

HOW IT WORKS

Sunlight

Provides energy source for cone.

Removable top section

For easy access to digestion chamber.

Digestion Chamber

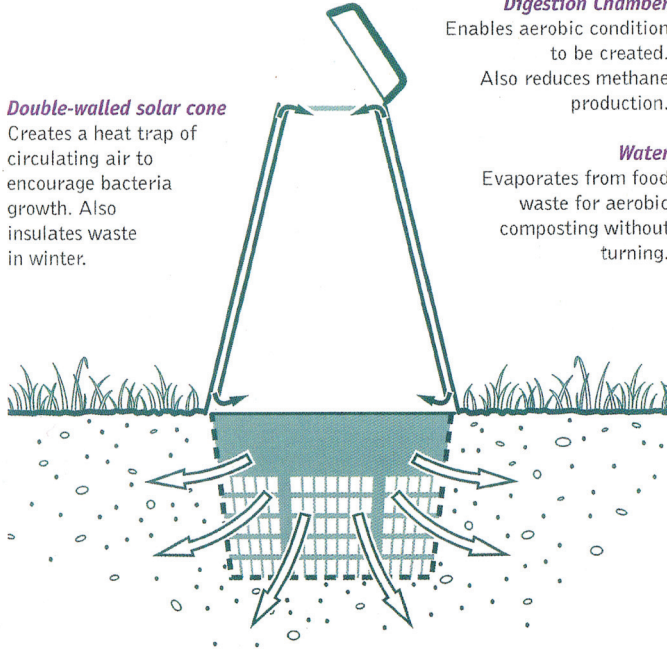

Enables aerobic condition to be created. Also reduces methane production.

Water

Evaporates from food waste for aerobic composting without turning.

Double-walled solar cone

Creates a heat trap of circulating air to encourage bacteria growth. Also insulates waste in winter.

Soil

Filters out smells and prevents access by flies.

Natural Micro-organisms and Worms

Migrate freely in and out of basket and break down the waste.

Rich Soil Conditioner

Seeps into surrounding ground.

Over 90% of the waste material in your Green Cone will be absorbed as water by the soil.

Get rid of food waste and help the environment too.

WHY
green cone™
the home of food waste digesters

IS GOOD FOR
THE PLANET

Green Cone is a unique solar-powered food waste digester that dramatically reduces the amount of organic household waste needing to be collected for disposal - which in turn helps the environment. By acting locally, you can help globally.

Prevents pollution of the atmosphere

The average household produces over a ton of waste per year, much of which is organic, and creates methane when disposed of in landfill sites. What's more with less waste to be collected, there are fewer heavier lorries polluting the atmosphere. By using Green Cone, you can put a stop to some of this pollution.

Reduces your household waste by up to 25%

Up to 25% of household waste is discarded food. This waste needs to be disposed of quickly otherwise it becomes smelly and a potential health risk. Put this waste food in your Green Cone and your problem is solved.

***Naturally digests
all your food waste***

Green Cone breaks down all cooked and uncooked food, including meat, fish, bones, bread, dairy products, fruit, vegetables and domestic animal excrement.

Makes recycling other waste easier

Once food waste is kept separate, remaining household waste is clean and dry and much easier to recycle.

Simple to install and use

The Green Cone System is easy to set up and then works 365 days a year with very little input from you. Simply put your food waste into the Green Cone each day. If the Green Cone is situated in a sunny part of the garden, there's no need to turn or mix the contents — just use and forget.

Good for your garden

Naturally occurring bacteria from the soil reduces food waste into water, carbon dioxide and a small amount of nutrient-rich soil conditioner to use in your garden.

Kind to the environment

The Green Cone's degradation process, and the resulting by-products are all entirely natural and safe to you, your pets and your plants.

Prevents bad smells and vermin

Food waste put into compost bins or rubbish can cause bad odours, and attract vermin and flies. Green Cone, however is specially designed for food waste so it won't create any such unwelcome problems.

***Becoming increasingly popular with
environmentally aware people***

With over 150,000 systems already sold throughout the UK, USA and Canada, Green Cone is now available in New Zealand through www.earthangel.co.nz
