Subject: Ash tree

To whom it may concern,

In regarding the ash tree at the Entrance to 64a Passmore Crescent, my name is Joel Gibson im a qualified arborist and have worked on this tree over the past several years, sadly it is not in the best health and has been growing very slowly with small bits of tip dieback.

I've been informed there is a possibility of a building to be built next to this tree and and this gives me some concern for its health. Especially if branches have to be cut off the tree or if the buildings foundations disturbed the trees roots. Concrete foundations from past experience close to a live trees, I've seen in multiple occasions end up killing those trees.

Sincerely Joel Gibson
