

Asset Information – Dunedin City Council

For information regarding underground Dunedin City Council assets visit the Dunedin City Council website:

<http://www.dunedin.govt.nz/council-online/webmaps/waterservices>

The actual locations of current assets must be verified on site before commencing work. The maps on the website show the location of known current Water and Waste services capital works and the location of known three waters services around Dunedin.

The Work In Progress map displays current known capital works related to three waters infrastructure. Please ensure you contact Dunedin City Council if you are planning any work within these areas during the timeframe indicated within the hatched area of the map.

The Water Services Map displays the known location of all the Dunedin City Council managed water, stormwater and waste water reticulation networks. It does not include most privately owned and managed services or other utilities. The map is primarily intended for use by utility contractors and professionals to aid the planning of their work.

Information shown is the best available at the time the request is made as shows the indicative location of assets. The accuracy and completeness of the information is variable and depends on the quality of the original data source used for this map. The Council may not have been notified about unauthorised changes to its assets.

The information provided to you may also not reflect authorised changes as a result of very recent work and this map should be used in conjunction with the Work in Progress map. We recommend that you apply for a LIM report to identify important characteristics of land adjacent to your worksite.
