, or a protected private land agreement under the Reserves Act 1977.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>i. In assessing the effects on amenity, Council will consider the effects of vehicle movements on the site as well as any significant changes to the number or nature of vehicle movements on the adjoining road.</li> <li>j. In determining whether land is 'highly productive land', Council will consider its land use capability (LUC) classification, the <b>high class soils mapped area</b> (HCS), as well as any other evidence related to productive values. The expectation is that land in the HCS and/or that has a LUC 1-3 classification will be considered 'highly productive land'. Note that information about the LUC classification is provided on the Landcare Research website (<a href="https://www.landcareresearch.co.nz">https://www.landcareresearch.co.nz</a>) and LUC 1-3 areas are shown on the Data Map (<a href="https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/">https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/</a>).</li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>k. In an ASBV, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and effects related to biodiversity values.</li> </ol>

### 16.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
<p>6. In a <b>Residential Transition Overlay Zone (RTZ)</b> (prior to release):</p> <ul style="list-style-type: none"> <li>• Intensive farming</li> <li>• Forestry</li> <li>• Cross lease, company lease and unit title subdivision</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 12.4 for guidance on the assessment of resource consents in relation to Objective 12.2.1 and effects related to future use of land for residential activity.</p>
<p>7. Service stations on a strategic road or arterial road</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objectives 16.2.1, 16.2.2, 16.2.3</p> <p>b. Provide for service stations on a strategic road or arterial road where:</p> <ul style="list-style-type: none"> <li>X. safe and convenient access to the site for pedestrians and cyclists can be provided;</li> <li>Y. there is adequate public infrastructure to service the development or any necessary upgrades to public infrastructure will be provided;</li> <li>Z. the service station will not detract from the economic and social vibrancy and viability of any nearby centres; and</li> <li>AA. where policies 16.2.2.5 and 16.2.3.6 can be achieved (Policy 16.2.1.11).</li> </ul> <p>c. Service stations are designed and located to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the amenity of residential activities on surrounding properties (Policy 16.2.2.5).</p> <p>d. Service stations are designed and located to avoid or, if avoidance is not practicable, ensure adverse effects of development on rural character and visual amenity are no more than minor (Policy 16.2.3.6).</p> <p><i>General assessment guidance:</i></p> <p>e. In assessing the effects on the amenity of surrounding residential properties and the streetscape amenity, Council will consider the:</p> <ul style="list-style-type: none"> <li>i. design and location of buildings, forecourts/yards and signs;</li> <li>ii. location of access/egress points;</li> <li>iii. effects of vehicle movements on the site; and</li> <li>iv. the hours of operation, light spill, noise and location or service station development in relation to site boundaries.</li> </ul> <p>X. In assessing the effects on public infrastructure, Council will consider the extent to which the service station is likely to attract pedestrians and cyclists and if necessary whether safe and convenient access for pedestrians and cyclists is available or will be provided.</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <p>Y. The service station is located on a site previously used for service station activity or that is otherwise a Hazardous Activities and Industries List (HAIL) site.</p>

### 16.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
	<p>Z. Any necessary upgrades to available public infrastructure will be made.</p> <p><i>Conditions that may be imposed include:</i></p> <p>f. Requirements for fencing, landscaping and/or setbacks of buildings, forecourts/yards, signs and access/egress points to minimise adverse visual or nuisance effects from noise, lighting and/or vehicle headlights on surrounding properties.</p> <p>g. Restrictions on hours of operation.</p> <p>h. Restrictions on on-site lighting.</p> <p>i. Requirements for screening of storage areas.</p> <p>j. Requirement to control dust.</p> <p>k. Conditions related to building design, scale and bulk including roof lines, height, façade articulation, colour and materials to ensure compatibility with surrounding rural amenity.</p> <p>l. Restrictions on signage.</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>m. See Rule 6.12.2.1 for guidance on the assessment of the effects on the safety and efficiency of the transportation network, and other transportation effects.</p>
<p>Y. In an <b>Industrial Transition Overlay Zone (IndTZ)</b> (prior to release):</p> <ul style="list-style-type: none"> <li>• Cross lease, company lease and unit title subdivision</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 12.4 for guidance on the assessment of resource consents in relation to Objective 12.2.3 and effects related to future use of land for industrial activity.</p>

**16.11.3 Assessment of discretionary performance standard contraventions**

Performance standard	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Acoustic insulation</li> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Rule 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety</p>
2. Density (Papakāika)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 16.2.3</p> <p>b. Any buildings and structures maintain the rural character values and visual amenity of the rural zones (Policy 16.2.3.1).</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>c. See Section 9.7 for guidance on the assessment of resource consents in relation to objectives 9.2.1 and 9.2.2; and effects related to efficiency and affordability of infrastructure and public health and safety.</p> <p>d. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</p>
X. Density (family flats on sites less than 15ha)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objective 16.2.3, 16.2.4.</p> <p>b. The density of residential activity maintains the rural character values and visual amenity of the rural zones (Policy 16.2.3.2).</p> <p>c. The scale, size and nature of activities on highly productive land means that any loss of current or potential future rural productivity would be:</p> <ul style="list-style-type: none"> <li>i. insignificant in any <b>high class soils mapped area</b>; and</li> <li>ii. no more than minor in other areas of highly productive land (Policy 16.2.4.2).</li> </ul> <p>d. The density of residential activity will not, over time and/or cumulatively, reduce rural productivity by displacing rural activities (Policy 16.2.4.4).</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>e. See Section 9.7 for guidance on the assessment of resource consents in relation to objectives 9.2.1 and 9.2.2; and effects related to efficiency and affordability of infrastructure and public health and safety.</p>

### 16.11.3 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
3. Light spill - where rules 16.5.5.1 or 16.5.5.2 are contravened, or where the light spill limit in Rule 16.5.5.3 is exceeded by 25% or less	<p><i>Relevant objectives and policies:</i></p> <ol style="list-style-type: none"> <li>Objective 16.2.3.</li> <li>Activities are designed and operated to ensure that any adverse effects from light spill on rural character and amenity, and the ability of people to view the night sky, are no more than minor (Policy 16.2.3.9).</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>It is proposed to use filtering to prevent blue or ultraviolet light</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>Duration, time and frequency of the proposed illumination</li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>See Rule 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ol>
4. Blasting (mineral exploration)	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>Objective 16.2.2</li> <li>Mineral exploration operates in a way that avoids or, if avoidance is not practicable, adequately mitigates noise or other adverse effects on the amenity of sensitive activities on surrounding properties (Policy 16.2.2.4).</li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>See Rule 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ol>
Y. In the <b>ONL</b> , <b>SNL</b> or <b>NCC overlay zones</b> : <ul style="list-style-type: none"> <li>Area of buildings and structures (Rule 10.3.5.X.b.ii)</li> </ul>	See Rule 10.7.

### 16.11.4 Assessment of discretionary subdivision activities

Activity	Guidance on the assessment of resource consents
1. Cross lease, company lease and unit title subdivision	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>Objective 16.2.1</li> <li>Cross lease, company lease and unit title subdivision do not result in an increase in residential development potential beyond that which might be achieved through a general subdivision (Policy 16.2.1.9).</li> </ol>

## **Rule 16.12 Assessment of Non-complying Activities**

### **Rule 16.12.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 16.12.2 - 16.12.5 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 16.12.2 - 16.12.5 apply as follows:
  - a. Rule 16.12.2 applies to all non-complying activities;
  - b. Rule 16.12.3 applies to non-complying land use activities;
  - c. Rule 16.12.4 applies to non-complying development activities; and
  - d. Rule 16.12.5 applies to non-complying performance standard contraventions.
4. With respect to section 104(2) of the RMA, Council will not consider family flats or papakāika as part of the permitted baseline in considering residential density effects in the rural zones.
5. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 16.12.2 Assessment of all non-complying activities

Activities	Guidance on the assessment of resource consents
<p>1. All non-complying land use activities listed below</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 16.2.1, 16.2.2, 16.2.3, 16.2.4.</li> <li>b. The activity does not detract from, or preferably contributes to, the strategic direction objectives, including, but not limited to, those related to: <ul style="list-style-type: none"> <li>i. Objectives 2.2.2, 2.2.3, 2.2.4, and 2.3.1.</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. In assessing the significance of effects, consideration will be given to: <ul style="list-style-type: none"> <li>i. short to long term effects, including effects in combination with other activities; and</li> <li>ii. the potential for cumulative adverse effects arising from similar activities occurring as a result of a precedent being set by the granting of a resource consent; and</li> </ul> </li> <li>d. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>e. For activities taking place within the <b>radio transmitters mapped area</b>, see Section 5.10 for guidance on the assessment of resource consents in relation to management of reverse sensitivity effects on Radio New Zealand’s facilities at 740 Highcliff Road and 35 Karetai Road.</li> <li>f. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>g. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</li> <li>h. For activities that may have effects on biodiversity values, see Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1.</li> <li>i. For activities adjacent to water bodies and the coast, see Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.2.</li> <li>j. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</li> </ul>

### 16.12.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
1. Commercial advertising	<i>Relevant objectives and policies (priority considerations):</i> a. Objective 2.4.1. b. Policy 2.4.1.6.c.
2. <ul style="list-style-type: none"> <li>• Supported living facilities</li> <li>• Commercial activities (other than those provided for)</li> <li>• Industrial activities (other than rural industry and rural contractor and transport depots)</li> <li>• Major facility activities (other than cemeteries, crematoriums, emergency services and the New Zealand Marine Studies Centre in the <b>Portobello Marine Science mapped area</b>)</li> </ul>	<i>Relevant objectives and policies (priority considerations):</i> a. Objective 2.3.2 and Policy 2.3.2.2. b. Objective 2.4.3 and Policy 2.4.3.4. c. Objective 16.2.1. d. Supported living facilities, commercial activities, industrial activities and major facility activities are avoided, unless otherwise provided for, in the rural zones (Policy 16.2.1.8).
3. In the <b>hazard 1A (flood) overlay zone</b> : <ul style="list-style-type: none"> <li>• Natural hazards potentially sensitive activities</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risk from natural hazards.
4. In the <b>hazard 1 (flood) overlay zones</b> (see Rule 16.3.6): <ul style="list-style-type: none"> <li>• Natural hazards potentially sensitive activities</li> <li>• Natural hazards sensitive activities</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risk from natural hazards.
5. In a <b>Residential Transition Overlay Zone (RTZ)</b> (prior to release): <ul style="list-style-type: none"> <li>• Mining</li> <li>• Landfills</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 12.5 for guidance on the assessment of resource consents in relation to Objective 12.2.1 and effects related to future use of land for residential activity.

### 16.12.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
<p>6. In an <b>ASBV</b>:</p> <ul style="list-style-type: none"> <li>• Commercial activities (except for restaurants or retail activities ancillary to sport and recreation and stand-alone car parking)</li> <li>• Early childhood education</li> <li>• Industrial activities</li> <li>• Major facility activities</li> <li>• Residential activities (except for working from home)</li> <li>• Rural activities (except for rural ancillary retail, rural tourism and rural research)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and the effects related to biodiversity values.</p>
<p>7. In the <b>ONF, ONCC, or HNCC overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• Commercial activities (except for restaurants or retail activities ancillary to sport and recreation and stand-alone car parking)</li> <li>• Major facility activities</li> <li>• Industrial activities</li> <li>• Residential activities (except working from home)</li> <li>• Rural activities (except for farming, grazing, landfills, mining, scheduled mining activity, rural ancillary retail, rural tourism and rural research - small scale)</li> <li>• Expansion of scheduled mining activity SMA007 (Saddle Hill ONF only)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to objectives 10.2.3 and 10.2.5 and the effects related to natural character of the coast and landscape values.</p>
<p>8. In the <b>ONL Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Landfills</li> <li>• Mineral exploration that involves blasting</li> <li>• Mining</li> <li>• Major facility activities (other than cemeteries, crematoriums and the New Zealand Marine Studies Centre in the <b>Portobello Marine Science mapped area</b>)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.5 and effects related to landscape values.</p>

### 16.12.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
9. In the <b>NCC and SNL overlay zones</b> : <ul style="list-style-type: none"> <li>Major facility activities (other than cemeteries, crematoriums and the New Zealand Marine Studies Centre in the <b>Portobello Marine Science mapped area</b>)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to objectives 10.2.3 and 10.2.5 and the effects related to natural character of the coast and landscape values.</p>
10. In a <b>wāhi tūpuna mapped area</b> : <ul style="list-style-type: none"> <li>Forestry</li> <li>Mining</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and the effects on cultural values of Manawhenua.</p>
X. In a <b>hazard facility mapped area</b> , bulk fuel storage facilities sensitive activities	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and Policy 9.2.2.15 and the risks to people from an emergency event occurring at a hazard facility.</p>

### 16.12.4 Assessment of non-complying development activities

Activity	Guidance on the assessment of resource consents
1. Demolition of a protected part of a scheduled heritage building or scheduled heritage structure	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1 and effects on heritage values.</p>
2. In the <b>ONF, ONCC, HNCC overlay zones</b> : <ul style="list-style-type: none"> <li>New building or structure</li> <li>Additions and alterations</li> <li>Indigenous vegetation clearance - large scale (ONCC, HNCC overlay zones)</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to objectives 10.2.3 and 10.2.5 and the effects related to natural character of the coast and landscape values.</p>
3. In a <b>wāhi tūpuna mapped area</b> : <ul style="list-style-type: none"> <li>New buildings and structures</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</p>
4. In an <b>ASBV</b> : <ul style="list-style-type: none"> <li>Indigenous vegetation clearance - large scale</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and the effects related to biodiversity values.</p>

### 16.12.5 Assessment of non-complying performance standard contravention

Performance standard

Guidance on the assessment of resource consents

<p>1. Density</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Objectives 16.2.1, 16.2.3, 16.2.4.</p> <p>b. Policies 16.2.3.2, 16.2.4.4.</p> <p>c. N/A</p> <p>X. The residential activity is the result of a surplus dwelling subdivision (Policy 16.2.1.7.X); or will be associated with long term land management or capital investment that will result in:</p> <p>i. significant positive effects for rural productivity; or</p> <p>ii. a significant contribution to the enhancement or protection of biodiversity values (Policy 16.2.1.7.Y).</p> <p><i>Related strategic directions:</i></p> <p>Y. Objectives 2.2.2, 2.3.1, 2.4.6, policies 2.2.2.1, 2.3.1.2, 2.3.1.3, 2.4.6.2.</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>d. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.1 and effects related to the efficiency and affordability of infrastructure.</p> <p>AE. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and effects related biodiversity values.</p> <p><i>General assessment guidance:</i></p> <p>Z. In assessing whether a proposal for land management or investment meets Policy 16.2.1.7.Y.i and/or 16.2.1.7.Y.ii, Council will consider the information provided with the consent application (see Special Information Requirements – Rule 16.13.X).</p> <p>AA. Types of land management or capital investment that may meet Policy 16.2.1.7.Y.i, depending on the specific circumstances of the site and proposal, include substantial investment in farm buildings or other farm assets required for commercial-scale horticulture or other commercial-scale farming.</p> <p>AB. In assessing whether a proposal may meet Policy 16.2.1.7.Y.ii, Council will consider the ecological context of the site and proposal at a local level, rather than requiring the contribution to be significant at an ecological district or citywide level.</p> <p><i>Conditions that may be imposed include, but are not limited to:</i></p> <p>AC. Conditions to ensure that the land management or capital investment will be completed or substantially underway (and thereafter staged), prior to the establishment of residential activity, or, where this is not possible, a bond is taken to ensure the actions required to meet Policy 16.2.1.7.Y are undertaken.</p> <p>AD. Conditions to ensure that existing areas of indigenous vegetation and/or the habitats of indigenous fauna are legally protected in perpetuity.</p>
-------------------	---

16.12.5 Assessment of non-complying performance standard contravention	
Performance standard	Guidance on the assessment of resource consents
2. In a <b>dune system mapped area</b> or <b>swale mapped area</b> : <ul style="list-style-type: none"> <li>Hazard exclusion areas</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risk from natural hazards.</li> </ol>
3. Light spill - where the limit is exceeded by greater than 25%	<i>Relevant objectives and policies:</i> <ol style="list-style-type: none"> <li>Objective 16.2.3</li> <li>Activities are designed and operated to ensure that any adverse effects from light spill on rural character and amenity, and the ability of people to view the night sky, are no more than minor (Policy 16.2.3.9).</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>It is proposed to use filtering to prevent blue or ultraviolet light.</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>Duration, time and frequency of the proposed illumination.</li> </ol> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ol style="list-style-type: none"> <li>See Rule 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ol>
4. <ul style="list-style-type: none"> <li>Noise - where the limit is exceeded by 5bD LAeq (15 min) or more</li> <li>Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ol>
5. <ul style="list-style-type: none"> <li>Setback from National Grid (buildings, structures, city-wide activities, and National Grid sensitive activities) (Rule 5.6.1.1)</li> <li>Setback from National Grid (subdivision activities) (Rule 16.7.X)</li> </ul>	<i>Relevant guidance from other sections:</i> <ol style="list-style-type: none"> <li>See Section 5.10 for guidance on the assessment of resource consents in relation to Objective 5.2.X and effects related to the operation, maintenance, upgrading and development of the National Grid.</li> </ol>
6. Minimum site size	<i>Relevant objectives and policies (priority considerations):</i> <ol style="list-style-type: none"> <li>N/A</li> <li>Objectives 16.2.1, 16.2.3, 16.2.4.</li> <li>N/A</li> <li>N/A</li> <li>N/A</li> <li>N/A</li> </ol> <p>X. The subdivision, considered as a whole:</p> <ol style="list-style-type: none"> <li>will not result in an increase in the number of sites that</li> </ol>

**16.12.5 Assessment of non-complying performance standard contravention**

Performance standard	Guidance on the assessment of resource consents
	<p>contravene the minimum site size (Policy 16.2.1.X.b.i); and</p> <ul style="list-style-type: none"> <li>ii. will not result in an increase in the residential development potential of the subject land, beyond that provided for by the density land use performance standard and the minimum site size subdivision standard (Policy 16.2.1.X.b.ii); and</li> <li>iii. will meet policies 16.2.3.8 and 16.2.4.3 (Policy 16.2.1.X.b.iii).</li> </ul> <p>g. Subdivisions are designed to ensure any associated future land use and development maintain or enhance the rural character and visual amenity of the rural zones (Policy 16.2.3.8).</p> <p>h. Subdivisions are designed to ensure any future land use and development will:</p> <ul style="list-style-type: none"> <li>i. maintain or enhance the productivity of rural activities;</li> <li>ii. maintain highly productive land for farming activity, or ensure any loss is insignificant on any <b>high class soils mapped area</b> and no more than minor on other areas of highly productive land;</li> <li>iii. maintain land in a rural rather than rural residential use; and</li> <li>iv. not increase the potential for reverse sensitivity (Policy 16.2.4.3).</li> </ul> <p><i>Related strategic directions:</i></p> <p>Y. Objectives 2.2.2, 2.2.4, 2.3.1, 2.4.6, policies 2.2.2.1, 2.2.4.4, 2.3.1.2, 2.4.6.2.</p> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>i. Where necessary, a legal mechanism is proposed that will ensure compliance with Policy 16.2.1.X.b.ii.</li> </ul> <p><i>General assessment guidance:</i></p> <p>Z. With respect to Policy 16.2.4.3.c, Council will generally consider that a subdivision that creates a new undersized site intended for rural residential use meets this policy, provided that the subdivision meets Policy 16.2.1.X.b.i &amp; b.ii – for example in the case of a subdivision involving an existing undersized site and a site that exceeds the MSS, which transfers land from the smaller site to the larger site, and transfers a residential development right from the larger site to the smaller site.</p> <p>j. In determining whether land is 'highly productive land', Council will consider its land use capability (LUC) classification, the <b>high class soils mapped area</b> (HCS), as well as any other evidence related to productive values. The expectation is that land in the HCS and/or that has a LUC 1-3 classification will be considered 'highly productive land'. Note that information about the LUC classification is provided on the Landcare Research website (<a href="https://www.landcareresearch.co.nz">https://www.landcareresearch.co.nz</a>) and LUC 1-3 areas are shown on the Data Map (<a href="https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/">https://apps.dunedin.govt.nz/webmaps/secondgenerationplandata/</a>).</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p>

16.12.5 Assessment of non-complying performance standard contravention	
Performance standard	Guidance on the assessment of resource consents
	k. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.1 and effects related to the efficiency and affordability of infrastructure.
7. Family Flats - Tenancy	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Strategic Directions: objectives 2.3.1, 2.4.6, 2.6.1, policies 2.3.1.2, 2.4.6.2, 2.6.1.2</p> <p>b. Policy 16.2.1.6.</p>
9. In an <b>ASBV</b> : <ul style="list-style-type: none"> <li>• Tree species</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and the effects related to biodiversity values.</p>
10. In the <b>ONF and ONL overlay zones</b> : <ul style="list-style-type: none"> <li>• Tree species</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. ## **Rule 16.13 Special Information Requirements**

### **16.13.1 Papakāika - ownership and occupation**

For papakāika activity, proof that both the owner and occupier of the land fall into one of the classes listed in the definition of papakāika is required. Proof can be obtained from the Māori Land Court or the Ngāi Tahu Whakapapa Unit.

### **16.13.X Land management or capital investment for productivity or biodiversity gains**

1. A resource consent application that includes a proposal for land management or investment intended to achieve significant positive effects for rural productivity (Policy 16.2.1.7.Y.i) should, in most circumstances, be supported by a farm management plan or similar document, prepared by a suitably qualified person, which sets out how gains to rural productivity will be achieved over the medium to long term.
2. A resource consent application that includes a proposal for land management or investment intended to achieve a significant contribution to the enhancement or protection of biodiversity values (Policy 16.2.1.7.Y.ii) must be supported by an ecological restoration plan, prepared by an ecologist or similarly qualified person, which includes the following:
  - a. a description of the site, including the area or areas to be enhanced;
  - b. a description of any indigenous vegetation present, including a species list;
  - c. a description of the indigenous wildlife present and known to use the site;
  - d. an ecological assessment of the significance of the site using the criteria in Policy 2.2.3.2;
  - e. an assessment of how ecological restoration may contribute to providing connectivity with ecological corridors or nearby areas of ecological importance;
  - f. an assessment of the benefits to biodiversity values of a range of practicable options for biodiversity enhancement, and confirmation that the proposed option is suitable for the site and conforms to best practice;
  - g. a schedule of ecologically appropriate species to be planted, including botanical names;
  - h. a planting plan depicting the location, species density and staging of planting;
  - i. measures that will be used to maintain plantings, including the replacement of any dead or non-thriving plants;
  - j. any other measures proposed to enhance habitat for indigenous fauna;
  - k. measures to be used to exclude stock from the enhancement area;
  - l. measures to be used to achieve long-term effective control of plant and animal pest species; and
  - m. the approach to be used to monitor the restoration measures set out in the restoration plan and actions to be taken if measures are not being fulfilled.

## **17. Rural Residential Zones**

### **17.1 Introduction**

A number of people seek to live in a rural setting and undertake rural activities at a small scale, such as the keeping of livestock. These small-scale rural activities are commonly known as lifestyle farming or hobby farming, and the properties on which they are undertaken are commonly known as lifestyle blocks.

Lifestyle blocks can have an adverse effect on sustainable management by removing rural land from productive use; by inflating rural land values to the detriment of more productive rural activities; or by generating reverse sensitivity effects in the rural environment resulting from people living on smaller blocks of land in proximity to productive rural activities such as farming or forestry; and by resulting in pressure to extend urban public infrastructure and services into rural areas. A further issue is that there are a large number of small sites across Dunedin's rural environment which can sometimes be difficult to manage and use.

The rural residential zones have been established in response to these issues, to provide specifically for lifestyle or hobby farming in appropriately located parts of Dunedin's wider rural environment.

Rural residential zones allow for residential activity at a scale consistent with lifestyle or hobby farming, along with those rural and community activities that are consistent with the level of amenity expected by people living in these areas. Non-compatible activities in rural residential zones are discouraged or carefully managed in recognition that these can adversely affect the liveability and amenity of the zones.

Rural residential zones are sometimes located in areas with good quality land and versatile soils, and can contain productive rural activities such as small-scale farming. In order to sustainably manage natural and physical resources, it is important that the productive potential of these areas is maintained.

Some rural residential zones are located in areas of high landscape values, or coastal areas where retention or enhancement of the natural character values of the coast is important. These areas are covered by overlay zones with different rules applying for certain activities, such as buildings, structures and forestry.

Even where not located in landscape or coastal overlays, rural residential zones have their own level of rural or semi-rural character and amenity. Land use activities and development that detract from this character and amenity should be avoided. Rural residential zones can also contain areas of indigenous vegetation and habitat for indigenous species, and are subject to rules managing the clearance of indigenous vegetation.

#### **17.1.1 Zone Descriptions**

##### **17.1.1.1 Rural Residential 1 Zone**

The Rural Residential 1 Zone occurs in a variety of locations, often in proximity to urban areas, that cater for demand for rural residential activity in different parts of Dunedin. The Rural Residential 1 Zone is elevated in some locations and provides a highly visible rural context for nearby residential and urban areas. This applies, in particular, to the Rural Residential 1 Zone at Waitati, Sawyers Bay, Blanket Bay, St Leonards, Chain Hills, Saddle Hill, Blackhead and Scroggs Hill.

In other locations the Rural Residential 1 Zone is less elevated but still provides a rural or semi-rural context to adjacent residential areas, including at Waikouaiti, Abbotsford, Waldronville, Ocean View and Brighton.

The Rural Residential 1 Zone sometimes occurs on river plains, such as at Wingatui, Tirohanga Road and Middlemarch. In these cases, the zone has a character that reflects the productive land on which it occurs, with an open pastoral setting. At Wingatui the Rural Residential 1 Zone has a settled and mature character, with mature trees and shelter plantings, and a diverse range of rural uses including hobby farming, horse grazing and horticultural uses.

#### 17.1.1.2 Rural Residential 2 Zone

The Rural Residential 2 Zone typically occurs in coastal locations, or on hill slopes in proximity to urban areas. The Rural Residential 2 Zone recognises existing semi-developed clusters of small rural sites where there is already some rural residential activity, and provides for one residential activity per existing site.

## 17.2 Objectives and Policies

<b>Objective 17.2.1</b>	
The rural residential zones enable lifestyle blocks, hobby farms and associated residential activities as the appropriate place in the rural environment for these to occur, and provide for a limited range of other compatible activities.	
Policy 17.2.1.1	Enable farming, grazing and conservation in the rural residential zones.
Policy 17.2.1.2	Require residential activity in the rural residential zones to be at a density that enables lifestyle blocks and hobby farms.
Policy 17.2.1.3	Require rural ancillary retail and working from home to be at a scale that: <ol style="list-style-type: none"> <li>is ancillary to, and supportive of, productive rural activities or conservation activity on the same property, and</li> <li>supports objectives 2.3.2 and 2.4.3 and their policies.</li> </ol>
Policy 17.2.1.4	Provide for forestry, domestic animal boarding and breeding (not including dogs), community and leisure - small scale, emergency services, and veterinary services (large animal practice) where the effects will be adequately mitigated in line with objectives 17.2.2, 17.2.3 and 17.2.4 and their policies, and the objectives and policies of any relevant overlay zones.
Policy 17.2.1.5	Only allow rural tourism, rural research, community and leisure - large scale, early childhood education, sport and recreation, and visitor accommodation where the effects will be adequately managed in line with objectives 17.2.2, 17.2.3 and 17.2.4 and their policies, and the objectives and policies of any relevant overlay zones.
Policy 17.2.1.6	Avoid cross lease, company lease and unit title subdivision in the rural residential zones unless it does not result in an increase in development potential beyond that which might be achieved through a general subdivision.
Policy 17.2.1.7	Restrict the tenancy and design of family flats to: <ol style="list-style-type: none"> <li>avoid, as far as practicable, the risk they will be used for a separate, non-ancillary, residential activity; and</li> <li>avoid, as far as practicable, future pressure to subdivide off family flats.</li> </ol>

<b>Objective 17.2.2</b>	
The potential for conflict between activities within the rural residential zones, and between activities within the rural residential zones and adjoining residential zones, is minimised through measures that ensure: <ol style="list-style-type: none"> <li>the potential for reverse sensitivity is minimised; and</li> <li>a good level of amenity on surrounding rural residential properties, residential zoned properties and public spaces.</li> </ol>	
Policy 17.2.2.1	Require residential buildings to minimise, as far as practicable, the potential for reverse sensitivity by being set back an adequate distance from: <ol style="list-style-type: none"> <li>site boundaries; and</li> <li>forestry, intensive farming, domestic animal boarding and breeding (including dogs), mining, landfills and wind generators - large scale.</li> </ol>
Policy 17.2.2.2	Require buildings that house animals to be set back from site boundaries an adequate distance so that any adverse effects on adjoining residential activities are avoided or, if avoidance is not practicable, are no more than minor.

### Objective 17.2.2

The potential for conflict between activities within the rural residential zones, and between activities within the rural residential zones and adjoining residential zones, is minimised through measures that ensure:

- a. the potential for reverse sensitivity is minimised; and
- b. a good level of amenity on surrounding rural residential properties, residential zoned properties and public spaces.

Policy 17.2.2.3	Require all new buildings to be located an adequate distance from site boundaries to ensure a good level of amenity for residential activities on adjoining sites.
Policy 17.2.2.4	Require rural ancillary retail and working from home to operate in a way (including hours of operations) that avoids or, if avoidance is not practicable, adequately mitigates noise or adverse effects on the amenity of surrounding properties.
Policy 17.2.2.5	Only allow rural tourism, rural research, community and leisure - large scale, early childhood education, sport and recreation, veterinary services and visitor accommodation where any adverse effects on the amenity of surrounding rural residential properties are avoided or, if avoidance is not practicable, adequately mitigated.
Policy 17.2.2.6	Require forestry and shelterbelts and small woodlots to be set back an adequate distance to avoid or minimise, as far as practicable, significant effects from shading on residential buildings on surrounding properties.
Policy 17.2.2.7	Only allow forestry where it will be located and designed to avoid or, if avoidance is not practicable, adequately mitigate shading, noise, traffic, and other nuisance effects on sensitive activities on surrounding properties.
Policy 17.2.2.8	Require subdivisions to deliver resultant sites that will achieve a high quality of on-site amenity through being large enough and of a shape that is capable of supporting rural residential development.

### Objective 17.2.3

The character and amenity of the rural residential zones are maintained, elements of which include:

- a. a high presence of natural features such as trees, bush, gully systems and water bodies;
- b. a semi-rural level of development, with a higher proportion of open space and lower density of buildings than in urban areas; and
- c. land maintained and managed for farming, grazing, conservation and rural residential activities.

Policy 17.2.3.1	Require buildings and structures to be set back from boundaries and of a height that maintains the character and visual amenity of the rural residential zones.
Policy 17.2.3.2	Only allow forestry where it will be located, designed, and managed to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the character and visual amenity of the rural residential zones.
Policy 17.2.3.3	Only allow rural tourism, rural research, community and leisure - large scale, early childhood education, sport and recreation, veterinary services and visitor accommodation activities where any adverse effects from development on rural residential character and amenity will be avoided or, if avoidance is not practicable, adequately mitigated.
Policy 17.2.3.4	Require ancillary signs to be located and designed to maintain the character of the rural residential zones, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on site to passing pedestrians and vehicles and not being oversized or too numerous for that purpose.

### Objective 17.2.3

The character and amenity of the rural residential zones are maintained, elements of which include:

- a. a high presence of natural features such as trees, bush, gully systems and water bodies;
- b. a semi-rural level of development, with a higher proportion of open space and lower density of buildings than in urban areas; and
- c. land maintained and managed for farming, grazing, conservation and rural residential activities.

Policy 17.2.3.5	Only allow general subdivision where the subdivision is designed to ensure any associated future land use and development will maintain or enhance the character and amenity of the rural residential zones.
-----------------	--

Policy 17.2.3.X	Only allow activities in a <b>structure plan mapped area</b> where they are designed to: <ol style="list-style-type: none"> <li>a. maintain or enhance any special values of the site as listed in Appendix A12; and</li> <li>b. ensure any other design outcomes listed in Appendix A12 are achieved.</li> </ol>
-----------------	---

### Objective 17.2.4

The productive potential of the rural residential zones for lifestyle blocks or hobby farms is maintained.

Policy 17.2.4.1	Require earthworks in a <b>high class soils mapped area</b> to retain soils on the site.
-----------------	--

Policy 17.2.4.2	Only allow land use, development, or subdivision activities that may lead to land use and development in a <b>high class soils mapped area</b> where any adverse effects on high class soils are avoided or, if avoidance is not practicable, are no more than minor.
-----------------	---

Policy 17.2.4.3	Only allow general subdivision where resultant sites are of a shape and size that will enable lifestyle blocks or hobby farms, including the keeping of livestock, and avoid use purely as large lot residential living.
-----------------	--

Policy 17.2.4.4	Avoid general subdivision in the Rural Residential 2 Zone unless it does not result in an increase in residential development potential.
-----------------	--

## Rules

### Rule 17.3 Activity Status

#### 17.3.1 Rule Location

The activity status tables in rules 17.3.3 to 17.3.5 specify the activity status of land use activities, development activities, and subdivision activities in the rural residential zones and relevant overlay zones, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)
2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

#### 17.3.2 Activity Status Introduction

1. The activity status tables in rules 17.3.3 - 17.3.5 show the activity status of activities in the rural residential zones and the overlay zones indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Additional activity status rules in hazard overlay zones*

7. For the purpose of the hazards provisions, activities are categorised as natural hazards sensitive activities, natural hazards potentially sensitive activities or natural hazards least sensitive activities. The activities that are in each hazards sensitivity category are included in the definitions section and in Section 11.1.
8. In the Hazard 1 (flood) Overlay Zone or the Hazard 2 (flood) Overlay Zone, the activity statuses in Rule 17.3.6 apply for the following activities:
  - a. natural hazards sensitive activities;
  - b. natural hazards potentially sensitive activities; and
  - c. new buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area.

9. Where the activity status in Rule 17.3.6 differs from that in rules 17.3.3 - 17.3.5, the most restrictive activity status always applies.
10. In addition to the rules in Rule 17.3.6, performance standards for development activities within hazard overlay zones are included in rules 17.3.3 - 17.3.5.
11. Activities in a hazard overlay zone must comply with all of the rules in 17.3.3 - 17.3.6.

**Rules applying in *Doctors Point Road structure plan mapped area***

X. Residential activities and subdivision activities within the **Doctors Point Road structure plan mapped area** are managed under provisions in Section 15, including Rule 15.8.AD **Doctors Point Road Structure Plan Mapped Area** Performance Standards and any associated provisions that normally apply to these activities in the Large Lot Residential 1 Zone.

*Performance Standards*

12. Performance standards are listed in the far right column of the activity status tables.
13. Performance standards apply to permitted, controlled, and restricted discretionary activities.
14. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
15. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

**Legend**

Acronym	Meaning
+	Additional provisions apply (assessment criteria for activities in the overlay need to be viewed)
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
RR	Rural Residential Zones
ONF	Outstanding Natural Feature Overlay Zone
ONL	Outstanding Natural Landscape Overlay Zone
SNL	Significant Natural Landscape Overlay Zone
HNCC	High Natural Coastal Character Overlay Zone
NCC	Natural Coastal Character Overlay Zone
Haz1	Hazard 1 Overlay Zones
Haz2	Hazard 2 Overlay Zones
Haz3	Hazard 3 Overlay Zones
ASBV	Areas of Significant Biodiversity Value

**17.3.3 Land Use Activity Status Table**

**Note 17.3.3X- Other requirements outside of the District Plan**

- Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

**Note 17.3.3A – Other requirements outside of the District Plan**

Plantation forestry and associated activities are addressed by the NESPF rather than this Rule 17.3.3.4 for rural residential zones in Rule 17.3.3.4.a and for SNLs in Rule 17.3.3.4.c.

For ONFs and HNCCs in Rule 17.3.3.4.b and for NCCs in Rule 17.3.3.4.c the NESPF does not apply.

The NESPF also does not apply to vegetation clearance prior to afforestation and rules 17.3.4.19, 17.3.4.20 and 17.3.4.21 and the rules in Section 10 Natural Environment apply.

### 17.3.4 Development Activity Status Table

1.	Performance standards that apply to all development activities					<ul style="list-style-type: none"> <li>a. Natural Hazards Performance Standards</li> <li>b. 22.	Storage and use of hazardous substances	P	P	P	P	<ul style="list-style-type: none"> <li>i. Hazardous substances quantity limits and storage requirements</li> <li>ii. Setback from coast and water bodies</li> </ul>
23.	Shelterbelts and small woodlots	P	RD	P	RD	<ul style="list-style-type: none"> <li>i. Forestry and shelterbelts and small woodlots setbacks</li> <li>ii. Tree species</li> </ul>
24.	All other site development activities	P	P	P	RD	

### Note 17.3.4A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

### 17.3.5 Subdivision Activity Status Table

Subdivision activities		Activity status				Performance standards
		a. RR	b. ONF/ HNCC	c. ONL/ SNL/ NCC	d. ASBV	
1.	General subdivision creating resultant sites used solely for the purposes of a Scheduled ASBV or QEII covenant; or reserve; or access; or network utilities; or road.	RD	RD	RD	RD+	i. Access ii. Esplanade reserves and strips
2.	All other general subdivision in the Rural Residential 1 Zone	RD	RD+	RD+	RD+	i. Access ii. Esplanade reserves and strips iii. Firefighting iv. Minimum site size v. Service connections vi. Shape X. <b>Landscape building platform mapped area</b> performance standards (where relevant) Y. Setback from National Grid (subdivision activities) Z. <b>Structure plan mapped area</b> performance standards (where relevant)
3.	All other general subdivision in the Rural Residential 2 Zone	NC	NC	NC	NC+	
4.	Cross lease, company lease and unit title subdivision	NC	NC	NC	NC+	

#### Note 17.3.5A - Other RMA considerations

- Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

#### Note 17.3.5B - General advice

- DCC does not generally provide reticulated water supply to sites zoned rural residential and a connection should not be presumed.

#### Note 17.3.5X - Other relevant District Plan provisions

1. Additional matters of discretion apply to the subdivision of land within a **Critical Electricity Distribution Infrastructure Corridor mapped area**. These are set out in Rule 17.10.5.
2. Additional matters of discretion apply to the subdivision of land within a **National Grid Subdivision Corridor mapped area**. These are set out in Rule 17.10.5.

### 17.3.6 Activity Status in Hazard 1 (Flood) Overlay Zone and Hazard 2 (Flood) Overlay Zone

Activity	Activity status	
	a. Haz1 (flood)	b. Haz2 (flood)
Land Use Activities		
1. Natural hazards sensitive activities	NC	RD
2. Natural hazards potentially sensitive activities	NC	RD
Development Activities		
3. New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m <sup>2</sup> of new ground floor area	RD	RD

### **Note 17.3.6A - Other RMA considerations**

X Section 10 of the RMA (existing use rights) provides for land to be used in a manner that contravenes a rule in a district plan if the use was lawfully established before the rule became operative or the proposed plan was notified, and the effects of the use are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified.

2. Accordingly, activities that are shown to have effects that are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified will not usually trigger the provisions for natural hazards sensitive activities and natural hazards potentially sensitive activities in Rule 17.3.6. However, Council will consider specific circumstances associated with the development and how this affects the character, intensity and scale of effects from the land use activity.

### **Note 17.3.6B - Other requirements outside the District Plan**

1. Clause E1 – Surface water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework (including earthworks) in relation to managing surface water and effects on other property.
2. Buildings and structures that will divert water may require resource consent under the Otago Regional Plan: Water.
3. If buildings and structures affect the flow of water, this effect is also subject to the common law principle of natural servitude.

## **Rule 17.4 Notification**

1. Applications for resource consent for the following activities will be considered without the need to obtain a written approval of affected persons and will not be notified in accordance with sections 95A or 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:
  1. earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is not listed by Heritage New Zealand.
2. With respect to resource consent applications for the following activities, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided with respect to applications for resource consent for the following:
  1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand;
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is listed by Heritage New Zealand; and
  3. contravention of the archaeological sites performance standard (Rule 13.3.3).
3. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided with respect to resource consents applications for the following:
  1. all restricted discretionary activities that list 'effect on cultural values of Manawhenua as a matter for discretion; and
  2. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat in Appendix A4.
4. With respect to resource consent applications for the following activities, the Department of Conservation will

be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:

1. indigenous vegetation clearance - large scale in a scheduled Area of Significant Biodiversity Value; or
  2. indigenous vegetation clearance - large scale or any discretionary or non-complying activity in a Natural Coastal Character or High Natural Coastal Character Overlay Zone.
5. With respect to resource consent applications for the following activities within the **radio transmitters mapped area**, Radio New Zealand Limited will be considered an affected person in accordance with section 95B of the RMA, unless its written approval is provided or discretion is restricted and excludes consideration of reverse sensitivity effects:
1. any activities that may be sensitive to electromagnetic interference, noise or visual effects from Radio New Zealand's facilities at 740 Highcliff Road and 35 Karetai Road; and
  2. subdivision that could result in activities of this kind.
6. With respect to sections 95D(b) and 95E(2)(a) of the RMA, Council will not consider family flats or papakāika as part of the permitted baseline in considering residential density effects in the rural residential zones.
7. With respect to resource consent applications for the following activities, the Otago Regional Council will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:
1. activities in the Hazard 1 or 1A (flood) overlay zones; and
  2. activities in **swale mapped areas**.
8. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## Rule 17.5 Land Use Performance Standards

### 17.5.1 Acoustic Insulation

Noise sensitive activities in the following areas must comply with Rule 9.3.1.

1. **port noise control mapped area;**
2. within 40m of the Taieri Aerodrome Zone;
3. within 40m of a state highway;
4. within 20m of an industrial zone; and
5. within 70m of a railway line.

### 17.5.2 Density

1. The maximum density of standard residential activity is as follows:
  - a. In the Rural Residential 1 Zone, the minimum site size per residential activity is 2ha, except:
    - i. a single residential activity is permitted on an existing site between 1ha and 2ha created before 26 September 2015 as long as all other performance standards can be met; and
    - ii. a single residential activity is permitted on a site created by Rule 17.7.5.3 as long as all other performance standards can be met.
  - b. In the Rural Residential 1 Zone, multiple standard residential activities are only allowed on a single site where all primary residential buildings (houses) are able to meet all the relevant performance standards if they were ever subdivided into separate sites.
  - c. In the Rural Residential 2 Zone, a maximum of one residential activity per site of at least 1ha.
  - d. In all rural residential zones, one family flat is allowed per site in association with a standard residential activity that meets this performance standard for density.
2. Standard residential activity that contravenes this performance standard is a non-complying activity.

### 17.5.4 Hours of Operation

1. For rural ancillary retail, customers must not arrive before 7am or depart after 7pm.
2. For working from home, customers and deliveries must not arrive before 7am or depart after 7pm. This standard does not apply to homestays.
3. Activities that contravene this performance standard are restricted discretionary activities.

### 17.5.5 Light Spill

Land use activities must comply with Rule 9.3.5.

### 17.5.6 Location

1. Domestic animal boarding and breeding (not including dogs) and rural ancillary retail must not be accessed directly from a state highway with a speed limit of 80kmh or over.
2. Activities that contravene this performance standard are restricted discretionary activities.

### 17.5.7 Maximum Gross Floor Area

Activity	Maximum gross floor area
1. Rural ancillary retail	60m <sup>2</sup>

Activity	Maximum gross floor area
2. Working from home	100m <sup>2</sup> (applies only to area used within buildings)

3. The retailing of plants grown on a site is exempt from the performance standard for maximum gross floor area.
4. Activities that contravene this performance standard are restricted discretionary activities.

**Note 17.5.7A - Other requirements outside of the District Plan**

1. Registration must be obtained from DCC Environmental Health Department for any working from home activity which involves food products, hairdressing, beauty therapy or tattooing. Please contact the DCC's Environmental Health Department on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.
2. A licence from DCC's Alcohol Licensing Department may be required for any working from home activity involving the sale or distribution of alcohol. Please contact the DCC on 03 477 4000 or visit the DCC website at [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.

**17.5.8 Minimum Mobility Car Parking**

1. NA.

Activity	Minimum number of on-site parking spaces
a- c. <i>Removed to comply with the National Policy Statement on Urban Development 2020 requirement to remove minimum car parking requirements. Rule numbering to be corrected at a later date.</i>	

2. Land use activities must provide on-site mobility parking spaces as follows:

Total number of parking spaces provided	Minimum number of these that must be mobility parking spaces
a. 1 - 20	1 parking space
b. 21 - 50	2 parking spaces
c. For every additional 50 parking spaces	1 additional parking space

3. NA.
4. NA.
5. Activities that contravene this performance standard are restricted discretionary activities.

**Note 17.5.8A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

**17.5.9 Noise**

Land use activities must comply with Rule 9.3.6.

#### **17.5.10 Separation Distances**

1. New residential buildings must be located at least:
  - a. 30m from an existing, lawfully established forestry activity on a separate site;
  - b. 100m from:
    - i. an existing, lawfully established intensive farming activity on a separate site; and
    - ii. an existing, lawfully established domestic animal boarding and breeding including dogs activity on a separate site;
  - c. 150m from existing, lawfully established landfills on a separate site;
  - d. 250m from existing, lawfully established wind generators - large scale on a separate site;
  - e. 200m from an existing, lawfully established mining activity, that does not involve blasting, on a separate site; and
  - f. 500m from an existing, lawfully established mining activity, that involves blasting, on a separate site.
2. For the purpose of this standard, separation distance is measured from the closest wall of the new residential building to the closest edge of any active operational area or part of the site being used for one of the activities listed.
3. Activities that contravene this performance standard are restricted discretionary activities.

#### **17.5.11 Setback from National Grid**

National Grid sensitive activities must comply with Rule 5.6.1.1.

#### **17.5.12 Tree Species**

Forestry and shelterbelts and small woodlots must comply with Rule 10.3.4.

### **17.5.13 Family Flats**

#### Rule 17.5.13.1 Family Flats - Tenancy

- a. Family flats must:
  - i. only be occupied by:
    1. a person or persons related to or dependent on the household that lives in the primary residential unit on the same site; or
    2. employed on-site, in a paid or voluntary capacity, as a domestic, child-care, farm or conservation worker by the household that lives in the primary residential unit on the same site.
  - ii. not be on a different tenancy agreement to the primary residential unit.
- b. Standard Residential activity that contravenes this performance standard is a non-complying activity.

#### Rule 17.5.13.2 Family Flat - Design

- a. Family flats must:
  - i. not exceed a maximum gross floor area of 60m<sup>2</sup>;
  - ii. be on the same available water and waste infrastructure connection, or the same non-reticulated wastewater disposal system as the primary residential unit;
  - iii. be on the same household electricity account;
  - iv. share the same driveway as the primary residential unit; and
  - v. be attached to or located in the same residential building as the primary residential unit, or located within 30m of the primary residential building (house), as measured as the closest distance between any wall of the primary residential building and any wall of the family flat.
- b. Standard Residential activity that contravenes this performance standard is a restricted discretionary activity.

## **Rule 17.6 Development Performance Standards**

### **17.6.1 Firefighting**

New residential buildings and subdivision activities must comply with Rule 9.3.3.

### **17.6.2 Natural Hazards Performance Standards**

#### 17.6.2.1 Hazard exclusion areas

New buildings and structures, and additions and alterations located in a **swale mapped area** must comply with Rule 11.3.1.1.

#### 17.6.2.2 Maximum area of vegetation clearance in the hazard overlay zones

Vegetation clearance in the Hazard 1 or 2 (land instability) overlay zones must comply with Rule 11.3.2.

#### 17.6.2.3 Relocatable buildings

New buildings containing residential activity on the ground floor in the Hazard 3 (coastal) Overlay Zone must comply with Rule 11.3.3.

#### 17.6.2.4 Outdoor storage

Outdoor storage in the Hazard 1 (flood) Overlay Zone must comply with Rule 11.3.4.

### **17.6.3 Hazardous Substances Quantity Limits and Storage Requirements**

---

The storage and use of hazardous substances must comply with Rule 9.3.4.

#### 17.6.4 Materials and Design

Earthquake strengthening must comply with Rule 13.3.2.

#### 17.6.5 Maximum Height

1. New buildings and structures, and additions and alterations, must not exceed a maximum height above ground level as follows:

Activity		i. Rural residential zone	ii. Landscape and coastal character overlay zones
a.	Roadside produce stall	3.5m	3.5m
b.	All other buildings and structures	10m	5m

- c. Rooftop structures are exempt from the performance standard for height provided they do not exceed the maximum height limit for all other buildings and structures by more than one third of that limit.
  - d. Buildings or structures must not protrude through the height restriction for the Taieri Aerodrome approach and take-off fans shown on the **Taieri Aerodrome flight fan mapped area**.
2. Activities that contravene this performance standard are restricted discretionary activities.

#### 17.6.X Area, Number and Location of Buildings and Structures

1. In Outstanding Natural Landscape (ONL), Significant Natural Landscape (SNL), and Natural Coastal Character (NCC) overlay zones and scheduled Areas of Significant Biodiversity Value (ASBVs), all new buildings, new structures and additions and alterations must comply with Rule 10.3.5.

#### 17.6.6 Number, Location and Design of Ancillary Signs

##### 17.6.6.1 General

- a. A maximum of one sign attached to a building and one freestanding sign is allowed per site, except:
  - i. only one sign may be located in any part of a site in an ONF, ONL, SNL, HNCC or NCC overlay zone.
- b. Signs visible from a public place must meet all of the following performance standards, except that regulatory signs, directional signs and warning signs that do not exceed 0.25m<sup>2</sup> are exempt from these standards.
- c. Signs must comply with Rule 6.7.3 where visible from a road.
- d. Signs must not be illuminated or digital.
- e. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

##### 17.6.6.2 Signs attached to buildings

- a. The maximum height above ground level, at the highest point of any sign, is 4m, except:
  - i. the maximum height is 2m in an ONF, ONL, SNL, HNCC or NCC overlay zone.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, except as mounted flat against a parapet or gable end.
- d. The maximum area of signs, per display face, is 1m<sup>2</sup>, except:
  - i. the maximum area of signs, per display face, is 0.6m<sup>2</sup> in an ONF or HNCC overlay zone.

- e. In an ONF or HNCC overlay zone the sign must only provide information about the values of the overlay zone (refer Appendices A3 and A5).

#### 17.6.6.3 Freestanding signs

- a. The maximum dimensions of freestanding signs are:
- i. maximum height of 4m, except:
    1. 2m in an ONF, ONL, SNL, HNCC or NCC overlay zone;
  - ii. maximum area of 2m<sup>2</sup> per display face, except:
    1. 0.6m<sup>2</sup> per display face in an ONF or HNCC overlay zone; and
    2. 1m<sup>2</sup> per display face in an ONL, SNL or NCC overlay zone;
  - iii. maximum of 2 display faces per sign;
  - iv. maximum width of 2m, except:
    1. 1m in an ONF, ONL, SNL, HNCC or NCC overlay zone; and
  - v. maximum depth of 400mm.
- b. Freestanding signs must:
- i. not obstruct parking, loading or access areas; and
  - ii. be positioned entirely within site boundaries.
- c. In an ONF or HNCC overlay zone the sign must only provide information about the values of the overlay zone (refer Appendices A3 and A5).

#### **Note 17.6.6A - Other requirements outside of the District Plan**

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*.
  - b. Dunedin City Council Commercial Use of Footpaths Policy
  - c. Dunedin City Council Roading Bylaw
  - d. Dunedin City Council Traffic and Parking Bylaw

#### **17.6.7 Parking, Loading and Access Standards**

Parking, loading and access must comply with Rule 6.6.

#### **17.6.8 Reflectivity**

New buildings and structures (except fences), and additions and alterations, in any landscape or coastal character Overlay Zone must comply with Rule 10.3.6.

#### **17.6.9 Setbacks**

##### 17.6.9.1 Boundary setbacks

- a. New buildings and structures, and additions and alterations, must be set back from boundaries as follows:

Activity	1. Minimum setback from road boundary	2. Minimum setback from side and rear boundaries with sites held in separate ownership

i.	Residential buildings (See Figure 17.6.9.1A)	12m	10m
ii.	Non-residential buildings housing animals (See Figure 17.6.9.1B)	12m	<ol style="list-style-type: none"> <li>1. Buildings with a maximum height of up to 7m above ground level: 15m.</li> <li>2. Buildings with a maximum height that is over 7m above ground level: The greater of either 15m or twice the maximum height of the building.</li> </ol>
iii.	Non-residential buildings not housing animals (See Figure 17.6.9.1C)	12m	<ol style="list-style-type: none"> <li>1. Buildings with a maximum height of up to 7m above ground level: 6m.</li> <li>2. Buildings with a maximum height that is over 7m above ground level: Twice the maximum height of the building.</li> </ol>
iv.	Roadside produce stall	No requirement	6m
v.	All other structures	No requirement	No requirement

b. Activities that contravene this performance standard are restricted discretionary activities.

Figure 17.6.9.1A: Setbacks for residential buildings

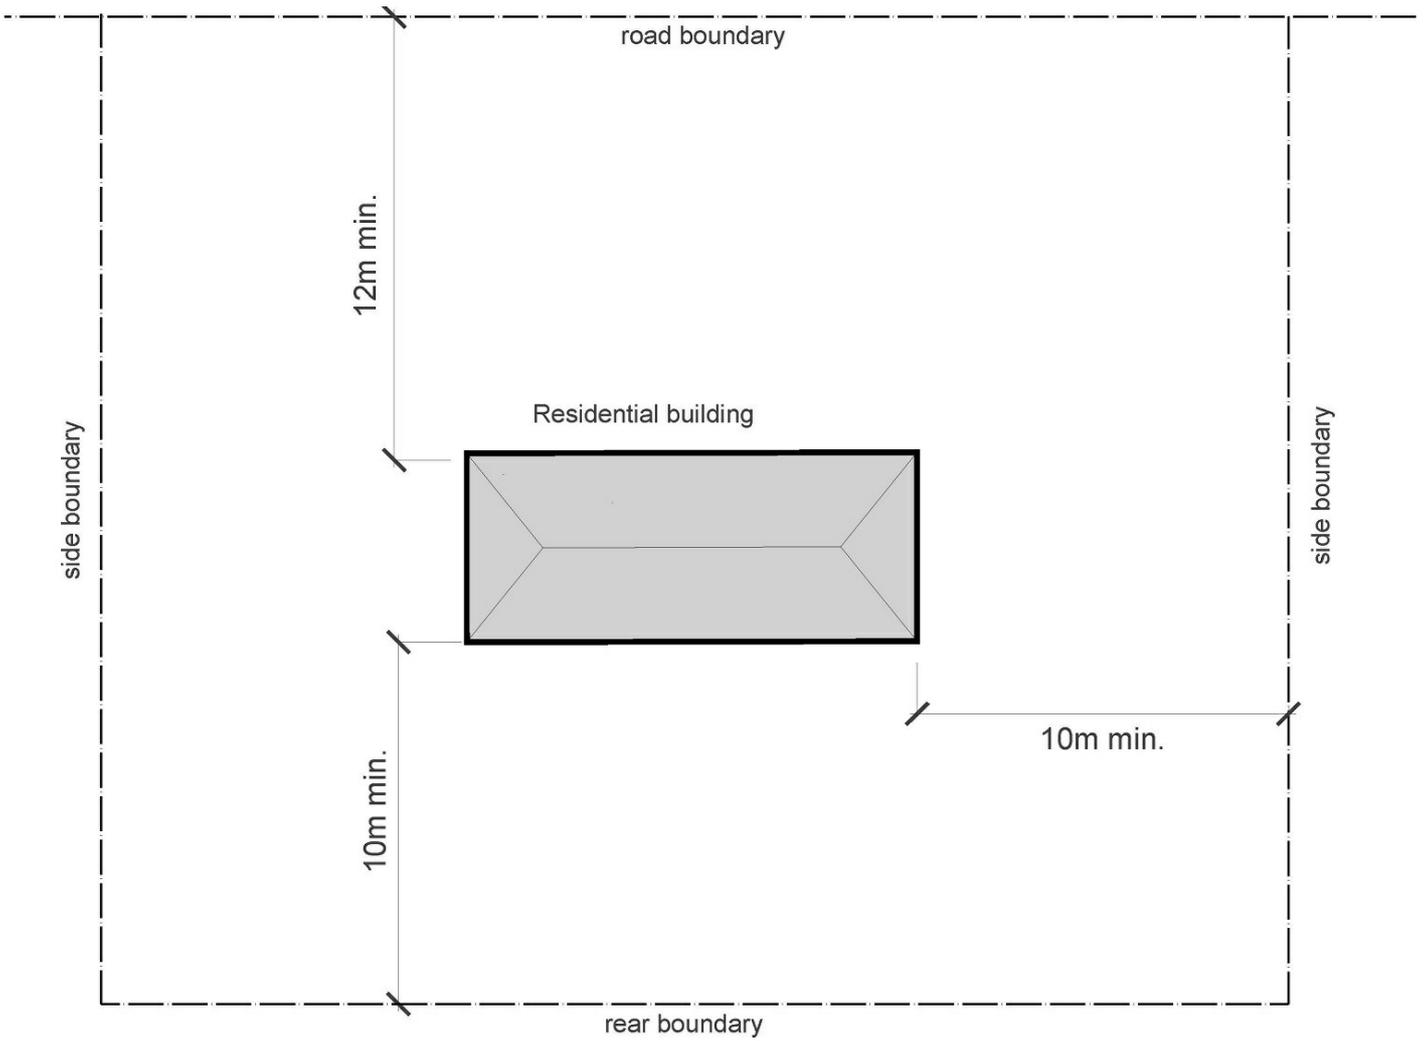

Figure 17.6.9.1B: Setbacks for non-residential buildings housing animals

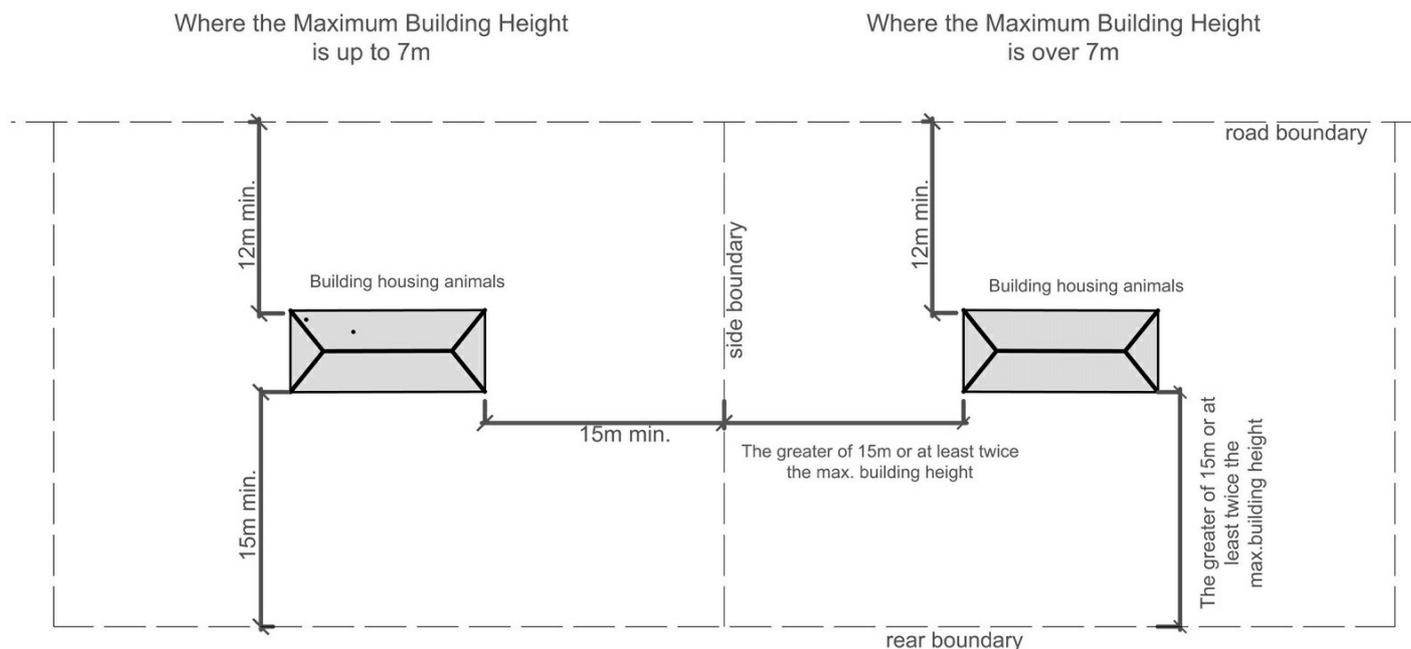

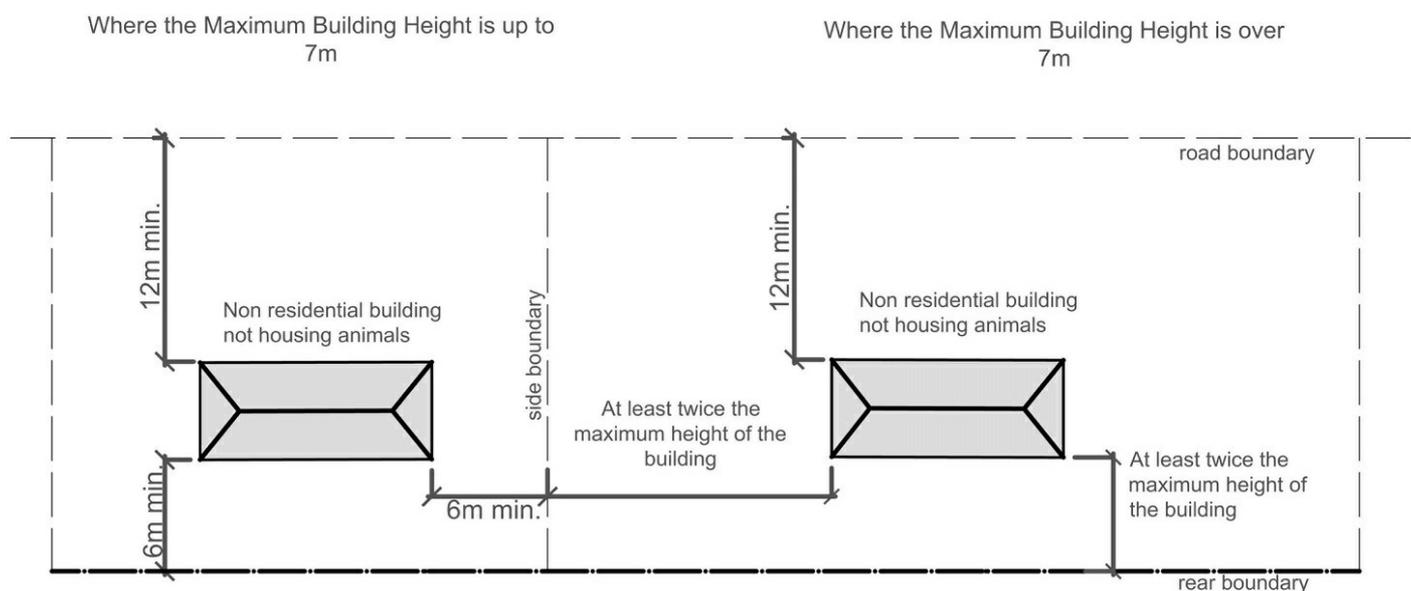

Figure 17.6.9.1C: Setbacks for non-residential buildings not housing animals

17.6.9.2 Forestry and shelterbelts and small woodlots setbacks

- a. Trees associated with forestry activity:
  - i. must not be planted within 30m of the boundary of any residential zone;
  - ii. must not be planted within 40m of a residential building where the building exists at the time of planting;
  - iii. must not shade a motorway or a strategic road, arterial road or collector road between 10am and 2pm on the shortest day of the year;

- iv. must not be planted within 10m of the boundary of the designated rail corridor; and
  - X. must not be planted within the **Critical Electricity Distribution Infrastructure Corridor mapped area**.
- b. Trees associated with shelterbelts and small woodlots:
- i. must be set back, or managed so that they maintain, a minimum distance of their own height from any residential building on an adjoining site, where the building exists at the time of planting;
  - ii. must not shade a motorway or a strategic road, arterial road or collector road between 10am and 2pm on the shortest day of the year; and
  - iii. must not be planted within 10m of the boundary of the designated rail corridor.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### 17.6.9.3 Setback from scheduled tree

New buildings and structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2

#### 17.6.9.4 Setback from National Grid

New buildings and structures, and additions and alterations must comply with Rule 5.6.1.1.

#### 17.6.9.5 Setback from coast and water bodies

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

#### 17.6.9.X Setback from Critical Electricity Distribution Infrastructure

New buildings, new structures and additions and alterations must comply with Rule 5.6.X.1.

#### **Note 17.6.9.XA - General advice**

1. The **Critical Electricity Distribution Infrastructure Corridor mapped area** is measured either side of the centreline of above ground Critical Electricity Distribution Infrastructure (except in the case of designated zone substations where the measurement is taken from the designation boundary), as follows:
  - a. 5m from the centreline of a 11kV line;
  - b. 8.5m from the centreline of a 33kV line;
  - c. 8.5m from designated zone substations; and
  - d. 9.5m from the centreline of a 66kV or a 110kV line.
2. Work near Aurora Energy's overhead lines and power poles requires Close Approach consent. For more information contact Aurora Energy.
3. Vegetation to be planted near Critical Electricity Distribution Infrastructure should be selected and/or managed to ensure that it will not result in that vegetation breaching the Electricity (Hazards from Trees) Regulations 2003.

#### **17.6.10 Vegetation Clearance Standards**

##### 17.6.10.1 Maximum area of vegetation clearance (UBMA)

Vegetation clearance in an **urban biodiversity mapped area** must comply with Rule 10.3.2.4.

##### 17.6.10.2 Indigenous vegetation clearance - small scale thresholds

Indigenous vegetation clearance - small scale must comply with Rule 10.3.2.1.

##### 17.6.10.3 Protected areas (vegetation clearance)

Vegetation clearance and indigenous vegetation clearance must comply with Rule 10.3.2.2.

17.6.10.4 Protected species (indigenous vegetation clearance)

Indigenous vegetation clearance must comply with Rule 10.3.2.3.

17.6.10.5 Maximum area of vegetation clearance in the hazard overlay zones

Vegetation clearance in the hazard 1 (land instability) Overlay Zone and hazard 2 (land instability) Overlay Zone must comply with Rule 11.3.2.

## **Rule 17.7 Subdivision Performance Standards**

### **17.7.1 Access**

General subdivision must comply with Rule 6.8.1.

### **17.7.2 Esplanade Reserves and Strips**

General subdivision must comply with Rule 10.3.1.

### **17.7.3 Firefighting**

General subdivision must comply with Rule 9.3.3.

### **17.7.4 Service Connections**

General subdivision must comply with Rule 9.3.7.

### **17.7.5 Minimum Site Size**

1. The minimum site size for new resultant sites in the Rural Residential 1 Zone is 2ha.
2. Resultant sites created and used solely for the following purposes are exempt from the minimum site size standard:
  - a. reserve;
  - b. access;
  - c. network utilities; or
  - d. road.
3. Subdivision activities that contravene this standard are non-complying, except in the following circumstances where the subdivision is discretionary:
  - a. all resultant sites are at least 75% of the minimum site size; and
  - b. a minimum of 50% of the resultant sites are not less than the minimum site size; and
  - c. the average area of the resultant sites is not less than the minimum site size.

### **17.7.6 Shape**

1. Each resultant site that is intended to be developed must be of a size and shape that is large enough to contain a building platform of at least 8m by 15m that meets the performance standards of this Plan including but not limited to:
  - a. NA;
  - b. all setbacks from boundaries, water bodies and scheduled trees.
2. Building platforms must have a slope of 12° (1:4.7 or 21%) or less and must:
  - a. not contain esplanade reserves or strips;

- b. not contain scheduled heritage buildings or scheduled heritage structures; and
  - c. not contain right-of-way easements.
  - d. NA.
3. For unreticulated areas, resultant sites must provide for a wastewater disposal area to be located at least 50m from any water body and Mean High Water Springs.
4. Sites created and used solely for the following purposes are exempt from the shape standard:
  - a. Scheduled ASBV or QEII covenant;
  - b. reserve;
  - c. access;
  - d. network utility; or
  - e. road.
5. Subdivision activities that do not meet this standard are restricted discretionary activities.

### **17.7.X Setback from National Grid (Subdivision Activities)**

Subdivision activities must comply with Rule 5.6.1.X.

## **Rule 17.Y Structure Plan Mapped Area Performance Standards**

### 17.Y.1

1. In addition to the performance standards in 17.5, 17.6 and 17.7 and any relevant overlay zones or mapped areas, activities in a **structure plan mapped area** must meet the area-specific performance standards below. Where a performance standard in this section specifically provides an exemption or alternative to a standard in 17.5, 17.6 or 17.7, the standard in this section supersedes that standard.

### **17.Y.X Signal Hill Road Structure Plan Mapped Area Performance Standards**

#### 17.Y.X.1 Land use performance standards

- a. Density
  - i. Standard residential activities must not exceed a density of one residential activity per site (note that Rule 17.Y.X.3 limits the maximum number of sites in the **structure plan mapped area**).
  - ii. One family flat is allowed per site in association with a standard residential activity that meets this performance standard for density.
  - iii. Standard residential activity that contravenes this performance standard is a non-complying activity.
  - iv. For the sake of clarity, this performance standard supersedes Rule 17.5.2.

#### 17.Y.X.2 Development performance standards

- a. Buildings and structures associated with any residential activity, except for the residential activity in existence at 235 Signal Hill Road on 19 February 2021, and the residential activity consented by LUC-2020-159, must be located outside the Flagstaff-Mt Cargill Significant Natural Landscape Overlay Zone.
- b. Development activities that do not meet this standard are non-complying activities.

#### 17.Y.X.3 Subdivision performance standards

- a. Access
  - i. Subdivision activities must provide suitably designed and formed public walking access through the mapped area, to connect:
    1. North Road (the point marked '1' on Figure 17.Y.XA) with the paper road at Thirstane Street (the point marked '2' on Figure 17.Y.XA); and
    2. the new accessway within the subdivision (the point marked '3' on 17.Y.XA) with the eastern corner of the mapped area (the point marked '4' on Figure 17.Y.XA).
  - ii. The required timing of the creation of these accessways is as follows:
    1. where the subdivision is not staged:
      1. legal access for pedestrians to fulfil clause i above must be created, and access from point 1 to point 2 must be formed, prior to the issuing of the section 224c certificate for the subdivision;
      2. access from point 3 to point 4 must be formed within five years of the issuing of the section 224c certificate for the subdivision.
    2. where the subdivision is staged (either via multiple resource consents or via multiple stages of one resource consent):
      1. legal access for pedestrians to fulfil clause i must be created prior to the issuing of the section 224c certificate for the first stage that creates any residential site(s) located

wholly or partly outside the SNL;

2. access from point 1 to point 2 must be formed in accordance with staging; and
  3. access from point 3 to point 4 must be formed within five years of the issuing of the section 224c certificate for the first stage that creates any residential site(s) located wholly or partly outside the SNL.
- iii. Subdivision activities must ensure that the accessway corridor that provides vehicle and pedestrian access to dwellings located along the north-western boundary of the site, outside the SNL, is: accessible to the public; and designed with a carriageway formation that is consistent with the standard required for a legal road.
  - iv. Subdivision activities must provide legal access for pedestrians between 534 North Road and the accessway described in clause iii above. Where the subdivision is not staged, this legal access must be created prior to the issuing of the section 224c certificate for the subdivision. Where the subdivision is staged, it must be created prior to the issuing of the section 224c certificate for the first stage that creates any site(s) located wholly or partly outside the SNL.
  - v. There is no requirement to form the access for pedestrians described at clause iv.
  - vi. Subdivision activities that do not meet this standard are non-complying activities.
  - vii. For the sake of clarity, this standard is additional to Rule 17.7.1.
- b. Minimum site size
- i. There is no minimum site size for new resultant sites, but the average area of the resultant sites must be no less than 2ha.
  - ii. Resultant sites created and used solely for the following purposes are exempt from the minimum site size standard:
    1. Scheduled ASBV;
    2. any covenant created to protect the Proposed Vegetation Protection Area;
    3. reserve;
    4. access;
    5. utility; or
    6. road.
  - iii. For the sake of clarity, this performance standard supersedes Rule 17.7.5.
  - iv. Subdivision activities that contravene this performance standard are non-complying activities.

#### 17.Y.X.4 Assessment guidance

- a. In addition to the assessment guidance for subdivision provided in Rule 17.10.4, Rule 6.11.2.7 and Rule 6.11.2.8, the following guidance is provided for the assessment of subdivision activities in the **Signal Hill Road structure plan mapped area**.

#### *General assessment guidance:*

- b. To appropriately manage effects on the safety and efficiency of the transport network, Council will generally prefer that the accessway described at Rule 17.Y.X.3.a.iii is vested in Council as road, unless an assessment of the physical constraints of the site demonstrates that it is not practicable for the full length of the accessway to be of sufficient width to vest in Council as road.

#### *Conditions that may be imposed include:*

- c. A bond to ensure formation of the public walking access described at Rule 17.Y.X.3.a.i.2, in accordance with

the timeframe specified at Rule 17.Y.X.3.a.ii.

Figure 17.Y.XA: **Signal Hill Road structure plan mapped area**

## 17.Y.Y Patmos Avenue (Rural Residential) Structure Plan Mapped Area Performance Standards

### 17.Y.Y.1 Land use performance standards

#### a. Density

- i. Standard residential activities must not exceed a density of one residential activity per site, with a maximum of one residential activity located in Area A and up to three residential activities located in Area B (see Figure 17.Y.YA).
- ii. One family flat is allowed per site in association with a standard residential activity that complies with this performance standard for density, provided it is located in the same residential building as the primary residential activity.
- iii. Standard residential activity that contravenes this performance standard is a non-complying activity.
- iv. For the sake of clarity, this performance standard supersedes Rule 17.5.2.

### 17.Y.Y.2 Development performance standards

#### a. Footprint of residential buildings

- i. New residential buildings must not exceed 250m<sup>2</sup> footprint and additions and alterations must not result in a residential building that is greater than 250m<sup>2</sup> footprint.
- ii. Activities that contravene this performance standard and result in a residential building less than or equal to 300m<sup>2</sup> footprint are discretionary activities.
- iii. Activities that contravene this performance standard and result in a residential building greater than 300m<sup>2</sup> footprint are non-complying activities.

#### b. Setbacks

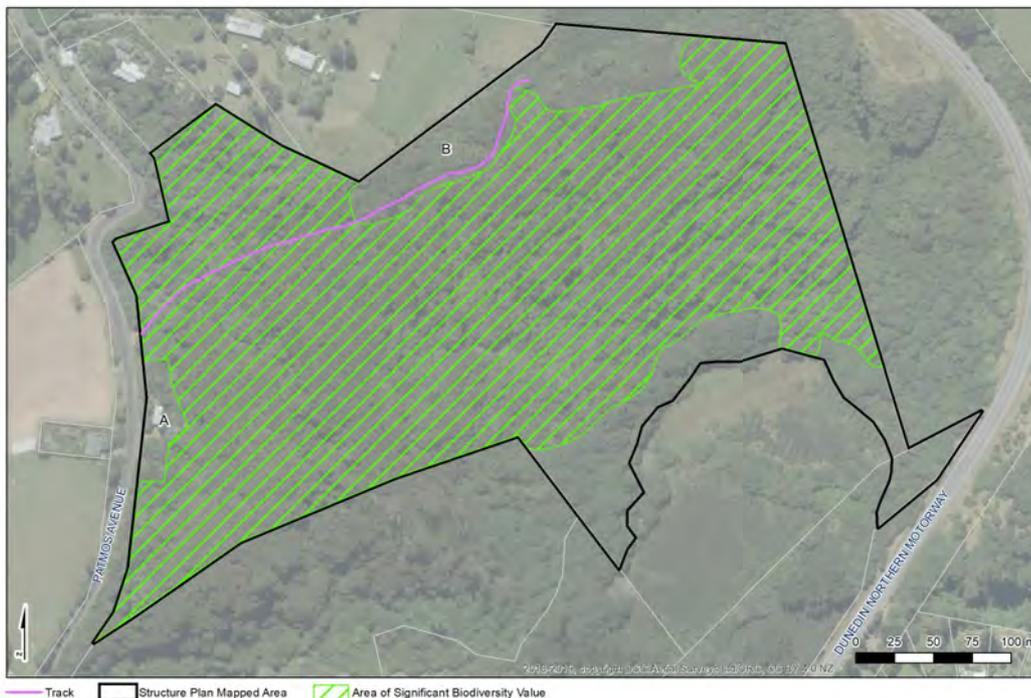

- i. Boundary setbacks must meet Rule 17.6.9, except that in Area A the minimum setback from road boundary for residential buildings is 6m.
- c. Vegetation clearance
  - i. Indigenous vegetation clearance must meet Rule 10.3.2.1, except that:
    - 1. additional indigenous vegetation clearance is permitted, if necessary, to widen the existing track (represented by the pink line in Figure 17.Y.YA) up to the minimum necessary to meet Rule 6.6.3.9 Width of driveways; and
    - 2. an additional 50m<sup>2</sup> of indigenous vegetation clearance is permitted for the formation of passing bays immediately adjacent to the existing track in order to form the shared driveway; and
    - 3. in Area B, indigenous vegetation clearance must not exceed a maximum area of 350m<sup>2</sup> per new resultant site over an initial 3-year time period from the issuing of new certificates of title to be considered indigenous vegetation clearance - small scale, after which indigenous vegetation clearance must meet 10.3.2.1.c.ix.
  - ii. For the sake of clarity, all vegetation clearance must meet Rule 10.3.2.2 and all indigenous vegetation clearance must meet Rule 10.3.2.3.

#### 17.Y.Y.3 Subdivision performance standards

- a. Access
  - i. Subdivision activities must provide for a shared driveway to serve the residential activities in Area B, following the existing track, with individual driveways to building platforms constructed from the closest practicable point along the shared driveway.
  - ii. Subdivision activities that contravene this performance standard are non-complying activities.
  - iii. For the sake of clarity, this performance standard applies in addition to Rule 17.7.1.
- b. Minimum site size and maximum number of sites
  - i. Subdivision activities must create no more than four resultant sites within the **structure plan mapped area**.
  - ii. The sites must be of a size, shape and location that enables all relevant performance standards to be met.
  - iii. Resultant sites created and used solely for the following purposes are exempt from this performance standard:
    - 1. Scheduled ASBV or QEII covenant;
    - 2. reserve;
    - 3. access;
    - 4. network utilities; or
    - 5. road.
  - iv. Subdivision activities that contravene this performance standard are non-complying activities.
  - v. For the sake of clarity, this performance standard supersedes Rule 17.7.5.
- c. Shape
  - i. Each resultant site must provide for a building platform outside of the area mapped as an ASBV and must enable Rule 17.Y.Y.1.a to be met.
  - ii. Resultant sites created and used solely for the following purposes are exempt from the shape standard:
    - 1. Scheduled ASBV or QEII covenant;

2. reserve;
  3. access;
  4. network utilities; or
  5. road.
- iii. Subdivision activities that contravene this performance standard are non-complying activities.
  - iv. For the sake of clarity, this performance standard applies in addition to Rule 17.7.6.

Figure 17.Y.YA: **Patmos Avenue (Rural Residential) structure plan mapped area**

**Note 17.Y.YA - Other requirements outside of the District Plan**

1. The New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001) contains restrictions on the location of structures and activities in relation to electricity transmission and distribution lines. Compliance with this code is mandatory. Compliance with this Plan does not ensure compliance with NZECP 34:2001

**17.Y.Z.Green Island Bush Road Structure Plan Mapped Area Performance Standards**

17.Y.Z.1 Land use performance standards

a. Density

- i. Standard residential activities must not exceed a density of one residential activity per site (note that Rule 17.Y.Z.3 limits the maximum number of sites in the **structure plan mapped area**).
- ii. One family flat is allowed per site in association with a standard residential activity that meets this performance standard for density.
- iii. Activities that contravene this performance standard are non-complying activities.
- iv. For the sake of clarity, this performance standard supersedes Rule 17.5.2.

17.Y.Z.2 Development performance standards

- a. Maximum number of vehicle crossings
  - i. The maximum number of vehicle crossings permitted within the **structure plan mapped area** is:
    - 1. three on the Blackhead Road frontage; and
    - 2. three on the Green Island Bush Road frontage.
  - ii. For the sake of clarity, the maximum number of vehicle crossings includes all existing and proposed vehicle crossings.
  - iii. Activities that contravene this performance standard are non-complying activities.
  - iv. For the sake of clarity, this performance standard supersedes Rule 6.6.3.1.

#### 17.Y.Z.3 Subdivision performance standards

- a. Access
  - i. No more than three sites within the **structure plan mapped area** may have access for vehicles onto Blackhead Road.
  - ii. Activities that contravene this performance standard are non-complying activities.
  - iii. For the sake of clarity, this standard is additional to Rule 17.7.1.
- b. Maximum number of sites
  - i. Subdivision activities must not result in more than 10 sites within the **structure plan mapped area**.
  - ii. Resultant sites created and used solely for the following purposes are exempt from this standard:
    - 1. Scheduled ASBV or QEII covenant;
    - 2. reserve;
    - 3. access;
    - 4. network utilities; or
    - 5. road.
  - iii. Activities that contravene this performance standard are non-complying activities.
  - iv. For the sake of clarity, this standard is additional to Rule 17.7.5.

#### 17.Y.Z.4 Information requirements

- a. Geotechnical investigation report
  - i. Applications for subdivision activities in the **structure plan mapped area** must include a comprehensive geotechnical investigation report by a suitably qualified geotechnical consultant. The geotechnical report must examine the ground stability over the entire area and identify areas suitable for development and, if required, suitable building platforms, and any areas where development, including earthworks, should be restricted.

#### Figure 17.Y.ZA: Green Island Bush Road structure plan mapped area

## 17.Y.YY Ōtākou Golf Course Road Structure Plan Mapped Area Rules

### 17.Y.YY.1 Earthworks performance standards

- a. Small Scale Thresholds
  - i. Earthworks not listed in Rule 8A.5.1.1 must not exceed the earthworks - small scale thresholds provided for earthworks in NCC overlays in Rule 8A.5.1.3, Rule 8A.5.1.4 or Rule 8A.5.1.5 to be considered earthworks - small scale (note that earthworks in an ASBV or within 5m of a water body or MHWS must not exceed the earthworks - small scale thresholds provided for earthworks in these areas).
  - ii. Earthworks that exceed these thresholds are treated as earthworks - large scale.

#### Note 17.Y.Y.1A - Other relevant District Plan provisions

1. Earthworks - large scale must comply with the setback from coast and water bodies performance standard (Rule 10.3.3).

### 17.Y.YY.2 Land use performance standards

- a. Density

- i. Standard residential activities must not exceed a density of 12 standard residential activities within the whole **structure plan mapped area** (note that Rule 17.Y.YY.4.b limits the maximum number of sites in the **structure plan mapped area**).
- ii. Activities that contravene this performance standard are non-complying activities.
- iii. For the sake of clarity, this performance standard applies in addition to Rule 17.5.2.

#### 17.Y.YY.3 Development performance standards

- a. **Maximum height**
  - i. New buildings, new structures, and additions and alterations must not exceed a maximum height above ground level of 5.5m.
  - ii. Activities that contravene this performance standard are restricted discretionary activities.
  - iii. For the sake of clarity, this performance standard supersedes Rule 17.6.5.
- b. **Reflectivity**
  - i. New buildings, new structures (except fences), and additions and alterations, must have exterior surfaces, including roofs, that have a light reflectance value (LRV) of 30% or less, except that this rule does not apply to:
    1. natural wood finishes;
    2. glass;
    3. clear plastic;
    4. soffits; or
    5. flues.
  - ii. For the purposes of this standard, exterior surface materials whose LRV changes due to weathering (e.g. stone) the LRV will be measured based on an 'as weathered' condition.
  - iii. Activities that contravene this performance standard are restricted discretionary activities.
- c. **Area of buildings and structures**
  - i. New buildings and structures up to 60m<sup>2</sup> footprint are permitted activities.
  - ii. New buildings and structures that are no more than 300m<sup>2</sup> footprint are controlled activities.
  - iii. New buildings and structures that contravene this performance standard (are more than 300m<sup>2</sup> footprint) are non-complying activities.
- d. **Access**
  - i. Site development activities must provide suitably designed and formed public walking access through the area marked 'Development Area' on Figure 17.Y.YYA, to connect Ōtākou Golf Course Road with Harwood Street and the coast, in general alignment with the route marked as 'Indicative Walking Track' in blue on Figure 17.Y.YYA, unless this has already been provided.
  - ii. The public accessway must provide for public access in perpetuity.
  - iii. Site development activities that contravene this performance standard are non-complying activities.
  - iv. For the sake of clarity, this performance standard is additional to Rule 6.6.

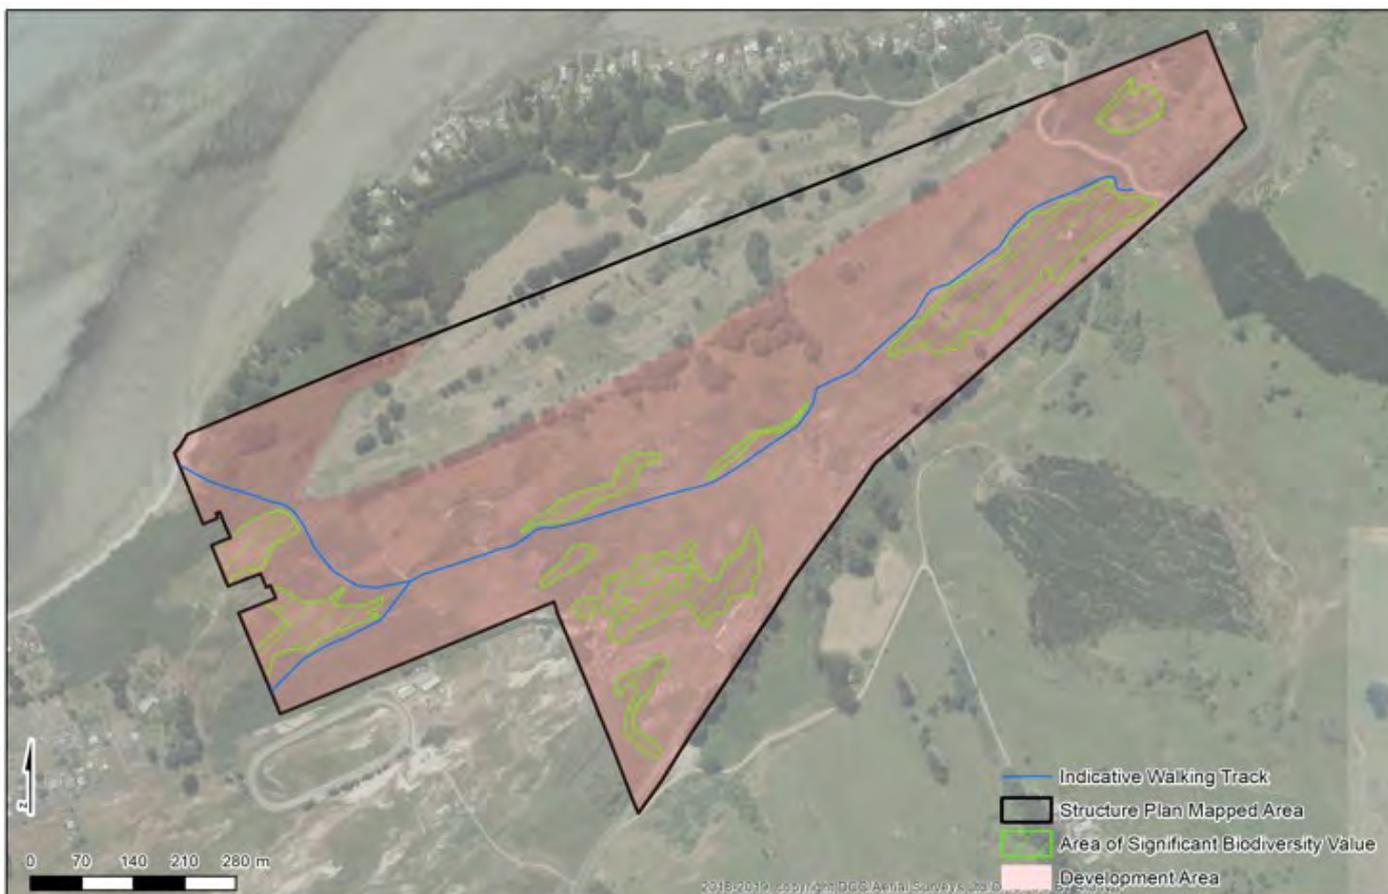

#### 17.Y.YY.4 Subdivision performance standards

- a. **Access**
  - i. Subdivision activities must provide suitably designed and formed public walking access through the area marked 'Development Area' on Figure 17.Y.YYA, to connect Ōtākou Golf Course Road with Harwood Street and the coast, in general alignment with the route marked as 'Indicative Walking Track' in blue

on Figure 17.Y.YYA, unless this has already been provided.

- ii. Legal access to fulfil clause i. above must be created, and accessways must be formed, prior to the issuing of the section 224c certificate for the subdivision.
  - iii. Subdivision activities that do not meet this standard are non-complying activities.
  - iv. For the sake of clarity, this performance standard is additional to Rule 6.8.1.
- b. Maximum number of sites
- i. Subdivision activities must not result in more than 12 sites within the area marked 'Development Area' on Figure 17.Y.YYA, plus an additional 'balance lot' provided that the use of the 'balance lot' is restricted through an appropriate legal instrument to only rural or community activities.
  - ii. Resultant sites created and used solely for the following purposes are exempt from this standard:
    1. scheduled ASBV, QEII covenant and/or any covenant created to protect biodiversity restoration areas;
    2. reserve;
    3. access;
    4. network utilities; or
    5. road.
  - iii. Activities that contravene this performance standard are non-complying activities.
  - iv. For the sake of clarity, this standard applies in addition to Rule 17.7.5 (Minimum Site Size).
- c. Shape
- i. Each resultant site must provide for a building platform within the area marked 'Development Area' (outside of ASBVs) on Figure 17.Y.YYA.
  - ii. Resultant sites created and used solely for the following purposes are exempt from this standard:
    1. scheduled ASBV, QEII covenant and/or any covenant created to protect biodiversity restoration areas;
    2. reserve;
    3. access;
    4. network utilities;
    5. road; or
    6. a single balance lot that may only be used for rural activities and community activities.
  - iii. Subdivision activities that contravene this performance standard are non-complying activities.
  - iv. For the sake of clarity, this performance standard applies in addition to Rule 17.7.6.

Figure 17.Y.YYA: Ōtākou Golf Course Road structure plan

#### Note 17.Y.YY.4A - Other requirements outside of the District Plan

1. Minimum floor levels are required by the New Zealand Building Code to safeguard people from injury or illness and other property from damage caused by surface water. These are implemented through the building consent process. Surface water is defined in the Building Code as "all naturally occurring water, other than sub-surface water, which results from rainfall on the site or water flowing onto the site, including that flowing from a drain, stream, river, lake or sea" (Schedule 1, Building Regulations 1992).
2. The discharge of human sewage through on-site wastewater treatment systems is managed by rules in the Regional Plan: Water for Otago. Resource consent may be required from the Otago Regional Council for new systems.

#### 17.Y.YY.5 Additional matter of discretion and assessment guidance for earthworks - large scale

- a. In addition to the assessment guidance for earthworks - large scale provided in Rule 8A.7, the following guidance is provided for the assessment of earthworks - large scale in the **Ōtākou Structure Plan Mapped Area**.
- b. Matter of discretion
  - i. Effects on special values and other design outcomes to be achieved.
- c. Guidance on the assessment of resource consents  
*Relevant objectives and policies:*
  - i. Objective 17.2.3.
  - ii. Activities in the **structure plan mapped area** are designed to:
    1. maintain or enhance any special values of the site listed in Appendix A12; and
    2. ensure any other design outcomes listed in Appendix A12 are achieved (Policy 17.2.3.X).

*General assessment guidance:*

- iii. See relevant guidance in Appendix A12, and, in relation to biodiversity values, the special information requirements in 17.Y.YY.9.c.

17.Y.YY.6 Assessment of controlled activities

- a. The following guidance is provided for new buildings and structures greater than 60m<sup>2</sup> footprint in the **Ōtākou Structure Plan Mapped Area**.
- b. Matter of control
  - i. Size, location and appearance of buildings and structures.
- c. Guidance on the assessment of resource consents

*Relevant objectives and policies:*

- i. Objective 17.2.3.
- ii. Activities in the **structure plan mapped area** are designed to:
  1. maintain or enhance any special values of the site listed in Appendix A12; and
  2. ensure any other design outcomes listed in Appendix A12 are achieved (Policy 17.2.3.X).

*General assessment guidance:*

- iii. See relevant guidance in Appendix A12, and, in relation to biodiversity values, the special information requirements in 17.Y.YY.9.c.

*Conditions that may be imposed include:*

- iv. Restrictions on the location and size of buildings and structures.
- v. Requirements for landscaping and other forms of screening of buildings and structures.

17.Y.YY.7 Additional matter of discretion and assessment guidance for development performance standard contraventions

- a. In addition to the assessment guidance for development performance standard contraventions provided in Rule 17.9.4, the following guidance is provided for the assessment of contraventions of the maximum height and reflectivity performance standards in Rule 17.Y.YY.2.
- b. Matter of discretion
  - i. Effects on special values and other design outcomes to be achieved.
- c. Guidance on the assessment of resource consents

*Relevant objectives and policies:*

- i. Objective 17.2.3.
- ii. Activities in the **structure plan mapped area** are designed to:
  1. maintain or enhance any special values of the site listed in Appendix A12; and
  2. ensure any other design outcomes listed in Appendix A12 are achieved (Policy 17.2.3.X).

*General assessment guidance:*

- iii. See relevant guidance in Appendix A12.

17.Y.YY.8 Additional matters of discretion and assessment guidance for subdivision and land use consents

- a. In addition to the matters of discretion and assessment guidance for subdivision consents provided in rules

17.10.4 and 9.6.2.Z, the following guidance is provided for the assessment of subdivision activities in the **Ōtākou Golf Course Road structure plan mapped area**. This guidance also applies to applications for land use consent for any discretionary or non-complying activities.

- b. Matters of discretion
  - i. Effects of wastewater from future development.
  - ii. Effects on special values and other design outcomes to be achieved.
- c. Guidance on the assessment of resource consents  
*Relevant objectives and policies (priority considerations):*
  - i. Strategic Directions: Objective 2.4.1, Policy 2.4.1.8.
  - ii. Objective 17.2.3.
  - iii. Activities in the **structure plan mapped area** are designed to:
    - 1. maintain or enhance any special values of the site listed in Appendix A12; and
    - 2. ensure any other design outcomes listed in Appendix A12 are achieved (Policy 17.2.3.X).

*General assessment guidance:*

- iv. In addition to the matters covered by Rule 9.6.2.Z, Council will consider as part of the assessment of any consent application for subdivision or for any activity requiring wastewater disposal:
  - 1. the effectiveness of proposed wastewater management on any sites to be used for residential development or for any activities that require wastewater disposal. This includes, but is not limited to, how the subdivision layout or activity provides for appropriate areas to be used for effluent dispersal that will ensure effluent dispersal does not create adverse effects on the amenity or health and safety of neighbours, or adverse environmental effects on water bodies and the coastal environment, and is able to achieve the objectives and policies of this Plan as well as any relevant regional or national plans and policies. Council may identify the Otago Regional Council as an affected party in relation to this matter.
- v. See relevant guidance in Appendix A12 and the special information requirements in 17.Y.YY.9.a.

*Conditions that may be imposed include:*

- vi. The locations of effluent dispersal areas.
- vii. A legal instrument that requires all wastewater treatment systems (including dispersal fields) meet the following standards:
  - 1. wastewater treatment to a minimum of secondary standard before discharge;
  - 2. design and location of wastewater discharge that ensures there will be no off-site surface discharge or runoff;
  - 3. design and location of wastewater systems that ensures ready access for system testing;
  - 4. the wastewater system is designed and installed by suitably qualified persons/entities; and
  - 5. requirements for owners of the wastewater treatment system to comply with maintenance and operational requirements set by the manufacturer or designer.

17.Y.YY.9 Special information requirements

- a. Wastewater management
  - i. Applications for land use activities which require wastewater disposal or subdivision must include a proposal for on-site wastewater management prepared by a chartered professional engineer or other suitably qualified person with suitable experience in wastewater system design. The proposal must include:

1. an up to date assessment of the predicted impact of sea level rise on the site, using the NZSearise website: <https://www.searise.nz> (4739 SSP5-8.5 Projection to 2150 including Vertical Land Movement (VLM) values), or any future updated source approved by Council;
  2. the results of soil permeability testing; and
  3. demonstrate one or more options for effective on-site wastewater management for all sites to be used for residential activity or for any activities which require wastewater disposal.
- ii. The proposal must include suggestions for conditions that will ensure future development will effectively manage wastewater in a way that does not create adverse effects on the amenity or health and safety of neighbours, or adverse environmental effects on the coastal environment or water bodies, and is able to achieve the objectives and policies of this Plan as well as any relevant regional or national plans and policies.
- b. Stormwater management
- i. Applications for subdivision or for any activities which require stormwater disposal must comply with Rule 9.9.X.7 and include:
    1. an up to date assessment of the predicted impact of sea level rise, using the NZSearise website: <https://www.searise.nz> (4739 SSP5-8.5 Projection to 2150 including Vertical Land Movement (VLM) values), or any future updated source approved by Council; and
    2. the results of soil permeability testing.
  - ii. The proposal must include suggestions for conditions that will ensure future development will effectively manage stormwater in a way that does not create adverse effects on the amenity or health and safety of neighbours, or adverse environmental effects on the coastal environment or water bodies, and is able to achieve the objectives and policies of this Plan as well as any relevant regional plans and policies.
- c. Biodiversity restoration
- i. Applications for earthworks - large scale, land use, site development or subdivision activities must include a proposed biodiversity restoration plan for the **structure plan mapped area**, prepared by a suitably qualified or experienced ecologist, unless this plan has been provided and accepted through an earlier consent application. The restoration plan should include the following:
    1. an outline of the objectives of the restoration plan;
    2. a description of the site, including existing biodiversity values (both flora and fauna);
    3. proposed restoration areas that will enhance or restore biodiversity values, including a description of restoration that will be undertaken of the existing golf course area, should this area no longer be used as a golf course;
    4. an assessment of how biodiversity restoration will contribute to the maintenance and enhancement of the biodiversity values of the ASBV areas within the **structure plan mapped area** and enhance ecological connectivity in the surrounding area;
    5. a planting plan that includes a list of ecologically appropriate species to be planted within the whole **structure plan mapped area**, including for any mitigation planting established to screen built development;
    6. a description of site preparation, and the location, species density and staging of planting; and
    7. a description of measures to be used to protect, monitor and maintain plantings and habitats.

## **17.Y.ZZ Double Hill Road Structure Plan Mapped Area Rules**

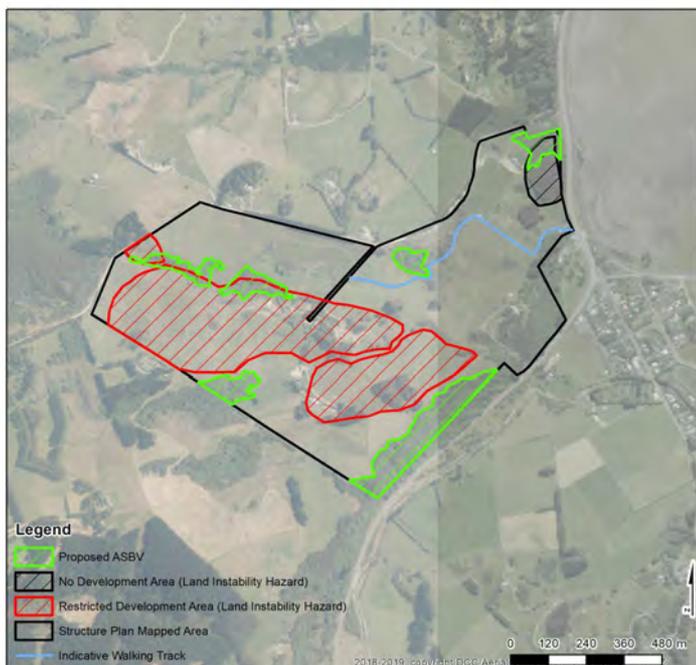

### 17.Y.ZZ.1 Development performance standards

- a. Natural hazards
- i. Earthworks in the areas shown hatched red on the Double Hill Road structure plan and labelled 'Restricted Development Area (Land Instability Hazard)' (see Figure 17.Y.ZZA), for the purposes of Rule 8A5.1, will be treated as earthworks in a Hazard 2 (land instability) Overlay Zone.
  - ii. New buildings must not be located in the area of land shown hatched black on the Double Hill Road structure plan and labelled 'No Development Area (Land Instability Hazard)' (see Figure 17.Y.ZZA).
  - iii. Activities that contravene clause ii of this performance standard are prohibited activities.

#### 17.Y.ZZ.2 Subdivision performance standards

- a. Access
- i. Subdivision activities must provide a suitably designed and formed public walking accessway through the **structure plan mapped area**, in general alignment with the route marked in blue on Figure 17.Y.ZZA.
  - ii. Legal access to fulfil clause i above must be created, and accessways must be formed, prior to the issuing of the section 224c certificate for the subdivision.
  - iii. Subdivision activities that do not meet this standard are non-complying activities.
  - iv. For the sake of clarity, this performance standard is additional to Rule 6.8.1.

Figure 17.Y.ZZA: Double Hill Road structure plan

#### 17.Y.ZZ.3 Additional matter of discretion and assessment guidance

- a. In addition to the matters of discretion and assessment guidance for subdivision consents provided in rules 17.10.4 and 9.6.2.Z, the following guidance is provided for the assessment of subdivision activities in the **Double Hill Road structure plan mapped area**.
- b. Matter of discretion

- i. Effects of wastewater from future development.
- c. Guidance on the assessment of resource consents  
*Relevant objectives and policies (priority considerations):*
- i. Strategic Directions: Objective 2.4.1, Policy 2.4.1.8.
  - ii. Objective 17.2.3.
  - iii. Activities in the **structure plan mapped area** are designed to:
    - 1. maintain or enhance any special values of the site listed in Appendix A12.Z; and
    - 2. ensure any other design outcomes listed in Appendix A12.Z are achieved (Policy 17.2.3.X).

*General assessment guidance:*

- iv. In addition to the matters covered by Rule 9.6.2.Z, Council will consider as part of the assessment of any consent application for subdivision:
  - 1. the effectiveness of proposed wastewater management on any sites to be used for residential development, including, but not limited to, how the subdivision layout provides for appropriate areas to be used for effluent dispersal that will ensure effluent dispersal does not create adverse effects on the amenity or health and safety of neighbours, or adverse environmental effects on water bodies, and is able to achieve the objectives and policies of this Plan as well as any relevant regional plans and policies (see Special Information Requirements 17.Y.ZZ.4).

*Conditions that may be imposed include:*

- v. The locations of effluent dispersal areas.
- vi. A legal instrument that requires all wastewater treatment systems (including dispersal fields) installed on the resultant sites to meet the following standards:
  - 1. wastewater treatment to a minimum of secondary standard before discharge;
  - 2. design and location of wastewater discharge that ensures there will be no off-site surface discharge or runoff;
  - 3. design and location of wastewater systems that ensures ready access for system testing;
  - 4. the wastewater system is designed and installed by suitably qualified persons/entities; and
  - 5. requirements for owners of the wastewater treatment system to comply with maintenance and operational requirements set by the manufacturer or designer.

**Note 17.Y.ZZ.3A - Other requirements outside of the District Plan**

- a. The discharge of human sewage through on-site wastewater treatment systems is managed by rules in the Regional Plan: Water for Otago. Resource consent may be required from the Otago Regional Council for new systems.

**17.Y.ZZ.4 Special information requirements**

- a. Wastewater management
  - i. Applications for subdivision within the **Double Hill Road structure plan mapped area** must include a proposal for on-site wastewater management prepared by a chartered professional engineer or other suitably qualified person with suitable experience in wastewater system design. The proposal must demonstrate one or more options for effective on-site wastewater management for all sites to be used for residential activity and include suggestions for conditions that will ensure future development will effectively manage wastewater in a way that does not create adverse effects on the amenity or health and safety of neighbours, or adverse environmental effects on water bodies, and is able to achieve the objectives and policies of this Plan as well as any relevant regional plans and policies.

- b. Geotechnical investigation report
  - i. Applications for subdivision activities in the area shown hatched red on the Double Hill Road structure plan and labelled 'Restricted Development Area (Land Instability Hazard)' (see Figure 17.Y.ZZA) must include a comprehensive geotechnical investigation report by a suitably qualified geotechnical consultant. The geotechnical report must examine the ground stability within the red hatched area to be subdivided and identify areas suitable for development and, if required, suitable building platforms, and any areas where development, including earthworks, should be restricted.
- c. Integrated Transport Assessment
  - i. Applications for subdivision of the **Double Hill Road structure plan mapped area** must include an Integrated Transport Assessment (ITA) for the whole mapped area. The ITA must include, but is not limited to, the following matters (see also further information on the content of ITAs in Rule 6.14.2):
    - 1. An assessment of the effects of subdivision on the safety and efficiency of the existing transport network, which identifies any transport infrastructural improvements deemed necessary to ensure adverse effects on the safety and efficiency of the transport network, for all modes, are appropriately addressed in accordance with Objective 6.2.3 and Policy 6.2.3.8. The assessment must include information on the upgrade of the State Highway 1/Double Hill Road intersection, and widening and sealing of Double Hill Road and Kilpatrick Road.
    - 2. Identification of any areas of land that will need to be vested in the DCC as road, in order to achieve an appropriate minimum legal road width.
    - 3. Consideration of internal roading design, layout, and connection points to the existing transportation network for all modes of transport in accordance with the Dunedin Code of Subdivision and Development 2010.

## **Rule 17.X Landscape Building Platform Mapped Area Performance Standards**

### **17.X.1**

- 1. In addition to the performance standards 17.5, 17.6 and 17.7 and any relevant overlay zones or mapped areas, activities in a **landscape building platform mapped area** must meet the area-specific performance standards below. Where a performance standard in this section specifically provides an exemption or alternative performance standard to a standard in 17.5, 17.6 or 17.7, the standard in this section supersedes that standard.

### **17.X.2 Porteous Road Landscape Building Platform Mapped Area Performance Standards**

- 1. All buildings must be located within the area marked A (landscape building platform) on the **Porteous Road landscape building platform mapped area** (see Figure 17.X.2A).
- 2. Driveways must be provided from Porteous Road (marked B in Figure 17.X.2A).
- 3. Activities that contravene this performance standard are non-complying activities.

#### **Figure 17.X.2A: Porteous Road landscape building platform plan mapped area**

Landscape Building Platform Mapped Area  Landscape Building Platform

**Note 17.X.2A - Other relevant District Plan provisions**

1. As the **Porteous Road landscape building platform mapped area** is within a Significant Natural Landscape Overlay Zone, additional rules apply. Resource consent for a controlled activity is required for new buildings greater than 60m<sup>2</sup> footprint on a landscape building platform (Rule 17.3.4.3.c). In addition to the performance standards for development activities in rural residential zones, activities must also comply with Rule 10.3.5 Number and Location of Permitted Buildings and 10.3.6 Reflectivity.

**17.X.3 Raynbird Street Landscape Building Platform Mapped Area Performance Standards**

17.X.3.1 Development performance standards

- a. All buildings must be located within the areas marked 'landscape building platform' on the **Raynbird Street landscape building platform mapped area** (see Figure 17.X.3A).
- b. Driveways must access Raynbird Street from the location marked 'vehicle access location' (see Figure 17.X.3A).
- c. Activities that contravene this performance standard are non-complying activities.

17.X.3.2 Subdivision performance standards

- a. Subdivision activities must provide for the landscape building platforms shown in Figure 17.X.3A.
- b. Activities that contravene this performance standard are non-complying activities.

**Figure 17.X.3A: Raynbird Street landscape building platform mapped area**

#### **Note 17.X.3A - Other relevant District Plan provisions**

1. As the **Raynbird Street landscape building platform mapped area** is within a Significant Natural Landscape Overlay Zone, additional rules apply. Resource consent for a controlled activity is required for new buildings with a footprint greater than 60m<sup>2</sup> within a landscape building platform (Rule 17.3.4.3.c). In addition to the performance standards for development activities in rural residential zones, activities must also comply with Rule 10.3.5 Number and Location of Permitted Buildings and 10.3.6 Reflectivity.

## **Rule 17.8 Assessment of Controlled Activities**

### **Rule 17.8.1 Introduction**

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 17.8.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:

- i. the activity, as a whole, will be treated as **restricted discretionary**; and
  - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
  - iii. the performance standard contravention will be assessed as indicated in Section 17.9; and
  - iv. the matters of control become matters of discretion and will be assessed as indicated in this section.
- b. if the contravention of the performance standard defaults to **discretionary** then:
- i. the activity, as a whole, will be treated as **discretionary**; and
  - ii. the performance standard contravention will be assessed as indicated in Section 17.11; and
  - iii. the assessment guidance in this section will also be considered.
- c. if the contravention of the performance standard defaults to **non-complying** then:
- i. the activity, as a whole, will be **non-complying**; and
  - ii. the performance standard contravention will be assessed as indicated in Section 17.12; and
  - iii. the assessment guidance in this section will also be considered.

### 17.8.2 Assessment of controlled activities

Activity	Matters of control	Guidance on the assessment of resource consents
1. Affecting a scheduled heritage building or a scheduled heritage structure: <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected.</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1)</li> </ul>	a. Effects on heritage values	See Rule 13.4
2. In the <b>NCC Overlay Zone</b> : <ul style="list-style-type: none"> <li>• New buildings greater than 60m<sup>2</sup> footprint on a landscape building platform</li> </ul>	a. Size, design and appearance of buildings	See Rule 10.4
3. In the <b>ONL</b> or <b>SNL overlay zones</b> : <ul style="list-style-type: none"> <li>• New buildings greater than 60m<sup>2</sup> footprint on a landscape building platform</li> </ul>	a. Size, design and appearance of buildings	See Rule 10.4

## Rule 17.9 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)

### Rule 17.9.1 Introduction

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA,

meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.

2. Rules 17.9.2 - 17.9.6:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 17.9.2 - 17.9.6 apply as follows:
  - a. Rule 17.9.2 applies to all performance standard contraventions;
  - b. Rule 17.9.3 applies to land use performance standard contraventions;
  - c. Rule 17.9.4 applies to development performance standard contraventions;
  - d. Rule 17.9.5 applies to subdivision performance standard contraventions; and
  - e. Rule 17.9.6 applies to performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item.

### 17.9.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1. Performance standard contraventions</p>	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. The need to meet other performance standards, or site specific factors including topography, make meeting the standard impracticable.</li> <li>c. The nature of activities on surrounding sites, topography of the site and/or surrounding sites, or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>d. In any landscape overlay zone, the development incorporates key design elements as set out in Appendix A3.</li> <li>e. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>f. Where more than one standard is contravened, the combined effects of the contraventions should be considered</li> <li>g. In any landscape overlay zone, the assessment will consider the landscape values outlined in Appendix A3.</li> <li>h. In any coastal character overlay zone, the assessment will consider the natural character values outlined in Appendix A5.</li> </ul>

### 17.9.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
1. Family flats - design	a. Effects on rural residential character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 17.2.1, and 17.2.3</li> <li>ii. The character and visual amenity of the rural residential zones is maintained (Policy 17.2.3.1).</li> <li>iii. The design of family flats avoids, as far as practicable, the risk they will be used for a separate, non-ancillary, residential activity and future pressure to subdivide off family flats (Policy 17.2.1.7).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. For contravention of maximum gross floor area, the family flat shares the same residential building as the primary residential unit.</li> <li>v. For family flats in separate buildings to the primary dwelling, the design of the family flat matches the design of the primary residential unit.</li> <li>vi. For family flats in separate buildings to the primary dwelling, landscaping or other forms of screening will be used to reduce the visibility of the family flat.</li> <li>vii. For family flats in separate buildings to the primary dwelling, the family flat will not be easily viewed from outside the site.</li> <li>viii. The size of the residential unit will not create future pressure or expectation for it to be subdivided or be consented to operate as a second residential activity on site</li> </ul>
3. Hours of operation	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.2</li> <li>ii. Rural ancillary retail and working from home operate in a way (including hours of operations) that avoids or, if avoidance is not practicable, adequately mitigates noise or adverse effects on the amenity of surrounding properties (Policy 17.2.2.4).</li> </ul>
4. Location	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
5. Maximum gross floor area	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objectives 2.3.2, 2.4.3, policies 2.3.2.2 and 2.4.3.4</li> <li>ii. Objective 17.2.1</li> <li>iii. Rural ancillary retail and working from home are at a scale that is ancillary to and supportive of productive rural activities or conservation on the same property (Policy 17.2.1.3.a).</li> </ul>

### 17.9.3 Assessment of land use performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
6.	Minimum mobility car parking	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
		b. Effects on accessibility	
7.	Separation distances	a. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.2</li> <li>ii. Residential buildings minimise, as far as practicable, the potential for reverse sensitivity by being set back an adequate distance from forestry, intensive farming, domestic animal boarding and breeding (including dogs), mining, landfills and wind generators - large scale (Policy 17.2.2.1.b).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. For non-compliance with separation distance from forestry, the new residential activity is located to the north of the forestry activity.</li> </ul>
8.	Tree species	a. Effects on biodiversity values	See Rule 10.5
		b. Effects on natural character of the coast	
		c. Effects on landscape values	

**17.9.4 Assessment of development performance standard contraventions**

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Boundary setbacks	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.2</li> <li>ii. Buildings that house animals are set back from site boundaries an adequate distance to ensure adverse effects on adjoining residential activities are avoided or, if avoidance is not practicable, are no more than minor (Policy 17.2.2.2).</li> <li>iii. New buildings are located an adequate distance from site boundaries to ensure a good level of amenity for residential activities on adjoining sites (Policy 17.2.2.3).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Screening or landscaping will be used in the development to ensure a good level of amenity for residential activities on adjoining sites.</li> <li>v. Where a building used to house animals contravenes the boundary setback standard, the type and/or number of animals or the frequency of housing them mean that the potential for adverse effects from noise, odour or dust on sensitive activities on adjoining sites will be avoided or minimised.</li> </ul>
		b. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.2</li> <li>ii. Residential buildings minimise, as far as practicable, the potential for reverse sensitivity by being set back an adequate distance from site boundaries (Policy 17.2.2.1.a).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Screening or landscaping will ensure potential for reverse sensitivity is minimised as far as practicable.</li> </ul>

#### 17.9.4 Assessment of development performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
	c. Effects on rural residential character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.3</li> <li>ii. Buildings and structures are set back from site boundaries to maintain the character and visual amenity of the rural residential zones (Policy 17.2.3.1).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Landscaping or other forms of screening will be used to reduce the visibility of buildings or structures.</li> <li>iv. Colours and materials used in the development will blend in with the character of the surrounding rural residential environment, with natural finishes and low levels of reflectivity.</li> <li>v. The proposed building or structure will not obstruct any important views from public viewpoints, or cause significant obstruction of views from dwellings on surrounding sites.</li> <li>vi. The proposed building platform is low lying in relation to surrounding sites and roads and the proposed building will not be easily viewed from outside the site.</li> <li>vii. There are already existing buildings on the site in breach of the same setback.</li> <li>viii. There would be positive effects from maintaining open space through the clustering of buildings on the site.</li> </ul>
2.	Firefighting	a. Effects on health and safety See Rule 9.5
3.	Hazardous substances quantity limits and storage requirements	a. Effects on health and safety See Rule 9.5

#### 17.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
4.	Forestry and shelterbelts and small woodlots setbacks	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.2</li> <li>ii. Forestry and shelterbelts and small woodlots are set back an adequate distance to avoid or minimise, as far as practicable, significant effects from shading on residential buildings on surrounding properties (Policy 17.2.2.6).</li> <li>iii. Forestry is located and designed to avoid or, if avoidance is not practicable, adequately mitigate shading, noise, traffic and other nuisance effects on surrounding properties (Policy 17.2.2.7).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. The area to be planted is to the south of any adjoining residential zone or residential buildings on an adjoining site.</li> <li>v. Slope or orientation or other topographical aspects of the sites involved mean that there will be no shading of residential buildings on an adjoining site.</li> </ul>
		b. Effects on health and safety	See Rule 9.5
		c. Effects on the safety and efficiency of the transport network	See Rule 6.10
5.	Maximum height	a. Effects on rural residential character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.3</li> <li>ii. Buildings and structures are of a height that maintains the character and visual amenity of the rural residential zones (Policy 17.2.3.1).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. As for Rule 17.9.4.1.c.iii-vi</li> <li>iv. The terrain provides an adequate backdrop to the proposed building or structure and mitigates any adverse visual effects from the building or structure.</li> </ul>

#### 17.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
6.	Number, location and design of ancillary signs	a. Effects on rural residential character and visual amenity	<i>Relevant objectives and policies:</i> i. Objective 17.2.3 ii. Ancillary signs are located and designed to maintain the character of the rural residential zones, including by being of an appropriate size and number to convey information about the name, location and nature of the activity on site to passing pedestrians and vehicles and not being oversized or too numerous for that purpose (Pol 17.2.3.4).
		b. Effects on the safety and efficiency of the transport network	See Rule 6.10
7.	Parking, loading and access standards	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
8.	Setback from coast and water bodies	a. Effects on biodiversity values and natural character of riparian margins and the coast	See Rule 10.5
		b. Effects on public access	
		c. Risk from natural hazards	See Rule 11.4
9.	Setback from scheduled tree	a. Effects on long term health of tree	See Rule 7.6
10.	Vegetation clearance standards: • Protected species (indigenous vegetation clearance)	a. Effects on biodiversity values	See Rule 10.5
11.	Vegetation clearance standards: • Protected areas (vegetation clearance)	a. Effects on biodiversity values and natural character of the coast and riparian margins	See Rule 10.5

### 17.9.5 Assessment of subdivision performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Access	a. Effects on accessibility	See Rule 6.10
2.	Esplanade reserves and strips	a. Effects on biodiversity values and the natural character of the coast and riparian margins	See Rule 10.5
		b. Effects on public access	
3.	Firefighting	a. Effects on health and safety	See Rule 9.5
4.	Service connections	a. Effects on efficiency and affordability of infrastructure	See Rule 9.5

### 17.9.5 Assessment of subdivision performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
5. Shape		<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Subdivision is designed to ensure any future land use or development is able to meet the performance standards in the zone, or where in a <b>structure plan mapped area</b>, reflects the requirements of the <b>structure plan mapped area</b> performance standards, unless: <ul style="list-style-type: none"> <li>i. a resource consent is approved for a development that does not meet the performance standard and the subdivision is intended for and capable of providing for that approved development; or</li> <li>ii. the resultant site is required for: <ul style="list-style-type: none"> <li>1. Scheduled ASBV or QEII covenant; or</li> <li>2. reserve; or</li> <li>3. access; or</li> <li>4. utility; or</li> <li>5. road (Policy 2.4.1.8).</li> </ul> </li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. Non-compliance with the performance standard for shape will be assessed based on which performance standard(s) the shape of the resultant site does not provide for compliance with. See matters of discretion and assessment rules in relation to performance standard contraventions for: <ul style="list-style-type: none"> <li>i. NA;</li> <li>ii. boundary setbacks;</li> <li>iii. setbacks from water bodies; and</li> <li>iv. setback from scheduled tree.</li> <li>v. NA.</li> </ul> </li> <li>d. For contravention of the building platform slope part of the shape performance standard (Rule 17.7.6.2), see the matters of discretion and assessment rules in relation to earthworks - large scale (Rule 8A.7.2.1).</li> </ul> <p><i>Conditions that may be imposed include:</i></p> <ul style="list-style-type: none"> <li>e. A building platform registered against the certificate of title by way of a consent notice.</li> <li>f. Restrictions or conditions, including by way of consent notice, on land use or development activities allowed on the site.</li> <li>g. A building platform may be required to be registered against the title by way of consent notice.</li> </ul>

**17.9.6 Assessment of performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>1. In a <b>hazard overlay zone</b>:</p> <ul style="list-style-type: none"> <li>• Maximum area of vegetation clearance in the hazard overlay zones (Hazard 1 or 2 (land instability) overlay zones)</li> <li>• Relocatable buildings (Hazard 3 (coastal) Overlay Zone)</li> <li>• Outdoor Storage (Hazard 1 (flood) Overlay Zone)</li> <li>• Hazardous substances quantity limits and storage requirements</li> </ul>	<p>a. Risk from natural hazards</p>	<p>See Rule 11.4</p>
<p>2. In the <b>ONL or SNL overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• Maximum height</li> <li>• Reflectivity</li> <li>• Area, number and location of buildings and structures</li> </ul>	<p>a. Effects on landscape values</p>	<p>See Rule 10.5</p>
<p>3. In the <b>ONL, SNL or ONF overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• Number, location and design of ancillary signs</li> </ul>	<p>a. Effects on landscape values</p>	<p>See Rule 10.5</p>
<p>4. In the <b>NCC or HNCC overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• Number, location and design of ancillary signs</li> </ul>	<p>a. Effects on natural character of the coast</p>	<p>See Rule 10.5</p>
<p>5. In the <b>NCC Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Maximum height</li> <li>• Reflectivity</li> <li>• Area, number and location of buildings and structures</li> </ul>	<p>a. Effects on natural character of the coast</p>	<p>See Rule 10.5</p>
<p>X. In an <b>ASBV</b>:</p> <ul style="list-style-type: none"> <li>• Area of buildings and structures</li> </ul>	<p>a. Effects on biodiversity values</p>	<p>See Rule 10.5.</p>
<p>6. In an <b>urban biodiversity mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Vegetation clearance standards: Maximum area of vegetation clearance (UBMA)</li> </ul>	<p>a. Effects on biodiversity values</p>	<p>See Rule 10.5</p>
<p>7. In the <b>Taieri Aerodrome flight fan mapped area</b>:</p> <ul style="list-style-type: none"> <li>• Maximum height (Rule 17.6.5.1.d)</li> </ul>	<p>a. Effects on health and safety</p>	<p>See Rule 9.5</p>

**17.9.6 Assessment of performance standard contraventions in an overlay zone, mapped area or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents		
8. Affecting a <b>scheduled heritage building or scheduled heritage structure</b> : <ul style="list-style-type: none"> <li>• Materials and design</li> </ul>	a. Effects on heritage values	See Rule 13.5		
9. In a <b>wāhi tūpuna mapped area</b> : <ul style="list-style-type: none"> <li>• Maximum height</li> <li>• Setback from coast and water bodies</li> <li>• Esplanade reserves and strips</li> <li>• Vegetation clearance standards: Protected areas (vegetation clearance), Protected species (indigenous vegetation clearance)</li> </ul>	a. Effects on cultural values of Manawhenua	See Rule 14.3		
Y. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> : <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (forestry)</li> </ul>	a. Effects on the safety and efficiency of network utilities	See Rule 5.7.		
Z. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> : <ul style="list-style-type: none"> <li>• Setback from Critical Electricity Distribution Infrastructure (buildings, structures, city-wide activities)</li> </ul>	<table border="1"> <tr> <td data-bbox="603 1200 884 1294">               a. Effects on health and safety             </td> </tr> <tr> <td data-bbox="603 1294 884 1464">               b. Effects on efficient and effective operation of network utilities             </td> </tr> </table>	a. Effects on health and safety	b. Effects on efficient and effective operation of network utilities	See Rule 5.7.
a. Effects on health and safety				
b. Effects on efficient and effective operation of network utilities				

## **Rule 17.10 Assessment of Restricted Discretionary Activities**

### **Rule 17.10.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 17.10.2 - 17.10.5:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how a consent application will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 17.10.2 - 17.10.5 apply as follows:
  - a. Rule 17.10.2 applies to restricted discretionary land use activities;
  - b. Rule 17.10.3 applies to restricted discretionary development activities;
  - c. Rule 17.10.4 applies to restricted discretionary subdivision activities; and
  - d. Rule 17.10.5 applies to restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item.
4. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in the Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.
5. Where a restricted discretionary activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 17.9; and
    - iv. the matters of discretion in this section will be assessed as indicated.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 17.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 17.12; and

iii. the assessment guidance in this section will also be considered.

6. With respect to section 104(2) of the RMA, Council will not consider family flats or papakāika as part of the permitted baseline in considering residential density effects in the rural residential zones.

### 17.10.2 Assessment of restricted discretionary land use activities

Land use activities	Matters of discretion	Guidance on the assessment of resource consents
1. All restricted discretionary land use activities in the rural residential zones that also involve development activities	a. Effects on rural residential character and amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.3</li> <li>ii. Any adverse effects from development on rural residential character and amenity will be avoided or, if avoidance is not practicable, adequately mitigated (Policy 17.2.3.3).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Landscaping or other forms of screening will be used to reduce the visibility of development from surrounding properties and public viewpoints.</li> <li>iv. Signage and entranceways are in character with the surrounding environment.</li> </ul>
2. All high trip generators, which include: <ul style="list-style-type: none"> <li>• any activities that generate 250 or more vehicle movements a day</li> </ul>	<ul style="list-style-type: none"> <li>a. Effects on accessibility</li> <li>b. Effects on the safety and efficiency of the transport network</li> </ul>	See Rule 6.11

### 17.10.2 Assessment of restricted discretionary land use activities

Land use activities	Matters of discretion	Guidance on the assessment of resource consents
3. Forestry	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.2</li> <li>ii. Forestry is located and designed to avoid or, if avoidance is not practicable, adequately mitigate shading, noise, traffic and other nuisance effects on surrounding properties (Policy 17.2.2.7).</li> </ul>
	b. Effects on rural residential character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.3</li> <li>ii. Forestry is located, designed and managed to avoid or, if avoidance is not practicable, adequately mitigate adverse effects on the character and visual amenity of the rural residential zones (Policy 17.2.3.2).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The forestry is located on land that is not visually prominent.</li> <li>iv. The forestry is of a size and on-site location that will lessen visual effects.</li> <li>v. Screen planting with other species will be used to reduce visual effects.</li> </ul>
	c. Effects on the safety and efficiency of the transport network	See Rule 6.11
4. Veterinary services (large animal practice)	a. Effects on amenity of surrounding properties	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.2</li> <li>ii. Any adverse effects on the amenity of surrounding rural residential properties are avoided or, if avoidance is not practicable, are adequately mitigated (Policy 17.2.2.5).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The activity is set back a sufficient distance from its own boundaries to mitigate adverse effects on surrounding residential activities.</li> </ul>
	b. Effects on the safety and efficiency of the transport network	See Rule 6.11

### 17.10.3 Assessment of restricted discretionary development activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
1. High trip generators: <ul style="list-style-type: none"> <li>New or additions to parking areas that result in 50 or more new parking spaces</li> </ul>	a. Effects on the safety and efficiency of the transport network  b. Effects on accessibility	See Rule 6.11
2. Indigenous vegetation clearance - large scale	a. Effects on biodiversity values	See Rule 10.6

### 17.10.4 Assessment of restricted discretionary subdivision activities

Activity	Matters of discretion	Guidance on the assessment of resource consents
----------	-----------------------	---

1. General subdivision	a. Effects on on-site amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.2</li> <li>ii. Subdivisions deliver sites that achieve a high quality of on-site amenity through being large enough and of a shape that is capable of supporting rural residential development (Policy 17.2.2.8).</li> </ul>
	b. Effects on rural residential character and visual amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.3</li> <li>ii. Subdivisions are designed to ensure any associated future land use and development will maintain or enhance the character and visual amenity of the rural residential zones (Policy 17.2.3.5).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. Sites are designed to respond to the topography and characteristics of the land and surrounding environment;</li> <li>iv. Building platforms are located to respond to land form and avoid significant visual effects;</li> <li>v. Driveways, network utilities and services are designed and located to minimise the need for significant earthworks.</li> </ul>
	c. Effects on long term maintenance of rural land for productive rural activities	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 17.2.4</li> <li>ii. Subdivisions are designed to ensure sites are of shape and size that enable lifestyle blocks or hobby farms, including the keeping of livestock, and avoid sites that will be used purely as large lot residential living (Policy 17.2.4.3).</li> </ul>
	d. Effects on biodiversity values and natural character of riparian margins and the coast	See Rule 10.6
	e. Effects on public access	
	f. NA	NA
	g. Effects on efficiency and affordability of infrastructure	See Rule 9.6
	h. Effects on the safety and efficiency of the transport network	See Rule 6.11
	i. Risk from natural hazards	See Rule 11.5

**17.10.5 Assessment of restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
<p>1. In the <b>ONF Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Indigenous vegetation clearance - large scale</li> <li>• Shelterbelts and small woodlots</li> <li>• General subdivision</li> </ul>	<p>a. Effects on landscape values</p>	<p>See Rule 10.6</p>
<p>2. In the <b>ONL or SNL overlay zones</b>:</p> <ul style="list-style-type: none"> <li>• Forestry</li> <li>• General subdivision</li> </ul>	<p>a. Effects on landscape values</p>	<p>See Rule 10.6</p>
<p>3. In the <b>HNCC Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Shelterbelts and small woodlots</li> <li>• General subdivision</li> </ul>	<p>a. Effects on natural character of the coast</p>	<p>See Rule 10.6</p>
<p>4. In the <b>NCC Overlay Zone</b>:</p> <ul style="list-style-type: none"> <li>• Forestry</li> <li>• Indigenous vegetation clearance - large scale</li> <li>• General subdivision</li> </ul>	<p>a. Effects on natural character of the coast</p>	<p>See Rule 10.6</p>
<p>5. In a <b>wāhi tūpuna mapped area</b> where activity is identified as a threat:</p> <ul style="list-style-type: none"> <li>• New buildings and structures</li> <li>• General subdivision</li> <li>• Forestry</li> <li>• Indigenous vegetation clearance - large scale</li> <li>• Shelterbelts and small woodlots</li> </ul>	<p>a. Effects on cultural values of Manawhenua</p>	<p>See Rule 14.4</p>
<p>6. Activities affecting a <b>scheduled heritage building or scheduled heritage structure</b>:</p> <ul style="list-style-type: none"> <li>• Additions and alterations that affect a protected part of a scheduled heritage building or scheduled heritage structure</li> <li>• Removal for relocation</li> <li>• All subdivision activities on sites containing a scheduled heritage building or scheduled heritage structure</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.6</p>
<p>7. In <b>all hazard overlay zones, swale mapped areas and dune system mapped areas</b>:</p> <ul style="list-style-type: none"> <li>• General subdivision</li> </ul>	<p>a. Risk from natural hazards</p>	<p>See Rule 11.5</p>

**17.10.5 Assessment of restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
8. In a <b>hazard 1 or 2 (flood) overlay zone</b> (see Rule 17.3.6): <ul style="list-style-type: none"> <li>New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area</li> </ul>	a. Risk from natural hazards	See Rule 11.5
9. In the <b>Hazard 2 (flood) Overlay Zone</b> : <ul style="list-style-type: none"> <li>Natural hazards sensitive activities</li> <li>Natural hazards potentially sensitive activities</li> </ul>	a. Risk from natural hazards	See Rule 11.5
10. In the <b>National Grid Subdivision Corridor mapped area</b> : <ul style="list-style-type: none"> <li>All subdivision activities</li> </ul>	a. Risk to the safety of people and property	See Rule 5.8.
	b. Reverse sensitivity effects	
	c. Effects on efficient and effective operation of The National Grid and access to it	
11. In an <b>ASBV</b> : <ul style="list-style-type: none"> <li>General subdivision</li> <li>Shelterbelts and small woodlots</li> <li>Site development activities (except for outdoor storage, parking, loading and access, vegetation clearance, storage and use of hazardous substances)</li> </ul>	a. Effects on biodiversity values	See Rule 10.6
12. In the <b>radio transmitters mapped area</b> : <ul style="list-style-type: none"> <li>General subdivision</li> </ul>	a. Reverse sensitivity effects	See Rule 5.8
Y. In the <b>Critical Electricity Distribution Infrastructure Corridor mapped area</b> : <ul style="list-style-type: none"> <li>All subdivision activities</li> </ul>	a. Effects on health and safety	See Rule 5.8.
	b. Reverse sensitivity effects	
	c. Effects on efficient and effective operation of network utilities	

**17.10.5 Assessment of restricted discretionary activities in an overlay zone, mapped area or affecting a scheduled item**

Activity	Matters of discretion	Guidance on the assessment of resource consents
X. In a <b>Residential Transition Overlay Zone (RTZ)</b> (prior to release): <ul style="list-style-type: none"> <li>• Forestry</li> <li>• General subdivision (Rule 17.3.5.1 and Rule 17.3.5.2)</li> </ul>	a. Effects on future urban development	See Rule 12.X.

## Rule 17.11 Assessment of Discretionary Activities

### Rule 17.11.1 Introduction

1. Discretionary activities will be assessed in accordance with section 104 and 104B of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 17.11.2 - 17.11.3 provide guidance on how a consent application for the listed discretionary activities will be assessed, under the heading 'guidance on the assessment of resource consents', including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi);
  - b. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
  - c. general assessment guidance, including any effects that will be considered as a priority; and
  - d. conditions that may be imposed.
3. Rules 17.11.2 - 17.11.3 apply as follows:
  - a. Rule 17.11.2 applies to discretionary land use activities; and
  - b. Rule 17.11.3 applies to discretionary performance standard contraventions.
4. With respect to section 104(2) of the RMA, Council will not consider family flats or papakāika as part of the permitted baseline in considering residential density effects in the rural residential zones.
5. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 17.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
1. <ul style="list-style-type: none"> <li>• Rural tourism</li> <li>• Rural research</li> <li>• Community and leisure - large scale</li> <li>• Early childhood education</li> <li>• Sport and recreation</li> <li>• Visitor accommodation</li> </ul>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ol style="list-style-type: none"> <li>a. Objectives 17.2.2, 17.2.3, 17.2.4</li> <li>b. Any adverse effects on the amenity of surrounding rural residential properties are avoided or, if avoidance is not practicable, are adequately mitigated (Policy 17.2.2.5).</li> <li>c. Any adverse effects on rural residential character and amenity are avoided or, if avoidance is not practicable, are adequately mitigated (Policy 17.2.3.3).</li> <li>d. Where in a <b>high class soils mapped area</b>, adverse effects on high class soils are avoided or, if avoidance is not practicable, adverse effects are no more than minor (Policy 17.2.4.2).</li> </ol> <p><i>General assessment guidance:</i></p> <ol style="list-style-type: none"> <li>e. In assessing effects on amenity, Council will consider the effects of vehicle movements on the site as well as any significant changes to the number or nature of vehicle movements on the adjoining road.</li> </ol> <p><i>Potential circumstances that may support a consent application include:</i></p> <ol style="list-style-type: none"> <li>f. The activity is set back a sufficient distance from its own boundaries and existing sensitive activities on surrounding sites.</li> <li>g. Development activities meet relevant performance standards.</li> </ol>

### 17.11.2 Assessment of discretionary land use activities

Activity	Guidance on the assessment of resource consents
	<p>h. Development is not situated on visually prominent land.</p> <p>i. The form, scale and materials used in buildings and structures are compatible with the character and visual amenity of the rural residential zones.</p> <p>j. Colours and materials used in development are chosen to blend in with the rural residential setting and minimise reflectivity.</p> <p>k. Landscaping or other forms of screening are used to reduce the visibility of development from surrounding properties and public viewpoints.</p> <p><i>Conditions that may be imposed include:</i></p> <p>l. Restriction on hours of operation</p> <p>m. Controls on on-site lighting</p> <p>n. A requirement for screening of storage areas</p> <p>o. A requirement to control dust</p> <p>p. Provision of car parking areas</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>q. See Section 6.12 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3 and effects related to accessibility and the safety and efficiency of the transportation network and its affordability to the public.</p> <p>r. In an ASBV, see section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and effects related to biodiversity values.</p> <p>s. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety.</p> <p>t. For activities that may have effects on biodiversity values, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.1.</p> <p>u. For activities adjacent to water bodies and the coast, see Section 10.7 for guidance on the assessment of resource consents in relation to Objective 10.2.2.</p> <p>v. For activities taking place within the <b>radio transmitters mapped area</b>, see Section 5.9 for guidance on the assessment of resource consents in relation to management of reverse sensitivity effects on Radio New Zealand's facilities at 740 Highcliff Road and 35 Karetai Road.</p> <p>w. See Section 14.5 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.</p>

### 17.11.3 Assessment of discretionary performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
<p>1.</p> <ul style="list-style-type: none"> <li>• Acoustic insulation</li> <li>• Noise - where the limit is exceeded by less than 5dB LAeq (15min)</li> <li>• Light spill - where the limit is exceeded by 25% or less</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</p>
<p>2. Minimum site size (Rule 17.7.5.2)</p>	<p><i>Potential circumstances that may support a consent application:</i></p> <p>a. The parent site contains significant topographical features such as water bodies or human-made features such as roads or rail corridors which make meeting the minimum site size impractical.</p> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>b. See Section 9.7 for guidance on the assessment of resource consents in relation to Objective 9.2.1 and effects related to the efficiency and affordability of infrastructure.</p>
<p>X. Area of buildings and structures in the <b>ONL</b>, <b>SNL</b> or <b>NCC overlay zones</b> (Rule 10.3.5.X.b.ii)</p>	<p>See Rule 10.7.</p>
<p>Y. <b>Structure plan mapped area</b> performance standards</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <p>a. Strategic Directions: Objective 2.4.1, Policy 2.4.1.8.</p> <p>b. Objective 17.2.3.</p> <p>c. Activities in a <b>structure plan mapped area</b> are designed to:</p> <ul style="list-style-type: none"> <li>i. maintain or enhance any special values of the site listed in Appendix A12; and</li> <li>ii. ensure any other design outcomes listed in Appendix A12 are achieved (Policy 17.2.3.X).</li> </ul>

## **Rule 17.12 Assessment of Non-complying Activities**

### **Rule 17.12.1 Introduction**

1. Non-complying activities will be assessed in accordance with section 104, 104B and 104D of the RMA meaning Council may grant or refuse the application, and, if granted, may impose conditions.
2. Rules 17.12.2 - 17.12.6 provide guidance on how a consent application for the listed non-complying activities will be assessed, including:
  - a. relevant objectives and policies that will be considered as a priority with respect to s104(1)(b)(vi); and
  - b. general assessment guidance, including any effects that will be considered as a priority.
3. Rules 17.12.2 - 17.12.6 apply as follows:
  - a. Rule 17.12.2 applies to all non-complying activities;
  - b. Rule 17.12.3 applies to non-complying land use activities;
  - c. Rule 17.12.4 applies to non-complying development activities;
  - d. Rule 17.12.5 applies to non-complying subdivision activities; and
  - e. Rule 17.12.6 applies to non-complying performance standard contraventions.
4. With respect to section 104(2) of the RMA, Council will not consider family flats or papakāika as part of the permitted baseline in considering residential density effects in the rural residential zones.
5. For all land use activities that require consent, all associated development activities will be considered as part of the resource consent even if the development otherwise meets the development performance standards in this Plan. Conditions on development activities may be used to minimise any adverse effects from the land use activity or create mitigating positive effects.

### 17.12.2 Assessment of all non-complying activities

Activity	Guidance on the assessment of resource consents
<p>1. All non-complying activities, including but not limited to the activities listed below</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 17.2.1, 17.2.2, 17.2.3, 17.2.4</li> <li>b. The activity is consistent with the strategic directions. including but not limited to:               <ul style="list-style-type: none"> <li>i. Objective 2.2.4</li> <li>ii. Objective 2.7.1</li> <li>iii. Objective 2.3.2 and Policy 2.3.2.2</li> <li>iv. Objective 2.4.3 and Policy 2.4.3.4</li> </ul> </li> </ul> <p><i>General assessment guidance:</i></p> <ul style="list-style-type: none"> <li>c. In assessing activities that are non-complying due to being in an overlay zone, mapped area, in a scheduled site, or affecting a scheduled item, that otherwise require resource consent, the assessment guidance provided in relation to the underlying activity status will also be considered.</li> </ul> <p><i>Relevant guidance from other sections (priority considerations):</i></p> <ul style="list-style-type: none"> <li>d. For activities taking place within the <b>radio transmitters mapped area</b>, see Section 5.10 for guidance on the assessment of resource consents in relation to management of reverse sensitivity effects on Radio New Zealand’s facilities at 740 Highcliff Road and 35 Karetai Road.</li> <li>e. See Section 6.13 for guidance on the assessment of resource consents in relation to objectives 6.2.2 and 6.2.3, and effects related to accessibility and the safety and efficiency of the transport network and its affordability to the public.</li> <li>f. See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects on health and safety</li> <li>g. For activities that may have effects on biodiversity values, see Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1.</li> <li>h. For activities adjacent to water bodies and the coast, see Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.2.</li> </ul>

### 17.12.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
<p>1. Commercial advertising</p>	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objective 2.4.1</li> <li>b. Policy 2.4.1.6.c</li> </ul>

### 17.12.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
2. <ul style="list-style-type: none"> <li>• Cemeteries</li> <li>• Crematoriums</li> <li>• Landfills</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</p>
3. In the <b>ONF or HNCC overlay zones</b> : <ul style="list-style-type: none"> <li>• Domestic animal boarding and breeding (not including dogs)</li> <li>• Forestry</li> <li>• Standard residential</li> <li>• Veterinary services - large animal practice</li> <li>• Visitor accommodation</li> <li>• Emergency services</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to objectives 10.2.3 and 10.2.5 and effects related to natural character of the coast and landscape values.</p>
4. In the <b>hazard 1 (flood) overlay zones</b> (see Rule 17.3.6): <ul style="list-style-type: none"> <li>• Natural hazards potentially sensitive activities</li> <li>• Natural hazards sensitive activities</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risk from natural hazards.</p>
5. In a <b>wāhi tūpuna mapped area</b> : <ul style="list-style-type: none"> <li>• Forestry</li> <li>• Mining</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on the cultural values of Manawhenua.</p>
6. In an <b>ASBV</b> : <ul style="list-style-type: none"> <li>• Rural activities (except for rural ancillary retail, rural tourism and rural research)</li> <li>• Residential activities (except for working from home)</li> <li>• Early childhood education</li> <li>• Commercial activities (except for stand-alone car parking)</li> <li>• Industrial activities</li> <li>• Major facility activities</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and the effects related to biodiversity values.</p>
7. In the <b>SNL or NCC overlay zones</b> : <ul style="list-style-type: none"> <li>• Emergency services</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objectives 10.2.3 and 10.2.5 and effects related to natural character of the coast and landscape values.</p>

### 17.12.3 Assessment of non-complying land use activities

Activity	Guidance on the assessment of resource consents
<p>X. In a <b>Residential Transition Overlay Zone (RTZ)</b> (prior to release):</p> <ul style="list-style-type: none"> <li>• Intensive farming</li> <li>• Landfills</li> <li>• Mining</li> <li>• General subdivision in the RR2 Zone (Rule 17.3.5.3)</li> <li>• Cross lease, company lease and unit title subdivision</li> </ul>	<p><i>Relevant guidance from other sections (priority considerations):</i></p> <p>a. See Section 12.5 for guidance on the assessment of resource consents in relation to Objective 12.2.1 and effects related to future residential activity.</p>

#### 17.12.4 Assessment of non-complying development activities

Activity	Guidance on the assessment of resource consents
1. Demolition of a protected part of a scheduled heritage building or scheduled heritage structure	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 13.8 for guidance on the assessment of resource consents in relation to Objective 13.2.1 and effects on heritage values.
2. In the <b>ONF or HNCC overlay zones:</b> <ul style="list-style-type: none"> <li>• New buildings or structures</li> <li>• Additions and alterations</li> <li>• Indigenous vegetation clearance - large scale (HNCC Overlay Zone)</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objectives 10.2.3 and 10.2.5 and effects related to natural character of the coast and landscape values.
3. In a <b>wāhi tūpuna mapped area:</b> <ul style="list-style-type: none"> <li>• New buildings or structures</li> <li>• Additions and alterations</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 14.6 for guidance on the assessment of resource consents in relation to Objective 14.2.1 and effects on cultural values of Manawhenua.
4. In an <b>ASBV:</b> <ul style="list-style-type: none"> <li>• Indigenous vegetation clearance - large scale</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and the effects related to biodiversity values.
5. In a <b>dune system mapped area:</b> <ul style="list-style-type: none"> <li>• Hazard exclusion areas</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> a. See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risk from natural hazards.

#### 17.12.5 Assessment of non-complying subdivision activities

Activity	Guidance on the assessment of resource consents
1. All other general subdivision in the Rural Residential 2 Zone	<i>Relevant objectives and policies (priority considerations):</i> a. Objective 17.2.4 b. General subdivision of sites in the Rural Residential 2 Zone is avoided unless it does not result in an increase in residential development potential (Policy 17.2.4.4).
2. Cross lease, company lease and unit title subdivision	<i>Relevant objectives and policies (priority considerations):</i> a. Objective 17.2.1 b. Cross lease, company lease and unit title subdivision is avoided in the rural residential zones unless it does not result in an increase in development potential beyond that which might be achieved through a general subdivision (Policy 17.2.1.6).

### 17.12.5 Assessment of non-complying subdivision activities

Activity	Guidance on the assessment of resource consents
3. In an <b>ASBV</b> : <ul style="list-style-type: none"> <li>• All other general subdivision in the Rural Residential 2 Zone</li> <li>• Cross lease, company lease and unit title subdivision</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>See Section 10.8 for guidance on the assessment of resource consents in relation to Objective 10.2.1 and the effects related to biodiversity values.</li> </ol>

### 17.12.6 Assessment of non-complying performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. Density	<i>Relevant objectives and policies (priority considerations):</i> <ol style="list-style-type: none"> <li>Objective 2.6.1, Policy 2.6.1.5</li> <li>Objective 17.2.1</li> <li>Residential activity in the rural residential zone is at a density that enables lifestyle blocks and hobby farms (Policy 17.2.1.2).</li> </ol> <i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.1 and effects related to the efficiency and affordability of infrastructure.</li> </ol>
2. <ul style="list-style-type: none"> <li>• Setback from National Grid (buildings, structures, city-wide activities, and National Grid sensitive activities (Rule 5.6.1.1)</li> <li>• Setback from National Grid (subdivision activities) (Rule 17.7.X)</li> </ul>	<i>Relevant guidance from other sections:</i> <ol style="list-style-type: none"> <li>See Section 5.10 for guidance on the assessment of resource consents in relation to Objective 5.2.X and effects related to the operation, maintenance, upgrading and development of the National Grid.</li> </ol>
3. <ul style="list-style-type: none"> <li>• Light spill - where the limit is exceeded by greater than 25%</li> <li>• Noise - where the limit is exceeded by 5bD LAeq (15 min) or more</li> <li>• Hazardous substances quantity limits and storage requirements (Rule 9.3.4.2)</li> </ul>	<i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>See Section 9.8 for guidance on the assessment of resource consents in relation to Objective 9.2.2 and effects related to public health and safety.</li> </ol>
4. Hazard exclusion areas (hazard overlays)	<i>Relevant guidance from other sections (priority considerations):</i> <ol style="list-style-type: none"> <li>See Section 11.7 for guidance on the assessment of resource consents in relation to Objective 11.2.1 and effects related to the risk from natural hazards.</li> </ol>

### 17.12.6 Assessment of non-complying performance standard contraventions

Performance standard		Guidance on the assessment of resource consents
5.	Minimum site size	<p><i>Relevant objectives and policies (priority considerations):</i></p> <ul style="list-style-type: none"> <li>a. Objectives 2.2.4 and 2.6.1</li> <li>b. ## 18. Commercial and Mixed Use Zones

### 18.1 Introduction

It is important for the economic and social success of Dunedin that it is a vibrant and exciting city. A vibrant city is lively and full of activity, due to a high level of pedestrian activity in the central city and centres and a wide range of activities occurring in these places. Key qualities that contribute to the success of the central city and centres are that there are attractions to encourage people to go there, that they are accessible (easy to get to and around) and that they are safe and enjoyable places to be.

To achieve a vibrant city it is important that Dunedin has an urban form that is accessible, clusters activities into walkable centres and a built form which supports pedestrian activity.

The key resource management issues that are being experienced or are anticipated in the commercial and mixed use zoned areas of Dunedin are:

- The retention and enhancement of the vitality and viability of the Central Business District and Centres is a key resource management issue for Dunedin City. There is a need to provide for a wide range of commercial, community, industrial and residential activities, at high densities in the CBD and centres in order to realise the social and economic agglomeration benefits that derive from the co-location of different activities.
- A need to provide a sufficient supply for the projected demand for retail and office space while avoiding an oversupply and decentralisation of activities, which could have adverse effects on the economic viability and vitality of the CBD.
- Different types of retail activity have different effects on the economic viability and vitality of the CBD and centres. For instance, having trade related and yard based retail in different parts of the city (including some areas currently zoned as Industrial) does not affect the vibrancy of centres in the same manner as general retail does. As such, a highly specific zoning response is necessary.
- While streetscape amenity values vary within the commercial and mixed use zones, land uses and development can have adverse effects on streetscape amenity values and it is important to maintain and enhance the existing amenity of all commercial areas, albeit to different levels.

There is the potential for conflicts to arise between different activities provided for within the commercial and mixed use zones as well as at the edges of the commercial and mixed use zones (for instance between residential and noisier activities) and these need to be well managed.

In response to the issues, the Plan establishes a group of thirteen commercial and mixed use zones in the city. These zones provide for a hierarchy of centres, anchored around one Central Business District (CBD), which provides a focus for economic and employment growth, driven by:

- attraction of businesses to these areas based on density of activity in the area and higher visitation;
- opportunities for social interaction, exchange of ideas and business cooperation;
- public investment in public amenities and other infrastructure in the CBD; and
- opportunities for agglomeration benefits from the co-location of activities.

The CBD Zone is supported by six different types of commercial centres within the suburban and rural parts of the city. These zones are collectively known as the Central Business District and centres zones. In order to make sure these areas are attractive places to visit, a wide range of commercial, community and residential activities are provided for in the CBD and centres, with design controls on buildings and structures to ensure a safe and good quality streetscape environment, for people to spend time in, which has a high level of pedestrian amenity.

The centres hierarchy is supported by a group of other commercial and mixed use zones which either surround the

Central Business District or are more separated from the CBD. There are four zones within the CBD edge mixed use zone group, which are the Warehouse Precinct Zone (WP), Princes, Parry and Harrow Street Zone (PPH), Smith Street and York Place Zone (SSYP) and Harbourside Edge Zone (HE). There are also two zones within the other commercial group of zones, which are the Trade Related Zone (TR) and CBD Edge Commercial zones (CEC).

These zones have characteristics (including built form, site size, land use activities and location) which make them distinct from each other and from the CBD and centres. A tailored range of land use activities and performance standards are applied to each zone. As such, the range of activities, the types of controls that are applied to development activities (including new buildings and site development activities) and the expected level of amenity vary between the zones.

Where any of the commercial and mixed use zones adjoin residential or recreation zoned areas, performance standards are applied to these commercial zones to ensure the character and amenity of these more sensitive adjoining environments will be protected.

## **18.1.1 Zone descriptions**

### **18.1.1.1 Central Business District (CBD) Zone**

The Central Business District (CBD) Zone encompasses the central part of the city and extends northwards along George Street to Albany Street. It includes the Octagon and Moray Place, extends south along upper Princes Street to Hope Street, east to include the Dunedin Railway Station and Toitū Otago Settlers Museum and west to the Smith Street and York Place (SSYP) Zone. The CBD is the focus for employment, retail, entertainment, leisure, visitor accommodation and art and culture activities.

Most of the CBD also has a **primary pedestrian street frontage mapped area** or **secondary pedestrian street frontage mapped area** applied to it, to ensure the best possible streetscape environment for users, and is covered by a heritage precinct overlay to protect the distinctive character of the area. Performance standards are applied to protect the streetscape amenity and heritage streetscape character, respectively, of these areas.

### **18.1.1.2 Centres Zones**

A range of different sized commercial centres are spread throughout the urban area of Dunedin and within outlying towns of the wider district. Principal, suburban and rural centre zones provide hubs for social and economic activity for suburban and rural communities. The Principal Centre Zone includes former pre-amalgamation town centres and is located at Green Island, Mosgiel, Port Chalmers and South Dunedin. The Suburban Centre Zone includes Caversham, Gardens, Mornington and Roslyn, and the Rural Centre Zone includes Outram, Middlemarch, Waikouaiti and Waitati.

There are also Neighbourhood Centre zones, which provide for the day to day needs of individual neighbourhoods, with the Neighbourhood Destination Centre Zone also servicing visitor needs, and the Neighbourhood Convenience Centre Zone also servicing the needs of passing motorists. The Neighbourhood Centre Zone includes Andersons Bay Terminus, Brighton, Brockville, Corstorphine, Forbury, Helensburgh, Hillside, Larnach, Macandrew Bay, Maori Hill, Musselburgh, the southern part of Andersons Bay Road, the area adjoining the University and Wakari. The Neighbourhood Convenience Centre Zone includes Kaikorai North, Kaikorai South, North Dunedin and South Mosgiel; and the Neighbourhood Destination Centre Zone includes St Clair and Portobello.

**Primary pedestrian street frontage mapped area** and **secondary pedestrian street frontage mapped area** are applied within these centres and the Port Chalmers Principal Centre Zone also contains a heritage precinct protecting part of the centre.

### **18.1.1.3 Warehouse Precinct Zone (WP)**

The Warehouse Precinct Zone adjoins the southern part of the CBD Zone and is bounded by Queens Gardens, Bond Street, Police Street and Cumberland Street. The zone provides for a mix of inner city living, visitor accommodation,

conference, meeting and function, entertainment and exhibition, light industrial, restaurant and bulky goods and trade related retail activity. General retail - retail services and office activity is also provided for, if it occurs in scheduled heritage buildings, in order to encourage their restoration.

The entire zone is within a heritage precinct and has a **secondary pedestrian street frontage mapped area** applied to it.

#### **18.1.1.4 Princes, Parry and Harrow Street Zone (PPH)**

The Princes, Parry and Harrow Street Zone encompasses the southern part of Princes Street and an area around Parry and Harrow Streets. The PPH Zone provides for a mix of inner-city residential living, training and education, visitor accommodation, industrial, trade and yard based retail activities.

Performance standards applied to this zone reflect the lower expectations for pedestrian amenity.

#### **18.1.1.5 Smith Street and York Place Zone (SSYP)**

The Smith Street and York Place Zone is a small zone adjoining the CBD. The SSYP Zone provides for visitor accommodation, training and education and residential activity in keeping with its existing character. Offices are also provided for where undertaken within scheduled heritage buildings, to encourage their restoration.

Performance standards applied to this zone reflect the residential and commercial character of this zone.

#### **18.1.1.6 Harbourside Edge Zone (HE)**

The Harbourside Edge Zone encompasses an area adjoining Birch, Kitchener, Wharf and Fryatt Streets and extends to the waterfront. The zone provides for the continuation of the existing industry, while allowing for a transition toward a more mixed use environment by also providing for conference, meeting and function, entertainment and exhibition, restaurant, training and education, visitor accommodation, small scale food and beverage and residential activities and a limited amount of office activity. In order to ensure an attractive place to live, work, and visit, new buildings within the HE Zone will be required, through a restricted discretionary resource consent process, to be designed and located to provide a high level of amenity. In addition, a performance standard requires the provision of public pedestrian access to and along the coast.

#### **18.1.1.7 Trade Related Zone (TR)**

The Trade Related Zone is an area around Andersons Bay Road which provides for large format food and beverage retail, trade related, and yard based retail as well as other specific categories of activities which generate high traffic volumes and require larger sites than are available within the CBD and centres. These characteristics mean that such retail types are likely to be incompatible with the amenity expectations of the CBD and centres. Performance standards applied to this zone reflect the more car-focused characteristics and the lower expectations for pedestrian amenity of this environment.

#### **18.1.1.8 CBD Edge Commercial Zones (CEC)**

There are two CBD Edge Commercial zones:

- an area south of the CBD (CEC - South Zone) around Cumberland Street that provides for large format food and beverage, bulky goods, trade related and yard based retail, as well as industry; and
- an area to the north-east of the CBD (CEC - North Zone) between Hanover Street and Stuart Street. This area provides for all the activities in the CEC - South Zone, as well as additional activities, including hospital and office activity. The additional activities are provided due to its closer proximity to the main retail area and Dunedin Hospital.

#### **18.1.1.X South Dunedin Large Format Zone (SDLF)**

The SDLF Zone adjoins the South Dunedin principal centre zone and extends along the western side of Andersons

Bay Road. This area provides for large format and bulky goods retail activities, in addition to the range of activities provided for in the adjoining Trade Related Zone, as these activities are likely to be incompatible with the amenity expectations of the CBD and the adjoining principal centre zone and often require larger sites than available in these locations.

## 18.2 Objectives and Policies

### Objective 18.2.1

Dunedin has a well-structured and economically and socially successful range of commercial and mixed use environments based on:

- a. the CBD, which is the focus for employment, retail, entertainment, leisure, visitor accommodation, and arts and culture activities;
- b. vibrant and viable principal centre, suburban and rural centre zones, which provide hubs for social and economic activity for rural, suburban and principal communities;
- c. Neighbourhood Centre Zone, which provides for the day to day needs of local areas, with the Neighbourhood Destination Centre Zone also servicing visitor needs, and the Neighbourhood Convenience Centre Zone also servicing the needs of passing motorists;
- d. a range of mixed use zones (WP, PPH, SSYP and HE zones) around the edge of the CBD, which provide for a compatible mix of inner-city living, commercial, and light industrial activities;
- e. an area south of the CBD (CEC - South Zone) and an area which adjoins the principal centre zone in South Dunedin (SDLF Zone) and extends along the western side of Andersons Bay Road, which provides for high trip generators, large format general retail and bulky goods retail which are likely to be incompatible with the amenity expectations of the CBD or adjoining principal centre zone and which may require larger sites than available in the CBD or adjoining centre;
- f. an area to the north-east of the CBD (CEC - North Zone), similar to the CEC - South but also containing a mix of activities which support the adjoining CBD and Hospital zones;
- g. an area around Andersons Bay Road (TR Zone), which provides for trade related retail and specific categories of high trip generators, which are likely to be incompatible with the amenity expectations of the CBD; and
- h. an area adjoining Birch, Kitchener, Wharf and Fryatt Streets and the coast (HE Zone) which provides for the continuation of the existing environment characterised by industrial activity, while allowing for a transition toward a vibrant and attractive place to live, work and visit by also providing for conference, meeting and function, entertainment and exhibition, restaurant, visitor accommodation, training and education and residential activities.

Policy 18.2.1.1	Provide for a wide range of commercial, residential and community activities in the CBD and all centres zones in order to encourage economically and socially vibrant and viable centres.
Policy 18.2.1.2	Enable general retail and office activities in the CBD and centres zones and restrict their establishment in other commercial and mixed use zones in order to maintain the vibrancy of existing centres.
Policy 18.2.1.3	Avoid retail and office activities in areas where they are not provided for unless: <ol style="list-style-type: none"> <li>a. it is an ancillary and secondary component of a general_retail - retail services or office activity that is undertaken in a scheduled heritage building as provided for by Policy 13.2.1.9 on the same or adjacent site; or</li> <li>b. there is a significant and sustained increase in the amount of retail activity across the city and it has been demonstrated that as a result there is a medium to longer term under-supply of retail land across all the areas where general retail is provided for; or</li> <li>c. in the HE Zone, it is associated with port, industrial or marine related activities operating in the area; or</li> <li>d. in the PPH Zone it is associated with campus activity.</li> </ol>

### Objective 18.2.1

Dunedin has a well-structured and economically and socially successful range of commercial and mixed use environments based on:

- a. the CBD, which is the focus for employment, retail, entertainment, leisure, visitor accommodation, and arts and culture activities;
- b. vibrant and viable principal centre, suburban and rural centre zones, which provide hubs for social and economic activity for rural, suburban and principal communities;
- c. Neighbourhood Centre Zone, which provides for the day to day needs of local areas, with the Neighbourhood Destination Centre Zone also servicing visitor needs, and the Neighbourhood Convenience Centre Zone also servicing the needs of passing motorists;
- d. a range of mixed use zones (WP, PPH, SSYP and HE zones) around the edge of the CBD, which provide for a compatible mix of inner-city living, commercial, and light industrial activities;
- e. an area south of the CBD (CEC - South Zone) and an area which adjoins the principal centre zone in South Dunedin (SDLF Zone) and extends along the western side of Andersons Bay Road, which provides for high trip generators, large format general retail and bulky goods retail which are likely to be incompatible with the amenity expectations of the CBD or adjoining principal centre zone and which may require larger sites than available in the CBD or adjoining centre;
- f. an area to the north-east of the CBD (CEC - North Zone), similar to the CEC - South but also containing a mix of activities which support the adjoining CBD and Hospital zones;
- g. an area around Andersons Bay Road (TR Zone), which provides for trade related retail and specific categories of high trip generators, which are likely to be incompatible with the amenity expectations of the CBD; and
- h. an area adjoining Birch, Kitchener, Wharf and Fryatt Streets and the coast (HE Zone) which provides for the continuation of the existing environment characterised by industrial activity, while allowing for a transition toward a vibrant and attractive place to live, work and visit by also providing for conference, meeting and function, entertainment and exhibition, restaurant, visitor accommodation, training and education and residential activities.

Policy 18.2.1.4	Provide for food and beverage retail: <ol style="list-style-type: none"> <li>a. in the CBD and centres; <ol style="list-style-type: none"> <li>X. where 500m<sup>2</sup> or less in gross floor area, in the HE Zone; and</li> <li>b. where 1500m<sup>2</sup> or more in gross floor area, in the CEC, SDLF and TR zones.</li> </ol> </li> </ol>
Policy 18.2.1.5	Provide for bulky goods retail and large format retail in the CEC, SDLF and WP zones in recognition that often these activities require larger sites than are available in the CBD and centres.
Policy 18.2.1.6	Provide for trade related retail and yard based retail to locate in the TR, PPH, CEC and SDLF zones in recognition that often these activities require a built form that cannot meet the requirements within the CBD and centres, and their location in these areas is unlikely to detract from the vibrancy and vitality of the CBD and centres.
Policy 18.2.1.X	Only allow general retail 750m <sup>2</sup> or more in the SDLF Zone where any adverse effects on the vibrancy and viability of the CBD and centres are no more than minor.
Policy 18.2.1.7	Limit the scale of retail ancillary to industry to a size that: <ol style="list-style-type: none"> <li>a. is clearly subordinate to and part of the operation of the primary industry activity;</li> <li>b. does not conflict with objectives 2.3.2 and 2.4.3; and</li> <li>c. does not create adverse effects on other industry activities, for example from traffic, parking, or reverse sensitivity.</li> </ol>

### Objective 18.2.1

Dunedin has a well-structured and economically and socially successful range of commercial and mixed use environments based on:

- a. the CBD, which is the focus for employment, retail, entertainment, leisure, visitor accommodation, and arts and culture activities;
- b. vibrant and viable principal centre, suburban and rural centre zones, which provide hubs for social and economic activity for rural, suburban and principal communities;
- c. Neighbourhood Centre Zone, which provides for the day to day needs of local areas, with the Neighbourhood Destination Centre Zone also servicing visitor needs, and the Neighbourhood Convenience Centre Zone also servicing the needs of passing motorists;
- d. a range of mixed use zones (WP, PPH, SSYP and HE zones) around the edge of the CBD, which provide for a compatible mix of inner-city living, commercial, and light industrial activities;
- e. an area south of the CBD (CEC - South Zone) and an area which adjoins the principal centre zone in South Dunedin (SDLF Zone) and extends along the western side of Andersons Bay Road, which provides for high trip generators, large format general retail and bulky goods retail which are likely to be incompatible with the amenity expectations of the CBD or adjoining principal centre zone and which may require larger sites than available in the CBD or adjoining centre;
- f. an area to the north-east of the CBD (CEC - North Zone), similar to the CEC - South but also containing a mix of activities which support the adjoining CBD and Hospital zones;
- g. an area around Andersons Bay Road (TR Zone), which provides for trade related retail and specific categories of high trip generators, which are likely to be incompatible with the amenity expectations of the CBD; and
- h. an area adjoining Birch, Kitchener, Wharf and Fryatt Streets and the coast (HE Zone) which provides for the continuation of the existing environment characterised by industrial activity, while allowing for a transition toward a vibrant and attractive place to live, work and visit by also providing for conference, meeting and function, entertainment and exhibition, restaurant, visitor accommodation, training and education and residential activities.

Policy 18.2.1.8	Limit the scale of activities in neighbourhood and rural centres to ensure activities: <ol style="list-style-type: none"> <li>a. are not a destination retail activity designed to attract customers from across suburbs, which are more appropriately located in the CBD or other central city commercial and mixed use zones; and</li> <li>b. do not dominate the centre and reduce the diversity of different activities that are able to establish there.</li> </ol>
Policy 18.2.1.9	Provide for licensed premises where these are ancillary to activities that are provided for in the zone, including: <ol style="list-style-type: none"> <li>a. bottle shops where food and beverage retail or dairies are provided for; and</li> <li>b. taverns and bars where restaurants are provided for; except in neighbourhood centres (see Policy 18.2.2.9).</li> </ol>
Policy 18.2.1.10	Provide for hospital activity in the CEC - North Zone, to allow for the relocation of Dunedin Hospital into this zone.
Policy 18.2.1.11	Limit the gross floor area of dairies to a size that reflects these activities operating as a local convenience store rather than a destination supermarket.
Policy 18.2.1.12	Only allow food and beverage retail in the WP, HE and PPH zones where the activity is of a size, and designed in a manner, to cater to people living or working locally or using the area for recreational purposes.

### Objective 18.2.1

Dunedin has a well-structured and economically and socially successful range of commercial and mixed use environments based on:

- a. the CBD, which is the focus for employment, retail, entertainment, leisure, visitor accommodation, and arts and culture activities;
- b. vibrant and viable principal centre, suburban and rural centre zones, which provide hubs for social and economic activity for rural, suburban and principal communities;
- c. Neighbourhood Centre Zone, which provides for the day to day needs of local areas, with the Neighbourhood Destination Centre Zone also servicing visitor needs, and the Neighbourhood Convenience Centre Zone also servicing the needs of passing motorists;
- d. a range of mixed use zones (WP, PPH, SSYP and HE zones) around the edge of the CBD, which provide for a compatible mix of inner-city living, commercial, and light industrial activities;
- e. an area south of the CBD (CEC - South Zone) and an area which adjoins the principal centre zone in South Dunedin (SDLF Zone) and extends along the western side of Andersons Bay Road, which provides for high trip generators, large format general retail and bulky goods retail which are likely to be incompatible with the amenity expectations of the CBD or adjoining principal centre zone and which may require larger sites than available in the CBD or adjoining centre;
- f. an area to the north-east of the CBD (CEC - North Zone), similar to the CEC - South but also containing a mix of activities which support the adjoining CBD and Hospital zones;
- g. an area around Andersons Bay Road (TR Zone), which provides for trade related retail and specific categories of high trip generators, which are likely to be incompatible with the amenity expectations of the CBD; and
- h. an area adjoining Birch, Kitchener, Wharf and Fryatt Streets and the coast (HE Zone) which provides for the continuation of the existing environment characterised by industrial activity, while allowing for a transition toward a vibrant and attractive place to live, work and visit by also providing for conference, meeting and function, entertainment and exhibition, restaurant, visitor accommodation, training and education and residential activities.

Policy 18.2.1.13	Avoid industrial activities in the SSYP Zone due to its residential character.
Policy 18.2.1.14	Avoid service stations, restaurant - drive through and yard based retail in the CBD, SSYP, HE and WP zones unless: <ol style="list-style-type: none"> <li>a. they are designed and located to meet the built form expectations of the zone, as set out in the development activities performance standards;</li> <li>b. any drive-through components will not be accessed or visible from the <b>primary pedestrian street frontage mapped area</b>; and</li> <li>c. there are no, or only insignificant, adverse effects on streetscape and pedestrian amenity from vehicle movements.</li> </ol>
Policy 18.2.1.15	Enable training and education in the CBD, all centres, CEC - North Zone, and WP, PPH, SSYP and HE zones, and Campus in the <b>Campus mapped area</b> , to enable tertiary (including the University of Otago and Otago Polytechnic) and specialist education providers.
Policy 18.2.1.16	Avoid conference, meeting and function or entertainment and exhibition in the NEC, NECC, SSYP, PPH and CEC zones unless: <ol style="list-style-type: none"> <li>a. it is ancillary to visitor accommodation; or</li> <li>b. it has specific operational requirements that require it to locate in these zones.</li> </ol>

### Objective 18.2.1

Dunedin has a well-structured and economically and socially successful range of commercial and mixed use environments based on:

- a. the CBD, which is the focus for employment, retail, entertainment, leisure, visitor accommodation, and arts and culture activities;
- b. vibrant and viable principal centre, suburban and rural centre zones, which provide hubs for social and economic activity for rural, suburban and principal communities;
- c. Neighbourhood Centre Zone, which provides for the day to day needs of local areas, with the Neighbourhood Destination Centre Zone also servicing visitor needs, and the Neighbourhood Convenience Centre Zone also servicing the needs of passing motorists;
- d. a range of mixed use zones (WP, PPH, SSYP and HE zones) around the edge of the CBD, which provide for a compatible mix of inner-city living, commercial, and light industrial activities;
- e. an area south of the CBD (CEC - South Zone) and an area which adjoins the principal centre zone in South Dunedin (SDFL Zone) and extends along the western side of Andersons Bay Road, which provides for high trip generators, large format general retail and bulky goods retail which are likely to be incompatible with the amenity expectations of the CBD or adjoining principal centre zone and which may require larger sites than available in the CBD or adjoining centre;
- f. an area to the north-east of the CBD (CEC - North Zone), similar to the CEC - South but also containing a mix of activities which support the adjoining CBD and Hospital zones;
- g. an area around Andersons Bay Road (TR Zone), which provides for trade related retail and specific categories of high trip generators, which are likely to be incompatible with the amenity expectations of the CBD; and
- h. an area adjoining Birch, Kitchener, Wharf and Fryatt Streets and the coast (HE Zone) which provides for the continuation of the existing environment characterised by industrial activity, while allowing for a transition toward a vibrant and attractive place to live, work and visit by also providing for conference, meeting and function, entertainment and exhibition, restaurant, visitor accommodation, training and education and residential activities.

Policy 18.2.1.17	Only allow restaurants outside the CBD, WP, HE and centres where the activity is not of a scale or nature that is more appropriate to locate in the CBD, centres, WP or HE because: <ol style="list-style-type: none"> <li>a. it is unlikely to contribute to the vibrancy and vitality of those zones; and</li> <li>b. it has specific operational requirements that do not fit with those locations.</li> </ol>
Policy 18.2.1.18	Provide for restaurants ancillary to trade related retail or food and beverage retail where they are designed to only service people engaged in the primary activity and are unlikely to attract significant patronage outside this purpose.

### Objective 18.2.2

The potential for conflict between activities within the commercial and mixed use zones and in adjoining zones is minimised, as far as practicable, through adequate separation distances and other mitigation measures which ensure:

- a. the amenity of adjoining residential and recreation zoned sites is maintained; and
- b. the potential for reverse sensitivity effects is minimised as far as practicable.

Policy 18.2.2.1	Require fencing along property boundaries that adjoin residential or school zoned sites to be of an adequate height and design to provide screening for the purposes of privacy and security.
-----------------	---

### Objective 18.2.2

The potential for conflict between activities within the commercial and mixed use zones and in adjoining zones is minimised, as far as practicable, through adequate separation distances and other mitigation measures which ensure:

- the amenity of adjoining residential and recreation zoned sites is maintained; and
- the potential for reverse sensitivity effects is minimised as far as practicable.

Policy 18.2.2.2	Only allow restaurants, and conference, meeting and function, and entertainment and exhibition ancillary to visitor accommodation in the PPH and SSYP zones where: <ol style="list-style-type: none"> <li>the activities are secondary to the visitor accommodation activity; and</li> <li>any adverse effects on the amenity of surrounding residential activities, from noise, anti-social behaviour, or other effects will be avoided or, if avoidance is not practicable, adequately mitigated; and</li> <li>the potential for reverse sensitivity will be avoided or, if avoidance is not practicable, adequately mitigated.</li> </ol>
Policy 18.2.2.3	Require buildings to be of a height in relation to boundary, and setback from side and rear boundaries, that maintains a reasonable level of sunlight access for: <ol style="list-style-type: none"> <li>current and future residential buildings and their outdoor living spaces in adjoining residential zones; and</li> <li>sites in the recreation and school zones.</li> </ol>
Policy 18.2.2.4	Only allow restaurants - drive through and service stations in commercial and mixed use zones, where significant adverse effects on the amenity of existing residential activities are avoided or mitigated as far as practicable.
Policy 18.2.2.5	Avoid crematoriums in all commercial and mixed use zones that provide for residential activity, because of the potential adverse social and cultural effects on activities that are provided for in these zones.
Policy 18.2.2.6	Avoid early childhood education and residential activities in the CEC South, SDLF and TR zones, and visitor accommodation in the SDLF and TR zones unless the potential for reverse sensitivity is insignificant.
Policy 18.2.2.7	Only allow community and leisure - large scale and visitor accommodation in neighbourhood centre zones (other than the Neighbourhood Destination Centre Zone) where the adverse effects on the amenity of surrounding residential activities will be avoided or, if avoidance is not practicable, adequately mitigated.
Policy 18.2.2.8	Only allow early childhood education and residential activity in the CBD, centres, CEC - North and CBD edge mixed use zones in locations where their establishment will not constrain (have reverse sensitivity effects on) activities that are provided for in the commercial and mixed use zone.
Policy 18.2.2.9	Only allow ancillary licensed premises in the NECC and NEC zones where the adverse effects on the amenity of adjacent residential activities and the surrounding neighbourhood will be avoided or, if avoidance is not practicable, adequately mitigated.
Policy 18.2.2.10	Only allow visitor accommodation in the CEC - South Zone where the potential for reverse sensitivity will be avoided or, if avoidance is not practicable, adequately mitigated.
Policy 18.2.2.11	Only allow residential activity in the <b>Speights buffer mapped area</b> where the potential for reverse sensitivity will be avoided or, if avoidance is not practicable, adequately mitigated.

### Objective 18.2.2

The potential for conflict between activities within the commercial and mixed use zones and in adjoining zones is minimised, as far as practicable, through adequate separation distances and other mitigation measures which ensure:

- a. the amenity of adjoining residential and recreation zoned sites is maintained; and
- b. the potential for reverse sensitivity effects is minimised as far as practicable.

Policy 18.2.2.X	In the <b>Campus mapped area</b> in the Harbourside Edge Zone only allow campus, restaurants, conference, meeting and function, entertainment and exhibition, visitor accommodation, residential activities and large-scale community and leisure activity where the potential for reverse sensitivity will be avoided or, if avoidance is not practicable, adequately mitigated.
-----------------	---

### Objective 18.2.3

Land use and development maintains or enhances the amenity of the streetscape, including the visual and environmental amenity for pedestrians along identified **pedestrian street frontage mapped areas**.

Policy 18.2.3.1	Require development to maintain or enhance streetscape amenity in all commercial and mixed use zones, by ensuring: <ol style="list-style-type: none"> <li>a. an attractive street interface is maintained through landscaping where buildings are not built to the street frontage;</li> <li>b. large parking areas which are visible from the street are visually broken up with internal landscaping, which also provides for rainwater absorption;</li> <li>c. service areas and outdoor storage areas associated with industrial or other activities are not visible from ground level of a public place; and</li> <li>d. an architecturally interesting façade through building modulation and use of glazing.</li> </ol>
-----------------	--

Policy 18.2.3.2	Require buildings along a <b>primary pedestrian street frontage mapped area</b> to be located, designed and operated to provide a high level of pedestrian amenity by: <ol style="list-style-type: none"> <li>a. providing a continual frontage of buildings along the street, apart from pedestrian alleyways;</li> <li>b. providing a clear and direct visual connection between the street and the building interior;</li> <li>c. providing a direct physical connection to the building interior through clearly identified pedestrian entrances on the highest order <b>pedestrian street frontage mapped area</b>;</li> <li>d. providing shelter for pedestrians on footpaths, in the form of a verandah;</li> <li>e. being of a height that maintains existing sunlight access to footpaths and public open spaces;</li> <li>f. providing an architecturally interesting façade and human scale design, through building modulation and consistent alignment of windows;</li> <li>g. being designed to have commercial activities at the ground floor, with an adequate ground floor to ceiling height to accommodate these activities; and</li> <li>h. providing customer-facing activities on the ground floor.</li> </ol>
-----------------	---

### Objective 18.2.3

Land use and development maintains or enhances the amenity of the streetscape, including the visual and environmental amenity for pedestrians along identified **pedestrian street frontage mapped areas**.

Policy 18.2.3.3	Require buildings in a <b>secondary pedestrian street frontage mapped area</b> to provide a good level of pedestrian amenity by: <ul style="list-style-type: none"> <li>a. providing a regular frontage of buildings along the street, with limited interruptions for vehicle accesses;</li> <li>b. providing a clear and direct visual connection between the street and the building interior;</li> <li>c. providing an architecturally interesting façade and human scale design, through building modulation and consistent alignment of windows; and</li> <li>d. providing shelter for pedestrians at pedestrian entrances.</li> </ul>
Policy 18.2.3.4	Require new buildings and additions and alterations to buildings in the Harbourside Edge Zone to be designed and located to provide a high level of amenity by: <ul style="list-style-type: none"> <li>a. being built to the street frontage along the entire length of Birch Street, and for no less than 60% of the street frontage on Kitchener Street, except for: <ul style="list-style-type: none"> <li>i. any setbacks required to allow pedestrian entrances; and</li> <li>ii. the provision of amenity space for customers or residents at the front of buildings;</li> </ul> </li> <li>b. including appropriate building modulation, window alignment, use of glazing, floor height, colour, architectural detail to provide visual interest and a human-scale design;</li> <li>c. being of a design that is coherent, appropriate to the setting and history of the area, and providing a positive relationship to both the street and the harbour; and</li> <li>d. having active edges with strong visual and physical connections from the street to the inside of buildings.</li> </ul>
Policy 18.2.3.5	Require development in the Harbourside Edge Zone to be designed and located to provide a high level of amenity by: <ul style="list-style-type: none"> <li>a. requiring public pedestrian access to and along the coast that is attractive, safe, durable, and readily accessible to the public;</li> <li>b. ensuring the design and location of on-site car parking does not compromise streetscape or harbour amenity;</li> <li>c. ensuring development activities incorporate the principles of CPTED; and</li> <li>d. maintaining viewshafts from Roberts Street and Kitchener Street to and across the Steamer Basin.</li> </ul>
Policy 18.2.3.6	Require fences visible from public places to be designed to maintain or enhance streetscape amenity.
Policy 18.2.3.7	Limit the size and number of ancillary signs to ensure they are able to convey information about the name, location and nature of the business to passing pedestrians and vehicles while not being oversized or too numerous for that purpose.
Policy 18.2.3.8	Require car parking (including stand-alone car parking) in a <b>primary pedestrian street frontage mapped area</b> to be located behind or within buildings with a customer-facing function (for example retail) adjoining the street.

### Objective 18.2.3

Land use and development maintains or enhances the amenity of the streetscape, including the visual and environmental amenity for pedestrians along identified **pedestrian street frontage mapped areas**.

Policy 18.2.3.9	Avoid land use activities (including stand-alone car parking) that require buildings or site design that is incompatible with: <ul style="list-style-type: none"> <li>a. the high level of pedestrian streetscape amenity expected for the location in a primary pedestrian street frontage and secondary pedestrian street frontage; and</li> <li>b. the higher level of urban neighbourhood amenity anticipated in the HE, SSYP and WP zones.</li> </ul>
Policy 18.2.3.10	Require industrial activities to avoid or, if avoidance is not practicable, adequately mitigate any adverse effects on streetscape amenity, by locating any part of the industrial operation that involves machinery or metal work within a part of a building that does not include any doors or windows that open to a <b>primary pedestrian street frontage mapped area</b> or <b>secondary pedestrian street frontage mapped area</b> .
Policy 18.2.3.11	Require new buildings and structures to be of a height that: <ul style="list-style-type: none"> <li>a. reflects the general heights of the block; and</li> <li>b. minimises as far as practicable adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the upper harbour toward the Otago Peninsula, including through the use of quality and contextually appropriate architectural design.</li> </ul>
Policy 18.2.3.12	Require network utility structures - small scale to be of a design, location and scale that maintains a high level of pedestrian amenity in <b>pedestrian street frontage mapped areas</b> .
Policy 18.2.3.13	Require buildings and additions and alterations, as part of the Dunedin Hospital redevelopment to maintain or enhance streetscape amenity by ensuring: <ul style="list-style-type: none"> <li>a. the use of verandahs where appropriate; and</li> <li>b. buildings and structures above 20m minimise as far as practicable adverse effects of shading and wind on pedestrian amenity.</li> </ul>
Policy 18.2.3.X	In the <b>Campus mapped area</b> north of Albany Street, only allow buildings and structures over 25m in height where: <ul style="list-style-type: none"> <li>a. the height is essential to the efficient and effective operation of campus activity;</li> <li>b. they are designed to minimise as far as practicable adverse effects of shading and wind on pedestrian amenity; and</li> <li>c. effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, are minimised as far as practicable through the use of quality and contextually appropriate architectural design.</li> </ul>

## Rules

### Rule 18.3 Activity Status

#### 18.3.1 Rule Location

The activity status tables in rules 18.3.3 to 18.3.8 specify the activity status of land use activities, development activities, and subdivision activities in the commercial and mixed use zones and relevant overlay zones, except rules for the following city-wide activities, which are contained in Part B of the Plan:

1. Public Amenities (Section 3)

2. Temporary Activities (Section 4) - note that this section includes provisions that apply to construction
3. Network Utilities (Section 5)
4. Transportation (Section 6)
5. Scheduled Trees (Section 7)
6. Natural Hazard Mitigation Activities (Section 8)
7. Earthworks (Section 8A)

### **18.3.2 Activity Status Introduction**

1. The activity status tables in rules 18.3.3 to 18.3.7 show the activity status of activities in the commercial and mixed use zones and the overlay zones indicated, provided any performance standards shown in the far right column are met.
2. Activities are split into three types: a. land use activities, b. development activities, c. subdivision activities. Within these types, activities are split into categories. The nested tables in Section 1.3 outline the hierarchy of categories, activities and sub-activities.
3. Permitted land use activities do not automatically provide for any related development activities. Therefore, the activity status of any associated development activities should also be checked.
4. Where a new land use activity requires a resource consent, all associated development activities will be considered and assessed as part of the resource consent even if the development otherwise meets the development performance standards listed in the Plan.
5. Development activities that are lawfully present at the time any relevant rules in this Plan have legal effect are not managed by those rules (the rules do not apply to existing lawfully established development activities).
6. The nested tables in Section 1.3 are intended to be a complete list of activities. However, in the case of an activity that is not covered by any of the activities in the nested tables, the activity status will be non-complying.

#### *Additional activity status rules in hazard overlay zones*

7. For the purpose of the hazards provisions, activities are categorised as natural hazards sensitive activities, natural hazards potentially sensitive activities or natural hazards least sensitive activities. The activities that are in each hazards sensitivity category are included in the definitions section and in Section 11.1.
8. In the Hazard 2 (flood) Overlay Zones, the activity statuses in Rule 18.3.8 apply to the following activities:
  - a. natural hazards sensitive activities;
  - b. natural hazards potentially sensitive activities; and
  - c. new buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m<sup>2</sup> of new ground floor area.
9. Where the activity status in Rule 18.3.8 differs from that in rules 18.3.3 - 18.3.7, the most restrictive activity status always applies.
10. In addition to the rules in Rule 18.3.8, performance standards for development activities within hazard overlay zones are included in rules 18.3.3 - 18.3.7.
11. Activities in a hazard overlay zone must comply with all of the rules in 18.3.3 - 18.3.7.

#### *Performance Standards*

12. Performance standards are listed in the far right column of the activity status tables.
13. Performance standards apply to permitted, controlled and restricted discretionary activities.

14. If a permitted or controlled activity does not meet one or more performance standards, then the activity status of the activity is indicated in the relevant performance standard rule.
15. If a restricted discretionary activity does not meet one or more performance standards, then the activity status remains restricted discretionary, unless otherwise indicated in the performance standard.

## Legend

Acronym	Meaning
N/A	Not Applicable
P	Permitted Activity
C	Controlled Activity
RD	Restricted Discretionary Activity
D	Discretionary Activity
NC	Non-complying Activity
Central Business District and Centres Zones (Centres Hierarchy)	
CBD	Central Business District Zone
PC	Principal Centre Zone
SC	Suburban Centre Zone
RC	Rural Centre Zone
NEC	Neighbourhood Centre Zone
NECC	Neighbourhood Convenience Centre Zone
NEDC	Neighbourhood Destination Centre Zone
CBD Edge Mixed Use Zones	
WP	Warehouse Precinct Zone
PPH	Princes, Parry and Harrow Street Zone
SSYP	Smith Street and York Place Zone
HE	Harbourside Edge Zone
Other Commercial Zones	
TR	Trade Related Zone
CEC-N	CBD Edge Commercial North Zone
CEC-S	CBD Edge Commercial South Zone
SDLF	South Dunedin Large Format Zone
Pedestrian Street Frontage Mapped Areas	
PPF	<b>Primary Pedestrian Street Frontage Mapped Area</b>
SPF	<b>Secondary Pedestrian Street Frontage Mapped Area</b>
Hazard Overlay Zones	

Acronym	Meaning
Haz1	Hazard 1 Overlay Zones
Haz2	Hazard 2 Overlay Zones
Haz3	Hazard 3 Overlay Zones

### 18.3.3 Land Use Activity Status Table (Central Business District And Centres)

1.	Performance standards that apply to all land use activities	<ul style="list-style-type: none"> <li>a. Acoustic insulation (noise sensitive activities)</li> <li>b. NA</li> <li>c. Light spill</li> <li>d. Location</li> <li>e. Noise</li> <li>f. Maximum gross area of centre (NEC, NECC, NEDC and RC only)</li> <li>g. Setback from National Grid (National Grid sensitive activities only)</li> </ul>			
Commercial activities		Activity status			Performance standards
		a. CBD	b. PC/SC/RC/NEDC	c. NECC/NEC	
2.	Ancillary licensed premises	Same activity status as underlying activity		D	
3.	Conference, meeting and function	P	P	NC	i. Minimum mobility car parking
4.	Commercial advertising	NC	NC	NC	
5.	Entertainment and exhibition	P	P	NC	i. Minimum mobility car parking
6.	Office	P	P	P	i. Minimum mobility car parking (registered health practitioners)
7.	Retail (except yard based retail)	P	P	P	<ul style="list-style-type: none"> <li>i. Minimum mobility car parking</li> <li>ii. Minimum vehicle loading</li> </ul>
8.	Retail ancillary to industry	P	P	P	i. Maximum gross floor area of retail ancillary to industry
9.	Yard based retail	NC	P	P	<ul style="list-style-type: none"> <li>i. Minimum mobility car parking</li> <li>ii. Minimum vehicle loading (centres)</li> </ul>
10.	Restaurants	P	P	P	
11.	Restaurant - drive through	NC	D	D	
12.	Service stations	NC	RD	RD	<ul style="list-style-type: none"> <li>i. Service station standards</li> <li>ii. Minimum mobility car parking</li> </ul>

13.	Stand-alone car parking	P	P	P	
14.	Visitor accommodation	P	P	RD	i. Minimum mobility car parking ii. Minimum vehicle loading
Community activities		a. CBD	b. PC/SC/RC/NEDC	c. NECC/NEC	Performance standards
15.	Community and leisure - small scale	P	P	P	i. Minimum mobility car parking
16.	Community and leisure - large scale	P	P	RD	i. Minimum mobility car parking
17.	Conservation	P	P	P	
18.	Early childhood education	RD	RD	RD	i. Minimum mobility car parking
19.	Sport and Recreation	P	P	P	i. Minimum mobility car parking
Residential activities		a. CBD	b. PC/SC/RC/NEDC	c. NECC/NEC	Performance standards
20.	Supported living facilities	P	P	P	i. Minimum mobility car parking ii. Location
Y.	Standard residential	P	P	P	i. Location
Z.	Working from home	P	P	P	i. Location/li> ii. Minimum mobility car parking
Industrial activities		a. CBD	b. PC/SC/RC/NEDC	c. NECC/NEC	Performance standards
21.	All activities in the industrial activities category	P	P	P	i. Location of industrial activities
Major facility activities		a. CBD	b. PC/SC/RC/NEDC	c. NECC/NEC	Performance standards
22.	Emergency services	P	P	P	i. Minimum mobility car parking
X.	Campus in the <b>Campus mapped area</b>	N/A	P	N/A	
23.	All other activities in the major facility activities category	NC	NC	NC	
Rural activities		a. CBD	b. PC/SC/RC/NEDC	c. NECC/NEC	Performance standards
24.	All activities in the rural activities category	NC	NC	NC	

**Note 18.3.3X- Other requirements outside of the District Plan**

1. Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

**18.3.4 Land Use Activity Status Table (CBD Edge and Mixed Use Zones)**

1.	Performance standards that apply to all land use activities					a. Acoustic insulation (noise sensitive activities) b. NA c. Light spill d. Location e. Noise f. Setback from National Grid (National Grid sensitive activities only)
Commercial activities		Activity status				Performance standards
		a. WP	b. PPH	c. SSYP	d. HE	
2.	Ancillary licensed premises	Same activity status as underlying activity				
3.	Bulky goods retail	P	NC	NC	NC	i. Minimum mobility car parking ii. Minimum vehicle loading
4.	Conference, meeting and function	P	NC	NC	X. P outside the <b>Campus mapped area</b> ; or Y. RD in the <b>Campus mapped area</b>	i. Minimum mobility car parking
5.	Commercial advertising	NC	NC	NC	NC	
6.	Dairies	P	P	P	P	i. Maximum gross floor area of dairies

7.	Entertainment and exhibition	P	NC	NC	X. P outside the <b>Campus mapped area</b> ; or Y. RD in the <b>Campus mapped area</b>	i. Minimum mobility car parking
AE.	Food and beverage retail 500m <sup>2</sup> or less in gross floor area	D	D	NC	RD	
AF.	Food and beverage retail more than 500m <sup>2</sup> in gross floor area but no more than 750m <sup>2</sup> in gross floor area	D	D	NC	D	
8.	All other food and beverage retail	D	D	NC	NC	
9.	General retail - retail services in a scheduled heritage building	P	NC	NC	NC	i. Minimum mobility car parking ii. Minimum vehicle loading
11.	General retail 1500m <sup>2</sup> or more in gross floor area	P	NC	NC	NC	i. Minimum mobility car parking ii. Minimum vehicle loading
X.	All other general retail	NC	NC	NC	NC	
12.	Training and education	P	X. P outside a <b>hazard facility mapped area</b> Y. NC within a <b>hazard facility mapped area</b>	P	P	
13.	Office in a scheduled heritage building	P	NC	P	P	i. Maximum gross floor area of office activity in HE Zone
14.	Office not in a scheduled heritage building	NC	NC	NC	P	i. Maximum gross floor area of office activity in HE Zone

15.	Restaurants	P	D	D	X. P outside the <b>Campus mapped area</b> ; or Y. RD in the <b>Campus mapped area</b>	i. Minimum mobility car parking
16.	Restaurant - drive through	NC	D	NC	NC

33.	All activities in the rural activities category	NC	NC	NC	NC	

### Note 18.3.5X- Other requirements outside of the District Plan

- Any electrical equipment used for an activity must be designed to meet the New Zealand electromagnetic compatibility (EMC) standards, to ensure there are no effects from electrical interference on surrounding sites. The Radio Spectrum Management (RSM) is the governing body which regulates EMC products in New Zealand and investigates interference to safety services, radiocommunication systems and broadcast services such as radio and television reception.

### 18.3.6 Development Activity Status Table

1.	Performance standards that apply to all development activities		<ul style="list-style-type: none"> <li>a. Boundary treatments and other landscaping</li> <li>b. Natural Hazards Performance Standards</li> <li>c. Setback from scheduled tree</li> <li>d. Harbourside Edge Zone Standards (HE Zone only)</li> </ul>
2.	Performance standards that apply to all buildings and structures activities		<ul style="list-style-type: none"> <li>a. Firefighting</li> <li>b. Height in relation to boundary</li> <li>c. Height</li> <li>d. Setback from coast and water bodies</li> <li>e. Setback from National Grid</li> <li>f. Building colour               <ul style="list-style-type: none"> <li>Y. Setback from Critical Electricity Distribution Infrastructure</li> <li>X. Setback from designated rail corridor</li> </ul> </li> </ul>
3.	Performance standards that apply to all new buildings and additions and alterations to buildings		<ul style="list-style-type: none"> <li>a. Minimum glazing and building modulation</li> <li>b. Minimum ground floor to ceiling height</li> <li>c. Pedestrian entrances</li> <li>d. Verandahs</li> <li>e. Setback from road boundaries</li> <li>f. Setback from boundaries of residential or recreation zoned sites</li> <li>g. Parking, loading and access standards (buildings that contain car parks only)</li> </ul>
All buildings and structures activities not covered in rows below		Activity status	Performance standards
4.	Signs attached to buildings and structures	P	<ul style="list-style-type: none"> <li>a. Number, location and design of ancillary signs</li> </ul>
5.	All other buildings and structures activities not covered in rows 6 to 22 below	P	<ul style="list-style-type: none"> <li>a. Fence height and design</li> <li>b. Number, location and design of ancillary signs</li> </ul>
New buildings and additions and alterations to buildings		Activity status	Performance standards

6.	New buildings and additions and alterations to buildings within the Harbourside Edge Zone that are visible from an adjoining public place, or the harbour (other than signs attached to buildings or structures)	RD	
7.	New buildings and additions and alterations to buildings as part of the Dunedin Hospital redevelopment (other than signs attached to buildings or structures)	RD	
Buildings and structures activities in a heritage precinct that are visible from an adjoining public place		Activity status	Performance standards
8.	New buildings	RD	a. Parking, loading and access standards (buildings that contain car parks only)
9.	Demolition or removal for relocation of: <ul style="list-style-type: none"> <li>a. a character-contributing building</li> <li>b. a non-protected part of a scheduled heritage building; or</li> <li>c. a non character-contributing building that adjoins the road frontage.</li> </ul>	RD	
10.	Additions and alterations to a character-contributing building or non-protected part of a scheduled heritage building (other than signs attached to buildings or structures)	RD	
11.	Additions and alterations to a non character-contributing building that: <ul style="list-style-type: none"> <li>• increase the footprint of the building by 10m<sup>2</sup> or more; or</li> <li>• increase in the height of the building by more than 2m.</li> </ul>	C	
12.	New retaining walls more than 1m high	RD	
13.	All other new structures that are greater than 2.5m tall or have a footprint of 2m <sup>2</sup> or more	RD	a. Number, location and design of ancillary signs
Buildings and structures activities that affect a protected part of a scheduled heritage building or scheduled heritage structure		Activity status	Performance standards
14.	Repairs and maintenance	P	
15.	Restoration of a building or structure that has a Heritage New Zealand Category 1 listing as detailed in Appendix A1.1	C	
16.	Restoration of all other scheduled heritage buildings and scheduled heritage structures	P	
17.	Earthquake strengthening where external features only are protected	C	a. Materials and design

18.	All other additions and alterations (other than signs attached to buildings or structures)	RD	
19.	Demolition	NC	
20.	Removal for relocation	RD	
Development activities on a scheduled heritage site, where visible from an adjoining public place or a public place within the heritage site		Activity status	Performance standards
21.	New structures that are greater than 2.5m high or have a footprint of 2m <sup>2</sup> or more	RD	a. Number, location and design of ancillary signs
22.	New buildings	RD	
23.	Parking, loading and access	RD	a. Parking, loading and access standards
Site development activities in all areas (except as covered by row 23 above)		Activity status	Performance standards
24.	Parking, loading and access	P	a. Parking, loading and access standards b. Location and screening of car parking
25.	New or additions to parking areas that result in 50 or more new parking spaces.	RD	a. Location and screening of car parking b. Parking, loading and access standards
26.	Outdoor storage	P	a. Location and screening of outdoor storage
27.	Storage and use of hazardous substances	P	a. Hazardous substances quantity limits and storage requirements b. Setback from coast and water bodies
28.	All other site development activities	P	

### Note 18.3.6A - General advice

1. An archaeological authority is required under the Heritage New Zealand Pouhere Taonga Act 2014 to modify or destroy an archaeological site. If you wish to do any earthworks that may affect an archaeological site, you must first obtain an authority from Heritage New Zealand. This is the case regardless of whether the site is designated, or the activity is permitted under the District Plan or Regional Plan, or a resource or building consent has been granted.
2. An archaeological site is defined as any place in New Zealand that was associated with human activity that occurred before 1900 and provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand. This includes the scheduled archaeological sites within the District Plan.
3. Pre-1900 buildings are considered archaeological sites. An archaeological authority must be obtained before demolishing a pre-1900 building or structure.
4. The **archaeological alert layer mapped area** identifies sites and areas that have a strong likelihood of containing archaeological remains, however remains may be present anywhere within the District. If archaeological remains are discovered during any site works, at any location, the Accidental Discovery Protocol (Appendix A8) should be followed.

**18.3.7 Subdivision Activity Status Table**

Subdivision activities	Activity status (all CMU zones)	Performance standards
1. Subdivision activities	RD	a. Access b. Esplanade reserves and strips c. Firefighting d. Service connections e. Shape X. Setback from National Grid (subdivision activities)

### Note 18.3.7A - Other RMA considerations

- Under Section 226(1)(e)(ii) of the Resource Management Act 1991, where an existing allotment shown on a survey plan meets all relevant provisions of the district plan and any proposed district plan, the Dunedin City Council must issue a certificate to that effect to enable the Registrar-General of Land to issue a certificate of title for that separate allotment.

### Note 18.3.7X - Other relevant District Plan provisions

- Additional matters of discretion apply to the subdivision of land within a **Critical Electricity Distribution Infrastructure Corridor mapped area**. These are set out in Rule 18.10.5.
- Additional matters of discretion apply to the subdivision of land within a **National Grid Subdivision Corridor mapped area**. These are set out in Rule 18.10.5.

## 18.3.8 Activity Status in the Hazard 2 (Flood) Overlay Zone

Activity	Activity status
Land Use Activities	
1. Natural hazards sensitive activities	RD
2. Natural hazards potentially sensitive activities	RD
Development Activities	
3. New buildings and additions and alterations to buildings that create within any two calendar-year period more than 60m <sup>2</sup> of new ground floor area	RD

### Note 18.3.8A - Other RMA considerations

X Section 10 of the RMA (existing use rights) provides for land to be used in a manner that contravenes a rule in a district plan if the use was lawfully established before the rule became operative or the proposed plan was notified, and the effects of the use are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified.

- Accordingly, activities that are shown to have effects that are the same or similar in character, intensity and scale to those which existed before the rule became operative or the proposed plan was notified will not usually trigger the provisions for natural hazards sensitive activities and natural hazards potentially sensitive activities in Rule 18.3.8. However, Council will consider specific circumstances associated with the development and how this affects the character, intensity and scale of effects from the land use activity.

### Note 18.3.8B - Other requirements outside the District Plan

- Clause E1 – Surface water of the New Zealand Building Code (Building Regulations 1992, Schedule 1) contains requirements regarding buildings and sitework (including earthworks) in relation to managing surface water and effects on other property.
- Buildings and structures that will divert water may require resource consent under the Otago Regional Plan: Water.
- If buildings and structures affect the flow of water, this effect is also subject to the common law principle of natural servitude.

## Rule 18.4 Notification

- Applications for resource consent for the following activities will be considered without the need to obtain a

written approval of affected persons and will not be notified in accordance with section 95A or section 95B of the RMA, unless Council considers special circumstances exist in relation to the application that require public notification:

1. earthquake strengthening of a scheduled heritage building or scheduled heritage structure where external features only are protected (controlled activity) and that are not listed by Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is not listed by Heritage New Zealand.
2. With respect to resource consent applications, Heritage New Zealand will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided for the following:
1. activities that affect a protected part of a scheduled heritage building, scheduled heritage structure, or a scheduled heritage site, that is listed with Heritage New Zealand; and
  2. contravention of the materials and design performance standard (Rule 13.3.2) where the building or structure is listed by Heritage New Zealand.
3. Applications for resource consent for the following activities will be publicly notified in accordance with section 95A of the RMA:
1. new vehicle accesses that cross a **primary pedestrian street frontage mapped area** (PPF);
  2. contravention of the Harbourside Edge Zone Standards performance standard (Rule 18.6.17.3); and
  3. It is likely that applications for the following performance standard contraventions will be publicly notified:
    1. acoustic insulation;
    2. light spill;
    3. noise; and
    4. setback from National Grid.
4. With respect to resource consent applications for the following activities, Manawhenua will be considered an affected person in accordance with section 95B of the RMA where their written approval is not provided:
1. all restricted discretionary activities that list 'effect on cultural values of Manawhenua as a matter for discretion; and
  2. discretionary and non-complying activities in a **wāhi tūpuna mapped area** where the activity is identified as a threat in Appendix A4.
5. With respect to sections 95D(b) and 95E(2)(a) of the RMA, Council will not consider general retail - retail services in scheduled heritage buildings as part of the permitted baseline when considering the effects of discretionary or non-complying activities in the Warehouse Precinct Zone.
6. With respect to resource consent applications for the following activities, the Otago Regional Council will be considered an affected person in accordance with section 95B of the RMA where its written approval is not provided:
1. activities in the Hazard 1 or 1A (flood) overlay zones; and
  2. activities in **swale mapped areas**.
7. All other activities are subject to the normal tests for notification in accordance with sections 95A-95G of the RMA.

## **Rule 18.5 Land Use Performance Standards**

### **18.5.1 Acoustic Insulation**

Noise sensitive activities in the following areas must comply with Rule 9.3.1:

1. within 20m of an industrial zone;
2. within 70m of a railway line;
3. within 40m of a state highway;
4. Central Business District (CBD) Zone;
5. Warehouse Precinct (WP) Zone;
6. Harbourside Edge (HE) Zone;
7. Princes, Parry and Harrow Street (PPH) Zone; and
8. CEC - North Zone.

### **18.5.3 Light Spill**

Land use activities must comply with Rule 9.3.5.

### **18.5.4 Location**

#### **18.5.4.1 Location of activities within pedestrian street frontage mapped areas**

- a. In sites that adjoin a **primary pedestrian street frontage mapped area**, activities on the ground floor facing the street frontage, must be retail, restaurants, or entertainment and exhibition, except for entrances, lobbies and accessways that service activities on upper floors.
- b. In sites that adjoin a **secondary pedestrian street frontage mapped area**, residential activities must not occupy the ground floor of buildings facing the street frontage.
- c. Activities that contravene this performance standard are restricted discretionary activities.

#### **18.5.4.2 Location of industrial activities**

- a. Within all commercial and mixed use zones, except trade related and CBD edge commercial zones, any part of an industry activity that involves machinery or metal work must be located within a part of a building that does not include any doors or windows that open to a **primary pedestrian street frontage mapped area** or **secondary pedestrian street frontage mapped area**.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### **18.5.4.3 Location of restaurant drive-through and service stations**

- a. Restaurant - drive through and service stations must not have vehicle access across a **primary pedestrian street frontage mapped area**.
- b. Activities that contravene this performance standard are a non-complying activity.

#### **18.5.4.4 Location of ancillary restaurants in the Trade Related Zone and South Dunedin Large Format Zone**

- a. For restaurants ancillary to food and beverage retail 1,500m<sup>2</sup> or more in gross floor area, or to trade related retail, all customer access must be internal to a building, except for emergency-only access/egress.
- b. Activities that contravene this performance standard are discretionary activities.

#### **18.5.4.5 Location of residential activities**

- a. New residential activities or residential buildings must not be located within the **Speights buffer mapped**

area.

- b. Activities that contravene this performance standard are restricted discretionary activities.

### 18.5.5 Maximum Gross Floor Area

#### 18.5.5.1 Maximum gross area of centre

- a. An individual land use activity must not occupy more than 50% of the gross area of a neighbourhood or rural centre.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 18.5.5.2 Maximum gross floor area of dairies

- a. The maximum gross floor area for dairies is 200m<sup>2</sup>.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 18.5.5.3 Maximum gross floor area of retail ancillary to industry

- a. Retail ancillary to industry must not occupy more than 10% of the gross floor area of the industry activity.
- b. Activities that contravene this performance standard are restricted discretionary activities.

#### 18.5.5.4 Maximum gross floor area of office activity in the Harbourside Edge Zone

- a. The cumulative gross floor area of office activity in the Harbourside Edge Zone must not exceed 6,000m<sup>2</sup>.
- b. No more than 3,000m<sup>2</sup> of gross floor area of office activity may be located outside the area covered by designation D214, unless the Otago Regional Council designation allowing office activity on this site is uplifted.
- c. Office activity that is ancillary to port, industry or marine-related activity is exempt from this standard.
- d. Office activity that contravenes this performance standard is a non-complying activity.

#### 18.5.5.5 Maximum gross floor area of restaurants in the Trade Related Zone and South Dunedin Large Format Zone

- a. The maximum gross floor area of restaurants ancillary to food and beverage retail 1,500m<sup>2</sup> or more in gross floor area, or to trade related retail, in the Trade Related Zone and South Dunedin Large Format Zone is 100m<sup>2</sup>.
- b. Activities that contravene this performance standard are discretionary activities.

### 18.5.6 Minimum Mobility Car Parking

- 1. NA

Activity	Zone	Minimum parking rate
a- v. <b><i>Removed to comply with the National Policy Statement on Urban Development 2020 requirement to remove minimum car parking requirements. Rule numbering to be corrected at a later date.</i></b>		

- 2. Land use activities must provide on-site mobility parking spaces as follows:

Total number of parking spaces provided		Minimum number of these that must be mobility parking spaces
a.	1 - 20	1 parking space
b.	21 - 50	2 parking spaces
c.	For every additional 50 parking spaces	1 additional parking space

3. Car parking must be provided on the same property as the activity except in the Harbourside Edge Zone where parking spaces must be provided within 200m walking distance of the activity, with all parking not on the same property as the activity provided as dedicated off-street parking for the activity through a lease agreement.
4. NA.
5. Residential and office activities (excluding registered health practitioners) undertaken entirely within a scheduled heritage building do not need to provide any additional mobility car parking other than what is already on site and may remove any car parking that does not meet the performance standard for location of car parking.
6. Parking spaces may be shared between land use activities (i.e. the same parking spaces may be used to fulfil the minimum mobility parking requirement for more than one land use activity), as long as the hours of operation of the land use activities do not overlap.
7. NA.
8. NA.
9. Activities that contravene this performance standard are restricted discretionary activities.

**Note 18.5.6A - Other relevant District Plan provisions**

1. Parking areas must comply with the standards in Section 6.6: Parking, Loading and Access Standards.

**18.5.7 Minimum Vehicle Loading**

1. Land use activities must provide on-site vehicle loading and manoeuvring as follows:

Zone		Activities	Minimum vehicle loading
a.	CBD and centres zones	i. Retail activity (except yard based retail)	1. On sites which gain direct vehicular access to a strategic road, arterial road or urban high density corridor or have a gross floor area of 500m <sup>2</sup> or more: 1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10)
		ii. Visitor accommodation	1. Visitor accommodation based on guest rooms (e.g. hotels) for 50 or more guest rooms: 1 loading space to accommodate the turning circle of a coach (See Appendix 6B, Figure 6B.12)
b.	Centres zones	i. Yard based retail	1. On sites which gain direct vehicular access to a strategic road, arterial road or urban high density corridor, or have a gross floor area of 500m <sup>2</sup> or more: 1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10).

Zone		Activities	Minimum vehicle loading
c.	Warehouse Precinct Zone	i. General retail - retail services (in a scheduled heritage building)	1. On sites which gain direct vehicular access to a strategic road, arterial road or urban high density corridor or have a gross floor area of 500m <sup>2</sup> or more: 1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10)
		ii. General retail 1500m <sup>2</sup> or more in gross floor area	
		iii. Trade related retail	
		iv. Visitor accommodation	1. Visitor accommodation based on guest rooms (e.g. hotels) for 50 or more guest rooms: 1 loading space to accommodate the turning circle of a coach (See Appendix 6B, Figure 6B.12)
		v. Bulky goods retail	1. Activities with a gross floor area of less than 1000m <sup>2</sup> : 1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10); 2. Activities with a gross floor area of 1000m <sup>2</sup> or more: 1 loading space to accommodate a B Train Truck (See Appendix 6B, Figure 6B.11).
d.	CBD edge commercial zones	i. General retail (750m <sup>2</sup> or more in gross floor area)	1. On sites which gain direct vehicular access to a strategic road, arterial road or urban high density corridor: 1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10)
		ii. Trade related retail	
		iii. Industry	
		iv. Food and beverage retail (1500m <sup>2</sup> or more in gross floor area)	
		v. Visitor accommodation (CEC - North)	1. Visitor accommodation based on guest rooms (e.g. hotels) for 50 or more guest rooms: 1 loading space to accommodate the turning circle of a coach (See Appendix 6B, Figure 6B.12)
		vi. Bulky goods retail	1. Activities with a gross floor area of less than 1000m <sup>2</sup> : 1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10); 2. Activities with a gross floor area of 1000m <sup>2</sup> or more: 1 loading space to accommodate a B Train Truck (See Appendix 6B, Figure 6B.11).

Zone		Activities	Minimum vehicle loading
e.	Princes, Parry and Harrow Street Zone	i. Trade related retail	1. On sites which gain direct vehicular access to a strategic road, arterial road or urban high density corridor, or have a gross floor area of 500m <sup>2</sup> or more: 1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10).
		ii. Yard based retail	
		iii. Industry	
f.	Harbourside Edge Zone	i. Industry	1. 1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10).
		ii. Visitor accommodation	1. Visitor accommodation based on guest rooms (e.g. hotels) for 50 or more guest rooms: 1 loading space to accommodate the turning circle of a coach (See Appendix 6B, Figure 6B.12)
g.	Trade Related Zone	i. Trade related retail	1. On sites which gain direct vehicular access to a strategic road, arterial road or urban high density corridor, with a gross floor area of 500m <sup>2</sup> or more: 1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10) 2. Activities with a gross floor area of less than 1000m <sup>2</sup> : 1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10) 3. Activities with a gross floor area of 1000m <sup>2</sup> or more: 1 loading space to accommodate a B Train Truck (See Appendix 6B, Figure 6B.11)
		ii. Food and beverage retail (1500m <sup>2</sup> or more in gross floor area)	
		iii. Industry	
X.	South Dunedin Large Format Zone	i. Trade related retail	1. On sites which gain direct vehicular access to a strategic road, arterial road or urban high density corridor, with a gross floor area of 500m <sup>2</sup> or more: 1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10); 2. Activities with a gross floor area of less than 1000m <sup>2</sup> : 1 loading space to accommodate an 8m rigid truck (See Appendix 6B, Figure 6B.10); 3. Activities with a gross floor area of 1000m <sup>2</sup> or more: 1 loading space to accommodate a B-train truck (See Appendix 6B, Figure 6B.11).
		ii. Food and beverage retail (1500m <sup>2</sup> or more in gross floor area)	
		iii. Industry	
		iv. Bulky goods retail	
		v. General retail 750m <sup>2</sup> or more in gross floor area	

2. Required vehicle loading must be designed and constructed to comply with Rule 6.6.2.
3. Activities that contravene this performance standard are restricted discretionary activities.

### 18.5.8 Noise

Land use activities must comply with Rule 9.3.6.

### 18.5.9 Service Station Standards

Service stations must comply with Rule 6.7.1.

### **18.5.10 Setback from National Grid**

National Grid sensitive activities must comply with Rule 5.6.1.1.

## **Rule 18.6 Development Performance Standards**

### **18.6.1 Boundary Treatments and Other Landscaping**

1. New buildings, additions and alterations that increase the gross floor area of a building, demolition or removal for relocation of buildings and new or additions to parking areas must provide, if not already present, a landscaping area with a minimum width of 1.5m along the full length of any road boundary that does not have a building within 1.5m of that boundary (except for where vehicle access is provided), except that this standard does not apply where:
  - a. The building subject to demolition or removal for relocation is not visible from the street frontage.
2. Landscaping areas must:
  - a. be planted with a mix of trees and shrubs and/or ground cover plants that achieves a total coverage of the ground area in planting (when mature), except for 10% of the area, which may be used for pedestrian paths;
  - b. have an average of one tree for every 5m of frontage;
  - c. not have more than 10% cover in impermeable surfaces (for pedestrian paths);
  - d. be designed to allow surface water run-off from surrounding areas to enter;
  - e. be protected by a physical barrier that prevents cars damaging plants;
  - f. for required trees, use trees that are at least 1.5m high at the time of planting and capable of growing to a minimum height of 5m within 10 years of planting;
  - g. be planted prior to occupation of any relevant building(s) or upon completion of site development activities; and
  - h. be maintained to a high standard, which means trees and under-planting are healthy and areas are regularly cleared of rubbish and weeds.
3. Any road boundary fences provided must be placed on the property side of any road frontage landscaping required by this rule.
4. Within any parking areas greater than 200m<sup>2</sup> (excluding loading areas), a minimum of 1m<sup>2</sup> of additional landscaped area must be provided for every parking space, with an average of one tree per 10m<sup>2</sup> of landscaping. This standard does not apply to sites used for yard based retail or sites with a street frontage of 12m or less.
5. Fencing must be provided along any boundaries which adjoin a residential or school zoned property (excluding roads). Fencing must:
  - a. be constructed from solid timber paling; and
  - b. have vertical palings which are butted together; and
  - c. only have palings visible from the residential zone; and
  - d. be a minimum of 1.8m high.
6. Activities that contravene this performance standard are restricted discretionary activities.

#### **Note 18.6.1A - Other requirements outside of the District Plan**

1. The Dunedin City Council Commercial Use of Footpaths Policy applies to all objects placed on the footpath or suspended over it up to a height of 2.6m. Contact customer services on 03 477 4000 or visit the DCC website [www.dunedin.govt.nz](http://www.dunedin.govt.nz) for more information.

### **18.6.2 Building Colour**

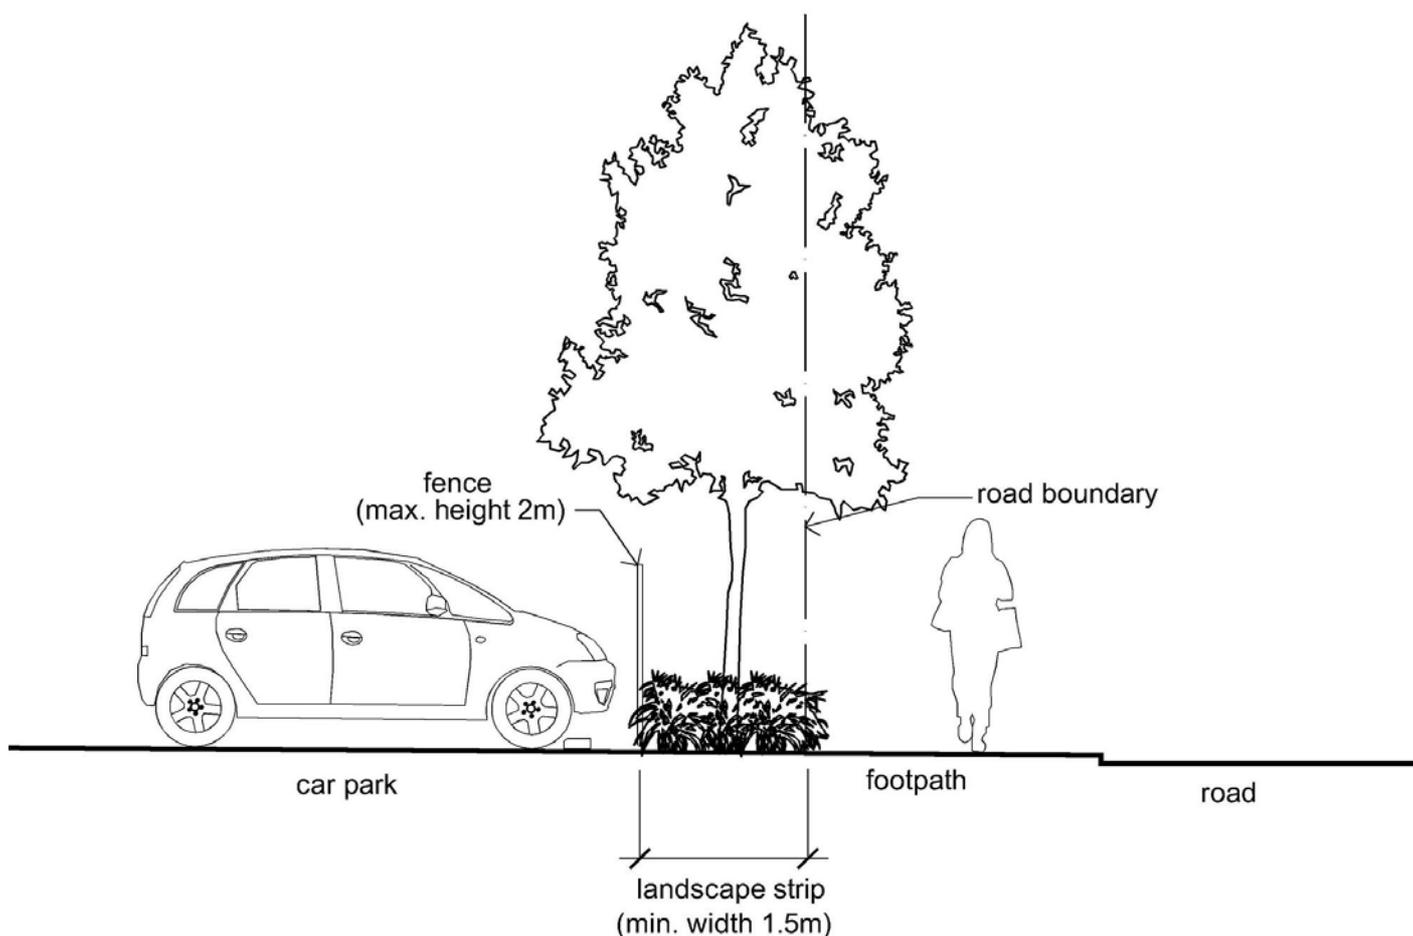

New buildings and structures, additions and alterations and repairs and maintenance in a commercial heritage

precinct must comply with Rule 13.3.1.

### 18.6.3 Fence Height and Design

1. The maximum height of a fence, freestanding wall, or gate is 2m along any side boundary or within 10m of the front boundary, unless completely screened from public view by buildings or established landscaping. For the purposes of calculating maximum height, where a fence or wall is erected atop a retaining wall, the height will be calculated as the combined height measured from ground level to the top of the fence, from the external side of the boundary.
2. Where landscaping is required by Rule 18.6.1, fences must be set back from the road an adequate distance to allow the landscaping to be located between the fence and the road (see Figure 18.6.3A).
3. Activities that contravene this performance standard are restricted discretionary activities.

Figure 18.6.3A: Street frontage landscaping and fencing

#### 18.6.4 Firefighting

New residential buildings must comply with Rule 9.3.3.

#### 18.6.5 Height

##### 18.6.5.1 Height in relation to boundary

- a. New buildings and additions and alterations to buildings on sites which adjoin a residential zone along their side or rear boundary must comply with the height in relation to boundary performance standard of that residential zone, along the adjoining boundary (see Rule 15.6.6.1).
- b. New buildings and additions and alterations to buildings on sites which adjoin the Recreation Zone along their side or rear boundary must comply with the height in relation to boundary performance standard of the Recreation Zone, along the adjoining boundary (see Rule 20.6.4.1).
- c. Activities that contravene this performance standard are restricted discretionary activities.

##### 18.6.5.2 Maximum and minimum height

- a. New buildings and structures, and additions and alterations must comply with the following:

<b>Zone/Centre</b>	<b>1. Minimum height of buildings (above ground level)</b>	<b>2. Minimum number of storeys for buildings (above ground level)</b>	<b>3. Maximum height of buildings and structures (above ground level)</b>	<b>4. Maximum number of storeys for buildings (above ground)</b>
i. Central Business District Zone (CBD)				
1. On sites which adjoin George Street	8m	2 storeys	12m	3 storeys
2. On sites which do not adjoin George Street	8m	2 storeys	16m	4 storeys
ii. Warehouse Precinct Zone	8m	2 storeys	16m	4 storeys
iii. Princes, Parry and Harrow Street Zone				
1. On sites located in the <b>PPH Zone height mapped area</b> (see Figure 18.6.5.2A)	6m	1 storey	20m	—
2. On sites located outside the <b>PPH Zone height mapped area</b>	6m	1 storey	12m	—
iv. CBD Edge Commercial North Zone	6m	1 storey	20m	—
v. CBD Edge Commercial South Zone	6m	1 storey	16m	—
v. Smith Street and York Place Zone	8m	2 storeys	12m	3 storeys
vi. Trade Related and South Dunedin Large Format zones	—	—	16m	—
vii. Centres	—	—	12m	3 storeys

- viii. Except:

1. Additions to scheduled heritage buildings and character-contributing buildings may exceed the

maximum height limit within the Central Business District and centres zones and CBD Edge Mixed Use zones, as long as that addition is:

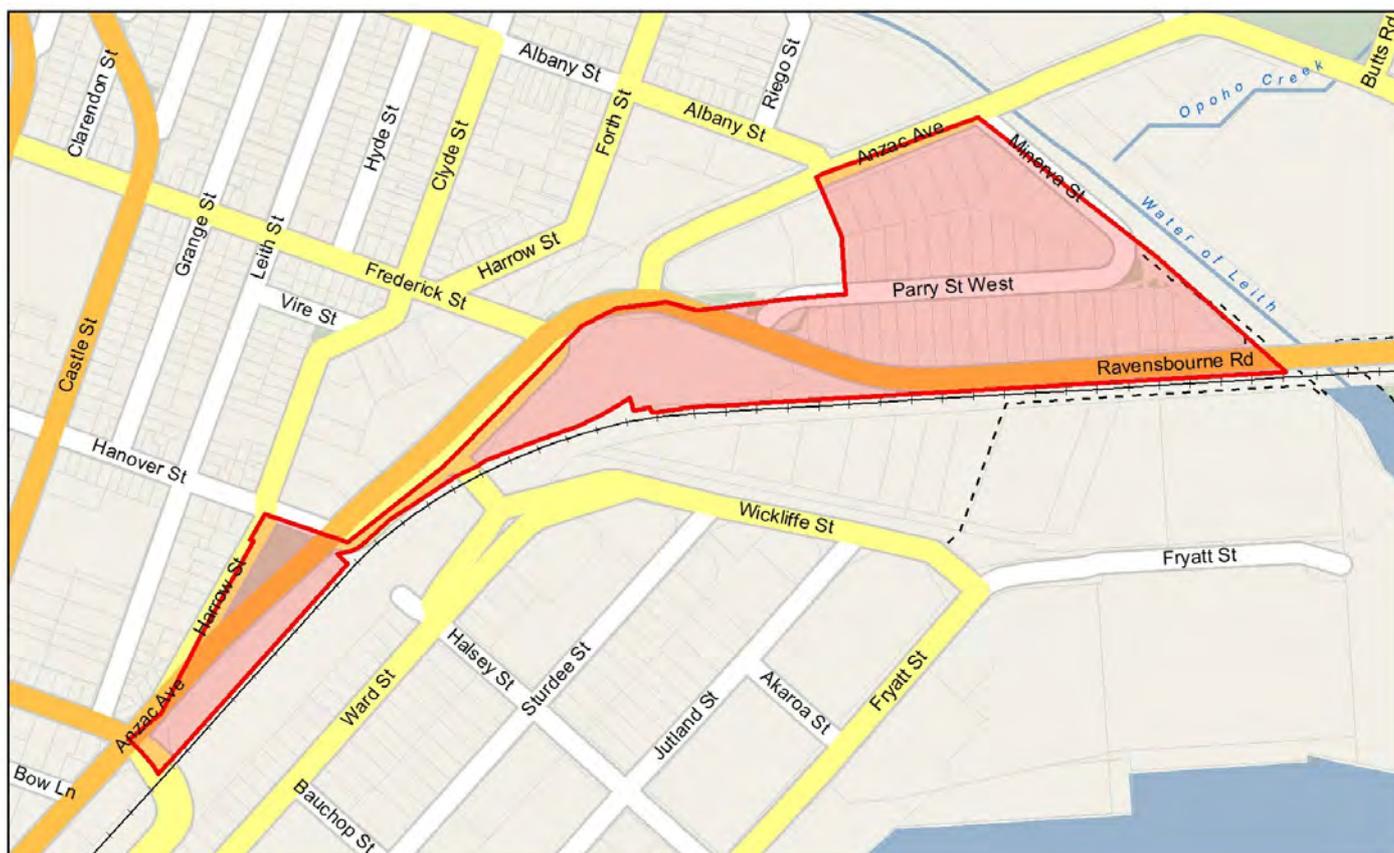

1. set back a minimum of 6m from the street frontage façade of the building;
  2. set back a minimum of 6m from the façade of the building which adjoins a residential or recreation zoned site; and
  3. a maximum height of 4m above the maximum height of an existing building.
2. Rooftop structures are exempt from the performance standard for height provided they do not exceed the maximum height limit for all other buildings and structures by more than one third of that limit or 5m, whichever is the lesser.

X. In the **Campus mapped area** north of Albany Street:

1. The maximum height for new buildings, new structures and additions and alterations is 12m above ground level at the boundary of the **Campus mapped area** along road frontages, then following a plane rising at an angle of 30 degrees up to a maximum height of 25m.
2. Rooftop structures are exempt from the performance standard for maximum height provided they do not exceed the maximum height limit by more than 5m.
3. Activities that contravene the performance standard for maximum height but are no greater than 40m in height are a restricted discretionary activity.
4. Activities that are over 40m in height are a non-complying activity.

b. Activities that contravene this performance standard are restricted discretionary activities.

Figure 18.6.5.2A: PPH Zone height mapped area

**Note 18.6.5.2A - Other relevant District Plan provisions**

1. The performance standard for Height for the Harbourside Edge Zone is included in Rule 18.6.17.1.

### **18.6.6 Natural Hazards Performance Standards**

#### **18.6.6.1 Hazard exclusion areas (swale mapped area)**

New buildings and structures, and additions and alterations in the Rural Centre Zone located in a **swale mapped area** must comply with Rule 11.3.1.1.

#### **18.6.6.2 Maximum area of vegetation clearance in the hazard overlay zones**

Vegetation clearance in the Hazard 1 (land instability) Overlay Zone or Hazard 2 (land instability) Overlay Zone must comply with Rule 11.3.2.

#### **18.6.6.3 Relocatable buildings**

New buildings containing residential activity on the ground floor in the Hazard 3 (coastal) Overlay Zone must comply with Rule 11.3.3.

### **18.6.7 Hazardous Substances Quantity Limits and Storage Requirements**

The storage and use of hazardous substances must comply with Rule 9.3.4.

### **18.6.8 Location and Screening of Car Parking**

1. Within a heritage precinct (except View Street Heritage Precinct) or on sites that adjoin a **primary pedestrian street frontage mapped area**, new extensions to parking areas must be located behind or within a building.
2. Parking areas that contravene this performance standard are a non-complying activity.

#### **Note 18.6.8A Other relevant District Plan provision**

1. Car parking that is provided within a building is subject to the performance standards for new buildings. Within a primary pedestrian street frontage there are also restrictions on the activities that can occupy the ground floor facing the primary pedestrian street frontage (Rule 18.5.4.1)
2. New or additions to parking areas are also subject to Rule 18.6.1 Boundary treatments and other landscaping.

### **18.6.9 Location and Screening of Outdoor Storage**

1. Outdoor storage of raw materials associated with industrial activities must be located or screened so it is not visible from ground level of a public place or a residential or recreation zoned property.
2. Service areas must be located or screened so that they are not visible at ground level from adjacent: residential activities, residential zoned properties, or public places.
3. Outdoor storage, including service areas, must not encroach into required parking, loading or landscaping areas.
4. Materials stored outside must be stored in a way that prevents them contaminating any off-site area.
5. Activities that contravene this performance standard are restricted discretionary activities.

### **18.6.10 Materials and Design**

Earthquake strengthening must comply with Rule 13.3.2.

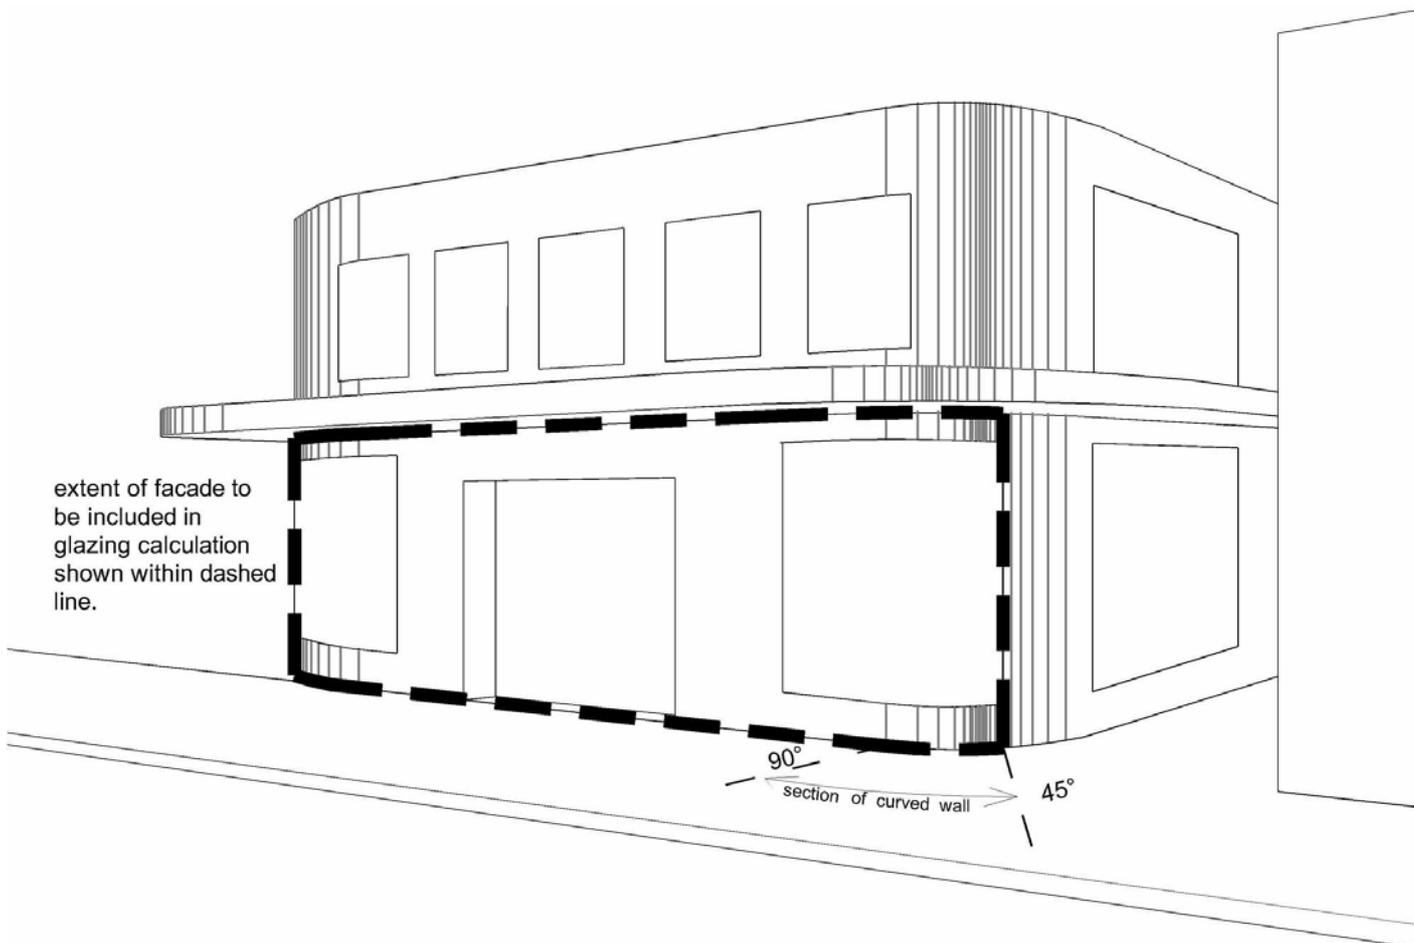

### 18.6.11 Minimum Glazing and Building Modulation

- The minimum building modulation and minimum glazing requirements for any parts of a new building or additions and alterations to a building which face, and are visible from, the following street frontages, is as follows:

Street frontage		i. Floor level		ii. Maximum distance between building modulation elements	iii. Minimum glazing
a.	Primary pedestrian street frontage mapped area	i.	Ground floor	10m	60%
		ii.	Upper floors	10m	30%
b.	Secondary pedestrian street frontage mapped area	i.	Ground floor	15m	30%
		ii.	Upper floors	15m	20%
c.	Other street frontage	i.	All floors	20m, or	20%

- Buildings must meet both the building modulation and minimum glazing standards in **pedestrian street frontage mapped areas**; in all other street frontages, they must only meet one of the standards.
- The required glazing will be calculated as a percentage of the total wall area (from floor to ceiling) that faces the street frontage and that includes clear glass. In the case of curved walls, the wall area will be calculated as the part of the wall which is 45° either side of a point directly facing (parallel to) the street frontage (see Figure 18.6.11A).
- Ground floor glazing that is required by this rule must be clear (unobstructed from signage, glass frosting or other materials attached to the glazing that prevents glazing being visually permeable) for a minimum of 50% of the glazed area.
- This standard does not apply to scheduled heritage buildings or within the Trade Related and South Dunedin Large Format zones.
- Activities that contravene this performance standard are restricted discretionary activities.

Figure 18.6.11A: Extent of building façade included in minimum glazing calculation

### 18.6.12 Minimum Ground Floor to Ceiling Height

1. New buildings and additions and alterations to buildings adjacent to a **primary pedestrian street frontage mapped area** must have a minimum ground floor to ceiling height of 4m for a minimum depth of 6m from the front of the building along the **primary pedestrian street frontage mapped area**.
2. Activities that contravene this performance standard are restricted discretionary activities.

### 18.6.13 Number, Location and Design of Ancillary Signs

#### 18.6.13.1 General

X. Signs must comply with the following standards, except the following signs are exempt from these standards:

- i. signs that are ancillary to campus activity that are not visible from outside of the **Campus mapped area**;
- ii. regulatory signs, warning signs, or directional signs; and
- iii. building names signs (excluding sponsorship names) in the **Campus mapped area**.

Y. Signs located on or above the footpath must comply with Rule 6.7.2.

Z. Signs must comply with Rule 6.7.3 where visible from a road.

AA. Signs must not be flashing within heritage precincts or the Harbourside Edge Zone or where visible from road reserves adjoining **pedestrian street frontage mapped areas** and must not be illuminated or digital within heritage precincts.

AB. Signs higher than 4m above ground level must only display the business name.

AC. Signs must comply with Rules 18.6.13.2-18.6.13.6 (where relevant).

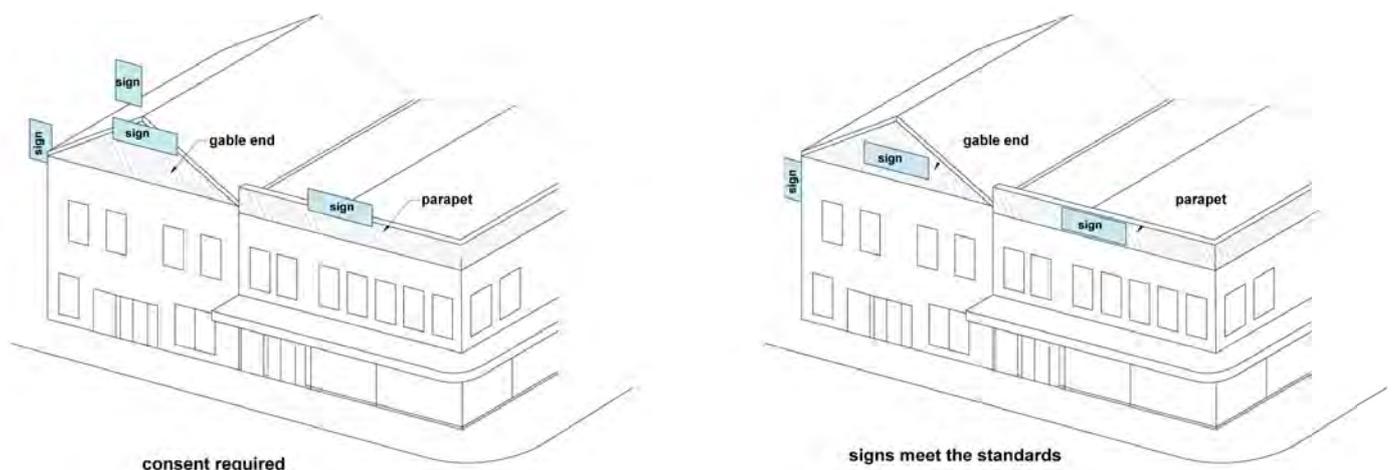

AD. Signs related to restaurants ancillary to: food and beverage retail 1,500m<sup>2</sup> or more in gross floor area or trade related retail, in the Trade Related and South Dunedin Large Format zones must not be externally facing (i.e. must not be visible from a public place).

AE. Signs that contravene the performance standard for number, location and design of ancillary signs are restricted discretionary activities.

#### 18.6.13.2 Signs attached to buildings

- a. The height, above ground level, at the highest point of any sign, attached to a building is:
  - i. 4m within heritage precincts or the Harbourside Edge Zone or where visible from road reserves adjoining **pedestrian street frontage mapped areas** (see Figure 18.6.13.6A); and
  - ii. 8m in all other locations.
- b. Signs must not be attached to roofs.
- c. Signs must not project higher than the lowest point of the roof, or, where mounted against a parapet or gable end, the parapet or gable end they are mounted against.
- d. Signs must be made of a solid material and may not be in the form of a flag, banner or other type of fabric sign in heritage precincts or the Harbourside Edge Zone or where visible from road reserve adjoining **pedestrian street frontage mapped areas**.

Figure 18.6.13.2A: Signs attached to buildings

#### 18.6.13.3 Signs attached flat against buildings (including verandah fascia)

- a. The maximum area of walls facing the street that signs may occupy (excluding signs in windows) is:
  - i. 50% of the area up to 4m or the bottom of a verandah, whichever is the lesser, in heritage precincts or the Harbourside Edge Zone or where visible from road reserves adjoining **pedestrian street frontage mapped areas** (see Figure 18.6.13.6A); and
  - ii. 15% or 8m<sup>2</sup>, whichever is the lesser, in all other locations.
- b. Signs attached to a verandah fascia must not exceed a height of 500mm, or the height of a verandah fascia, whichever is greater.

#### 18.6.13.4 Signs attached at a right angle to the façade of a building (including attached to the underside of a verandah)

- a. Signs must not exceed:
  - i. a maximum of 1 per 5m of street frontage, in heritage precincts or the Harbourside Edge Zone or where visible from road reserves adjoining **pedestrian street frontage mapped areas** (see Figure 18.6.13.6A);
  - ii. a maximum of 1 per 15m of street frontage, for a site with a single premise, or 1 per 7.5m, for a site with multiple premises; and
  - iii. in all locations, a total of 3 signs per building.
- b. Signs must have a maximum of 2 display faces.
- c. Signs must have a maximum area per display face of:
  - i. 1.5m<sup>2</sup> in heritage precincts or the Harbourside Edge Zone or where visible from road reserves adjoining **pedestrian street frontage mapped areas**; and
  - ii. 2m<sup>2</sup> in all other locations.
- d. Signs must not protrude from a façade more than:
  - i. 1m in heritage precincts or the Harbourside Edge Zone or where visible from road reserves adjoining **pedestrian street frontage mapped areas**; and
  - ii. 1.5m in all other locations.

#### 18.6.13.5 Portable freestanding signs on footpaths

- a. In heritage precincts, the CBD Zone, centres zones, Harbourside Edge Zone, Princes, Parry and Harrow Street Zone, CBD Edge Commercial Zones, or where visible from road reserves adjoining **pedestrian street frontage mapped areas**, portable freestanding signs on footpaths are only allowed for premises that have no ground floor street frontage (other than entranceways).
- b. Portable freestanding signs on footpaths must not exceed:
  - i. a maximum height of 900mm above ground level; and
  - ii. a maximum width of 600mm.
- c. Portable freestanding signs on footpaths must be spaced at least 5m from any other portable sign.
- d. Portable freestanding signs on footpaths must not exceed 1 sign per site, except where a site has a street frontage of 30m or more, then a maximum of 1 sign per 15m of street frontage is allowed.
- e. In the Trade Related and South Dunedin Large Format zones, portable signs on footpaths are not allowed.

#### 18.6.13.6 Freestanding signs

- a. The maximum number of freestanding signs is:
  - i. 1 per site in heritage precincts or the Harbourside Edge Zone or where visible from road reserves

adjoining **pedestrian street frontage mapped areas**; and

- ii. 2 per site or 1 per 50m of street frontage, whichever is the lesser, for permanently fixed freestanding signs in all other locations.
- b. The maximum dimensions of freestanding signs are:
- i. In heritage precincts or the Harbourside Edge Zone or where visible from road reserves adjoining **pedestrian street frontage mapped areas**:
    1. maximum height of 4m;
    2. maximum area of 3m<sup>2</sup> per display face;
    3. maximum width of 2m; and
    4. maximum depth of 400mm
  - ii. In Trade Related and South Dunedin Large Format zones (see Figure 18.6.13.6B):
    1. maximum height of 8m for permanently fixed freestanding signs;
    2. maximum height of 4m for portable freestanding signs;
    3. maximum area of 16m<sup>2</sup> per display face for permanently fixed freestanding signs;
    4. maximum area of 8m<sup>2</sup> per display face for portable freestanding signs;
    5. maximum width of 2m; and
    6. maximum depth of 400mm.
  - iii. In all other locations (see Figure 18.6.13.6C):
    1. maximum height of 6m for permanently fixed freestanding signs;
    2. maximum height of 4m for portable freestanding signs;
    3. maximum area of 12m<sup>2</sup> per display face for permanently fixed freestanding signs;
    4. maximum area of 8m<sup>2</sup> per display face for portable freestanding signs;
    5. maximum width of 2m; and
    6. maximum depth of 400mm.
- c. Freestanding signs must:
- i. not obstruct parking, loading and access areas; and
  - ii. be positioned entirely within site boundaries, except:
    1. flag signs within the CBD and centres zones (outside heritage precincts, and areas of the road reserve that adjoin **pedestrian street frontage mapped areas**) and within PPH, CEC and TR zones may project a maximum of 1.5m over a footpath if the flag sign is located at least 2.5m, at its lowest point, above the footpath; and
    2. portable freestanding signs on footpaths provided for in Rule 18.6.13.5.

Figure 18.6.13.6A: Signs in **pedestrian street frontage mapped areas**, heritage precincts and Harbourside Edge Zone

**Signs attached to buildings:**  
50% of wall area (excluding  
glazing) at a maximum height  
of 4m above ground level

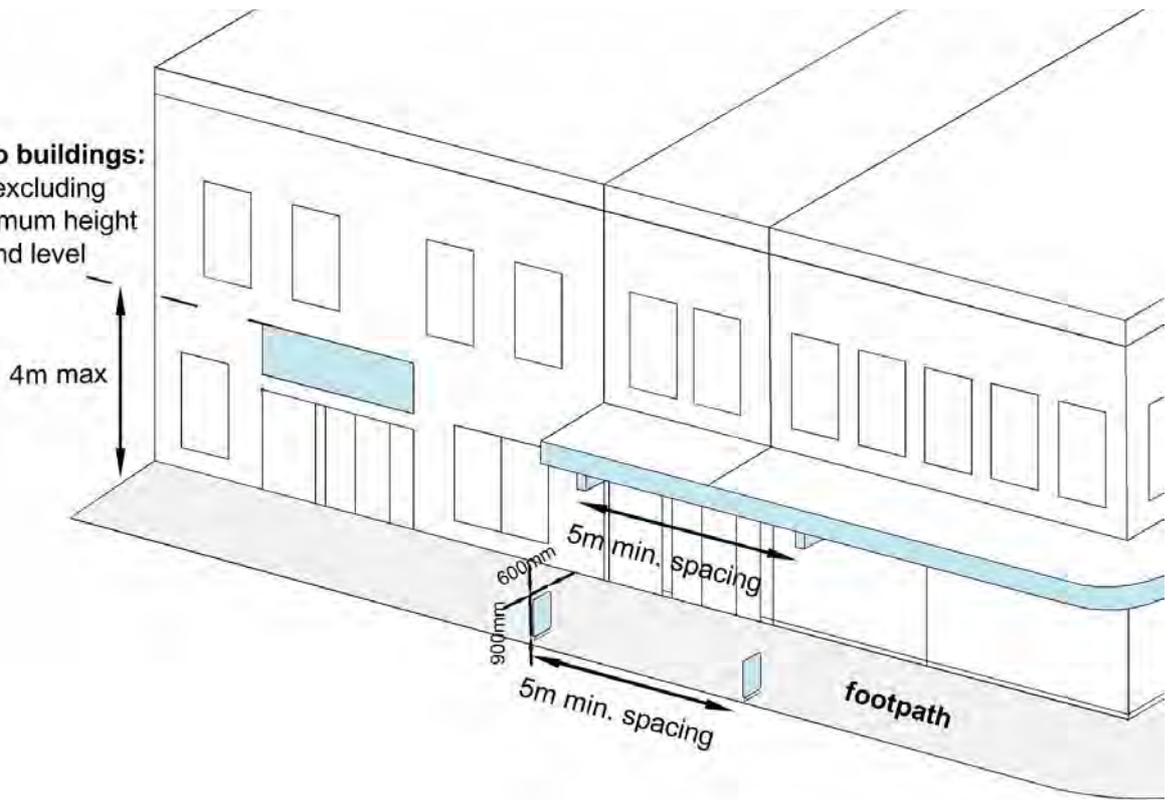

Figure 18.6.13.6B: Signs in the Trade Related and South Dunedin Large Format zones

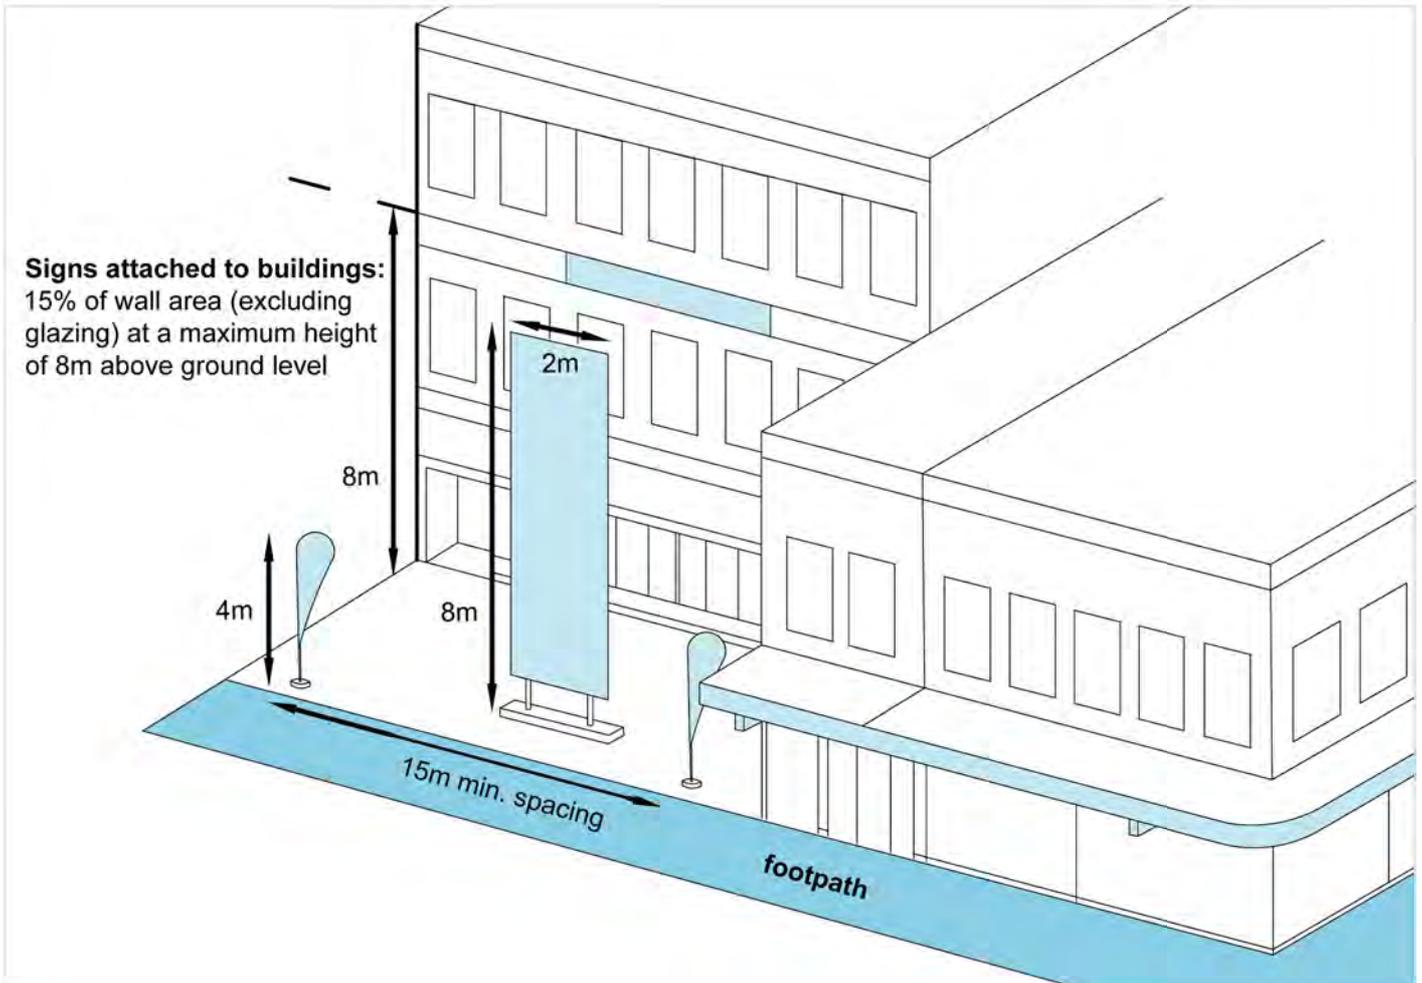

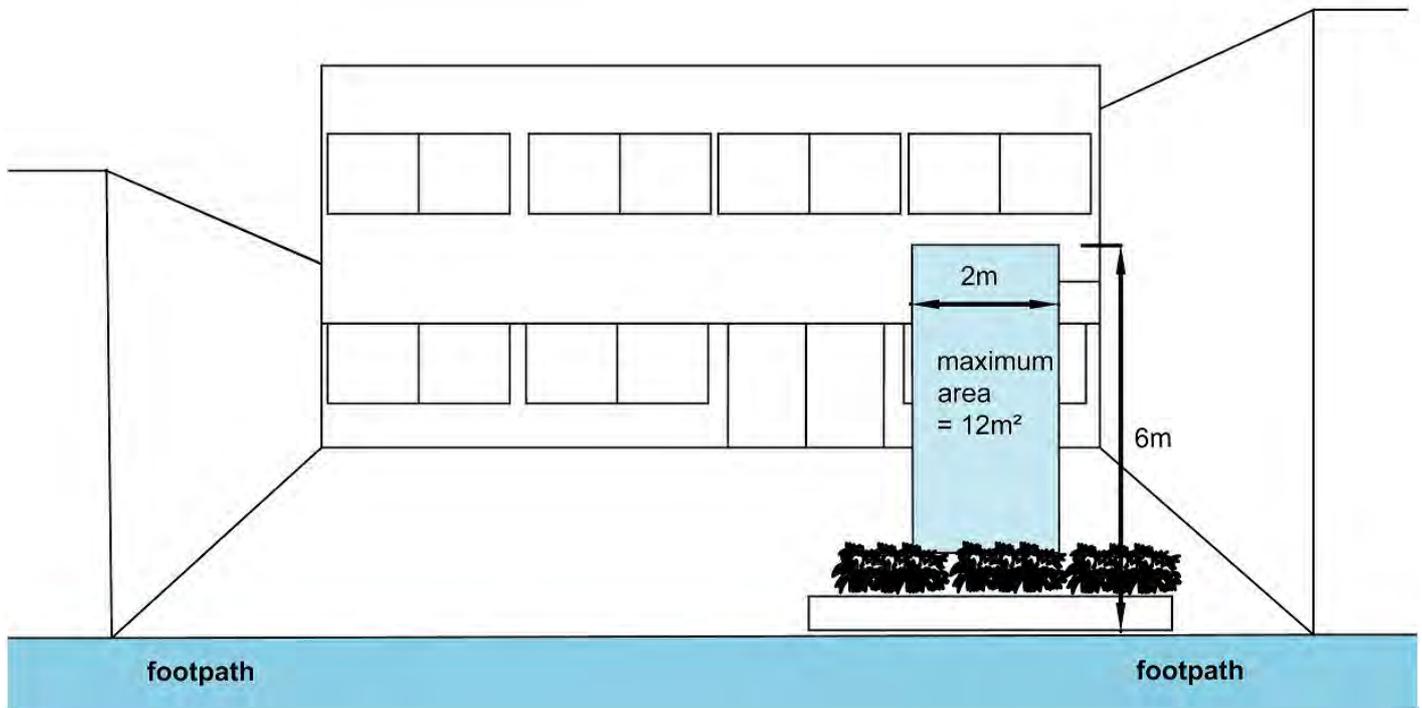

Figure 18.6.13.6C: Signs in all other locations.

#### Note 18.6.13A - Other relevant District Plan provisions

1. Commercial advertising is a non-complying land use activity in all zones, except for the Airport Zone.
2. See Section 3 Public Amenities for the rules related to public noticeboards.
3. See Section 4 Temporary Activities for the rules related to temporary signs.
4. Illuminated signs must comply with the standards in Rule 6.7.3.

#### Note 18.6.13B - Other requirements outside of the District Plan

1. For additional restrictions that may apply to signs, see also:
  - a. NZ Transport Agency *Traffic Control Devices Manual, Part 3, Advertising Signs and Signs on State Highways Bylaw*
  - b. Dunedin City Council Commercial Use of Footpaths Policy
  - c. Dunedin City Council Roading Bylaw
  - d. Dunedin City Council Traffic and Parking Bylaw

#### 18.6.14 Parking, Loading and Access Standards

1. Parking, loading and access must comply with Rule 6.6.
2. New vehicle accesses are not allowed across any **primary pedestrian street frontage mapped area**.
3. Vehicle accesses that contravene the performance standard in Rule 18.6.14.2 are a non-complying activity.

### 18.6.15 Pedestrian Entrances

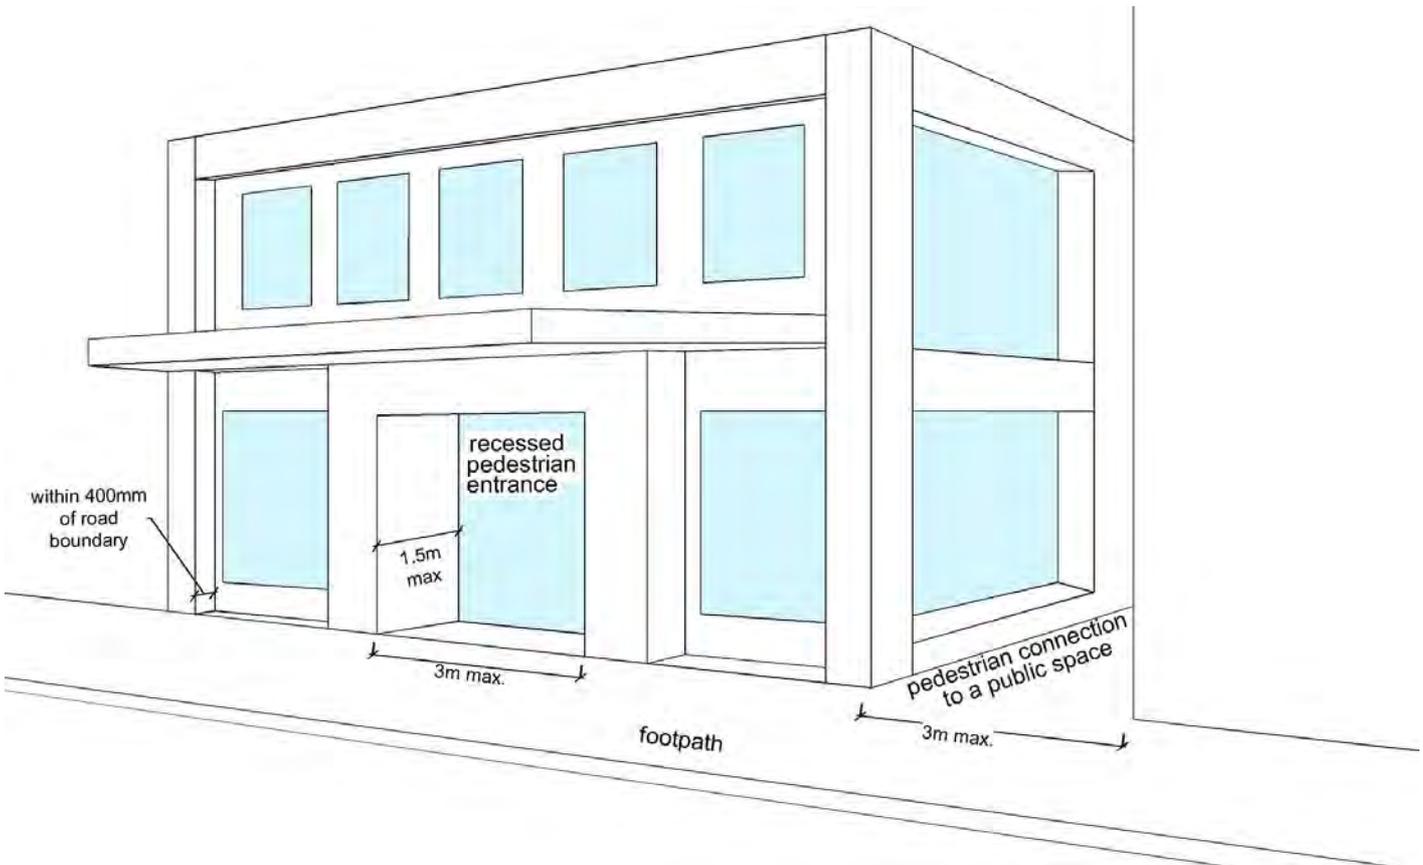

1. For new buildings and additions and alterations to buildings built adjacent to a **primary pedestrian street frontage mapped area** or **secondary pedestrian street frontage mapped area**:
  - a. the principal pedestrian entrance must be located on the **pedestrian street frontage mapped area**; and
  - b. if a building is adjacent to both a **primary pedestrian street frontage mapped area** and a **secondary pedestrian street frontage mapped area**, the principal pedestrian entrance must be located on the primary pedestrian street frontage.
  - c. Activities that contravene this performance standard are restricted discretionary activities.

### 18.6.16 Setbacks

#### 18.6.16.1 Setback from road boundaries

- a. New buildings and additions and alterations to buildings must be built within 400mm of any road boundary that is a **primary pedestrian street frontage mapped area** (i.e. they must occupy the full width of the site, parallel to the road boundary), for the entire length of the **primary pedestrian street frontage mapped area**, except:
  - i. a setback of up to 1.5m for a maximum width of 3m may be provided to allow for a recessed pedestrian entrance;
  - ii. a gap adjacent to the side boundary of up to 3m may be provided to allow for a publicly-accessible pedestrian connection from the street, to an existing or proposed public walkway, road, reserve or other public place (see Figure 18.6.16.1A); and
  - iii. on any part of a site that adjoins a residential or recreation zone and where Rule 18.6.16.2 (setback from boundaries of residential or recreation zone) applies.
- b. New buildings and additions and alterations to buildings must be built within 400mm of any road boundary that is a **secondary pedestrian street frontage mapped area** for 60% of the length of the **secondary pedestrian street frontage mapped area**, except a setback of up to 1.5m for a maximum width of 3m may be provided to allow for a recessed pedestrian entrance.
- c. On a secondary pedestrian street frontage mapped area, any part of a building not built within 400mm of the road boundary, must be set back a minimum of 1.5m from the street frontage, in order to meet Rule 18.6.1.
- d. Activities that contravene this performance standard are restricted discretionary activities.

Figure 18.6.16.1A: Setback from a **primary pedestrian street frontage mapped area**

18.6.16.2: Setback from boundaries of residential or recreation zoned sites

- a. Along any boundaries that adjoin a residential or recreation zone, all new buildings or additions and alterations to buildings must have a minimum boundary setback of 3m.
- b. Activities that contravene this performance standard are restricted discretionary activities.

18.6.16.3: Setback from scheduled tree

New buildings and structures, additions and alterations, and any site development activities that involve the installation of impermeable surfacing must comply with Rule 7.5.2.

18.6.16.4: Setback from coast and water bodies

New buildings and structures, additions and alterations, and storage and use of hazardous substances must comply with Rule 10.3.3.

18.6.16.5 Setback from National Grid

New buildings and structures, and additions and alterations must comply with Rule 5.6.1.1.

18.6.16.X Setback from designated rail corridor

New buildings, new structures and additions and alterations must comply with Rule 6.7.4.

#### 18.6.16.Y Setback from Critical Electricity Distribution Infrastructure

New buildings, new structures and additions and alterations must comply with Rule 5.6.X.1.

#### 18.6.17 Harbourside Edge Zone Standards

The following standards apply only within the Harbourside Edge Zone.

1. New buildings must comply with the following:

Area	i. Minimum Height	ii. Maximum Height
a. <b>Harbourside edge height mapped area</b> (see Figure 18.6.17A)	6m	20m
b. Harbourside Edge Zone outside the <b>harbourside edge height mapped area</b>	6m	16m
c. Harbourside Edge Transition Overlay Zone (when it is released)	6m	16m

2. New buildings and structures, and additions and alterations must be designed to enable public pedestrian access through from Birch, Fryatt and Kitchener Streets to the public walkway required in Rule 18.6.17.3, at a minimum of five locations, as follows:
  - a. one accessway must be located within 5m of the 'Roberts Street public accessway' shown on Figure 18.6.17B;
  - b. four further accessways must be located in the general area of the 'other public accessways' shown on Figure 18.6.17B;
  - c. the accessways must be available for public use between the hours of 8.00am and 10.00pm; and
  - d. the accessways may be external to or internal to (through) buildings.
3. For all sites that have a boundary with the coastal marine area, before any new building on a site is occupied, a public walkway must be provided along the full length of the seaward side of the site in the general location of the **harbourside edge public walkway mapped area** (see also Figure 18.6.17B). The public walkway must be either:
  - a. along the wharf, if it is upgraded to a safe standard;
  - b. along the land between the external seaward wall of the building and mean high water springs; or
  - c. partly along the wharf and partly on the land between the external seaward wall of the building and mean high water springs.
4. The public walkway required by Rule 18.6.17.3 must:
  - a. have a minimum width of 5m;
  - b. be designed and located to enable the continuation of the walkway into any adjacent site where it is required by this plan;
  - c. be free of all obstructions to pedestrian movement;
  - d. not be used by vehicles, except for using or accessing the slipway, or vehicles being used for maintenance of the wharf, the walkway or any adjacent structure or building;
  - e. be constructed with a non-slip finish with materials complementary in colour to the materials used for the adjoining sections of walkway, if already constructed; and
  - f. be lit to the Lighting for Roads and Public Spaces AS/NZS 1158.3.1:2005, P4 Standard.
5. Activities that contravene rules 18.6.17.1, 18.6.17.2, or 18.6.17.4 are a restricted discretionary activity.

6. Activities that contravene Rule 18.6.17.3 are a non-complying activity.

Figure 18.6.17A: Harbourside Edge height mapped area

Figure 18.6.17B: Harbourside Edge public walkway mapped area and location of accessways

### 18.6.18 Verandahs

1. New buildings and additions and alterations to buildings along a **primary pedestrian street frontage mapped area**, except within the St Clair Neighbourhood Destination Centre, must have a verandah that:
  - a. extends the full length of building frontage along the **primary pedestrian street frontage mapped area** and adjoins its neighbours (except across any existing vehicle access) to provide continuous pedestrian cover of the footpath;
  - b. has a maximum depth of 3m or is no closer than 500mm from the adjacent kerb (whichever is the lesser);
  - c. the bottom of which is between 3m and 4m above the footpath;
  - d. has a fascia that is no higher than 500mm;
  - e. provides under lighting unless the building provides lighting of the footpath under the verandah; and
  - f. on corner sites, continues around the corner for the full length of the **primary pedestrian street frontage mapped area**.

2. Along a **secondary pedestrian street frontage mapped area**, except within the Warehouse Industrial Commercial Heritage Precinct, new buildings and additions and alterations to buildings must have a verandah that covers the full width of the main pedestrian entrance.
3. Scheduled heritage buildings that do not have an existing verandah are exempt from this standard.
4. Activities that contravene this performance standard are restricted discretionary activities.

## **Rule 18.7 Subdivision Performance Standards**

### **18.7.1 Access**

Subdivision activities must comply with Rule 6.8.1.

### **18.7.2 Esplanade Reserves and Strips**

Subdivision activities must comply with Rule 10.3.1.

### **18.7.3 Firefighting**

Subdivision activities must comply with Rule 9.3.3.

### **18.7.4 Service Connections**

Subdivision activities must comply with Rule 9.3.7.

### **18.7.5 Shape**

1. Each resultant site that is intended to be developed must be of a size and shape that is large enough to contain a building platform of at least 100m<sup>2</sup> that meets the performance standards of this Plan including, but not limited to:
  - a. NA;
  - b. setbacks from boundaries, water bodies, scheduled trees; and
  - c. esplanade reserves or strips.
2. Building platforms must have a slope of 12° (1:4.7 or 21%) or less and must not contain:
  - a. scheduled heritage buildings or scheduled heritage structures; or
  - b. right-of-way easements.
  - c. NA.
3. For unreticulated areas, resultant sites must provide for a wastewater disposal area to be located at least 50m from any water body and Mean High Water Springs.
4. Sites created and used solely for the following purposes are exempt from the shape standard:
  - a. Scheduled ASBV or QEII covenant;
  - b. reserve;
  - c. access;
  - d. network utility; or
  - e. road.
5. Subdivision activities that do not meet this standard are restricted discretionary activities.

## **18.7.X Setback from National Grid (Subdivision Activities)**

Subdivision activities must comply with Rule 5.6.1.X.

## **Rule 18.8 Assessment of Controlled Activities**

### **Rule 18.8.1 Introduction**

1. Controlled activities will be assessed in accordance with section 104 and 104A of the RMA. Council must grant the application and may impose conditions with respect to matters over which it has reserved its control.
2. Rule 18.8.2:
  - a. lists the matters over which Council has reserved its control; and
  - b. provides guidance on how consent applications will be assessed, including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi); and
    - ii. conditions that may be imposed.
3. Where a controlled activity does not meet a performance standard the following occurs:
  - a. if the contravention of the performance standard defaults to **restricted discretionary** then:
    - i. the activity, as a whole, will be treated as **restricted discretionary**; and
    - ii. the matters of discretion are expanded to include the areas of non-compliance with the performance standard; and
    - iii. the performance standard contravention will be assessed as indicated in Section 18.9; and
    - iv. the matters of control become matters of discretion and will be assessed as indicated in this section.
  - b. if the contravention of the performance standard defaults to **discretionary** then:
    - i. the activity, as a whole, will be treated as **discretionary**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 18.11; and
    - iii. the assessment guidance in this section will also be considered.
  - c. if the contravention of the performance standard defaults to **non-complying** then:
    - i. the activity, as a whole, will be **non-complying**; and
    - ii. the performance standard contravention will be assessed as indicated in Section 18.12; and
    - iii. the assessment guidance in this section will also be considered.

### 18.8.2 Assessment of controlled development activities

Activity	Matters of control	Guidance on the assessment of resource consents
<p>1. Affecting a scheduled heritage building or a scheduled heritage structure:</p> <ul style="list-style-type: none"> <li>• Earthquake strengthening that affects a protected part of a scheduled heritage building or scheduled heritage structure, where external features only are protected; or</li> <li>• Restoration of a protected part of a scheduled heritage building or scheduled heritage structure that has a Heritage New Zealand Category 1 listing (as detailed in Appendix A1.1).</li> </ul>	<p>a. Effects on heritage values</p>	<p>See Rule 13.4</p>
<p>2. In a heritage precinct, additions and alterations to a non character-contributing building that involve:</p> <ul style="list-style-type: none"> <li>• an increase in the footprint of 10m<sup>2</sup> or more; or</li> <li>• an increase in the height of the building by more than 2m.</li> </ul>	<p>a. Effect on heritage streetscape character</p>	<p>See Rule 13.4</p>

## **Rule 18.9 Assessment of Restricted Discretionary Activities (Performance Standard Contraventions)**

### **Rule 18.9.1 Introduction**

1. Restricted discretionary activities will be assessed in accordance with section 104 and 104C of the RMA, meaning only those matters to which Council has restricted its discretion will be considered, and Council may grant or refuse the application, and, if granted, may impose conditions with respect to matters over which it has restricted its discretion.
2. Rules 18.9.2 - 18.9.6:
  - a. list the matters Council will restrict its discretion to, under the heading 'matters of discretion', these matters are not further restricted by any guidance provided; and
  - b. provide guidance on how consent applications will be assessed, under the heading 'guidance on the assessment of resource consents', including:
    - i. relevant objectives and policies, with respect to s104(1)(b)(vi);
    - ii. potential circumstances that may support a consent application. These are examples of situations or mitigation measures that may support consent being granted, but are not requirements that must always be met in order for an activity to be granted consent;
    - iii. general assessment guidance; and
    - iv. conditions that may be imposed.
3. Rules 18.9.2 - 18.9.6 apply as follows:
  - a. Rule 18.9.2 applies to all performance standard contraventions;
  - b. Rule 18.9.3 applies to land use performance standard contraventions;
  - c. Rule 18.9.4 applies to development performance standard contraventions;
  - d. Rule 18.9.5 applies to subdivision performance standard contraventions; and
  - e. Rule 18.9.6 applies to restricted discretionary performance standard contraventions in a pedestrian street frontage, overlay zone, mapped area, heritage precinct, or affecting a scheduled item.

### 18.9.2 Assessment of all performance standard contraventions

Performance standard	Guidance on the assessment of resource consents
1. Performance standard contraventions	<p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>a. The degree of non-compliance with the performance standard is minor.</li> <li>b. Topography or other site specific factors make the standard irrelevant as the adverse effects that the standard is trying to manage will not occur.</li> <li>c. Non-compliance with a development performance standard would improve the design of the development in a way that would result in positive effects and better achieve the identified objectives and policies of the Plan.</li> <li>d. There are positive effects on heritage values related to better site design outcomes achieved through not meeting the performance standards.</li> </ul> <p><i>General assessment criteria:</i></p> <ul style="list-style-type: none"> <li>e. Where more than one standard is contravened, the combined effects of the contraventions should be considered.</li> <li>f. In balancing consideration of the objectives and policies related to the maintenance of heritage values or heritage precinct streetscape character and those related to general amenity, greater weight will usually be placed on heritage policies.</li> </ul>

### 18.9.3 Assessment of land use performance standard contraventions

Performance standard	Matters of discretion	Guidance on the assessment of resource consents
2. Maximum gross area of centre (Rule 18.5.5.1)	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.1</li> <li>ii. Activities in neighbourhood and rural centres: <ul style="list-style-type: none"> <li>1. are not a destination retail activity designed to attract customers from across suburbs, which are more appropriately located in the CBD or other central city commercial and mixed use zones; and</li> <li>2. do not dominate the centre and reduce the diversity of different activities that are able to establish within the centre (Policy 18.2.1.8).</li> </ul> </li> </ul>
3. Maximum gross floor area of dairies	a. Effects on the vibrancy, and economic and social success of the CBD and centres	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.1</li> <li>ii. Dairies are of a size that ensures they operate as a convenience store rather than a destination supermarket (Policy 18.2.1.11).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iii. The dairy serves the local neighbourhood and primarily sells day-to-day convenience food, beverage and house consumables, for example milk and bread.</li> </ul>

### 18.9.3 Assessment of land use performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
4.	Maximum gross floor area of retail ancillary to industry	<p>a. Effects on the vibrancy, and economic and social success of the CBD and centres</p> <p>b. Effects on ability of other commercial and industrial activities to operate</p>	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 18.2.1</p> <p>ii. The size of retail ancillary to industry:</p> <ol style="list-style-type: none"> <li>1. is clearly subordinate to and part of the operation of the primary industry activity;</li> <li>2. does not conflict with objectives 2.3.2 and 2.4.3; and</li> <li>3. does not create adverse effects on other industrial activities, for example from traffic, parking, or reverse sensitivity (Policy 18.2.1.7).</li> </ol>
5.	Minimum mobility car parking	<p>a. Effects on accessibility</p> <p>b. Effects on the safety and efficiency of the transport network</p>	See Rule 6.10
6.	<ul style="list-style-type: none"> <li>• Minimum vehicle loading</li> <li>• Service station standards</li> </ul>	a. Effects on the safety and efficiency of the transport network	See Rule 6.10
7.	Location of residential activities	a. Reverse sensitivity effects	<p><i>Relevant objectives and policies:</i></p> <p>i. Objective 18.2.2</p> <p>ii. The potential for reverse sensitivity is avoided or, if avoidance is not practicable, adequately mitigated (Policy 18.2.2.11).</p>

### 18.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
1.	Boundary treatments and other landscaping	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.3</li> <li>ii. Development maintains or enhances streetscape amenity by ensuring: <ul style="list-style-type: none"> <li>1. an attractive street interface is maintained through landscaping where buildings are not built to the street frontage (Policy 18.2.3.1.a); and</li> <li>2. large parking areas which are visible from the street are visually broken up with internal landscaping, which also provides for rainwater absorption (Policy 18.2.3.1.b).</li> </ul> </li> </ul>
2.	<ul style="list-style-type: none"> <li>• Boundary treatments and other landscaping</li> <li>• Height in relation to boundary</li> <li>• Setback from boundaries of residential and recreation zoned sites</li> </ul>	a. Effects on amenity of sites in adjoining residential or recreation zones	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.2</li> <li>ii. Buildings are of a height in relation to boundary and setback from side and rear boundaries that maintains a reasonable level of sunlight access for: <ul style="list-style-type: none"> <li>1. current and future residential buildings and their outdoor living spaces in adjoining residential zones; and</li> <li>2. sites in the Recreation and School zones (Policy 18.2.2.3).</li> </ul> </li> <li>iii. Fencing along property boundaries which adjoin residential or school zoned sites are of an adequate height and design to provide screening for the purposes of privacy and security (Policy 18.2.2.1).</li> </ul> <p><i>Potential circumstances that may support a consent application include:</i></p> <ul style="list-style-type: none"> <li>iv. Access to sunlight to the outdoor living space(s) and windows of bedrooms and living areas of nearby residential buildings is maintained or any reduction is minor.</li> <li>v. Access to sunlight on surrounding recreation areas is maintained or any reduction is minor.</li> <li>vi. A reasonable level of privacy is maintained for the windows, doors, and decks of any residential and visitor accommodation on surrounding residential zoned sites.</li> </ul>
3.	Fence height and design	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.3</li> <li>ii. Fences visible from public places are designed to maintain or enhance streetscape amenity (Policy 18.2.3.6).</li> </ul>
4.	Firefighting	a. Effects on health and safety	See Rule 9.5

#### 18.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
5.	Hazardous substances quantity limits and storage requirements	a. Effects on health and safety	See Rule 9.5
6.	Height (Rule 18.6.5.2) - maximum and minimum height (except as covered under 18.9.6.X below)	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 2.4.1</li> <li>ii. Objective 18.2.3</li> <li>iii. Buildings and structures maintain or enhance streetscape amenity by ensuring building height reflects the general heights of the block (Policy 18.2.3.11.a).</li> <li>iv. Buildings and additions and alterations as part of the Dunedin Hospital redevelopment maintain or enhance streetscape amenity by ensuring buildings and structures above 20m minimise as far as practicable adverse effects of shading and wind on pedestrian amenity (Policy 18.2.3.13.b)</li> </ul>
		b. Effects on views across Otago Harbour	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 2.4.3</li> <li>ii. Objective 18.2.3</li> <li>iii. Buildings and structures minimise as far as practicable adverse effects on the skyline vista of the city, particularly as viewed from Dunedin's inner hill suburbs across the harbour towards the Otago Peninsula, including through the use of quality and contextually appropriate architectural design (Policy 18.2.3.11.b).</li> </ul>
7.	Location and screening of outdoor storage	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.3</li> <li>ii. Development maintains or enhances streetscape amenity by ensuring service areas and outdoor storage areas associated with industrial or other activities are not visible from ground level of a public place (Policy 18.2.3.1.c).</li> </ul>
8.	Minimum glazing and building modulation	a. Effects on streetscape amenity	<p><i>Relevant objectives and policies:</i></p> <ul style="list-style-type: none"> <li>i. Objective 18.2.3</li> <li>ii. Development maintains or enhances streetscape amenity by ensuring an architecturally interesting façade through building modulation and use of glazing (Policy 18.2.3.1.d).</li> </ul>

### 18.9.4 Assessment of development performance standard contraventions

Performance standard		Matters of discretion	Guidance on the assessment of resource consents
